Ascending passages are played *crescendo;* descending passages diminuendo: B 1-2, 1-7, 26-32, 41-47, 7-8, 33-36. C 2, 6, 30-32, 11, 16, 28. Only a few of innumerable illustrations of this rule can be given, for this perhaps the most comprehensive of all laws of interpretation, applicable alike to the shading of a mere phrase or motive and the building up of a broad climax. So universal is its application, in fact, that exceptions are usually specifically indicated. In like manner accelerated passages are played *crescendo,* retarded passages *decrescendo*: B-26 32; 7-8, 118. C 2, 30-31; 2, 10.

Melodic phrases are given on repetition with varying tone force: if the first be subdued the second is usually intensified; if the first be emphatic, the second is calm: B 15-20, 41-47. C 9-10, 25-26, 29-30.

Repetitions of single tones or short pattern figures must be shaded, usually made *crescendo* near the beginning and *decrescendo* towards the end: C 10, 32. The rule finds especially frequent application in the treatment of the bass: B 2-6, 21-2, 93-4.

Accents naturally divide themselves into two classes, the regularly recurring measure or metric accent and the more or less irregularly appearing rhythmic accent. The former must always be at least felt, if not clearly marked, and is of practically uniform strength throughout a composition, while the latter is not only irregular in recurrence but also variable in strength. Where the metric accent is obscured in the melody, by cross rhythms or by persistent syncopation, it must be at least suggested by the accompaniment: B 16-20, 73-80, C 31, 32.

The rhythmic accent may or may not coincide with the metric accent. In case of coincidence the stress on the initial note of the measure is enhanced B 2, 7, 22, 47. In the Chopin *Nocturne* this coincidence on the third beat of the measure throughout the composition has induced Riemann to propose the shifting of the measure bar to what is now the middle of the measure.

The highest note of a phrase, or of a passage, receives a rhythmic accent: B 2, 7, 33, 41, C 1, 3, 9, 11. An exception to this rule, however, is frequently met with in Beethoven's works, where often, after an ascending passage when a climactic accent is expected, the composer expressly prescribes a sudden *piano,* a refinement employed so frequently, especially in his maturer works, as to become almost a mannerism.

The longest note of a phrase must be accentuated: B 2, 7, 15, 22, 47, C 1, 2, 25. A melodic dissonance, especially if it forms a syncopation, must be stressed: B 20, 22. C 6, 32. Harmonically important notes, especially in the bass, if introducing a modulation, receive more weight: B 15, 27—32, 54, 62, C 12.

The initial note of a descending phrase, even if it falls on a weak beat, is slightly emphasized: B 20, 41, 83. C 6. The first note of a repeated passage figure is slightly accented as exemplified, for instance, throughout the first Cramer *Study.* Often the distinguishing of such pattern notes in the bass as well as in the upper parts, bring into relief an otherwise hidden melodic outline, and raises otherwise meaningless, empty passage-work above the level of mere ornamentation.

To this brief survey of the rules of interpretation much more, of course, might be added. For instance, an expressive rendering often demands not only proper accentuation but the withholding of dynamic force, the case practically always at phrase endings. Also suggestions might be given as to the dynamic relations of the different parts. Enough, however, has been said to point the pupil in the right direction. At any rate no slavish following even of such rules as have here been offered is intended, but rather the free play of the individual imagination. There is no such thing as "the one and only interpretation" of a given composition. It was Wagner who said, "If only one correct rendition were possible the executive artist would be a monkey." No two artists interpret the same work the same way, for an artistic performance is not a mere reproduction; it is a re-creation.

However, although initiative must be fostered in the pupil, so recondite a matter as artistic interpretation should not be left wholly to private devices. Unquestionably the inexperienced player needs to be launched in the right direction. Nor should this be long deferred. No senseless strumming, not even in the beginning, should be tolerated. Intelligent phrasing, accentuation, and some degree of dynamic shading can be taught simply as easily as the second grade. Then in the medium grades, the finer details can be explained. How that is to be done depends upon circumstances. The pupil for instance, may be asked to recite in one lesson the rules of one division, those concerning tempo acceleration, for example. For the next lesson, using the less detailed *Peters* he may write into the Beethoven ment here, employing the expression demanded by the illustrations quoted; Or, using the more fully noted *B Lebert Edition,* he may be required plain the expression marks given basis of these rules. Finally he m edit a piece he has well in hand, again in the light of these rules, thos details which even the best editions contain. The same procedure may lowed with the remaining rules.

The teacher, however, may also o among his pupils a class or a musi ary club, where this and similar like phrasing, ornamentation, histo so forth, may be much more intere pursued than with individual pupi that case Klauwell's remarkably cle concise *On Musical Execution* or tiani's more ambitious *The Princi Expression in Piano Playing* may made the basis of the work.

In some consistent and systemati interpretation must be taught if the aims at genuinely fruitful work. study must not be a mere drill. Of we must perform the task of the m But, let us perform it with a forwar ing mind. Let us aim at a real educ development where one step leads lo to another, where there is no lost where the pupil is directed fro tangible to less tangible aesthetic by sane, clear precepts.

Test Questions on Mr. Moos's Art

1. *What are the advantages gained by learning rules of expr*
2. *What two rules have to d the relation between rhythm and dyn*
3. *Which tendencies are to be ov in time interpretations and which aged?*
4. *How can one distinguish b "heroic treatment" and "heroics." should be avoided?*
5. *In what ways do a thorough edge of the rules of expression increase initiative?*

Substitute "music" for art these words of Elbert Hubbard ring true. "Around every art are found young men in velv who smoke countless cigarettes, off opinions about this great ma that, and prate prosaically in monotone of the Beautiful. Som these young persons give lectur 'Art As I Have Found It,' but be deceived by this—the art tha is probably being produced by shy, redheaded men who work top floor, and whom you can fin with the help of a search-war (Hubbard, himself, preferred to in the spotlight; but—he worke

---

Watching the Left Hand

By Amos Wright

AFTER a great many misgivings as to the reason why my playing never seemed to be reliable when I attempted to play in public, I found, as though by inspiration, one of the reasons.

The trouble was very largely in my left hand.

When the blunder came, it was usually a left-hand blunder. My left hand simply did not play with the same confidence and assurance as my right hand. I sought to remedy this by practicing a great deal with my left hand. I took the following studies and devoted considerable time to them.

School of Mechanism for the Left Hand, by J. B. Duvernoy.

Fifteen Studies for Left Hand, by E. R. Kroeger.

Ten Melodious Study Pieces, by A. Sartorio.

Studies for Left Hand Alone, by A. Sartorio.

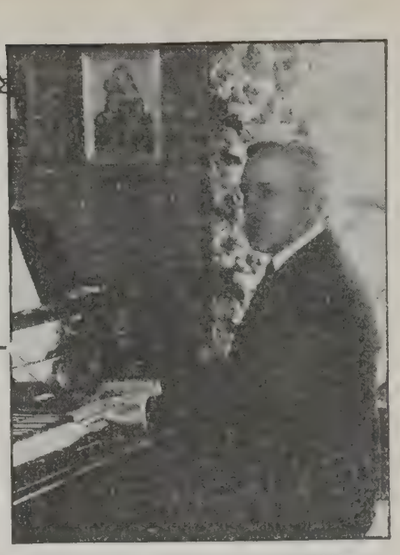
Left Hand Technic (Gradus ad Parnassum), by I. Philipp.

Left Hand Alone, by Berkedal-Barford.

This did a great deal of good, I must confess, but yet my left hand still erred. Possibly this was due to some fault in my early training. Possibly it was due to the fact I was very strong right-handed. Some people are that way, you know.

However, the thing that actually cured me is so simple that I am almost ashamed to incorporate it in an article. When I was playing a composition, I formed the habit of always watching my left hand and no attention to my right hand. I then saw that left hand played the notes correctly, the right would follow automatically.

It was a great surprise to find how much th really helped me in correcting the mistakes in th hand part. Take any composition you know by ory and play it through two or three times, wit eyes fixed on the left hand and not on the right and see how much your left hand gains in confi After you have played it a number of times this try playing the same composition with your eyes



I told this to my teacher, who tried it with a n of pupils; and he reports that results were excelle

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M.A.

Professor of Pianoforte Playing at Wellesley College

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered Department. Full name and address must accompany all inquiries

PROF. CLARENCE G. HAMILTON

Whole-Tone Scale Cross Rhythms

. Please give the notation for the ole-tone scale, also brief informa- concerning its origin and use. t used in all keys, as our diatonic e is used?

. How should the measures in Dowell's *Scotch Poem* be taught, which six notes are played against r? H. K. F.

t would be difficult to discover who ed the whole-tone scale, although it y first appeared in Russia. Exten- e has been made of it by Debussy other French impressionists. Like omatic scale, it is indeterminate in , belonging to no particular dia- ale, and therefore employed in con- with all of them.

notation depends upon the key in t is used. With C major, it would ted thus:

r scales, sharps and flats in the sig- will provide for their respective

Practice these measures with the separately, as though they were in 4/4 time, and giving a strong to each beat. If this rhythm be mly in mind, there will be no diffi- n putting the hands together, at first e accent of each beat still strongly !, as follows:

Technical Points

t. Should the second and fifth fin- s keep in a quiet position while third and fourth fingers are ex- ting a trill?

2. What technical studies should ive after a pupil is through with non and both Pishnas?

3. I have been drilling on the omatic scale with some pupils for ir years, and their speed does not rease. They are practicing enough. at is the reason? W. H.

The second and third fingers should pt relaxed, but may follow the s of the hand as it rotates from side with the trill.

he way, it is better to trill, when- ssible, with alternate fingers, rather nsecutive ones: 1 and 3, 2 and 4, 5; since this method secures more n in the finger motions.

I advise you to select exercises that the pupil's need from *Mastering les and Arpeggios* by James Francis and at the same time to apply these es by giving advanced studies, such se of Cramer and Clementi.

I see no reason why the chromatic should lag behind other scales in unless your pupils are practicing it tiffness in the wrist. Have them e slowly, with constant attention to ion of the wrist muscles, and speed follow naturally in due course of

Various Problems

1. What shall I do with a pupil who has been studying about a half year, and who has been getting along well until recently? Though she knows the notes in the book and on the piano, she always strikes the wrong keys. Can this be attributed to carelessness? Slow practice doesn't seem to remedy the fault at all.

2. What should I give a pupil who has just completed Beyer's book and finds Burgmüller, Op. 100, too difficult?

3. What would you advise me to do with an adult pupil who, though playing the piano for three years, and practicing much, has fingers that are stiff? MISS J.

(1) Insist upon the pupil's playing everything with the hands separately for at least a week before the hands are put together. When the latter is done, teach her to criticise her own work. Have her watch for her own mistakes, and when she detects one, let her mark a circle around it with a blue pencil that is always kept handy for the purpose. Perhaps the most valuable thing which we can give our pupils is this very habit of self-criticism!

(2) You might try Engelmann's *Selected Primary Studies,* Books 1 and 2, or Bilbro's *Short Melody Etudes.*

(3) The difficulty probably lies more in her wrists than in her fingers; I should emphasize exercises for loosening the wrist muscles. Also, have her practice scales and arpeggios with the metronome, gradually increasing the speed as she gains in facility. If she does not respond to such treatment, you will do well to restrict her to pieces which do not require much rapidity of execution.

Player Pianos

I notice in The Teachers' Round Table of November, 1925, that a teacher has referred to a player piano as a curse to one of her pupils, because of its hard action. I use a player piano a great deal, and prefer it because of its unusually easy action, also because, in this case, it happens to have an unusually good tone. It seems to me that the player action is more apt to "limber up the keys," than to make the action hard. When I am occasionally "musically hungry," and crave music beyond my ability, I find great satisfaction in using the rolls. It is surprising what expression you can get with the rolls when you really try to listen for the parts that you wish to bring out. Musical skill may also be applied to the pedals and levers of the player part, as well as to the keys when playing by hand. There is of course danger that some less enthusiastic pupils may become lazy, and use the rolls too much; but an occasional performance of some difficult classic may be very helpful as well as enjoyable.

I am sure that *all* player pianos need not necessarily be a curse to a pupil R. S. V.

Since there are many different makes of player pianos, there are all varieties of action, from easy to hard, from good to bad, according to maker and price. I heartily agree with the correspondent that the piano player may be an inestimable boon to music students, or, for that matter, to music lovers in general, by bringing them into close touch with music that would otherwise be inaccessible: symphonies, overtures, concertos, and the like. In my college classes I make constant use of player pianos for the reasons just stated. It would be an ideal condition, indeed, if every piano teacher had in his studio a player of the higher type to employ with the pupils for illustrations and examples.

A Mature Student

I started piano when thirteen years old, and studied, under a poor teacher, until I reached the fifth book of Mathews' course. When I was twenty-five, I started again—teaching myself with the assistance of the ETUDE. I have not been able to continue steadily until now, when I can give three or four hours a day to practice. Last January I started vocal lessons.

This is the question which is consuming much of my energy; all of my friends tell me that I am insane to attempt to make a pianist of myself at my age, which is twenty-nine. Please, *please* tell me if this is so? I want to become proficient because I love it and cannot tolerate poorly played music.

I am teaching my boy, nine years old, and of course must keep ahead of him. My ultimate aim is to become a piano teacher. MRS. A. L. L.

It is quite impossible for me to judge, without meeting a piano student and hearing her play, just what her capabilities are and how far she may progress, since such results depend on so many different factors—limberness of the playing muscles, size and condition of the fingers, facility in reading music, interpretative ability, amount of practice, and so forth. But from your description, I can see no earthly reason why you should not become a proficient player and general musician, provided you stick to the job, and keep up your enthusiasm. There are but two reasons why a mature pupil may not succeed: first, because her fingers may have lost some of their suppleness, and second, because she is apt to chafe at the necessary burden of practice. Of these the latter reason is by far the most potent.

But with your background of early study, and with your ardent desire to learn, both of these objections should vanish; and if you really work hard, I prophesy for you a successful musical career. You may not become a virtuoso, but you ought to become an excellent player and teacher. Also, do not confine yourself to piano or vocal practice. Study musical history, form, theory; and hear all the good music that comes your way.

The Hand Touch

Please tell me what to do for a pupil whose fingers, hands, wrists and arms are stiff? She is twelve years old, and has been studying music for about five years.

Another pupil, about the same age, insists that she cannot play without holding her wrists high; and the first joints of her fingers "break in."

Is wrist staccato played by lifting the hand quickly from the keys and throwing it back in the old-fashioned way, as though the wrist were a hinge? M. L. M.

The answer to all your questions is *relaxation.* Begin by having the pupil hang her arm down by her side, with the shoulder low, and all the arm muscles relaxed. Now, grasp the pupil's wrist and raise it slowly up to playing position, meanwhile sustaining the dead weight of the arm, with her hand hanging limply downward.

Next, the pupil should practice the hand touch. Starting with fingers on the keys, let her throw her hand loosely from the wrist so that each finger in turn sounds a key, while the wrist *jumps up* an inch or two. At the beginning of each stroke the wrist should be about level with the hand and forearm.

Such exercises ought to cure the first pupil of stiffness, and the second of holding her wrists too high. If, in the hand touch, the key is released at the exact instant that the tone is heard, the result is the *hand staccato* about which you ask. Pulling the hand back from the wrist is seldom employed by modern pianists, since it is an unnecessary motion, involving a stiffness of the wrist.

Mozart's Sonatas

1. Please give the correct metronome markings for the different movements of Mozart's *Sonata in A-major.*

2. Is the pedal supposed to be used in all the sonatas? S. M.

(1) First movement:

Theme and first four variations, ♩. = 60.

Fifth variation, ♪ = 88.

Sixth variation, ♩ = 138.

Second movement: ♩ = 120.

Third movement: ♩ = 132.

(2) In Mozart's works the pedal should be sparingly used, and never when the blurring of a melody or of harmonies that do not sound well together results. It may well be employed to help the rhythmic accentuation, or to increase the richness of the chords, as in this passage from the last movement of the *Sonata in A-major:*

"Beneath these flowers I dream a silent chord. I cannot wake my own strings to music; but under the hands of those who comprehend me, I become an eloquent friend. Wanderer, ere thou goest, try me. The more trouble thou takest with me, the more lovely will be the tones with which I shall reward thee."

—ROBERT SCHUMANN.

"Tempo should be in the blood. If it is not you may be sure that the other intentions of the composer will be bungled."—GRIEG.

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

BUT HE HAD EATEN THE CHOCOLATE

MASSENET begins the foreword to his "Recollections" with this charming anecdote—here somewhat abbreviated:

"I have been often asked whether I put together the recollections of my life from notes jotted down from day to day. To tell the truth I did, and this is how I began the habit of doing so regularly.

"My mother—a model wife and mother, who taught me the difference between right and wrong—said to me on my tenth birthday:

"'Here is a diary. And every night before you go to bed, you must write down what you have seen, said or done during the day. If you have said or done anything wrong, you must confess it in writing in these pages. Perhaps it will make you hesitate to do wrong during the day.'

"Once when I was alone, in search of some distraction I amused myself by foraging in the cupboards where I found some squares of chocolate. I broke off a square and munched it. I have said somewhere that I am greedy. I don't deny it. Here's another proof.

"When evening came and I had to write the account of the day, I admit that I hesitated a moment about mentioning the delicious square of chocolate. But my conscience, put to the test in this way, conquered, and I bravely recorded my dereliction in the diary.

The thought that my mother would read about my misdeed made me rather shamefaced. She came in at that very moment and saw my confusion; but directly she knew the cause she clasped me in her arms and said:

"'You have acted like an honest man, and I forgive you. All the same, that is no reason why you should ever again eat chocolate on the sly!'

"Later on, when I munched other and better chocolate, I always obtained permission."

There is no public for serious music performed indifferently or badly; and yet it is precisely for this non-existent section of the public that nine concerts out of ten are designed.—APPLEBY MATTHEWS.

FAINT, LADY, FAINT!

"OSCAR COMETTANT in *Le Piano et les Pianistes,* tells a story which seems improbable but which he declares to be absolutely authentic," says Mme. Landowska in a chapter on "Virtuosi" in her "Music of the Past."

"A certain great pianist, as admirable a performer as he was a skilful self-advertiser, conceived the idea of paying women twenty francs a concert to pretend to faint from pleasure in the midst of a *fantaisie* played so fast that it would have been humanly impossible to bring it to a conclusion. Once, at Paris, one of the women paid to faint, missed her cue and fell into a deep sleep while the pianist played Weber's *Concerto.* Counting upon this woman's fainting-spell to interrupt the finale of that composition, he had taken it at an impossible tempo. What to do in this interesting case? Muddle it, like a vulgar pianist, or pretend to forget? No, he simply played the rôle which should have been filled by the fainter and fainted himself.

"The crowd pressed about the pianist, doubly phenomenal because of his lightning execution and of his sensitive organization. He was carried into the foyer, the men applauding madly, the women waving their handkerchiefs; and the 'fainter' waking up fainted—perhaps really this time—in despair at not having pretended to faint."

THE GENEROSITY OF THEODORE THOMAS

GEORGE P. UPTON, who knew Theodore Thomas very well, speaks highly of the great conductor's character, in his *Musical Memories.* Thomas was conspicuously loyal to his friends.

"An instance of loyalty to an old friend was shown in the last days of Carl Bergmann," says Upton. "He and Bergmann had been intimately associated in the Mason-Thomas chamber concerts. Each recognized the musical ability of the other. They were, in fact, the pioneers who prepared the way for others. They did the hard unprofitable work of breaking the ground from which others have reaped rich harvests. In time, however, Bergmann grew jealous of Thomas. He was a splendid musician, but personally a weak man. He put many obstacles in Thomas's way and greatly annoyed him; but when Thomas had an orchestra of his own their roads diverged.

"Bergmann, meanwhile, was the victim of his own weaknesses. He alienated his friends and sank lower and lower. One evening Thomas went to a restaurant much frequented by musicians, and, upon entering, found Bergmann in a wretched plight, with the crowd making sport of him. His temper blazed up at once as he thought of what Bergmann had been in his better days. He advanced and rebuked the crowd in an outburst of wrath, of which he was capable at times, and threatened to thrash the lot of them if they did not let their victim alone. 'Respect the Bergmann that was, if you have have no respect for the Bergmann that is,' he thundered. The crowd slunk away, and Thomas then took Bergmann home, though he had long before forfeited all claim upon his friendship. The incident shows the man."

CHOPIN'S BREAK WITH GEORGE SAND

CHOPIN'S romantic relationship with George Sand came to an end in 1844, when the composer's weak health had been further enfeebled by the death of his father. Alice M. Diehl in her *Musical Memories,* quoting Karasowski and Count Tarnowski, gives the following reason for the break:

"George Sand wrote a novel, 'Lucrezia Floriani,' in which she was supposed to depict herself as the heroine, and Chopin as the selfish, sickly, and jealous Prince Karol, who repays the devotion and self-sacrifice of the artist 'la Floriana' by so tormenting her that she dies.

"Whether Chopin suspected the truth of the portraiture is not known. But it was stated by several of those who were likely to know and be truthful, that he was asked to assist in the correction of the proofs; and that the young Dudevants, her children, said on one occasion: 'Surely you know, Monsieur Chopin, that Prince Karol is *you?*'

"Madame Sand and her friends denied that this was true, and cited traits in the Prince which no one could have attributed to Chopin.

"'So little is Karol the portrait of a great artist,' she said, 'that Chopin, reading the manuscript day by day on my desk, never for one moment dreamt of such a thing—he, the most suspicious of beings.'"

MUSIC FOR THE MOVIES

MOST first-class moving-picture theatres nowadays employ first-class musical directors who, in addition to conducting the orchestra, frequently arrange and adapt the orchestral music incidental to the feature picture.

It calls for intensive work, especially when the screen drama happens to be based on an opera, such as "La Bohème." Recently the writer sat beside Andrea Setaro, a fine musician formerly of Philadelphia and now musical director of the St. Francis Theatre in San Francisco, and watched him at work over Puccini's masterpiece.

It was only a few days before the performance. We sat in a small projection room under the stage while the preview before us enrolled a "Bohéme" that had little or nothing to do with either Murger's novel or Puccini's opera. Setaro was in despair. "No Cafe Momus," he groaned. "No chance to play *Musetta's Waltz!* The public will be furious if we leave it out!" Nevertheless, he went on plugging at his curious task.

With a stop-watch beside him, he was timing each bit of the action, second by second, scribbling notes on each episode as it came.

These notes he took to his *sanctum sanctorum* and set to work on his score. A few days later it was finished. Out of fourteen separate editions of *Bohème* selections, he had pieced together a *pasticcio* to fit the picture, working all day and all night long and conducting performances in the meanwhile. When he failed to find what music he needed in the printed selections, he took bits from the original opera score and re-orchestrated them in manuscript. With amazing adroitness he had adopted Puccini's music to screen needs that Puccini never anticipated. Even *Musetta's Waltz* found a place!

Not since the days of Handel have musicians been called upon to do work of this kind at such lightning speed.

Criticism wears itself out to discover somcthing always new in the classics (luckily the dead cannot speak) and some indispensable defects in the moderns (unfortunately, the living talk too much).—MUSICAL NEWS AND HERALD.

THE FASCINATING DICTIO

HALÉVY is remembered as the c of "La Juive" and as the teache Paris Conservatoire of Bizet, Gou Saint-Saëns, among others. Also father-in-law of Bizet. He mig shone as a writer but for his music. The French critic, Saint has written of him:

"Halèvy had a natural talent for which he cultivated and perfec study, by a taste for reading wh always gratified in the intervals o in his study, in public places—ever in fine, when he had a minute t He could isolate himself completely midst of the various noises of his or the conversation of the drawir if he had no part in it. He wrote poetry and prose, and he read with turbable attention while people arou talked.

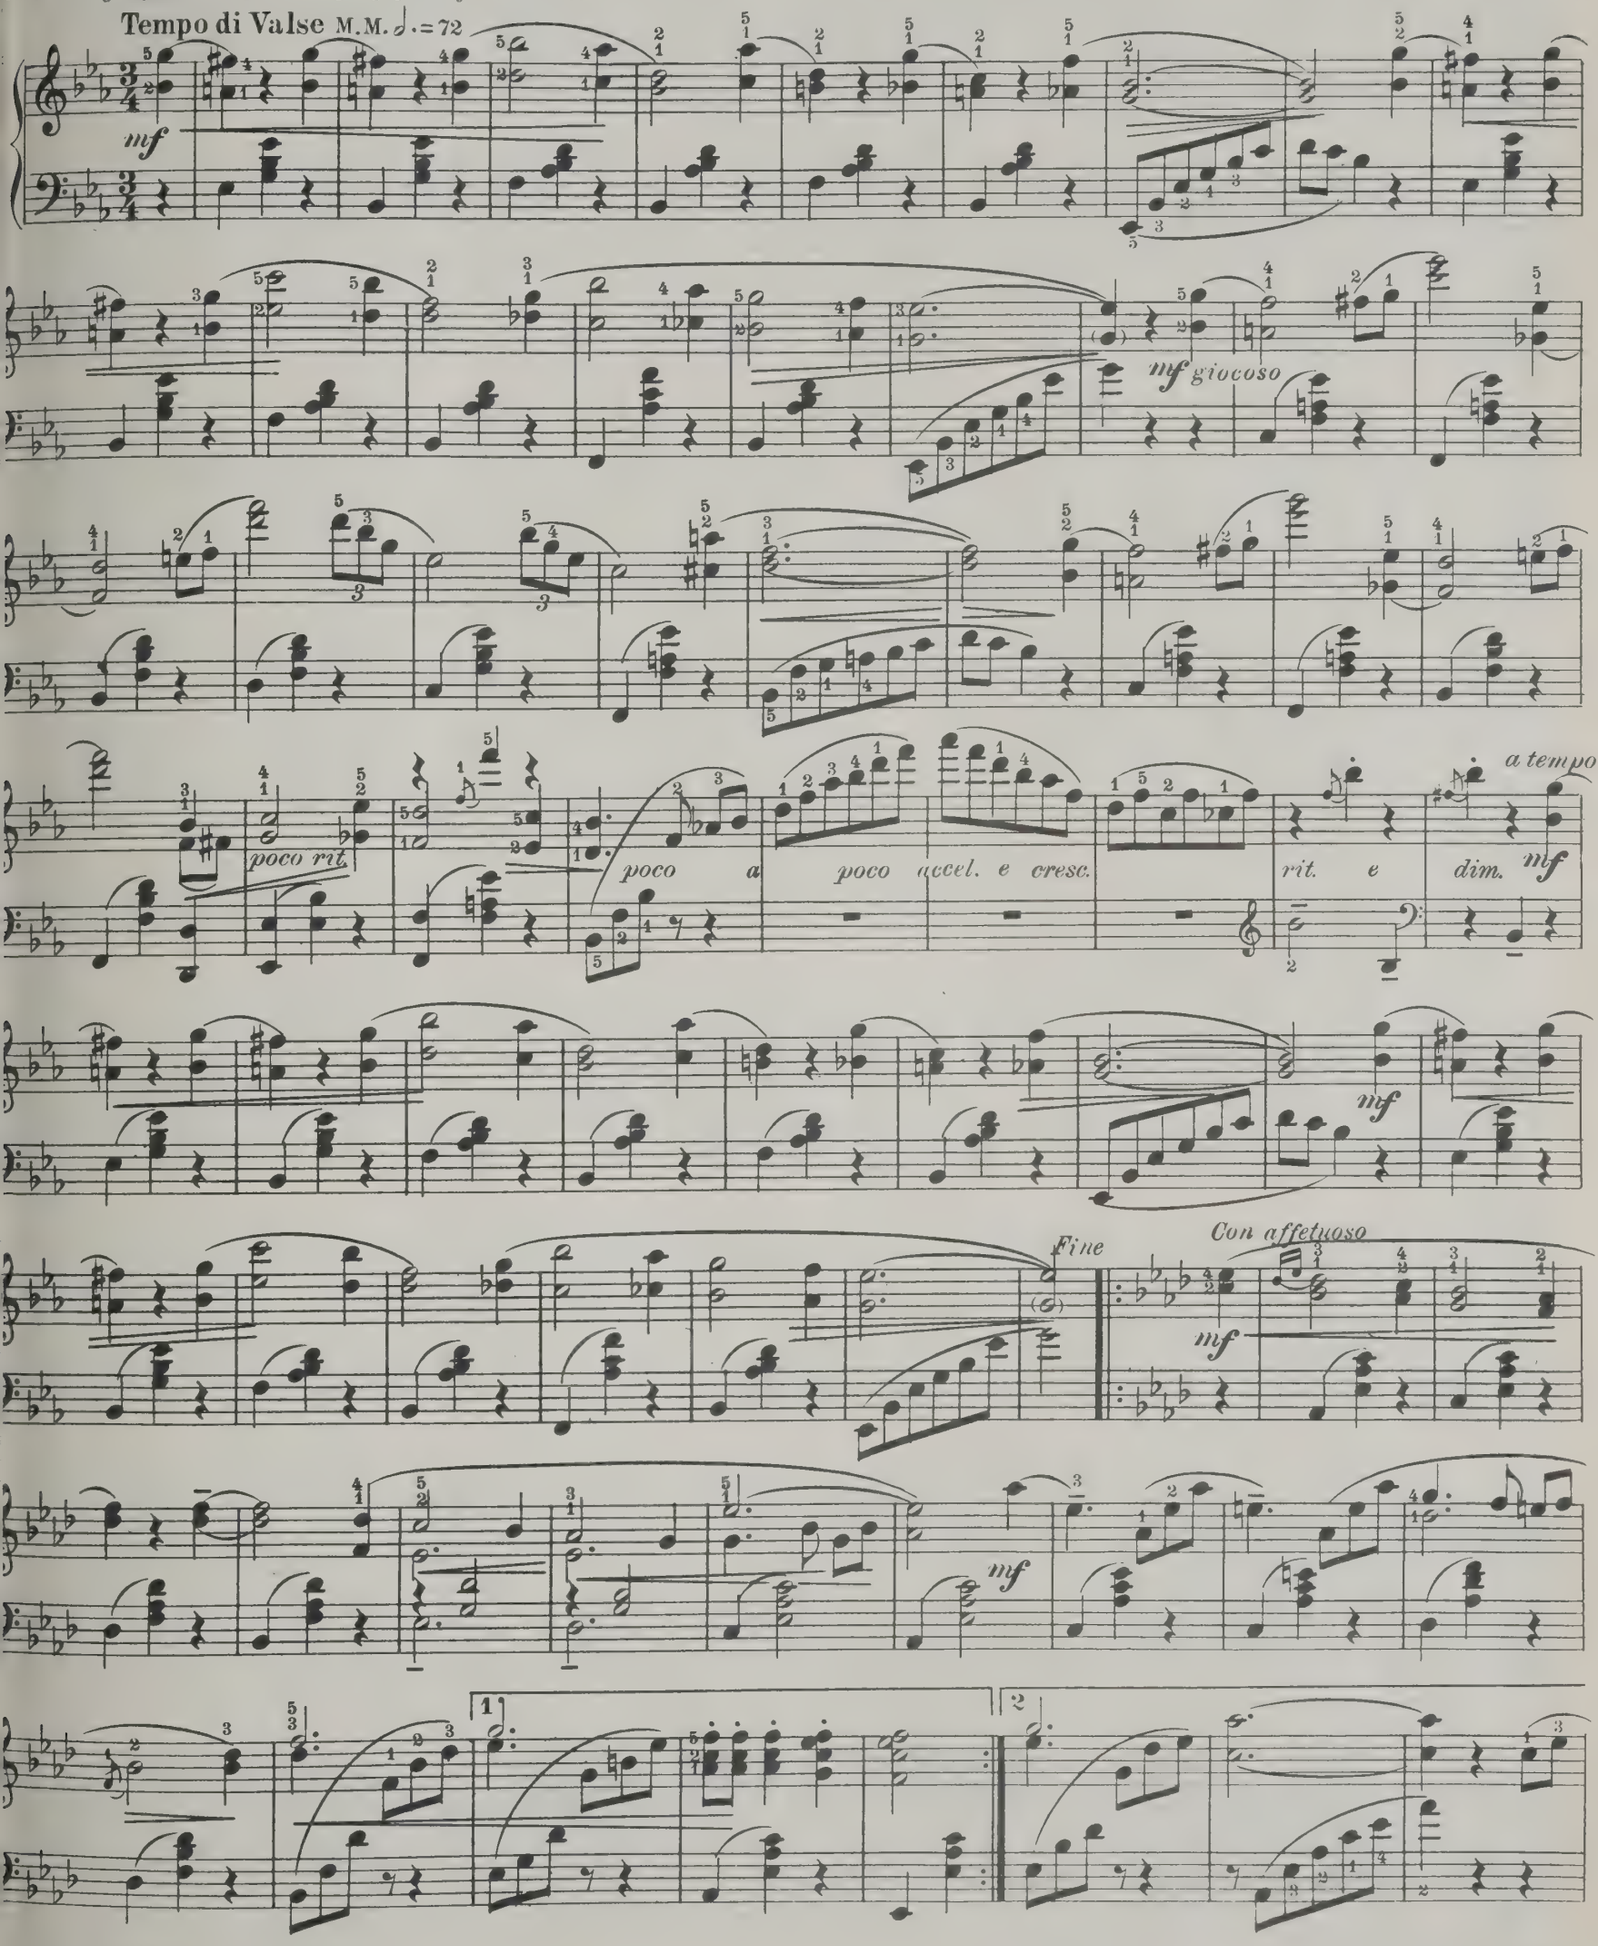
"He possessed the instinct of lan was familiar with German, Italian lish and Latin, knew something of H and Greek. He was conversant wi mology, and had a perfect passi dictionaries. It was often difficult t to find a word; for on opening the d ary somewhere near the word for w was looking, if his eye chanced to some other, no matter what, he sto read that, then another and anothe he sometimes forgot the word he altogether."

"The most important thing in l your self-possession is to forget yo dience and play for yourself. Wh walk out on the stage, look at the and walk straight over to it. Don't find your friends in the hall. It is —*Mischa Lev*

RUBINSTEIN, THE MASTE

IN A book of "Musical Mem crowded with good things, George P. tells us that, of the great pianist came to Chicago during his expe "Rubinstein was master of them al comes back to me most vividly in h certs at Aiken's Theatre in 1872 Wieniawsky, and with Louise Orme Louise Liebhart, two mediocre vo He was the Jupiter Tonans of th board.

"His personal appearance was i sive. He was athletic in mould; hi was large, and his hair luxuriously dant and carelessly worn. His fe were rugged, reminding one of so the portraits of Beethoven whom h resembled in some of his traits of acter. He was outwardly a cold, man, with a face as rigid as stone almost utterly ignored audiences, a more frantic the applause the less was he to recognize it. It was only he was disturbed by the idle chat people that he recognized anyone those recognized under such con were not likely to forget the manner



"He was a man of strong passion in performance they were tempered dominant artistic nature. He could with tremendous power, sometimes such vehemence as threatened disas the wires; and, on the other hand melody-playing was characterized delightful singing quality. For, wi his energy, which sometimes app ferocious, he still had great beauty of When it is considered that he played thing from memory, and that his rep embraced hundreds of compositions piano alone, as well as concertos, and he never practiced, only now and the ing to the piano to run over a few ures of a piece he had not played long time, his great talent will be appreciated."

Twenty-Five Prizes Open to All Etude Readers

"WHY EVERY CHILD SHOULD HAVE A MUSICAL TRAINING"

What Can You Say on This Subject?

FOR years THE ETUDE MUSIC MAGAZINE has devoted a great amount of space to indicating how a musical training is of great value to the child in developing rapid thinking, accuracy, self-discipline, memory, good taste, muscular, mental and nerve co-ordination.

We have brought to our readers' attention the opinions of many of the greatest thinkers of the time, pointing to the fact that the training received in the study of the art, particularly in the study of an instrument (including the voice), has a very great significance in the fields of Religion, Education, Sociology, preparation of the mind for higher accomplishments in Art, Science and Business, in Musical Therapeutics, and other inspirational themes. Now we should like to have an opportunity to print the boiled-down opinions of some of our readers upon the subject at the head of this column.

CONDITIONS

The contest closes December 31st, 1926. All manuscripts must be in our office at 5 P. M. on that date.

Anyone may contribute. It is not limited to subscribers to THE ETUDE.

The Essays must be between three and four hundred words in length.

The Essays must be written on one side of the sheets of paper. Kindly write as legibly as possible. When feasible have the Essay typewritten.

Address "THE ETUDE Prize Essay Contest," THE ETUDE MUSIC MAGAZINE, Philadelphia, Pennsylvania.

Be sure to put your name and address at the top of each page of manuscript.

Essays accompanied by return postage will be returned. All others will be destroyed within one month after the closing of the contest.

When the opinion of the Judges is divided between the merits of two approximately excellent manuscripts, neatness of appearance, clearness of expression, and punctuation will be taken into consideration.

PRIZES

FIRST PRIZE—A MUSICAL LIBRARY. Valued at One Hundred Dollars ($100.00)

Just think what a boon this wonderful library would be in any School or Home!

The following works selected from the publications of the Theodore Presser Company, at the regular retail prices, constitute this prize.

PIANO

Descriptive Analyses of Piano Works, *Edward B. Perry*.$2.00
Stories of Standard Teaching Pieces, *Edward B. Perry*.. 2.00
Great Pianists on Piano Playing, *Jas. F. Cooke*..... 2.25
Basic Principles in Pianoforte Playing, *Josef Lhevinne*.. .60
Principles of Expression in Pianoforte Playing, *A. F. Christiani* 2.50
Piano Playing and Piano Questions Answered, *Josef Hofmann* 2.00
Well Known Piano Solos and How to Play them, *Chas. W. Wilkinson* 2.00
Science in Modern Pianoforte Playing, *Mrs. Noah Brandt*. 1.00

How to Sing, *Luisa Tetrazzini*..... 2.00

SECOND PRIZE

A Musical Library valued at Fifty Dollars ($50.00)

This library may be selected from the foregoing list to the total of Fifty Dollars.

THIRD PRIZE

Twenty-five Dollars Cash.

FOURTH PRIZE

Fifteen Dollars Cash.

FIFTH PRIZE

Ten Dollars Cash.

ADDITIONAL PRIZES

For the next ten Essays which, in the opinion of the Judges deserve recognition, a Cash Prize of Five Dollars each will be awarded.

Following this in order will be ten more prizes, each consisting of a subscription to THE ETUDE, for one year.

Practical Education Notes Upon The Etude Music in This Issue

Prepared by EDGAR ALDEN BARRELL

For many years "THE ETUDE" presented monthly valuable educational notes on the music contained in each issue. These notes, which were appreciated, were prepared in person by Mr. Preston Ware Orem, Music Critic of "THE ETUDE." With the expansion of Mr. Orem's work directions it was found impossible for him to continue these notes. They will be prepared in the future by Mr. Barrell, who has recently joined rial staff of our publication. Mr. Barrell is an experienced teacher of piano and voice, and an organist as well as a composer. He is a graduate ard University; a pupil of Dr. Arthur de Guichard and John Hermann Loud. Our readers may look forward to profitable study suggestions rmative biographical and musical comments in this department.]

è Amore, by A. Buzzi-Peccia.

PECCIA

This song is a very felicitous adaptation of Bach's Fifteenth Prelude from the *Well-Tempered Clavichord*. The melody is elevated in character, distinctly vocal, and entirely suited to Bach's composition. Incidentally, it is not reminiscent of Gounod's adaptation of the two Bach preludes.

The singer will find its comfortable intervals very pleasant to sing. Nationally a song of this type calls for extreme legato singing, a department of vocalism in which present-day singers are woefully de- you have difficulty in this direction, ider *Tornato è Amore* as primarily a xercise in *legato*, and strive to make curve as smooth-going and graceful ogress of the lovely swan which in- nille Saint-Saëns to compose his fa- ncello piece of that name.

Italian text is used, special care will ry in sounding the consonants. For o not sing "Ah no, non più Martir;" ad. "Ah No, NoN Più MaRTiR," n "aMoR" and "SouRiDe" and the rtant words, expend the greatest care tter of consonantism.

asing a d fingering of the piano edi- s prelud are included, so that the ac- nt may be used separately if desired. notice how carefully the phrasing is

a expressed by the words of this song at a joyful and even more or less eling be evinced by the singer; which course, *be apparent upon the singer's e*. Do not, therefore, sing this song sombre glance and facial play which fitting for Chausson's *Les Morts* or *od-bye, Forever*.

in the Rain, by H. S. Stewart.

t of *Singing in the Rain* is by Corey is a frequent contributer to many of g periodicals. In a truly poetic way escribed the rapture of the flooding, nshine of happiness sequent to storm w. Unhappiness has fled, he says; the e parted, and now in their place come nd azure skies. So be glad.

ewart has set these words admirably. ime is swinging and pleasant. As in us song, assume (if you haven't one an expression of happiness and con-

Were What the Rose Is, by P. Day.

a splendid musical adaptation of Swin- ell-known poem. Of easy *tessitura*, ly is ingratiating and reposeful and sung very smoothly and evenly.

experience as a teacher, we learned verage student—whether from a Puri- hyness or from pure carelessness we decide—nearly always neglected to give "love" its full measure of expression. ake this mistake. "Love" is a highly word; according to some, the most im- rd in any language next to "Divinity." that may be, you surely must not treat avalier or heedless manner. Also be remember the *r* in the word "rose." of the most interesting, and slighted,

n Charles Swinburne's poetry is, per- most musical in our language. Any r music-lover who is unacquainted with gs would rejoice in the melody of rden of Proserpine," "Hertha," and his poems.

Scottish Blues, by R. S. Morrison.

We are not just certain in what sense Mr. Morrison intended the word "blues." His piece is a jolly affair, of moderate difficulty, and should readily recommend itself to teacher and student.

In the second section (in B-flat), there is some splendid work for the right hand. Practice this separately.

Love Song, by Franz Drdla.

Franz Drdla, himself a violin virtuoso of the greatest renown, has long been known as one of the foremost writers for the violin. Kubelik, Elman, Zimbalist, and nearly every famous violinist, has used his pieces; and they are so melodious and so musicianly in workmanship that their success is thoroughly deserved. Few composers who write for this instrument write so understandingly and effectively for their medium.

The "Love Song" is graceful and interesting. Make the second theme (in G Minor) differ in interpretation and tone quality from the first, and build up carefully to the climax. This latter caution we mentioned last month, but students are so regardless in this matter that we shall take the liberty of repeating the same caution "not seldom," as they say in the Greek language.

This number will scarcely show off to its best advantage if the performer is ignorant of the primary significance of a slur. In the first motif, where you find a half-note slurred to a quarter-note, be careful, therefore, to accent *the half-note* and not the quarter.

Prayer and Cradle-Song, by Frederick Lacey.

This composition, by the talented English composer, Frederick Lacey, is excellent material for recital or church purposes. Play the prayer slowly, reverently, and *molto legato*. A fine way to commence this number wrongly is to make the left foot do all the pedal work of this introductory passage, the while the right is kept see-sawing back and forth on the poor overworked Swell pedal. See that you do not fall guilty of this error!

A prayer of this short extent is never uttered  ; on the contrary, it is nearly all of the same volume, or at most only  . Hence the Swell pedal is to be used sparingly.

Mr. Lacey has registrated his *Prayer and Cradle-Song* effectively.

Minuet, from String Trio in E-Flat, by L. van Beethoven.

Beethoven's writing for strings approaches the very limits of perfection; and since those same limits as well are scarcely fallen short of in the Beethovenian symphonies and piano sonatas, the world with one accord acclaims this composer next to the greatest, if not the greatest, that ever lived.

On the desk before us as we write is a copy of the six Quartettes, Op. 18. How much we paid for this copy we have forgotten—probably a rather trifling sum; certainly trifling when the joy and fascination and instruction we have derived therefrom is considered. For each Quartette is a thrilling experience, a wondrous journey into a wondrous region reverberant with floods of pure melody and marvelously decked with harmonic web and contrapuntal tracery. The *String Trio in E-Flat*, of which we publish the *Minuet*, evinces these same qualities. Mr. Burmeister is to be congratulated upon such a happy arrangement of this *Minuet*.

The themes of the *Minuet* are as lovely and as peaceful as the meadows near Baden where the master would sometimes roam of a summer's day. Try to play them with a "singing tone;" and be watchful, almost meticulous, about your pedalling.

Among the Flowers, by G. N. Benson.

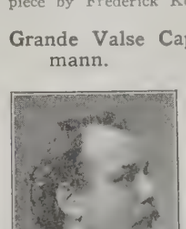
A study in triplet-groups and in flowing melody. Where the first note of the group is a quarter-note, do not accent the second and third notes equally with the first. The first note is melody, the other two, accompaniment. To say this may seem like "harping" on an old idea; but the offense is such a common one! One colonel at the head of a regiment looks nicely, but he becomes very, very insignificant if you dress all his men up in garb identical to his. Think of the quarter-note, then, as the colonel. Or if you are old enough to remember that stirring picturization of Alexander Dumas's "Three Musketeers," you can think of the first note as the immortal Fairbanks and the other notes as his less important and less striking compeers. (We hope this is not free advertising for this little-known cinema actor!)

Sailor's Dance, by Ernest Newton.

This is a typical dance of a happy "tar." One can almost visualize the scene. The theme is vigorous, and must not be played limply or with weak finger-action. Where, in the right-hand, the phrase markings run over the bar line, phrase very exactly.

The Bazaar, by Helen Dallam.

Speaking of *The Bazaar*, Miss Dallam is a resident of Chicago, not a very *bizarre* place but at least a very *fine* place.



This composition is decidedly colorful, rhythmic, Eastern. Strange music, bannerets of flaming colors, the sound of gongs, and—finally—all the ferial jostling and joviality which we associate with an Oriental bazaar are brought to mind. To the perfect fourths of the introductory measures, picture to yourself a geisha girl (beautiful, of course!) dancing strange steps in a manner highly pleasing to a group of onlookers.

This number demands a strong and even accent.

The Fading Rose, by Frederick Keats.

As Omar Khayyam, the Persian poet, well knew, the loveliest rose is only born to fade and die. And yet there is great beauty in even a fading rose for one who truly loves roses. This piece by Frederick Keats is delicate and lovely.

Grande Valse Caprice, by H. Engelmann.

HANS ENGELMANN

As everyone knows, Mr. Engelmann was one of our most prominent and prolific pianoforte composers. Born in Berlin, Germany, in 1872, he came to America at the age of nineteen; and here, after hardship and struggles to become known, he gradually built his great reputation as composer and teacher.

The *Grande Valse Caprice* is an excellent four-hand piece. Make the various sections well-contrasted as regards both rhythm and tone-color. The tempi are clearly indicated.

Funeral March of the Dwarf King, by Vernon Eville.

This is a gnomic dead-march, characteristic in its mock solemnity and resembling not at all the celebrated Funeral March of Chopin! The interchange of major and minor tonalities is well accomplished. Accent the right-hand part as marked; and for the last four measures, diminish the ton in nice gradations so that the last chord is *really* pianissimo.

G-Minor is not the most effective of the minor keys—it has something a trifle banale and common-place about it—but is very acceptable in this instance.

Grande Polka de Concert, by Homer N. Bartlett.

HOMER N. BARTLETT

Homer N. Bartlett is one of the composers who, though having consistently written excellent and pleasing and musicianly music, yet owe much of their reputation to the success of a single composition. Eduard Poldini, for instance, conceived the *"Poupée valsante,"* and this immediately brought him universal fame. The *Grande Polka*, from its natal day, almost, has been the drawing-room piece *par excellence* of America, and it has given an "imperishable lustre" to Mr. Bartlett's name.

Such success is not obtained without reason; and when we examine this composition closely, the fine, contrasting, very rhythmic themes make it at once apparent why the *Grande Polka* has met with such wide-spread and undissenting approval. It is a "corking" good piano-piece, and every serious student of the instrument should have it in his repertoire. It will tax your technical and interpretative powers, perhaps, but it is so worth-while and so pleasing that you will enjoy the process.

Mirthful Moments, by W. M. Felton.

Mr. Felton is one of the most gifted of Philadelphia's young composers. He has a good understanding of the peculiar idiom of the piano, and he also has great melodic fertility. This number, in waltz tempo, is one of his most attractive pianoforte compositions.

Long, Long Ago, by Albert Locke Norris.

Last month, if you remember, we spoke of the great versatility of Francis Hopkinson; of the many lines of activity in which he was interested and capable. This month we could make remarks of much the same tenor about Mr. Norris. Everyone has read his fascinating stories, but not everyone has had the pleasure of becoming acquainted with his other capabilities, especially his musical talent. *Long, Long Ago*, his Opus 49, No. 2. is a stately little selection, recalling to the mind "other times, other ways." There is an odor of sweet lavender faintly but surely pervading it.

To do this composition justice, practice some very staccato number (like the "touch-piece" by Galuppi in last month's ETUDE), and then play *Long, Long Ago* in a manner diametrically opposed to this, *viz.*, employing a legato that is as smooth as possible.

In the middle section, which is in the subdominant key (A-flat Major) of the main tonality (E-flat Major), be careful not to bring the left hand part out so strongly that the right hand melody fails to "get across."

Danse Rococo, by Mari Paldi.

This is, necessarily, an age of intense specialization—and the vast increase of knowledge in all subjects forces one to narrow one's field down, frequently, to one aspect of the whole. Miss Paldi has limited herself, in her composition, to writing piano pieces for children; and in these she has achieved notable success.

Miss Paldi was born in Michigan, and has received her musical training mainly from Julia Lois Caruthers and Adolf Weidig. Her father was musical, and a pupil of the famous pedagogue, Stephen Heller.

Danse Rococo is a fine teaching piece. If you will look up the word "rococo" in the dictionary, you will see that the strict meaning is "florid" or "feebly pretentious." That was the original meaning; but in present-day usage "rococo" is often taken to mean simply "old." This composition must be played with great relaxation of arm and wrist. The left-hand eighth-note passages of the second section should be practiced separately, until the pupil can execute them evenly and smoothly. This, of course, is the melody, the right-hand part being only an accompaniment and commentary.

Thousands have written expressing their delight with the improvement and expansion of THE ETUDE during the last two years. We appreciate this more than our friends realize. It has inspired us to project a larger, finer, and more entertaining and more instructive ETUDE for the coming season. We know that every ETUDE reader will be immensely pleased with "THE GREATER ETUDE."

THE PRESSER COLLECTION

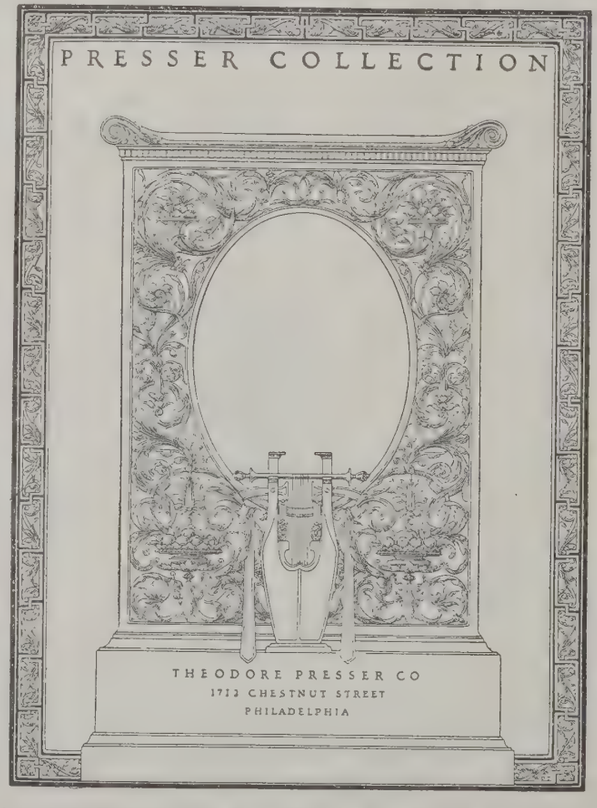
A RENAISSANCE

THE Presser Collection of Musical Classics in many instances has been preferred in the past because of certain strong individual characteristics and original educational ideas incorporated in the Collection.

IT is the ambition of the Theodore Presser Company to make this Collection in all respects one of the highest possible standard. For this purpose, editors of wide practical experience and musicians of international standing have been engaged to revise and re-edit where necessary.

THE Theodore Presser Company has the honor to announce that the services of Mr. Walter Dorwin Teague, considered by many as the greatest of American designers, also have been engaged to provide covers for special editions. On this page in advance of its use is presented the new cover design for the Presser Collection, a real masterpiece of the designer's art.

Mr. Walter Dorwin Teague



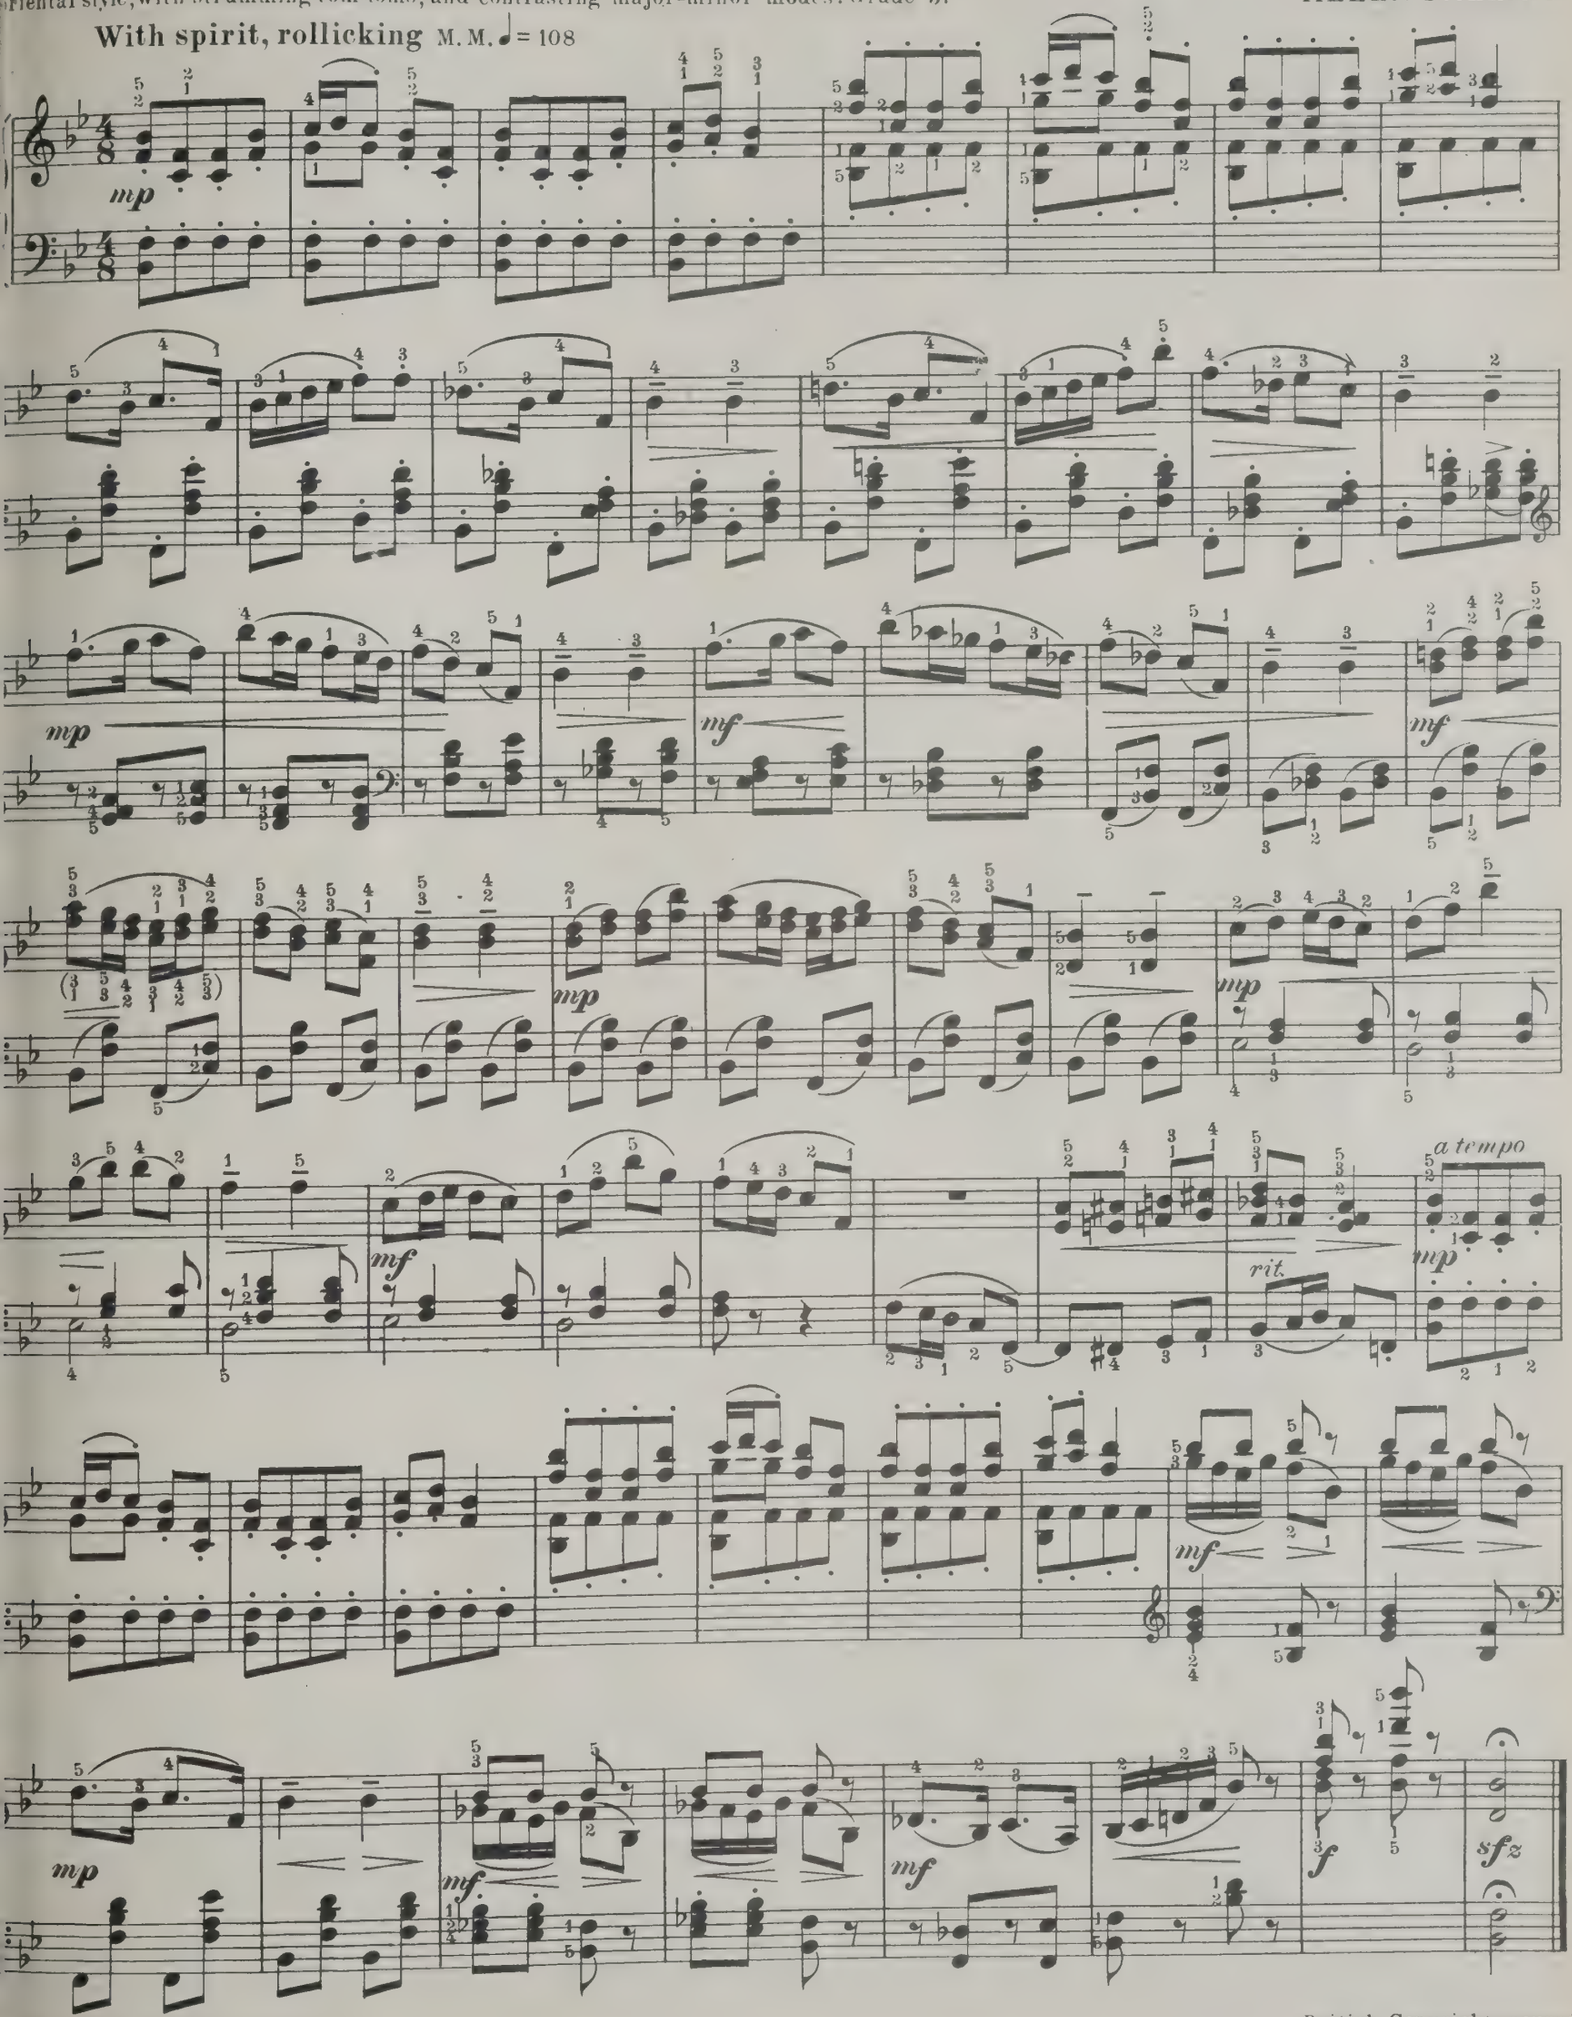
MR. WALTER DORWIN TEAGUE was born at Decatur, Indiana, December the 18th, 1883. He was the son of a clergyman. He studied art at the Art Students' League of New York, under Mr. George Bridgeman and soon attained great distinction for his work.

HE has been President of the Artists' Guild of New York; Vice-President of the Drama League; Honorary Vice-President of the Authors' League, and received the much coveted medal for Decorative Design two years. His work has an exquisite finish, proportion, grace and force that gives it a classical permanency. The title design he has prepared for the Presser Collection, because of its distinctive artistic character, will be welcomed as a mark of the best taste and beauty in the finest homes and educational institutions of the world.

HE has ranked in his field as such artists as Sargent, Abbey, Whistler and Pennell are ranked in their respective fields.

IN securing the services of Mr. Teague, the Theodore Presser Company has followed the policy that "nothing is better than the best," and the new and exquisitely beautiful cover of the Presser Collection establishes the standard for the manner in which every detail of this great edition of the musical classics will be maintained in the future. The cover stamps the standard. Naturally, the work is one of very great dimensions and many years will be required to complete various details. Music buyers, however, will welcome the rich appearance of the new and revised volumes, as they appear.

MR. PRESTON WARE OREM, manager of the Publishing Department of the Theodore Presser Company, is surrounding himself with an increasing circle of experts in connection with this great work. As rapidly as the high artistic and educational character of the work permits, the revised volumes and new editions will appear.



Always ask for Presser Collection for the Standard Volumes of Bach, Beethoven, Burgmuller, Chopin, Clementi, Czerny, Duvernoy, Grieg, Gurlitt, Hanon, Heller, Koehler, Koelling, Kuhner, Kullak, Lemoine, Loeschhorn, Low, Mendelssohn, Moscheles, Schumann, Streabbog, Etc., Etc.

A Music Students' Loan Fund of $12,500

To assist students lacking sufficient means for their study, the Alumni Association of the Sherwood Music School is providing a Music Students' Loan Fund of $12,500; to be distributed in amounts averaging $500, and used to defray the 1926-27 tuition expenses of new students entering the Sherwood Music School, beginning with the 1926 Fall Term.

These Loans are repayable over a period of six years, with very small payments during the first two years.

No competition is involved in securing the benefit of a loan from this Fund. The loans will be placed at the discretion of the officials of the Association, with students who can provide good character recommendations and who need financial assistance.

Requests for particulars and application blanks are invited; address—

The Singer's Etude

Edited for August by Well-Known Specialists

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

The Voice as Related to Health Culture

By Stanley F. Widener

A SEARCH for the secret of beauty of tonal quality in the correct singing as well as the correct speaking voice, leads one to discover how easily and spontaneously the great singers give the most difficult operatic arias. The conclusion is that after the preparatory work is finished, it is only a question of proper relaxation of the throat.

However, proper relaxation of the throat depends entirely upon a re-building of the human body. Ignorance of this fact accounts for the unpleasant quality of tone which seems to be inherent in the voices of many singers, students for years under celebrated vocal instructors (in reality, nothing more than vocal coaches) with little or no knowledge of the means of voice production.

Beautiful tones are produced by great singers by a perfectly natural pressure, otherwise known as the "coup de glotte" (stroke of the glottis). The effectiveness of this vocal attack depends upon the air-column, and the manner in which it strikes the vocal cords. Beautiful tones are sometimes made by inferior singers, who are referred to as musically talented, but mentally lazy. They seem to be endowed with perfectly controlled throat and tongue muscles, governed by only the slightest breath pressure; but their voices are not usually of proper strength and durability, for the reason that they lack not only the proper musical knowledge, but also the body-vitality which is the chief requisite of all great singers.

Any strong, healthy student can develop the voice of a real artist in two years' time by training the abdominal muscles to sustain an unlimited breath pressure, but for a weak or sickly student to aspire to become a great singer is like reaching for the moon. No royal road to the heights of vocal efficiency will ever be discovered, and the training is now and ever shall be as rigid as that of the prize fighter. There is absolutely no question concerning the effectiveness of proper breathing in the elimination of all diseases of the respiratory organs.

The most important factor in health culture is how much oxygen you breath, and the next important factor is how much reserve breath you keep while exhaling. The immense chest expansion boasted of by the noted athletes is not to be emulated. Such unnatural expansion causes the lungs and heart to suffer from the unequal strain always present when there is very little reserve breath. If, however, the chest is developed to remain permanently expanded, and the diaphragm permitted to work to full capacity, the singer is proceeding upon the right principle.

As a matter of fact, one who is able to stand and sit perfectly erect usually breaths correctly, but unfortunately for posterity, a large percentage of civilized humans are sadly in need of shoulder braces, and are being slowly starved to death for want of oxygen.

The following exercises are for the acquirement of breath control and the development of diaphragm muscular relaxation:

Excercise No. 1. Stand with feet close together, arms hanging loosely at the sides. Empty the lungs as completely as possible. Inhale full breath through the nose, while lifting the arms above the head. Clasp the hands and stretch upwards, as though trying to touch the ceiling. Remain in this position while mentally counting five at a slow tempo. Release the hands and bring them back to the sides slowly, while exhaling the breath as through an imaginary pipe stem.

Exercise No. 2. Place right foot slightly in advance of the left. Exhale all the breath possible. Bend upper part of body forward until you touch the finger tips. Straighten slowly to an erect position, while taking a full breath through the nose, the arms being raised above the head at the same time. Clasp the hands, turn to the left as far as possible, without moving the feet; then to the right, holding the breath all the while. Turn to the front, release the hands, and bring them down to the sides; exhale slowly during this last movement of the hands.

Exercise No. 3. Feet close together, knees pressed firmly back, hands gently gripping the sides. Inhale deeply. Bend forward toward the floor, keeping the knees rigid. Rise to erect position, turn to the left, then to the right, then backward as far as possible without moving the feet. Resume erect position, and exhale slowly through the closed lips.

Proper breathing is a thorough cleansing process for the interior of the body. It cleanses the air that remains in the lungs after each respiration; it dispatches the blood through the whole body, which collects all poisonous gases and carries them back to the lungs to be emitted with expiration. By holding the breath, as directed in these exercises, we prolong this process, and free the body of more impurities, while at the same time developing the muscles of the diaphragm.

This article has no purpose in advocating chest labor in singing. No one can control breath and turn it all into tone if the lungs are inflated to capacity. The diaphragm and the muscles of the lower ribs are the chief agents in breathing quietly and deeply, and under no circumstances should there be any heaving of the upper chest or shoulders.

Relaxation expresses a condition of absence of tightness, and must not be confused with looseness. The body should remain passive to the natural acts of inhaling and exhaling, in the act of singing, to obtain a perfect freedom of vocal expression. The student should also remember that retention of breath is not accomplished properly, at least for the vocalist, by closing the vent in the larynx, but simply by the action of the diaphragm and rib muscles. The throat must be kept lax and open.

In conclusion, there is no objection to any plan for the development of a beautiful voice. If there had been only one way, it would have been discovered long ago, but the knowledge of vocal science seems to be ever broadening. Certainly, however, too little attention is given to body-building. Careful dieting is essential, but sufficient oxygen developed through diaphragmatic breathing, exercises the stomach muscles, keeps the internal organs in place and gives virile tone to the entire system.

The Vowel's the Thing

By Charles Tamme

ALL SINGING is based on the word; and the singer's notes are sustained on the vowels of the word sung.

With this at the center of thought, assuredly singers cannot give too much attention to their vowels. Indeed, vowels should be cultivated with greater energy and persistence than any other phase in the mechanics of singing. The singer who knows his vowels has gone a long way on the road to success.

The study of vowels is by no means without complications, for there are various points of view from which they must be understood.

The vowel sounds are fifteen. A singer should train himself to recognize each of these, no matter how it may appear from a graphic standpoint. The "o" in "hot," for example, is really the vowel sound "ah" and never should be sung otherwise.

The table of vowels would read:

a as in grape
a as in fat
a as in father
e as in sleet
e as in fresh
oo as in fool
u as in fuss
aw as in law
o as in old
ü as in für (German)
ö as in schön (German)
an as in wander (anticipated n)
on as in don't (anticipated n)
un as in bunch (anticipated n)
an as in thanks (anticipated n)

When the vocalist has mastered these sounds, that is, when he has learned to sing each purely, with clarity and resonance, and with the maximum freedom, he should apply this knowledge in all his singing. To this end, the old *maestri* of Italy composed a form of music known in the profession as the *vocalise,* which is a composition to be sung on the vowel sounds. The *maestri* would propound various technical phases in the art of singing, which were then carried into execution by the singer in the various *vocalises.* In this way, unlimited attention was centered upon the vowel sound, the basis of all song.

Every vowel in every syllable of every word, long or short, should be clear in the mind of the singer, with regard to its exact pronunciation, as well as to the correct method for obtaining this pronunciation. For the vowel cannot possibly ring clear and true to the hearer if the conception of it is not clear and true in the mind of the singer.

When a note is sounded, the singer's whole attention should be focused on the vowel. Is the vowel sound true, is it free, is it resonant? If not, the inter which prevents these conditions sh studied and eliminated.

There should be no vague grop tone quality; tone quality will take itself if the vowel is right. As a m fact, it is the vowel which is colo the tone, as is sometimes erroneous posed.

When more than one note is su singer should be sure that there is vowel for each note, pronounced fectly as he knows how.

In scale work, arpeggios and ru great secret of clean cut work lies simple formula of bestowing a vowel sound on each note. No how quick the scale, how eph the run, the art of singing requir detail of attention with regard to th sound. Without it, uneven, blurre work is the result.

Again, in the matter of pitch—o notes, especially—the vowel's the For the pitch mechanism is entirel side the singer's direct control, and tion to it too often produces unfo results. But intelligent attention vowel on high notes is a valuable for singers to learn. Any note in th range is easy to produce, once a learns to pronounce the vowel on whi sung with care and precision, and t that knowledge.

If the singer will but learn th vowel is the answer to many mechanical as well as technical diff in his art, he will have made a gre forward.

Some Fundamental Pri ples of Voice Productio

By Dr. Floyd S. Muckey
The American Society of Singing Tea

From the Standpoint of the Listener

I. SOUND is a sensation pr through the organ of hearing by of air waves.

II. Pitch is that characteristic sensation of sound which depends the rate at which the air-waves stri ear drum.

III. Volume is that characteris the sensation of sound which depen on the extent of motion of the ear

IV. Quality is that characteristic sensation of sound which depends the manner of motion of the ear dr

From the Standpoint of the Produc

V. The voice is sound or air-w Vocal Tone is always complex, composed of several simple tones (F mental and over-tones), varying in and intensity.

VI. Sound, air-wave, or voice p tion necessitates the use of a mech which has three essential elements:

1. A vibrator, which is set in m by impact of breath again vocal cords and establishe air-waves.
2. A pitch mechanism to dete the rate at which the air- are originated.
3. A resonance mechanism to force the air-waves establish the vibrator.

VII. In the voice mechanism the cords serve as vibrator; the cart and muscles of the larynx form the mechanism; and the cavities of pharynx, mouth and nose, the reso mechanism.

VIII. Pitch of the voice is deter by the length, weight and tension o vibrating portion of the vocal cords

IX. Volume of voice depends upo extent of vibration of the vocal which is caused by breath pressure upon resonance.

uality of voice depends upon the
n of the vocal cords as a whole
segments, and upon resonance.
Vocal resonance, which is an im-
factor in voice production, is due
ympathetic vibration of the air in
nance cavities.
Correct voice production, or that
f the mechanism which produces
vocal tone, includes the free vibra-
the vocal cords, the free motion
cartilages and muscles of the
and the full use of the resonance
This action, under the influence
roperly controlled breath, produces
e for which Nature intended this
ar mechanism.
Any muscular contraction which
the free vibration of the vocal
he free motion of the cartilages
scles of the larynx, and the full
the resonance space, is termed an
ence.

XIV. Every form of interference leaves its impress on the quality of the tone.

XV. The vocal muscles are involuntary in their true action for voice production. The interfering muscles are subject to voluntary control. Correct action of the voice mechanism must be induced and not forced. Interference, being under control of the will, can be eliminated. Every form of interference by undue tension of the false vocal cords, or soft palate, or muscles of chin and tongue, and so forth, leaves its impress on the quality of tone.

XVI. The art of voice production is based upon the facts of anatomy, physiology and physics. The facts apply to every voice mechanism with equal force and in precisely the same way, and are therefore impersonal.

XVII. The art of singing is composed of four elements: Breathing, Tone Production, Diction and Interpretation.

Singing Out of One's Compass

of the greatest dangers of the
tudent is trying to sing out of his
compass. A contralto tries to be-
mezzo-soprano, a mezzo wants to
a dramatic soprano, a baritone is
itisfied with tenor rôles. As a
he larynx is strained, and the blood
in the vocal cords become dis-
and congested.
ourse, we all know that high tones
ny times electrifying, that the
rise to the "big top note," and
y we want them to rise; but, if
obtained at the expense of singing
one's register, the life of the voice
to be of short duration.
teacher and student, therefore,
pay strict attention to the middle
for the importance of these funda-
tones cannot be overestimated.
re the foundation upon which the
vocal structure is built, and the
of their proper use can be traced to the extreme registers. Trust to the true basic principles of voice production, that is, to automatic breath control and a passive throat, and allow your voice to grow naturally. If nature intended you for a soprano you will sing soprano, and never mind what you do, you will never be anything else. Santley, the most distinguished English baritone of his day, tried to make himself a tenor, but was never given a consideration by the public. Finally, some teacher told him that he was a baritone, taught him in that *tessitura*, and he became a world-renowned artist.

I used to consider that all arias and songs should be sung in their original keys; and it took me some years to get that thought out of my mind, to realize that if one desired to deliver a message it must be sung within the compass of the singer, otherwise the message was never more than half delivered.—*Music.*

American Traditions

ARED with the Old World our
toward culture are so young that
nation have fallen into something
bit of thinking of ourselves with
ng of inferiority in this particular
Nevertheless, the following from a
porary has a bit of the heartening
t:

"Massachusetts boasted an amateur Singing Society for years before the first choir of the kind came into existence in Europe (the Sing Akademie of Berlin) founded in 1791, and there were about six Societies in Germany when the Handel and Haydn Society of Boston was organized in 1815."

"Faust History"

OD, at the outset, received $2,000
publishing rights of his "Faust"
and he stipulated for a fee of
or every performance in Paris, a
ich continues to be paid to his de-
ts. Reckoning the number of
nances already given in France,
ey run to thousands, and consider-
e amounts demanded in Great
America, Italy, Germany and
re, it is estimated that about $300,000 had been paid to the composer and his family, which may be regarded as quite a satisfactory return for what was hardly three years' labor. Gounod visited London in 1863 for the production of "Faust," which was first heard at Her Majesty's Theater. Colonel Mapleson, the manager, thought so little of its possibilities that he insisted on a substantial contribution toward the stage expenses.—*London Daily Mail.*

inger whose general education has eglected is in a most unfortunate And by general education is not nly those academic studies that pcurn in schools. The imagination must be stimulated, the heartfelt love for the poetical must be cultivated, and, above all things, the love for nature and mankind must be developed."—MME. MARCELLA SEMBRICH.

The Far-Reaching Influence of the

KIMBALL

DURING the many years since the Kimball piano was first manufactured, this instrument has steadily filled a larger and higher place in the estimation of discriminating people. The influence has spread from small beginnings, until to-day probably more than 400,000 Kimball pianos, as well as other Kimball instruments, are in daily use. In homes, schools and churches, a steadily increasing number of Kimballs stand as witnesses to abiding merit.

There is a Kimball exactly suited to your home—a Grand, an Upright, a Reproducing Piano, a Player Piano, or a Phonograph.

ties of human nature but the ıains that the life at the summer reates an urge to study intensively. ; analyze a possible day at a sum- ;ic school. After breakfast, and a riod of recreation, a short chapel s held in which the whole student rticipates in singing devotional and ;ongs. The first period may be to theory and harmony classes, or in choral conducting. The next ıay be taken up with school music classes of all kinds.

this intensive work a period may wherein the whole school comes for lectures in music appreciaoted music educators may appear ;ent their favorite topics. This followed by various classes where teaching with the use of small of children is carried on. The session may close with the school period, when the entire student ;ets some noted conductor for an onal study of the choral works nasters. During the time that all nethods classes have been carried ain students have been studying d instrumental playing individually lasses with special teachers. These may be post-graduates or those irly interested in obtaining a techowledge of the instruments of the a. These are the so-called spedents.

The Afternoon

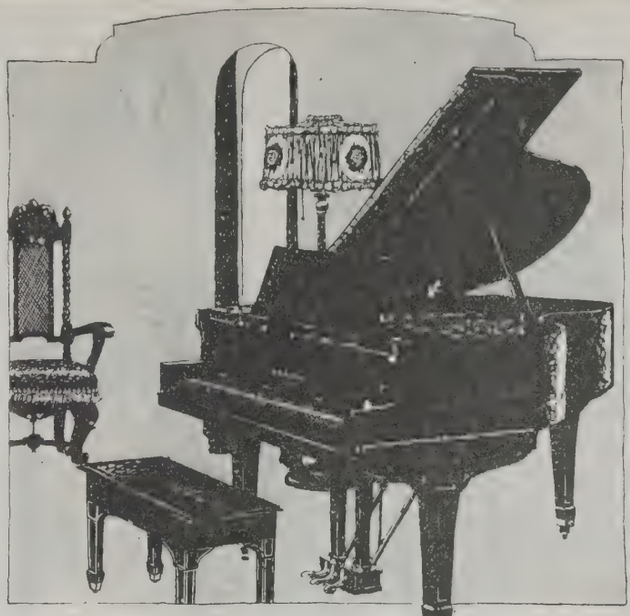
ER LUNCHEON and a period of reation, a period of general methresented to the entire student body. music educators may discuss imdevelopments in school music; and nbers of the faculty may present of their subjects. In this way all students get an insight or a crossof the work carried on in all of the ; classes. The next period may be to sight singing in graded classes. rd afternoon period may be given educational psychology and special ;. Then comes a period for or- ;ion, orchestra methods and class s in presenting violin and piano .The day's work may end with the orchestra rehearsal.

makes a full day, but we must re- : that no student takes all of these . Many students find time to rest ers enjoy the outdoor life afforded. social life of the session is empha- y the fact that the entire student eets often during the day. As the .re served in large community din- ls there is an opportunity for in- "stunt" and community singing. enings are given over to study, so- ersion and concerts. It is inter- to observe the reaction of certain souls who "find themselves" in surroundings. Experienced super- ınd young students meet on a com- ocial level and much good comes he discussions which arise and the onal contacts which are made.

r school superintendents visit these : schools in order to secure s to fill vacancies which have oc- in their teaching forces. The student willing and capable receives ready tion, and the teachers and officers school have many inquiries for the s of the outstanding pupils in their School boards recognize the pe- value of attendance at these summer and often defray the entire expenses r teachers who elect to go to sumhool. Further, certain communities he salaries of teachers who attend the summer schools. There are many incentives beside these to attend.

Beside the possibility of attending summer school regularly, there is the need of considering the advancement of the avocational interests of the supervisor. Every one should have a "hobby." For the music supervisor it should be some outdoor pursuit. Getting back to nature is getting close to the source of inspiration in art. I know of a number of music supervisors who are successful gardeners. Many are fond of "hikes" and camp life. The great out-of-doors should have a call for all of us.

Travel enriches our background, and it is possible so to arrange an itinerary of summer travel as to cover the visiting of musical points of interest. The summer music schools and music centers may be visited. By traveling in the summer, an opportunity is afforded to hear opera and symphony orchestra concerts. Some of the large cities carry on a full summer season of out-door opera. Practically all of the larger cities have symphony orchestras which present fine programs daily.



The supervisor naturally counts on the summer time as the time in which he can read articles on school music. A liberal education can be obtained by this method of self-help. Many issues of music magazines have accumulated during the regular school year, and it is imperative that these valuable contributions be read and analyzed for future stock-in-trade. The educational magazines should not be overlooked if one is to maintain contact with the place of school music in the trend of modern education. And then there are many works on music and general education which cannot be overlooked. To offset this (heavier reading) the supervisor should endeavor to keep pace with the best of fiction.

Keep up Technic

BESIDES THE reading of literature concerning his field, the supervisor turns with enthusiasm to technical practice of his chosen instrument. This often proves to be a real diversion. The busy teacher does not have time to practice during the regular season, the sum total of actual playing is often small, and so there is real recreation in piano, organ, violin and vocal practice. Much material should be examined and read in order to make a suitable selection of music programs for the coming season. Orchestra music should be selected and studied. Certain instrumental parts may need revision or rearrangement. Operettas should be read and selected. Time should be given to the examination of chorus and glee club material.

The local phonograph shop will gladly turn over a library of records for the supervisor's inspection. The piano store will welcome an inspection and hearing of the educational piano recordings. The need for a detailed planning of the courses in music appreciation is obvious; and this preparation should fill many enjoyable hours of the enthusiastic supervisor's time.

I do not want to give the impression that the supervisor's summer should be filled up with hack-work of various kinds. Much of the reading and planning can be done while one is away on a vacation. One of the greatest problems that faces the educational and social world today is the question of the proper use of leisure. A contented mind is a busy mind; and the satisfaction of looking back on a summer filled with quiet study, travel and recreation is well worth the time spent in its planning.

WEAVER
GRAND PIANOS

BECAUSE of its beautiful and enduring tonal qualities, a host of cultured people—gifted musicians, talented singers, skilled teachers, earnest students, and discriminating music lovers—acclaim the Weaver Grand Piano as one of the really artistic instruments of America.

The Gateway to a successful future

ARE you interested in teaching music? In the concert field? In theatre organ playing? In Public School Music? These are a few of the professional fields for which we can prepare you. We assure you an opening in your chosen line as soon as qualified.

Teaching

Students preparing with us for teaching may take positions in our Extension Branches, of which there are more than one thousand located all over the country, or in our Chicago Neighborhood Branches, of which there are more than thirty, with others in process of establishment.

Those who come to us with previous training and experience can very quickly qualify to take positions in our Chicago Neighborhood Branches, thus gaining further experience and earning money for their own study.

Theatre Organ

Since the establishment of our Theatre Organ Department, we have trained and placed organists in positions with salaries starting from $85 to $100 a week.

Students of piano and organ, who have developed instrumental technic and musicianship, can prepare to meet the requirements of theatre playing in a very short time. Good openings are assured.

Concertizing

Chautauqua and Lyceum tours offer salaries of $40 to $100 weekly. Concert engagements are usually paid for by the single appearance, the fee being $25 to $50 and upward.

Our extensive system of Branches enables us to provide ample openings for those we train for the concert field.

Public School Music

Our two-year course leads to a Teacher's Certificate, entitling the possessor to the Illinois State Teacher's Certificate and permission to teach, without examination.

Annual salaries of $1,500 to $2,500 are available, with large outside earnings through private teaching, choral directing, etc.

More openings than we can supply applicants for are referred to us every year from school authorities throughout the country.

Our Fall Term begins in September.
Write for Catalog mentioning **The Etude,** ***and telling us which phase of our service most interests you.***

Sherwood Music School

Founded 1895 by WM. H. SHERWOOD
Fine Arts Building . 410 So. Michigan Avenue
CHICAGO, ILLINOIS

Teaching Positions

TEACHING positions are available in our Thirty-two Chicago Neighborhood Branches for young teachers of piano and violin who wish to teach, and, at the same time advance themselves by study with our artist teachers; also for advanced students as soon as they are qualified to teach.

See Fall Announcement elsewhere in this issue. Write for Catalog and Teaching Position Application Blank, mentioning The Etude *and giving an account of your training and experience.*

Sherwood Music School

uld I Take Up Music Again?

ETUDE:
ing THE ETUDE Symposium on this
I find that most of the prominent
are of the opinion that they would
would they wish their children to
nusic, unless they had such marked
at they could rise far above the

sure I humbly represent a great
unknown worshippers at the shrine
When I began teaching I had ambi-
pected to make my mark; I expected
wonderful players. I now smile
past struggles in trying to bring
the desired goal. Some have suc-
ry well; some have even become
teachers; and yet have I achieved

I different from the school teacher?
f her pupils become presidents or
ice in the Hall of Fame? And yet
s not the world owe to the obscure
ful teacher in the daily schools?
rica is to become a land of music,
must become as common as that of
r subject. Every child must have
of training. The great artist-
cannot reach all of these. The
usic teacher has a niche, and a most
one, to fill.
f us would like to have been great.
s may pass unheralded and unsung.
ire a part of a great and glorious
. We obscure musicians, if we be
ful, in the end shall have played a
ole in the great Drama of "Making
d Musical." F. J. M.

arning about the Composer

ETUDE:
many pupils can tell you anything
composers of the music they play;
many teachers take the trouble to
s information?
a young girl play beautifully Grieg's
r Piano, but after talking with her
rised to learn that she had abso-
idea who Grieg was. I am quite
had she known a little about his
would have played his piano sonata
ttle better. Studying the lives of
is enjoyable to the student and
stimulate interest in music.
PAUL C. DEGAVRE.

Chopin at Nohant?

ETUDE:
call your attention to a mistake in
thal's delightful sketch "The Genius
n," in February number of THE

e 105, "Chopin's Sacrifice," he states
however, he was located at Castle
in Majorca——."
is not in Majorca but in France,
Châtre, in Berri. Nohant was the
country home of George Sand's grandmother, Mme. Dupin de Francueil, a fine example or representative of the *ancien regime*.

Berri or Barry was the *civitas or pagno Bituri censis* of Gregory of Tours. Berri suffered during the hundred years war, and during the wars of religion in the sixteenth century.

As early as 1360 it was made a duchy. The last to bear the title of "Duke of Berri" was the ill-fated Charles Ferdinand, grandson and heir of Charles X., from whom George Sand claimed to have descended.

George Sand describes Berri as the unknown *Vallee Noire*. She loved the wild rustic life at Nohant, and in turning from her novels of revolt, she chose simple stories of rustic life, pastorals of great beauty. It is here that she shows her true originality and genius, although we think of her sarcastic pen, her brilliant characterizations. It was at Nohant that she spent her girlhood, and later on held her court, as it were, visited by Liszt, Chopin and others.

JULIA E. SCHELLING.

Finding the Right Music

TO THE ETUDE:

If you have ever been puzzled, when buying music, in judging what is most suitable, desirable, necessary or popular, you may find help in the following suggestion. Have on hand a large loose-leaf notebook, such as is used in school laboratories, and paste in it all clippings of musical programs or newspaper announcements of recitals, concerts and festivals, in alphabetical order, according to name of teacher, artist, school or radio station. Always leave a space above each clipping for writing in the data when published.

It would be well to reserve a whole page for each teacher, school or radio station, as many of them give several programs in a month or even in a week. G. H.

Counting Out Loud

TO THE ETUDE:

I am a music teacher of about fifteen years' experience and also a theatre pianist and organist of ten years' experience. I am sorry that many of my pupils, subscribers to THE ETUDE, may read the article in your November number by J. G. Hinderer. His plan may be fine for a finished musician, but, for the first three years' study, children and grown-ups need to count, and count out loud much of the time. It helps them to concentrate on their work.

Please excuse this explosion, but I would love to see Mr. Hinderer undertake to be a drum major for a high school band! He would find young people do not think or feel very much. When they are older it is different. A teacher who has lived with students many hours every day knows as only a teacher can know. I will not teach a person who refuses or pretends he is unable to count out loud. MRS. PEARL STALKER-STUMP.

New Books on Music—Reviewed

in Modern Music, Second Series. By H. Hadow. Cloth Bound; three and twelve pages; illustrated. Pub- The Macmillan Company. Price,

k that describes actual people, we ifully; one that tells us what they ie, we follow eagerly; but one that the motives for their actions, we ungrily. This volume does not leave an unspoken "Why?" hird portion of each book is made up pts of the libretti and musical text. hor seeks through every example to me the fact that the melody is not osed on the text like a capital on a marble column, but that it is made to fit the libretto as a brook's course is shaped by its bed. The excitement of the mob, the anguish of torture, the sight of death; all are given through union of word and tone.

Beethoven. By Paul Bekker. Translated and adapted from the German by M. M. Bozman. Three hundred and ninety-one pages; bound in cloth. Published by E. P. Dutton & Co., and J. M. Dent & Sons, Ltd. Price, $4.00.

A work on Beethoven, like one on Alexander the Great, inevitably stamps itself with the personality of the man himself, for, as the latter conquered the world of men, so the former conquered the world of tones.

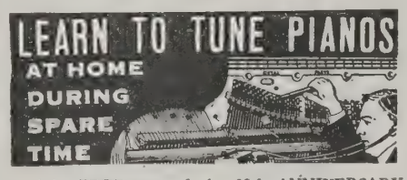
The book relates one long and bitter struggle. First, biographical; Beethoven overcoming adverse conditions in the shape of his parents, his brothers, his adopted son, his deafness: second, psychological; Beethoven combating his personality, his stubborness, his eccentricity, his egotism, his loneliness: third, scientific; Beethoven subduing rhythmical and tonal possibilities to his will in Pianoforte Works, Symphonies, Dramatic Works, Vocal Works and Chamber Music.

As age increased and sounds became more closely locked in his thoughts, he required stronger and more complicated mediums of expression. Once (we are told), when brought to task on the difficulty of his compositions for the violin, he exclaimed, "Do you for a moment believe that I think of a wretched fiddle when I am composing!"

This book renews for us the tread of that mighty spirit resounding through the realms of tonality, becoming at last a triumphal march down the ages.

The Pianist's Thumb. By Howard Wells. Seventy-three pages. Cloth bound; illustrated. Publishers: Oliver Ditson Company. Price, $1.25.

As a topic of general interest to pianists the thumb and its dexterity excels the weather or the next war. Here, then, are examples, taken from the greatest composers, of thumb passages in scales, arpeggios, chords and trills, with accompanying directions for gaining velocity, delicacy, smoothness, emphasis and strength.



MUSIC MAKES THE HOME HAPPY!

Half-Stopped Organ Pipes

By Helen Oliphant Bates

HALF-STOPPED pipes are a hybrid between open and stopped pipes. They may be divided into two kinds:

(1) Those in which a small hole is burned down through the stopper.

(2) Those in which the pipe tapers to the top until the opening is only one-third or one-fourth the size of the mouth.

In the first class, which bears closest relation to the stopped pipes, the hole through the stopper makes the pipe partake of some of the brightness of open pipes. The tone, which is not as thick as that produced by pipes entirely stopped, has a peculiar color, due to the presence of overtones not found in the natural harmonic series. Stops belonging to this class are the treble portion of the Lieblich Gedeckt, the Clarinet Flute, the Rohrflote and the Flute à Cheminée. The Flutes à Cheminée, as the name implies, are built with a chimney which partially opens the pipe. The wider this chimney, the more like an open pipe the sound becomes.

The second class, or half-stopped pipes, represented chiefly by the Gemshorn family, is most closely related to the open pipes, but the smallness of the opening at the top makes the tone assume some of the characteristics of stopped pipes. Stops of this family produce a clear, incisive tone which combines softness with assertiveness, and brightness with a minimum of power.

The intelligent and effective use of half-stopped pipes will follow as a logical result of the knowledge of their structure and quality. Inasmuch as they stand between open and stopped pipes, they will be used:

(1) Alone, when a brilliance midway between open and stopped pipes is desired.

(2) To add to stopped pipes some of the quality of open pipes, and to open pipes, some of the quality of stopped pipes.

(3) In Combination with both open and stopped pipes, as a means of bringing the two together and unifying the tone.

Our Salaries

By R. Dunham

NONE of us would object to an increase. Few of us are likely to get it. Before we say too much about it however, would it not be well to pause and consider the situation? Are we worth even what we get? Many of us feel the present propaganda for "better salaries to the organist" to be ill-considered. It would be vastly more valuable and, incidentally, more profitable to make our slogan "better music to the churches."

Every organist knows whether he is trying to give the very best that he can produce, or whether he is more concerned about his salary. Churches may sometimes be unfair to their organists. Is it not true that just as frequently organists are unfair to their churches? It behooves us therefore to examine ourselves before we complain too loudly about what we are being paid. We must make our church music so much better that every service will be a revelation of the very finest that sacred music has to offer. Then and not sooner, shall we have any moral right to force our churches to raise more money for our monthly checks.—*American Organist.*

"I am in favor of establishing a definite and permanent place for music in our national activities."—PRESIDENT HARDING.

The Organist's Etude

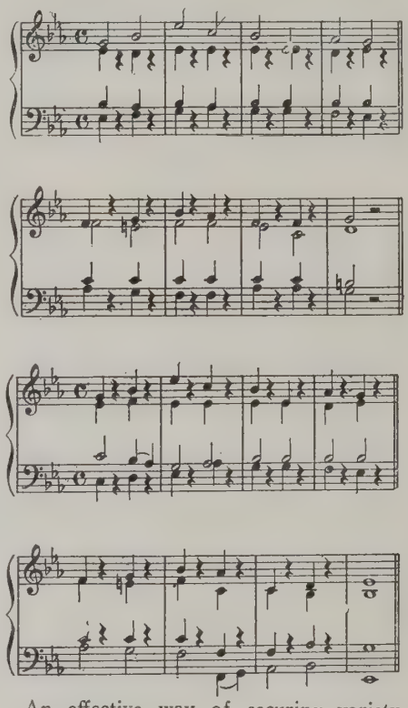
Edited by Well-Known Specialists

It is the Aim of THE ETUDE to make this Organ Department "An Organist's Etude Complete in Itself"

Hymns and Chorals

By Charles Knetzger

A HYMN is a religious song belonging to the choral form. It is usually written for four voices which, when played or sung together, form chords which give the composition a dignified character and make it well adapted for divine service as an expression of prayerful adoration.



Hymn and choral playing is of great importance to the student of music, for it develops his musical intelligence and sensibility in a remarkable manner.

A good way to master hymn playing is to take each voice separately, beginning with the highest, practicing it until it can be played correctly and fluently. Then the parts may be played together, while the pupil endeavors to follow each voice in turn, either mentally or vocally, if possible. Parts which are too high or too low for the voice may be sung an octave higher or lower, as the case may be.

Hymn and choral playing is well adapted to secure an agreeable, smooth singing tone; for the keys must be gently depressed and held their full value with a firm clinging touch, instead of striking them and releasing them instantly. For this reason it is necessary to make frequent changes of fingers upon the keys to insure a smooth legato effect. Thus, we often find two figures written over a note, as for example $\overset{4}{\frown}5$. This means that the note is to be played with the fourth finger, which holds the keys down until the fifth finger is substituted in its place. This is usually done almost instantaneously. The fourth finger is then free to play the next note without breaking the legato.

Choral playing also affords excellent opportunity for pedal practice; for the frequent changes of chords necessitates many changes of pedal, while the simplicity of structure enables the student to follow the modulations with ease. To keep the tones of one chord from mixing with those of another requires no little skill. The pedal should never be pressed down simultaneously with the chord, but immediately after; and it should be released before the next chord is struck.

Mason's *Touch and Technic, Book IV,* has excellent exercises for the production of fine discrimination of tonal effects in chord playing. He advises directing the force of the touch to a particular voice of the chord by employing the legato touch, playing the other voices with a finger staccato. The following examples will make the meaning clear:

An effective way of securing variety when playing hymns on the piano is to emphasize each voice in turn, first the soprano, then the alto, tenor and bass. As the force of a stroke depends largely upon the speed with which it is struck the fingers which play the predominating voice should strike the keys with a speed somewhat greater than that of the other fingers. Beautiful effects can be obtained in this way.

A Famous Hymn Composer

By E. A. Tranah

THE Rev. John Bacchus Dykes, Doctor of Music, London, England, born in 1823 and died in 1876, is to-day the favorite composer in the Christian world; and yet comparatively few people (even musicians) know his name. This fact has been tested several times in social and church gatherings of many denominations (and it will stand the same test to-day), by first taking a vote as to whether sacred or secular music is the more popular. Sacred music invariably gained the vote, with hymns as the preference in this class. Then by asking those present to name their favorite tunes, an average of four out of ten were for Dr. Dykes' music; which easily places him in the foremost rank of all composers who ever lived.

On looking over the Sunday papers it is a rare thing to find a church program, of any denomination, without at least one of his hymns on it. To mention a few of his writings will convince our readers that the foremost position was earned by this great, good man. He was beloved by everybody; and his funeral service at Durham Cathedral was one of the largest and most solemn ever held there.

"Lead Kindly Light," "Holy, Holy, Holy," "Jesus, Lover of My Soul," "O Jesus, Thou Art Standing," "Our Bl deemer," "Hark! Hark! My Sou Paradise," "Art Thou Weary," "I the Voice of Jesus Say," "Near God, to Thee," "Days and M Quickly Flying," "Eternal Father to Save," "Day of Wrath, O I Mourning," "Hark the Sound of Voices," and over one hundred ot every Episcopal, Methodist and I terian Hymnal published in the l language, flowed from his consecrat

Dr. Dykes was, for many years, of St. Oswald's Church, Durham land, a small chapel under Durham dral which was only used on we by the divinity students of the U sity; so Dr. Dykes spent most of hi days at St. Peter's Church, Newcas Tyne, fourteen miles away, where be easily understood, under his gu we had the reputation of having the boy choir in England, for hymn s His power of intensifying the l solemnity and grandeur of the word wonderful. His instructions were, your whole thought and sincerity i *words,* and the music will take care self;" and this will be found to be th foundation and true key-note for ing our grand hymns appeal d to the minds and hearts of all listeners as well as singers; sendi congregations home with the feelin as Bishop McClaren of Chicago ren to me, with his hands on my sho that he "felt better after the service the intense sincerity affected him, s he could preach better;" whereas, ca thoughtless, frivolous singing so dep him that he could not collect his th sufficiently to bring them out as fo and distinctly as he would wish.

Music to Illustrate Words

I have heard Dr. Dykes say to hi choir that, if they could not impro the beautiful words with music, it be better to cut out the music. phrase was carefully studied, and the derful work achieved by him was t sult of his sincerity with which h spired those under his guidance, and writing music exactly fitting and a priate to the words. A good soulful o ist can almost tell what his music n without any words.

I was fortunate enough, as boy and to be under this great master's tra for twelve years; and in my church as soloist and choir master in Amer have greatly benefited by following i footsteps and striving to have those a me to use their best endeavors to every word they utter. More perfec inspiring music can thus be produced in any other way; of course, not negle the correctness of the music—and comes naturally when the heart and are in the words.

There have been reasons for w this article. First, that the name of a who stands so preëminently in the rank should be remembered; and se that a study of his works and met may add to the piety, sincerity, beauty grandeur of our church services.

All the hymns enumerated in this a I sang in on their first production as as of most of his others, of many of w I have his original manuscript. They at once received as gems and inspira of the highest order.

"Music is preëminently the Christian Music is the fundamental that touche men in their common human feel Great music brings us very close toge soul to soul, without regard to accide birth, station or other dividing factors—HORACE WHITEHOUSE.

The One-Legged Organist: A Word on His Behalf

By Edward Benedict

quintessence of opprobrium, the ul-ncentrate of scorn, the superlative ive hurled forth by the legitimate upon the head of his theatrical is "one-legged organist." It tersely the feelings of one who ped Parnassus via Bach, Guilmant or toward a parvenu lately gradu-m the submerged ranks of mere layers."

d with the scorn is a touch of o, for who will deny that the has many times gained fame and r reward far in excess of that ac-d by his more conservative

hrase "one-legged organist" was ied especially for the theatrical For years teachers have been ac-l to apply the epithet to pupils too lazy to disengage the right m its comfortable place on the ial when duty called. The theatri-er, however, brazenly flaunted his edness in the face of a hostile id even gloried in his shame.

did he get that way? It certainly asier to let one foot do the work There must be some other rea-the upper half of a theater organ's retains its virgin varnish year in out while the lower octave wears the contacts.

y mind it is the radical change construction which is responsible one-legged style of playing. First, ric swell action enabled the player ice accents, thus giving a welcome to what had hitherto been a some-mbre art. This new way of using lls, plus a constant use of the s, seemed to please theater audi-nd so the organist's right foot and l pedals became inseparable pals. dvent of high wind pressures ena-voicers to produce stops of marked ality, in distinct contrast to the in-flutes, reeds and strings of yester-he theater organist soon found that kest way to invoke the managerial was to play with his swells open. complained that the music was ud" and that it "hurt their ears." words, keen strings, kinuras, tubas and tibias could not be served undiluted to the cash customers without incurring their vehement displeasure. This state of affairs made it necessary to close the swells tight when two-foot pedal passages were played, a very unsatisfactory procedure.

The fact that the "movie" organist played almost entirely from piano or orchestral music was another factor influencing him toward one-footism. The tendency was to let the pedals play the simple bass notes, all bass passages being taken care of on the manuals. With the sixteen-foot reeds on second touch any bass melody could be brought out quite satisfactorily with the left hand.

It seems to me that the only logical way to play modern keen-voiced, high-pressure organs is with the one-foot pedal system. I have heard two of America's foremost theater organists attempt "two-foot" passages on mighty-voiced units and the result, while spectacular on account of the elevated consoles, could hardly be classed as musical.

Mind you, I hold no brief for the one-legged system. Accuracy is not always humanly possible and solo passages can be rendered only in a jerky and disjointed manner. A friend of mine who was pianist in a New York vaudeville theater persuaded the management to install an organ. A few weeks' practice at a convenient church and he was ready for his debut as a "movie" organist. The ambiguity of his foot work prompted me to inquire as to just what system of pedal technic he employed. His reply was illuminating. "It's very simple, Benedict. Any note I happen to hit is the right one."

The one-legged theater organist is here to stay until the organ builders devise new means of operating the swells. Just what form this invention will take the future alone will tell. I favor a tilting back-rest to operate the swells while both feet are busy on the pedals. A double touch to work the shutters has also been suggested.

Jumping to the coda, I would request you legitimates to temper your scorn with pity. Perhaps the one-legged organist is such through circumstances and not entirely through inclination—*From the Diapason.*

The Choir Attendance Contest

ENDANCE at the rehearsals of a vol-choir is such a live question that ution of it is always a source of to such workers. A contest held choir of St. Luke's Episcopal of Long Beach, California, met wonderful results.

quote the following account from *g Beach Telegram:*

contest was exceedingly close, with ming team showing an average at-e record for the three months of itest of 84 per cent. and the losers per cent. At the checkup it was red that the losing team had earned ints out of a possible 598, and the g team 512 points out of a possible four members on each side scored cent. attendance, during the entire of the contest, while there were thers who entered after the contest whose attendance was 100 per cent. the period of their membership.

ng into consideration the fact that ganization is a volunteer choir of mbers, it is remarkable that the at-ce at rehearsals was almost perfect. following are the rules which were d for the contest:

"Each attendance at each service Sundays scores one.

"Rehearsals not scored unless for tardiness deduction.

"Tardiness at rehearsals or services deducts one-half point from total score of each member.

"Absence from rehearsals bars member from services the following Sunday.

"Absences for two complete Sundays without meritorious excuses, will be considered as resignation.

"Resignations will be accepted as of date tendered.

"Rehearsals to begin promptly at 7:45 and continue till 9:15.

"Judges of the contest shall be the choirmaster, the organist and rector and the two team captains.

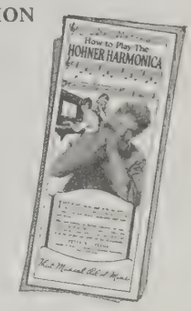
"The contest terminates Easter Sunday night, April 20, and officially begins Sunday morning, January 20.

"The services to be held Good Friday evening score one just as a Sunday service.

"The team scoring the most points shall be declared the winner. The other team will be required to present the winning team with an evening of entertainment."

Homework on a HOHNER Is Fun!

Music plays an important part in the education of the boy and girl; and to-day the harmonica is playing an important part in musical education.



Any child can quickly learn to play a Hohner Harmonica with the aid of the Free Instruction Book available to music teachers and others through dealers or direct.

There are no long hours of study and practice—just a few minutes a day, at home or in the school—and very soon the pupil will be playing popular, classical and operatic selections.

Homework on a Hohner is *fun!* It teaches accuracy, rhythm and expression—the basis of a musical education. If you are interested in knowing the possibilities of the harmonica as "a stepping-stone to serious musicianship," write M. Hohner, Inc., Dept. 204, 114 East 16th Street, New York.

FREE BOOK OF INSTRUCTION

This interesting and helpful booklet comprises 16 pages of simple instruction illustrated with charts and pictures, and includes six popular musical selections arranged for harmonica and piano. Copies in any quantity will be supplied upon request.

Hohner Harmonicas are endorsed by such prominent group educators as—

Peter W. Dykema, Prof. School Music, Columbia University, New York.
Dorothy Enderis, Ass't Supt., Milwaukee Schools.
W. A. Gore, Supt. Schools, Webster Grove, Mo.
Nellie C. Hudd, Principal Mozart School, Chicago.
Harry Keeler, Principal, Lindblom High School, Chicago, Illinois.
Edward Randall Maguire, Principal Junior High School 61, N. Y. C.
W. H. Wheeler, Principal, Alton Community High School, Alton, Illinois.

—AND MANY OTHERS—

HOHNER Harmonicas

AUSTIN ORGANS

THE standing of Austin in the one great city of Philadelphia, is indicated by Austin organs in St. Mark's, St. Luke and Epiphany, St. Clement's, Church of the Saviour, Arch Street Presbyterian, Cathedral SS. Peter and Paul, Girard College, First New Jerusalem Church. All are very large, comprehensive instruments; models of modern construction and beautiful churchly tone.

Organ and Choir Questions Answered

By Henry S. Fry

President of the National Association of Organists, Dean of the Pennsylvania Chapter of the A. G. O.

Q. For the past several years I have been a student of the piano and am now playing fifth grade music. How long should one study the piano before taking up the pipe organ? Could you advise me as to what studies to take up in preparation for the pipe organ? Is typing harmful to one studying the piano?

A. In addition to your piano studies, we would suggest that you take up the studies of harmony, counterpoint and fugue, theory, orchestration, organ construction, specifications and so forth.

Continue your piano studies until you have acquired a brilliant facile technic, which will be of great value in your organ work.

The Editor is not prepared to say whether or not typing is always harmful to piano technic. It might depend on how much typing is done and the kind of touch used on the typewriter. If a stiff finger touch is used it might induce "pounding" on the piano.

Q. Being a reader of THE ETUDE *and an organist in a local church I read your answers with great interest and benefit. I have a volunteer choir of twenty voices, eight sopranos, six altos, four tenors, and two basses, all with rather strong voices. Having no choir leader, I must do the directing myself. My question is, "What fundamental stops should I use when accompanying the full chorus, also when accompanying solo voices?" I realize there is no fixed rule, and one must use one's own judgment, but I would like to know what principal stops to use when accompanying. The following is the specification of our organ:*

GREAT ORGAN, 8 ft., Open Diapason; 8 ft., Gross Floete; 8 ft., Dulciana; 4 ft., Gemshorn; Harp.

SWELL ORGAN, 16 ft., Bourdon; 8 ft., Violin Diapason; 8 ft., Gamba; 8 ft., Salicional; 8 ft., Aeoline; 8 ft., Stopped Diapason; 4 ft., Flute Harmonique; 2 ft., Flautino; 8 ft., Vox-Humana; Tremolo.

PEDAL ORGAN, 16 ft., Bourdon; 16 ft., Lieblich Gedeckt.

COUPLERS, Swell to Great Unison; Swell to Great 4 ft.; Swell to Great 16 ft.; Swell to Swell 4 ft.; Swell to Swell 16 ft.; Swell to Pedal; Great to Pedal.

A. As you say there can be no fixed rule as to stops to be used, much depending on the amount of tone being produced by the singers, either as individuals or as a chorus, and the character of the accompaniment. For fortissimo passages with your full choir, full Great, Swell and Pedal, with Swell to Great, Swell to Pedal and Great to Pedal couplers might not be too much organ to use, though, if your Gross Floete is unenclosed and very loud toned, it might be best to omit it, as it has a tendency to destroy the effectiveness of the metal Diapason quality.

When the choir is singing with less tone than fortissimo reduce your registration accordingly to obtain proper balance. For foundation stops in accompanying soloists we would suggest the Swell organ eight and four feet stops (omitting Vox-Humana, as a rule, though it is sometimes effective in coloring the tones of the other stops). If this combination proves to be too much you might omit Violin Diapason or Gamba, or both. Care should always be taken not to allow the organ to overpower the singers.

Q. If the contents of this letter would help out the "Organ Question and Answer" department of THE ETUDE *music magazine, I would be only too glad to have you use it, as it might help someone else. I wanted to attend the Guilmant Organ School, but it was impossible for me to do so as it was so far away. I am enclosing one of their programs with the subjects marked in which I would like to become proficient. I desire to become proficient in all the subjects under the three headings.*

1. Church Service Playing.
2. Recital Playing.
3. Subjects under "Lectures."

Since I am unable to attend the school, what would you advise me to do that I may become expert in these subjects and be the best kind of an organist it is possible for me to become? I am starting a "Music Library" and wish to include in it all the best organ music from the forerunners of J. S. Bach up to the most modern organ composers. I would like to include also the best books on Musical Literature and works pertaining to the pipe organ. Can you give me a list of the best and leading publishers of organ music, from whom I may purchase the best editions for this organ library, also any Organ or Music Journals or Magazines which would keep me posted on new publications worthy of being included in the library?

A. You have set for yourself a difficult (perhaps not impossible) task in endeavoring to attain the proficiency you desire without a teacher. We would suggest the following works as a beginning for your studies and for the library, assuming of course that you have already acquired some organ technic, manual and pedal:

FOR PRESENT STUDY: Master Studies for the Organ, Carl; Pedal Studies, Nilson; Trios, Albrechtsberger.

FOR ORGAN LIBRARY: Forerunners of Bach, Bonnet; Organ Works, complete, Bach; Organ Concertos, Handel; Organ Sonatas, Rheinberger; Organ Sonatas and Preludes and Fugues, Mendelssohn; Organ Sonatas Original Edition, Guilmant; Organ Symphonies, Widor; Organ Symphonies, Vierné; Organ Works, complete, César Franck; Organ Sonatas, Borowski; Organ Sonatas, Mark Andrews; Organ Suites, Rogers; Organ Symphonies, Barnes; Organ Symphony, Dickinson; Organ Works, Karg-Elert; Organ Works, Max Reger; Arrangements for Organ, Best; and many miscellaneous pieces by Bonnet, Dupre, Gigout, DuBois, Faulkes, Wolstenholme, Hollins, Yon, Bossi, and many additional works by American composers of which the leading publishers will gladly furnish you list.

WORKS ON CHOIR TRAINING: Choir and Chorus Conducting, Wodell; Choral Technique and Interpretation, Coward; Choir Training, Richardson; Practical Hints on the Training of Choir Boys, Stubbs; The Essentials of Choir Boy Training, Hall; The Choir Trainer's Art, Richardson.

LITERARY WORKS PERTAINING TO ORGAN: The Organ and Its Masters, Lehee; The Organ in France, Goodrich; The Organ and Its Position in Musical Art, Statham; Organ Playing, Its Technique and Expression, Hull; The Organ of the Twentieth Century, Audsley; Organ Stops and Their Artistic Registration, Audsley; The Art of Organ Building, Audsley; The Temple of Tone, Audsley; The Art of Transcribing for the Organ, Ellingford; French Organ Music, Past and Present, Grace; Organ Works of Bach, Grace; A Primer of Registration, Nevin; Organ Accompaniment, Richards; Johann Sebastian Mach the Organist and His Works for the Organ, Pirro.

GENERAL MUSICAL LITERATURE: Dictionary of Music and Musicians, Grove; History of Music, Stanford-Forsythe; Music and Musicians, Lavignac; Musical Ministries in the Church, Pratt; Music in the History of the Western Church, Dickinson; English Hymns, Duffield; The Story of the Hymns and Tunes, Butterworth; Standard History of Music, Cooke; Great Men and Famous Musicians, Cooke; Music Masters Old and New, Cooke.

MAGAZINES: The American Organist; The Diapason; THE ETUDE; The New Music Review.

A. G. O. EXAMINATIONS: Associate and Fellowship Examination Papers (Bound).

PROGRAM MAKING: Bound copies of programs by Samuel A. Baldwin and Charles Heinroth.

Large list of programs published in magazines named. Of course there are many other works, both literary and musical, which might be named, but the ones suggested are among those well-known. The publishers of THE ETUDE can secure for you any or all of the works named.

Q. Where is the largest organ in the world? Who built it? What is its total number of stops? Where may I obtain its specifications?

A. The largest organ in the world is in the Wanamaker Store, Philadelphia. The original instrument was designed and built by the Los Angeles Art Company and was intended for the Convention Hall in Kansas City. Previous to the time of its proposed installation it was exhibited in Festival Hall at the St. Louis Exposition in 1905. After the close of the Exposition, the contract with the Kansas City authorities was found to be null and void, and for several years the instrument lay unused in a storage house in St. Louis. The late John Wanamaker sent for the organ, and thirteen freight cars were required for its transportation to Philadelphia. The original organ was designed to contain 140 speaking stops, but its present owners have enlarged it and are continually improving it (having their own organ shop) until now it contains 247 speaking stops. It is played daily by Miss Mary Vogt and Miss Harriet Ridley. Charles H. Courboin and other noted players have appeared as guest organists. The specifications are not available, but some facts in reference to the instrument may be of interest. These facts are based on the time when the organ contained 232 stops, fifteen having been added since their compilation.

Weight of organ, over 375,000 pounds.

More than 120,000 feet of lumber used in its construction.

Twenty-five freight cars would be required to carry it.

Total space occupied by organ and blowers, 118,602 cubic feet.

The incandescent lights strung along the organ chamber would light the streets of a small town.

Pipes	17,954
Percussion tones	192
Total	18,146

The harp in this organ is a new invention, being a plucked string instead of a percussion tone.

There are eight swell boxes.

Lengths of pipes range from three-fourths of an inch to 37 feet, 9 inches.

A booklet containing information in reference to the organ may be had by addressing the present owners of the instrument.

Department of Orchestras and Bands

(Continued from page 569)

ers who have a number of bands often forget just what pieces to st what they have been playing, n, and how many times, and what ave been perfected at each play- very leader should keep a book s him at a glance just when, how y every piece has been played. that the teacher can do will so ay the time put into it as this sort eeping. With its help lessons may ied so that every second of the re- may be used to advantage. The ill soon respond to this and their will increase tremendously as they l the joy of progressive accom- it. Nothing kills a pupil's interest uickly than vague and pointless ls. Nothing increases his inter- than the increasing perfection of emble in a definite, recognizable sfying way.

Temperament

f the things that the leader has to with is the good player who thinks little too good to play for that par- ader or with that particular bunch. l require tact. The first thing that der must do is to be sure that ers will never get the idea that he want them, (they must be made elcome to this class than to any but on the other hand, for their es as well as that of the leader, st never get the idea that they are sable. This is fatal to good dis- n any band. Many leaders put up kinds of trouble from some par- player because he plays well and er needs him.

attitude is likely to crop up at any any ensemble and if after a heart talk between the leader and the pupil, the pupil still thinks he can descend to play, he should be sum- lismissed no matter how much of a e leaves behind. There are always oming on, and they will come on the band is rid of trouble makers. brings to mind a leader who was ring to organize a chorus in a sub- own which had many fine soloists who were willing to sing in a He said to the members at the a rather slenderly attended re- "Now, if you know of any fine who will come and sing in this to help us out, just tell them that ot want them." This is the atti- e band leader must take toward ists he will invariably find in his who will just condescend to help. ould be there to play as well as n and to be a part of the perma- rsonnel of the band. Any leader es them in on any other basis is laying up trouble for himself. The ay not be as good for a while, but pay in the end to be very firm on nt.

r's Attitude Toward Good Players

again, the leader may not be so e and it may happen that some of t players merely tolerate his play- little tact on the part of the leader ooth this over, but if it does not it be summarily dealt with. Of in a case of this kind, the leader better do a little studying himself, win the respect of the players. uation, however, is not entirely con- o the school band. Professional re very prone to the same trouble. ell for the leader to instil a keen f fair play into his players before e up professional playing.

leader continually has to face the good players by graduation, leav- ool and other reasons. This should t all discouraging. On the contrary, der should openly rejoice that he has been able to send fine players out into the world. He should look upon his or- chestra or band as a training school to help as many players as much as possible. Every ensemble has its ups and downs, but the wise leader has as many players as possible in training to keep the organi- zation full and up to standard. The more pressure from the bottom, the higher the band will go. The more competition to enter, the harder all will work.

The leader should plan to have pupils like this play whenever possible, but with the good-natured understanding that pro- fessional playing comes first. The leader will gladly use what time the student has, and spend his energies on those who are coming on and need developing. The leader may often use these professional players to fine advantage by asking them to sit in their respective sections and help the poorer players in various ways.

There are often good players who will not condescend to enter the band. They are either training for soloists, or their teachers do not want them to do ensemble work, or for various reasons they think that band playing is beneath them. The leader should interview the player, his parents and teacher, and frequently this false attitude on the part of the student can be changed. However, nothing suc- ceeds like success, and the leader should never spend his time or energy teasing these into his band. Let him spend it in raising the standard of the ensemble, and when this has arisen to where it should be there will be no trouble in attracting and keeping these fine players.

But these students should not be allowed to appear on the school programs, nor should they be given band credit unless they play in the school ensemble.

Contests

Band contests are most interesting and are of much value to the participants if properly conducted.

Many such contests have been held in the past, both for school bands and for amateur community organizations, and an even greater development is expected in the future. They are becoming a particu- larly popular feature at county and other fairs.

With the idea of bringing more uniform- ity into the school band events and mak- ing them more effective in raising the standard of school music and in securing better recognition for the importance of school music, the Committee on Instru- mental Affairs of the Music Supervisors' National Conference has been organizing high school and grammar school band con- tests on a State basis annually since 1924. In some cases the Committee has held the contests directly under its own auspices but in most cases it has co-operated with local agencies, usually state colleges or universities, the Committee assisting with prizes. The first national contest will be held by the Committee in the spring of 1926.

For further information concerning school band contests write to C. M. Tre- maine, Director, National Bureau for the Advancement of Music, 45 West 45th Street, New York, who is Secretary of the Committee.

Bibliography

For those who wish further information on the subject of teaching bands and of band instruments the following material is suggested:

"Instrumental Technique," for Orches- tras and Bands, by J. E. Maddy and T. P. Giddings; "School Orchestras and Bands," Glenn Woods; "Building the School Or- chestra," R. N. Carr; "Universal Teacher" for Orchestra and Band Instruments, J. E. Maddy and T. P. Giddings.

School for the Training of

THEATRE ORGANISTS

Direction: CHARLES H. DEMOREST and HENRY FRANCIS PARKS
Famous Theatre Organists and Teachers

FALL TERM OPENS SEPTEMBER 13th

Students have lessons and practice before the Screen provided by the College in its studios. New two and three manual Wurlitzer theatre organs for lessons and practice, owned and operated by the College.

COURSE OF STUDY

A two-year course. Varied to suit the individual student.

FIRST YEAR

First Term: First working registration, arranging of popular ballads, semi-classic ballads. Themes for feature films.

Second Term: Preparation for news reel playing, arrangement of piano numbers for the organ, waltzes and marches. Characteristic numbers arranged.

Third Term: First studies in adapting orchestrations to the organ, first studies in jazz playing, second or double-touch, playing of song-slides. Comedy film.

Fourth Term: First actual screen work, the news reel, comedy film, classification and construction for feature films, cuing short and long feature film, thorough preparation in adapting music.

SECOND YEAR

First Term: Repertoire, transcriptions of violin and orchestral music, orchestral overtures adapted, first actual screen work in playing the feature film, scenics, cartoons, travelogues, etc.

Second Term: Modulation and improvisation for all types of films, memorizing for important situations, dramatic music such as misteriosos, furiosos, etc. Actual dramatization of all kinds of films, meeting actual conditions of the theatre, improvisation including waltzes, marches, intermezzos, jazz, melody work.

Third Term: All scenic effects such as storms, falls, thunder, trains, etc. Constant practice before screen.

Fourth Term: Devoted entirely to screen work by those who have followed the complete course, and opportunity will be given to play before invited audience, so that practical experience may be gained fitting the organist for public work.

LENGTH OF COURSE

The time which will be consumed in covering the course will be determined to a large extent upon the ability as organists of those who take it. Students who never have studied organ previously will require two full years to finish the course. Experienced organists may cover it in one year.

NOTE—*Church and concert organists of experience are eligible to enter the Advanced Course.*

FREE FELLOWSHIP

Mr. Demorest and Mr. Parks have each consented to award Free Fellowships of two lessons weekly, each of thirty minutes, to the students who, after an open competitive examination, are found to possess the greatest gift for playing theatre organ. Free Fellowship application blanks on request.

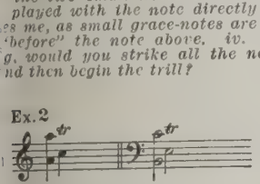
ed Notes: Phrasing: Grace s.



When notes occur like this:

Ex.1

all played together, are they not? they written so—placing the notes ide? ii. Is the hand lifted at the end phrase? Do the slurs over the notes the phrasing? Can one "always" on the slurs for correct phrasing? Chaminade's "The Flatterer," near the the two small notes at the close of played with the note directly above? s me, as small grace-notes are always before" the note above. iv. In the g, would you strike all the notes to- nd then begin the trill?

Ex.2

They are played together, the quar- octaves are given one beat each, with rest following; the two half-notes ed *legato* and sustained for two beats hey are so written for legible reading l the running together of notes. ii. id (or the fingers) is raised at the ach phrase. Phrases are usually in- by slurs; but printers will make mis- even as you and I," therefore, analyze struction of the piece and reason out al phrasing for yourself: it is a most ning and instructive occupation. iii. sures seven and six from the end of e, the initial notes of the trill are simultaneously with the treble, and cluding notes of the trill are played ie last eighth-note. Grace-notes are ways" played before the beat—*some*- n some modern music they are so but in nearly all classical composi- ey are played *with* the accompanying ord and beat. iv. Strike all the notes and begin the trill at the instant of

o Study a Song.

What is the best way for me to study so that I may avoid that tiredness of that always supervenes when I study ngs?—Tenor, Broad St., Phila., Pa.

Pre-occupation and anxiety to sing cor- oth words and music (perhaps also to e accompaniment) cause you to attack otes incorrectly. There is only one afe way to study new songs: Learn rds alone by heart, so that you may them without music, giving to each s proper value, and breathing at all rks of punctuation. Then sit at the ind play the melody of each phrase ind again until the air is perfectly zed. You may then—but not before he words to the air, *without any at- at self-accompaniment.* In this man- eeper insight will be gained as to the g and meaning of the composition and, onder, you will develop no symptoms of congestion, provided always that your be flawless.

r-Tips or Finger-Nails?

The teacher whom I have had for over ars has taught me to touch the keys y finger-nails, by which my fingers have ped or turned-in appearance of hooks. now gone to a more advanced teacher ls me that this is all wrong, that the position of my fingers should be curved, I strike the notes with the fleshy tips fingers and without touching the keys e nails. Which is correct?—A. C. D., nce, R. I.

The first method is altogether wrong; esent instruction is correct. The cush- one of the tips of the fingers should the keys, not the slightest finger-nail touch; from which you will gather that you would do well to keep your nails relatively short.

Changing the Key of a Song.

Q. Does it do any harm to the interpretation of a song, as originally intended by the composer, to transpose it to another key? I have read somewhere that each key has its own special characteristic. If this be so, surely to change a song from the key of E natural to that of E flat, for example, must alter the whole character of the song. What truth is there in this?—Teddy G., Boston.

A. This is a question about which much might be said, both for and against, but more the latter than the former. *Imprimis*, the composer, when he wrote the song, had in mind the particular tessitura of the special voice for which he wrote, a soprano, for example. No other voice could impart to the music and words the quality required; the interpretation would suffer. Let a soprano sing *The Lost Chord* in A flat or A, and the result would be lamentable, wanting in dignity and religious sentiment. Let a bass sing the *Ave Maria* (Bach-Gounod) and the effect is both chaotic and comical, a growl for the voice and, in many places, a heavy rumble for the accompaniment. Undoubtedly, there are songs, chiefly for the medium voice, which are intended by the composer to be sung in any key adapted to any voice. In this case the idea of a special key being necessary to impart a special mood or character is completely nullified. In the case cited, the key of E is said to be the "most brilliant key, expressive of joy." By changing it to E flat, all gives way to "soft, serious solemnity," according to the qualities attributed to those keys. Finally there is the difference of pitch of pianos and orchestras, which also destroys the imaginary qualities of the keys. Of making of songs there is no end. There are so many thousands to choose from that there is no occasion to do violence to a composer and his composition by singing transposed versions. There are, however, exceptions to this as to every rule.

Base or Bass.

Q. In some of my reading, I have come across the word "base," seemingly referring to music. As I am not sure of its meaning and application, will you please explain?—J. F. H., Camden, N. J.

A. "Base" is the old English spelling for the word "bass," or foundation upon which the harmony is constructed. The word "base" was also frequently used to designate the Bass-Viol (Double Bass) or Viol da Gamba. It is so mentioned in the English government expense accounts of the year 1629, when Charles I was king.

Modulation and Transposition.

Q. i. Are not modulation and transposition the same thing, or nearly so? ii. How should I proceed to transpose a piece in the major key to its minor key?—B. B. G., Flint, Mich.

A. They are not the same, by any means. Modulation is the passing from one key to another, without any violent shock to the ear, but by regular and very gradual steps, such as: from the key of C to G, or F, or A minor or E minor. Transposition is the putting the entire piece into another key, in which every step and interval and chord is the same, relatively, as the original key. Another form of transposition consists of changing a piece from the major to its tonic minor, or to its relative minor (or, contrarily of minor to major), keeping the melodic and harmonic structure absolutely the same, but constructed on the minor scale instead of on the major. A very good example of transposition from the major to its tonic minor may be found in Chopin's *Valse brillante*, Op. 34, No. 2. Measures fifty-three to sixty-nine in A major are followed by sixteen measures in the tonic minor, an absolute counterpart, note for note. It may be observed that all that is necessary to transpose from a major mode to its tonic minor is to make the third and the sixth of the key respectively a minor third and minor sixth by flatting these intervals. To transpose to the *relative* minor is somewhat more difficult, since it necessitates putting the whole piece down a minor third (*do to la*) and making the seventh degree (*sol* of the major) sharp (that is si).

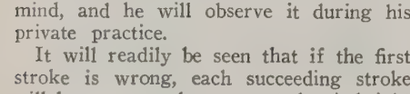
The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

Up or Down

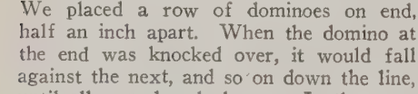
NO MISTAKE is more frequently made by the violin pupil during the first few years than commencing a passage with the down-bow when it should be begun with the up-bow, and vice versa. The average pupil, when he plays the first phrase of a composition, or resumes playing after having stopped at some point in the piece, slaps his bow on the string without giving a thought to whether it should be a down- or up-bow. As a matter of fact the beginner usually commences everything with a down-bow, although a pupil is found occasionally with the up-bow habit.



This seems a very simple matter, but in the early stages of violin playing it is of the utmost importance. The teacher should always ask the pupil whether the beginning stroke of a phrase is up or down and also ask the reason. If the pupil does not know he should be told. It is a good plan at first to have the pupil say "Up" or "Down," as the case may be, before he starts a phrase at the beginning or at any point through a composition. If he is compelled to do this during the lesson, the habit of determining the direction of the first stroke will be firmly fixed in his mind, and he will observe it during his private practice.

It will readily be seen that if the first stroke is wrong, each succeeding stroke will be wrong unless corrected. A bright pupil will often correct the bowing after having started it wrong, but too many will keep on to the bitter end; down-up, down-up, where it should be up-down, up-down, and vice versa.

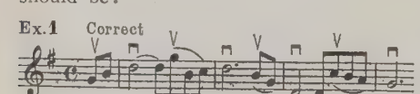
Commencing wrong and continuing wrong is like the trick we used to play with dominoes when we were children. We placed a row of dominoes on end, half an inch apart. When the domino at the end was knocked over, it would fall against the next, and so on down the line, until all were knocked over. In the same manner, if the first bow stroke is wrong, every stroke will be wrong to the end of the composition unless corrected.



The following bars of a march by Meyerbeer illustrate what happens when the wrong bow is used at the start. In the first example the up-bow is used, as it should be:

Ex.1 Correct

In the second example the down-bow is incorrectly used thus making each succeeding bow stroke wrong and spoiling the rhythm and swing of this stirring march:



Ex.2 Incorrect

The student should try both ways and see how much better the first and correct method of bowing makes the composition sound.

The third example is from a study by Mazas. This must be begun with the down-bow in order to bring all the down-bows on the naturally accented parts of the measure:

Ex.3

Let the student try the passage both ways, first commencing on the down-bow, and then on the up-bow. He will soon see how difficult it is to get the proper rhythm and accentuation when he commences on the up-bow.

Nothing is more important in violin study than to get the up and down bows in the right places. The down-bow, as every violin student soon learns, is naturally heavier, and gives a more vigorous sound than the up-bow. Consequently the down-bow should be applied wherever possible to the notes which are placed on the naturally accented parts of a measure, or on notes to be specially accented as in the case of *SFZ, FP* effects. Of course there are innumerable instances of accented notes being taken with the up-bow, and many bowing exercises for teaching accents on the up-bow. But I am speaking of the fundamental rule in violin playing that wherever possible, the down-bow should come where the accents lie.

In very rapid passages of sixteenths and thirty-seconds, when the first of each group is taken with the down-bow, the natural heaviness of the down-bow stroke is of great assistance in giving the passage its proper rhythm and effect.

Using Unmarked Music

IT IS A very good plan for the teacher to obtain some solo or orchestra first violin parts in which the down- and up-bows are not marked, the notes are incorrectly slurred, and indications of length and kind of bowing are omitted. Some publishers can furnish books containing first violin parts and solo violin music, which are admirably adapted to the purpose.

These parts should be given to the pupil to mark correctly, one or two each week. When they are brought to each lesson, the teacher should look them over and call the pupil's attention to anything he has marked wrong. The up and down bows, the correct number of notes to be played under each slur, the length of bow required, and the kind of bowing to be used, should all be designated.

The constant corrections of the teacher and the careful thought the pupil is obliged to bring to bear on the various parts he is obliged to mark will in time give him an insight into the principles of violin bowing, which will be of the greatest possible value in getting a correct idea of good violin playing. It is also valuable to him in that he will not be obliged to depend on the teacher for every little thing, once he has learned the correct principles of the art of bowing and phrasing.

Correct Bowing Develops Rhythm

PROPER bowing is the life and soul of violin playing; and for this reason the location of the up and down bows is of enormous importance in giving the pupil the true ideas of rhythm. Only good editions which are marked by good violinists should be used by the student. Most editions of standard studies, such as those by Mazas, Kayser, Kreutzer, Fiorillo, and Rode, are well edited and properly marked; but there is a vast amount of orchestra and solo violin music which is hardly marked at all. Much of it is even marked wrong, as regards up and down bows, fingering, where certain kinds of bowing should be used, the proper number of notes in a slur, and so forth. A great deal of violin music is marked by composers, arrangers, piano and wind instrument players, and other musicians who have little practical knowledge of the violin. The violin student naturally supposes that such music is marked correctly, and tries to play it as it is marked, which results disastrously in many cases.

The violin student who, during the years of his violin study, plays from nothing but good editions, correctly marked, and has a good teacher who understands perfectly the correct principles of violin bowing, learns instinctively to apply the proper bowing, phrasing and fingering to any given passage. His playing will be effective, because it is based on correct principles calculated to give the best effects in playing the composition.

On the other hand, the student who plays from wrongly marked editions or those merely phrased and not marked in a characteristic manner for the violin, or who has an ignorant teacher, will never succeed in playing otherwise than in a weak and ineffective manner.

A Consideration of the Spiccato, Détaché, Martele and Staccato

By William Kupper

IN THE technic of the right arm there are four divisions which belong together in any discussion because each has some relation to the others. Each represents an obstacle whose surmounting means one long, and effective step to a fine technic, and its subsequent membership in the artist class. Nearly every great work has passages employing one of these four bowings, so it is obvious that the violinist should study their aspects.

The spiccato's peculiar lightness, different from the more stolid, heavier bowings of the others, makes it stand apart. The drizzling rain of an autumn shower, a string of naive, almost pellucid pearls, always suggest the perfect spiccato. The true virtuoso, rambling through the tricky, delicate lines of a spiccato-laden composition like Gossec's "Gavotte," can fill an audience with a sense of lightness and grace, particularly charming to women. Just as in all things, its accomplishment is a difficult affair, given either to the born genius or the hard worker.

Rapid Spiccato

Spiccato is necessarily used when the tempo is fast. Accordingly, the fingers of the left hand must intone with precision and celerity. When a small section of the middle of the bow is used, a light up and down stroke, gradually increasing in speed will make the stick bounce. A perfect check over the caroming is the hardest task, but continual practice will give the desired control. Finally, effortless lightness must be achieved. Again, practice and some artistic sense will bring the gift. Slurred spiccato can be practiced to advantage by means of scales played with down-bow notes bowed, and a similar number of up-bow notes bounced. A factor of some importance is the balance of the stick, but it is safe to say that a p can play a "Perpetuo Moto" almost a with a mediocre bow.

The détaché, next in lightness, re a sure bow arm and simultaneous placing. It is never very loud, becau the method of accomplishment. A beginner will find out, tone alway creases nearest the fingerboard. D is played almost directly over the part of the fingerboard, with long, st strokes. It is necessary to watc course of the bow, to correct any a tions. As the name suggests, the not *detached.*

The Martele

Since the martele, or "hammer-st requires the *forte,* it is played neare bridge. It is an intermediate varie type of bowing between the détach the staccato. The martele is usually on a quarter note followed by two notes, at a juncture where an accent to fall naturally. Like the détaché played with the most bow possible.

The staccato is a cardinal asset of a great violinist. A certain "drive fire, found so often in a born player pre-requisite. It can be divided into gle note, diverse string changing, sta and slurred staccato.

At the start of the staccato, the hair should be pressed to touch the and released gradually in a draw note. When this is done rapidly, the is a sententious or brisk note. It i particularly difficult when notes ar the same string; but it takes on th pect of an obstacle when a series of must be played alternately on diff strings. Here the "trick" is to ma change using the termination of the already played as the fulcrum of an i nary lever. In the transition no s should be heard.

Slurred Staccato

Slurred staccato is played contrar the "use-the-wrist" precept of violin ing, with a stiff, motionless wrist, pelled in short jerks by the whole arm will be found, however, that up-bow red staccato is more difficult than d bow staccato of the same variety. tyro need not worry about this, bec most compositions either are arranged up-bow staccato, or can readily be cha A scratching, weak staccato is barre interest; a fiery, clean staccato proc confidence in the player's ability and livens a passage. The Bach double certo is a noteworthy example of a position in which staccato with a "nerv vibration will produce an effect equ lent to that produced by composition more romantic nature.

An Instrument of Express

By Hope Stoddard

THE violin, while being played, sh be as intimate a part of the player as the vocal cords of the singer. To a this end the instrument should be held rectly in front of the player, with fingers of the left hand in readines drop on the strings.

There should be no strained attitud shoulder or head. Clamping the violin tween shoulder bone and jaw bone dea the sound, as does also padding under violin. In short, no unnecessary inter ence whatever should exist in the di communication of sound from the m of the player, through his fingers, and the violin.

"It is unnecessary to make a legend a the violin; that is, to overdo the effor make its history poetical, when the ins ment just as it stands is perfect poet —*Eduard Remenyi.*

The Violinist as a "Coach" in Ensemble Playing for Pianists

By Ben Venuto

MANY violin teachers not only conduct classes in ensemble playing for their violin pupils, but also are in occasional request to teach pianists the art of accompaniment and ensemble-playing. These two things, by the way, though not synonymous, have much in common, as one can scarcely hope to be a good ensemble player unless first of all a good accompanist.

We will assume that pupils of this sort are always reasonably well advanced in the art of piano playing, and if their piano teacher has given them frequent practice in duet "for four hands," it will be all to the good; also, it is desirable that they should be reasonably rapid readers.

Beginning with material which does not offer any special technical difficulty, the first thing to be taught is to take the correct *tempo* at the start and stick to it (except where otherwise indicated by the composer) not slowing up in rapid passages nor hurrying over long notes.

The next thing is to observe the *nuances*, such as *rit., accel.*, the *fermatas*, and so on. While, of course, it is possible to exaggerate these unduly, it is almost universally the case that amateurs take too little account of them, and either do not observe them at all or do so in a timid and trifling manner.

Following on this, the pupil should be led to distinguish between those passages in which the violin appears as solo instrument with piano accompaniment and those in which the relative importance of the instruments is reversed. In the former case, the piano tone must be kept somewhat subdued; in the latter it must sound out (at least in its principal melody) above the violin. In Mozart's sonatas there is a continual interchange. Passages also occur, though not so frequently, in which the instruments should both be equally loud or soft. The power to discern from the musical content of a piece which of these three conditions exists at any given spot is one of the highest tests of musicianship. Where two themes of apparently equal importance are combined together, generally the one having the *slower* notes should be given slightly more prominence.

All dynamic signs, such as *f, ff, p, pp, sfz.*, the pupil must be taught to observe not only strictly but *sufficiently;* but it should be well explained that all these are relative in their meaning, and a *f* in an accompaniment passage may often be properly no louder than an *mf* would be in the principal melody.

The best material for this sort of study is found in classical sonatas. Schubert's three Sonatinas are the least difficult, though the second is more so than the first or third. They may be had in one volume, at a modest price. After these, use Mozart's. His eighteen violin sonatas are published by two or three different American firms in a somewhat bulky and expensive volume, which it will pay the teacher to own, but if it is desired to get them singly for the pupil, they may be had separately and quite economically. These are among the most beneficial works possible for acquiring the art of ensemble. Coming to more modern times, Dvorak's *Sonatina for Violin and Piano, Op. 100,* is an interesting and melodious work, and not too difficult.

The next grade may be represented by Beethoven. All of his ten violin sonatas are good, but the one in F (No. 5) is the greatest favorite, and may be had singly. (The great *Kreutzer Sonata* may also be had singly, but this is a work for only the most mature artists.) After these, we recommend Grieg's violin sonatas in F, G and C minor.

Hints on Re-Hairing the Bow

A GREAT deal of misinformation is about in regard to re-hairing violin bows. Some people even believe that when the hair gets dirty and worn out and begins to be thinned out on account of broken hairs, it is the best policy to throw the bow away and get a new one. An ETUDE reader writes to inquire, "Is it best to have a violin bow re-haired or to buy a new one? Some say they are not good after being re-haired."

Here are the facts in the case. If the bow is one of good quality and the stick is not warped or has not lost its inward curve, it is always well worth re-hairing, always providing a competent repairer can be found to do the work. If the hair is not put in properly, with the hairs in straight lines (not crossed) and of even tension, the bow will not play properly although the stick is good.

Perfect re-hairing is quite a difficult art, and, as a rule, we rarely find a workman competent to do it, except in one of the larger cities, although we occasionally find a good man in a small town. Many violin students try to re-hair their own bows, but they make a mistake in so doing, as it is a tedious job at the best, and takes a large experience.

One of the most difficult things in re-hairing is to fix the hair at exactly the right length. If too long, the hair cannot be screwed up to the proper tension for playing, and, if too short, the hair cannot be loosened after playing.

The present cost of re-hairing runs from $1.00 to $2.00, according to the quality of the hair, the skill and reputation of the workman, and the size of the city where the work is done. In the smaller towns where there is no one competent to re-hair bows, the violinist had best send them to a good workman in the nearest large city.

Where a bow is of very poor quality, with the stick warped and without its original curve, and the frog and fittings in bad condition, it is often the best plan to get a new bow, as the old one would not be worth re-hairing. At present prices the minimum amount at which a bow can be bought, which will do even passably good service, is $5.00. The advanced student should have a bow costing from $20.00 to $30.00 at least.

However, good imitation as violins are often valuable if made olin makers who follow closely in l the work of the mighty Antonio.

Chin Rest.
The pain you complain of when violin might easily come from the ou have in holding it, as you be- a higher chin rest, and also use your shoulder which you can make nd attach to the violin by ribbons tie passed around under the chin

Age No Criterion.
V. C.—Send twenty-five cents for back number of THE ETUDE for August, 1922, in which you will find an extended article on Hopf (note spelling) violins. Just how good your violin is I could not tell without seeing it. 2—Mere age in violins is of small importance, for age will not help a violin unless it is a good instrument in the beginning. 3.—The two letters marked inside the violin are probably the initials of the maker's or repairer's name.

Genuine Guarnerius.
E. H. N.—The matter hinges entirely on whether your violin is a genuine Guarnerius. Write to some of the violin dealers whose address you will find in the advertising columns of the ETUDE. If genuine they could no doubt find a purchaser for you.

L. Schwaicher Violin.
A. A. D.—Extended details of the life of Leopold Schwaicher, violin maker, Florisdorf (near Vienna) 1768-1813, are lacking. They might possibly be found in some European work on violin makers. These violins bear a good reputation among dealers in old violins.

Imitation Strad.
C. T.—From your description, I am quite sure that your violin is an imitation Strad, and not an original. The marks you speak of are put there to imitate the signs of age. I cannot estimate its value without seeing it.

Music and High School Work.
J. F. H.—While I cannnot say definitely how great your talent is without hearing you play, I consider your progress very good if you play the compositions you name really well. I am afraid you cannot reach the virtuoso stage, living in such a small town. Your best course would be to go to Chicago (which is near your home) and study in some college or conservatory of music. Your teachers there, even after a ten weeks' term, could tell you whether you have sufficient talent to become a virtuoso. I always advise violin students studying for the profession, to go to the large cities because there they can get excellent instruction, and also have opportunities of hearing symphony orchestras, grand opera, and famous violinists. As you are only fourteen you ought to keep up your school studies at least until you graduate from High School.
2.—I do not see how you can practice eight hours a day and get your school lessons too. If you do three hours a day, it will be as much as you can do, and go to school too. If you can afford it you would save time, by having a private tutor for your general education.

Genuine Gagliano?
C. D.—It is impossible to say from a written description, and a copy of label, whether a violin is genuine or not. The expert must have the instrument in his hands to decide. Send your Gagliano to one of the firms dealing in old violins who advertise in THE ETUDE and they can tell you.

Valuable Imitation.
P. M. C.—As the label in your violin contains the words, "Made in France," it is quite certain that the violin is not a genuine Strad, as these violins were made in Cremona, Italy. The violin may be a good one, however, as some of the imitations made by good violin makers are valuable. It is no doubt worth repairing.

Life of a String.
M. E.—The word *paysage* in French means landscape. 2.—Your second question is not clear. Please re-state question. 3.—A finger mark above a cipher means that the note is to be played as a harmonic. Possibly the finger mark and cipher you speak of are written over a chord of two notes, indicating that one of the notes of the chord is to be fingered and the other to be played on an open string. 4.—All notes indicated to be played as harmonics should be played in that manner unless the player decides that it would be more effective to play the notes with firm fingering. 5.—Constant use of the fingers in pizzicato will harden the tips. There is no ointment or other preparation which will help. 6.—In justice to its advertisers THE ETUDE cannot undertake to recommend any special makes of comparatively modern violins. 7—No definite length of life for violin strings in use, can be set, since so much depends on the player. A strong player uses up strings faster, also a player whose hands perspire a great deal. You should remove strings when the bow hair has worn them flat, when they grow false, and when they become dirty, lifeless and ragged from use. Most people keep their strings on too long. 8.—Rosin your bow when it needs it, just as the barber strops his razor when it becomes dull. No exact rule can be laid down as to how much or how often you should rosin your bow.

The Works of

SCHUMANN	CLEMENTI	HAYDN
DIABELLI	BACH	DUSSEK
BEETHOVEN	HUNTEN	MENDELSSOHN
MOZART	KUHLAU	HANDEL
SCHUBERT	SCARLATTI	CHOPIN

As LONG as music is taught, the finest of the easier classics will be strongly demanded. For these lighter works of the old masters are as immortal in their way as the grandest symphonies. This idea was in our mind when we began the compilation of this series. The result is that we are offering to American educators the most beautiful and authoritatively correct edition procurable anywhere. In the summer time it is wise to choose early the material for the next season.

The Service That Has Made Thousands of Friends

The growth of any merchandising business enterprise depends primarily upon service, either as expressed in material products or in the manner in which these are made available to the public. Just so far as such an undertaking anticipates or responds to a definite need, so will it grow. Success and an established place in the business world may safely be taken, not merely as evidence, but as actual proof that a dependable service has been consistently performed. Such service has not only made the Theodore Presser Company an outstanding institution in the world of music, but what is even more gratifying, it has created an endless chain of staunch and faithful friends whose number is beyond specific counting. These friends of the Company, valued as they are for that, still occupy a more significant place in their friendship for and their unflagging interest in the art of music, itself. Mere business support is of less moment than the ever-deepening and widening musical activities of these friends of ours and it is a great satisfaction to us to feel that in serving our patrons well, we are also serving the cause of music.

Beginning With the Pedals Of the Piano By Helen L. Cramm

This is a genuine beginner's book for the study of the pedals. It will compare more than favorably with any similar book as yet published. We expect to have this work out in time for the fall season. The name of Helen L. Cramm is so well-known that its appearance upon the title page of any educational work is a guarantee of the excellence of such work. This volume may be taken up to good advantage in the early second grade.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Sesqui-Centennial Visitors Cordially Invited To Call Upon Us

The Sesqui-Centennial may have been slow in getting under way, but when one considers the remarkable exhibit that may be viewed at this time, he will marvel at what was accomplished in preparing so creditable a celebration of the 150 years of American Independence.

Every day finds the number of visitors to the Sesqui-Centennial growing greater and greater, and we are most happy in the fact that so many music lovers from all parts of the country are registering at our exhibit in the Liberal Arts Building of the Sesqui-Centennial Exposition.

We have a valuable souvenir that is sent to each registrant and we also will send it to any of our friends who cannot come to Philadelphia to register in person, but who care to send a postal request for this valuable musical souvenir.

Our establishment at 1712 Chestnut Street is open to those who want to see the great stock of music publications with which we conduct our business. We are conveniently located near the center of the city and in one of our Chestnut Street buildings is the local office of the American Express Co. which can be of great service to those having travel problems or who utilize the American Express Company's Travellers' Checks.

The Seven Last Words of Christ A Sacred Cantata By Th. Dubois

Dubois' *Seven Last Words* has been forging rapidly to the fore as one of the finest and most effective Lenten or Penitential choral works. It is one of the finest settings of the "Seven Last Words." It contains beautiful solos, a number of which are used separately, and splendidly dramatic chorus writing. It is not too difficult for performance by the average good mixed choir. We have in preparation a new edition of this work, edited and revised by Nicholas Douty, who also has supplied the English adaptation of the text. Mr. Douty is a successful singer and musical educator who is perhaps best known by his artistic work year after year in connection with the Bach festivals at Bethlehem.

The special introductory price in advance of publication is 50 cents per copy, postpaid.

A Dozen Melodies for Saxophones By Clay Smith

Mr. Clay Smith, the well-known lyceum entertainer, has certain attainments which serve to fit him admirably for the makings of such a book as mentioned above. He is a most accomplished player of the saxophone, for one thing, and for another, he is a successful song-writer with a vein of appealing melody. This book contains twelve of his best songs arranged as solos or duets for saxophones and piano. The volume of piano accompaniment will do for all but there are separate parts in solo or duet form for the C-melody saxophone, the E-flat alto saxophone and the B-flat tenor saxophone, respectively.

Either of the saxophone volumes may be ordered at the advance of publication price of 30 cents each, postpaid. The piano accompaniment may be ordered at the special low price of 45 cents, postpaid.

What Are You Doing To Insure Your Success In The New Teaching Season?

A query like the above is not amiss with either the individual who has been in the teaching field for some years or the one who is entering the teaching profession for the first time this coming fall. Anyone can sit back and wait for things to come to him. To succeed one must not only take steps to bring about the desired things, but must also be prepared to handle the situation after he has made his achievement. At this season of the year the music teacher should be planning ways and means for securing the patronage of those in his community who desire or who can be induced to study music.

A study of local conditions will disclose opportunities for posting and distributing announcements of the teaching advantages one has to offer and a little initiative of this character is a good investment. It is true that this need not be done until the early days of September, but now is the time to prepare.

Those who feel the need of suggestions should secure the *Business Manual for Music Teachers* by Bender, which sells for $1.25, or there is a little booklet, *Progressive Ways of Securing New Pupils* by Eastmann, which bears the nominal price of 10 cents.

In addition to taking steps to insure a clientele, the individual who desires to achieve real success as a teacher plans well ahead on the teaching material to be used. The Theodore Presser Co. will gladly make suggestions for pupils of all grades and will cheerfully send material for examination. Helpful booklets, catalogs or folders covering various classes of music publications may be had for the asking. In these the teacher will find new things brought to attention, any of which may be had for examination, according to our "On Sale" plan. A booklet that is in demand is the *Guide to New Teachers on Teaching the Pianoforte.* This booklet is free and in addition to various advice and suggestions, lists dependable material in pieces, collections and studies in all grades.

Romeo and Juliet Operetta for Men By John W. Brigham

Nothing is dearer to the heart of the college boy in his hours of recreation than the indulgence in musical and dramatic production. For such purposes works must be prepared specially. Mr. John W. Brigham, the author of *Romeo and Juliet,* has already to his credit a similar and highly successful work entitled *Cleopatra.* In *Romeo and Juliet,* as in *Cleopatra,* the classic plays are burlesqued broadly and brought up to date. The fun making is so wholesome and spontaneous, however, that no lover of Shakespeare's works will be offended by these presentations. For any organization of high school or college students or men's glee clubs, *Romeo and Juliet* will prove just right. Mr. Brigham's operettas are so easy of production that they may be done right on the campus in an almost impromptu manner, or upon the stage with the usual accessories.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

The Pianist's Daily Dozen By Charles B. Macklin

We hear much nowadays about the "daily dozen." This term is usually applied to various forms of physical exercises which are intended to be taken systematically for the improvement of the health and strength of the individual. There is no reason why the idea should not be applied specifically to the improvement and development of the hands as used in piano playing. This is just what Mr. Macklin has done in his *Pianist's Daily Dozen.* We feel sure that all who try these exercises will be pleased with the results. Anything which will tend to shorten and to lighten the daily drudgery of the pianist should prove most welcome.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Folderol— A Musical Farce Comed By R. M. Stults

This is another new operett are now announcing for the It may seem odd that we are three different operettas at time, but each of these has it tinctive place, and all arc *Folderol* is for production by intended to be used by mus dramatic organizations and the entire work, words and music, duction of Mr. Robert M. Stu well-known to the public thro successful works. There are le for soprano, alto, tenors and there are choruses for men' and mixed voices. One of th tractive features is an entir first part, at the beginning of act.

The special introductory pr vance of publication is 40 cents postpaid.

Three Dances For Piano Four-Hands By Cyril Scott

Mr. Cyril Scott is one of the contemporary composers. Whil towards the modern atmosphe his work is nevertheless sound out extravagance. He has the sa of melody. His most recent O original four-hand group, *Thre* These are well worth playing, will be welcomed by lovers of music who are in search of They are not beyond the fourth point of difficulty, but they wi careful interpretation and a fini of performance. The three piec published together in one volu

The special introductory pri vance of publication is 35 cents postpaid.

The Storm For Piano Solo or Pipe Organ Solo By Clarence Kohlmann

Thousands have been thrille spectacular as well as artistic p presentation of *The Storm* by ented organist of the Ocean Gr torium, Mr. Clarence Kohlma number, as rendered by Mr. Koh feel should be available to the as well as pianists who desire number for recital programs. I up to the fury of *The Storm* a picting conditions after *The S* abated, Mr. Kohlmann utilizes from other composers; also seve known hymns are to be heard in t tion, some presented in chime e

There are portions of good and anthems from such comp Grieg, Haydn, Tschaikowsky an Every performer on the piano of any ability will have great fu number, whether they plan to p publicly or not.

It is now in preparation for ance in published form and the of publication orders for copies cepted at 25 cents for the piano 25 cents for the pipe organ solo the number is printed and placed those who did not order it in ad publication will have to pay th fair market price that will be pla each copy.

Twelve Melodious Studies In Scale and Chord Passag For the Pianoforte By C. W. Kern, Op. 560

The many admirers of Mr. numerous and successful piano pie welcome this most useful and a set of intermediate grade studies. prove to be one of the best book to start third grade work, or to l the third grade after second gra has been completed. The studies most like little pieces, each ha own title, but each one has real t and musical value.

The special introductory price vance of publication is 30 cents p postpaid.

Album of French Composers For the Pianoforte

Since our first announcement that we intended publishing this volume we have been more than gratified by the response of our patrons in sending advance orders. It proves that there is a general demand for compilations of this kind and presages the success of this particular volume. Pianists of taste and discrimination always enjoy playing the compositions of the French writers as their works are characterized by a delicacy and refinement that appeal not only to the talented performer but to the average audience as well. This volume will contain the choicest writings of the best French composers and will be restricted to works of a grade of difficulty in keeping with the ability of the average piano player.

The advance of publication cash price is 35 cents, postpaid.

Five Little Tunes For Five Little Fingers Left Hand Pieces By Mildred Adair

These five little tunes are charming little piano pieces of about Grade 1½ for the left hand alone. Professional pianists frequently display their technical equipment in the left hand alone exhibition, and the emulation of such performances makes these little numbers extremely attractive to young students. In gratifying their personal pleasure in the matter they are gaining in their left hand technical proficiency. We do not know of any teaching system that would not permit the introduction of these numbers for a few lessons, and most certainly the pupil would be benefited in making these numbers effective; also in their performance the student gains an elementary knowledge of the use of the pedal. Prior to this work appearing from the press we will be glad to register advance of publication orders at the price of 25 cents a copy, postpaid.

Standard Second Grade Recreations for the Pianoforte

It has been several years since we have published a book of easy pieces made up from the special large plates. *Standard Second Grade Recreations* is one of the best that we have ever compiled. It contains many pieces and they are all good, including many of our most successful issues. The book begins almost in grade one and then proceeds progressively through grades two and two and one-half. Among the composers represented are: Walter Rolfe, H. D. Hewitt, Rob Roy Peery, Wallace Johnson, Mildred Adair, Adam Geibel, N. Louise Wright, William Baines, George L. Spaulding, Frederick A. Williams, C. C. Crammond, Mari Paldi, and many others. The book is now on the press, to be ready shortly.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

New Easy Four-Hand Album

Practical musicians are all very much alive to the necessity of cultivating *ensemble* playing as nearly as possible from the very beginning. For piano students, four-hand playing is the best medium. We have published a number of books for this purpose in the past and all have been very successful. We have now in preparation a new one made up of first and second grade four-hand pieces which have not appeared in any other compilation. Some of the most popular writers are represented by their very best pieces; in addition to the original duets that we have used, there are a number of effective arrangements of some of our most popular solo pieces. The pieces are all very carefully graded from the beginning up to the early third grade. They are not teacher and pupil duets, but they are adapted for two students of nearly equal attainments.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Brehm's First Steps for Young Piano Students

This is a very good little instruction book used by many teachers with success which may serve as an introduction to the *Standard Graded Course,* or any similar work. It is essentially adapted for teachers who prefer to begin with both hands in the Treble Clef. Our new edition of this book will be considerably augmented, all of the original material being retained however. The studies are short and practical, well graded and interesting to play.

The special introductory price in advance of publication is 25 cents per copy, postpaid.

Twenty-Four Caprices in The Form of Etudes For Violin Solo By P. Rode

Another evidence of our determination to make our violin catalog a real source of the best that can be obtained is found in the announcement of our intended publication of this indispensable work. *The Twenty-four Caprices in the Form of Studies for Violin Solo in all the twenty-four keys* by P. Rode is one of the bulwarks of violin technic, without which no violinist can hope to "get by." They are absolutely indispensable to a complete violin technic, being one of that famous trio—Kreutzer, Rode and Fiorillo. This new edition will be edited by Mr. Otto Meyer, the personal representative of Sevcik in this country. Mr. Meyer has done the editing of a number of other recent works in the *Presser Collection* and we are sure that this new edition will meet with the approval of all teachers who desire the best only in educational publications.

The special introductory price in advance of publication is 45 cents per copy, postpaid.

Fifty Easy Melodious Studies For the Pianoforte By A. Biehl, Op. 7

In keeping with our policy of adding, from time to time, to the *Presser Collection* the very best educational material, we will soon publish in this edition the well-known studies by A. Biehl, Opus 7. To those of our readers who may not be familiar with this work, we wish to state that it consists of elementary exercises in mechanism that may be taken up in connection with early second grade study and their use may be continued up to the beginning of third grade work. To these and to the many teachers who are familiar with these studies we suggest the placing of orders while copies may be obtained at the special advance of publication price, 30 cents a copy, postpaid.

First Garland of Flowers For Violin and Piano By Julius Weiss, Op. 38

These are little violin pieces with piano accompaniment written in such a way that they are attractive to the young beginner and at the same time are really excellent material for teaching purposes. They are all in first position and can be used very early in the pupil's training, thus giving him almost at the beginning of his course, that pleasure which comes from playing a "solo"—as well as real practice in ensemble work. Our edition of this work will show the same care that has been evidenced in our other works in the well-known *Presser Collection.*

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Every Teacher Should Send a Postal for a Copy of Our

THEO. PRESSER CO., 1712 Chestnut St., Phila., Pa.

THE PRESSER PERSONNEL

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Mrs. Fannie B. Hunter

Little does the average individual realize how enormous is the scope of the mail order business which carries Theodore Presser Company publications almost to the four corners of the earth. To maintain the service demanded by such a business, it is necessary to utilize thousands of descriptive circulars and announcements in advising our many mail order patrons of new publications, or of those established ones which have some special appeal. Considerable mailing is also necessary for THE ETUDE Subscription Department's notices and circularizing.

The department which cares for the folding and mailing of the vast amount of publicity material, sent out by the Theodore Presser Company, is under the supervision of Mrs. Fannie B. Hunter, who came with the company in the Fall of 1914. Fortified by her first two years of experience in the ranks of this department, in addition to her previous experience with a well-known local binding and mailing concern, Mrs. Hunter soon gained sufficient recognition of her services to warrant her being placed in entire charge of this department.

No small importance can be attached to this responsible position, for upon the efficient functioning of the circular mailing department depends the proper delivery at just the right time of suggestions to meet the needs of the moment or the near future.

Mrs. Hunter's success in her work can be attributed directly to her industry, to her capable supervision over the members of her department and to her adherence to the high Presser standards and ideals.

Album of Study Pieces in Thirds and Sixths

The ability to play double notes (thirds and sixths) accurately and smoothly is one of the distinguishing marks of the good pianist. The presentation by teachers of this phase of technic sometimes is delayed until the student is pretty far advanced, although there is no real reason for this if the student can be inducted into this study by such an easy method as the giving of these attractive study pieces. Modern teachers find that by giving melodious, musically interesting study material they can obtain just as satisfactory results, and obtain them more quickly. This is one of the prime reasons for the success of the series *Albums of Study Pieces for Special Purposes* of which this is the latest volume to be announced. The other volumes in the series are devoted respectively, to *Trills, Arpeggios, Scales* and *Octaves.* The retail price of each is 75 cents. The special introductory price of *Album of Study Pieces in Thirds and Sixths* is 30 cents a copy, postpaid.

A New Collection of Favorite Songs and Choruses for all Occasions

This is a most desirable collection of just the songs that are in demand for informal gatherings of a general nature. There are familiar melodies both old and new that everyone likes to sing. We have tried to gather together all of the favorites in this book. Many of them are so arranged as to be sung by mixed voices in four-part harmony, or, of course, in unison. Others are intended to be sung in unison only. There is the usual piano accompaniment for all. This is a real community book, suitable alike for homes schools, lodge and all public meetings.

The special introductory price in advance of publication is 10 cents per copy, postpaid.

(*Continued on page 622*)

Advance of Publication Offers Withdrawn

The advance of publication offers are withdrawn on the following works:

How to Play the Piano—Hambourg.

How to Sing—Tetrazzini.

Technic for Beginners—Risher.

Two and Twenty Little Studies for the Pianoforte—Cramm.

This withdrawal notice cancels the old advance of publication prices at which these works have been offered, and after August 1st, they are offered at prices that are reasonable to the buyer and fairly profitable to the publishers.

The advance of publication prices are made low for the advertising value in introducing works in this manner and as thousands of our patrons know, all advance of publication subscribers receive excellent value for their money.

Technic for Beginners, by Anna Priscilla Risher, which is being withdrawn this month is now priced at 75 cents a copy.

This is the first book of regular daily finger exercises and is a preparatory work to *Hanon* or *Pischna.*

Two and Twenty Little Studies for the Pianoforte, by Helen L. Cramm is published at 75 cents a copy.

This new work embraces quite a few essential points in the development of the playing ability of young pianists. Teachers will find this a most helpful work in elementary instruction.

How to Play the Piano, by Mark Hambourg is a volume well worth possessing if at all interested in being an accomplished performer on the pianoforte. It would take many lessons to gain all of the advice given by this eminent pianist in this book which sells for $1.50 a copy.

How to Sing, by Luisa Tetrazzini. Madam Tetrazzini gives in this book much of value to the teacher and student of singing. It not only makes interesting and instructive reading, but it is valuable to have at hand for frequent reference. The price of this book is $2.00 a copy.

Etude Premiums Given for New Etude Music Magazine Subscriptions

See advertisement on the inside back cover of this issue. The rewards offered represent merchandise manufactured by high class business houses and are well worth the small effort it takes to secure them. We pay all charges so that the only expenditure is asking you to obtain ETUDE subscriptions from music lovers and remitting for the subscription price as collected. Make your selection of the gift you desire and we will see that it is promptly sent.

Warning

Swindlers are still active. Daily receipt of complaints from music lovers throughout the country show that many people are still paying cash to strangers. We do not employ travelling agents. Our direct representatives are located in the towns in which they take orders for ETUDE. Unless you are convinced of the responsibility of the subscription agent, you pay money at your risk. We cannot be responsible for the work of so-called *college students* gathering votes for a tuition, *ex-service men* who were never near the front, nor impostors using other and apparently plausible stories.

Three Splendid Etudes For Only 35c

There is still time to give your friends a musical treat by subscribing for three splendid summer issues of THE ETUDE MUSIC MAGAZINE at only 35 cents. Currency or stamps acceptable. This will give any music lover a splendid introduction to THE ETUDE MUSIC MAGAZINE and the small amount paid will be credited on a regular subscription of $2.00 provided the order is received promptly after the last introductory copy has been mailed.

Change of Address

If you have had your ETUDES follow you to your summer home, be sure to advise us promptly when you return to the city in the fall. It is necessary for us to have both addresses to insure accurate attention.

ing a picture of some composer and
lace.
rom your friend,
BILLY HEGNER (Age 11).

How I Shall Play"

By Rena Idella Carver

L play my chords so big,
China 'most can hear.
and deep like chestnut trees;
relaxation, dear.

play arpeggios, too,
furiously along,
ce crimson flying leaves,
with the wind's wild song.

play my scales so swift,
l neat with no mistake;
ie squirrels with envy turn,
flying trips they make.

play my finger work—
e round and full and free—
se and trill shall be,
apples from the tree.

play some octaves rare,
surely, clean and true,
ng branches, leaves,
when the wind blows through.

play all studies, too,
h speed and cleverness,
ndurance; rival be
irds in gracefulness.

play my pieces new,
like the swaying grain,
spirit all may catch,
joy cannot restrain.

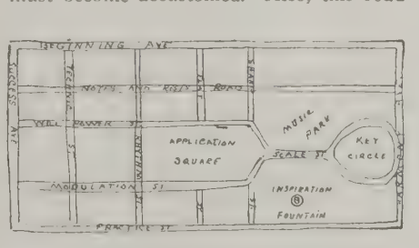
play all my review,
as Autumn haze;
v, luscious, ripe and rich:
as the Autumn days.

s how I'll surely play,
lly do good work,
s teacher tells me to,
er a day my practice shirk.

A Trip Through Musicland

By Constance McGlinchee

AUTO trips are, of course, enjoyed most in the summer time. Even then they mean real pleasure only if the car is in perfect condition, the roads good, and the weather fine.



But there is one trip that can be enjoyed at any season of the year and in any kind of weather. Everybody does not know about it, but it is very popular with those who do!

There is one thing necessary before starting, and that is that anybody who wants to come with us must love music with his whole heart, and soul and mind—more than anything else in the whole wide world!

The necessary equipment for the trip is: ten good, strong, healthy fingers; two good feet—obedient to the ears (right foot not too heavy); one quick, intelligent mind; two keen, critical, and very discriminating ears; a good sense of color; a fine sense of proportion; not forgetting a lot of the sense known as "common"—which is, in reality, anything else!—and oh! we must be sure we have plenty of Ambition Gas.

Now let's start! We go first to Application Square. It is quite famous, so that if we should get lost, any policeman (and there are extra ones on this street) will gladly direct us. There is no danger, though, if we just follow Will Power Street straight. It is in the center of the City of Talent, and very easily reached from any of the nearby suburbs—Much, Very Much, Quite-a-lot, Unusual, Little Talent, and Great Talent.

From Application Square we take Staff Road, a very popular thoroughfare. It has a new kind of roadbed, to which we must become accustomed. Also, this road is marked differently from some; that is, by lines and spaces. This is confusing at first, but very easy, once mastered. If, in addition, we notice the clef guide-posts all along, and always make sure just where we are, we cannot get lost.

Map of Talent City.

What is that street on the left? Oh, "Notes and Rests Road." We'll go in there! What a beautiful road! And what lovely sounds are those that come to our ears? They must be the tone-birds up in the staff-trees! We shall see lots of them on our journey.

Suddenly, as we drive along, we see a small parking space off to the side, and a big white sign over it reads—"Rest." There is an officer here who makes us stop, with some other cars. While we stop, cars coming from the other direction pass. Of course they have to "rest" sometimes, too. There is a beautiful view from here, and how still everything is! It IS "*rest*"-ful, isn't it? The officer is motioning us to go on, now; you see, we cannot stop too long, or we should not be "in time." As we continue, we discover that there are a number of these "rest" places on this road.

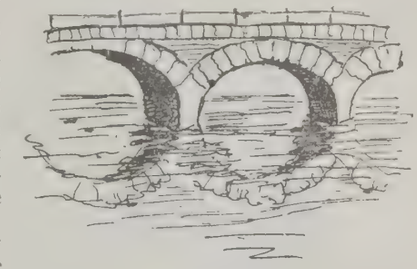
The speed laws must be very carefully watched in this section. All through "The Waltzes," it is 3/4; in Marchville, 4/4; some towns allow 6/8, others only 2/4. We must pay very strict attention to these, or we shall get a summons from the patrolling officer, Mr. Time.

All this country that we have just been through, was the Beginning Hill Section. Now we must drive up the hill itself, which is very steep and quite rough. But we can make it all right if we just have on plenty of power. There have been serious accidents here—many caused by carelessness. We cannot go too carefully up this hill. If we take the necessary precautions here, all the rest of the trip will be easier.

So far, we have been going through Natural country; but presently, we shall be in the section known as "The Keys"—famous for its beauty the year round; rich in color, with infinite variety in the shades of its shrubbery and flowers. We must stop here for some more Ambition, too.

(To be Concluded Next Month)

Finishing Touches



By Marion Benson Matthews

Lou finished with a magnificent flourish, the piece she had been playing for the family's enjoyment, and hopped up from the piano bench.

Mother glanced at her keenly. "I used to play that piece, years ago," she remarked, "and it seems to me you have left out a good many bass notes."

"Oh, I may have left out a few, but it really doesn't make much difference," said Lou, with a little pout. "It sounds just as pretty, and most people wouldn't know anything had been left out at all."

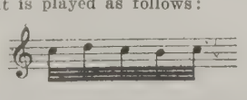
"Ho, ho!" laughed Harry. "That's like a civil engineer saying, 'Never mind if I *don't* make my calculations quite exact; the bridge will look just as pretty, and

most people won't know it hasn't a firm foundation.' And perhaps some of them wouldn't—only those poor souls who went down with it when it finally collapsed."

"It's not the same thing," declared Lou. "Making a bridge sound and safe is much more important. It's a matter of life and death. Leaving out a few notes isn't going to endanger anyone's life!"

"Let's use this comparison, then," suggested Ruth. "Suppose Mother made you a dress and, instead of finishing it off carefully, said, 'I can't be bothered with the finishing touches. I will use pins instead of buttons, and pin up the hem instead of stitching it.' When you wore the dress on the street, wouldn't you look ridiculous? Especially if all the pins dropped out!"

Mother and Harry laughed, and even Lou was forced to smile at this picture of herself. Then Mother said, soberly, "Perhaps it isn't a matter of life and death, as you put it. But it is more serious than you think, for this reason: If you allow yourself to become careless and slipshod in your playing, you certainly will become so in *everything else* you undertake. If you get into the habit of doing little tasks well, you will just as surely do the important ones well. Don't you see?"



"I see, Mother," said Lou, thoughtfully.

Question Box

DEAR JUNIOR ETUDE:
Will you please tell me the meaning of this sign ∾ ?
R. V.,
New Jersey.

Ans. The sign ∾ is called a "turn" in music. It is played as follows:

Some editions of Paderewski's *Minuet à L'antique* make frequent use of this sign, while others write out the notes in detail.

DEAR JUNIOR ETUDE:
Will you please tell me the meaning of the following sign:

F. I.,
Colorado.

Ans. The sign is an abbreviation, meaning to divide the time alloted to the quarter note stem, into three notes, indicated by the three dots. It would be played as a triplet.

JUNIOR ETUDE—Continued

The Junior Etude contests will be discontinued during August and September. This month's answers will appear in October.

DEAR JUNIOR ETUDE:

I have been one of your faithful readers for several years and have derived much enjoyment and help from your columns.

My sister and I go to Minneapolis every summer to study music. I take violin and dramatic art and my sister takes piano and voice.

During the winter my sister teaches music in our home town and I go to high school and take piano lessons from her.

I also give piano lessons to several small boys and girls.

From your friend,
IDA THOLLEBANG (Age 16),
Wisconson.

DEAR JUNIOR ETUDE:

I like to read the letters from boys and girls on THE JUNIOR ETUDE page, so I am writing, too.

I am very much interested in music. My father is director of a boys' band, and teaches orchestra and band instruments. My mother is a piano teacher and gives about forty lessons a week at our home; so I do not get much chance to practice, but am getting along fine. My mother organized a club and we named it the "B Natural Club." I think it is a cute name.

From your friend,
ANNETTE BASTIEN (Age 13),
Minnesota.

DEAR JUNIOR ETUDE:

I am one of the many music students that delight in reading your splendid department. This year I am staying at home and practicing for a vacation! I like to practice very much in the early morning, when everything is cool and bright. I am studying the Liszt etude, "Eroica," and a song by Chopin-Liszt. A few weeks ago a man from New York came to the conservatory where I take my lessons and heard a few of us play, as he wanted to give the one who played the best a prize. I played Beethoven's "Moonlight Sonata," and a Liszt concerto with my teacher. I wasn't old enough to receive the prize, but three of our students won. I surely was glad. I have studied piano three years, and I hope some day to be on the concert stage. I have wonderful opportunities, as my music teacher is one of the best pedagogues in the world. My letter is very long, but I thought perhaps you would like to see what young students are doing with music. I have gotten several of my friends to subscribe to your splendid magazine.

With best wishes,
From your friend,
EVELYN R. TEANDER (Age 13),
Iowa.

DEAR JUNIOR ETUDE:

I never knew of you until five days ago. Our Librarian, Mrs. Kimble, was kind enough to hunt up some back numbers for me. I take a great deal of interest in music, for I intend to teach music when I am older. I am thirteen years of age and am in the eighth grade.

There have been three music memory contests in my school. Miss Hunt picked out three from our school to send to the district contest.

When I was in the fifth grade I went to Rushville, Indiana, with Kathryn Bishop and Percy Peters. We had one "sub," Josephine Brown.

Then in the seventh grade I, my sister, Kathleen, and Percy Peters, went to Rushville with Miss Popper, fifth grade teacher and Miss Hunt. In 1924, Brookville came in second while Glenwood won. We three represented Franklin County.

We have no piano now, but will have soon. I play mostly without music. Since I have been going to school I never have received anything except "A" on my report.

I have started a music scrapbook and it is very interesting and hope some readers will try it.

From your friend,
MARGARET MARY CORNELIUS,
Indiana.

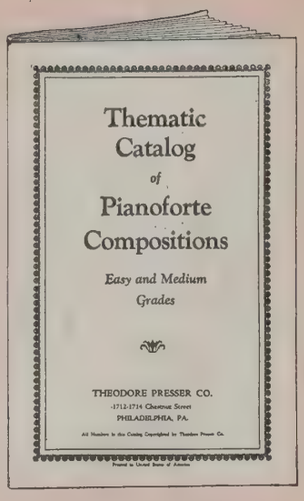
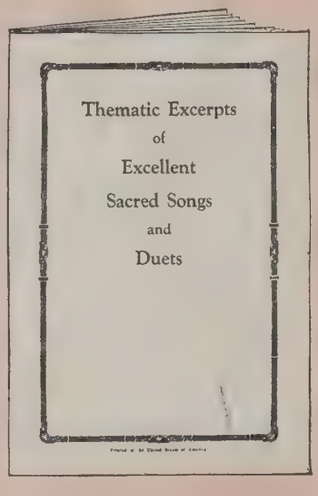
"Samples" for Music Buyers

SURELY the most satisfactory buying is when one enjoys the opportunity of testing "samples." This page is devoted to the offering of valuable booklets that contain generous portions of some of the best songs and piano compositions, without charge, to any interested in such music publications. Read the description of each of the six booklets illustrated on this page and send a postal for the ones that you believe will be helpful to you.



Teachers, particularly, should secure some of these helpful booklets for the help they would be in selecting numbers for teaching purposes.

Local music dealers will supply these musical catalogs gratis, or write direct to

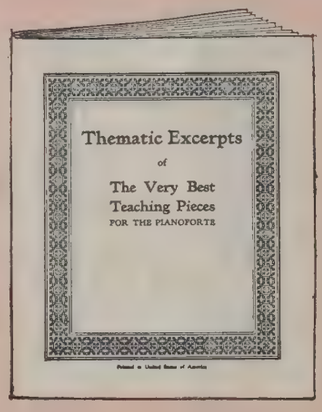


THEODORE PRESSER CO.

Everything in Music Publications

1712-1714 Chestnut St. Philadelphia, Pa.

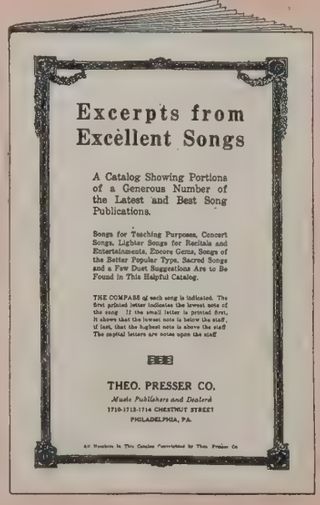
THERE are thematic cuts of well over 200 piano compositions in this catalog and every teacher should have it at hand for convenience in securing suitable teaching pieces. 60 or more of these compositions are in grades 1 and 1½—over 70 in grade 2—50 are grade 3—nearly 30 are grade 4, and the balance are grades 5 to 7.



THE church and home singer will delight in going over the dozen sacred songs and three sacred duets of which pages are given in this booklet of "Thematic Excerpts of Excellent Sacred Songs and Duets." The complete text of each song is given, as well as the range of each key in which the songs are published.

Theodore Presser Co. catalogs cover choir music, chorus music, organ music, violin music, methods, studies, musical literature works, musical plays—in fact, any class of music publications. Ask for those that interest you.

Contains Full-page Reproductions of 48 Piano Compositions that are in Great Favor With Piano Teachers and Pupils Everywhere.



**Krogmann

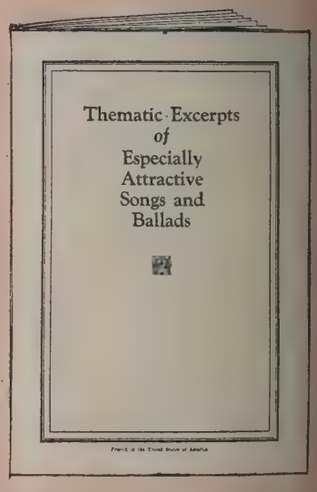
André
Rogers
Loeb-Evans
Williams
Koelling
Cooke
Burleigh
Friml
Steinheimer
Forman**

Above are named some of the outstanding composers whose compositions are brought to attention in this booklet. These melodious numbers are chiefly in grades 1, 2 and 3, only a few going beyond these grades.



"Excerpts from Excellent Songs" is one of the most popular catalogs ever issued. It contains portions of around 100 songs that are sufficient to supply songs for teaching purposes, concert songs, lighter songs for recitals and entertainments, encore songs, as well as giving a few suggestions in duets and sacred songs. There are few of the better known song

writers missing from this catalog, since one finds in it some of the best and most recent offerings of such writers as Ambrose, Baines, Mrs. Beach, Barrell, Brown, Buzzi-Peccia, Cadman, Candlyn, Cooke, Dett, Ellis, Foster, Galloway, Hadley, Hageman, Hammond, Kountz, Lieurance, Manna-Zucca, Marzo, Newton, O'Hara, Scott, Smith, Tate, Stults and others.

JUST to get acquainted with nearly 100 piano compositions through the portions of them shown in this catalog will give the proficient player or the teacher of the pianoforte many moments of pleasure at the keyboard. A promise of the worth of its contents is in seeing such composers as Friml, Guion, Hofmann, Huerter, Lemont, Schuett, and others represented.

FULL-PAGE reproductions of fifteen successful songs as well as the complete text of each are given in this booklet. Vocalists may have it for the asking, and theirs will be the opportunity to judge in the best manner the desirability of possessing the song in complete form.

Never hesitate to ask the Theodore Presser Co. for musical information. Giving helpful service to those in the music world is our greatest pleasure.

Outstanding Contributions to Piano Literatur

Piano Technical Works by I. Philipp, which have been used extensively by leading teachers everywhere. No special or proprietary course is required to adapt them to daily teaching.

I. PHILIPP

M. Philipp is ranked as the foremost writer of Technical Works since Czerny and Tausig. He is Professor of Pianoforte Playing at the Paris Conservatoire.

Preparatory School of Technic

BY I. PHILIPP

The Beginner's Book of Practical Exercises

AN excellent work that may be taken up in early grades of study and continued in whole or in part over several years as daily practice material. It contains all technical essentials, including splendid preparatory scale and arpeggio work that will give the student a substantial foundation for this important phase of Piano Study. It may be used to precede the author's *Complete School of Technic* or in conjunction with any system or method of teaching.

Price, $1.25

Finger Gymnastics

By I. PHILIPP **Opus 60**

SUPERB material for the completion of fingering work in extension—one of the most original works on technic to be found in the whole literature of piano materials. The contents are so arranged that they can be apportioned judiciously in daily practice, according to the weaknesses and particular needs in the student's technic.

Price, $1.50

Exercises in Extension For the Fingers

By I. PHILIPP **Catalog No. 5649**

THE studies in this volume serve as an introduction to finger gymnastics for the earnest student, being designed to give the greatest flexibility to the fingers and to strengthen the hand and wrist.

Price, 75c.

Complete School of Technic

BY I. PHILIPP

A Compendium of Modern Teaching

MANY piano teachers consider this ou standing course of studies as an indi pensable adjunct to the student's routine d daily practice. It is an extraordinary an valuable technical work for students of mo erate attainments, and is exhaustive in all d tails, including fingering exercises, scale chords and arpeggios, octaves, double note trills, tremolo, etc. The regular use of thes exercises will develop flexibility and ind pendence of the fingers and will give the st dent a good mechanism. Such a work as th furnishes ideal daily practice material f use throughout one's entire career.

Price, $1.25

The New Gradus ad Parnassum

Academic Edition of Selected Studies for the Pianoforte

Revised and Compiled by I. PHILIPP—*In Eight Books*

The "New Gradus" volumes comprise an exhaustive treatment of the various departments of technic in separate books, and below is given a brief outline of each book. The major portion of the studies used in these volumes fall in grades 5 to 7. This is the same material used by M. Philipp in his master classes at the Paris Conservatoire.

Book 1 Catalog No. 8690

Left-Hand Technic

A remarkable grouping of study material for bringing the left hand keyboard work up to a satisfying quality. M. Philipp has utilized compositions from the world's greatest piano technicians in presenting advanced study material for this department of technic.

Price, $1.00

Book 2 Catalog No. 8691

Right-Hand Technic

In this volume studies are so arranged that the player's attention is concentrated upon the right hand, the left-hand accompaniment being made quite simple. They are in progressive order, and original material by M. Philipp is presented in addition to the best of appropriate studies by other world-famous piano authorities.

Price, $1.00

Book 3 Catalog No. 8692

Hands Together

"Hands Together," stressing the important principles of contrary motion, is suitable for the student advancing to new heights in keyboard proficiency. It is an excellent work for any pianist whose technical ability is above moderate attainments. A perfect mastery of these studies equips one for the undertaking of studies that progress into the virtuoso class.

Price, $1.00

Book 4 Catalog No. 8693

Arpeggios

A perfect handling of the arpeggio may be acquired through the use of the "New Gradus," volume four, which gives the arpeggio in a fine variety of forms. Some of the most satisfying effects in piano compositions are found in these gems which the compiler has drawn from classics and the works of well-known pedagogic writers.

Price, $1.00

Book 5 Catalog No. 8694

Double Notes

This book offers invaluable aid to piano students in handling the complicated double-note work in major and minor thirds and sixths that will confront them when attempting to render many of the favorite compositions for the piano. Copious fingering marks help the player in these studies.

Price, $1.00

Book 6 Catalog No. 8695

Octaves and Chords

There is always a need for octave and chord work, and the material in this volume offers the best in this line of technic. Such studies as these should receive daily attention from students sufficiently advanced to profit by the use of them. M. Philipp has gone thoroughly into the literature of piano technical material in seeking these study gems.

Price, $1.00

Book 7 Catalog No. 8696

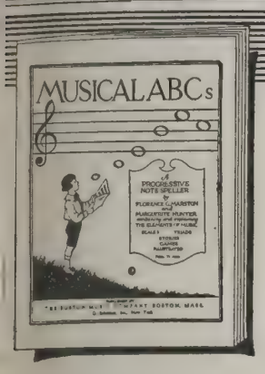
The Trill

The trill is an interesting technical device and the piano student is given an excellent drill upon it in the studies in this volume. A variety of forms are presented with work for the left hand as well as for the right hand, furnishing exercises that will aid the advanced pupil in developing a clear, well-rounded trill.

Price, $1.00

Book 8 Catalog No. 8697

Various Difficulties



Twenty excellent studies that make an exceptional grouping of study material for the student who is really developing into a proficient player. They will assist development in general, there being studies that cover the tremolo, two-hand trill in third, complicated chord rhythms, wide skip, glissando, and other technical difficulties.

Price, $1.00

WILHELM BACHAUS

A Master Lesson On

BEETHOVEN'S SONATA PATHETIQUE

Prepared Especially For

THE ETUDE MUSIC MAGAZINE

By the Eminent Virtuoso

WILHELM BACHAUS

Will Appear in THE ETUDE for October

THIS master lesson is one in the long series by the world's most famous pianists. THE ETUDE has never represented that these lessons are equal to those given in person by great teachers. On the other hand they do represent many hours of the most careful and exacting preparation upon the part of the world's foremost artists of the keyboard and are of vast significance and value to the student and to the teacher. Very few students could afford to pay Mr. Bachaus for the time he has spent in the preparation of this remarkable lesson. Mr. Bachaus is now playing in Australia with great success.

In the November issue of THE ETUDE Mr. Mark Hambourg, distinguished Anglo-Russian Virtuoso, will present a lesson upon the Schubert Tausig Military March. In every instance carefully edited editions of the composition are printed in THE ETUDE Music Magazine with cross references to the lesson.

During the course of several years some twenty of these Master Lessons have been presented in THE ETUDE.

Annual September Offer *Pages 698, 699, 700 and 701 of this issue contain information of vital interest to all music lovers. Do not miss it.*

Harmony Book for Beginners

By Preston Ware Orem Price, $1.25

Teachers Achieve Speedy Results With This Harmony Book

An Ideal Harmony Class Book

AN unequaled "success." The main essentials of harmony are made understandable in a clear, concise manner and everything is presented simply, yet in an engaging and interesting manner. Teachers will find this work lays a strong foundation for future musicianship and music lovers not conversant with the subject will be greatly enlightened through the self-study that can be done with this book.

The Best and Most Practical Work for Self-Study in Harmony

And After the "Harmony Book for Beginners"

Theory and Composition of Music

By Preston Ware Orem Price, $1.25

SURPASSES anything available as a guide to the practical application of harmony to composition. May be taken up by anyone having an elementary knowledge of harmony. It teaches Melody Writing, Harmonizing Melodies, How to Write an Accompaniment, Modulation, Modern Harmony, Musical Forms.

Etude Letter Box

Helps To Teaching Young Pupils

TO THE ETUDE:

I think we teachers often fail in giving pieces that are too difficult. If a piece has been hard and laborious, follow it with something easy and tuneful, in which all the details of expression and phrasing may be brought out with freedom, thus allowing some individuality of the pupil to be developed.

The most effectual method I have found in dealing with a poor lesson is to tell the pupil that *every* mistake will be counted, wrong notes, wrong time, wrong fingering. Then the pupil's pride comes to the rescue and he puts forth an effort. This painstaking endeavor with proper relaxed muscular conditions is the only work that gets real results.

When a new piece is to be memorized care should be taken to assign an amount that corresponds to the child's mental ability. Perhaps only two or four measures is enough at first, but they must be played until perfect.

Sometimes pupils, after practicing a piece a week, will come for a lesson not knowing the key in which it is written. Such carelessness should be censured sharply. Even beginners can be taught the tonic, sub-dominant and dominant in their pieces. In four-four time the eighth notes may be compared to words with two syllables, like "singing" or "laughter," and sixteenth notes with words like "beautifully" and "expressively."

A system of marking mistakes with a red or blue pencil is also a stimulant to the child. The difficult passages may be enclosed in parentheses for exercises to be practiced slowly to develop technical ability and correct fingering, then more quickly for ease and rhythm.

N. B. INGALLS.

The Road Game

TO THE ETUDE:

Although I expect the studying ing of music to be my life work, I find the necessary hours of pract tiresome, so I play a game as I pieces. This is my game.

I build a hard road with my t sign a contract with my teacher, s I will have my solo learned by a ce The first thing toward the work o is getting the land on which to road. This consists in getting a of the sharps and flats, changes i and difficult measures, which I re sight. I put special study on the may go ahead and not lose any t I start work on the hard road. when my hours of practice become count every measure and do not until I can play it perfectly. Whe to a tricky measure I put a small it; then before I reach that meas the sign and take particular caution to play it correctly.

Nearly every piece has a few diffi and almost every strip of hard bridges. So I also construct brid my road. By doing this I put spe on studying fingering, and pract places until I can play them with assurance. The bridge has served pose. It would be tiresome to never come to any town, so ever of key is a town.

Then—my road is complete. My is fulfilled and my goal is reached the satisfaction of playing my pi ease; for I am as sure it is correct a saying it was fun to learn it.

EVELYN KARR (Ag

Musical Smiles

Good Eats

REGINALD DE KOVEN, at his daughter's wedding breakfast, in New York, praised the appetite of musicians:

"Being fine, healthy fellows," he said, "musicians always have good appetites. You know, perhaps, what Rossini once declared.

"'If I am to dine on roast turkey,' said Rossini, 'there should be only two at table —myself and the turkey. If, however, it is a question of grilled chicken, then the company should number three—myself and two chickens.'"

Scrambled Geography

A VAUDEVILLE entertainer, who was looking for a song to feature, was observed shaking his head dubiously over so music. His partner, the other hal sketch, came along and wanted t what he had.

"Another Dixie song by a writer."

"Well, what's wrong with it?"

"Oh, nothing much. He's Suwanee River located in Californ

Did Beethoven Jazz?

By E. L. Selwyn

CONCERNING the origin of the "Merry-making of the Country Folk" in Beethoven's "Pastoral Symphony," Thayer quotes Schindler to the following effect:

"There are facts to tell us of how particular was the interest which Beethoven took in Austrian dance-music. Until his arrival in Vienna (1792), according to his own statement, he had not become acquainted with any folk-music save that of the mountains, with its strange and peculiar rhythms. How much attention he afterwards bestowed on dance-music is proved by the catalog of his works. He even made essays in Austrian dance-music, but the players refused to grant Austrian citizenship to these efforts. . . . In the Tavern 'To the Three Ravens' in the *Vordern Brühl* near *Mödling* there had played a band of seven men. This band was one of the first that gave this young musician from the Rhine an opportunity to hear the national tunes of his new home in an unadulterated form. Beethoven made the acquaintance of the musicians and composed several sets of Laendler and other dances for them. In the year mentioned (1819), he ha complied with the wishes of the b was present when the new opu handed to the leader of the compan master in high good humor remark he had so arranged the dances th musician after another might put his instrument at intervals and take or even a nap. After the leader ha away full of joy because of the p of the famous composer, Beethoven me if I had observed how village cians often played in their sleep, sionally letting their instruments f remaining entirely quiet, then awa with a start, throwing a few vi blows or strokes at a venture, but ally in the right key, and then asleep again; he had tried to copy poor people in his 'Pastoral Sympl

Schindler then refers to the well-passages in the movement in questio ticularly the passage for the secon soon which comes in at the cadence what are apparently the only notes available—F, C, F.

"IS THE curse of the popular music of today rather its obsession by rhythm—the physical element in music—to the debasement of melody and harmony, the el which are the brain of music?"—*A. J don.*

THE MOST IMPORTANT PUBLICATION OF THE AGE *for* SINGERS, TEACHERS AND STUDENTS!

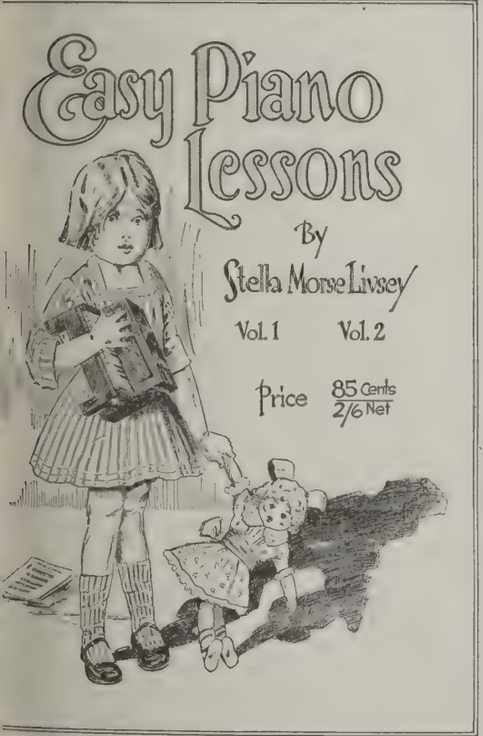
SIR GEORGE HENSCHEL, with whom many of the world's greatest singers and teachers have coached, now makes available for general use his wonderful method of

ARTICULATION IN SINGING

A Manual for Student and Teacher With Practical Examples and Exercises

The main reason why so many fine singers fall short of becoming great artists is due to the fact that their articulation is either faulty or incomplete.

Perfection in interpretation is only gained by a uniting of both vocalization and articulation. To interpret a song properly—effectively—the singer or reader—should have the listener understand clearly every word that is sung or said.



Many church and concert singers are really instrumentalists. They articulate so poorly that the listener does not "grasp" the meaning of the song—does not understand what they are singing about. They fail to put the message across.

Here is a book replete with sage advice and minute instructions as to just what to do and just what not to do in the proper and in the effectual rendition of vocal music.

A WORK OF GREAT VALUE TO EVERY TEACHER AND SINGER

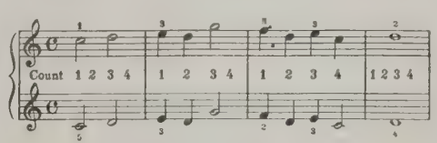
EASY PIANO LESSONS



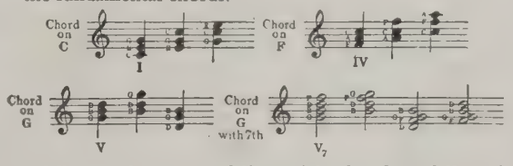
By STELLA MORSE LIVSEY

In two volumes. Price, each, 85 cents

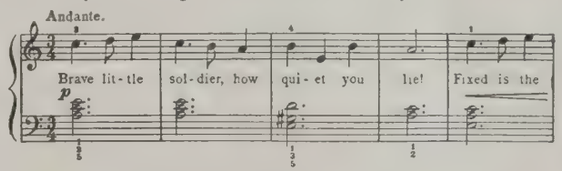
Published with beautiful multi-color title like the accompanying illustration

IN RESPONSE to the demand for a similar book of a little more advanced grade to follow "Children's Musical Moments," this work has been prepared. A similar pleasant path is followed, and the same ideas of thoroughly melodious and efficient progress have been applied to this work.

The pupil is expected to learn the why and wherefore of things at this stage, to be able to read notes, and should understand time values and count aloud.



The construction of scales is carefully explained, and the pupil is then encouraged to form all the scales on this formula.



Simple transposition is encouraged, syncopated time is introduced, the tie, staccato practice, triplets, slurs, phrasing generally, made clear by means of the words.

The elements of Harmony are touched upon in connection with chord construction and the explanation of the fundamental chords.

Minor scales are carefully explained and are followed by little compositions in the minor keys.

Teachers are left quite free to use their own particular system of technique, a limited number of footnotes being given for the benefit of young teachers who may not be as ready as those with more experience.

A table of key signatures, major, minor, and chromatic scales, and a list of the important marks of expression appear at the end of each volume.

Volume II naturally contains more material of recreational nature, but in each case the little composition is devoted to some particular technical problem.

This new work is the most important since the appearance of "Children's Musical Moments."

Twenty-Five Prizes Open to All Etude Readers

"WHY EVERY CHILD SHOULD HAVE A MUSICAL TRAINING

What Can You Say on This Subject?

FOR years THE ETUDE MUSIC MAGAZINE has devoted a great amount of space to indicating how a musical training is of great value to the child in developing rapid thinking, accuracy, self-discipline, memory, good taste, muscular, mental and nerve co-ordination.

We have brought to our readers' attention the opinions of many of the greatest thinkers of the time, pointing to the fact that the training received in the study of the art, particularly in the study of an instrument (including the voice), has a very great significance in the fields of Religion, Education, Sociology, preparation of the mind for higher accomplishments in Art, Science and Business, in Musical Therapeutics, and other inspirational themes. Now we should like to have an opportunity to print the boiled-down opinions of some of our readers upon the subject at the head of this column.

CONDITIONS:

The contest closes December 31st, 1926. All manuscripts must be in office at 5 P. M. on that date.

Anyone may contribute. It is not limited to subscribers to THE ETUDE.

The Essays must be between three and four hundred words in length.

The Essays must be written on one side of the sheets of paper. Kin write as legibly as possible. When feasible have the Essay typewritten.

Address "THE ETUDE Prize Essay Contest," THE ETUDE MUSIC MAGAZI Philadelphia, Pennsylvania.

Be sure to put your name and address at the top of each page of manuscr

Essays accompanied by return postage will be returned. All others will destroyed within one month after the closing of the contest.

When the opinion of the Judges is divided between the merits of t approximately excellent manuscripts, neatness of appearance, clearness expression, and punctuation will be taken into consideration.

PRIZES

FIRST PRIZE—A MUSICAL LIBRARY. Valued at One Hundred Dollars ($100.00)

Just think what a boon this wonderful library would be in any School or Home!

The following works selected from the publications of the Theodore Presser Company, at the regular retail prices, constitute this prize.

The World of Music

GLAZOUNOFF

A Glazounoff "Jubilee" has been celebrated by the Leningrad (St. Petersburg) State Conservatory, commemorating twenty years of service by this master as its director. Born in the Russian capital in 1865, he was elected to his present position in 1905, when the peace of the institution was disturbed by the protests of Rimsky-Korsakoff, because Glazounoff made himself a ominal figure above his famous friend. the unique experience of having been d under the Czarist régime, of serv- ughout the revolution, and of main- the favor of the Soviet government.

International Society of Con- ary Music held its fourth annual at Zurich, from June 18th to 23d. ere five concerts and a theatrical pro- and American composers were repre- by a "String Quartet on Indian " by Frederick Jacobi.

ppresentazione del Animo e rpo (Representation of Soul and he first of oratorios, by Cavälieri, and vas first performed at the Oratory o) of St. Philip de Neri of Rome hich it received its name), was given t performance during the annual mu- of the Musicians' League of Frank- rmany, late in June.

ks of Jean-Jacques Rousseau, rench composer and musical historian, number of sixty-nine books and two and forty-two pamphlets, have been the library of Princeton University, a purchase made by Dean Glauss, from te Buffanoir, the French critic.

Birth-House of Gaetano Doni- where he first saw the light in 1797, mo, Italy, and which has long been a many musical tourists, has been ac- y the Italian Government and will be as a national monument to his genius. of a weaver who sought to make of eacher, the world owes some of its rkling music to the fact that Donizetti ntly ran away from this home.

e Rôze, one of the most favored of nnas of the 1870's and '80's, died in l near Paris in the last week of June. one of the particular stars of the and Strakosch troupes and of the 'arl Rosa company, of England. She icularly successful in the leading rôles ien," "Fidelio," "Lohengrin," "Aïda," ovanni," and "The Magic Flute." After rement she was for many years a t teacher of singing in Paris.

ona," a romantic opera, by Alberto founded on an American Indian leg- l interpreting the spirit of the Red fe with much of the poetic fancy that e Longfellow's "Hiawatha" so fasci- s now being prepared for production American Grand Opera Company, of , Oregon.

E. EDDY

Clarence Eddy, "The Dean of American Organists," celebrated his seventy-fifth birthday on the 27th of June. A distinguished company gathered at the palatial home of Charles M. Hayes, on a bluff of Chicago's Sheridan Road, overlooking Lake Michigan, and did honor to the occasion. A message from Vice-President Dawes and a tribute from William Chapman, whose mother had n in her arms to hear Mr. Eddy, at ennial in 1876, added interest to the he annals of American organ-playing ubly bear no name that has added er to this field of our national art.

m Van Den Burg has been ap- eading violoncellist of the Philadel- hestra. By a strange coincidence he, h three immediate predecessors, Hans is Kindler and Michel Penha, all hail land. One might wonder by what the little kingdom of windmills be- prolific in tulips and 'cellists?

Louis Svecenski, violinist and viola player, died in New York, on June 8th. Born in Croatia, November 6th, 1862, he received his advanced musical training at the Vienna Conservatory as a classmate of Fritz Kreisler and Franz Kneisel. Wilhelm Gericke brought him to America in 1885, to become a member of the Boston Symphony Orchestra, with which he remained until 1903. He was the faithful viola player of the famous Kneisel String Quartet throughout the entire thirty-two years of its existence.

The Gramophone (Talking-machine) has been banned from the precincts of Cambridge University (England) because of the students' over-indulgence in Jazz; and now a number of young friends of the classics have petitioned the Vice-Chancellor to allow the use of the mechanical reproducer for the music of the masters.

The "Pop" Concerts in Boston Symphony Hall attract fifteen thousand people every week. About one hundred and fifty thousand are reported as the attendance for this season; and fully five million admissions have been paid since the inauguration of the series in 1885.

Turkish Schools now employ only Western music in their methods of instruction; and this notwithstanding that the Constantinople Conservatory has collected and preserved more than three thousand traditional Turkish airs. Though much richer in tones (employing approximately two hundred) than occidental music, that of Turkey is barren of either polyphony, harmony or counterpoint.

Four Leading Military Bands of the World are this month playing and officially representing their respective nations at the Sesqui-Centennial Exposition at Philadelphia: The Band of the Coldstream Guards, of London; the Garde Republicaine Band, of France the Royal Carabinieri Band, of Italy, and the United States Army Band, from Washington, D. C.

The Brahms Chorus, with N. Lindsay Norden as conductor, is a new vocal organization of Philadelphia. With a membership of one hundred voices, its aim is the artistic interpretation of *à capella* music, in which Mr. Norden has achieved surprising results both while formerly conductor of the Mendelssohn Club and as leader of one of the best choirs of Philadelphia.

Alice Singer, American harpist, has been awarded the Reine Harp Prize, in a contest which closed in Paris on June 28. She is the first American to win this distinction.

Six Student-Soloists, none of whom is more than seventeen years of age, have been chosen to appear at the concerts of the Stanley Music Club, of Philadelphia, which are given by one hundred members of the Philadelphia Orchestra under the bâton of Artur Rodzinski. It is interesting to note that but two of these young people are native-born Americans, the other four coming from Russia.

The London Bach Choir, organized for the performance of the "Mass in B Minor," celebrated in June its fiftieth anniversary. Its first conductor was Otto Goldschmidt (Jenny Lind's husband), and succeeding leaders have been Sir Charles Villiers Stanford and Sir Walford Davies.

Stephen Foster's one hundredth anniversary was celebrated on the Fourth of July by impressive programs at Pittsburgh and other places. Born at Lawrenceville, now a part of Pittsburgh, on July 4th, 1826, by his simple, spontaneous, soul-songs he probably enriched Columbia's musical heritage more than any other of her sons or daughters. Of his more than two hundred songs several undoubtedly will remain classics wherever and so long as the English language is sung.

Broadcast Programs have been kept this summer at the same high standard as prevails in the winter, by the Sears-Roebuck Station WLS, of Chicago. Cyrena Van Gordon, Charles Marshall, Glenn Drake, Marie Morrissey and the Little Symphony Orchestra of Chicago are among those contributing to the star programs planned for Friday evenings, beginning at nine-thirty o'clock, Chicago daylight saving time.

The Hart String Quartet was a welcome visitor from Canada in August, when it gave a series of concerts in "The States," taking them as far West as Cedar Rapids, Iowa. The organization takes its name from Hart House, the main building of the University of Toronto. When the Massey Foundation presented this building to the University it also established and endowed the Quartet, thus assuring a permanent association of these educational and cultural agencies.

Keystone View Co.
DAME ETHEL SMYTH

Dame Ethel Smyth has received from Oxford University the much coveted honorary degree of Doctor of Music. She is probably Britain's most distinguished of women composers. Her grand opera, "The Wreckers," has had many performances on the continent and in Great Britain; and her lighter and more romantic, "The Boatswain's Mate," has been very popular in the English opera houses. Dame Smyth's first opera, "The Forest," was produced at the Metropolitan of New York, under Heinrich Conried, after its première at the Royal Opera of Berlin.

Two Famous Viennese Theatres celebrate interesting anniversaries this year. The Burgtheatre early in the year marked its one hundred and fiftieth anniversary and thus recalled the days of the Empire when it was Europe's foremost stage. The theatre an der Wien, in June had its one hundred and twenty-fifth "birthday," and has special historic interest in that it was founded by no other than Schikaneder, libretist of Mozart's "Magic Flute."

Works by Fellows of the American Academy in Rome recently made up a special program performed at that institution. A "Lento for Piano and Stringed Instruments," by Walter Heffler, songs of Robert Sanders, and a "Quintet for Piano and String Instruments," by Herbert Elwell, were the compositions heard.

Raoul Laparra, composer of "La Habanera," which was in the repertoire of the Metropolitan Opera Company two years ago, has been awarded the Monbine Prize of Three Thousand Francs, for his opera, "Le Joueur de Viole (The Violin-Player)" which recently met with success in Paris.

The American Federation of Musicians met in Salt Lake City, in the second week of May. Joseph N. Weber was unanimously re-elected as president for his twenty-seventh term in this office.

The Royal Conservatory of Liege has celebrated its first one hundred years of existence. Méhul is probably the best known of its Directors; while *Ysaye,* one of the greatest of modern violinists, received his early education there where his father was an instructor of violin. César Franck and César Thomson are two other students who have reflected glory on the school.

SIR HENRY WOOD

Sir Henry Wood, whom we would be tempted to call "The Theodore Thomas of England," were it not that he is so purely, genuinely and peculiarly just the "Sir Henry" who has done so much, and this so unobstrusively, to make England honored musically, has been again a most welcome visitor among us. The noted conductor of the Queen's Hall Orchestra of London is here primarily to conduct his second series of concerts at the Hollywood Bowl.

Mrs. J. Powell Jones, organist of Epworth Memorial Church, of Cleveland, Ohio, was recently elected dean of the Northern Ohio Chapter of the American Guild of Organists, the second time that a woman has been raised to this office.

The Centenary of the Birth of Karl Bechstein, founder of the House of Bechstein, piano manufacturers of Berlin, was celebrated by that institution on June 1st. Hans von Bülow was one of the first great pianists to use these instruments, which later was done by Liszt and other artists, till they largely supplanted the instruments of Erard and Broadwood, which had been the favorites of Europe.

Negro Spirituals and Negro "Work Songs" are reported to be growing in popularity in Berlin, where the leading critics are emphasizing the "spiritual" as America's greatest contribution to musical art.

Eugene Cowles, once so popular with that unusual organization, "The Bostonians," is reported to be organizing a new light opera company in "The Hub," to be known as "The New Bostonians."

Alexander Gretchaninoff, the widely-reputed Russian composer, is to make a visit to this country early in the fall. Best known in America by his compositions, he is familiar as well in his native land as a pianist and conductor. Born in Moscow on October 3d, 1864, he is recognized as the leading living disciple of the great Rimsky-Korsakoff, Stravinsky having missed this distinction by following a star which led him into a path divergent from that of the great creator of "The Snow Maiden," and "Le Coq d'Or."

Beethoven is to be the central figure of a silent drama soon to be produced by the German Fox Film Company. It is said that the picture will be staged on a large scale, employing actual scenes associated with the composer and the creation of his works.

© Aimee Dupont
DAME NELLIE MELBA

Dame Nellie Melba, for thirty-eight years one of the most popular of concert and opera singers of the world, made her "farewell" appearance in opera at Covent Garden, London, on June 7th, with demands for tickets on the outside and scenes of enthusiasm within the theater that might well have stirred even one accustomed to laudation. It was a thrilling climax to one of the most brilliant careers among the singers of a century. A flawless art in technic, an unparalleled evenness of voice from limit to limit, and a ravishingly silvery tone, made *la Melba* a coloratura singer unequalled in her day and perhaps never surpassed.

(*Continued on Page 702*)

It is the constant ambition of the editors and publishers of the "Etude" to make each issue of the journal worth many times more, in practical instruction, stimulating inspiration and real entertainment, than the price of the entire year's subscription. The music lover can not possibly find a better two-dollar investment.

The Basis of Beauty!

FOR the busy housewife, the business girl or professional woman—too engrossed to give much time to the cultivation of beauty—Mme. Helena Rubinstein, leading beauty specialist, provides a wonderful cream that supplies all the most essential needs of every skin.

A few moments of daily care with this most remarkable of preparations—

VALAZE PASTEURIZED FACE CREAM

—will work wonders for your complexion.

BLENDING smoothly into the skin, it gathers up even the finest particles of dust and soil—it revitalizes the cells and tissues—it "molds out" the tired look about the eyes and forehead. Moreover not only does it protect and safeguard the skin, creating a charming smoothness, but it is also an ideal make-up base.

Judge for yourself—you will see a great improvement almost immediately, for no quicker or more effective aid to beauty has ever been created.

VALAZE PASTEURIZED FACE CREAM — 4 oz. 1.00, ½ lb. 2.00, lb. 3.50 (*also in tins for the convenience of travellers*).

Perfect Valaze Cosmetics —flattering and protective

VALAZE RED RASPBERRY ROUGE—smart, becoming to every type. 1.00.

VALAZE RED GERANIUM ROUGE — latest Paris shade. Perfect day shade for blondes. Evening shade for every woman. 1.00.

VALAZE ROUGE-EN-CREME—for cheeks and lips. Red Raspberry, Red Geranium and Brunette. 1.00, 2.00, 5.00.

VALAZE CRUSHED ROSE LEAVES ROUGE —a subtle tone for the conservative. 1.00.

VALAZE LIPSTICKS—to match rouges—ultra-smart, adherent. 1.00, .50.

VALAZE ROUGE-POWDER SIFTER or VALAZE DOUBLE COMPACT—Newest of vanities in stunning Chinese-Red, all the rage in Paris, conveniently small yet containing as much powder and rouge as ordinary large compacts. Choice of shades. 1.50.

VALAZE MIDGET DOUBLE COMPACT—tiny as your wrist watch. Silvered—*ideal for evening*—Chinese-Red *for daytime use.* 1.50.

Letters from Interested Readers

Music as a Means of All-Round Development

To THE ETUDE:

Of all the arts, music is the best means of giving all-round development of human powers, this is education of soul, mind and body unitedly. Man struggling with the difficulties of his instrument might be compared to an army overcoming a strong enemy. The soul as general sends the eyes as scouts to instruct the mind as captain to command the ten fingers as soldiers. If all the necessary forces are on duty, entrancing strains of music result—the battle is won; but if any one of them is wanting there is only partial defeat of the enemy. Can we conceive any other study that demands the same simultaneous exertion of all one's powers to their limit? Some one has truly written in THE ETUDE, "Music as an art may be best approached through the pianoforte . . . . There is nothing in the literature of music that cannot be explored through the piano. It is for this reason that I feel very strongly that every one who desires to study music, whether the design is professional or amateur, should, at first, strive to gain a certain pianistic facility. The ability to play the piano, if merely for exploring purposes, is a valuable possession for anyone in these days, when there is such a world interest in music. Except drama, music is the only fine art which can be re-created wherever there is the right medium." Music is always increasing in favor with Americans, and becoming a "possession" and not an "importation." I herewith venture to claim for it the enviable position of our best means of education.

MARY M. PLEASANTS.

Musical Fairy Stories

To THE ETUDE:

Some people are quick to criticize teachers who seem to make play out of elementary musical education by telling fairy stories, playing games and in other ways appealing to the child nature. These fault-finding parents and friends of the pupils believe that, since the road to success in music is long, hard, and anything but a game, children should not be started off with the wrong conception of the task that is before them, and that in place of myth and fable, which are told merely to interest the child, stories from the lives of the musicians should be given.

Musical biographies, which can be made exceedingly interesting to children, form a foundation for more advanced studies in history and appreciation, but fairy stories have no educational value. These arguments are sounder in theory than in practice; because children live in a world of fancy which forms such a vital part of their young li nothing can supplant it. The fairy the only world that the child has exp and it is therefore, the only world understandable to him. For the int healthy progress of the young child elves and sprites are almost indispens

H. O.

Cheer for "Shut Ins"

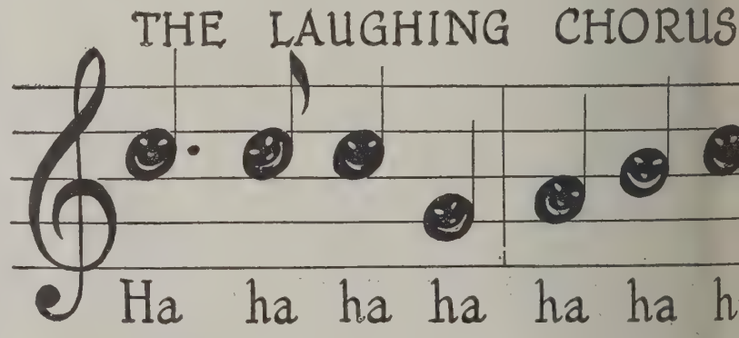
To THE ETUDE:

The late numbers of THE ETUDE usually welcome, as they arrived whi recovering from a sprained back an

The article on "Development of t in Piano Playing" by E. A. Schubert, what I needed. It reminded me o stein's almost deformed hand and o crushed beneath a wagon, and I co feel thankful that my left wrist was dislocated.

I gathered both information and tion from the wealth of THE ETUDE's The articles on "Music and Labor" June issue, were most encouraging have always believed in the need o in all branches of life.

"How to Overcome Nervousness" b gave very helpful suggestions.



One article seemed to me to lay t value on the discovery of talent by test. In working with young piano I have found that an untrained ear easily detect small variations in p in time duration and that intelligen ing often rapidly develops this ability individuals who have remarkable t sensitive ears often lack other essen musicianship. Pupils sometimes rem parently hopeless for six months or m then develop faculties one would n dreamed of being there.

Tests of rhythm, to be within th of children, should be confined to dan marches. An interesting test which out the imaginative side of the char what might be called the "mood test this such pieces as a gay peasant da neral march, wedding march, noctur carolle, military march, and fantastic tive pieces are useful. The childr record briefly the impression made by each piece.

Music should be a part of the child' life, from the time he first steps into dergarten room. The singing, the the marching, the skipping, and the of hands outvalues all other means of ing a sense of rhythm and pitch.

With best wishes for your continued

KATHERINE JOY PO

Adaptable

Professor Fugue.—When will it be convenient for your daughter to take her music lesson?

Dad.—Any time when I'm not at home.

A Good Excuse

Little Bobbie would not sing in school. His teacher insisted that he do so or give a reasonable excuse.

Bobbie (half-sobbing): "I don't want to sing, 'cause mother says I sing just like Dad, and you ought to hear him."

A Cheerful Prospect

Will. R. MacDonald, of Washington, once rented a farm a few miles outside of the city to escape the noise of town, but he soon tired of looking after the place.

"I'm going to hire a manager, to look after this farm," he told his family, at breakfast one morning. "Then I won't have any more trouble. He can occupy a room on the top floor, and we will all have a quiet, easy time."

MacDonald leaned back and smiled serenely in anticipation of the coming rest and peace.

That night as the new manager through the hall, on his way MacDonald stepped out and asked he cared to have the afternoon pa

"No, thank you," replied the f rest and quiet. "I have a flute on always practice two hours before to bed."

Speeding Up

Farmer Oats, at a concert, dur performance of a duet, remarked friend:

"D'ye ken, Tammas, now it's go o'clock, they're singing twa at a as to get done sooner!"

Say it with Music

They had courted for fifteen ye yet neither of them would as m name the happy day. So one evenin supper she began to play on the pia asked her to play something swe touching, so she played "Darling, Growing Old." He took the hi proposed.

Study in Your Own Home with the Best Teachers in the Country

No longer is it necessary for the ambitious musical student to incur the expense of leaving home to study at an expensive resident conservatory. By the University Extension System the masters' methods are taught in the home by easily understood lessons sent by mail.

The Piano student has the lessons of the marvelous teacher Sherwood. The Cornetist studies with the master Weldon; Crampton trains the voice of the singer; Heft shows how to interpret the soul of music on the Violin; Rosenbecker and Protheroe take the pupil through every phase of the study of Harmony; Protheroe gives his authoritative instruction in Choral Conducting; Frances E. Clark gives the most practical methods in Public School Music; Frederick J. Bacon, the great banjo- ist; Samuel Siegel, world-renowned mandolinist, and William Foden, famous guitarist, give their methods for mastering these instruments. The History Course, including Analysis and Appreciation of Music by Glen Dillard Gunn, and Advanced Composition by Herbert J. Wrightson, are advanced courses leading to the degree. Ear Training and Sight Singing by F. B. Stiven.

More than 200,000 ambitious men and women have gained proficiency in these various branches of music by the University Extension Method. And to you we offer the same advantages which were given to them.

This Is *Your* Opportunity—Mail Coupon TODAY!

AN ARRAY OF EXCELLENT TEACHING MATERIAL FOR PIANO

PIANO TECHNIC FOR CHILDREN
By Julia Lois Caruthers $2.50
A well-known work on the subject of the first technical training practiced away from the piano. Includes all the accepted standards of technical exercises used in ultimate artistic piano playing Each problem is illustrated and accompanied by songs and rhymes. Specially designed for class work.

HOW TO TEACH PIANO TO THE CHILD BEGINNER
By Louise Robyn $1.50
A set of thirty-six lessons based upon scientific principles of child pedagogy. Miss Robyn's wide experience and success as a teacher ably qualifies her as authority for the practicality of her method of procedure set forth in this work.

MUSIC EDUCATION
A Series of Books. By Calvin B. Cady
Volume 1—An Outline $1.00
A book that has been out of print for some time This new issue now available differs from the original only in the absence of blank pages for teacher's notes. This volume treats of the educational processes whereby music as a mode of thought can be developed in the child's consciousness and brought to expression.
Volume 2—Teacher's Material $1.80
The specific purpose of this book is to illustrate the principle and processes of music as an education as sketched in Volume 1.
Volume 3—First Home Studies for Ten Fingers
Book 1, 75c.; Books 2 and 3, each, 50c.
In these books the processes of music development are practically applied by the use of two and three tone melodies. They introduce also the Staff, realization of Rhythmic feeling and simple phrasing.

FROM THE VERY BEGINNING
By Phyllis Lucy Keyes 60c.
The first study for the child of the Big Staff and the Keyboard. All one-line pieces, using the simpler keys and yet giving a very free use of the Keyboard. Words and pictures add to the interest and ample space is given for the printing of each piece.

THE CHILD AT THE PIANO
By Meda Zarbell Steele 75c.
Four essential lines of fundamental elementary music development have been followed in this book: (1) Ear-training and Theory; (2) Study of the Staff and Keyboard; (3) Rhythm and (4) Technic.

THE VERY FIRST LESSONS AT THE PIANO
By Mrs. Crosby Adams 90c.
A book that has served a great need and will continue to do so as long as there are teachers who wish to awaken the interest of the pupil in his music work from the beginning. Standard with thousands of successful teachers.

TEN IDEAL LESSONS FOR CHILD TRAINING IN PIANO STUDY
By Kathleen Air 50c.
A creative plan of awakening and leading the child in music. Ideas successfully used by Miss Air in her work as head of the children's department of the Columbia School of Music, Chicago. Provides the pupil with a true foundation—mentally, musically, rhythmically and physically. Suitable for class work or private instruction.

WORK AND PLAY BOOK
By Mrs. Crosby Adams 75c.
Dealing with the important study of Transposition in its elementary stages. A familiar Folk Song melody is given and space is provided for its transposition into all the major keys. It involves scale construction and triad building in both Major and Minor keys. A book that produces far-reaching results.

PRELIMINARY STUDIES FOR THE PIANO
By Mrs. Crosby Adams 30c.
Systematic training in elementary preparation for piano playing. To establish an easy familiarity with the keyboard and grand staff in a series of simple exercises. Valuable lessons for the adult beginner to precede the "Graded Studies," or for the child to precede "The Very First Lessons at the Piano."

FINGER SONGS FOR THE PIANO
By Edna Densmore 60c.
Brief tuneful melodies using large notes and intended for very first daily sight reading for the young student.

SYNTHETIC SERIES
by Florence A. Goodrich
Vol. 1 (S. E. No. 11), 75c.
Vols. 2 & 3 (S.E. Nos.12 & 13), each, $1.00
A plan of intelligent memorizing. Shows the value of analyzing the harmonic structure of pieces to be learned. The plan is definite, presented authoritatively and forms a firm basis for future success in this part of musical development. The volumes follow one another in logical order.

LESSONS IN RHYTHM
By John Mokrejs 75c.
To develop a feeling for and scientific understanding of Rhythm.

ALTHEA'S SAMPLER
By John Mokrejs 60c.
Some highly original ideas in teaching the first necessary steps in music. Woven into quaint stories, the fundamentals are presented as story characters. First problems are mastered with no apparent effort but give a satisfying permanence in the child's mind. Color names are used in the training of Positive and Relative Pitch.

STUDIES IN SIGHT READING FOR THE PIANO
By Mary Frances Frothingham 75c.
These studies are designed to train the eye to see keyboard and staff relations; to conceive quickly such details as signatures, ties, rests, time value of notes, etc., essential to smooth and accurate sight playing.

THE QUEER LITTLE HOUSE OF LINES AND SPACES
A Note Spelling Book
By Elizabeth Blackburn Martin 60c.
An ingenious way whereby the pupil becomes thoroughly familiar with the lines and spaces on the grand staff. Serious work presented interestingly. The book includes lessons in note values and notation, rests, also key signatures.

LESSONS IN SIGHT READING AT THE PIANO
By John Mokrejs 75c.
A simple and direct method of developing accuracy in sight reading. Explains in careful detail the fundamental principle of this method. The mental training resulting from study as prescribed in this work is exceedingly beneficial.

THE LITTLE HANON
By Robert J. Ring (S.E. No. 100) $1.00
Elementary Technic for Beginners. A series of simple exercises designed to cover, step by step, the various elementary finger movements. The diatonic progression of the exercises eliminates all the drudgery usual in purely technical work. Patterned after and preparatory to the "Hanon Virtuoso Pianist."

PRACTICAL SCALE BUILDER
By Robert J. Ring 25c.
Each page a chart for the construction by the pupil of all the Major and Minor scales. A plan that insures the understanding knowledge of the scales from all angles. Teaches the pupil to think, write and recite scales, as well as to play them. Widely used in class work and private instruction.

PRELUDES FOR YOUNG PIANISTS
By Florence A. Goodrich 75c.
Attractive music that develops pianistic style, encourages transposition, accustoms the pupil to chord building, introduces rules of simple harmony, stimulates interest in the mastering of early technical problems.

HOME STUDY BOOK FOR BEGINNERS
By Mrs. Crosby Adams,
Parts 1 and 2, each 40c.
Teaches the pupil to use the tools of musical craftsmanship and write as well as play musical phrases and sentences.

GRADED STUDIES FOR THE PIANO
Compiled by Mrs. Crosby Adams
7 Books for Two Hands, Grade 1 to 5, each, $1.00
3 Books for Four Hands, Grade 1 to 3, each, $1.00
Universally recognized as a superior series of graded piano work. Selected from a wide range of classic and modern material, they furnish every thing necessary for a complete musical development.

The TEACHER'S LOOSE-LEAF JOURNAL LEDGER the MUSIC STUDENT'S LESSON RECORD by Leola Arnold are indispensable utilities for the music teacher.

HARMONY FOR BEGINNERS AND ADVANCED STUDENTS
ELEMENTS OF HARMONY, By Emil Barth, 40c.
PRELIMINARY STUDIES IN KEYBOARD HARMONY AND TRANSPOSITION
By Anna Heuermann Hamilton 40c.
KEYBOARD HARMONY AND TRANSPOSITION
Vols. 1 & 2, each, 40c.
By Anna Heuermann Hamilton
HARMONY AND ANALYSIS
By Kenneth M. Bradley $2.00
HARMONIC MATERIAL AND ITS USES
By Adolf Weidig $3.00, plus postage

SCHUBERT ALBUM

TWENTY-FOUR COMPOSITIONS BY FRANZ SCHUBERT—PRICE, $1.00

IF you are familiar with the beautiful melodic qualities of Schubert's compositions you will enjoy thoroughly having a volume of Schubert's numbers for piano. If you have never made the acquaintance of many of Schubert's melodies then this album holds a treat for you. The good pianist not only will find these numbers interesting, but the average player also is able to enjoy playing them since they do not possess any forbidding keyboard work. The purchasing price is very reasonable, figuring only a little over four cents for each one of these delighting pieces.

THEODORE PRESSER CO., 1712-1714 Chestnut Street, PHILADELPHIA, PA.

During Your Visi to the "Sesqui"

WE want you to make o store your headquarters receipt of mail, etc. Let serve you in any way wh may be helpful to you.

Remember, we will be glad welcome you either at 17 Chestnut St., or at our booth the Liberal Arts Building the Sesqui group.

We have prepared a very attractive Sesqui souvenir of interest to all music lovers, which we will gladly forward to anyone upon request.

Start Fresh

The world goes up and the world goes down,
And sunshine follows rain;
And yesterday's sneer and yesterday's frown
Can never come over again.
Charles Kingsley.

We are standing upon the threshold of a new season. Let us make it the most helpful, the most productive, the most sunny, the most prosperous season of our lives. We say "let us" because we are joining in the resolution with you.

Backed by renewed vigor, widened experience, great national activity, the blessings of peace and good government, there is almost no limit to what we may do.

One of the principal things is to be ready. We have been working harder than ever before to get things ready to be of greater service to music lovers, teachers and students. Never in history was musical opportunity greater. Never in history has music been in position to be of such great service to humanity.

Teachers, especially, should make prompt plans to have everything ready—circulars, cuts, study programs complete, all necessary supplies ordered and in the studio, as far in advance of the teaching season as is possible.

Above all, do not let past failures discourage you. Start fresh and build anew. If the cyclone blew down your house of dreams last year, worrying about it will never build a new one. Hazlitt used to say "Prosperity is a great teacher; adversity is a greater." Every year we grow richer in life experience. Prosperity comes from cashing in on this experience.

Standing Criticism

"Only the Great can profit by criticism," wrote a famous French artist of other days.

Criticism is the chisel of destiny.

The music student who does not learn how to stand criticism is not likely to get very far in the art. Standing criticism demands stamina and poise and understanding.

The constructive criticism of a real master is priceless. Destructive criticism well delivered is equally valuable. By destructive criticism we mean those observations intended to destroy bad habits and inconsequential effort.

Unfortunately many critics in their effort to make their remarks felt have an idea that they must use a battle-axe or else the no less painful lance and scalpel.

These critics talk mostly for their own entertainment, or for the purpose of surprising others with their smartness, their erudition, their omniscience.

This kind of criticism is the hardest for the student to stand.

"Your scales sound as smooth as a corduroy road!"

"Your voice is beautiful, my dear, especially those two or three tones that are not in your nose or your throat."

"Your touch is wonderful. It sounds like a pneumatic hammer."

These and other similar serrated remarks are very easily uttered and are usually about as helpful to the pupil as would be the trick of boxing his ears to show how simple it is to hurt some defenseless individual. The European teachers of another day used to take pride in their sarcastic criticisms. The more sting, the more biting, the more cutting their remarks, the nearer they supposed they were to higher pedagogical ideals.

Although criticism today is upon a different plane, it is impossible for the student to go very far without receiving directly or indirectly some staggering critical blow.

The student who is wounded by such critical blows is certainly not the one who will triumph. He must learn how to keep on his feet and permit the "chisel of destiny" to carve out his artistic entity. Every criticism should be carefully and deliberately weighed. It is hard to be impersonal when the subject under discussion is yourself. Is the critic right? Are the weaknesses he points out things of great importance of which I have not been conscious? How can I find the right remedy?

Sometimes students are pathetically damaged by criticism that is inconsequential. They form the habit of listening to all kinds of chance remarks and never cultivate stamina enough to hold their own ground. They are pushed from pole to pole by the observations of people who have never earned the right to criticise.

Never be hurt by criticism. If you think that the critic knows what he is talking about, his criticisms may be priceless. If the critic has no right to criticise, why, pray, be concerned with his acerbities?

Most of all be your own severest critic!

Twenty-five Million Slogans

Last fall we wondered and wondered what we might do to help musical education in the most practical way. We wanted to do something that would help all teachers, all music lovers, all manufacturers, all students, all publishers, all schools.

Finally we concluded that we could do our share best by crystallizing the great thought that music is of inestimable value to mankind, in as few words as was feasible and then giving that thought as wide a circulation as possible. This resulted in the creation of a slogan that you have already seen printed conspiciously in The Etude and elsewhere.

"Music Study Exalts Life"

Since the creation of this slogan we have had it printed some twenty-five million times. It has been displayed upon news stands from coast to coast. It has repeatedly been published in our advertisments in papers with an aggregate circulation of five million readers. During the coming year we shall give it equal if not greater currency.

We suggest that our readers may do a great work for music by using this very terse but comprehensive slogan on all of their programs, printed matter or announcements of any kind.

The power of a slogan in affecting the mental attitude of the public is enormous. Every mind you direct toward this thought will advance the interests of music.

Putting Music in the School Bell

Makers of comic pictures of other days limned sketches all too graphic of the schoolboy trudging forth to school, his eyes turned painfully backward toward the "swimmin-hole" and the baseball field.

What of the present day and generation? Wonderful school buildings, trained teaching experts, gymnasiums, flowers, excellent books, alluring pictures, the cinematograph and always music, music, music, have turned the old-fashioned school from a kind of institution for juvenile penal servitude into one of the most fascinating things in child life.

In some of our big cities children clamor to get back to

school. Unlike the country child, the summer to the city child becomes a dreary period indeed; and the naturally active child mind longs eagerly to get to work.

There is really no comparison with the work done in the schools of today and in our forefather's days. The pupil of today is expected to accomplish far more in a shorter period. In most cases he does it and does it with a relish.

A parallel condition exists in music teaching. Music teaching has become a great calling. Its representatives prosper in relation to their efficiency. The same may be said of musical publications. This has tended to make the work prepared for the pupil practical and entertaining—a thousand times more entertaining than it could have been a generation ago.

Music has come into the school bell. Instead of being a horrible clanging sound which made children shudder, they now run joyously toward it.

Sesqui Now in Full Swing

We have had the keen pleasure of shaking hands with great numbers of our friends who have come to see us from all parts of the United States and the world at large, while visiting the Sesqui-Centennial Exposition in Philadelphia.

The projectors of this immense exposition were urged to open it early in the season to accommodate many visiting conventions, though the work upon the huge enterprise was only partly completed.

At this date, however, the exposition is in full swing; and a very astonishing and beautiful exhibition it is. The exhibits are reported to be valued at some $300,000,000. Gorgeous in color, rich in educational significance, filled with human and patriotic interest, the vision of Mayor Freeland W. Kendrick is now triumphantly realized. The exposition is splendidly conducted by the director, Mr. E. L. Austin.

When you come to Philadelphia be sure to call at our display right at the main entrance of the Liberal Arts Building which is located at the entrance of the great exposition itself. We shall also be glad to welcome you at our main offices at 1712-1714 Chestnut Street. Make this your headquarters. Direct your mail here if desired. Let us serve you in any possible way.

The Etude Music Magazine contribution to the celebration of one hundred and fifty years of American independence is a beautiful souvenir book of sixty-eight pages with three-color cover. It is entitled:

"Two Hundred Years of Musical Composition in America."

This souvenir is entirely free to readers of The Etude who make requests for it. It contains over four hundred pictures of American composers and sixteen pieces of the best music. It is the kind of souvenir you will want to keep permanently in your library, as no such collection has heretofore been published.

Orbits

Every great piece of creative or interpretative art moves in an orbit divine.

This thought is so vast that it is difficult to encompass it with words.

Consider such a marvelous work as the "Fifth Symphony" of Beethoven. After hearing this masterpiece over and over, we at no time are left with a feeling that at any point has the great composer fallen short of the demands of a permanent work of art; and, what is really more important, never has he exaggerated his spiritual message. His *Creation* moves in an orbit, moves with the inflexibility of Fate, moves without apparent effort. Every moment it fills the human soul with satisfaction, with artistic contentment. By this very orbit do we determine its eternal character.

No less perfect are the orbits of Gray's *Elegy*, Raphael's *Sistine Madonna*, Shakespeare's *Hamlet*, or Rodin's *Thinker*. They have so completely filled their artistic orbits that millions of men and women have found unending gratification in them.

Bach, Handel, Mozart, Haydn, Schubert, Schumann, Liszt, Chopin, Wagner, Brahms, released great works from their souls; and who would change a note to break the lines of their orbits? This cannot always be said of all of the works of the masters. Handel often lapsed from his own ideals. Works produced under such conditions have properly disappeared just as did numerous compositions of Rossini, Raff, Meyerbeer, Rubinstein, Mendelssohn and others. Even Wagner could write a "Centennial March" hardly ever touching the orbit of his eternal gifts.

As in musical creation, the interpretative artists are great or mediocre in so far as their performances move in orbits approximating human artistic perfection. Hear some of the records of Caruso singing, *Vesti la giubba* from "Pagliacci." Every note seems to follow an orbit as predestined as that of Saturn. Never is there a phrase delivered without the proper relation to the whole. Never is the tempo distorted. Never are the climaxes too loud. Never do the tones falter. With all this there is no suggestion of mechanical perfection. Caruso has created an orbit as natural and as wonderful as any of the firmament. Exact perfection is mechanical. The interpretation of a great work must move in a human orbit.

The alert teacher, the bright student will find a great lesson in considering interpretations in the future from this standpoint. Was the orbit described as though it followed some eternal design? Was every note delivered in its proper place, at the proper time, with the proper tone, accent and rhythm, so that at no moment was there any sense of shortcoming or exaggeration but instead a sensation of complete artistic satisfaction such as we expect at all times from Hofmann, Kreisler, Battistini, Casals, or Schumann-Heink?

Sticking on the Job

"*La donna alla finestra, la gatta alla minestra.*" So runs the old Tuscan adage—"While the housewife's at the window, the cat gets into the soup."

We have always held that it was a very fine thing for the teacher to be broadly interested in community affairs. Yet we have known musicians who spent so much time running from club to club, and from meeting to meeting, that there was no time to attend to business.

Music teaching is a calling which demands very close and constant attention. It calls for the most painstaking attention to the broad problems of pedagogy, the most careful consideration of the individual needs of the pupil, and, finally, incessant contact with the output of the publisher, so that the very latest thought and materials in the field of music teaching may become instantly accessible.

Do your share in the development of the musical interest of the community. Feel yourself a part of the larger life of the neighborhood in which you live. But in doing this, remember that your calling, like all others, has one main road to success and this is paved with the hard stones of strict attention to the real business of teaching.

An Editorial Joy

This month the editor of The Etude celebrates his nineteenth birthday in the sanctum. The privilege of editing The Etude Music Magazine, while it has incurred great obligations, incessant labor, and sometimes seemingly unavoidable trying situations, has nevertheless been an ever-expanding joy. This is largely due to the keen interest, friendship and remarkable appreciation of the readers themselves who have been so ready to express their feelings and, at the same time, to help in extending the work of The Etude in new fields with the oncoming generations.

We are now making extensive plans to make The Etude larger, stronger, more entertaining and more practical in the future than ever before. You, the readers of The Etude, have been so loyal, so fine in your support, that our only feeling is that we cannot do enough for you. The entire staff of The Etude is imbued with this sense of warm gratitude for your active and valuable coöperation. Editing The Etude is a delightful adventure to us. We enjoy every moment of it.

Music on the Other Side of the World

An Interview with the Noted Virtuoso Pianist

MISCHA LEVITZKI

EDITOR'S NOTE:—*Mr. Levitzki has just returned from his tour of the Orient, where he has met with extraordinary artistic success. One of the youngest of the recognized great pianists, he is also one of the most "toured." His travels have taken him to many far off places and with his brilliant and alert mind, he has made observations which are of the keenest character and of very great interest to musical readers everywhere.*]

IS VERY difficult for the casual musical player or the amateur to appreciate the extent of interest in ne-art throughout the world at the t time. We are all inclined to esti- musical values by our own sur- ngs and fail to vision the interest er peoples in other lands. It is my conviction that in the Orient the awakening which is attending trade, acture and other interests will be ed by enormous opportunities in the f music and these opportunities will e developed merely among those rs from Europe and America, who entured into the lands of the Rising nd established an Occidental civili- there, but they will exist in the and hearts of the natives, who are ow feeling the wonderful urge for l expansion.

rip to the Orient is always a fasci- experience. To the touring artist, ment of adventure becomes contin- more and more fascinating, despite ny difficulties and often disagreeable ts of travel. As one voyages over cific, thoughts naturally center upon i. There is a saying that 'God d a little bit of Heaven on earth and it Hawaii.' Surely when one en- rs the gorgeous tropical atmosphere lovely island and realizes that after is an American island, governed by cans, it does seem like a little sec- Paradise. As far as the civilization e external conditions relating thereto ncerned, you would hardly realize u are not playing in Los Angeles or, say, Miami.

still, there is something different life, even if one gets but a glance There is the great Japanese and ine population evident everywhere. perience in Hawaii seems like a de- l dream.

Concerts Between Boats

HE TIME of the concert was ar- ranged to suit the arrival of the ecause many artists stay there but y, while the boat stops on its voy- the Orient. The boat arrived at clock and the concert was arranged n. It was held in a fine, modern , accommodating some 1800 people. udience was very largely American, small native attendance. The stand- appreciation was exceptionally fine. as whisked around town and over land before and after the concert ken to the famous beach at Waikiki, I went in swimming. There is prob- o water in the world so wonderful at Waikiki. It is like liquid velvet. been in swimming at many different in America, in Europe and in the , but the water at Waikiki is unfor- e. In fact, when I reached the boat to sail at four o'clock, after just hours in Hawaii, including a large t, it was difficult to realize I had d so much in one day.

Australia and New Zealand

OURING in Australia and in New Zealand is one of the greatest ex- es in an artist's life. The big cities stralia—Sidney, Melbourne, Brisbane de and Perth—and those of New d—Auckland, Wellington, Christ Church, and Dunedin—are very interesting. Of course, there are many smaller and delightful cities. It is a very great surprise for the American and European artist to find that the Australians are perhaps the most enthusiastic devotees of music in the world today. Their taste for the best is developed to the highest standpoint. They are very independent in their judgment. No matter how great the reputation of the visiting artist may be in other lands, and no matter how many overtures may have been made by glib press agents, the Australian and the New Zealander judge strictly for themselves. And they have remarkable judgment in all matters musical and theatrical. If the artist is not worthy of their appreciation, they do not hesitate to say so in no uncertain terms.

"Australia, at the present time, is no place for second-class musical material, for such is doomed to failure. They are probably more careful in their consideration of musical points of excellence than in any other place in the world. They have excellent educational facilities.

"While in Sidney, during my Australian tour in 1921, I visited the Conservatory, then under the direction of the noted Belgian conductor, Mr. Henri Verbrugghen, who also conducted the orchestra, and I found conditions exceedingly fine. He took me through the excellent building of the institution and everything was kept up to a very high standard. I heard the playing of many students. They were very musical and had a very high level of proficiency. Mr. Verbrugghen is now the conductor of the Minneapolis Symphony Orchestra.

"In Australia, the expression of appreciation of the audiences, the wild enthusiasm, is something far more like the Russians or the Italians, than any other concert-goers in the Western world. The country simply radiates healthfulness and life. The people are vigorous and lusty. This is truly the land of sunshine. The climate is divine. One is not crowded or jostled as everywhere in our large American cities. The country is as big as the United States (without the territories) and there are only five or six million people.

Climate and Concerts

"TO MY MIND, concert-giving in Australia is on a different level from that in any other part of the world. The climate has a great deal to do with this. The artist feels so invigorated, so fine, that I am sure he must give his very best. The audiences are so responsive that ten encores are not at all unusual. When one reaches the door of the stage entrance, it is not unusual to see as many as one thousand people outside, some of whom have waited from one-half to three-quarters of an hour to greet the artist. The Australians are so hospitable to art and to the artist that one feels a genuine sense of welcome everywhere. Real art and not social éclat is the thing that counts in this wonderful new world.

"The cities are like the cities of America and England; but the people will tell you there is more of a tendency to be like America than England. The talking machine and the player-piano have been wonderful advance agents for American artists.

"This year in Java I played thirteen concerts. It may be difficult for the readers to realize that it is possible to give thirteen well-attended concerts in a country like Java where the temperature ranges from 110 to 140 degrees in the day time. Even the names of the cities, Surabaya (which is the New York of Java), Batavia, Bandoeng, Samarang, Solo, Cheribon and Malang, must be very little known to many of the readers of THE ETUDE, yet I gave four concerts in Surabaya and three concerts in Batavia. In Batavia there was a concert hall seating 1400 people. These concerts were all given under the direction of the Kunst Kring or Art Circle, which supports an orchestra all its own.

Musical Java

"IN JAVA, which belongs to Holland, the population is about forty million Malays with around two hundred thousand whites. The white people are, of course, largely Dutch. They have a very highly developed musical life and have chamber music organizations of every type. Practically none of the natives take part in the concerts, but a number of the half-casts are always found in the audience, for in Java, unlike other parts of the Orient, the mixed breeds enjoy complete social equality. The Dutch frequently intermarry with the native Malays and the offspring are never referred to as anything but Dutch. They have an equal standing and are so received when any of them journey to Holland itself. They are often extremely fond of music and very devoted to it. The natives of Java are extremely fine and often very handsome people. Between the hours of ten in the morning and four in the afternoon, business-life virtually ceases. The climate is so extremely hot that only existence is possible. Therefore the concerts start at 9.30 in the evening. Even then, the halls may be very hot and oppressive. For the touring artist, travel in Java is about as terrible as one can possibly imagine. No trains run in the cool night, for the reason that the engineers are natives and are evidently afraid that they might fall asleep at the switch. Consequently travel is done in the day-time, and Javanese railroads and railroad trains are about as terrible a torture machine as a civilized person could wish. If you leave your window open for any length of time your are black with soot. If you close your window, you are stifled. Therefore, a trip through this interesting tropical country with birds and monkeys in the trees, instead of being a very fascinating thing may become a very terrible experience.

"The Dutch have put perfect automobile roads through Java. In fact, some of the roads are as fine as those in California. The country is heavenly beautiful, with the cocoanut and bamboo trees and wonderful indigenous vegetation. Therefore it is a delightful place to visit if you go as a pleasure tourist with no work to do.

"Civilization among the Dutch reaches a very high standard in domestic life,

音樂·能強·向上·人生

Music Study Exalts Life

Music is the Gate to Paradise

音樂は天國への門

Mischa Levitzki, in the traditional Japanese costume, a gift of Countess Watanabe, a member of the Japanese Royal Family

Houses are very handsome. Labor costs next to nothing and a person in the middle class may have as many as ten to twenty servants. However, one thing is obvious —the heat of the country and the sultry climate has an unquestioned effect upon the human character. It is almost impossible to endure this without becoming irritable, or, as we say in America, "edgeways." When I made my tour of Java I was so worn out that I was obliged to cancel a number of other concerts before I could go on. In Java, I played very much the same kind of programs that I would play in New York, London, Berlin or Paris, and found a very splendid musical appreciation.

"It is difficult to forget the humid climate. It has an effect upon everything, including musical instruments. Even the violins are sometimes ruined by this humidity, as they often warp at the seams.

The Gamelong

"BEFORE leaving Java, one must comment upon their native musical instruments, the gamelong. This is the Javanese orchestra. It consists of thirty or forty different kinds of bells and is by far the most fascinating native music I have ever heard. The musicians, in their native costumes, have a fine feeling for art and play these bells with wonderful skill, producing tonal effects that are altogether fascinating and difficult to describe. They are master craftsmen in the manufacture of the bells. It sometimes takes years to make one bell so that it is satisfactory to these players.

"I understand that a rich American is bringing a large collection of these bells to this country and that this collection is said to be worth something like one hundred thousand dollars. They will be quite useless without the fascinating players. Perhaps, America may, at some time in the future, hear a gamelong played by the Javanese.

Musical Japan

"JAPAN was my next field of action. Tokyo, where I gave six concerts at the Imperial Theater, which is as fine as any modern theater in the world and seats some two thousand people, is an interesting place. There, the musical situation is reversed. The native patronage of the concert was about eighty-five per cent. Of course, there were many in the audience from the Embassy and the English-speaking population in Tokyo, but the Japanese interest in music became instantly apparent and was delightful to witness. Don't think for an instant that they are not acquainted with the character of Occidental musical art, because they are.

"If one gets away from Tokyo to such a city as Osaka, which has outgrown Tokyo in population and now is a city of some two million and five hundred thousand inhabitants, with only one hundred foreign inhabitants, one notices that he is reaching into real Japan.

"In Kobe, there are some three thousand Europeans and Americans. There I gave two concerts, also one concert in Kyoto. Kyoto is said to be the most artistic city in Japan. In Hakata I gave only one concert, and there one finds oneself in a city almost totally apart from Occidental civilization. There are only four foreigners in the city. The concert was given under the auspices of the University, in a hall which seated 1400 people, but it was different from any other concert I have ever given. The aisles down which the audience walked were elevated from the floor; and the auditors, instead of sitting upon chairs, sat cross-legged upon cushions upon the floor. The interest in the art was remarkable in every way. In fact, all through Japan, there is an astonishing musical awakening. People are buying pianos and a new piano company there is said to be exceedingly successful. Phonographs are manufactured, as are violins.

"In China, the interest in music seems to be totally different from that found in Japan, in that, for the most part, it is confined to the Europeans. I gave one concert in Pekin, two concerts in Tientsin, two concerts in Hongkong and four in Shanghai.

"When one approaches the city of Shanghai, for instance, one is impressed that he is about to visit a splendid modern European or American city, perhaps as fine as anything we can boast of in the Occident. The China of our imaginations and the China of history are obstructed by a scheme of European architecture that one would hardly expect to find in these lands on the other side of the world. The attendance at the concerts was almost exclusively European. Nevertheless, I feel there is an enormous musical opportunity in China, among the natives, who, as the world knows, are keenly intelligent and susceptible to the highest artistic development, but who have never been approached through native channels. Conservative in the extreme, they hesitate to attend or even affiliate themselves at times with European festivals; but if concerts were to be given to them in their own theatres, as they are educated and developed, I am sure they would come to realize the fascinating form and beauty of the music of the Occident. It may require the labors of many enterprising impresarios, combined with the sacrifices of idealistic artists for years before this field is developed.

Musical Missionaries

"THERE ARE missionaries in art, as well as in religion and education and medicine.

"There is really very little to induce the artist to visit the Orient, if he seeks merely monetary gains. In Australia and the United States, Argentine and in Europe, he may expect large and just rewards for his talent and achievements. These countries have been developed for years, but China, the sleeping giant of the world, is just beginning to realize the wonders of music. Of course, there are some very fine Chinese musicians, but the great body of people are not alive great opportunities of the land.

The Indian Field

"THE SAME may be said of India has never been exte exploited. Very few of the artists' or ventures have met with anythi disaster. But it is impossible to that a great country like India, wi leaven of Occidental culture mixe their own highly developed philos accomplishments, would not be at time in the future a field for artists. Of course, the temperatur at all times, be a disagreeable, an insurmountably disagreeable, feature instance, at Singapore, in the Strai tlement, the temperature was almost as Java and it is only by reason will power and desire to express the messages of the masters in the bes sible way that one can appear befor audiences.

"As one passes through India an into Egypt, he finds a revival of i in music in Cairo. One of the fine formances of opera I have ever hea there.

"Unfortunately, I was unable to Jerusalem, because of lack of time. hope, however, to be there in the n tant future. Judging by some repor has reason to look for great things country in the future. Jewish ability and talent, when combined w right facilities and high ideals, prod sults well known to the world. The stone of a fine new conservatory b has just been laid in Jerusalem."

5. *Describe musical*

Tiny Life Stories of Great Masters

By Mary M. Schmitz

Charles François Gounod (1818-1893)

1. Q. Where and when was Charles François Gounod born?

A. Paris, France, June 17, 1818.

2. Q. Who were his parents?

A. His father was Louis Gounod, a distinguished painter who restored many of the great masterpieces to be found in the homes of the French monarchs at Versailles. His mother was the daughter of a French magistrate. She was a highly cultured woman and musician, and taught music many years.

3. Q. Was the family in affluent circumstances?

A. No; they were in very moderate circumstances, and after the father's death the mother worked early and late to provide means for the education of her two sons.

4. Q. Tell about Gounod's first visit to an opera.

A. Charles was a little boy when he and his mother and brother went to hear the opera "Otello." He was so excited he could hardly eat his dinner. It was a bitter cold night and for two hours they had to stand and wait, stamping their frozen toes until the ticket window was opened. He said when they entered the great theater and saw the curtain and bright lights he felt as if he were in some temple and almost expected some heavenly vision to rise upon his sight. When he heard the voices and orchestra he was almost beside himself with delight. He was wild to write an "Otello" himself.

5. Q. Who were Gounod's music teachers?

A. His mother was his first teacher. Then he studied with Anton Reicha, who advised Madame Gounod to make a musician of her son. Afterwards he entered the Paris Conservatoire and studied with Halevy, Lesueur and Paer.

6. Q. Did Gounod win any prize while in the conservatory?

A. Yes; when he had been there one year, in 1837, he won the Second Prix de Rome with his cantata, "Marie Stuart and Rizzio." In 1839 he won the Grand Prix de Rome with his cantata "Fernand."

7. Q. What is the Prix de Rome? (prē-de-rōm.)

A. The Grand Prix de Rome (prize of Rome) is a prize given by the French government to a certain number of painters, musicians, sculptors and engravers, after a rigid examination, by which they may continue their studies in Rome, Italy. The winner of the prize has four years at the Villa Medici the Académie de France à Rome, and an annual sum of 4,000 francs for his expenses. Every successful competitor is expected to send to the Conservatoire, if he is a musician, or to the Salon, if a student of the other arts, a specimen of his work every year.

8. Q. After finishing his studies in Rome and returning to Paris, to what kind of music did Gounod devote himself?

A. He was a devoted churchman, had even thought of entering the priesthood, and consequently wrote much music for the church services.

9. Q. Name some of Gounod's sacred music.

A. "Solemn Mass" in G, "The Redemption," "Mors et Vita," "Le Sept Paroles di Jesus."

10. Q. Was Gounod a writer of operas?

A. Yes; he wrote many operas, of which the best known are "Faust," in 1859, "Philemon et Baucis," in 1860; "Le Reine de Saba," in 1862, and "Romeo et Juliette," in 1867.

11. Q. Which of these was the most renowned and oftenest given?

A. "Faust," which has been given in the Paris Grand Opera House fifteen hundred times, and for which new scenery, costing no less than thirty thousand dollars, has recently been made.

12. Q. When and why did Gounod go to England to live?

A. Upon the outbreak of the Franco-Prussian in 1871, Gounod sailed for England, with his fami cause he detested war and thought it "barbarous fo to fight each other."

13. Q. What very popular sacred songs did G write while living in England?

A. "The King of Love My Shepheard Is," "Th a Green Hill Far Away," "Nazareth," and other so

14. Q. Did Gounod write any symphonies?

A. Yes; but they were not of great importance

15. Q. Was Gounod a pianist, and did he write piano?

A. No; he was not a great piano player, and wro pieces for the piano. Gounod preferred the orga had a small organ in his home, upon which he son played until late in the night.

16. Q. What was Gounod's last composition?

A. A "Requiem." He was going over the sc this work (which he hoped would be his greatest a pupil, when he suddenly fell over dead.

17. Q. Did Paris honor Gounod after his death

A. Yes; the funeral procession was preceded by pany of police and followed by cavalry, infantry a tillery. In the procession were many famous men ters, science and art. Queen Victoria sent a han wreath to be placed upon his grave.

18. Q. What two great French composers Gounod's friends?

A. Hector Berlioz and Camille Saint-Saëns.

19. Q. What words did Gounod speak that off couragement to every student whether his talent be or small?

A. "There is no necessity that every man's cup be the same size. The great point is that each always be full to the brim."

How Can I Raise the Standard of My Playing?

New Constructive Ideas in Tone-Making. Free Curves, Controlled Through the Use of Curves and Straight Lines

By FLORENCE LEONARD

American Representative of Rudolph M. Breithaupt

IAT IS THE difference between straight-line playing and free curves? Or between controlled nd free curves?

are various ways of stating the es.

curves give the opportunity for imum of relaxation. They may e less than the maximum.

ht lines are the field for the mini- relaxation. They may also have m the minimum.

s the arm's point of view.

urves have the resonant, sonorous, ce tone.

lled curves have the intense, vivid, g tones (provided always that the as strong muscles).

ht lines are inclined to hard and s, and demand great skill to avoid That is why the slight yielding of rolled curve is preferable. They o less elasticity in phrasing.

s the ear's point of view.

urves are used for the most ple statement, of either singing or rippling runs.

lled curves are used for the most eeling, the highest climax; for the le thought, for the abstract beauty ntellectual style; for the run that in clearness and intensity, and the dazzles for sheer daring, and for per, the memory which enthralls ntensity.

s the interpreter's point of view.

is another point of view of the er. Some interpreters say to es: "This is the one tone which ne." They are pleased with only ity—either that of free curves or controlled curves, or that of lines.

Classifying Players

EASY to classify the players in different groups. Two striking s are Basoni, with controlled and straight lines, and Carreño e curves. Each of these players occasionally from the chosen Carreño believed in, and taught, n—free curves. Yet some of her thought that she played best e combined or alternated the two The players of most color, of etry, change constantly from one another, as the composer's thought

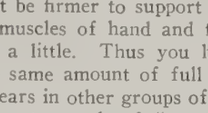
traight line is more limited in its on than the controlled curve. layers think "straight line," when actually playing in curves so shal- so small an arc, that they do not he difference. If, however, we ex- ne movements carefully, we shall nd the distinction better.

Three Kinds of Playing

PREVIOUS article, the writer ssed three kinds of free playing: ging the arm (and wrist) up and urves described by the wrist); 2. he hand and arm upon the finger- ary movement (curves described rist); 3. flinging the fingers freely down—especially down—in the in combination with swing or roll m (curves described by finger and

s examine these from the arm's view.

an example, take an arpeggio, as ajor—b, d♯, f♯, b, d♯, f♯ b. Play lowly, leaning *lightly* on the finger tips, with fingers in contact; that is, do not swing the fingers in the knuckle—merely place them. Swing the wrist high and forward. At the moment of swinging the thumb under, the elbow will swing loosely out, and there will be no holding back in wrist, elbow or shoulder. If this movement is executed correctly, there will be the maximum of relaxation, as much as is *practicable*. Every joint and muscle will be as loose as is practicable, *with one exception*—the shoulder group.

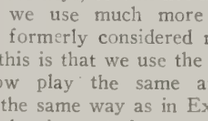


II. Next play the same notes in the same way, except that you now *lean heavily* on the finger-tips, but without pressing. (The important distinction between leaning and pressing has been previously discussed.) In this exercise the shoulder group has "let go," and thus it is added to the other groups of fully (practically) relaxed muscles. But the weight is heavier on the fingers. Therefore the hand must be firmer to support it. Therefore the muscles of hand and finger have tightened a little. Thus you have again, about the same amount of full relaxation, but it appears in other groups of muscles.

We have to speak of "practicable" relaxation, because, if there is complete relaxation, or even too much, the arm will fall from the keys, or will not move at all. And yet we use much more relaxation than was formerly considered right. The proof of this is that we use the arm more!

III. Now play the same arpeggio in precisely the same way as in Ex. I, except that you play it much faster. At the first attempt you will probably swing off the keys, for you (if you have followed directions) will have swung high. There is not time to swing so high in rapid playing.

The wrist describes the curves. *Now*, your curves, instead of being somewhat like



Illus. 1

Diagonal forward direction

as in exercises I and II, are more like

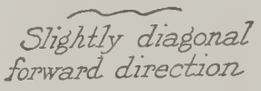
Illus. 2

Diagonal forward direction

That is, you must be relaxed, ready to move in any direction. But you will move further in some directions than in others.

IV. Play the same arpeggios again, as in Ex. II, but much faster. You must take care that the softness, the mobility remains in the joints, that the shoulder has "let go" and that the hand-and-finger group is firmer. But because you are playing faster your curve will be smaller.

Here and in III the relaxation is less complete, because certain muscles prevent your moving far, even though the ability to move is present. The curve will be similar to the curve of III.



V. Play the same arpeggios, as rapidly as possible, and *p* or *pp*. Muscles and joints must be soft. Fingers should preferably be in contact for this experiment. If the notes are not accurate at first, keep on, nevertheless! Make the arm swing and roll along very rapidly. It carries the hand with it. Allow the thumb to hang, and swing or roll with the hand. Make no effort to pass it under in this exercise. Allow the arm to find "its own way."

Experiment many times, making sure that the arm is moved freely from the shoulder. Observe your movements, and decide which is the chief one. If your movement is right, it will be chiefly rolling (rotary) in elbow and shoulder.

But other important movements will be present, combined with rolling.

Your curve will now be something like this:

Illus. 3

Slightly diagonal forward direction

and your hand, instead of moving as far, diagonally, toward the back of the keyboard, stays near the front, though it still has some diagonal direction.

All these curves, though small, are free curves, because they have as much relaxation as is possible in making the movement. You have "let go" as far as possible. And that means that you have used those muscles only which are necessary to make the movement. Others could be added to "hold" more, to qualify the tone, or to press. But they have not been. Hand and fingers are "free," and passive.

Repeat all these exercises, and think closely about the tone quality.

In Ex. I the tone should be
- pleasing
- smooth
- flowing
- not hard in "attack" (beginning of the tone)
- not *round* in attack.
- In quality, *p*, *mp* or *mf*.

In Ex. II the tone should be
- pleasing
- smooth
- flowing
- move definite in attack.
- In quality *mf* to *f*, according to the hand and arm of the player.

In Ex. III the tone should be like that of Ex. I, but the connection (quasi-legato) is better and smoother, because the tones follow each other more quickly.

In Ex. IV the tone will likewise be similar to that of Ex. II.

Repeat the same exercises, and add to each a free fling (*not* a high left of a *curved* finger) from each finger. You are now adding free finger curves to free arm (wrist and hand) curves. The faster you play, the smaller the finger curves must be because there is less and less time to lift the finger away from the keys.

After experimenting thoroughly, play Ex. I with finger added and then without finger. Compose the tones. Play each exercise with finger added, and without finger. You will hear from the finger a "sparkle," a definite roundness of attack, which is absent when the finger does not take part.

The next exercise is much more difficult to work out because it requires more control of the muscles. Even when the movement is learned, it always requires thought for execution.

VI. The material is the scale B-major, one octave. Play it (without added finger like I and II, faster like III and IV, very fast like V.

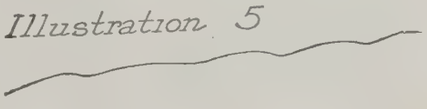
Now place the second finger on F♯ keeping the wrist *level*, but *soft*. Extend the elbow, and then draw it back, using the fore-arm like a piston-rod thus pushing the finger and hand in and out, forward and back on the key, while the finger never leaves F♯. Make this movement gradually faster and faster, as fast as possible Make the same movement with the third finger, and with the fourth and fifth. You are now (presumably) accustomed to a rapid movement of the arm, forward and back, while the finger slides on the key.

Now play the scale slowly, by pushing the piston-rod (the fore-arm) forward and back, the hand being pushed in and out on the keys thus:

Illus. 4

The wrist does *not* now make curves, by rising and falling, or rolling. (At most any curves would be infinitesimal.) It remains level.

The finger does not slide on the key. It is firm, and takes the weight of the arm, the moment it is pushed onto the key.



Thus the up and down curves made by the wrist have disappeared; the sidewise curves made by the rolling or rotary movement have disappeared.

There is left only a flat, scallop-like curve that is almost a zig-zag line. This curve is traced by the finger-ends as they are pushed back and forth, in and out.

That is, muscles which formerly let go of the wrist, now hold it level. There has been a shifting of the relaxed and the not-relaxed conditions throughout the whole arm and hand. There is less relaxation and more holding. The curves are now *controlled*.

This movement should be practiced many times, in one octave, two, three, four, until it becomes so smooth, each part of it combining so perfectly with each other part, that you have the feeling of tracing one long, smooth line with an occasional wavering curve.

Illustration 5

After obtaining control of this movement in slow tempo, increase the speed of the piston-rod, send the hand in and out, more rapidly—very rapidly. There you have one style of very rapid scale.

Experiment, now, with the arm lightly leaning on the fingers, and with the arm heavily leaning on the fingers, keeping all the suppleness of elbow and shoulder, all the passive obedience of wrist, hand and fingers. Here, then, is one example of *controlled curves*. There are other kinds also.

You may have been listening to tone, while experimenting. You will like this tone, if your movement is right. It is pure, clear, fine, *legato* in a most pleasing degree. What melody does it express most fitly? Does it suit the *E-flat Nocturne* of Chopin (which is in danger of being played out of existence if played in the ordinary tone) or the theme of the *Andante Spianato* (*Polonaise in E-flat*) or the *F♯ Major Nocturne*, or the Beethoven *Sonata in C♯ Minor* (*Moonlight*—so called) first movement?

What passages does it express? Portions of a certain *Rondo in A-Major*, by Mozart? Of a Beethoven *Rondo in G*? Yes. Chopin, *Eutde on the Black Keys*? No. The last movement of the *C♯ Minor*

Sonata (Beethoven)? No! Why? It has not enough brilliancy, enough sparkle in the attack, for the Etude. That is better played with less control, more swing and throw and impulse. The Beethoven needs more power and articulation. We must add strong impulse and much pressure from the shoulders, if we are to play that Beethoven in controlled curves. Some players can accomplish this satisfactorily, but most of them would prefer the fuller tone of the small, *free* curves with an occasional large curve and many strong impulses.

VII. After you have mastered the B scale in rapid tempo in this controlled movement, try to play the same thing with freer movement. Push the arm in and out rapidly. Let the wrist dip ever so lightly as the thumb passes on. Let the hand and fore-arm roll, infinitesimally. Let the fingers fly like little drumsticks, but never very high.

This tone will be similar to that in Ex. IV but there should be a stronger tone, with more articulation. In comparison with Ex. V, the movement itself will be more forward and back, with less rolling and more finger.

Compare this tone quality with that of Ex. VI, and notice the difference in legato, and the difference in the attack (beginning) of the tone.

Compare all the different movements, also, for quality of tone.

These papers have attempted to describe only two or three kinds of tone-making for melodies and passages. There are other very important ones, built up on these fundamental ideas. The questions of impulse and of pressure are very important, and have to be worked out definitely. Octave playing is a subject by itself, and yet it is best worked out with the aid of the "piston-rod" movement.

Now how are these movements to be learned and applied to playing?

They cannot be learned in a moment. They must be systematically developed, beginning with simple figures of five notes. broken chords, scales, arpeggios. One simple figure or scale should be played in all the different ways—free and controlled. Close listening, close thinking are necessary. It is not so much a question of *what* you play as of *how* you play. The *Thirty-two Variations* of Beethoven are an epitome of technical problems. You may play each one five hundred times and never come nearer the solution. But if you play them with the right movements a right thinking you can hope, some approach such playing as the write but recently from Paderewski. were no suggestions of technical pr for every Variation was a mood, left us hushed before the Master M creation and re-creation.

3. *What is "practicable relaxatio*
4. *Name five compositions or compositions suited to playing wi trolled curves.*
5. *What type of compositions w suited to playing with "free curves examples given?*

A Lesson With Chopin

THE following very interesting article is an extract from the life of Chopin by J. Cuthbert Hadden. Mr. Hadden secured the following account of Chopin as a teacher, from one of the master's pupils.

"In compliance with your request that I should tell you something about Chopin as a teacher, I can only speak from my own experience, and after the lapse of fifty-seven years my memory is naturally rather hazy, though I can recall some incidents distinctly.

"My first interview with Chopin took place at his rooms in Paris. Miss Jane Sterling had kindly arranged that my sister and I should go with her. I remember the bright fire in his elegant and comfortable *salon*. It was in this very month of March, 1846. In the center of the room stood two pianofortes—one grand, the other upright. Both were Pleyel's, and the tone and touch most beautiful.

"In a few moments Chopin entered from another room and received us with the courtesy and ease of a man accustomed to the best society. His personal appearance, his extreme fragility and delicate health have been described again and again, and also the peculiar charm of his manner. Miss Sterling introduced me as her *petite cousine* who was desirous of the honor of studying with him. He was very polite, but did not give a decided assent at once. Finally he fixed a day and hour for my first lesson, requesting me to bring something I was learning. I took Beethoven's Sonata in A Flat (Op. 26). I need hardly say I felt no slight trepidation on taking my place at the grand piano, Chopin seated beside me. I had not played many bars before he said *'Laissez tomber les mains.'* Hitherto I had been accustomed to hear 'Put down your hands,' or 'Strike' such a note. This *letting fall* was not mechanical only; it was to me a new idea, and in a moment I felt the difference. Chopin allowed me to finish the beautiful air, and then took my place and played the entire Sonata. It was like a revelation. You are doubtless well acquainted with the celebrated *Marche Funèbre* which of late has so often been played on mournful occasions in public, in conjunction with Chopin's own most beautiful and pathetic composition. He played that *Marche Funèbre* of Beethoven's with a grand orchestral, powerfully dramatic effect, yet with a sort of restrained emotion which was indescribable. Lastly he rushed through the final movement with faultless precision and extraordinary delicacy—not a single note lost, and with marvellous phrasing and alternations of light and shade. We stood spellbound, never having heard the like.

"My next lesson began with the Sonata. He called my attention to its structure, to the intentions of the composer throughout; showing me the great variety of touch and treatment demanded: many other points, too, which I cannot put into words. From the Sonata he passed to his own compositions. These I found fascinating in the highest degree, but very difficult. He would sit patiently while I tried to thread my way through mazes of intricate and unaccustomed modulations, which I could never have understood had he not invariably played to me each composition—Nocturne, Prelude, Impromptu, whatever it was—letting me hear the framework (if I may so express it) around which these beautiful and strange harmonies were grouped, and in addition showing me the special fingering, on which so much depended, and about which he was very strict.

"He spoke very little during the lessons. If I was at a loss to understand a passage, he played it slowly to me. I often wondered at his patience, for it must have been torture to listen to my bungling, but he never uttered an impatient word. Sometimes he went to the other piano and murmured an exquisite impromptu accompaniment. Once or twice he was obliged to withdraw to the other end of the room when a frightfu coughing came on, but he made signs to me to and take no notice.

"On two occasions I arrived just at the termin a lesson. A lady, young and very attractive, wa from the piano. She thanked Chopin gracefully pleasure he had given her. She was a Russian rank. On the other occasion a German lady, a sional musician, and her husband were taking le were expressing their obligations. I heard her since receiving Chopin's assistance, her studies longer a toil but a delight.

"In sending you these fragmentary recollection it would be unfair to Chopin if they were to cor impression that he had a cut and dry 'method majority of his pupils, I always understood, w ready excellent and even distinguished musicians they went to him. They required no elementary ing, whereas I was but a young amateur with great natural love for music and very little training. Chopin questioned me as to this, and him I had learned more from listening to singi anything else. He remarked: 'That is right ought to be song.' And truly in his hands th *did* sing, and in many tones. I watched, I liste can find no adequate description of that thrilling One never thought of 'execution,' though that w vellous. It seemed to come from the depths of and it struck to the hearts of listeners. Volum been written, yet I think no one who did not h could quite understand that magnetic power. It a deep, though somewhat mournful pleasure to open the pages marked with Chopin's pencilings margins—graceful little additions to the printed

A Little Help on the C Scale Fingering

By John Ross Frampton

THERE are several scales, some major and some minor, which use the same fingering as the scale of C major, either in one hand or in both. And so it will pay to learn the fingering in a way which will be helpful for all these scales. The letter names certainly will not serve, for the right thumb plays F in the C scale and G in the G scale. But there is a real system, as we shall discover.

Thumbs

Two things must be determined and learned: First, which notes the thumb of each hand plays; second, which finger turns over the thumb. Let us study the right hand first. The right thumb plays C and F and then C again (if we play two or more octaves). If we call C the first note of the scale (which it is in the scales of C major and C minor, but nowhere else), F is the fourth note, the subdominant. In the scales of G major and G minor the first and fourth tones are G and C, and these are the ones marked for the thumb in your instruction books. And this would prove true also for the right hand of both the D scales, for both the A scales, both E scales, both B scales and Cb major.

The left thumb plays C and G (dominant) in both C scales; that it, it plays the first and fifth tones. It does this also in both the scales of G, in both D scales, both A, both E and both F scales. So we find that both thumbs play the keynote (tonic), but the right thumb plays the fourth scale-step (subdominant) while the left plays only the fifth scale-step (dominant). That is, both thumbs play together only on the keynote of the scales, while in the middle of the scale they play different notes.

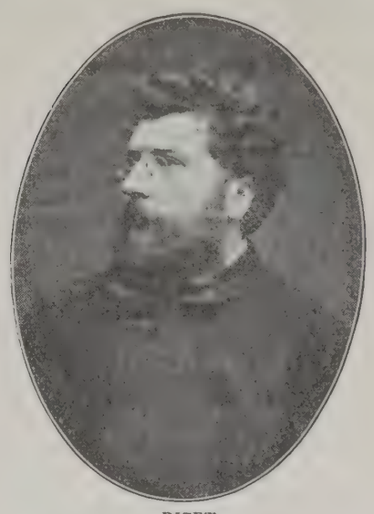
Which Finger to Turn Over the Thumb

Of course the second finger always plays after the thumb, when the key is under it, but when we have to turn fingers over the thumb we must know whether to use the third or the fourth finger (and that does not mean the little finger). Is it not queer that fiddlers do not know how to number their fingers? They call their little finger their fourth finger! Won't people laugh at them when the preacher says "Stick out the fourth finger of the left hand," and they give him their little finger! Why! The fourth finger of the left hand is the most important finger any girl has, and these poor violinists don't even know it by number!

When the right hand turns over the thumb on t note, C, it places the fourth on B, and the left p fourth over C to D. Do you see that whenev thumbs play together we always turn the fourt over, in whichever hand we need to reach ove when the right thumb is on F we turn the thi and also when the left thumb is on G we turn t over. That is, when the thumbs do not play we always turn the third over.

The Two Sets of Rules of C Scale Fingering

What we have to remember, then, is that both play together on the keynote, and when they always turn the fourth finger over. That the do not play together in the middle of the scale playing the dominant and the right the subdon and when the thumbs play at separate times we turn the third fingers over.



There is one other point which is interest should be helpful. The third and sixth tones scale (mediant and submediant) are the ones wh tinguish major from minor scales. In all scale use the C fingering these notes are always play the third finger in both hands.

The Remarkable Art of Georges Bizet

Composer of "Carmen"

By HEINRICH KRALIK

(Translated by Jacques Mayer)

BIZET

TLY BEFORE the day on which t died—June the third, 1875—oc-ed the memorable date of the first ance of "Carmen"—March the third ame year. Dates, too, are figures k, even if at times in a mysterious , which, however, is not to be stood! General opinion—and the the people is well known to be e of God—does not doubt the oincidence of the two so closely ateful days and translates from ure language of the year's dates rmen" caused Bizet's death. Could been merely a chance that the areer ended at the moment when began its glorious ascent in the ame? Who then should not be-nysterious coincidences, in a fate-n of circumstances; although it too superficial, and all too easily ensible, how in this case the earth-ace was relieved by the higher life art-work, how, through a stage 's error of fate, which permitted e behind the scenes of the world-mysteries were exposed, and the between physical death and spirit-revealed to an extent much more children of men can otherwise er useful or bearable. And in ality we perceive the poet's pre-ts: "I shall die, so that I may . ."

The Diagnosis

MEDICAL diagnosis spoke of olism, of an affection of the heart, abscess in the throat, without quite he mystery of the sudden death. time the physical exhaustion was to the composing and rehearsing men;" then the blame was laid failure at its première and the tment and anger at the harsh s. And thus arose the legend that yet thirty-seven year old master broken heart, a legend which only lly touches the deeper underlying

sure, the "Carmen" criticisms of re exasperatingly obtuse, stupid telligible; although Bizet had not from his contemporaries anything d not have been easily or quickly od. But in those days a bolder ear-harmony must have sufficed to ears deaf, the eyes blind, and the uel. And that which could not be from the paradigms of Auber, r Boieldieu, was regarded at the omique as Wagnerian nonsense. as the "wild Wagnerian" who d to throw the young French to "germanism," and to endanger chimerical dreams," "poetical "purely symphonic elements" and -dramatic theories of Richard the sacrosanct style of operatic

Bizet belongs," said one of his to that new sect, whose doctrines f dissolving the musical idea into por instead of compressing it into ms. 'This school—M. Wagner is —has made the motive unfashion-pensed with antiquated melody, g, designed for the orchestra, is y its feeble echo. From such a necessarily only a confused work t."

e thus sees, the spirit of that ightened by the elementary power ard Wagner, was incapable of ng the faintest trace of the "Car-men" music whose fundamental traits shine with the very virtues which the critics failed to discover—its precise and compact formula, its pure and dramatically rounded melody, its thrifty, transparent, helpful and unobtrusively colorful orchestra.

Bizet Reviewed

BUT ONLY ten years later, Bizet, the erstwhile "wild Wagnerite," had become the acclaimed hero of all anti-Wagnerian predilections. This time the movement came out of Germany, and its apostle was called Friedrich Nietzsche. One bade farewell to Walhalla, to "the damp North, to all the vapory steam of the Wagner ideals," and sought in a warmer zone redemption from the redeemer. One revelled in the dryness, the clearness of the air. Whoever felt uncomfortable and oppressed in the cyclopean structure of the music drama, followed the great poet and thinker, "went over" to "Carmen" and rapturously threw himself into the arms of the hot-blooded Spanish gypsy.

"Wagner merely belongs to my ailments," said Nietzsche; and one hurried to experience with him, who had really been infected by Wagner, the Wagnerian neuroticism.

Wagner's work, his poetry, his philosophy, and above all, his music, was termed decadent; and from those execrable influences, one sought salvation in Bizet, in the joyousness of the "Carmen" school, which, according to Nietzsche, was neither French nor German, but African.

The creator of "Carmen," the last person in the world inclined to such a blunder, was thus compelled to bear aloft a banner and to perform a combative rôle. The assumption that a mission was to be undertaken, even were it only for the purpose of making music more tropical, more sunburnt, "Carmen" could only possibly have carried out by her impudently ironic and mirthful tral la la (E minor). As a matter of fact the meridional expounders of musical aesthetics would have nothing to do with and vigorously protested against the proposed burning of the Tetralogy at the altar of Georges Bizet. The all-too glorious sacrifice, the *"le trop glorieaux holocauste,* as Camille Bellaigue put it, was tactfully declined.

Turning Tides

THE DOUBLE misunderstanding, at first to be suspected as a partisan of Richard Wagner, and then to be proclaimed as his antipode, may have laid the foundation of that other legend which wished to designate Bizet as a combative pioneer. In reality Bizet had nothing whatever in common with the heroic artist type, or with the traits of a Prometheus. He never felt the least desire to rebel, to storm against traditions, or to break the aesthetic tablets of the law. His genius was cultivated with peaceful, one may say, bourgeoise methods; under the protectorate of the Conservatoire, and the Ministry of the Fine Arts.

A Parallel

HIS CAREER resembles at distant intervals that of a favorite scholar who, with commendable ardor and to the delight of the teachers and the higher officials, takes part in all official competitions, always reasonably sure of winning distinctions. And later on, when the untiring student had become a young master, he always enjoyed the firm, undeviating favor of the superior powers, above all, that of the opera managers.

Bizet was their declared favorite, overwhelmed with their commissions and orders. And neither open nor disguised failures could shake their confidence in his talent. The "Pearlfishers" disappeared after eighteen performances, the "Maid of Perth" only with difficulty attained to the same number; and the charming "Djamileh" had even to content itself with eleven repetitions. Less good fortune attended the stage-music to "L'Arlésienne," from which the fascinating suite for concert purposes was arranged. The composer was never held responsible or blamed; on the contrary in his case the usually fearsome impresarios maintained their faith in him, with astonishing tenacity. Bizet was and remained their favorite and, as his critical biographer, Henri Gauthier-Villars, once remarked, he enjoyed the paradoxical privilege of alluring the managers through his failures.

"Carmen," too, was written to the order of the Opera Comique; and for this masterpiece, in which the genius of the composer found its complete and glorious revelation, we have to thank, not an irresistible artistic impulse, but the rare accident of a lucky commission. There is nothing to show that "Carmen" impressed Bizet more deeply than the other texts or libretti which he set to music. He wrote the score, just as he always wrote: As a convinced adherent and admirer of the traditional Italian operatic forms, as an experienced master of his calling, as a sceptical judge of the public, thoroughly understanding how much he could venture and how much he could concede; and with only these aims in view—to compose good music and to be successful. Meanwhile, unconsciously and involuntarily there poured from the deepest and the most mysterious recesses of his being into the score, new wonders of melody, of harmony and of the highest musical and dramatic expression.

A Musical Chasm

IN THE romantic world, the chasm between the formalistic and the idealistic types of art is much less broad or deep than in our material precincts and many graceful passages bridge over the opposing shores of artistic viewpoints. The orientation is not easy and often dwells upon the most subtle impressions. Thus Henry Pruniers, the eloquent advocate of the youngest French composers, delivered before the International Society of New Music a discourse on the actual problems of his country, in which, to the astonishment of the uninitiated, he drew a sharp line between Debussy and Ravel. (Our clouded view in this instance, only perceives the stylistic points of contact.) Pruniers's convincing argument depicts Debussy as the purest artist of expression, whereas, he puts Ravel entirely into *l'art pour l'art* (art for art's sake) category. The brilliant observer is certainly quite right, with this reservation, that, in the French climate, such classifications lose a great deal of their weight. Certainly Bizet, too, is entirely a formalist and in that sense almost reactionary; but his art never and nowhere conceals the direct descent from its source. But one must not forget that we are concerned with French formalism, which so often subtly leads to the other shore, and with the French school which is the genuine child of the French spirit.

In the history of music, we can find nothing more simple nor more explicable than the career of Bizet. And yet how much misunderstanding, exaggeration, confusion and partisanship clings to it! Now and always "Carmen" stands undisturbed and unassailable upon the solid foundation of its tradition. But the seesawing, ever-changing aesthetic appraisals merrily go on, even now, fifty years after the death of the master. At the present moment fashion and taste do not appear to be too gallantly disposed towards the seductive Spanish girl. At the aforementioned "conference" of M. Pruniers, who sought to connect present-day music with that of the past, and to date the "movement" back to Berlioz, he casually mentioned a stately array of French composers —the name of Bizet was not among them. Apparently he was not sufficiently a progressist; there was too little of the revolutionist in his blood to entitle him to distinction; he was theoretical, uninteresting. For all of which he will not find it difficult to console himself, and with the sceptical superiority that so wonderfully distinguished his art, quietly accept just as the contrary—the theoretical adulation, which to-day or to-morrow may again become the fashion.

Melody Eternal

When all is said and done, the thing which compels immortality for the composer is, first and foremost, melody. The mighty Bach, the tremendous Brahms, are not great because of their craftsmanship alone. It is their melodic gifts which bring them close to humanity. Few composers released more beautiful melodies from their souls than did Bizet. Few finer melodies have been conceived. Though his production was small in quantity, the character of his luscious melodies is unequaled.

Self-Test Questions on Mr. Kralik's Article

1. *How long did Bizet live after the première of "Carmen?"*
2. *To what causes were Bizet's death ascribed?*
3. *What criticisms were at first directed at "Carmen?"*
4. *Describe the renaissance of "Carmen."*
5. *Under what conditions was "Carmen" written?*

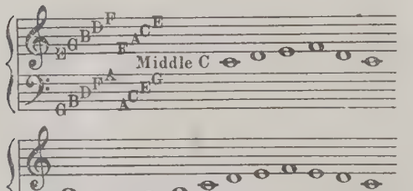
When the Wrong Note Is "It"

By J. Laurence Scheer

THE PUPIL often comes with his weekly lesson well learned save for a few false notes which he seems unable to avoid. Usually he says such mistakes are beyond the power of correction. Yet, in some of the repetitions, he plays these parts perfectly.

The best way to conquer this habit is to have the pupil deliberately practice the phrase wrong. When he is told to play it thus, he fairly gasps. He seems to wonder if his teacher has lost his sanity. To explain the reason, have him imagine himself in a game of tag, not knowing just who is "it." In this case he is liable to be tagged by any boy in the game because, in his ignorance, he cannot know whom to avoid.

In the piece he plays let him understand that the false note in question is "it." His incorrect playing teaches him to observe and to remember to avoid the mistake.



After he has played it purposely wrong a few times, have him play it correctly until he can render it either way at will. Thereafter if he plays it incorrectly he will have to do so deliberately.

Teach Both Staffs from the Beginning

By Mrs. W. B. Bailey

MOST of our noted standard instruction books teach the beginning pupil to read for several lessons in the treble staff before he is taught anything about the bass staff. To overcome this obstacle it is well for the teacher to make her own exercises for a few lessons, at least one to use for a part of each of the first lessons.

Beginning with middle C teach the child to locate it on the piano. Use something like this example making the notes large and clear:

Teach the very first lessons in notes, names and positions on paper and have the pupil play all above middle C with the right hand and all below with the left. Then have them play all the way through, first with the right hand and then with the left.

Simple little exercises can be made readily with these notes adding a few more as needed.

After a few lessons let the pupil help compose his exercises for the next lesson. This will give him a doubly clear idea of staff degrees and their names and sounds as well as increase his interest in practicing. Naturally he will like better to learn to play what he feels he has helped to compose.

Since the opera is really a union of drama with music, why have so few of the great poets written librettos for operas, or why are practically all librettos very poor dramatic literature? Why have the great painters and designers nearly always left the scenery of opera to beginners or second-rate talents? Why is perfect histrionic art rarely seen on the opera stage, but often seen in the drama without music? —*Musical Quarterly.*

A Musical Bank Account

By Helen Oliphant Bates

THE purpose of a musical bank account is to furnish an incentive for regular practice. At the end of each practice period the pupil deposits a cardboard note in the bank, which is made by covering a small-sized cardboard box with colored paper, decorated with musical signs. A whole note is deposited for a whole hour, a half note for a half hour, and a quarter note for a quarter hour. At the end of a month a gold star or other reward is given to each child who has in the bank the equivalent of one whole note for each day, and at the end of the season a prize is presented to the pupil with the largest bank account.

The musical bank account can be carried on in dollars and cents instead of whole, half and quarter notes, by crediting the pupil with a specified amount for each hour, and entering the amount in a small note-book. For each unpracticed hour the pupil fails not only to receive the amount for the day, but forfeits also an equal amount from the balance already earned.

Honor to Louis C. Elson

Louis C. Elson, noted teacher and critic of Boston, who died February 14, 1920, was long one of the most active and valued contributors to THE ETUDE. *It is with pleasure that we note that the Elson Club, of the New England Conservatory, have recently erected this handsome memorial to their former friend and master. The memorial is by Henry Hudson Hitson. Mr. Elson taught at the conservatory for forty years.*

The Magic of Details

By Mary M. Pleasants

OF all the fine arts, playing an instrument requires the most spontaneous action of mind and body, if not of soul. Hence, it is of utmost importance to study the best means to accomplish finished performance. Many better means may exist, but experience as student and teacher has taught that observing details in the printed music simultaneously with details of the instrument in use forms the magic of successful rendition of music. Of course, the performer must have mastered details *singly* before attempting to *unite* them.

Enumeration of these details may help some readers. With electric flash the mind, through the eyes, must grasp (1) Notes, (2) Key Signature, (3) Time Signature, (4) Tempo Signs, (5) Fingering, (6) Rhythm, (7) Accent, (8) Expression Signs, and, to crown all, (9) good *tone* or *touch*. Without the last requisite, all the others will prove useless for pleasing hearers.

The quantity and difficulty of musical signs to be grasped by the mind form a harder task than the rendition of them. The two make the science and art of music. Someone has called the *science* or knowledge the *parent* to guide *art* or the *child* to right action. So science may exist without art, but art is dependent upon science for its existence.

The successful performer on an instrument must possess three essential characteristics—interest, understanding and memory—working unitedly to attain successful rendition of a piece. What is known as "stage fright" is doubtless the temporary loss of one of these musical graces.

In conclusion, observing details in playing becomes to the student a veritable sesame to *treasures of sound*, more desirable than the riches which greeted the eyes of a wondering Aladdin.

Why Not More Home C Music?

By Izane Peck

"WHY not more collective m American families?" I asked my the cornetist, while we were din gether at the Shorham.

"Meaning?" he queried.

"Why not family orchestras? I families where there is a singing n also a playing member. Perhaps t even a violinist. But I know of n ily whose various members comp orchestra and gather together for tainment and profit. What is the re

"Lack of incentive," the cornet plied succinctly. "It takes one r only to begin and keep up a family tra. I know of one such family mother, a pianist, came to see day.

"'You see,' she announced, 'I p piano, my husband has learned th our oldest boy has been taking vio sons for two years, and now I w other boys to learn the cornet. W teach them?'

"I was stunned almost too m reply. As cornetist in the Soldiers' Band, and with my position in the bert-Belasco Theater, I was rathe Besides, I had taught before. Pupi irregular and careless—thankless for me.

"The boys were given a book o for the cornet. The family has chestra collection. In time they m velop into a very interesting fam chestra, giving themselves and pleasure.

"Returning again to our discus was the initiative of the mother wh responsible for this orchestra. S trained her boys to regular lesso regular practice—valuable assets, n ter what they become eventually. has not been a missed lesson in tw a half years. However, each ye weeks' vacation has been allowed.

"Another case comes to my mi certain father inspired his three bo the idea of forming a fife and drum He induced a civil war veteran (dr boy) to teach them the drum bea 4-4, 3-4, 6-8, double drag, and so They used drumsticks upon the table, with the promise of real drum the beats had been well learned. now have their drums. The fathe the fife. Occasionally they play fo and bazaars, as well as for evenn time.

"Then I know of a string qui consisting of father, mother, daugh two sons. They are classed as prof als and often receive paying engag

"Collective music in families is a ant possibility," the cornetist concl

It is more than a possibility for th student. It is an opportunity to about instruments other than the pia is particularly an invitation to lea piano better.

Why not foster the family or idea?

Beethoven's Piano Sonatas and How to Play Them

Part IV

Expressly Written for THE ETUDE by the Eminent English Musical Educator

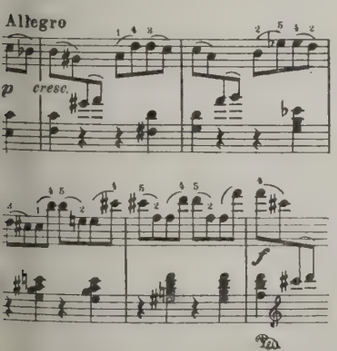
PROFESSOR FREDERICK CORDER
of the Royal Academy of Music, London

Each Article in this Series Is Independent of the Foregoing Articles

SONATA XVII (Dramatic)
Op. 31, No. 2, in D Minor

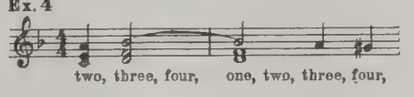
METHING more serious you cer-tainly have here; the startling variety nd passionate power of the material ; earned it the appropriate, if un-ıtic, name here given. The unex- changes of time recall those in the etic," but are much bolder and unconventional. As usual, the nota- aves much to be desired in the mat- : clearness. The opening measure, stance, loses half its power if played

Ex. 1 Largo



l of

Ex. 2

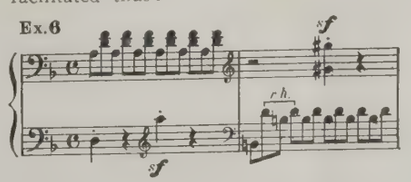


ıose who allow their eyes to guide go so far as to play F♯ instead of the turn in the sixth measure. They aware that until about 1830 a small -sharp or double-flat was never ı as an ornament; the engraver does pear to have possessed the tools. In resent case the single sharp is used old-fashioned sense of "sharpen the note." The lower note being nor- F sharp, the ♯ raises it to Fx. But sical person should not need more he plain 𝄪. F♯ is as impossible as

spread chord at 7 is played like the ne, but I should make a trifle less of ıole phrase. The eighth-note passage follows is exceedingly difficult. It of course, be played with a change of on each repeated note, and where a e of hand can be managed it is a relief. Klindworth adapted this de- or the 13th to 16th measure. It is so l in most modern editions, but I find llowing a great help for 9 to 12.

"duet" passage at 21, some players over, taking the treble voice with ft hand; but I do not advise this— t till 30—as it entails the use of the to sustain the bass, and this blurs elody on a good piano. There is no difficulty in changing the triplet accompaniment from one hand to the other. At 42 be sure you change fingers at the repeated eighth-notes, or all is ruined. At 55 and 57 accustom yourself, however swift the pace, to mentally count

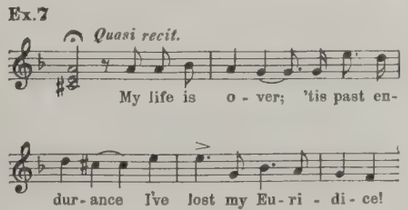
Ex. 4



Otherwise, in your haste you will clip the time. Also observe the very sudden changes of tone at 63, 69 and 75. The repeat of this part is not usually played; it detracts from the dramatic character. Again, do not spoil the solemn measures of *Largo* by rushing at them. Each is played more slowly than the preceding, the arpeggio at 101 being taken very dreamily, with soft pedal. Do not forget to make a "breath-pause" after the pause in 102. Then start off suddenly and really *ff*. Here, of course, the left hand crosses the right each time. Be careful in this tremolo (as in that at 21) to accent slightly the second beat of the empty measures, else the triplets will try to turn themselves into twos. Just mark a little stress in these places and it will keep you

Ex. 5

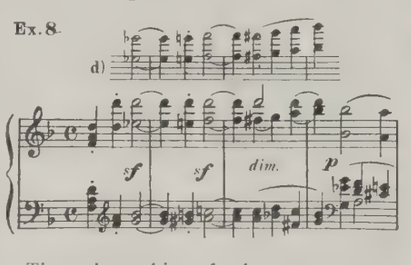
Should the change in the work of the left hand at 123 and 124 make you liable to miss the important bass notes, it can be facilitated thus:



Ex. 6

Observe the point at 134, where the two hands, having played a passage for 9 measures in unison, now go back to back. At 141 I should not play the small notes of the right hand too lightly. Give them about the value of a dotted half-note.

The gloomy bass passage sounds much better if it continues its course by taking the octave lower at 145. This brings us to the lowest C♯ of the piano (unavailable to Beethoven), which is added to the arpeggio of the *Largo*. At 149 there needs to be a complete pause before proceeding with what should have been marked *"Quasi recitativo"* instead of with Beethoven's ambiguous words "With expression—simply." These four measures need to be played in imitation of the manner in which an operatic artist would sing in a dramatic *scena* where the music is interrupted by a reflection of this kind.



Ex. 7

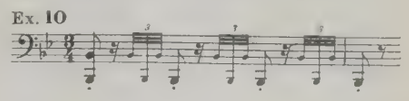
For the proper delivery of this and the succeeding phrase it is almost necessary for the performer to have some such words in his head in order to feel the necessary freedom of measure.

In resuming the *tempo* at 163, see that you do resume it and do not make a wild skirmish. Players sometimes divide the arpeggios up between the hands, but this should be done with care, if at all. They lie quite easily for the right hand, and it is quite enough to play the B♭ in the middle of 169 and 170 with the left. At 178-9 take the G♯ in the right hand with the thumb; it is stronger to make it correspond with the previous phrase. Similarly, I should have advised you to do with the D♯ at 46-7-8. At 193 Beethoven was unable to make the treble part go up to B♭ and got out of the difficulty very ingeniously, so much so that one hesitates to alter it. In many modern editions both versions are given.

Ex. 8

There is nothing further to comment upon until the cut-off *crescendo* at 222. Make the most of this effect. The following left-hand broken chord is difficult to keep *pp*, the turn-under at the end of each measure being uncomfortable. Of course, the right-hand *could* assist, either by playing the last two eighth-notes of each measure (you are holding down the pedal) or the first one (not so good); but it would have to be done very lightly and neatly, the pace being so great. Take a good breath before the final chords.

The *Adagio* is so orchestral in character that Beethoven has troubled himself very little as to which hand is to play which notes, and wholesale alterations are advisable. Be sure you count *six* in the opening measure (and also at 3), else you will clip the time. At 5, wait until you have counted the 5th eighth-note before you start the run up. The trill at 8 begins, of course, upon D, and you will find it better to let the left hand take the *three* lower notes as a spread chord; you will get a nicer trill.



Ex. 9

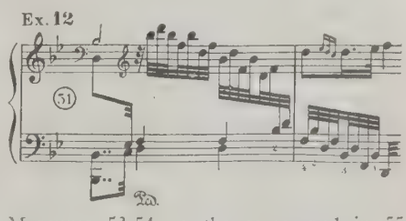
Accept the assistance of the left hand on the last beat of 9 and in all similar places. The turn in 10, being on a dotted note, comes as here indicated, and not later. So, of course, do those in 12 and 14.

The three broken octave bass notes in 17, would have explained themselves better had they been written as grace-notes.

Ex. 10

They are in imitation of drum-rolls and should be played as light and swiftly as possible, counting two to each main note. When we come to 23, broadly built persons will find the crossing over of the left hand difficult, or even impossible. The easier way is to exchange the work of the hands (this alternative is given in some editions), being very careful to keep the harmonized melody smooth and unbroken.

Ex. 11



The C's in the right hand are played exactly like the notes in the left hand, whether there are two or three short notes.

Be extra careful over the little scale at the end of 30, playing with a quick finger-staccato and a microscopic breath-pause where the *crescendo* is cut off; then it makes a very pretty effect. The middle notes of the right hand must be very subdued so as to allow the melody to stand out. At the end of 42 it seems only natural to make a slight *rit.*, but let it be very slight, with a tiny breath-puase to enable you to start the return in comfort.

The ornamentation to the subject, which now presents itself, has been written by Beethoven quite regardless of convenience to the player. There is more than one way of dividing it up between the hands, but the best is

Ex. 12

Measures 53-54 go the same, and in 55 nearly the same, venturing to dispense with the repeated notes on the 2nd eighth-note in the left hand, which spoil the rhythm and were only written because Beethoven mistrusted the sustaining power of his pedal.

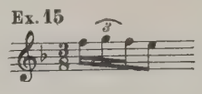
There is nothing else to trouble about, save the left-hand fingering of the broken chord arpeggios at 56-8. The thumb will have to go on F♯ and other uncomfortablenesses—anything to keep the passages smooth. In the *Coda* the octave-melody cannot be properly legato unless the left hand gives some assistance, thus:

Ex. 13

I suppose it is superfluous to remind you that the trill in 100 begins on E♭, but that

in 101 begins on A to avoid anticipating the key-note. The last measure of all is quite odd and Beethovenish.

The *Finale* is marked *Allegretto,* but nearly always played *Presto.* I do not know whether Beethoven sprinkled in so many difficulties to prevent people from rushing it, or whether his heart misgave him for the formidable task he was setting. (See particularly 70, 71 and 298-9.) But the remarkably even flow of the movement certainly urges the player to lay it out on a grand scale. Anyhow, tiresome though the arpeggios may seem, if played "one-two-three," they must be practiced thus at first. Keep before you the tendency of the right hand-hand thumb to emphasize his note, which is not on the beat. The middle A of the left hand, indicated to be sustained, was really thus written only in order to impress the player that the whole arpeggio is to be *legato.* Beethoven had not yet learned to trust to the pedal for this kind of thing. Make the most you can of the cresc. . . *dim.* . . at 10-15.



Count three at 23 and 27 to keep your time steady, and do not be afraid to make a break for the huge skip at 30. The cross-accent passage at 43 needs a distinct accent on the first of every measure and the *mordents* must not fall into mere triplets.

Ex. 14

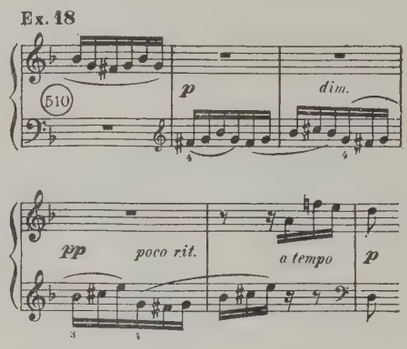
The three notes must be crushed together and take the least possible time. This fingering "2, 4, 3," and wiping action on the keys will bring it off. The left-hand part, from about 57 to 90 is very trying, and the 5th finger must be occasionally assisted by the 4th and 3rd. For example,

Ex. 15

The most difficult part is 81 and 82, which is best fingered thus:

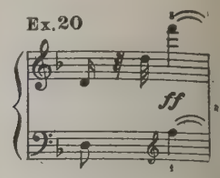
Ex. 16

Endeavor to keep the upper notes as smooth as though they were written with eighth-note tails.



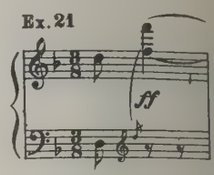
In the middle of 94 (the measure which ends the first part) there must be a perceptible "breath-pause" whether you are making the repeat or not. A slight accent on the third sixteenth-note of every four at 99 to 100 will keep the left hand steady; and, of course, you will perceive that in 110 the left hand takes his turn at being the leader for eight-measures and must be rather prominent. This exchange of interest is made several times, until, with short cut-off *ff* the first subject reappears in B♭ minor. At 159-168 is a long *crescendo* that wants to be nicely graded. Following this (169-173) are four measures in which the treble goes A to G♯, G♯ to A. This can be made to sound as directed only if the fourth finger can play the G♯. To play both notes with the fifth spoils the slur. At 199 the right-hand has sixteen measures all to itself. It is usual, however, to play the four notes marked *sf* with the left-hand; and I find that the effect of weakening and slackening of the passage can be materially assisted by handing over measures 511-514½ to the left hand.

Ex. 17



We then come to the real return, which runs as before until 233, where the curious diminished third interval fails to appear, and we take another turning, into B♭. The modulating passage takes us through F minor, C minor and G minor, to the dominant of D minor, where we reach the second subject, the second half of which Beethoven was obliged to cut off the top.

Ex. 18



There is no virtue here in preserving his mutilated version. Most editions give both. There is nothing further to draw attention to until 381, where the composer has put in a quite needless difficulty, wh surely a little thought would have s mounted. Instead of the almost impossi skip of a tenth

Ex. 20

why not have written

Ex. 21

or simply a third in the left hand?

Finally, I believe that, had he had hearing, he would have cancelled the den piano in the third measure from end, fond as he was of this effect. I too late for it, and the movement want end "with a bounce" as the showmen But the chromatic scale in 382-3 is ano strong reason for not turning *Allegr* into *Presto.* And don't you forget it!

Test Questions on Mr. Corder's Articl

1. *What gives appropriateness to title of this sonata?*
2. *When did the double-sharp double-flat come into use, and how v their places formerly filled?*
3. *Why is the repeat of the "first gr of this sonata usually omitted?*
4. *What is the general character of Adagio?*
5. *What is the chief characteristic of last movement, and on what scale sh its interpretation be planned?*

Ex. 19

Musical Instruments of Yesteryear

By Paul Stengel

THE immense progress of the twentieth century has markedly influenced, if not revolutionized, the production and construction of musical instruments. To convince the uninitiated it is only necessary to compare a present day flute with its ancestor. The modern Concert Flute of the "Boehm" family, with its acoustically correct ring-key system, relegates the simple scale flute, of the time of Frederick the Great, to the scrapheap. The same holds good in comparison with the old-fashioned, weak-toned Spinet, and the modern masterpiece of mechanical genius, the Concert Grand Piano.

Here we have an instrument which, at the touch of one finger, sets in motion fifty different mechanical parts, all working in unison, to produce instantly the desired tone. The mathematical conclusions are really staggering when we consider that the player of the piano uses not one, but all the fingers of both hands, most of the time, while playing. And how much greater is the difference in the evolution of the organ. The concert organ of to-day, with its electro-pneumatic keyboards, cannot be compared even remotely with its forbears. The tonal combinations and orchestral possibilities of this modern instrument are hard to imagine.

Now we come to the traditional exception that proves the rule—the violin. This instrument is the very soul and foundation of the orchestra. The instrument in its mechanical application is the very same as has been handed down to us by such masters as Stradivari, Amati, Guarnerius, Gasparo da Salo, and others. Its position stands unchanged, unchallenged, and it has withstood successfully all attempts at "improvement."

However, there was (before the advent of jazz) a point in favor of the instruments of bygone days; that is, a great number of types in each family. In the middle of the eighteenth century a great change came in the world of tonal ideals. Up to that time the tonality of orchestral instruments had been rather limited and weak. A demand came, not from the concert-going class alone, but from the performers as well, for a greater range and stronger tonal quality in musical instruments, and, as is always the case, where there is a demand, there is a supply. Unfortunately, a number of beautiful though peculiar instruments faded slowly into oblivion. There is really nothing that can equal the simplicity and appealing charm of the old fashioned Spinet, also known as Cembalo or Clavicymbel, or the almost extinct Viola da Gamba. Add to this the important rôle these instruments played in the musical and cultural art of their time, and their absolute essentialness for the true portraying of the scores as written in that time by the old masters, and you will find sufficient reasons to support and encourage their resurrection and use.

In the year 1709, Bartolommeo Cristofori of Padua, invented the Pianoforte, or Hammerclavier. A few decades later this instrument had superseded all its predecessors. It seems as if the construction of the amiable Paduan had sounded the death knell to the Clavicymbel and the Cembalo. The Spinet managed to hold its own for some time, perhaps due to the preference of the old masters, who looked askance at the new intruder. The Cembalo and Spinet produced their tone by a mechanical plucking of the strings with quills or tungs of leather. The Clavichord required the touching of small brass-tangents upon its strings.

The strong and far-carrying Pianoforte tone took the place of the thin and delicate clavichord tone. Haydn and Mozart finally wrote for the Pianoforte exclusively, while the Clavier works of Bach, Handel and the Scarlattis were for and by the Clavicymbel. Owing to the exquisite taste and interpretative qualities of Madame Wanda Landowska, the interested music lover has had opportunity lately to listen to these old-fashioned instruments and to enjoy their peculiar romantic timbre.

In the latter half of the eighteenth century the V da Gamba or Knee-violin with its six or seven str fell gradually out of popularity. Fighting its way to fore by dint of sheer beauty of tone and adaptabilit solo passages, it is to be regretted that at present this strument is almost unknown, save to the student of tiquity.

Another string instrument, the Lira da Gamba, ha sixteen and sometimes eighteen strings to annoy the former, fell into discard long before the advent of Viola da Gamba. Another member of the Gamba fa the Viola d'amore, held sway during the Rococo pe It was a favorite solo and chamber instrument. By re of its metallic strings underneath the fingerboard, vil ing in unison with the gut strings above the board, it in the hands of an artist, a powerful swayer of hu emotions. Sweet and pathetic passages were espec adapted to it. Its companion, the Viola di Bardone, which Haydn wrote 175 pieces, enjoyed the same p larity and later neglect.

Entire families of brass instruments have come gone. The Key Horn, Serpent and Ophicleide; the man Sordunen, Rackette and Shalmeien, are all in ments of the past. The Oboe, English Horn and Fa are some which have stood the test of time. Our p valve instruments of the latest make are improve over the old style rotary valves. Rotary valves are used in Europe, especially in France and Germany. Slide Trombone, like the Violin in its class, stands sup and alone. It has been handed down to us uncha fundamentally, just as it was first used in the fift century, when it became popular.

Elaborate plans are now being made to expand the interest and size of THE ETUDE *during the coming months. New and fresh features of esp interest to the musical home are being especially prepared for early publication, by leading authorities in all parts of the musical world.*

The Magnifying Pedal

By JACOB EISENBERG

JACOB EISENBERG

E PEDAL is probably the least inderstood adjunct in the production of effects in piano playing, the same time the most interest- ce employed in securing variegated on. Its proper use makes a beauti- more beautiful, a velvety tone elvety and a sonorous tone more s. It aids in punctuating the read- a composition, in phrasing, in g dynamic effects, in creating l nuances and in developing rhyth- ance. It makes legato passages, otherwise would sound semi-de- flow smoothly. It aids in sustain- s for a longer period than would e be possible.

is life and body to a composition. bring out the intent of the com- nd the individuality of the per-

It gives power where added is necessary and yet retains the sonority. It adds the softness and owing roundness so much desired ssimo passages. In short the prop- of the pedal makes a performance of beauty, while its improper use, th the same finger execution, pro- a performance of mediocrity, and nembered only as an example of ot to emulate.

rary to the more or less accepted the main purpose of the pedal to make tones sound louder. The at the pedal is known as the "loud and its employment results in a at increased volume of tone, has an erroneous impression of loud- However, considerable effort is be- ended to correct this idea. Most on the subject decry the use of m "loud pedal" and favor in its he term "damper pedal" because it lates and regulates the mechanism sing and lowering of the dampers he strings. In a performance in the pedal is perfectly employed the ner produces even his *ppp* effects junction with the pedal; while his ssages have practically the same of loudness, with or without its ment.

An Augmentative Effect

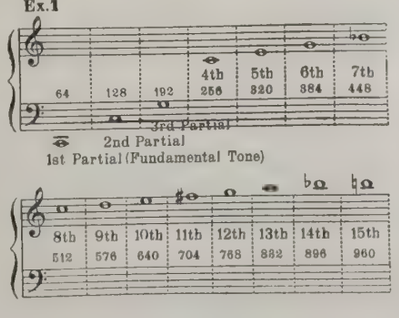
R IS IT the function of the pedal o create sonorous and velvety tones. uality of sonority is infused into oduced tone by the manner in which nner strikes the string. It follows, hat an improperly struck string will e a tone of inferior quality which dal only intensifies by permitting all ings of the piano to vibrate in sym- with it. This error is then en- upon by the action of the sounding making the inferiority more pro- d. The purpose of the pedal, then, is create the sonority but to make the ly produced tone *more* sonorous, velvety, *more* connected. Thus its urpose is an augmentative one, that king a greater degree of tonal ef- ossible.

use of the power of this pedal to fy and enhance all effects, the pedal be known as the *magnifying* pedal that way give the proper impression real purpose. Calling it the "Loud " makes one hesitate in employing *ppp* passages where its employment ally essential to its use in *fff* pass- Calling it the *damper pedal* brings en more erroneous idea of its pur- o mind. This term with numerous ts results in a "dampening" effect the tonal quality produced. Know- as the magnifying pedal, on the hand, explains its real purpose in piano playing. It will remind the student to be extremely careful of his performance before he employs it, for his faults as well as his good points will be magnified.

The most perfect pedaling will produce imperfect results if there should be lacking the necessary co-ordination with the upper part of the body in producing sonorous tones, proper punctuation, phrasing, rhythm and so forth.

Producing a Sonorous Tone

WE SHALL now take into consideration what constitutes a sonorous tone and how to produce it; what constitutes proper punctuation and how the magnifying pedal may infuse this superior quality into a performance.



We all know that the pitch of a string is wholly dependent upon several very important factors, such as the length and thickness of the string, the tension at which it is held in the piano and the numerical frequency of the vibrations caused by the striking of that string by a hammer. It is because the vibrations of a long string are proportionately less frequent than those of a short string that it produces a lower tone. In other words, a long string in vibration will produce a tone of a lower pitch than a shorter string in vibration under the same conditions.

If a string were to vibrate as a whole and uniformly the produced tone would be known as a pure and simple tone. However, a string never does vibrate as a whole, but in sections of different lengths. Though all sections vibrate simultaneously each section produces the tone peculiar to the numerical frequency of the vibrations of that section.

If a string, for example C, is struck it will produce simultaneously numerous tones besides the tone proper to that string, which is called the "First Partial" "Prime," or "Fundamental Tone." The other and simultaneously sounding tones are called "Upper Partials" or "Overtones." If the fundamental tone is C (as in subjoined diagram) with a frequency of sixty-four vibrations to the second, the second partial will sound an octave higher with one hundred and twenty-eight vibrations, and the third partial will be a fifth higher than the second with one hundred and ninety-two vibrations a second, and so on indefinitely. The frequency of the vibrations of each succeeding upper partial is a multiple, in arithmetical progression of 1, 2, 3, 4, 5, —, of the frequency of the first partial or fundamental tone.

Example 1 gives a clear and definite idea of the upper partials which sound simultaneously with each fundamental tone together with the number of vibrations of the fundamental tone and each of the upper partials. It also explains the complexity of the sounds produced by a single key depression.

Ex.1

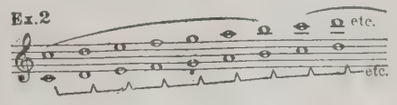
All of the fifteen tones appear with a single depression of the lowest partial (C) in this diagram. By way of experiment sound lightly the tone distinguished by the third or sixth partial until a good impression is made upon the ear, then after the sound has died away sound the lowest C and the G will again be heard within the tone C.

It is the presence of these overtones in their proper proportions to the fundamental tone which makes the tone one of sonority. You will notice that the lower partials bear a distinct harmonic relation to the fundamental tone. However, if the dissonant upper partials are excited to undue proportions, that is, made unduly prominent, by an improper manner of key depression, the resultant tone is one of inferior quality.

Proper Key Depression

LET US see what happens when the magnifying pedal is brought into play with a tone produced by an improper key depression. The dissonant upper partials, Nos. 7, 9, 14 and others, cause the strings in the piano which are in sympathy with those dissonant sounds to vibrate more than they would ordinarily and so magnify the dissonance far beyond the desired proportions.

Proper key depression is therefore of vital importance in producing a sonorous tone and in employing the magnifying pedal. To properly depress the keys the hand should maintain a natural position, in which the wrist is a trifle lower than the knuckles; the fingers should always be rounded and form the segment of a large circle and be held quite close to the keys. Each key should be depressed with a direct downward movement and *not* with a squeezing or pressing movement. There must be in every finger action the all-essential quality of relaxation well balanced with firmness. Tones produced in this manner will always contain all the overtones, consonant and dissonant, in their proper proportions, will therefore be sonorous, and with the use of the magnifying pedal, will be made still more beautiful.



The Pedal and Punctuation

NEXT WE come to consider phrasing and legato and staccato effects, all combined under the subject of punctuation. It is in this sphere that the magnifying pedal plays its most important rôle. To punctuate in music is to break up the composition into thought-groups. Most students carry the sound from one thought through to the next thought without the slightest cessation of sound between them, obviously an inferior interpretation.

For instance, during his study of this article, at the conclusion of each thought or word group, the reader pauses. There is a period, be it for but a millionth part of a second, of absolute silence, the purpose of which is, first, to call attention to the fact that the end of one thought has been reached and, second, to give that thought a chance to sink in, as it were, before attacking the next. Let the reader try, for a test, repeating any group of four or five sentences without the slightest pause between them. He may get the idea contained in those sentences, but there will be something lacking in the reading. Carrying the sound of one thought or sound group into the next sound group in music, creates the same effect, an effect which, of course, must be avoided if the reading is to be superior.

In separating thought or sound groups in piano playing perfect coördination of action from both fingers and feet is demanded. All the notes within the sound or thought group that make up a legato passage must be so fingered that the passage will be executed with a perfectly smooth effect. The magnifying pedal is then employed in a manner that will maintain the individuality and importance of each chord and yet augment and intensify the sonority and smoothness of the chord passage. Let us take for example the simple octave passage which follows, containing two sound groups.

Ex.2

Let us first employ a proper fingering which will enable us to execute the passage with a perfect finger-legato, there being at least three fingerings all of which are equally good. Next let us depress the keys, sounding the first octave which should be followed by an immediate depression of the magnifying pedal in a syncopated manner. Both keys and pedal should be depressed until *only* the fingers depress the second octave with a perfect finger-legato movement. At this juncture both octaves are heard for only a trifling part of a second, just the same as any other legato passage, when the pedal is again depressed in a syncopated manner after being permitted to rise for the shortest possible period of time.

This rapid pedal release and depression, while the fingers still keep the keys of the second octave depressed, puts an end to the sound of the first octave and permits only the second octave to be heard and magnified by the sympathetic vibrations of the other strings whose free vibratory powers have been restored by the raising of the dampers due to the second pedal depression. This procedure is followed with each succeeding octave to the end of the first slurred or sound group. Both hands and feet should be removed from the keys and pedal simultaneously just a trifle before the second slurred group is to be attacked. In attacking the second slurred, group, bring the hands down upon the keys and the foot down upon the pedal with a perfectly concerted movement.

In an artistic employment of the magnifying pedal its use is closely connected with the manner of finger execution. Any treatment of the subject of pedaling which omits a careful discussion of the all-essential coördination of fingers and feet is lacking in thoroughness. In this article I have given only simple examples, which call for the same treatment as is given to even the most complicated problem. It is up to the

performer first, to separate his composition into effective sound groups, and then introduce breathing spaces—opportunities for the listener to let the thoughts sink in—between all those thought or sound groups of tones.

Self-Test Questions on Mr. Eisenberg's Article

1. What is the first consideration in the use of the Magnifying Pedal?

2. What causes low or high pitch in a string?

3. What are "overtones," and in what way may they cause an inferior quality of sound?

4. What is the position of the hand for proper key depression?

5. Of what value is the pause in musical punctuation?

On Always Progressing

By Sid G. Hedges

THERE is a real danger that every musician, particularly the teacher and the amateur, shall at some time arrive at a point in his musical development beyond which he does not, though he might, progress.

With the teacher this point is usually where music is adopted as a profession. Many young teachers assume that their education is completed when they first take pupils. The truth is that when they have reached the stage where they are qualified to teach others they have merely clambered on to the lowest rung of the professional ladder, and the whole of the varying grades of the teaching profession lie before and above them.

The amateur is often satisfied when he can join some little orchestra, or accompany, or sing a song. He, similarly, has merely reached the lowest level at which it is permissible to perform in public.

Every musician should aim at being always progressive. But there is an additional and more serious reason why study and practice should never cease. If they are discontinued, the musician will retain not even the standard he has reached; his ability will deteriorate.

Rubinstein, the great pianist, once declared that if he ceased practicing for one day the bad effect would be noticeable to himself; if he ceased for two days his acquaintances would see a difference; and if three days passed without practice everyone would notice it.

There is no age at which progress becomes impossible, but it must be remembered that musical progress does not consist in increase of finger dexterity alone. It has many aspects; appreciation of music, theoretical knowledge, musical history, a knowledge of composers, compositions and particular instruments, and so on.

Study should be planned as systematically throughout one's lifetime as in the earliest days. It is not necessary to continue regular lessons indefinitely when one has reached a really high standard of technic. Some people, however, have occasional lessons throughout their life; and this seems a most sensible plan. Even fifteen minutes daily practice will be sufficient to keep one constantly progressing.

It has been said that "sticking to a thing means success." Therefore, no musician who keeps up his daily practice need assume that any piece of music will always remain outside his powers of performance.

"There is a prevalent opinion that music is for women and effeminate men, that men lose their masculinity if they confess a love for music. I love music and I think I have held on pretty well to the masculine side of my nature."—CHARLES M. SCHWAB.

Lessons Away from the Piano

By Leonora Sill Ashton

THE CHIEF requisites of these lessons are an observant eye and an imagination, both of which can be instilled by a teacher's patience and perseverance.

When counting becomes jerky and uneven, even with a metronome, stop the pupil's playing for an instant and have him listen to the clock tick. Let him understand that the metronome does for music practice what the clock does for the household. If the latter ticks too quickly or too slowly, if it ticks unevenly, the whole family suffers: meals are delayed; bed-time is put ahead; everything is out of order. The same disorder occurs in a piece of music when the time is not kept correctly.

Watch the Hammock

When stiff, unyielding arms and hands refuse to relax, the sight of a hammock hanging on the veranda swayed gently by the summer air and weighted in the middle by a book will prove enlightening. Also, if the pupil's sense of rhythm is undeveloped, the hammock will again be useful, this time, however, with the book removed and the child placed in it. Without touching the ground beneath with his feet, let him swing himself. It will not take long for him to feel and understand that the motion of the hammock is generated by his own muscular impulse at definite intervals. This same impulse should guide and govern his fingers when he plays.

When this is clearly understood, have him draw his feet up into the net and "let the old cat die." When the hammock swings by itself with the momentum he has given it, explain to him that this is the free, unconscious manner in which the fingers should perform the rhythm of music when it has been completely mastered by the mind and muscles which lie behind those fingers.

One day some small fingers remained glued to the keys. Like the soft coal smoke on a foggy morning they seemed unable to rise. In a moment of despair an obliging daddy-long-legs walked slowly across the piano lifting his legs high in the air at every step. No more words of remonstrance or explanation on raising fingers were needed that day.

Listening to Echoes

If a child's mind and ears seem closed to every kind of tone-color, instead of trying to illustrate the point on the piano, take him for a walk. Lead him to a spot where there is an echo and let him hear his own voice repeated slowly, faintly and far away. Then take him to a brook or running stream. Let him listen to the water ripple over the small stones in the manner of scales well performed. Then lead him to the spot where the pool is deep and quiet and still, and remind him of soft, slow, deliberate chords.

There is a whole fabric of harmony in the trees and growing things. The lower tones are the roots buried in the bass, as in the ground; the middle voices of accompaniment are like leaves and twigs with a beauty of their own; and, finally, the melody, is the fruit or flower, the consummation of music.

Another comparison can be made by sounding a fifth on the piano and showing the child an empty vase, then sounding the same fifth with a third added and simultaneously putting a rose in the vase.

The keen association of ideas is one of the rare attributes of a child's mind. The teacher cannot begin too early to associate tangible things with the idea of music.

Striking Wrong Notes

By T. L. Krebs

IF YOU accidentally strike a wrong key, especially when playing from memory, do not let this minor slip distress you to the extent that your mind dwells upon this mishap. In the first place, use your utmost endeavor to avoid such accidents; but when the slip has once been made put it behind you, so that you can concentrate your thoughts on what is still before you.

If you are a pupil playing before other pupils, remember that, while you have studied this composition for weeks, perhaps even months, and therefore are instantly conscious of the slip when a wrong note is struck, those of your fellow-pupils who have not studied the same composition as intensively as you have studied it will scarcely notice a wrong note here and there. If they are keen enough and attentive enough to hear these slight blunders, they will have musical insight enough to know how easily even the most conscientious player may make a slip. They will surely make allowances accordingly.

Do not get the notion that the great artists, before the largest and most critical audiences, never play wrong notes. I doubt whether any of them, from Paderewski down through the entire line, ever finishes an evening's recital without some wrong notes pricking their musical consciences, when in the privacy of their own chamber they review the happenings of the day.

It is said of Rubinstein, one of the greatest of the great pianists of modern times, that he remarked on one occasion, when someone complimented him on the excellence of his performance of that evening: "If I could have taken all the wrong notes I played and strung them together, I would have had almost enough notes for another recital."

We should never condone or look lightly upon the playing of wrong notes, nor on any kind of carelessness in our musical work. We should always strive for clearness and cleanness in our playing. But if a slip occurs in a public or private recital we should not brood over the mishap, and through such brooding and fretting over what has happened run the risk of falling into much more serious blunders. Here the trite saying may well be applied: "There's no use crying over spilt milk." But be careful in the first place *not to spill the milk.*

Bach at the Organ

MAKING allowance for the fact that the following was written evidently before the advent of the modern electric keyboard with its extreme delicacy of touch, we get an interesting picture of Bach at the organ keyboard from A. Pirro's "Johann Sebastian Bach, Organist."

"As to the character of organ touch, no change has taken place in the last two centuries. Possibly at the time of Bach the keys of the pedals were slightly different from those of our day; undoubtedly in his youth he made much less use of the heel than of the toe, since the pedal-keys were extremely short. But he soon recognized the necessity of perfecting the bass keyboard of the organ both by extending its compass and by lengthening the pedal-keys to their present dimensions.

"He played with the body inclined slightly forward, and motionless; with an admirable sense of rhythm, with an absolutely perfect polyphonic ensemble, with extraordinary clearness, avoiding extremely rapid *tempi;* in short, master of himself, and, so to speak, of the beat, producing an effect of incomparable grandeur.

"His contemporaries speak enthusiastically of his exquisite taste in the combination of registers, and of his manner of treating them, at once so unexpected and original."

Select the Proper Ke

By Jean McMichael

A Lesson on Beethoven's "Fifth Symphony"

By VICTOR BIART

THUS DOES Fate knock at the door." With this phrase, attrib- uted to Beethoven by Schindler, haracterizd the stentorian motive forms the corner-stone of the mighty ," one of the grandest monuments domain of symphonic music. Al- the truth of Schindler's statement ice been questioned, the reputed utter- as affixed itself to this symphony in sional as well as lay circles so as to give rise to the not infrequent ation of the master work as "The Symphony." At all events its com- with the character of the work and so fully with the life experience of aster, himself so familiar with the ess raps of Fate, that it is generally ed as being in unison with the key- f the symphony.

s work is not an example of program : it is not based upon a synopsis or nor the characterization of subjects. rt of interpretation has today out- the stage in which every great work s kind must have its "hero." Yet, it mated by such tremendous vitality, nal intensity and activity as to point ne deeper and more tangible signifi- than the abstract character of abso- usic. The convulsive throbs, the dra- accents, the tremendous forcefulness titanic strains, all bespeak the inten- truggles of Man with Fate. It is page from life with life's outward les and inward conflicts.

thoven sympathized deeply with man's tions for freedom—political, re- and, particularly, expressional. The element in this symphony, with its from life, is the point of contact en this music and the hearer, and ex- largely its hold on the musical pub- r the Fifth is nowadays the most ntly performed of Beethoven's sym- s.

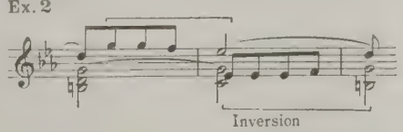
Romantic Elements

E EXPRESSIONAL status of the work places it in the realm of roman- sic. Its fundamental spirit overhangs ork as a whole. This does not ex- the variety demanded by every work of such dimensions as the symphony; he contrasts are kept within the s of an all-prevading unity.

where is this more significantly evi- han in the third movement which es the place of the *Scherzo,* as it has to be designated, although not called the composer.

spirit of resignation of the *Andante,* hing a recuperative spell after the first movement, the jubilant emer- of the *Finale* from the mysterious the third movement, signalizing the h of Man over Fate as well as the nce of the brief passage from the novement in the midst of the *Finale*: ese features are symptoms of the eneity of spirit that prevades the work. The appearance of the nical motive of the First Theme of rst movement in certain parts of mphony further betokens this fun- tal unity.

"Fifth Symphony" was completed 07 or in the early part of 1808, gemminated in the master's mind out five years. It was first per- l in Vienna on December 22, 1808.



BEETHOVEN COMPOSING THE "FIFTH SYMPHONY"
From a Sculpture by Francesco Jerace

Analysis

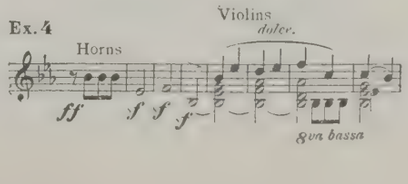
LIKE A BOLT of tremendous power the motive (of Example 1), is flashed by all strings and both clarinets, the latter in unison with all violins. This is the fundamental motive of the first theme of the first movement and is often designated as the Fate Motive, a designation which will be employed in this analysis, though without programmatic intent. It is singular in its brevity, consisting of but four notes. But what immense force is concentrated in it! Of elemental strength is the harmonic bareness of the massive unisons with the intensity of the great body of strings, requiring no reinforcements by the brass. How imperious the long hold on the E flat! The repetition of the motive a tone lower in measure 3 releases the motive in measure 6, where it passes softly from second violins to violas, thence to first violins. A derivative of the Fate Motive arising from this animated conversation is the following:

Ex. 2

which suddenly leads to a momentary stand of the whole orchestra on the dominant in measure 21.

A stentorian call of the Fate Motive *ff* by nearly full orchestra, in the following three measures, on A-Flat and F, is impelled downwards through the strings soon joined by wood-wind. This leads to a sudden rise to a great height of expressional power. In this passage the strong rhythmic impulse develops new melodic formations:

Ex. 3



Rising steadily in a great crescendo with those vehement and hammering accents so typical of Beethoven, this passage culminates in the magnificent climax of the first theme, the first violins precipitating the Fate Motive down the harmony sustained by the wind instruments.

Second Theme

FROM THE glorious heights of this magnificent climax, involving the whole orchestra, both horns in unison sound the Fate Motive, now in E-flat major (measure 59), like a great preemptory summons. In response the first violins intone the gentle melody of the second theme, reiterated successively by clarinet and flute.

Ex. 4

Throughout its brief course this theme is shadowed by an altered version in the bass strings of the Fate Motive, which, however, retains its characteristic rhythm. This motive pursues the melody of the second theme in its upward trend until it reaches the *Codetta* group, beginning with measure 94, with which the Exposition reaches its final climax. The closing phrases in E-flat, with the Fate Motive bounding down the intervals of the tonic harmony in the wind instruments, and the repeated cadences (dominant-tonic) complete the Exposition. The frequent presence of the Fate Motive, if only in its rhythmic form, establishes a basis of unity for the entire Exposition, and thus for the whole movement.

Development or "Working Out"

IN THE WORKING-OUT section the clarinets and horns in unison, *fortissimo,* announce the Fate Motive as the subject for discussion. It is eagerly seized upon by all strings in unison, then passed from one of their respective groups to the other, the clarinet taking part in the discussion. The variant shown in Ex. 2, with its inversion and other melodic transformations, is also subjected to extensive treatment.

The familiar long chords (each occupying an entire measure) passing back and forth between the wind and stringed instruments effect a lull after the pounding of the Fate Motive, which also appears in the form which it assumes in introducing the second theme. To some writers this quiet passage is a moment of panting exhaustion in the great conflict.

After this respite the Fate Motive is resumed with renewed strength and rising to a towering height of power, crashes into the Recapitulation.

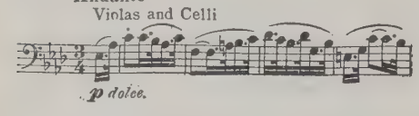
Recapitulation

HERE THE whole orchestra takes part in hurling forth the Fate Motive (measure 248). During the halt on the Dominant of C-minor in measure 268 the oboe, standing out alone, utters a poignant plaint. The course of the theme is thereupon resumed in traditional manner, the second theme accordingly appearing in C-major.

Nowdays the call which ushers in this theme, though written for bassoons, is played by the horns which are far more suitable for it but which, in Beethoven's day, were impracticable at this point.

The triumphant Closing-Group is followed by a most dramatic *coda* (beginning in measure 374) which Beethoven had so extended and to which he had given such prominence in the "Eroica." In the beginning of this *Coda* the Fate Motive—at least in its rhythmic form—is alternately thundered back and forth between the wind and strings. It rises to a tremendous height of all dominating power in measures 479 and 481. Its gigantic force is felt even in this day of the "heavy artillery" orchestra.

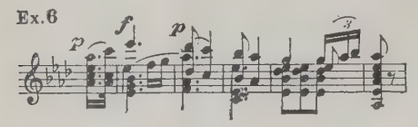
Two soft phrases ending with a weak cry from the oboe follow to be crushed by the whole orchestra hammering out the motive, now in cadential capacity, with ruthless power. Fate now stands as the conqueror.



Andante

IN THIS movement the master reaches those heights of sublimity so typical of him. The spirit of resignation underlying the first theme seems to be a nat-

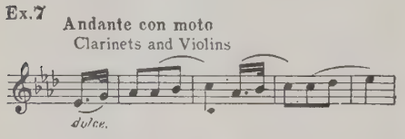
ural sequel to the emotional storm of the first movement. We do not have to turn to the brilliant palette of the modern composer for beauty and variety of orchestration, for this master work abounds in both. How aptly are the celli and violas chosen for the richness and gripping intensity of the stream of tone that they are to draw out in the wondrous and noble melody of the first theme, with its proud, striking rhythm!



The movement consists of two themes and variations and is in four sections and a coda. The first theme begins as follows:

Ex.5

Of a sorrowful touch is the conclusive phrase that follows in the wood-wind, repeated in modified form by the strings.



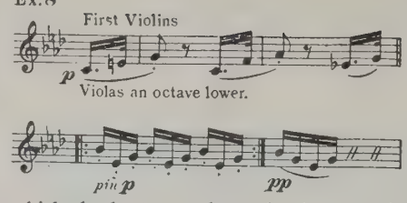
Ex.6

Corroborations of the ending of this phrase by wood-wind and then by the strings, round off the theme.

The hymn-like second theme is hopeful in character and begins as follows:

Ex.7

The rhythmical identity of the opening motives of both themes will not escape notice. This feature pervades the second theme and concludes it. It is a bond of unity between both themes.

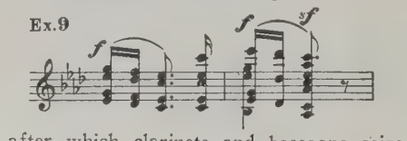


The jubilant outburst of full orchestra in C-major foreshadows the spirit of the Finale. This episode (measures 29-38) is followed by a profoundly earnest passage with a suggestion of inquiry, of mystery, from which issues the second section.

The second section extends from measure 50 to measure 98. The melody of the first theme, still retained by violas and celli, is varied—also rhythmically—now flowing in smooth, even sixteenth-notes. All violins now join in the accompaniment, while the clarinet draws a line in its beautiful, warm color above the whole texture. The variation of the melody includes the corroboratory repetition of the cadence.

The second theme returns with the same orchestration as in the first section, the only variation being furnished by the thirty-second notes in strings. The third section begins with measure 99 and extends to measure 185. It is, therefore, the longest section of the movement. The first theme here appears three times, first presenting the melody in meandering thirty-second notes in violas and celli below sustained E-flats in bassoon, clarinet and flute; the second time in first violins, to more active accompaniment; the heavy double-basses joining the celli in its third appearance, beneath an animated accompaniment by the entire orchestra. After the halt on the Dominant (E-flat) in measure 123 follows the oft mentioned conversation in the wood-wind, the opening motive of the first theme being uttered by the clarinet and answered by the bassoon. The well-known passage in thirds gliding in contrary motion with flutes and oboes paired against clarinets, in which the strings evince a momentary interest, leads to the second theme now jubilantly proclaimed by full orchestra.

Noteworthy is the rhythmic transformation of the initial figure of the themes in the following phrase:



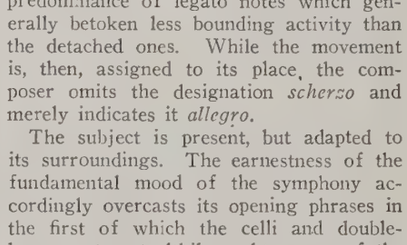
Ex.8

which leads to a short development in wood-wind of the opening motive of the first theme, in solemn, funereal movement in A-flat minor.

A brief "bridge" passage connects with the fourth section (beginning with measure 185), in which the first theme passes by in magnificent stature, *fortissimo*, involving the whole orchestra. The coda begins at *più mosso* (measure 206), where the basson soliloquizes briefly on the opening of the first theme. Measures 225-226 rise to exalted emotional expression:

Ex.9

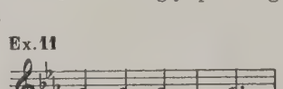
after which clarinets and bassoons seize the first motive, to be joined by all strings, the entire orchestra now bringing the movement to its magnificent close with the ending of the first theme.



Allegro

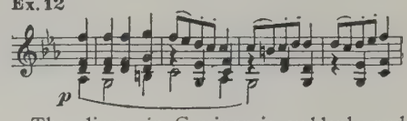
THE THIRD movement takes the place of the *scherzo* which Beethoven introduced into the symphony—although Haydn had foreshadowed it. *Scherzo* means "jest." It is, therefore, the scene of merriment in sonata and symphony. But merriment would not comport with the profound earnestness that is the fundamental mood of this symphony; it would conflict with that spiritual unity that underlies the master's expressional scheme.

Yet the composer would not omit this movement and deprive the symphony of this important member of its quaternary architecture. He, therefore, retains the movement that corresponds to the *scherzo*, with its characteristic features; the short measure (3-4), the more or less rapid tempo and the animated, vigorous, character. An important element in this character is the staccato notes. In the Principal Subject, that in C-minor, there is a predominance of legato notes which generally betoken less bounding activity than the detached ones. While the movement is, then, assigned to its place, the composer omits the designation *scherzo* and merely indicates it *allegro*.



The subject is present, but adapted to its surroundings. The earnestness of the fundamental mood of the symphony accordingly overcasts its opening phrases in the first of which the celli and double-basses enter stealthily under cover of the sombreness of the bass register.

Ex.10

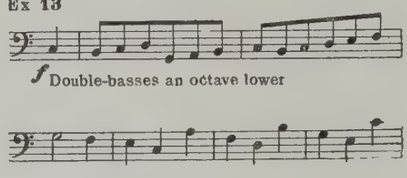


After the inquiring halt in measure 18 the Fate Motive suddenly reveals itself in the horns in strongly pulsating triple metre.

Ex.11

It then dominates practically the whole orchestra, leading it resolutely through the key of E-flat minor in which it ends in a semi-cadence. From the general orchestral silence emerge the celli and their double-bass consorts with the opening phrases of the first theme in their stealthy *pianissimo*, soon to gravitate back to the fundamental key. After a brief excursion into F-minor, *fortissimo*, the theme leads to a new episode, with first violins in a light, carefree, vein.

Ex.12



The climax in C-minor is suddenly and peremptorily silenced by the closing phrase, *piano*.

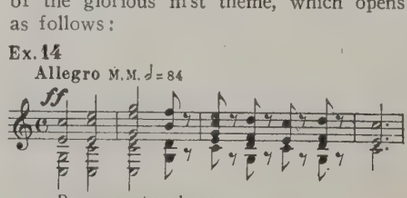
Trio

THE NECESSARY contrast of the middle section, called the trio, is effected by the bright key of C-major. Momentary relief from the all-prevading earnestness is provided by the running figures of this contrapuntal section. The theme in the ponderous double-basses, paired with the celli, suggested to Berlioz "the gambols of elephants."

Ex 13

The student of thematic treatment will appreciate the manner in which the master leads the Trio back into the Principal Subject.

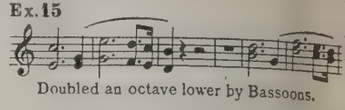
The latter now flits by in light staccato notes in the impressive stillness of a secretive *pianissimo*. All climax is avoided, which, if anything, heightens the wondrous mystery of the long passage beginning with the deceptive cadence on the A-flat in bass strings and leading directly into the *Finale*. Significant of the "poetic idea" underlying the whole are the soft raps on the kettle-drum, in the metre of the Fate Motive, which seem to conjure up the opening phrase of the present movement in the first violins. This melody now dances its way right into the light of solution, though at first oblivious to it. With the E-natural of C-major in the eighteenth measure from the end of the movement the first flicker of the light of solution appears. The abrupt crescendo with which the passage, and with it, the movement, culminates, leads into the *Finale*.



Finale

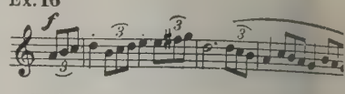
THIS MOVEMENT is an overwhelming outburst of jubilation. It is like a spontaneous release of the pent-up emotions of joy and of triumph. Its joyful tones convince us that, in spite of all, Beethoven was at heart an optimist. His employment of the key of C-major in such instances always bespeaks this fact. This *Finale*, therefore, comes as an uplifting relief from the oppressive suffering of life. It furnishes a most refreshing climax to the work.

Here the trombones make their very first appearance in the symphony. Their stentorian tones add to the force and power of this great utterance of rejoicing. The double-bassoon and piccolo are also employed for the first time in Beethoven's symphonies.



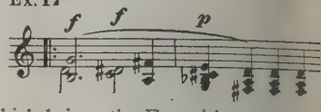
The latter further adds to the brilliancy of the glorious first theme, which opens as follows:

Ex.14



This theme is said to have evoke outcry from the French soldier: l'empereur!" Brimming with enthu is also this subsidiary theme for clarinets, bassoons and horns.

Ex.15

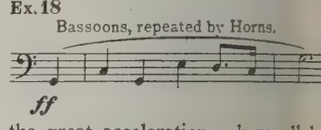


The spirit of the movement is p along to the second theme, which appears:

Ex.16

This theme culminates in the *Codet*

Ex.17



which brings the Exposition to its clos

The Development, or "working treats of the second theme. The str feature of this movement is the su appearance of the passage from the *gro* (third movement), beginning wit Fate Motive in its triple-measure at the end of the Development and for its climax. It is soon banished, how by the exultant outbreak of the pitulation.

An instance of the extraordinary p inence of the *Coda* which begins w contracted form of the subsidiary th

is the great acceleration, where all b away from the tempo to rush into *Presto*, in which the theme of the *Co* and the first phrase of the first them the Finale in a precipitate *Stretto* brin work to its triumphant close.

Self-Test Questions on Mr. Biart's Art

1. *Explain the significance of the Motive."*
2. *What striking figure describes close of the first movement?*
3. *What spirit pervades the first t of the* Andante? *The second theme?*
4. *Why did not Beethoven call the movement the* Scherzo?
5. *What passages seem to signify the moment of panting exhaustion, (b first flicker of the light of solution?*

Enriching Perfect Techni With Understanding

By A. Lane Allan

"WHAT does it mean to you?" I suddenly.

The youngster who was struggling something to her obviously meanin looked blank.

Correct as to technic, very nearly pe as to time, but absolutely lacking in fe she played for me a composition very title should bring out all the em of which the human heart is capable.

The old but effective illustratio nature—first the flash of lightning rumble of thunder, then the silence winter with its cold blasts, followe the gentle rains of spring and its of colorful flowers—this served to out the contrast that is required in as much as in nature. Thereafter the rather than the letter of perfection be her aim and reflected itself in her pl The joy of expression is perceptib listener as well as to pupil and grow well and quickly that it is astonishin

DEPARTMENT OF ORCHESTRAS AND BANDS

The Oboe

By DR. PERRY DICKIE

R THE enlightenment of the many ho are not acquainted with this autiful instrument we would say e oboe—known in French as Haut- s a constituent of that branch of the ra termed the "wood-winds." a member of the double-reed family tradistinction to that of the single of which the clarinet is the typical ntative, its tone being produced by a nsisting of one leaf of wood, while ase of the oboe, the reed consists of ooden leaves vibrating in contact ch other.

oboe is a musical instrument of the antiquity, and evidences exist of its been in use in all parts of the from the earliest times. It is, in ie shawm mentioned in the Psalms. oboe in its then primitive form—the —was originally derived from a ubular reed with holes on the side when covered or uncovered by the —of course at the same time the being blown into it—made the of different pitch, a peculiar scale ir own, constituting the music of ne and greatly different from that s. The mouthpiece at the end was udely formed and consisted of two of thin reed lying near each other, hich, when blown through, by their ns produced the characteristic tone milar to that of to-day, but of a much quality. These pieces are tech- called the reed, and they exercise important function in the playing instrument.

A Primitive Form

E FIRST FORM of the oboe of ny musical value consisted of a conical tube of wood with six nd the same number of keys, thus ing the full compass of the chro- cale. However, on this instrument ited musical results were possible to which early orchestration demon- by the simplicity of the parts that ritten for the oboe found even in sic of the great composers.

oboe as a real musical instrument ts origin to the French to whom attributed nearly all improvements instrument in bringing it from its rudity to its present state of per- Even in its playing it seems to re- French mouth to reach a perfec- tone quality: the failure to acquire the despair of those of us who ied, and without success, to reach me of excellence.

A Popular Instrument

E OBOE was employed as an or- iestral instrument about 1720, and iat time has been represented in all rks of the great masters, in which s most important and prominent Unfortunately, the lesser lights of f the present day do not show this aste, often omitting entirely the om their works, to their great ar- ss.

even the early playable forms of e, many changes have taken place, ny additions and improvements have ade in the instrument.

earliest of which the writer was ssor was an instrument with a key somewhat after the Meyer flute; r, with characteristics of its own. Later on, for several years, we played on a style termed a military model, but for what reason we cannot quite understand, as the only difference was in some minor forms of a key or two. Later on, aspiring still higher, we became the owner of a conservatory model of the best French make, the excellence of which is recognized by all. This with its many keys and other additions enables the execution of technical work with comparative ease, which hitherto with the old system of fingering was executed only with the greatest difficulty, and was about impossible for one not having exceptional technical ability. With this instrument one can satisfy the vagaries of the modern composer in the very ugly and unmusical emanations that are served up to the public, which are as dry as dust and also difficult to execute, which makes the burden still greater, both to the player and to those who have to listen to him.

Modern Neglect of Oboe

SURELY, we are not indebted to too many of our modern composers for melodious or even interesting oboe parts in their works. One must look to the older French and Italian masters for ideal parts for the instrument that delight the ears of the player as well as the listener. In the old Italian operas, the oboe has parts to play that have not been even equaled by our modern composers for showing off the instrument to its best advantage. As an example of the high esteem in which the oboe was held by Rossini, it is said that, when on his visit to England in 1823 to conduct his operas, he brought his own oboist with him to play the parts in his works. Thus was the oboe in the zenith of popularity for many years.

Later on, indeed, it began to be neglected, that is, except in opera or large symphony orchestras. Here it was an absolute necessity for the effective rendering of the orchestral ensemble and for it no substitute was available. Nevertheless, although it has always been a component of the complete opera orchestra, still we remember in a prominent opera company of some years past, which, by the way, gave New York the best operatic music it has ever had, the two oboes were placed in such a position under the stage, that not a sound could be heard from them, even when prominence was called for in the score. While—mark the difference—on a recent visit to the opera in Paris, we noticed the oboe players seated by the side of the first violins, nearest the audience, from which the instruments were most plainly heard.

The tone quality of the oboe is characteristically its own, indescribably sweet and reedy, penetrating and prominent, having a most delightful wail which is most plaintive when produced by a virtuoso, but which is not possible to the amateur.

Unfamiliar Instrument

TO A VERY great number of the laity, the oboe is an unknown quantity, in fact, a sort of musical mystery, while there are not a few, even in the musical profession, whose ideas of the instrument are decidedly hazy, to say the least. There are some very ridiculous ideas prevailing among musicians as to the supposed hazards that would ensue on attempting to play the oboe, almost as great as was attributed by the ancients to the terrors expected to be experienced by one who ventured beyond the Pillars of Hercules into the open sea, which was believed to be infested by hideous monsters who destroyed all who ventured therein.

As an example of the ideas held by some regarding the oboe; we were asked by a musician if playing the instrument did not make the hair fall out. Why he should have gotten such an impression as this, we cannot conceive, as we have not observed any greater amount of baldness among oboe players than among those of other instruments. There is also a popular impression that playing the oboe has a disastrous effect upon the brain, and therefore endangers one's sanity. This question we have been asked frequently, and to this we have always answered that it is our opinion that such a result would be only likely in the case of one with any tendency to a rush of blood to the head in using a reed that required a forcible blowing to obtain a tone, thus causing an excess of blood sent to the head, which would certainly aggravate such a condition.

Appearance of Oboe

TO THE CASUAL observer the oboe in its appearance is somewhat similar to that of the clarinet which, however, on close examination does not bear out the, at first, seeming resemblance. Some less discriminating, seem to associate it with the flute which, however, it resembles still less, while in our own experience, we have had our instrument characterized as a horn, which shows what a lack of discernment is possessed by some.

The most noticeable difference between the oboe and the clarinet, which is most marked when one is not close enough to distinguish the key system, occurs in the mouthpiece of the two instruments. That of the clarinet is quite thick as to the body of the instrument, and the end of the mouthpiece is beveled off; while in the case of the oboe, that which is held in the mouth is very thin, of about the thickness of a pipe stem. While there are many other points of difference between the two instruments, still these two would be the most noticeable to the ordinary observer who wished to distinguish them, and will therefore suffice for all purposes.

Fingering the Oboe

IN THE matter of fingering the oboe, the older and simpler forms of the instrument resemble somewhat that of the old-time keyed flute and clarinet, though this has some characteristic features of its own. From this system there have been a continual advance and evolution until it now has developed into its highest form, the conservatory model, after ideas advanced by the French oboists. The oboe now stands as an instrument entirely characteristic, individual and entirely different in the highest type of musical art.

A physical difficulty attributed to its playing, which may be so to some but not by any means to all, can be easily overcome. It is due to the smallness of the aperture between the leaves of the reeds which compels a holding back of the breath. Hence, frequent rests in the music are necessary to give the lips a chance to recuperate, and also to relieve the breathing, thus insuring the obtaining of the best results in playing. Notwithstanding this, still it is a fact that in some music, long continued stretches of playing are exacted from the oboe, even in some cases throughout the whole length of a piece. This is a great drawback to those who are unacquainted with the resources of the instrument, or to whom the value of a beautiful tone is of no importance owing to a lack of artistic taste.

In this age of orchestral noise, the neglect of the oboe and its absence in small and medium-sized combinations is doubtless accounted for by its inability to blare out into an agonizing prominence like some of the other instruments that are more capable of quantity than quality of tone. This tendency is too often encouraged by orchestral conductors whose ideas of music consist of the greatest amount of noise that can be made, regardless of the ear drums of their listeners. We have in mind in this connection, a certain movie theater orchestra in this city. When the strings, woodwind and (French) horns play alone or in combination, the effects are positively delightful, but when we see the trumpets and trombones brought up to the lips of their players we hold our breath in suspense, and after the vociferous din made by the drums, of which the snare is the chief offender seeming to be trying to drown all else, we are in almost a state of nervous shock.

The Oboe Submerged

SURELY, THEREFORE, to attempt to contend with such conditions as these, the oboe is of no earthly use in the orchestra for any musical purpose, except possibly to make the ensemble appear complete, in which case a dummy would do as well. However, in an orchestra where the aim of the conductor is for accomplishment of musical and artistic results, the oboe is a veritable musical treasure, and an acquisition of such value that it cannot be dispensed with under any circumstance whatever. From the earliest times, the oboe has been a favorite with the great masters in music and used by them in the classics as frequently as is now the blaring trumpet or cornet in modern music, or the howling saxophone in our not delectable jazz, which some tell us is the forerunner of an American school of music, but of which we say, "Heaven deliver us from such a future."

That the oboe is so often conspicuous by its absence from so many of the modern orchestral combinations, we feel, should rather be regarded as a compliment than otherwise, to this beautiful instrument. Nevertheless, such is an irreparable artistic loss, for surely there is no instrument of the orchestra that is more capable of imparting tone color to the ensemble than the oboe in the hands of an artist, when it is permitted by the conductor to be in a prominent place. As for this latter complaint, it is unfortunately of too common an occurrence that the oboe tone when it should be prominent, is either subdued too much or even entirely smothered out of existence

A NEW DEPARTMENT OF PUBLIC SCHOOL MUSIC

To be Conducted Monthly by

GEORGE L. LINDSAY, Superintendent of Music, Philadelphia Public Schools

Planning a Music Program for the School Year

"HAVE A PLAN" was the slogan of one of the world's greatest merchant princes. Not only "have a plan" but follow it doggedly to its successful conclusion. The music supervisor faces many problems in looking forward to the year's work; and a campaign of action must be carefully outlined which will suit the conditions and meet the needs of the particular community in which he works. Great care must be exercised in deciding on all policies of action with regard to the plan of methods and selection of materials for the elementary and junior and senior high school music work. High ideals and great achievements cannot be gained in a single season. Know what is good and sound and then work quietly and consistently toward your goal. Consider the times in which we live and meet the present issues in education and life with a music program that answers the question of the needs of the child.

It is unwise, however, to force any pet "hobby" of method on a community. Accept the findings of the leaders in the field of public school music, adopt standard methods, use proven materials and you will be in a position to defend your course of study. Many supervisors are constantly experimenting with the music course of the various grades under their supervision, sometimes successfully but quite often such laboratory experimentation gets nowhere and the supervisors go elsewhere. The Music Supervisor's National Conference has met the needs of school music at large by organizing committees which have studied many phases of school music and submitted reports which have resulted in the adoption of standard courses of study. Much still remains to be done but the courses have been accepted by the majority of wide-awake supervisors and great good has been accomplished.

The Standard Course of Study for the Elementary Grades

THE STANDARD course, adopted by the Music Supervisor's National Conference, for the first six years of the elementary school has been widely accepted and all of the modern school-music publications are based on this course. The majority of the courses in elementary music-methods, adopted by the more progressive communities, educationally, state that the course is built on the standard course of study. This is an age of standardization rather than an age of experimentation. In making a survey of the elementary schemes used in the leading cities of he United States, we find that two-thirds of the country are using schemes based on the standard course of study with modifications made necessary by the type of song material used. The strength of the music work in any place rests on the strength of the elementary course. Here the foundations are laid and no amount of show work in the high school will counter-balance a lack of enthusiasm and development in the grades.

Specializing in Music Teaching

GREAT CARE should be exercised in supervising the teaching of music in the elementary grades. If special teachers of music are not provided, then the regular grade teachers must present the music work. The modern elementary teacher is fairly well trained in that she can sight-read music material of hymn tune difficulty and has some knowledge of the piano keyboard. This ability is useful in presenting the mechanics of music study but a love for music as an art must be fostered in the teacher. This is the duty of the supervisor. Teachers' help meeting should be held and time given individually to the weaker and newer teachers.

Substituting Teachers

IF A TEACHER cannot present music fairly well, an arrangement should be made for another teacher to take the class and the unmusical one should present some other lesson to the musical teacher's class. Many teachers find difficulty, at times, in singing the rote songs for the children. A clever teacher whom I knew, had a good ear and a great love for music but she could not sing. Strange as it may seem the music work in her class was quite strong. This teacher gave books to talented children in the class, and they took the books and learned the new songs with help at home. This group was dignified as the class choir and each pupil acted as a check on the other, and in this way the song was sung correctly by this small group for the rest of the class. The teacher knew when the song was sung correctly but she could not sing herself. Teachers should be encouraged to prepare the music lessons with the same care that they prepare any other. Teachers' choruses may be organized and great co-operation and enthusiasm aroused in a social way which will react in the right kind of teaching in the classroom. Music makes a direct appeal to the emotions, and so it must be presented in an emotional way and a direct appeal made to the finer sensibility of the pupils.

Much assiduous research has been devoted to the study of music appreciation. It is high time that the great value of presenting listening lessons in the development of music understanding is appreciated. The modern supervisor cannot afford to neglect this means of presenting musical experience greater than the vocal ability of the teachers and children. Courses have been prepared and standards gradually approached and several good texts are available. There is greater need for lessons in music appreciation in the unmusical community than elsewhere. A good preparation for the introduction of a course in music appreciation is easily established by the introduction of a music memory contest. The local phonograph dealer will gladly co-operate and support the movement. A wholesome contact with the school and home will be made through the music memory contest.

Violin and Piano Classes

NOTHING has appealed more to the tax-payer than the provision for class lessons in piano and violin. An opportunity is thus afforded to capable young professional teachers of the community to handle classes in and after school hours in this work. Remarkable results have been attained and much young talent discovered by this movement. The pupils should pay a small fee and the classes should not be large. Every child can have a chance to develop any musical potentiality that he may possess. The first and second years of musical progress may be covered in this way and then the talented child will find the way open to study privately. This movement has greatly aided the private teachers in that a larger group of children than ever before have been given opportunities for instrumental study. These children later take private lessons. The class instrumental study helps the music in the classroom and elementary orchestra can be easily developed.

Musical Projects

THE SUPERVISOR should not overlook the possibility of presenting general musical projects in which the whole school system can participate. This may mean the preparation of an operetta or cantata. A music festival may be planned. Music week should not be overlooked. Special assembly programs should be provided and local or visiting artists invited to present programs. General programs of music appreciation are being broadcast from radio stations, and advantage can be taken of this for the study of general appreciation. Music clubs can be invited to present programs to the schools and thus lectures, concerts and recitals may be presented. Pageants and masques can be prepared in conjunction with the English, History and Physical Education Departments.

Elementary Music Clubs

THE SO-CALLED extra-curricular activities should not be overlooked. It is quite possible to organize elementary school orchestras and glee clubs. In the larger communities an all-elementary orchestra may be organized with individual orchestras in the various schools used to furnish picked players. Every school should have a glee club and it is not difficult to make a fair showing with a picked group of singers. The glee clubs can stage operettas and concerts and the orchestras can help out. Funds can be raised for school projects by selling tickets and an audience is always assured when children in good numbers are in the production.

Junior and Senior High School

THE SUPERVISOR often oversees the teaching of music in the elementary grades and teaches in the junior and senior high schools. This practice obtains in fairly large communities and adds greatly to the burden of the supervisor. The music electives in the high schools cannot thrive under this arrangement and it is obvious that special teachers must be provided in order to afford opportunity for a full program of music electives or courses to develop.

If the high school is small, it is well to present chorus work to every student for one period weekly, and in addition, to offer a special elective of chorus or vocal ensemble for four periods weekly. All of the chorus work should re credit toward graduation on a labor basis, that is, one-half semester hou credit given for each period of c work. The chorus work is the back of the high school music and it sh be given to every pupil even in the la high schools. Choruses of four or hundred can be safely handled and ing is more inspiring than the m singing of high school pupils. Great should be exercised in choosing c music for high school use.

Study Musical Taste

MEET the taste of pupils half with selections that are not di but melodious and effective. Ma music teacher has met his "Waterloo trying to force the chorus to sing ficult part music. Much music is vided to-day which is melodious in voice part and the parts can be directly with words. Unison, two numbers, and three part numbers co ing of soprano, contralto and bar should be presented. Some work in appreciation should be outlined and sented during a few minutes of choral period. Exercises for vocal ibility, shading and tonal balance in c ing can be presented. Great inter evinced in this type of work but too of the valuable period should n devoted to it. A few minutes s suffice.

In handling large single choral gr several teachers should be assign proctor the group. The teachers wh assigned should be on the basis o to each one hundred pupils and the of these teachers are to take attendan see that each and every pupil is parti ing, that books and music are distri and to help by participating wh possible in the singing, and to giv co-operation to the director of the c at all times. A good accompanist absolute necessity. It is far bette the teacher of music to play and from the piano when a capable a panist is not available. The high glee club may be provided by the o ization of a mixed vocal ensembl special chorus. Where this is impo the glee club should be organized extra-curricular basis. The glee c one of the high school's greatest and pupils of high school age can duce anything from "Pinafore" to opera.

The High School Orchestra

INSTRUMENTAL work is popu all grades of school but it can be most effective in the high school. orchestra and band give the boy his est chance in music. This contact the musical life of the boy is of importance and surprising results hav achieved by high school orchestras. much cannot be said of the value pupil's participation in well balanc strumental groups of this kind. A organized campaign will produce i in playing the so-called unusual i ments of the orchestra. No pupil

The Teachers' Round Table

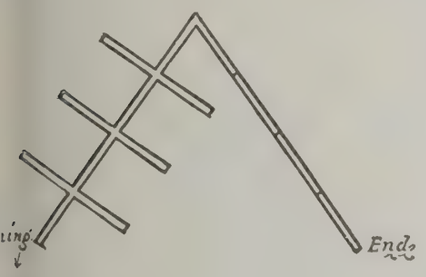
Conducted by PROF. CLARENCE G. HAMILTON, M.A.

Professor of Pianoforte Playing at Wellesley College

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered Department. Full name and address must accompany all inquiries

PROF. CLARENCE G. HAMILTON

Scales and Arpeggios



) I have two girl pupils in the fifth grade who good in major scales and arpeggios. What other s should they have, and what book can I use in ning them? They are both using Mathews' *Fifth k Book*, with music from the ETUDE for supple- lary work. Should they have had other books ales before the fifth grade?

) I also have a second grade pupil, advanced ars, who memorizes readily, but is poor at sight- ing. How may this be remedied?

MRS. M. H. S.

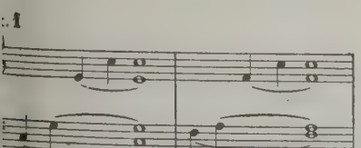
The minor scales should of course be taught, as the chromatic scale. After the plain scales and s have been presented, there are many ways in ese may be emphasized, such as practicing them ıry motion, in canon form (one hand preceding ·), in varied rhythms, and so forth. The scales ɔ be given in thirds, sixths and tenths. For a ium of such devices, I refer you to the book *g the Scales and Appeggios,* by James Francis

example of an interesting combination of par- contrary motions in scale practice, let the pupil cale at the bottom of the keyboard, play up one ith the hands together, separate the hands one ıd meet again, play up another octave in parallel nd so on till she arrives at the top of the fourth nen she should descend to the beginning without Here is a diagram of the entire performance:

ion represents one octave. There are three sep- ɔefore the top of the scale is reached.

ɔend a part of each lesson period in playing sim- with your pupil, without stopping for minor Also assign her a weekly stunt in reading sight.

Co-ordinating the Hands



ave a pupil, ten years of age, who knows the in treble and base clefs perfectly, can play each hand separately in correct tempo, but putting the hands together is very slow in ing all the notes. I fear that it is a lack of ination. How can I remedy the fault?

B. L. A.

ly your pupil has learned to read horizontally, vertically. Accordingly, she should be given n which the vertical reading predominates, and rry out a scheme for mastering the notes up- tead of across the page.

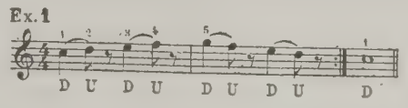
er study, therefore, something composed almost y of chords—such as the *Soldiers' March* and rom Schumann's Op. 68, or any simple hymn- nd let her practice each chord systematically first the bass note, and then each note above it ion, afterwards playing the whole chord to- is:

Ex. 1

ɔcess should be continued, with the preliminary kened, until she can sound each chord imme- thout previous analysis.

The same principle may be then applied to all kinds of music, by studying each chord or interval from the lowest note up, until the right method of "vertical" read- ing has been established.

High and Low Touch



1. What are high and low touches?
2. Who originated them?
3. Do you teach them?

B. S.

Probably by high and low touches, you refer to those more commonly called hand and arm-weight touches, taught by most modern teachers. In the former, when a key is sounded the hand is thrown downward from the wrist, so that as the finger strikes the key the wrist tends to jump upwards. In the arm-weight touch, when the key is sounded, the weight of the arm is released, so that the wrist falls.

Of the two, the hand touch, which is the one most in use, is well adapted to brilliant, fluent, or staccato play- ing; while the arm-weight touch is used chiefly for cling- ing or sonorous effects. The efficiency of these two touches is illustrated in the following exercise, where the first of each pair of notes is played with the arm- weight touch (D=wrist down), and the second is played by the hand touch (U=wrist up):

Ex. 1

This exercise may be practiced with the hands sep- arately and then together, playing with the left hand two octaves below the notes as written.

As to the origin of these touches, it may be said that they have grown naturally, from the development of piano playing and from the teachings of clear headed and progressive instructors.

Indistinct Arpeggio

I have a pupil about 23 years of age, who has nearly completed the third grade of Mathews' *Standard Graded Course*. She is a willing worker, and tries to play everything just as I tell her, but it seems impossible for her to play arpeggios prop- erly. She misses some of the notes, while others are indistinct. She has been playing "ragtime," but now cares nothing for it. Has that injured her playing?

V. E. F.

If the pupil has played ragtime in the customary slap- dash manner, no doubt it has brought on the careless habits. Such habits can, of course, be remedied only by a rigid diet of slow practice. Begin by having her prac- tice broken chords in the octave compass, playing the notes very slowly, and with a distinct, even touch. Such figures as the following may be used:

Ex. 1

In extending this compass, let her play the chord tones successively through one octave, giving one note to a beat, then through two octaves, with two notes to a beat, three octaves with three notes to a beat, and finally four octaves with four notes to a beat.

This exercise may be applied to all keys and to dif- ferent chords and their positions. It is also desirable to practice with the metronome, beginning at ♩ =88, and working up toward ♩ =144.

Fingering of Scales and Arpeggios

I notice that several teachers of good standing in a neighboring city are teaching their pupils to play all scales and arpeggios with the same finger- ing that is used for the key of C. I have always taught the old standardized fingering. What do they gain in so doing? Do they change the finger- ing in studies and pieces accordingly, or adhere to the ordinary fingering marks? Would you advise me to change my method?

F. M. P.

The uniform fingering which you describe is advocated by some on the ground that it facilitates transposition from one key to another. As an exercise in the use of the fingers under all circumstances of position, too, it has its advantages, and may be employed, at least to a certain extent.

But on the whole, such fingering is often so clumsy that, in my opinion, it is apt to impair clear and fluent execution. I believe, therefore, that it is dangerous to teach it, at least before the standard fingering has been well mastered. Certainly, such a forced system of finger- ing cannot well be applied to all kinds of passage work, especially in cases where the short fingers (the thumb and fifth finger) would come continually on the black keys, while the long ones would come on the white keys.

We may conclude that our forefathers were not alto- gether wrong in restricting the use of the thumb on the black keys. Do not be easily misled, and do not hesitate to continue the use of a standard fingering which has stood well the test of time.

Third Grade Materials

1. I have a pupil in grade 3 who is doing very nice work. In addition to scales and arpeggios in octaves and various rhythms, I have her study the C. K. Hanon—*Virtuoso Exercises* and the Czerny-Liebling *Selected Studies*, Book 1. Would you advise the use of the above material, or am I neglecting some phase?

2. I use Mathews' Books 1 and 2. After this stage, I feel that a pupil needs greater variety and is much more interested in a book of technical studies and an occasional piece of sheet music, which makes a great appeal. Am I correct in my opinion, or is this material insufficient?

N. M. N.

Any course, however carefully prepared, must be adapted to the needs of the individual pupil. Also, it is better for both teacher and pupil to vary materials from time to time. So I think that you are quite wise to give special work when it seems desirable.

The studies that you mention are all good. I suggest, however, that you duly emphasize the element of inter- pretation, by the use of such studies as Bilbro's *Short Melody Etudes* (Grade 2), Burgmüller's Op. 100 (Grades 2-3), Heller's Op. 47 (Grades 3-4) and Op. 46 (Grades 4-5). Remember that musical expression is the real end of all your teaching, and that technic and everything else should be subordinate to it!

Thousands of pleased subscribers have used this very practical department, conducted by an authority of national reputation. We ask our subscribers to place their questions on a sheet sep- arate from their regular correspondence and never to fail to add the full name and address. Ques- tions not suitable for this department will be an- swered by personal letter from THE ETUDE *Edu- cational Service Department, when practicable.*

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

PORTRAIT OF A MUSICAL CHILD

FREDERICK DELIUS

THE "Life of Frederick Delius," by Philip Heseltine, contains some delightfully naive autobiographical material by this famous composer who, though born in England, of German parents, and long resident in Florida as a youth, now ranks as a leading English musician.

"As a little boy," says Delius, "I used to take sudden violent dislikes to people, and developed a strange habit of going to visit quite unknown people to whom I had taken a fancy. One of my great likes was a sailor lad who sometimes came to Bradford. He belonged to a big merchant-vessel and I loved to hear him talk about his travels in strange lands and seas. His departure on a fresh voyage always filled me with envious sadness.

"I cannot remember the first time when I began to play the piano; it must have been very early in my life. I played by ear, and I used to be brought down in a little velvet suit after dinner to play for the company. My mother would say: 'Now make up something,' and then I improvised. When I was six or seven I began taking violin lessons from Mr. Bauerkeller, of the Hallé Orchestra, who came over from Manchester especially to teach me. Later on, I had another teacher, Mr. Haddock, from Leeds. My first great musical experience was hearing the posthumous *Valse* of Chopin, which a friend of my father's played for me when I was ten years old. It made a most extraordinary impression upon me. Until then I had heard only Haydn, Mozart and Beethoven, and it was as if an entirely new world had been opened up to me. I remember that after hearing it twice I could play the whole piece through from memory."

Music is an art—not a science. Four hundred and twenty years ago a group of composers, who termed themselves the "Netherland School," failed in their endeavor to construct music in which the science of so-called part writing and the mathematical devices of canon and fugue were substituted for the art of stirring the emotions.—DALLAS NEWS.

SHAKESPEARE'S TENOR

A CHARMING book is *Shakespearean Music in the Plays and Early Operas*, by Sir Frederick Bridge, long organist of Westminster Abbey. He gives us some interesting facts and introduces us to various personalities, among them a learned Doctor John Wilson, later professor of music at Oxford, but at one time identified with the "Jacke Wilson" who may have sung tenor for Shakespeare himself, and certainly the collector of many Shakespearean songs. Concerning him Sir Frederick says:

"I have stated that he lies in the Cloisters of Westminster Abbey, and in course of time the inscription on his gravestone became much worn by the feet of the many visitors to the Abbey. At the suggestion of a musical enthusiast the Dean and Chapter ordered the stone to be re-cut, and while the workman was carrying out his task, the gentleman who had got it done stood by and explained what a distinguished man lay beneath the stone: "Shakespeare's Tenor, Professor of Music at Oxford, Gentleman of the Chapel Royal and a great composer." The workman listened with interest, and then, pausing for a moment, exclaimed, 'Ah! I wish I had know'd that when we took that there drainpipe through him!'"

"YOU WILL NEVER BE A MUSICIAN"

"MOST despicable among men is a titled adventurer," says Nathan Haskell Dole, speaking of the father of Carl Maria von Weber in his book of *Famous Composers*. Those who believe that difficulties during childhood will prevent a man of genius from making his way, may well study the early biography of the composer of *Der Freischütz*, though the child was a "baron" by birth.

"His father, like Beethoven's father, had been dazzled by the success of young Mozart, and had vainly hoped that each of his children would turn out an infant prodigy. 'The glamour was all the greater now because his niece, Constance, had married Mozart,' says Dole.

"The poor little baron was a feeble child, suffering from a disease of the hip-bone, which made him lame for life. He was not able to walk at all until he was four; before he used his legs he was taught to sing and his hands were wonted to the keys of the clavier. He showed no special bent for music, and his stepbrother, who tried to teach him, is said to have flung down his violin-bow in despair, exclaiming, 'Carl, whatever you may be, you will never become a musician.'

C. M. VON WEBER

"During his early years he had no settled home. His father was traveling about as director of a dramatic troupe composed chiefly of his own family. They were in Weimar in 1794, where the mother appeared in the theater, under Goethe's direction, as Constance in Mozart's *Die Entführung aus dem Serail* (Elopement from the Harem).

"When he was twelve, his gentle, unhappy mother died of consumption, and he was left to the care of his father's sister Adelheid."

Weber began to compose very early, and his second published work, *Sir Variations on an Original Theme*, were lithographed and engraved by the composer.

EARLY VENETIAN OPERA

"THE first commercial opera-house was opened in 1637 in Venice," says R. A. Streatfeild in his book, *The Opera*. "Opera became so popular therein that, before the century was out, Venice possessed eleven theaters devoted to opera alone. This enterprise naturally brought with it a certain standardization in all the parts which make up an opera—in the scenery, in the orchestra, in the plots of the plays and in the style of the music itself. Plots became less mythological and more human, the style less literary and more popular.

"Cavalli, a pupil of Monteverdi, who was the chief Venetian opera composer, had considerable feeling for descriptive music to accompany these scenes, but he also gave way to popular taste in introducing songs. Monteverdi would give musical unity to a long declamatory passage such as Ariadne's lament, by the recurrence of a short refrain. Cavalli makes more of the 'refrain' and less of the declamation, so that what we very soon get is dialogue carried on in very conventional recitative, with a number of little songs. Most of these songs consist of a pleasing little tune followed by a more emotional and less melodious section, after which the first tune is repeated, generally with impromptu variations on the part of the singer. This *da capo*, which has a great importance in the history of musical form, and lasted in Italian opera right up to the end of the eighteenth century, was a great hindrance to the dramatic effect and in process of time degraded opera to the level of a concert."

TOO MUCH "VIVA!"

C. H. H. PARRY

TOO GREAT a fondness for applause is as bad for nations as for individuals, according to Sir Hubert Parry. In "The Evolution of the Art of Music" he has something interesting to say on the "eagerness of composers for sympathetic response," and what it has done to handicap the Italians.

"The Italians appear to have been the most spontaneously gifted with artistic capabilities of any nation in Europe. In painting they occupy almost the whole field of the greatest and most perfect art; especially of the art produced in the times when simple beauty of form and color was the main object of artists. In music, too, they started every form of modern art. Opera, oratorio, cantata, symphony, organ music, violin music, all sprang into life under their auspices. But in every branch they stopped half way, when the possibilities of art were but half explored, and left it to other nations to gather the fruit of the tree which they had planted.

"Numbers of causes combine to make this invariable result. One of the most prominent is curiously illustrated by the history of opera. The Italians are generally reputed to be, on the average, very receptive and quickly excitable. The eagerness of composers for sympathetic response is found in the same quarters as quick receptiveness of audiences to the music that suits them. The impressions that are quickly produced do not always spring from the most artistic qualities. But the Italian composer cannot take note of that; he is passionately eager for sympathy and applause, and is impelled to use all the most obvious incitements to obtain them, without consideration of their fitness. The way in which Italian composers resort to the most direct means to excite their audiences is a commonplace of everyday observation."

"DO YOU SMOKE?"

IN HIS later years, Robert Sc
was curiously reserved, and J
Niecks relates some odd instances
new book on Schumann, including

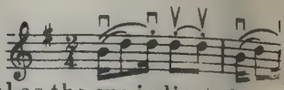
TURKEY IN THE STRAW



Edited by Robert Braine

AMERICAN DANCE T

The "Turkey in the Straw" is America's most popular dance tune. If we are not careful it will become our national air. It has increased in popularity enormously on account of the wave of interest in the country fiddler and his favorite tunes, which has swept over the United States in the past year.

In answer to many requests, the *Etude* presents this universally known dance tune, with the bowing best calculated to give the maximum of vigor and clean-cut rhythm. In the syncopated measures a bowing sign has been placed above each note.

Some of our country fiddlers bow the syncopated measures as follows:—

but this latter bowing is not so forceful as the one indicated.

The first note of each measure throughout comes with a down bo marked, and the player must be careful to give this note a vigo accent, if he would bring out the true "country fiddler" swing to sprightly composition. The fourth finger must be used where ma and the slurs where indicated, as this makes for a smooth and execution, which is necessary. The *tempo* is very fast.

Most Marvelous Musical in World's History

The BRUNSWICK PANATROPE

utilizes newly discovered electrical processes to bring you music and radio of a beauty hitherto unknown

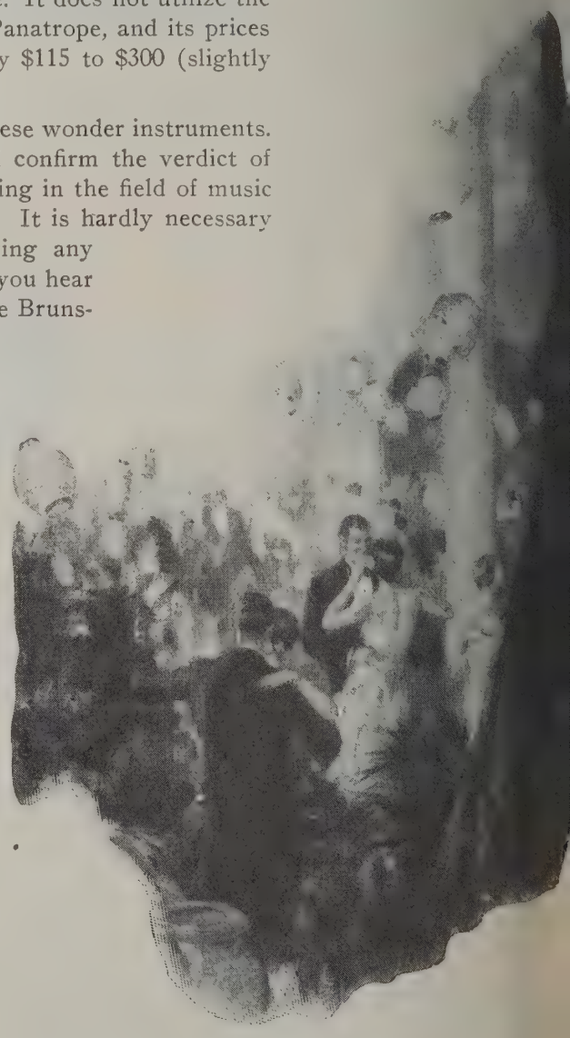
THE PANATROPE is the joint achievement of four of the most widely-known institutions in the fields of electricity and acoustics: Radio Corporation of America, General Electric Company, Westinghouse Electric & Manufacturing Company, and The Brunswick-Balke-Collender Company.

Amazes critics

Although perfected less than a year ago, this new reproducing musical instrument has been heard by more than four million persons. When first demonstrated, it was given front-page space by the great metropolitan newspapers as the most important musical development of the age. Critics were no less enthusiastic. Nothing in the whole world of music ever created such profound interest and attention.

The Brunswick Panatrope may be had either alone or in combination with the Radiola Super-heterodyne. Thus it puts at your finger-tips all recorded music and the rhythmic, newsy programs of radio as well. Operates entirely from the light socket; no batteries or outside wires needed.

Another triumph



Brunswick has also developed another musical instrument, as yet unnamed,* for bringing out the music of the new records. In tone quality and its ability to reproduce the entire musical scale, this instrument represents a very great advance over anything in existence, save the Panatrope. It does not utilize the electrical equipment of the Panatrope, and its prices are lower, ranging from only $115 to $300 (slightly higher west of Rockies).

Certainly you must hear these wonder instruments. Your musical judgment will confirm the verdict of the critics that there is nothing in the field of music reproduction equal to them. It is hardly necessary to suggest that before buying any musical instrument or radio, you hear the Brunswick Panatrope, the Brunswick Panatrope & Radiola and the new Brunswick musical instrument as yet unnamed.*

Brunswick dealers will gladly demonstrate these instruments. If there is no Brunswick store near you, write us.

**$5,000 for a name*

To find a suitable name for the new Brunswick instrument described above, we offer 3 prizes totaling $5,000 for the best name submitted with slogan not exceeding 10 words describing its music. Write for free booklet giving all details. Address Dept. P-107.

Health and Happiness

The hunger for sweets, common to all the human race, is satisfied by WRIGLEY'S Chewing Sweets.

And Wrigley's does not harm the stomach—on the contrary, it is extremely beneficial to teeth, appetite and digestion.

Its lasting flavors appeal to the taste, its soothing refreshment relieves fatigue and its antiseptic effect on mouth and throat guards against ills.

Wrigley's clears the breath of the odors of eating.

Your friends prefer a sweet breath.

So the use of Wrigley's shows a consideration for those about you, which is one of the evidences of refinement.

Made clean, kept clean, sealed air-tight in its wax-wrapped package.

Comes to you with all its original goodness and flavor.

New Books on Music—Reviewed

Choice Rhythms for Youthful Dancers. By Caroline Crawford, with music by Elizabeth Rose Fogg. Cloth bound; one hundred and three pages. Published by A. S. Barnes & Co. Price, $3.00.

It is well to take off, now and then, the straight-jacket of Art which has come to torture man in the shape of set types and forms without rhythmical meaning, and to view the dance again as something we do for the fun of it. The gay twirl before the mirror when the young girl has got just the right twist to her hair; the blithe run to the street-car in the early morning through empty streets and frosty air; the quickening of the step to match that of the passing parade; these are the very root and substance of dance forms.

The thirty-seven "Choice Rhythms" given herein are built on this conception. They are written for children whose emphatic, naïve movements make special types of the Processional, Schottische, Polka, Galop and Whirl, feasible and necessary.

Alice in Orchestralia. By Ernest La Prade. Cloth bound: charmingly illustrated. One hundred and seventy-one pages. Published by Doubleday, Page and Co. Price, $1.00.

Here is a new Alice who wanders into "Orchestralia" where instruments put away their players carefully between performances, where disagreements and quarrels are settled by a general "tuning up," and where standing in society is based on the tones of one's voice!

Most marvelous of all—this tale is no dream! First-hand facts are given concerning the mechanism of the four types of orchestral instruments. Would we like to know what makes over-tones, what determines pitch, why saxophones are counted members of neither the wood-wind nor brass-wind group, why trombones are the most dignified of wind instruments and kettle-drums the most useful of percussion instruments.

Then let us take this tour with Alice by way of the "Tuba Tunnel." It is every bit as easy as the trips we have taken with the other Alice down the rabbit-hole and through the looking-glass. Besides, *this* journey leaves us much the wiser!

The Appreciation of Music. By Percy A. Scholes. Cloth bound; one hundred and twenty-nine pages. Illustrated with portraits, diagrams and notations. Published by Oxford University Press, American Branch. Price, $1.75.

This book is best read as it rests on the piano rack, our fingers on the keys.

In words and notations the *Appassionata Sonata* and many another classic composition are fully described in their forms of Variation, Fugue, Sonata, Rondo, Gigue and Minuet. But, lest the gifts be without price, composers are also introduced in quaint lights. "How the *Harmonious Blacksmith* happens to be so named" and "the Melodote of the Coins in the Herrings Pocket" are stories that cause us to wink at Fate.

The book is far too short for much (and all have become so before the end is reached), but, strangely enough, the last page is really just the beginning, for it is there that our ears begin to listen.

The English Madrigal. By Edmund Fellowes. Cloth bound; one hundred and eleven pages; illustrated with old prints. Published by the Oxford University Press. Price, $1.40.

In those "ultra-modernistic" days when people sang without bar lines, signatures, Madrigals (mother-song) were discovered in Italy. But soon this form was adopted by the English and made a part of their native life as their folk-dance on the green. It was in proper expression of Merrie England that she did not have to pocket her pride and called "merrie."

Of the atmosphere in which the composers who wrote throve, of the printers who "humbly coppied" their rhythm, harmony and words, who would care to know of these, read of English in flavor, in author and spirit and devoted wholly to the description of English Madrigal.

How to Compose a Song. By Ernest Newton. Cloth bound; one hundred and six pages; illustrated with musical [illegible]. Published by E. P. Dutton & Co. Price, $2.00.

The musician who plays amiably editions of the great and less great who knows how composing is done in a way, how to do it, yet who shrinks the folds of modesty rather than put melodies that come to him—such are better not read this book.

It tells, first, what a song is and distinguish it from music unlinked words; second, how to give the song ting of harmony and meaningful accompaniment; third, what the Introduction Finale should express and what the leave unsaid; fourth, how to make singable through homely practices with actual transcribing.

The student need not think he will an end of the work by reading to page. An hour later he will find pencil in hand, eagerly calling to the Noah's Ark of notes and staves which has been wandering in his mind

the episode in C major, a modulation A flat is effected. This modulation is lly beautiful. Our readers will find a analysis of this movement in Mr. Biart's this issue.

own, by James H. Rogers.

H. Rogers

Mr. Rogers, the renowned Cleveland composer and teacher, seems equally "at home" in whatever type of composition he attempts. His organ writings are marked by a dignity and virility and an exemplification of true "organ style;" his songs are graceful and highly vocal; and his pianoforte pieces are gems of humor, originality, musicianliness.

Chinatown is a characteristic number, presenting no real difficulties, but demanding that the left wrist be kept extremely o play the *stuccato* notes.

du Soir, by Felix Borowski.

Borowski was born in 1872, at Burton reland), England. After studying in and, later, at the Cologne Conserva- ıe went to Scotland, where he taught in school in Aberdeen. His compositions attract wide attention, and in 1894 Mr. returned to London, and began to iimself with larger works. In 1897 he ted to come to Chicago as professor of on at the Chicago Musical College. In became the president of the college, a ch he held until July, 1925, when he in order to devote himself to private and composition. In addition to his as a composer and teacher, Mr. Borow- accomplished considerable literary work usical field.

readth of melodic line which has made ic so pleasing is exemplified in this Song." The left hand must be suffi- appressed to permit the melody to stand ly.

composition is in "three-part" form Make the middle section *really agitato.* oda of this composition is thoroughly l. Mr. Borowski's use of triplets is ffective.

rdens, by James Francis Cooke.

omposition, originally written as a piano receiving a most cordial reception from rs all over the world; teachers are using immense success and it is now being by Sousa and his band.

elody of *Sea Gardens,* so excellent and ting," is highly exceptional. It will, we ndear itself to thousands and thousands ts for many years to come.

nal analysis of this piece is as follows:

ion A (A-flat Major).

ge section (A Major).

ion B (F-sharp Minor, *molto dramatico*).

lude (employing the "whole-tone scale").

ion A (A-flat Major).

ıst mention, in passing, the fine poem by ats, one stanza of which Mr. Cooke has to this composition. The poem is a (fourteen lines), and is so lovely that it here in its entirety.

Sonnet on the Sea

eternal whisperings around
shores, and with its mighty swell
ice ten thousand Caverns, 'til the spell
te leaves them their old shadowy sound.
s in such gentle temper found,
rcely will the very smallest shell
l for days from where it sometime fell,
st the winds of Heaven were unbound.

who have your eyeballs vex'd and tir'd,
m upon the wildness of the Sea;
whose ears are dinn'd with uproar rude,
oo much with cloying melody—
ar some old Cavern's Mouth, and brood
start, as if the sea-nymphs quir'd.

l," by the way, is the old spelling of

The composition comes arranged for solo, for organ, for orchestra, for bands and for two-part chorus.

Pleading, by George F. Hamer.

An expressive, plaintive theme, well rounded. For the middle section, Mr. Hamer chose the relative minor. As you all know, every major scale has its relative minor (and conversely, of course) whose signature is the same as the major, and whose "do" is three notes lower than the "do" of the major. Or, if you will, the sixth tone of the major.

Marine Corps Reserves, by Adam Geibel.

Dr. Geibel has here a spirited march, with well-contrasted themes, and a real band atmosphere.

Goldenrod, by A. Louis Scarmolin.

The wide intervals of the theme may suggest the fine dignified height of this striking plant.

Goldenrod calls for strong accentuation, and relaxed arm and wrist.

Mr. Scarmolin is a resident of Hoboken, N. J.

Turkey in the Straw (Violin).

Everyone knows and has whistled this tune, and some have even been fortunate enough to hear Melly Dunham or other virtuoso perform it.

Turkey in the Straw must be played *vivace,* and with strong and sure attack.

Silver Dreams, by Montague Ewing.

A very original composition. Watch out—or a heavy touch will swiftly bear these dreams back to earth!

Valse in A, by Sergei Rachmaninoff.

If you will look up, in the dictionary, the derivation of the word "vital," you will find that it comes from the Latin word "vita," meaning "life." And so, when I say that the main theme of this *Valse in A* is exceedingly and gloriously "vital," we mean that it has a lot of life. In fact, it is so alive that it appears to have proceeded upon its own course, impelled by its own momentum, without the advice or consent of its creator. Note the clever syncopational effects.

The subsidiary theme, in F-sharp minor, works back to the first theme, which now has a counterpoint against it (in dotted half-notes, descending the scale). This stepwise counterpoint is a favorite trick of Mr. Rachmaninoff's.

In the D-flat middle section, the melody is in the inner voice, you will perceive. The dotted halves, ascending, are a reminiscence of the counterpoint to the first theme. Notice the accentuation in the left hand. This middle section is to be taken as marked, *allegro-moderato!*

The last section, utilizing previous material, is especially brilliant.

Chanson d'Amour, by Frank H. Grey.

Which means, "A Love Song." This is a fine *cantabile* melody, supported by an accompaniment which is varied enough to avoid monotony. In this piece there is a fine chance for gradations of tone and tone-color.

The composer was born in Philadelphia in 1883; attended Harvard University 1903-1907, where he studied under John Knowles Paine and Walter R. Spaulding; he now resides in New York City.

Cradle Song, by Buryl Retting (Violin).

This is a lulling graceful number, easy technically, but not so easy of interpretation. Keep the rhythm even and swaying.

Festival March, by Carl Wilhelm Kern.

The first theme of this march is clear-cut and vigorous, and is carefully conducted through various tonalities. Notice the pedal octave intervals; they are not difficult to execute and are highly effective. The section is in F Major, the Sub-Dominant. Make the sixteenth notes almost thirty seconds, to convey the intended effect to your audience.

Roses are Calling, by Gordon Balch Nevin.

Mr. Nevin has won great renown, both as a composer and as an organist. He was born in Easton, Pa., of musical parents, his father being the very well-known composer George B. Nevin. He received most of his training under J. Warren Andrews and Dr. J. Frederick Wolle. Mr. Nevin has given over one hundred and fifty organ recitals in Eastern cities, and is at present located in Johnstown, Pa., where he is the organist of the First Presbyterian Church. His compositions are many and notable, and he is also the author of several books on musical subjects.

The title of the present song recalls to mind the famous slogan, "Say it with Flowers!" and, as we all realize, flowers *are* truly and wonderfully eloquent.

On the word "gathers," accent the first syllable more than the second, *although the second has an equal note-value.* This is a point regarding which one must be ceaselessly watchful.

Sing this number very smoothly; and for "loncly" and "longing," put all the expression you can command into your singing.

The syncopations in this song are good, and are not so frequent as to be detrimental to the main rhythm.

(Continued on page 703)

IVERS & POND "PRINCESS"

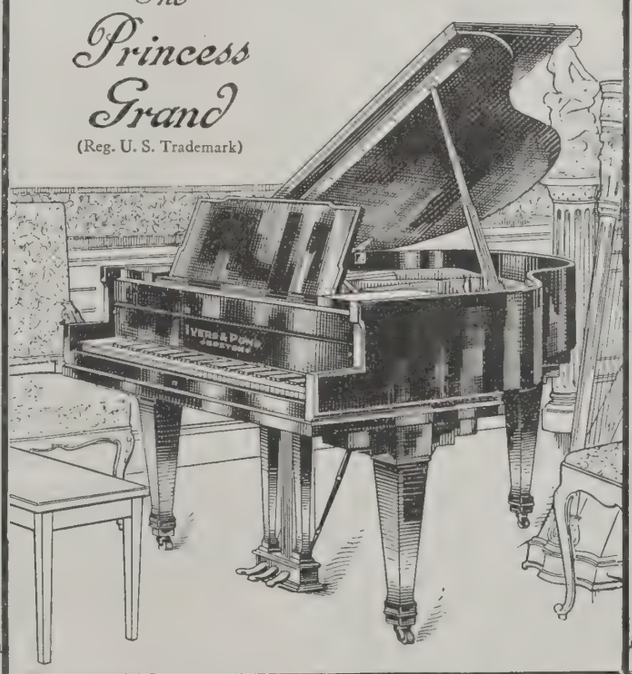
A MINIATURE CONCERT GRAND

This delightful piano might with justice be called a miniature concert grand, for musically it embodies the advantages of the larger grands, and possesses a tone volume and range of expression surprisingly broad.

In no detail has quality been sacrificed for size, *Ivers & Pond* standards being rigidly maintained. Musicians quickly recognize the characteristic Ivers & Pond tone in the "Princess"—a tone half a century in developing, and easily apparent in every Ivers & Pond.

The best traditions of old-time Boston piano building and the most advanced ideas of today are combined in *Ivers & Pond* pianos. Built, as from the first, in *but one quality—the best*—by the same interests, with the same artistic ideals, they are used in 600 educational institutions and 75,000 homes. *Write for the new catalog now.*

Our Unique Selling Plan



If we have no dealer near you, we can supply you from our factory as safely and as satisfactorily as if you lived near by. We make expert selection and guarantee the piano to please, or it returns at our expense for freight. Liberal allowance for old pianos in exchange. Attractive easy payment plans. For catalog, prices, and full information, *write us today.*

The Singer's Etude

Edited for September

By CLARA KATHLEEN ROGERS

Formerly Widely Known on the Operatic Stage as Clara Doria

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

How to Study an Operatic Role

WHEN ABOUT TO study an operatic rôle, the first thing for you to do is to read the libretto carefully, not only to become acquainted with the plot and general movement of the play, but also with the dramatic situations and the types of character represented by the various personalities. In doing this, if gifted with imagination you will instinctively be dramatizing it mentally, will be picturing the carriage and general bearing of the principal characters; in other words, you will be acting the play subjectively!

Now it will be time to give attention particularly to the characteristics of the person to be represented, to picture to yourself how *you* would feel and act if placed in similar circumstances, and then, how you *would* have felt had your nature, surroundings and lot in life been the same. You must endeavor to get under his or her skin, so to speak.

Up to this point the aim has been to grasp and impress on yourself the dramatic situations and all that they entail. But now the time has come to tackle the musical score. If enough of a musician to play over your part on the piano until you are familiar with it, it is just so much in your favor; but if not, get your accompanist to play it over and over again while you follow with your eyes the vocal part, but do not attempt to sing it however strongly tempted to do so! You have now possessed yourself mentally of both the dramatic values and their musical settings, and the time has now come to study your part in a different way. From now forward concentrate on the musical medium through which you are to interpret the feelings and emotions of your assumed character, the declamatory values, the modulations of tone, the delicate nuances that will render eloquent your expression.

Picturing Ideals

IF YOU HAVE the gift of musical interpretation and a right conception of all the infinite shades of color that rightly belong to the human voice, all of this will come intuitively—you will not have to think it out deliberately! You will simply picture your ideal conception of your part according to your highest musical and dramatic possibilities. You have been, in common parlance, making up your mind just how you want *to hear yourself sing* your part; and this making up your mind is actually the whole crux of the thing if you will only believe it! It is the one compelling force which dominates the whole action of your vocal processes; it is the one thing which enables you to achieve your ideal expression in utter unconsciousness of the ways and means by which it is accomplished.

You can experience an ecstatic exaltation in mentally hearing yourself sing, which is unequaled in any other way. In this ecstasy you may indulge yourself to the full! Imagine yourself singing your part with all your heart and soul—with all that is in you of vital energy, till the whole of your being responds to the joy of it; but resist the temptation of actually voicing it.

You may be wondering why I am so insistent on your work being purely mental; therefore, without entering into the psychological processes which lie back of it all, here are some of the obvious reasons for the advice given: If when undertaking the study of a new rôle, you obey the natural impulse to sing at it at once after a fashion—as the majority of young students are apt to do—you will hear it done with all the imperfections of tone and expression incidental to a tentative effort, which must necessarily be faulty, because you have as yet formed no idea as to how it should sound. Consequently, immature and faulty singing is the first impression you receive—an impression which interferes fatally with any ideal conception you might otherwise form. Our first fresh conception of a musical composition is always the best, because it is independent of our medium—because it is unhampered by the flesh and reigns supreme in our consciousness.

The Unsatisfying Phrase

ALL ARTISTS have at some time in the course of their studies realized that when a vocal phrase failed to satisfy them, on repeating it again and again it grew worse instead of better, and that soon they had lost all idea of how they originally wanted it to sound. The explanation of this is that the faulty sounds kept impressing themselves on the subconsciousness which, acting on the vocal processes, gave them back the fruits of the bad impression received.

I hope it has been made clear that to sing your songs or recitatives before having determined how they should sound—what effect you intend to produce—is the worst thing that can be done; that you must first form an ideal of the effect you would produce untainted by physical inadequency; otherwise your best conception will become blurred and you may lose confidence in it altogether!

To put it in another way, any unsatisfactory tones, uttered in your struggle to master unfamiliar musical phrases, will be subconsciously received and registered in all their imperfection, and those imperfect tones will be duly reproduced by subconscious control of the mechanical actions of voice.

In corroboration of the soundness, as a working principle, of the above directions, I will tell you something of my own experience as an opera singer, as there is nothing so convincing as a proof obtained by a personal experiment which has been successful. In the early days of my operatic career I had, for the purpose of enlarging my repertoire, accepted an engagement in a small town of about thirty thousand inhabitants in Southern Italy, where the only place of entertainment was the opera house, and where each week a change of opera was required by an exceedingly exacting public who had no other resources for their diversion.

Singing Steadily

IN OUR COMPANY there were two prime donne and two tenors, each pair having their separate repertoire! As it happened that the second company did not draw, it fell to my lot to be called on to sing nearly every night instead of the four performances originally expected of me. This was too hard work for so young an artist (I was not yet twenty years of age at the time!) including, as it did, the studying and rehearsing a new opera each week. The consequence was that after a couple of months of this severe régime I had to stop singing for a whole week as an attack of laryngitis made it impossible for me to utter a sound. Meanwhile, there was a new opera to be memorized; (It was, I remember, *Crispino e la Comare*), and, as singing was an utter impossibility, I was forced into familiarizing myself with it mentally. I *imagined* myself singing it, score in hand, until I could do it entirely by memory. As I was warned that I must give my vocal cords a complete rest, not even permitting myself to speak but in a whisper, I refrained from any attempt to sing audibly, even when after five or six days I began to feel that my voice had come back. Thus it happened that I had never heard the sound of my voice in that part until the dress rehearsal, I only knew *how I wanted* it to sound. But when I started to let my voice out in the first number, I was simply amazed at the ease and security with which I sang, and this same security prevailed throughout the opera. Never before had I felt satisfied that I was giving all that I had it in me to express! All the acclamations and praise showered on me at the end of the performance were as nothing compared to the elation of realizing that I had actually sung my part as I had ideally conceived it!

It was this experience which started in me the habit of silent study. I never could have gone successfully through that strenuous season of four months, during which the bulk of the work rested on my shoulders, had I not discovered so effectual a way of sparing my voice and keeping it fresh, besides avoiding the still greater danger of losing my first fresh conception of the effect I meant to produce through hearing myself struggle with tentative and blundering efforts until my original was blurred if not altogether effaced.

After all that has been said on this ject, although it may seem to be s fluous, I think you should be warne the method of studying an operati above indicated will not prove inf unless, by previous training, you hav dered your vocal organs capable sponding to whatever demands m made on them in dramatic singing. of course, involves the daily inte practice of vocal exercises which and maintain in a pliable condition parts that are brought into play in si In other words, you first must have tered the technic of vocalization, wh not a silent process, but in which tone must be heard and critically on until it satisfies you.

To Master Technic

THE MOST EFFECTIVE wa master the technic of singing practice separately all the different esses involved. First of all, confine self to vocalizing and go no further you have satisfied yourself that yo sing every vowel on every tone of the within your compass with perfect dom and at the same time preserve th altered *sound* of every vowel, always ing in mind that although the vowel *ings* in the throat vary in order to themselves to the different pitches of their *sounds* must always remain tered.

It is necessary to emphasize this be it is so common a fault to juggle wi legitimate sounds of vowels under the impression that it is difficult to pr good tone on certain ones such as sl (as in and), e (as in end), long e (me). That, however, is a great mis for equally good tone can be produc every vowel, provided you know how about it! Your teacher, if he has a p understanding of vowel formation i throat (not in the mouth) should te that every vowel adapts itself beautifu the pitch of tone on which it is sung. have only to *think* each vowel into tone before giving voice to it. This of vocalizing the scale should be foll up daily until the automatic adaptati each vowel to each pitch of tone beco matter of course; until, from co practice, it becomes instinctive or s nature.

Articulation

WHEN THIS IS accomplished, attention to the distinct articu of all the different consonants. Tha volves acquainting yourself with th act points of contact between the teeth, tongue, hard and soft palat manded by the different consonants also a knowledge of the different c of consonants, as each class calls special treatment. As soon as you acquainted yourself with the nature treatment of these, it is for you to r very nimble, through daily exercis the parts involved in articulating, so these inevitable interruptions to the tones may be as brief as possible this way you will have accomplish great feat in the art of singing and lamation, namely, the ability to words as distinctly as though they independent of voiced sound, while voice sounds as free and clear as th unhampered by words.

Think what a splendid spontaneit utterance is thus achieved; think ho stantaneously the pictured emotio state of mind thus finds expressio dramatic singing!

In the limited space allotted to article, of course it is impossible t more than indicate the general cours study to be pursued in acquiring a nic which is, in reality, nothing mor less than a perfect instrumentality!

The lure of the Operatic Stage has been, from time immemorial, a fascinating "Friar's Lantern" to the aspiring singer. One who has followed successfully this fugitive light here comes before the curtain and, in an interesting "Epilogue," chats with her listeners of the Pictured Ideals, the Obstinate Phrase, the Inevitable Repertoire, which must be made reality, and with these turns a sheaf of sidelights on the preparation for that magic world behind the footlights.

The True Function of the Ear

much importance is attached aining of the ear, and properly so, er should understand why. It is o argue that the ear is not part ical organ, nor of the brain which sound; therefore, some explana- he relation of the ear to the brain g should be given.

r is the receiver and the arbiter of t takes note of and analyzes the qualities of sound. It receives a pleasing or an unpleasant im- ; but it is not the ear that *conceives* lthough it does dominate its con- What the ear does is to com- to the brain, through the auditory nerve, the impression received; and that impression stimulates the brain to conceive and the will to produce sound. If the impression produced is beautiful, the tone conception and production will also be beautiful; if it is either disagreeable or indefinite, the tone conceived and produced will also be either disagreeable or uncertain. You can only conceive tone as well as you are able to perceive it.

The ear, therefore, is the sense to be relied on as the first cause of sound, because without the functioning of the ear there would be no stimulus to produce it. The living proof of this is the deaf mute.

Sensations Are Effects, Not Causes

HYSICAL sensations which accom- ging are of some value as associated ain pitches and qualities of tone; re of regarding these sensations as of the tones you hear; because merely the automatic response to us vocal tones and not intended ler your control. In seeking to re- the *sensations* you would be inter- ith the natural processes acting in or. Direct your thoughts simply one itself; in so doing you will re ground.

ite the "listening ear". In doing r will also become analytical, and l not have to depend on your perceptions. Until you yourself e difference between the true tone spurious sound which the indis- ng ear accepts, your practice at l avail you but little.

sound is often confused with nasal *resonance*, though the effect of the one is quite different from the other. Nasal *sound* is caused by raising the tongue at the back and lowering the soft palate so that the two parts come into contact. Nasal *resonance*, on the contrary, is obtained by keeping the entire pharyngeal passage open and free from any obstructing movement of the tongue, because the upper or *naso pharynx*, which is above and behind the soft palate, is the passage to the most effective chambers of resonance. You can easily observe in a mirror the physical action of nasal sound by voicing (ng) as in sing. Note the pinched and disagreeable sound which results.

If Americans, in their student days, had their attention called to this distinction, that frequent and much deplored "American twang" in speaking would be eliminated.

Dangerous Advice

dangerous advice has been given its by certain gifted singers who hieved celebrity. In describing n sensations they have failed to that they are not describing the s that either could or should be others who are formed in a dif- old. It is with our throats much with our faces—eyes, nose and occupy approximately the same , yet how differently related they ch other! How different in form, nd in sensitiveness! Would it not be absurd to assume that we all must look alike, because we possess the same set of features? In point of fact, no two people's throats are alike! Have we not here one more good reason for teaching young singers in what good *tone consists;* in letting them *hear* it and in leaving them to find out for themselves what their own sensations are when they feel satisfied with the sound of their voices, rather than to seek after the sensations of some other singer?

The Value of a Sense of Beauty

SE of beauty back of volition is the source of voice that is beautiful. nger is without either an inherent ltivated *sense of beauty* all the in the world, employed by teach- useless!

normally constructed vocal and rgans which have been, once for ered pliable by practice, the sing- speaker's conception of sound is responsible for the quailty of his

The pliability of the parts, which must yield their co-ordinated response to the will of the singer, is obtained by the steady and intelligent practice of technical exercises familiar to every teacher and singer. But the practicing of such exercises, divorced from an unfailing demand for a quality of sound throughout, that is *beautiful,* will not result in a perfect mechanism, that is, a mechanism which is the automatic response to the singer's sense of beauty.

Some "Messiah" Statistics

MESSIAH" had its first perform- Dublin, Ireland, in 1742, at which ndel visited Ireland at the invita- he Lord Lieutenant, bringing with ew composition which proved to oratorio which now has become ous, musically speaking, with the s season. America first heard the work in 1771, when it was performed in Philadelphia as an *a capella* composition. This was a year before its first performance in Germany. The New York Oratorio Society gave it for the first time in New York on Christmas night, 1874, in the old Steinway Hall.

The Home Beautiful Contains a Grand

"How I wish I had learned to play the piano"

YOU have probably said that to yourself time and time again. Most people have.

Childhood is the time to begin a mastery of music. And fortunate is the child who, in early life, is taught to play and to understand beautiful music.

Music teachers endorse the Brambach Baby Grand as a most valuable aid in developing a true love for music. Its rich, full tones thrill and inspire the child with their sweet resonances.

The Brambach is used by the best teachers because it is a beautifully-proportioned instrument, of wonderful responsiveness and tonal excellence. And on account of its convenient size it is the ideal piano for the modern home or apartment.

Easy to own one

Because of the enormous Brambach production, this remarkable grand piano is priced surprisingly low, $650.00 and up, f. o. b. New York City On convenient terms, if desired. Distributed by leading music houses everywhere.

Mail coupon below for further information and for a paper pattern showing the exact space requirements of this beautiful Baby Grand. The pattern will be mailed with our compliments.

AMERICAN CONSERVATORY
CHICAGO'S FOREMOST SCHOOL OF MUSIC

41st Session Commences September 9, 1926

Offers superior courses in all branches of music and dramatic art, including Master School. Diplomas, Degrees and Teachers' Certificates granted by authority State of Illinois. Thorough preparation for concert, opera and teaching positions. Many special features, recitals, concerts with full orchestra, lectures, etc.

Excellent Dormitories Offer Accommodations at Moderate Rates

UNSURPASSED FACULTY OF ONE HUNDRED ARTIST-INSTRUCTORS

Among these might be mentioned

PIANO — Heniot Levy, Allen Spencer, Silvio Scionti, Henry Purmort Eames, Louise Robyn, Kurt Wanieck, Earl Blair, May Doelling.

VOICE—Karleton Hackett, E. Warren, K. Howe, Charles La Berge, Elaine De Sellem, John T. Read, Carl Songer.

VIOLIN—Jacques Gordon, Herbert Butler, Adolf Weidig, Scott A. Willits.

ORGAN—Wilhelm Middelschulte, Frank Van Dusen.

MUSICAL THEORY, COMPOSITION—Adolf Weidig, Arthur O. Andersen, John Palmer, Leo Sowerby.

VIOLONCELLO—Hans Hess.

ORCHESTRAL INSTRUMENTS—Members Chicago Symphony Orchestra.

and others of equal importance

PUBLIC SCHOOL MUSIC—O. E. Robinson.

HARP—Enrico Tramonti, Clara L. Thurston.

DRAMATIC ART, PUBLIC READING—Walton Pyre, Louise K. Willhour.

DANCING—Louise Willhour.

THEATRE ORGAN SCHOOL — Frank Van Dusen.

GUEST INSTRUCTORS, 1926—Delia Valeri, John C. Kendel

Free Advantages: Admission to Teachers' Normal Training School; Students' Orchestra; Vocal Sight Reading. Admission to all Conservatory Recitals; Lectures; Musical Bureau for securing positions.

THIRTY FREE SCHOLARSHIPS AWARDED
EXAMINATIONS FROM SEPT. 3 TO SEPT. 7. (APPLY FOR EXAMINATION BLANK)

Lyceum and Chautauqua engagements secured

Examinations Free - *Catalog mailed free on application* - Moderate Tuition Rates

THEATRE ORGANISTS

Direction: CHARLES H. DEMOREST and HENRY FRANCIS PARKS

Famous Theatre Organists and Teachers

FALL TERM OPENS SEPTEMBER 13TH

Students have lessons and practice before the Screen provided by the College in its studios. New two, three and four manual Wurlitzer and Moeller theatre organs for lessons and practice, owned and operated by the College.

COURSE OF STUDY

A two-year course. Varied to suit the individual student.

FIRST YEAR

First Term: First working registration, arranging of popular ballads, semi-classic ballads. Themes for feature films.

Second Term: Preparation for news reel playing, arrangement of piano numbers for the organ, waltzes and marches. Characteristic numbers arranged.

Third Term: First studies in adapting orchestrations to the organ, first studies in jazz playing, second or double-touch, playing of song-slides. Comedy film.

Fourth Term: First actual screen work, the news reel, comedy film, classification and construction for feature films, cuing short and long feature film, thorough preparation in adapting music.

SECOND YEAR

First Term: Repertoire, transcriptions of violin and orchestral music, orchestral overtures adapted, first actual screen work in playing the feature film, scenics, cartoons, travelogues, etc.

Second Term: Modulation and improvisation for all types of films, memorizing for important situations, dramatic music such as misteriosos, furiosos, etc. Actual dramatization of all kinds of films, meeting actual conditions of the theatre, improvisation including waltzes, marches, intermezzos, jazz, melody work.

Third Term: All scenic effects such as storms, falls, thunder, trains, etc. Constant practice before screen.

Fourth Term: Devoted entirely to screen work by those who have followed the complete course, and opportunity will be given to play before invited audience, so that practical experience may be gained fitting the organist for public work.

LENGTH OF COURSE

The time which will be consumed in covering the course will be determined to a large extent upon the ability as organists of those who take it. Students who never have studied organ previously will require two full years to finish the course. Experienced organists may cover it in one year.

NOTE—*Church and concert organists of experience are eligible to enter the Advanced Course.*

FREE FELLOWSHIP

Mr. Demorest and Mr. Parks have each consented to award Free Fellowship of two lessons weekly, each of thirty minutes, to the students who, after an open competitive examination, are found to possess the greatest gift for playing theatre organ. Free Fellowship application blanks on request.

erested in elementary theory
reading and ear training. A
be supplied on terminology
n, and material provided for
ork in the practice of sight
l ear training. Scale and
lding, key relationships and
work for the study of har-
mony should be provided. This course should be given to all of the students preparing for a course in elementary teacher training.

Harmony

RECENTLY suitable texts for the presentation of harmony have been prepared and the high school teacher need not fear to present a course in harmony to high school students. A good text is essential and the time has passed when the boast of the school music teacher that "we have our own course, we do not use any text" is not accepted but is considered a sign of weakness.

Applied Music Study

PROVISION should be made for granting credit for instrumental study taken with private teachers. Credit for this applied music study should be considered on the basis of one thirty-minute music lesson taken weekly with five hours of practice for two or more semester hours of credit or one thirty-minute lesson with ten hours of practice for four or five semester hours of credit. Forms must be prepared and supplied to cover all of the reports necessary, and provision should be made for individual examinations.

I have outlined a comprehensive program for most of the music activities which the modern supervisor should consider. All of these activities can be adequately cared for if the supervisor will work out a plan and take advantage of the many standard courses and texts which are now available.

Saint-Saëns' Anonymous Symphony

By S. A. Walsall

IT IS hard nowadays to realize the prejudice against young composers which existed in France in the fifties of the last century, and was probably heightened in the case of Camille Saint-Saëns by virtue of his Jewish blood. In the life of Saint-Saëns, by Watson Lyle, we discover that he was obliged to resort to deceptive methods to get his first symphony played. We learn of the composer's start in life as follows: "In December, 1852, Saint-Saëns was appointed to his first professional post. This engagement, as organist in the Church of St. Méry, he held for five years.

"The following year his symphony in E flat, not published until 1855, was produced by the Société de Saint Cécile, anonymously, under Seghers. Prejudices against the performance of works by unknown composers (as if everybody has not been at one time 'unknown') was even greater then than now, and Seghers knew very well that if the symphony was put before the committee as signed by his young friend it would be contemptuously tossed aside. He therefore said that it had been sent to him anonymously from Germany.

"The symphony was enthusiastically praised. At the rehearsal, the youth of eighteen, all trembling for the success of the year-old child of his brain, listened to a conversation regarding it between Berlioz and Gounod, who were already interested in him, but were unaware that he was the author of the work they had just heard. They freely discussed the good and bad points of the composition and were naturally greatly astonished when they learned, after the public performance, that the young man, whose ideas they had sought to improve by the discussion of the new symphony, was actually its composer."

OVER 200 YEARS OF MUSICAL INSTRUMENT MAKING

WURLITZER
REG. U.S. PAT. OFF.
Studio Player

Discover the joy of playing a piano yourself

WHAT a delightful relaxation it is to pause at eventide and express your moods, or exult in the day's accomplishments at a Wurlitzer Player Piano! And how easy the action, and responsive the touch—such perfection of mechanism and tonal beauty as never before attained in any Player.

Then, too, the Wurlitzer Player is small enough to fit nicely into the smallest room, alcove or hallway, and the price is so exceedingly low for a high quality piano that no home should be without one.

The Curtis Institute of Music

Endowed by Mary Louise Curtis Bok

Third Year Begins Friday, October 1, 1926

The endowment of The Curtis Institute of Music has enabled it to assemble a faculty which comprises many of the greatest artists of our time, and the opportunities offered to study under their guidance and instruction are unique.

THE TEACHERS

Voice

Marcella Sembrich
Madame Charles Cahier
Horatio Connell
Emilio de Gogorza
Harriet Van Emden
Madeleine Walthèr

Piano

Josef Hofmann
Benno Moiseïvitsch
Moriz Rosenthal
David Saperton
Isabelle Vengerova

Violin

Carl Flesch
Frank Gittelson
Richard Hartzer
Sascha Jacobinoff
Emanuel Zetlin

Viola

Louis Bailly

Violoncello

Felix Salmond

Harp

Carlos Salzedo

Orchestra

Leopold Stokowski

Students not only pursue their major subjects under distinguished artists but in all their supplementary studies they have most unusual advantages. Thus, students of singing may have instruction in repertoire and interpretation from Richard Hageman; diction from a number of eminent specialists; and in the theoretical department receive such instruction in solfège and harmony as is necessary for their general musicianship. The students in piano may be coached in accompanying by Richard Hageman; may work in ensemble with Louis Bailly or Felix Salmond; take Wanda Landowska's lectures on Ancient Music; and, if qualified, may study composition with Reginald O. Morris or Rosario Scalero. For students of the violin, viola and violoncello, there are the ensemble classes of Mr. Bailly and Mr. Salmond, practical work in the orchestra under Leopold Stokowski, special orchestra classes under Marcel Tabuteau, as well as the usual theoretical work, and composition if they are qualified. Similar opportunities await those that study harp or one of the many orchestral instruments.

Moreover there are rich opportunities to secure a sound background of general culture through the classes and lectures of distinguished educators, authorities and critics, and to hear in recital and concert the artists who make the faculty.

The sole qualification for entrance is the possession of native musical talent worthy of being taught by these great masters. For those who can pay, the tuition is very moderate. To those of exceptional talent who cannot pay financial exemption is granted.

Musical Pointers *for* Musical Parents

Conducted by MARGARET WHEELER ROSS

"Etude" takes pleasure in announcing a new column in which pithy paragraphs ar periodically from the pen of Mrs. Ross, who has had wide experience in '. Address all inquiries to Educational Service Department (attention of Department), "The Etude Music Magazine," 1712-1714 Chestnut Street, Phila-Pennsylvania.

e questions on a separate piece of paper bearing the above address and give n name and address in full. Answers will be published under only the ' the inquirer.

all questions brief.

questions except those of general interest to the greater body of "Etude" ill be answered in this department.

ngs and good wishes to THE umily of interested parents. In corner, all by ourselves, I shall we may work out to a satis- onclusion the points that perplex our children's musical progress, ner, that we may become real hrough our mutual interest in ie most delightful and fascinat- s in life—music and children. . I have been both a mother and teacher I feel that I can be of p to the musically untrained f the multitude of children en- the study of music, in whose IE ETUDE is a regular visitor. ie study of music advisedly; for iat it should be from its earliest s. Unfortunately, too often the are merely "taking music les-

ntrained Parents, Victims

ly untrained parents must ac- blind faith the instruction in t their children receive. As in specialized subject, unless they some training themselves they ble of judging the qualifications vho teach their children. In all ubjects the parent is protected te school laws, and the children nably safe. In music and pic- , however, they have no legal s; and when the time comes to instructor the parents must on the popularity of the teacher, e of friends, perhaps no better han they to judge, or the en- of their childrens' playmates for ticularly favored teacher; and iese sources is absolutely reliable lesired.

ost parents believe their children cal talent, which in the majority is likely to be true, there is a nount of time and money spent suit of music than in any other rt.

teachers were always carefully then the excess would need not ored; but so long as we have no dardization for music teaching, vs protecting the public therein, rity of the subject and the easy be made thereby is going to profession overcrowded to the detriment both of the art and of the teacher who spends the time and money for the necessary preparation.

Music Advances

But happily, music in America has made tremendous strides within the past few years; the general public is fast becoming musically educated; and we have a noble army of experienced teachers devoting their best efforts and unlimited energy to the musical advancement of our children—and I might add, in the main, an army as yet unappreciated, and shamefully underpaid. We must educate the parents to a realization of the necessity of *scientific pedagogy* in the study of music. They must be made to understand its fundamental economic value. We must hammer continuously upon the fact that the beginning lessons are the most important, and that the best teacher obtainable is the one to have at that stage.

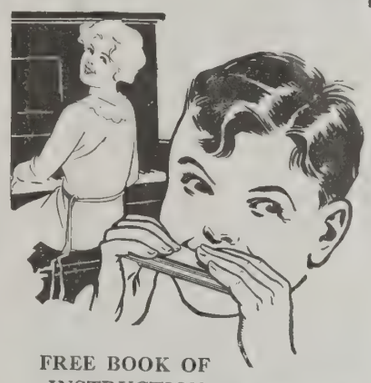
Because THE ETUDE comes into your home it is but natural to conclude that you are interested in music, or that it is there upon the recommendation of the teacher of your children. In either case then, we can safely assume that you have selected a wise and intelligent teacher, and that your problems are going to be only those of keeping the children interested in the subject of directing the practice habits, that the best results may be obtained from the time put into it or, perhaps, the clearing up of some points relating to methods or materials.

Let Us Help

But, whatever they may be, I hope you will bring them to this department that we may work them out, not only for yourself, but also for the benefit of other parents similarly perplexed. After all, most of the problems pertaining to any subject in life are common to every one of us and need only thought, and perhaps some specialized training, for a ready solution. Indeed, just getting the viewpoint of somebody else will often clear up a very complicated matter that we have looked at too long from one angle.

Let me again assure you of my interest and cooperation, and welcome you into what I hope may become a happy family of ETUDE parents—the fathers, as well as the mothers.

Bach, Beethoven, Chopin, Mendelssohn, Wagner, Liszt!



The glory and splendor of the music of all these at your command, and played as it should be played, by such artists as Paderewski, Pugno, Nickisch, Grunfeld, Cesare, Carreno. All this, and more, at the touch of a button, if you possess a

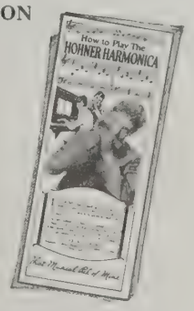
Homework on a HOHNER Is Fun!

Music plays an important part in the education of the boy and girl; and to-day the harmonica is playing an important part in musical education.



Any child can quickly learn to play a Hohner Harmonica with the aid of the Free Instruction Book available to music teachers and others through dealers or direct.

There are no long hours of study and practice—just a few minutes a day, at home or in the school—and very soon the pupil will be playing popular, classical and operatic selections.

Homework on a Hohner is *fun!* It teaches accuracy, rhythm and expression—the basis of a musical education. If you are interested in knowing the possibilities of the harmonica as "a stepping-stone to serious musicianship," write M. Hohner, Inc., Dept. 204, 114 East 16th Street, New York.

FREE BOOK OF INSTRUCTION

This interesting and helpful booklet comprises 16 pages of simple instruction illustrated with charts and pictures, and includes six popular musical selections arranged for harmonica and piano. Copies in any quantity will be supplied upon request.

Hohner Harmonicas are endorsed by such prominent group educators as—

Peter W. Dykema, Prof. School Music, Columbia University, New York.
Dorothy Enderis, Ass't Supt., Milwaukee Schools.
W. A. Gore, Supt. Schools, Webster Grove, Mo.
Nellie C. Hudd, Principal Mozart School, Chicago.
Harry Keeler, Principal, Lindblom High School, Chicago, Illinois.
Edward Randall, Maguire, Principal Junior High School 61, N. Y. C.
W. H. Wheeler, Principal, Alton Community High School, Alton, Illinois.

—AND MANY OTHERS—

HOHNER Harmonicas

The Organist's Etude

Edited for September

By CLEMENT ANTROBUS HARRIS

Eminent Organist and Choirmaster of Adelaide, South Australia

It is the Aim of THE ETUDE to make this Organ Department "An Organist's Etude Complete in Itself"

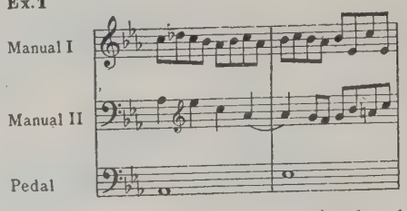
Getting Organ Practice on the Piano

Part I.

THE DIFFICULTY of finding someone to blow when there is no mechanical blower, the distance of the church from one's home where there is one, the expense in both cases and the fact, in some instances, of a church being open for private prayer all day, these and other factors dangerously reduce the amount of practice which an organist can get on his own instrument. Faced with a Bach fugue, a Rheinberger sonata, or a Widor symphony, to be mastered, perhaps, at short notice, the case at times seems desperate.

Moreover the difficulty is often a *deterrent to pupils.* To so balance oneself on the stool that one can play high notes on the uppermost of three or four manuals with both hands, while playing low notes on the pedals with both feet, and at the same time to feel no misgivings about the rest of one's anatomy in relation to the bench—this at first seems impossible *with* practice, let alone without it! Add the manipulation of stacks of stops at each side of the manuals, thumb-pistons between them, and two or three sets of composition and coupler pedals, a swell pedal or pedals, and possibly a tremolo pedal underneath them, and two books to read from, one music, the other printed words, and—well, no wonder an English cathedral organist estimated the organ pupils of the general practitioner as about one per cent. of those for voice and piano!

To the average organist the position would be hopeless were it not that a great deal of organ music can be practiced on the piano; and most of that which cannot be played exactly as written can be adapted to the lesser instrument. Indeed, those who have not made the experiment will be amazed at the amount of ground they can cover in an hour at the organ if they have first done everything which was possible away from it.



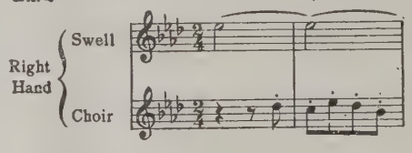
Passage Without Pedal-Part

THE STUDENT whose opportunities for practice are limited should study *and finish* on the piano *all passages for manuals only.* The whole of the second movement of Bach's *St. Anne Fugue* is a case in point. The difference in touch need be no bar to this. It is possible to play just as *legato* on the piano as on the organ. Not only so, but all piano playing should be *legato,* unless the contrary be specified. The co-relative of this is equally true. The *staccato* touch is just as practicable on the organ as on the piano, and in modern playing is nearly as frequently called for. (I say in modern *playing,* rather than in modern *music,* from a conviction that the older composers used far more varieties of touch and tone-colors than it has been customary to adopt in playing their works which were for long rendered in a studiously "stodgy" manner! Expression *marks* are of comparatively recent introduction; not so expression itself!)

Manuals Simultaneously

ALMOST THE ONLY difficulty likely to be encountered in playing organ manual parts on the piano is when two manuals are in use simultaneously, and the hands cross. Even then the crossing may be so extreme as to be practicable on the piano by crossing the hands on the one keyboard. The last page of the famous *Toccata in F,* which concludes Widor's "Fifth Organ Symphony," is a striking instance of this. The left hand has chords an octave higher than the broken-chord passage in the right hand! When the hands are nearer together the difficulty is often greater. But it can generally be overcome by simply playing the right-hand part an octave higher, or the left-hand an octave lower, or, in extreme cases, both. Even the possession of a pedal-piano or practice-organ, if it have only one manual, will not always obviate the necessity for resorting to this device, as the following extract from Bach's *Trio in C Minor* will show:

Ex. 1



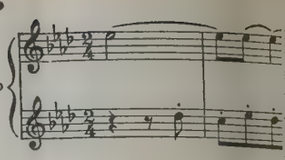
By breaking ties this passage can be played at the pitch written on one manual; but the resulting effect is very unsatisfactory. Far the better plan is to play one hand an octave higher than written. Either hand may be so treated, but the best effect is obtained by raising the left hand. The pedal part can be represented by playing the whole-notes as quarter-notes with the left hand and using the sustaining pedal.

Changing Manuals

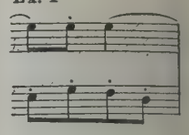
WHEN TWO manuals are *alternated,* both hands moving simultaneously from one to the other, as in producing echo effects, the difficulty of getting effective practice of the passage on the piano is quite apparent—the reason being, of course, that no skip is involved. For this reason it will often be advantageous from an executive standpoint to play the second manual part an octave higher than as written though it is not necessary to do so.

A favorite modern device is to play on two manuals simultaneously with one hand—generally the right hand, but sometimes both hands. Almost invariably such passages can be played on one keyboard, the only objection being, as in the previous case, that doing so is much easier than playing them as written. Care must be taken to adopt the fingering necessary when two manuals are used and not that which might be better if the ultimate object was to play them on one. Very frequently one part consists of a long sustained note which the other part crosses. This need not deter the student from obtaining useful practice on the piano. In all such cases the continuity of the sustained note should be sacrificed, not the iteration of the shorter one of the same pitch. (Similar passages often occur in music composed expressly for the piano—a crossing of parts which cannot possibly be played exactly as written, and the same rule applies.) A very simple extract from a Widor symphony will be sufficient to illustrate this principle: as written, two manuals:

Ex. 2



as practiced, one manual:



CLEMENT ANTROBUS HARRIS

Ex. 3

Of course, the *staccato* touch can maintained on the third note, E flat, lower part unless a *second* break tie, plus the introduction of a *st* note, is made in the upper part plan is followed as a matter of tas

Ex. 4

Passage with Pedal Part

THE CRUX of the whole matt in the fact that the harmonic b a composition being, as its name i the foundation, can never be omitted tain principles—not arbitrary rul *natural laws*—apply to it which are cable to no other part. (The *harmon* in music must not be confused w vocal bass. The lowest of any t more simultaneous sounds is the ha bass, however high they are, or by soever means they may be produce where there is a pedal part in organ it always forms the harmonic bass in the course of a pedal point.) quently to omit the bass would vitiate the student's ear, and to a to all within earshot of his pra room that he was devoid of the m mental musical sensibility! Yet th part is the most difficult to master piano has no pedal-clavier. So wha student to do?

(Part II will follow)

Congregational Hymn Si

By Edward Gould Mead

JUST AS music is one of the features of the church service, so t important feature of church musi hymn singing. No matter how ive and pleasing the singing of or soloist or the playing of the o it is the singing of hymn tunes congregation that constitutes the essence of the service. Yet the mains that in the preparation of th for the church service little or no is paid to the practice of hymn least by the congregation. Yet if gregation is not familiar with the the ensemble singing can not be m pressive, even though the choir hearsed the hymn tunes well a with much assurance. If time wer say, at the weekly prayer meeting, tice on the hymn tunes for the Sunday, drill could be given on arate parts and proper phrasing to bring out the true meaning verses.

Many churches have poorly edit books in which the verses of th are printed underneath the tunes to or, what is far worse, on the posite the music. In either case the notes is made difficult for the singer. Moreover many airs are hymn books which are either un their texts or musically inferior church should provide itself as possible with well-edited hym "Hymns of the Christian Life" or of the Living Age."

nister and the organist can each are in helping to improve con- l singing. The minister can call o the merits of the hymn itself, s its author, and reading one or ne verses. The organist, in play- elude to a given hymn, can sug- pecial character by the use of ops, afterward enlarging the reg- n playing for the congregation. necessary for the organist to ongregation in singing (especially if no singing leader is present), and in so doing, maintain a perfect rhythm and steady tempo. If the congregation is large or if it shows the slightest tendency to drag or flatten in pitch, playing the upper three voices as detached chords, while keeping the bass part legato is very effective.

No form of music is more inspirational than hearty congregational singing of good hymn tunes. Why should not this be developed as much as possible?

Pedal Points

By E. A. B.

one of those brave, brave or- o use *both* feet when they play ? If so, let me first congratu- and then inquire whether you *ch* foot to use *when*. Of course, ion is quite a poser, and is the cult in that it belongs to that f questions which can never be very accurately, at best.

one way, though, that you can approximately when to use the ne right foot: Sitting on the ch, cross your legs—taking care *ght* is placed over the *left*. With still crossed and resting on the pedals, extend each foot (in the opposite direction to the other) as far as possible. You will find that the right foot reaches about to B♭, the left about to F♯. Now in general, the notes below that B♭ are the domain of the left foot, whereas those above the F♯ belong to the right. And between the B♭ and the F♯, the feet can be used nearly interchangeably.

Of course, as we all know, there are many occasions when one foot enters the other's precincts; but the rule that we have laid down is true 99 and 44/100 per cent. of the time.

Mixtures

MINATE mixtures from the mod- is to deprive it of its chief life ancy.

was a strange theory presented years ago by a visiting organ at mixtures were an unnecessary s new string pipes were so full ones' that they more than com- for the lack of mixtures. The ccepted by many of the American nd organists, and one by one they cut out the mixtures. Possibly eason was to save money on their ntracts—hence maybe, when such specified they resorted to what dulciana mixtures, which are so soft and insignificant that it is difficult to distinguish whether they are in tune or not.

"Without properly and brilliantly voiced swell and great mixtures (I do not allude to a selected combination of overtones on a choir dulciana mixture) there is a lack of harmonics, which abound in orchestral instruments. To overcome this deficiency in an organ, the old builders introduced mixtures, or 'filling up' stops. To go into the history of mixtures is not within the province of this article. All that need be said is that in large instruments they are of as great importance as an independently voiced pedal department."—EDWIN H. LEMARE in *Diapason*.

Organ Schools Compared

By Herbert Westerby

CENT Romantic movement has n penetrated pianoforte, or- hamber and choral music, and to nt British songs. But it still tside the realm of church music, hat is quite unique in itself, and anding composers for the organ. is ahead of Britain in the Romantic manifestation in organ music; its characteristic and impressionistic school of organ composition is already well founded, and it remains for British composers to follow their lead and instil the spirit of Romanticism into that as well as other branches of British musical art.

Double Pedaling In Hymns

By Helen Oliphant Bates

atment of hymns may be varied both the bass and the tenor on . This requires careful practice, py, unrestful effect will be the ach foot should be practiced the attention should be directed liminating unnecessary motions ng the necessary motions as possible. On the piano, if the the hand and arm is carried note to another, a simulated btained even when the hand must n one section of the keyboard to The same principle should be em- h the feet. If you wish to make f a fifth, for example, do not foot up and hunt around in the e next note. But before leaving note, turn the foot in the direc- e note to which the skip is to be m a mental impression of the will be necessary to slide, and then glide noiselessly over the tops of the keys, always keeping the foot in contact with the pedal-board.

After practicing each foot separately, put them together, taking pains to bring both feet down at exactly the same time. Nothing is more inartistic than to have the parts coming in one after another.

When the two pedal notes do not lie over a third apart, it will sometimes facilitate a connection to play the two parts with the same foot. To do this, turn the foot sideways, at right angles with the pedalboard, and hold the arch high.

Double pedaling should be used in the church service only when it can be done smoothly and when the character of the hymn is suited to this kind of treatment; but as an exercise it may be applied to any hymn and will be of value in improving pedal technic.

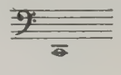
the 1926 examination for Associ- the American Guild of Organists ing questions were included: en did Pergolesi live? Name two t works. ho was the father of modern violin

kindly give some information that te the answers to these questions?

Giovanni Battista Pergolesi was 1710 at Jesi near Ancona. The place of his birth were given y many historians until the Mar- illarosa finally settled the question ce to the register of his baptism, e of which is given by E. Faustini- his life of Pergolesi (Gazzetta Musi- ilano, Aug. 31, 1899; published in by Ricordi, 1900). The original the family appears to have been t in accordance with local custom nbers of it who settled at Jesi vn as Pergolese or Pergolesi, from town in the Marche, of which they es. Among Pergolesi's well-known ns are "Stabat Mater," "Salve Re- opera "La Serva Padrone" and a ra "Olimpiade."

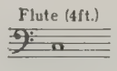
rcangelo Corelli, who has a double a prominent place in the history art, that of a great violinist who n foundation for all future devel- technic, and pure style of playing of a composer who materially ad- e progress of composition. nformation in reference to Pergo- Corelli may be found in Grove's y of Music and Musicians."

church is contemplating the pur- second-hand pipe organ. Would you e me an expert opinion as to the The organ is a ————. It is ty years old, has been in a well- position and in use for only about utes a day all this time. It was a dred-dollar organ at the time of its and an organ of the size would to- r much more, I suppose. I think it five or six hundred pipes. An organ saw it some time ago named two nd twenty-five dollars as his fee for it. He said the damages were due y roof. It has not been repaired. ourse, you do not know just how age could be done by leaks, but you e on general principles whether a ion organ, in moderate use for rs, ought still to be a good, service- or not. It would be impossible for hurch to purchase a new pipe organ. be expensive to keep the organ in r church is a frame building. Would uction organ be sufficiently protected limate in this, or would it continu- ing trouble?



omit a very important item in your ., what it would cost you to secure in addition to the amount necessary organ in repair. If you are cor- rmed as to the amount of use the has had, barring the damage due roof, the instrument should be good onal service and might be a good can secure it for a very reasonable If the organ is in good condition damage resulting from leak, and ge is thoroughly repaired, it should expensive to maintain. Ordinarily not advise the purchase of an organ ge, but the comparatively small use it has had may be in its favor. It might be well for you to have the interior of the organ thoroughly examined, for even though the organ may have had comparatively little use, the pipes and other parts may have received abuse from careless or incompetent tuners. The editor would recommend careful investigation before purchasing the instrument.

If your church building is free from excessive dampness you should not have any extraordinary trouble. Where there is dampness the sliders are apt to swell and stick.



Q. Indicate on the staff the actual pitch produced when the lowest "C" on the manuals is played on the "Harmonic Flute," "Stopped Diapason," "Piccolo," "Open Diapason," "Flute."

A. An important part of the above question is missing, *i. e.*, the pitch of the stops. We will supply the pitch in the answer, which can not be definitely correct unless this is indicated. The pitch of the note sounding is not affected by the quality of the pipe but by the pitch at which the stop appears; therefore, to specify a "flute" without designation of pitch is vague.

Harmonic Flue (8 ft.), Stopped Diapason (8 ft.), and Open Diapason (8 ft.).

Flute (4 ft.),

Piccolo (2 ft.),

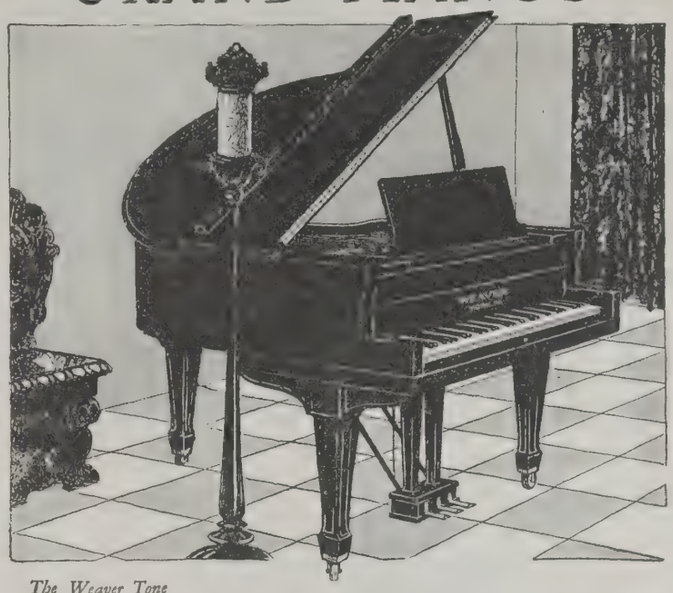
Q. What was the original meaning of Positif Organ? Name some other types of early organs.

A. "Positive Organ" (French "Positif") was originally a stationary organ as opposed to a "portative" or portable instrument used in processions. Hence the term "Positive" came to signify a "chamber organ"; and, later still, when, in a church instrument, a separate manual was set aside for the accompaniment of the choir, this was also called a "positive" owing, no doubt, to the fact that it usually had much the same delicate voicing as a chamber organ and contained about the same number and disposition of stops. The Positif of our present-day church organ is known as the Choir Organ.

Other types of early organs included:
Pan's Pipes or Syrinx
Cheng or Chinese Organ
Magrephah (Hebrew Instrument).

Q. What influences the "timbre" of organ pipes?

A. Difference in timbre is produced by variation in the upper-partial tones or harmonics which accompany the foundation tone of a note or sound. In Lavignac's "Music and Musicians" we read "The *material* of the pipe has no influence upon the vibrations; its *dimensions* are everything, for the pipe itself has no share in the production of the sound." This statement probably does not meet with agreement on the part of organ builders of today, when we have advocates of pure tin pipes for string tones, spotted metal for certain other stops, and so forth, which would indicate material had some effect on the tone quality. The editor recalls, however, at one time hearing William E. Haskell, well known for his experiments in production of tone from pipes, say "that for money he would produce just as keen a tone from a piece of lead pipe." Wood pipes would scarcely be said to produce in every case exactly the same tone as that produced by metal pipes, which is another indication in the mind of the editor that material does affect the result. Tone quality of pipes is also influenced by the height and width of the mouth of the pipe; by variation in the nicking or notching of the beveled edge of the languid and by the placing of "beards" near the mouth of the pipe. Beards are generally of dowel-rod shape and are made of wood or brass.



Q. Name the orchestral instrument which has the fewest overtones.

A. The flute. Helmholtz appears to have considered that the octave and twelfth were the only upper partials heard, but the writer of the article on "Flute" in Grove's "Dictionary of Music and Musicians" found that when d' on the flute was sounded the seventh partial was discernible, but with a' no partial higher than the fifth was detected.

Q. What is the purpose of the Eustachian Tube?

A. The Eustachian Tube is sort of a conical duct connecting the middle ear with the pharynx. At each movement of swallowing this tube opens, and in this way enables the air contained in the middle ear to remain in equilibrium of pressure with the external air; without this perfect and constant equilibrium the tympanic membrane would not be in good condition to receive vibrations.

WEAVER
GRAND PIANOS

The Weaver Tone . . . undimmed by age but steadfast through the years.

CREATED for those who have a desire for the finer things of life and the judgment to select wisely.

The unqualified approval of world-famous musicians and the thousands of Weaver owners is proof, beyond cavil, of its supremacy.

WEAVER PIANO CO., INC. - - York, Pa.

Musical Composers, Attention!

We offer the following twelve prizes:

One 1st prize of $150.00 for the most attractive unpublished anthem submitted.

Two 2d prizes of $75.00 each for the next two most attractive unpublished anthems submitted.

Three 3d prizes of $50.00 each for the next three most attractive unpublished anthems submitted.

Six 4th prizes of $35.00 each for the next six most attractive unpublished anthems submitted.

$660.00 in 12 Prizes in Cash

All anthems submitted must be in our hands not later than February 1, 1927.

Send for our special announcement folder outlining all conditions and rules of the competition.

Lorenz's 6th Anthem Competition

We publish about two hundred anthems a year. By our method of distribution, these anthems are sung by not less than 20,000, in some cases, by as many as 35,000 singers within about two months of publication. The demand for so many new anthems every year constitutes a large opportunity for anthem writers, and this anthem contest is our earnest invitation to them to embrace it.

A Music Students' Loan Fund of $12,500

To assist students lacking sufficient means for their study, the Alumni Association of the Sherwood Music School is providing a Music Students' Loan Fund of $12,500; to be distributed in amounts averaging $500, and used to defray the 1926-27 tuition expenses of new students entering the Sherwood Music School, beginning with the 1926 Fall Term.

These Loans are repayable over a period of six years, with very small payments during the first two years.

No competition is involved in securing the benefit of a loan from this Fund. The loans will be placed at the discretion of the officials of the Association, with students who can provide good character recommendations and who need financial assistance.

Requests for particulars and application blanks are invited; address—

Question and Answer Department

Conducted by

ARTHUR DE GUICHARD

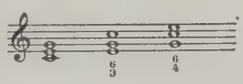
Always send your full name and address. No Questions will be answered when this has been neglected.

Only your initials or a chosen nom de plume will be printed.

Make your questions short and to the point.

Questions regarding particular pieces, metronomic markings, etc., not likely to be of interest to the greater number of ETUDE readers will not be considered.

To "Wind" or to "Wind," that is the Question.



Q. I have been taught to pronounce "wind" to rhyme with "mind," "find," and so forth, wherever it appeared. Some schools are teaching the short i, as in "in." Please let me know the correct manner, as our choir is of divided opinion. "Windy (long i) Tempest" does not appeal to me.—M. O., STELLARTON, N. S.

A. In singing, as in poetry, the single syllable "wind" should be pronounced to rhyme with "mind," with a long "I" sound, as "al" in "aisle." This pronunciation is much to be preferred in singing, on account of the "ah" vowel sound in the long "I" more musical than the short one. However, similar to so many other words, when the word is lengthened by the addition of other syllables the "I" becomes short, as: windlass, windpipe, windrow, Windsor, windy, and so forth.

The Chord of the 6/4.

Q. What is the chord of the 6/4?—J. F. M.

A. The chord of the 6/4 is the second inversion of the common chord, these figures referring to the intervals from the bass which for the chord.

The first is in the original position of a note (C) with its 3rd and 5th; no number needed. The second is inverted or turned upside-down, by placing the bass, or low note, at the top. The intervals from the bass note, which is now E, are a 3rd and a 6th (called the chord of the sixth, or first inversion). The third chord, obtained by inverting the chord of the sixth, shows intervals, from the low note G, of a 4th and a 6th: whence the name.

Length of Time Required for Vocal Studies for Operatic Excellence.

Q. How long does one have to study to become an operatic singer? Is not the possession of a good voice all that is required? ii. Have there not been many operatic singers who "debuted" very young?—M. T. T., MILTON.

A. Anything from five to eight years, and even longer. It all depends upon the postulant's natural endowments, education, intellectual training and acquirements, powers of assimilation, of observation, of critical acumen, of artistic insight and of careful unremitting study of technic, characterization and interpretation. All this? Yes, and more. Voice, for an operatic singer, is a very necessary factor; but it, alone, will not command success; several years' study in order to acquire correct attack, good resonance, an even scale, pure *legato*, steady *sostenuto*, to which must be added perfect technic in breath and voice management, these are all essential elements, before the would-be artist can begin to interpret. Interpretation requires both musical and literary knowledge and study. By "literary" knowledge, let it be understood that diction (popularly so called) is included, as well as the language of the opera to be interpreted. A girl, who begins her vocal studies at the age of sixteen or seventeen, might be ready to enter the operatic field when she is twenty-three or four; and a man, who begins at eighteen or nineteen, could qualify at twenty-five or six: in very rare cases, some are ready after five years' study. As a general rule, singers who enter upon an operatic career prematurely, after a too brief period of preparation, usually lose their voices in a relatively short time. ii. Thank you for that word "debuted"—it is a new light to me! Adelina Patti, the most celebrated coloratura, made her debut at the age of sixteen, but was promptly withdrawn for further study; she made her real and successful debut some two years later, in London. Jenny Lind, called "the Swedish Nightingale," was eighteen when she first appeared, but at the age of twenty-one she gave up her public appearances in order to study in Paris and Berlin during three years. After five years of opera, she renounced the operatic stage and appeared only in concert. Minnie Hauk was sixteen at her debut in New York as a lyric soprano: she sang in the chief European opera houses for about twenty-eight years. Lilli Lehman, a remarkable soprano, made her debut when she was twenty-two; Schumann-Heink appeared at the Royal Opera of Dresden when seventeen; Emma Calvé made her first operatic debut, in Brussels, at the age of eighteen; Etelka Gerster, an excellent high soprano, was twenty-one when she sang the rôle of Gilda (Rigoletto), at Venice; and Marcella Sembrich, who made her debut when nineteen, sang at the Metropolitan Opera House, New York, in 1883, again from 1898 to 1900, and from 1901 to 1909 when she withdrew from opera. The foregoing are some of the *very rare* cases referred to.

Scale-Practice for Advanced Players.

Q. i. What is the meaning of "centripetal" and "centrifugal?"

ii. In the December, 1925 ETUDE *occurs the following answer in regard to fingering the scales: "You should practice all scales with the same fingering as the scale of C, both up and down." This is contrary to all my teaching and to the authorities I have consulted. Perhaps I do not clearly understand just what was meant. Would you kindly explain?*—H. W. CAMERON, TEXAS.

A. i. "Centripetal" (from Latin centri—, from *centrum*, a center, and *petere*, to seek, fly to), tending to a center. "Centrifugal (from Latin: *centri*—, from *centrum*, a center, and *fugere*, to fly from), flying from a center.

ii. The practice proposed is only for those players who have already attained a certain excellence of finger dexterity. It would be dangerous for those students who cannot play Cramer or Czerny, for instance, with a certain degree of facility. They, however, who can play without difficulty Czerny's "School of Velocity" and "School of Virtuosity," would do well to undertake more advanced problems. When they are quite conversant with all the major and minor scales and with their fingering it would be very much to their advantage to practice the scales of all the keys, with the same fingering as for the scale of C (1, 2, 3, 1, 2, 3, 4, 1, 2, 3, 1, and so forth), placing the thumb on the black keys in the usual order of C. This is but a preliminary exercise to other combinations. If you find the study helps you, I shall gladly give you other scale-fingerings. This practice is particularly useful in the compositions of Chopin, Liszt, Débussy, Ravel and the more recent composers.

Octave Playing: From the Wrist, or from the Arm?

Q. Which do you recommend me to use, in playing octaves: wrist or arm motion? Should my wrist and arm be held high or low? I ask your advice because I find my fore-arm speedily becomes very tired and stiff. How can this be avoided? Is it because I have a wrong position at the instrument?—A. C. D., NEW YORK.

A. Primarily, it all depends upon the kind of playing required. For light, rapid execution wrist action is necessary, whereas for stronger, heavier playing arm motion is needed. Your feeling of fatigue comes, most probably, from a certain amount of tension and stiffness of wrist, as well as from a bad position of the hand and arm. For rapid octaves use wrist motion entirely, with a low position of the hand; for heavier octaves use arm motion, with a high position of the hand. The fatigue of which you complain may be overcome by changing your hand position from low to high, and so on. But, above all, let there be no wrist tension; it is this which causes the pain in your fore-arm. Also, do not have your piano seat too low.

Gregorian Music.

Q. What is meant by Gregorian Music? I know it is some kind of church music, chiefly Roman Catholic, but why "Gregorian?" —MARY B., Arlington, Mass.

A. Pope Gregory I, called "the Great," 590-604, is said to have added four Plagal modes (or scales) to the four Authentic modes already introduced by St. Ambrose. Gregory also reformed the whole musical service of the Roman church. Gregorian music, therefore, means music founded upon those eight modes.

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

Violin Teaching

THOUSANDS of young violinists and violin students all over the country are interested in making a start as violin teachers. Some wish to make it a permanent profession; some wish to use it as a side line to make a little spending money; while others hope to earn enough by teaching to pay for their own lessons and musical education.

THE ETUDE receives many letters similar to the following from a young violin student in New York City, who writes: "I would like you to give me some advice on the teaching profession and tell me if I am capable of teaching. I am a student eighteen years of age, and am studying with a reliable teacher. I am fairly advanced, having gone through Kreutzer, Rode, and other studies, and concertos by well known composers, such as Kreutzer, Viotti, Rode, and DeBeriot. I have just started to teach and am trying my utmost to get pupils, but I have not one pupil yet. As an ETUDE subscriber, and as one of your readers I hope you will give me your best advice on what to do to get a start in the teaching profession."

The Beginners

If this young man has a genuine talent for the violin, has studied the works he names with a good teacher, and can play them in an artistic manner, there is no doubt that, theoretically, he has sufficient knowledge to teach beginners and pupils in the medium grades of violin playing. His success will depend on whether he has the knack of imparting to others what he knows himself.

Violin teaching is a gift. Some people are natural born teachers; some learn to teach well only after long years of experience; while some never learn it. I have known many excellent violinists, splendid artists, who could play the great concertos in public, yet who were utterly incapable of producing good pupils. They could play these great works themselves, but how to lead students up the long and arduous path to this proficiency was completely beyond their comprehension. Some violinists dislike teaching. They lack patience, and the continual mistakes made by their students irritate them, and make them realize their inability to teach. Very often we find teachers, some of whom have considerable ability as players, who simply confess defeat when it comes to teaching. They walk around the room, look out the window, eat apples, read letters, and pay very little attention to what the pupil is doing. It goes without saying that teachers of this class never produce good pupils.

Problems of the Teacher

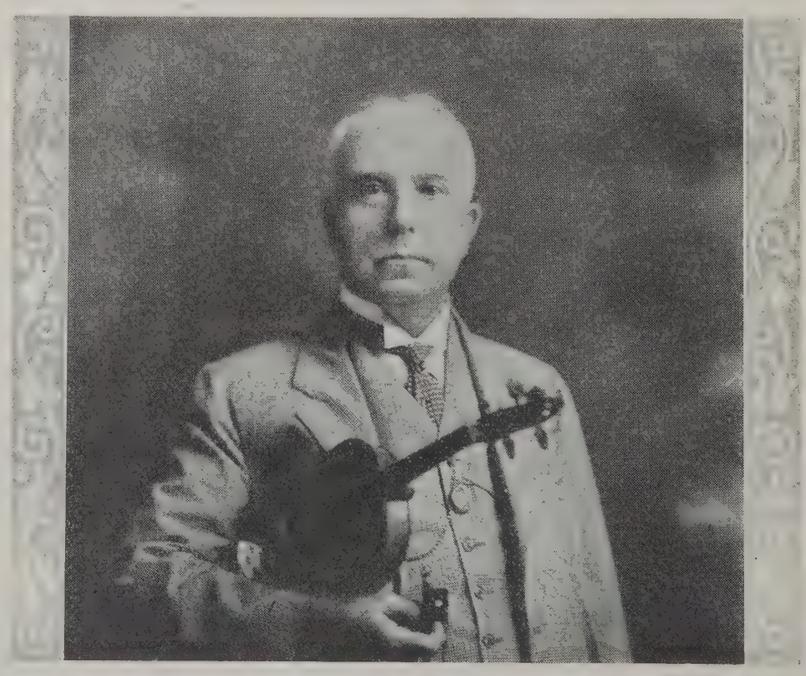
Violin teaching is one of the most difficult and arduous of all professions. The ideal violin teacher must not only have studied his profession thoroughly, but he must also have an artistic nature and a boundless stock of patience, which must be exercised with even the dullest pupil. Great experience is necessary, for every pupil is a law unto himself, and no two can be handled exactly alike. Above all, the ideal teacher must *love to teach*. He must take the greatest possible interest and pleasure in watching the development of his young violin students, budding and flowering like plants in a nursery. If he dislikes teaching and lacks the necessary patience, he may as well stop right there, for he will never succeed in turning out even mediocre pupils.

This dislike of teaching is why we find so many violinists, excellent as players, who cannot turn out good pupils. On the contrary, we find many good teachers in the ranks of violinists who are indifferent players themselves, utterly incapable of playing a solo in public. Such teachers know how the violin should be played, and owing to their stock of patience, and by dint of taking infinite pains, and by their love of teaching, turn out excellent pupils.

Then we have the really good violin teacher who is indeed a fine artist, but who combines with this ability as a player experience, patience, and love of teaching. Such a teacher will naturally turn out pupils of high atttainments.

Just what class of teacher our young correspondent will become a member of is hard to say. Time alone will tell the story. I should want to know him personally to make any predictions.

The reason why this young man finds so much difficulty in getting pupils is probably owing to his youth. Eighteen is very young for a music teacher, for people usually look for teachers older and more experienced to whom to trust the musical education of their children. In like manner the boyish doctor finds it up-hill work to get patients, and the juvenile lawyer to get clients.



Age to Begin

However, youth is not as great a bar to getting a start in the violin teaching profession as it is in other professions. The young teacher usually charges much less than the older and more experienced one, and this with many people outweighs his youth and lack of experience. However, in the present instance eighteen is very young, and our correspondent who hopes to make money from violin playing might find it better to play in an orchestra for a few years before starting to teach. It all depends on the individual and how he impresses people. If he can gain their confidence and convince them that he can do the work, he can no doubt build up a satisfactory teaching business in time.

As to the chances of gaining a good sized class in a short time, the size of the city has a great deal to do with it. This young man lives in New York City, where it is exceedingly difficult to get a start as a violin teacher unless one has remarkable ability and a very large circle of friends. I have known violinists to spend years in trying to build up a business in violin teaching in New York City only to fail in the end. Teachers of very great ability, who are well known in the musical profession, do not have any trouble, of course. They simply let it be known that they can take a certain number of pupils, and pupils flock to them, no matter where they locate. This is especially the case as regards teachers who have produced pupils who have become eminent in the violin profession.

In a large city like New York, the following suggestions in getting a teaching business might help: First, send announcements to all your friends that you have opened a studio, or that you are prepared to give lessons at the residence of your pupils. Second, have cards printed to distribute to friends and acquaintances and to leave at music stores, or with friends who will help distribute them and recommend you. Third, if you are a good public soloist, play on every occasion you can, making as many friends and musical acquaintances as possible, and letting it be known everywhere that you are looking for pupils. Fourth, advertise in the musical papers, if you can afford it.

Fifth, when you begin getting a few pupils, give pupils' recitals, for this is the one best method of gaining new business. Even if you have only a single good pupil, prepare him as soon as possible for a recital which he can give by himself, possibly assisted by a pianist or vocalist whom you might ask to help. Sixth, try and get a position as assistant to an established violin teacher who will turn over the beginners and the lower-priced teaching to you. Hundreds of music teachers in large cities have gained success by this course.

ROBERT BRAINE
Eminent Authority On All Questions Pertaining to the Violin

Environment Tells

Seventh, if you open a studio, establish it in a good residence di a room on the first floor, where have your sign on the front of th You will get many transient pupil manner. Eighth, make an arrange possible, with pianists, vocalists, ar ers of various instruments, who teach the violin, to recommend y violin teacher to their acquaintance can return the favor by recom these teachers in their respective l to your own friends and pupils.

In smaller cities the getting o is much simplified. The prospective soon becomes well known if he pla in public, and makes as many a ances among the musical people town as he can. He must, of co a certain amount of advertisin cards printed, and let people know is teaching. Personal solicitation a good plan for securing pupil young teacher can get prospects f pupils and from his friends a quaintances. Getting new pupils a is a matter of hard work and ability, and the young teacher wh his hands and expects business to him without solicitation is often pointed.

Playing the Violin in Ch

By Berta Hart Nance

"BRING your violin and help us choir." How often the budding hears such an invitation from som minister or church worker. Very the violinist disdains to play in except for an occasional solo. Wh he learn, he thinks, from playi songs in the first position? His ment would scarcely be heard, any a matter of fact, however, when a works with a choir he gains any of useful information as well as a tunity for growth and service.

The first requirement of success work, as indeed in all religious to take it seriously. The voice of lifted in some soul-stirring hymn, used of God as effectively as the a minister. Also, the violinist sh member at all times that this is a tunity to assist in the church ser not an opportunity to exhibit his o He will therefore strive to make as inconspicuous as possible. He early, get his tuning done, his st case disposed of, and his music a before many people come.

He sits, when possible, at the tr of the organ or piano. His relati the other members of the choir, to say, should be pleasant, but o he should insist upon, even to the stubbornness, is a clear space ab in which to draw his bow. For sweep is nowhere more needed tha work he is going to do.

His work is more exacting tha first apparent. His attempt to b notes of his instrument with th of the singers will soon show hi that he did not know he had. note or a slight contact of the b a string other than the one bei is instantly apparent. Steadiness ing the time is important, for the a leading instrument, and, if it will hold back the singers. Also, best results, the violinist should fo words of each verse of the son plays it, and not merely play the a certain number of times.

His work is capable of cons variety. He may lead the soprano altos. In some songs it is pos render both soprano and alto parts by playing chords on two strings.

y-school is sweeping along on a

s over and over. Such well-
eces as Schubert's *Serenade,*
Humoresque, and Mendelssohn's
ng have been fairly played to
iolin solos. The following list of pieces which range from difficult to very easy are less widely-known solos that contain the spiritual quality which the violinist seeks for church use: *Souvenir,* Drdla; *Cradle Song,* Hauser; *Andante,* Gluck; *Nachtstücke,* Schumann; *Melody in D,* T. D. Williams; *By the Brook,* René de Boisdeffre; *To a Wood Violet,* M. W. Felton; *Nocturne,* Op. 2, Alfred Karpasch; *Hungarian Love Song,* Helen Ware; *Cavatina,* Raff.

Practical Benefits

Nothing so tends to the growth of any gift as its serious use, and the church violinist will find his musicianship growing. His continual effort to make the violin sing out will work wonders in tone. If the choir rehearses under a good leader he will gain in phrasing and expression. Occasionally the church may have special services in which some professional choir leader trains the choir. Here is a golden opportunity.

Why should not the violin be more used in our smaller churches? The pastors are willing; the people welcome it. That it is not more used is the fault of the violinists themselves who overlook this opportunity for growth and service.

The Last Teacher

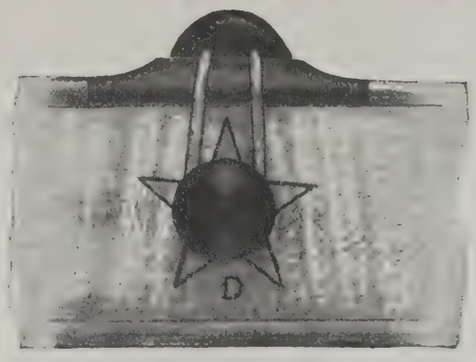
much public playing as you can. Play for audiences of all kinds. Try to feel with them, and establish a common bond of sympathy with them, thus making a mutual inspiration between player and audience. The sympathy of the audience will nerve you to attain climaxes and subtleties of expression which you have never imagined in your private practice. Problems in interpretation and expression, which you have never understood, will become clear to you in the excitement you will feel when playing before audiences.

"Then the applause of the audience will be a great incentive. The first applause the young artist gets when he plays at a great concert fairly lifts him out of himself. He is a different being. Passages in his concerto, which have seemed more or less commonplace, take on a new meaning. Under the heat and excitement of public performance, they seem trumpet-tongued like the voices of angels.

Effects of Applause

"The effect of applause and sympathy on the part of the audience was strikingly exemplified when a company of foreign actors toured the United States a few years ago. One of the audiences they played to was so cold and lacking in sympathy and applause that it literally froze the actors' blood, and they found it impossible to give a good performance. One of the actors decided to take the bull by the horns and let the audience into the secret of getting a good performance Going before the curtain he said, 'Ladies and Gentlemen,' you do not applaud. Maybe it is our fault. However, with a little encouragement we could do better.'



"The audience took the hint, applauded liberally the balance of the evening with the result of getting a magnificent performance.

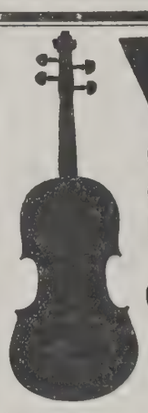
"The violinist who does much public solo playing, plays very differently from the one who does not, for he has been instructed by his audiences.

"Yes indeed my young friend, there is another teacher. Prof. Audience is the greatest of all—the supreme teacher, the last word in matters of interpretation and expression. He will teach you things which no other teacher can do."

been teaching young violinists ears now. I find that the pres- ion of students has a bad in- slur over its work. It wishes to accomplish what requires a body and a soul and a lifetime all in a few years and with partial application."—CESAR THOMPSON.

A Guaranteed Violin

Master Reproductions



The artist will find in these violins qualities supposedly found only in a real old master's violin. They are finished in detailed reproduction of every mark of use and age of a genuine old master model. Each violin is subjected to two years' seasoning, then graduated and adjusted by experts.

GUARANTEED TO MAINTAIN PERFECT ADJUSTMENT FOR ONE YEAR

Every violin worthy of being a Master Reproduction is guaranteed and distinctively marked with a Vega Star around the end pin, protecting you against inferiority.

Write for our beautiful free catalog describing the many Vega Master Reproductions, and the Company behind them.

"Il Benito Fiddle"

By Delphine C. Delu

So MANY men prominent in every walk of life have been musicians that people will hardly be surprised to hear that Benito Mussolini is a violinist and the fortunate possessor of a genuine Stradivarius.

Below is a translation of an article called "Mussolini's Violin" taken from one of the Italian papers:

"Music is his real rest. Every day, no matter how overcharged with work he may be, he finds time to play his violin. Sometimes one has laughed at this. But, pray, why should not a politician be a musician? Mazzini played his guitar during the siege of Rome.

"His favorite composers are Wagner and Beethoven, and above all the old Italian composers Scarlatti and Vivaldi, whose music has such a melodic and Latin strain to it.

"Sometimes in the past summer he would go away over Saturday and Sunday. He would go to Nettuno on the seashore, to an old castle which has been restored, a castle whose ponderous bastions have resisted time, and whose high scalloped terrace dominates the waves; and there, accompanied by an excellent pianist, he would play for hours.

"Just as in the past, after having lunched on a cup of milk, he would for an instant forget the sharpness of the fight, interpreting the divine pages of Beethoven. Without doubt to-day he forgets the troubles of being a celebrity. Only his cheap violin of the past has given way to an authentic 'Stradivarius.'"

"Music in itself is never immoral. It can be made immoral only by the association of improper words with it. . . . What is wrong with many of the popular jazz selections is not that they are ethically bad but that they are musically bad. They are stupid, dull. Even the young men think of them as something to dance by—not something to remember as music."

—JOHN PHILIP SOUSA.

Violin Questions Answered

By MR. BRAINE

Heymann Violin.

J. W.—Josef Heymann, Amsterdam, belonged to the Dutch school of violin making and made some excellent instruments. His label reads: "Josef Heymann, fecit, Amsterdam, 18—." The name is spelled "Heymann," not "Hyman." If you have the Hill (London) guarantee with your violin, the chances are that it is genuine.

Teacher Should Advise.

A. G. S.—The age of twenty-four is too late to begin, if one hopes to become a really finished violinist capable of playing difficult violin pieces. However, if you have talent you can learn to play easy and medium-grade pieces well enough to get a great deal of pleasure out of it. Your teacher who hears you play at every lesson would be better qualified to advise you as to what you may hope to accomplish. I fear that you are trying to advance too fast. You ought to study in the first position at least six months before starting on the higher positions. Violin playing is a plant of very slow growth. You cannot force it. However, I cannot advise you definitely without hearing you play.

The Vibratory Motion.

A. H.—Neither of the methods you name will produce the true vibrato. In executing it correctly, the tip of the finger is held firmly on the string at the point where the required tone is to be produced. The hand is then moved rapidly with a to-and-fro motion (from the wrist) with the result that the tone is alternately raised and lowered to a very slight degree, imitating the trembling of the human voice under the influence of emotion. 2.—No exact rule can be laid down for the speed with which the vibrato should be executed. Sometimes it is more effective played slowly and sometimes more rapidly. 3.—THE ETUDE for November 1922, had an extended article on how to execute the vibrato.

Branded Violin.

A. J. S.—Sorry I cannot trace the violin branded C. G. Hamm. 1780. There are thousands of violin makers quite unknown to fame, some of whom have made very creditable violins. I am afraid this maker could not have been of very high class since he burned his name into the wood on the inside. A high class maker usually places his name, the date and place, on paper labels pasted inside the violin.

Labeled Imitation.

J. J. K.—The violin cannot be a genuine Stradivarius because the label distinctly states that Fried. Aug. Glass "made this violin in imitation of Stradivarius." The first part of the label is in German and the second in Latin. I am afraid this violin is only a German factory fiddle of no great value but could not say definitely without seeing it. 2.—The spelling is "Stradivarius."

Stainer Imitation.

Mrs. W. O. A.—It is probable that your violin is an imitation Stainer. If genuine it would be valuable, but there is probably not more than one chance out of a hundred thousand that it is. You will have to send your violin to a good dealer in old violins as no one can tell anything about it without seeing it.

Where Doctors Disagree.

H. M. F.—There is much difference of opinion among authorities as to just how the violin should be held in playing; what part, if any, the shoulder should play in holding it, whether pads should be used, and so forth. THE ETUDE has published recently an article on this subject. It is a case of "doctors disagreeing." 2.—It is better to do the vibrato with the hand alone, from the wrist, although we often see violinists using the forearm to a greater or less extent. Send for a back copy of THE ETUDE for November 1922, in which the matter is discussed.

A Modern Miracle.

H. C. F.—It is hard enough for a teacher to attempt to forecast the future of one of his own pupils as regards the possibility of his becoming a virtuoso. How, then can I, a perfect stranger, who have never heard you play, form any idea of what the future holds in store for you? You seem to be bright and intelligent, and your enthusiasm for music will carry you a long way. Five hours a day is quite long enough to practice; it shows you are in earnest, in that you are willing to work so hard. I can form no idea of your talent or how you have progressed without hearing you play. Your teacher is the one who should advise you. 2.—As to whether you have had too late a start, you can draw your own conclusions from the fact that almost without exception all the great virtuoso violinists have commenced at from five to eight years of age. Many of them have been professional concert artists as early as twelve to fifteen years of age. 3.—If possible you ought to study in New York, Chicago, in Philadelphia or in Europe where you would be in a musical atmosphere and have an opportunity of hearing great violinists play the great musical compositions. 4.—To attempt to be a Fritz Kreisler, which you say is your ambition, is attempting to be one picked out of a hundred millions. It would be nothing less than a miracle if you could achieve it.

Starting at Twenty-four

F. W. S.—At twenty-four you are starting the study of the violin very late, that is, if you hope to learn violin technic thoroughly and do really artistic work. You can hardly hope to do the higher grades of professional violin work. However, the fact that you are a mandolin player will help with the work of the left hand since the fingering of the two instruments is similar. It is the bowing which you will find difficult. I am glad you have a good teacher and that he says you have talent. He is better fitted to advise you concerning just what you can accomplish than I who have not heard you play. You may progress rapidly on the violin and even hope to be able to do the easier grades of professional work.

Selling a Factory Violin.

W. E. N.—If your violin is a valuable old instrument made by a well-known maker, especially if it is an old Italian specimen, almost any dealer in old violins would purchase it or find a purchaser for you; but if it is a factory-made fiddle with an old date pasted inside, it would be well to try to sell it in the town where you live. You will first have to have it appraised by a violin expert to find out what it is worth. It may be worth little or nothing and again it may be valuable.

Violin Bow Technic
By Henry Hoaré Price, $1.50
A work of prime importance to every teacher and student of the violin.
A series of studies covering every fundamental principle essential to the technic of violin bowing. Musically interesting, technically simple and all written for first position. Can be used by beginners and advanced pupils alike.
Among the important features are the careful and intelligent explanation of the "firm staccato;" the explicit instructions that precede each lesson; the metronomic markings indicated for each bowing problem and the illustrative division of the bow best suited for the various bowings.
Clearly a more connective and modern course of the art of violin bowing than has ever before been presented.

DELICACY AND POWER. *Sun News-Pictorial*

Jubilation sings in the veins of Percy Grainger as he plays, and over our souls he unfurls a banner of optimism. He is a latterday Siegfried, in spiritual tune with the resonant forests and the fresh hill torrents, and where Siegfried failed with his reed Grainger wins with his grand piano.
Sun News-Pictorial.

VARIETY AND VIRTUOSITY. *The A*
GORGEOUS AND PRODIGIOUS. *Sun News-Picto*
BRIGHT MOODS—GRAINGER LOVES THEM. *Sun News-Picto*
A FRESH AND VITAL PIANIST. *The He*

Not only have concerts themselves as a rule, in the past, been too formal, but the music performed has almost always been too uniformly dignified. Who could live happily with a person who never unbent, whose dignity was always in evidence? Who for that matter, could live contentedly with a person of the opposite kind, with anyone, that is, who was perpetually full of animal spirits, who never took anything seriously? Into the needlessly firm atmosphere of the concert hall comes Percy Grainger with his "Jubas" and his "Country Gardens," his "Sea Shanties" and his propriety-flouting ditty from Texas, everything done with amazing and quite irresistible verve.

Yes: but that is not the whole story.

This world famous musician, this same person, begins his program, as it were, on the mountain tops with an organ fugue of Bach and a noble sonata by Chopin. The clarity of the execution in the fugue was a thing to marvel at; every note told, and the phrasing throughout was quite perfect. Never, perhaps, has an audience shown more reluctance to leave the hall. They drifted out in a tentative way, ready at any moment to sit down again if the pianist could be persuaded to reappear, looking as they drifted oddly like groups of people playing "musical chairs." The effect might be amusing; the tribute was a very real one and richly deserved.—*The Argus, June 7, 1926.*

The variety of Percy Grainger's programs is as marked as his versatility as an artist. Beginning last night with Bach and Brahms, he passed into the modern French and Spanish schools, and then gave a number of compositions by English-speaking composers, ranging from the beautiful De Profundis Prelude by Balfour Gardiner to one of Grainger's exhilarating Morris Dance arrangements and David Guion's gravely comical "Sheep and Goat Walking to the Pasture," in which a light brisk step moves beside a heavy one. But despite its variety, the program was well balanced and consistently interesting. The large audience in the Auditorium was enthusiastic in its demand for many extras. The rendering of the Bach Partita in B-flat Major was marked by crystal clarity, delicacy, and a charm that cements affection. Then came the chief work of the evening, Brahm's F-minor Sonata, which fully showed the artist's compelling gifts of interpretation, his sense of architectonics, and his strong musicianship. He made the sonata glow with life. The andante was pure poetry, while the majesty of the first movement, the gentle reflective mood of the Intermezzo, and the bold contrasts of the Finals were finely revealed.—*The Herald, June 9, 1926.*

Schumann's Symphonic Studies showed the recitalist ready and able to follow every mood and fancy of this romantic composer. The music abounds in difficulties. Grainger, unconscious of these, pressed his mind to the demands of the theme and its embellishment. For all who could register his impressions there opened a world of astonishment and delight.—*The Age, June 11, 1926.*

Grainger is, of course, the accredited prophet and spokesman of the great Norwegian tone-poet. Grieg himself sent him forth with full authority. A program which in addition to all this, contained a Liszt Hungarian Rhapsody, and Grainger's own arrangement of the Brahm's Wiegenlied, all played in a perfectly masterly style, must have roused in all the listeners a feeling of profound gratitude and admiration and satisfaction. —*The Argus, June 11, 1926.*

When a man can make you love Bach the more, as Percy Grainger certainly did last night with his extremity of delicacy in the first Partita, and yet whisk you along at a later stage to an enjoyment of the sheer two-steppy positiveness of David Guion's "Sheep and Goat Walking to the Pasture," he is a magician—*The Sun News-Pictorial, June 9, 1926.*

A Musical Souvenir of the Sesqui-Centennial

At this writing thousands of requests are reaching us daily for a free copy of the souvenir booklet "Two Centuries of American Musical Composition" that we have issued as a musical souvenir of the Sesqui-Centennial.

We have made a tremendously large edition of this valuable booklet, but it is impossible to estimate just how long we will have copies to furnish in response to requests. Because of this we would suggest that our friends and readers who have not asked for a copy of this souvenir and who would be interested in having this booklet with its portrait gallery of 482 American composers and among other features, a dozen and one complete musical compositions, make their request immediately.

There is no charge for this souvenir and we are glad to have it well circulated among the active music workers of America, as our part in seeing that there is more or less of a permanent record of American musical achievement made in connection with the Sesqui-Centennial exhibition, that has given music so great a part in its programs.

The Presser Personnel

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Richard P. Bender

A valued member of our Retail Department. Of course we render Retail service to music buyers everywhere, but that which we designate as our Retail Department serves the hundreds who daily come in person to our salesroom, at 1712-1714 Chestnut Street. Few of these realize that the clerk waiting upon them must have a knowledge and experience enabling him to know just where to find that for which they have asked in our immense stock of over 25,000,000 music publications.

Library experts, catalog experts or other systematizers would be stumped in trying to arrange a locating system to equal the speed with which the well informed music clerk's mind directs him to get Lieurance's "By The Waters of Minnetonka," when the customer asks for "Moon Dear," or perhaps they only remember "that it was a pretty little second grade piece with the melody in the left hand," when they want "Rose Petals," by Lawson.

It takes more than months to assimilate the needed information that makes it possible to care for the requests of our Retail patrons promptly and Mr. Bender, except for about one year serving our country in the World War, has been in the music business since 1909, when he started with us, and his store of knowledge is one of our assets.

The Theodore Presser Co. endeavors to make the members of its organization happy in their duties, so that there will be years of experience, such as held by Mr. Bender, available to those music buyers depending upon this house for prompt and accurate service.

Iris Planted Now Will Develop Strong Roots For Beautiful Flowers Next Spring

We are offering six beautiful plants bearing blue, purple, white, yellow, lavender and pink flowers. Iris will grow under almost any condition or climate.

We will send you your choice of two for one new subscription or all six for three new subscriptions.

This is your opportunity to beautify your garden without one penny cash outlay.

Save Money On Magazine Combinations

Note the display ad. on the inside back cover of this Etude. The opportunity to obtain your Winter's reading at a substantial reduction by ordering two or more magazines is yours. These prices are not guaranteed and many will change during the season so order early and obtain the benefit of the reduction.

The Presser Personnel

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Henry G. Houghton

This is an introduction to many of our readers, but to hundreds of music buyers in Boston, New York and Philadelphia it is but a renewal of acquaintance, since Mr. Henry G. Houghton has served in our Philadelphia Retail Department since 1921, and has had connections with the G. Schirmer, Inc., New York store from 1902 to 1912, and the Boston Music Co. from 1912 to 1921, and therefore has a wide acquaintance with music buyers in the East. Even prior to these dates he has around ten more years in the music business to his credit, these years having been spent in the New England Conservatory Music Store.

At the New England Conservatory during his youth he obtained a thorough musical education and he enjoys a proficiency in both piano and organ playing above the usual.

Mr. Houghton, during his more than 35 years in the music business, has seen thousands of new music publications come on the market, has seen musical tastes change with the times, has seen hundreds of compositions achieve great popularity and thousands more sink into oblivion. Then again in these years, there have been countless publications achieve what might be termed a standard sale and to retain a working knowledge of all these small, moderate and great "sellers," Mr. Houghton has trained his mind beyond the average in the retention of correct titles, sub-titles, composers, publishers, etc.

Expert knowledge with Presser Co.'s unequalled stock and liberal policies make a perfect combination for perfect service.

Look Out For Swindlers

Fall magazine buying is now coming with a rush and fake magazine subscription agents are active. Pay no money to a stranger unless you are convinced of his responsibility. If there is any doubt, take his name and address, send the subscription price direct to The Etude together with the name and address of the agent and we will credit him with his commission, if any.

Every day we receive complaints from the unsuspecting public who have paid good money to so-called ex-service men, men claiming to be working their way through college or getting votes in a popularity contest. The Etude employs no schemes nor "sob-sister stories" to secure subscriptions. We cannot be responsible for cash paid to swindlers.

The Presser Personnel

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Frank M. Merz

Walking into our Retail store the observant person will note in the excellent corps of experienced clerks there to serve, a neat, gentlemanly individual who at twenty feet might pass for a young man not too far in the twenties, but after closer observation and seeing the despatch, assurance and courtesy with which he furnishes requested music publications, it is soon apparent that here is experience and knowledge that belies the appearance of not having given twenty-five years of his life to the music business.

Such an individual is our Mr. Frank M. Merz, who is Assistant Manager of the Retail Department. He is well-known to many music buyers, having sold considerable music over retail store counters for nine years before joining the Theodore Presser Co. Retail staff in the year 1911. So great has been the development of our Retail store business that its Manager, Mr. John Y. Blaetz, long has been handicapped by the tremendous demands made upon him and early this year it was found necessary to create the position of Assistant Manager, and Mr. Merz was selected immediately for this position of responsibility.

We could write much extolling Mr. Merz personally, since he has been with us so many years and is one of our World War Honor Roll men, having served overseas, and like most of our men, is a good husband and a proud father, but since space is limited we have to be content with telling of his business attributes and these entitle him to a high standing among the best in the music business.

Change of Address

If your Etude has been going to your Summer address be careful to notify us immediately of your change of address to your home town, giving both the old and new addresses when changes are made. Notifying the postmaster will not cause a magazine to follow you as second class mail is not forwarded. Help us to give you good service by following the above suggestion.

FOR SEVENTY-FIVE CENTS YOU CAN ADD TO YOUR MUSIC LIBRARY ANY ONE OF THESE ALBUMS

YOUNG PLAYER'S ALBUM
70 melodious second and third grade piano pieces.

POPULAR HOME COLLECTION
46 excellent numbers for the average pianist.

Piano Study Material

TECHNIC FOR BEGINNERS

By Anna Priscilla Risher **Price, 75 cents**

Offer No. 1—*Introductory Cash Price, 40c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

THIS little book of preparatory exercises for beginners paves the way for the future study of the more elaborate studies of Philipp, Pischna, Hanon and others. Each finger is developed gradually until there is a proper amount of strength to be able to attempt more strenuous tasks. It is intended that the exercises be played in all keys and that they be used as daily studies in conjunction with the regular work of an instruction book as soon as the beginner has mastered the rudiments. Teachers will find this a work of great help in early developing independent finger action as well as increasing the strength of each finger.

TWO AND TWENTY LITTLE STUDIES
On Essential Points in First Grade Piano Teaching

By Helen L. Cramm **Price, 75 cents**

Offer No. 2—*Introductory Cash Price, 35c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

THE young student whose teacher uses this book as a refreshing period after the pupil has been confined to a method or instruction book to its completion or almost so, is indeed fortunate. There are little solos and duets that help the pupil to review pleasantly or to become acquainted with contrary scales, parallel scales, crossing hands, playing melodies with the right hand, playing repeated notes, etc. These studies are real teaching gems that help the teacher to encourage the young student to continued progress in playing ability.

MIDDLE C AND THE NOTES ABOVE AND NOTES BELOW

By Lidie Avirit Simmons **Price, 75 cents**

A little book for the Juvenile Beginner in the Study of Piano Playing

Offer No. 3—*Introductory Cash Price, 40c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

A VERY first instructor for introducing the notes by the names they take for the line or space they occupy. Both clefs are entered from the start and after a note or two have been introduced in a lesson there is space provided for the pupil to write them a number of times and place their names beneath. Then there is a little piece to exemplify each step in notation and give keyboard location of staff knowledge gained. There are words to all these pieces to aid in counting and feeling the rhythm. Altogether this is a charming book for the beginner.

BOOK FOR OLDER BEGINNERS

By John M. Williams **Price, $1.00**

An Instruction Book for Adult Beginners in the Art of Piano Playing

Offer No. 4—*Introductory Cash Price, 60c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

THE works of Mr. Williams seem to need no introduction, because his teaching ideas have been found so practical by so many teachers that they eagerly seek any new publication bearing his name. This book gives the rapid progress to pieces that older beginners want and yet it covers the ground work in a satisfactory and quite thorough manner. Teachers will find this just the instruction book for those of more mature minds than the average beginner.

TWELVE MOTHER GOOSE MELODIES
For the Pianoforte with Text ad lib.

By W. Berwald **Price, 60 cents**

Offer No. 5—*Introductory Cash Price, 35c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

ANYONE familiar with the compositions of W. Berwald hearing of this little volume of easy second grade teaching pieces for the first time could not help having a curiosity aroused as to how this accomplished and gifted writer would handle the familiar Mother Goose Rhymes in utilizing them as a basis for little piano compositions. As one might well imagine he has produced little gems that reflect the finish and harmonic interest of his more serious works. The texts are given in full and may be sung if desired. Large notes used in engraving the plates of these pieces make their reading easy for the little players.

EASY STUDIES IN EARLY GRADE

By Mathilde Bilbro **Price, 75 cents**

Offer No. 6—*Introductory Cash Price, 40c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

WHEN one sees the name of Bilbro there is a promise of something individual, practical and attractive for use in elementary piano instruction. Here is Miss Bilbro's latest work. It gives a valuable beginning in technical work and is of a quality that cares for the musical side likewise. These studies are not very beginning studies, being rather for the advanced first for early second grade. They start in the simplest keys and quieter hand positions and progress gradually. Arm work and those things that lay at the foundation of modern technic are covered.

SECOND YEAR STUDY BOOK

By Arnoldo Sartorio **Price, 75 cents**

Offer No. 7—*Introductory Cash Price, 30c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

A GROUP of eight interesting study pieces of 2, 3 and 4 pages in length. Each piece is of real service to the teacher and of great value to the pupil well advanced in the second grade and ready to take up the interesting technical phases that abound in third grade work. The characteristic qualities of these study pieces will tend to hold the pupil's interest while the study of them is developing ability to master fingering, sight reading and time problems. Careful attention has been given to the editing of these studies for fingering and phrasing.

MINIATURE FUGUES

By Russell Snively Gilbert **Price, 60 cents**

Offer No. 8—*Introductory Cash Price, 35c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

IN discussing educational works we frequently have stated that the very foundation of real musicianship is found in polyphonic playing and as this is true, too much attention cannot be given it. The difficulty has been in securing suitable works to lead up to the study of polyphonic playing. These little two part fugues will help the student to possess a clearer idea as well as a freer technique for the simpler works of Bach. The teacher has here a logical step between the *Kunz Canons* and Leefson's *First Study of Bach*.

BACH ALBUM OF FAVORITE COMPOSITIONS

Arranged and Edited by Sara Heinze **Price, 75 cents**

Offer No. 9—*Introductory Cash Price, 35c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

THE Sara Heinze Bach Album is a well-known compilation of what might be termed the favorite moderately easy compositions of Johann Sebastian Bach, but this final introductory price is on a new and carefully revised edition of this valuable teaching collection in the Presser Collection. The 21 numbers making this volume are chiefly from the Suites and Partitas.

SIX PICTURESQUE STUDIES

By Paul du Val **Price, 75 cents**

Offer No. 10—*Introductory Cash Price, 30c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

ONE finds a wealth of attractive study material in the earlier grades, and yet there is every bit as much reason for seeing that students of the fourth grade are supplied with studies as engaging as those furnished to hold their interest in the earlier grades. Each one of these studies by du Val has a decided technical value in its exemplification of some special departments in modern mechanism. Their musical qualities are excellent and altogether these studies are a tasteful and original group with which teachers should be acquainted.

A LITTLE OF EVERYTHING FOR EVERY DAY

By Gilmore Ward Bryant **Price, $1.00**

Offer No. 11—*Introductory Cash Price, 40c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

A TECHNICAL piece is presented first in the key of C. It carries one into a finger passage, changeable rhythm, octaves, trills, turns, scale passages, arpeggios, chords and other technical difficulties, making in all seventeen natural technical divisions that are lettered for individual use if desired. This same material is presented in six other keys and provision made for its playing in four more. Pupils from the third all the way to the sixth grade might well use these studies in daily practice as the perfect mastery of them means a technical acquirement capable of real achievement in pianoforte playing.

ALBUM OF OCTAVES

Study Pieces for Special Purposes, Vol. 4 **Price, 75 cents**

Offer No. 12—*Introductory Cash Price, 40c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

THE scale of this series of albums of study pieces for special purposes has been so remarkable from the start that we had to check up ourselves to make certain that we were right in making a final introductory offer on this volume as a publication of less than one year on the market. The 26 pieces in this album have been so generously built around octaves that they make the most attractive kind of study material for developing accurate spanning and playing of octaves in the various keys and rhythms. Pupils as early as the third grade would be helped by this volume.

Vocal

POPULAR PIANOLOGUES
From the Repertoire of Coyla May Spring
Written and Compiled by Clay Smith **Price, $1.00**
Offer No. 26—*Introductory Cash Price, 65c.*
INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

SOME TIME ago Clay Smith was induced to present in a volume some of the musical readings from Coyla May Spring's rich repertoire and because of the great favor with which this volume of "Favorite Musical Readings" was accepted and because of the demand for more from the same source this second volume "Popular Pianologues" was compiled. The nine numbers in this album will delight those who use pianologues or who do musical readings with piano accompaniment. Also because of their suitability for use as encore songs the singer will find them worthy of possession.

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

NOW if there is a proficient amateur orchestra anywhere in need of good things to play we predict that this collection will prove the most satisfactory of all that might be considered. A dozen and one of the numbers are published for the first time as orchestra numbers in their appearance in this collection, and then excellent, playable, but not difficult arrangements of "Poet and Peasant," "William Tell," "Hungarian Lustspiel" by Keler-Bela, Mendelssohn's "Priests' March" and "Hero's March" are included. The published parts are First Violin, Violin Obbligato—A, Violin Obbligato—B, Solo Violin, Second Violin, Viola, Cello (or Bassoon), Bass (or E flat Bass), Flute, First Clarinet in B flat, Second Clarinet in B flat, E flat Alto Saxophone, C Melody Saxophone (or Oboe), B flat Tenor Saxophone, First Cornet in B flat, Second Cornet in B flat, Third Cornet in B flat, Trombone (Bass Clef), B flat Trombone (or Baritone) in Treble Clef, Horns in F (or E flat Altos) Drums and Piano Accompaniment.

Sacred Cantatas

KING OF THE AGES
A Choral Cantata for Easter
By R. M. Stults **Price, 60 cents**
Offer No. 28—*Introductory Cash Price, 35c.*
INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

THE parable of the ten virgins and their lamps should keep the prudent choirmaster from being the victim of an unsatisfactory Easter service through late selection of material and the resulting lack of thought upon the rendition and rehearsing. Here is an opportunity to give very early thought to next Easter's service. "King of the Ages" is melodious and is effective but not difficult. Satisfying solos are allotted each voice. The time of performance is about 35 minutes.

BELSHAZZAR
A Sacred Choral Cantata
By R. M. Stults **Price, 60 cents**
Offer No. 29—*Introductory Cash Price, 35c.*
INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

THIS is a Cantata for mixed voices that is excellent for use at any time in the Church Calendar. There are Soprano, Tenor, Baritone and Bass solos but in the depicting of the gripping events surrounding Belshazzar's lavish feast the composer has satisfactorily elected to place the prominent parts with the Bass and Baritone. The choruses are of more than ordinary interest and the organ introduction and interludes provide the necessary atmosphere demanded by the text.

Cantata—Mixed Voices

ABRAHAM LINCOLN
Text by Edward Stockton **Music by Richard Kountz**
Price, $1.00
Offer No. 30—*Introductory Cash Price, 50c.*
INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

A WONDERFUL narrative in musical form of Abraham Lincoln. It is for four part chorus and its rendition would be a credit to any high school chorus or community choral organization. The season of Lincoln's birthday is ideal for choral concerts and this cantata offers an opportunity to make the feature a timely one. With its calm and peaceful passages, its dramatic moments, with the pathos and yearning of the slaves' spirituals and its rise to majestic, swelling tribute, this cantata is full of marvelous possibilities in the effects obtainable.

Children's Operettas

IN THE CANDY SHOP
By Mildred Adair **Price, 50 cents**
Offer No. 31—*Introductory Cash Price, 25c.*
INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

A NOVEL entertainment in which the customers find the candy store man has candies that speak (or sing) for themselves. The children participants may be as small as it is practical to use and all but the shopkeeper should be girls, although this is not absolutely necessary. Piano teachers might well use this as a novelty for pupils' recitals since it is required that one little performer play a piano solo and that two others play a charming little piano duet. Takes about 20 minutes.

THE LOST LOCKET
Words by Gertrude Knox Willis
Music by Mrs. R. R. Forman **Price, 60 cents**
Offer No. 32—*Introductory Cash Price, 35c.*
INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

A GROUP of Boy Scouts camping out in celebration of Washington's Birthday are met by a group of Campfire Girls. The girls' Captain has a colonial heirloom locket and unknowingly drops it. After the scouts and girls have left the scene a pantomime ensues in which the little colonial lady of the locket and her husband lead a group of colonial maids and colonial officers in a minuet. George Washington also appears. This is a very nice little patriotic sketch.

THE MADCAPS
An Operetta for Children or Adults
Words and Music by William Baines **Price, 60 cents**
Offer No. 33—*Introductory Cash Price, 35c.*
INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

CHILDREN could present this just as readily as older performers could utilize it for a most artistic musical divertisement. The story deals with the trial of Boreas, Old Sol, Master Painter, and Jack Frost for alleged cruelties perpetrated upon Mortals during the four seasons. With the Spirits of the different Seasons, Flowers, Snowdrops and other nature characters having a part in the performance, one can imagine readily the beautiful stage pictures that can be presented. There is a moral in the Mortals learning to have a better appreciation of Nature's goodness and blessings. All chorus work is unison.

Musical Plays

HEARTS AND BLOSSOMS
Comic Operetta in Two Acts
Lyrics and Book by Lida Larrimore Turner
Music by R. M. Stults **Price, $1.00**
Offer No. 34—*Introductory Cash Price, 65c.*
INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

AFTER having seen immensely enthusiastic audiences enjoying this musical comedy it is hard to keep from starting a complete description that cannot be accommodated in the space allotted. It is not difficult for the singers and any group of intelligent young people from 16 to —, well on up to when they cease to be sprightly, with proper direction can duplicate the eye, ear and mental enjoyment that was presented in the performances mentioned above. The Stage Manager's Guide which sells for $1.00 gives full directions for actions for song numbers, complete stage business, a diagram of the stage and dance steps that may be used. The plot with interlocked love matches is good and humorous.

NEARLY A HONEYMOON
A Musical Play in One Scene
Book and Lyrics by Jessica Moore
Music by Geo. L. Spaulding **Price, 60 cents**
Offer No. 35—*Introductory Cash Price, 35c.*
INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

A SHORT play so constructed that it can be used as a closing number of a program of miscellaneous specialties or it will be found suitable as a curtain raiser to any play or operetta. It is easily staged and there is humor in the text and fresh melodic attraction in the music. There are seven leading characters, four of these being male.

GREAT MEN AND FAMOUS MUSICIANS ON THE ART OF MUSIC

By James Francis Cooke **Price, $2.25**

Offer No. 36—*Introductory Cash Price, $1.60*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

IT is marvelous how many of the great folks of today and of past years and centuries can be counted among those that might be classed as accomplished musicians, and it is wonderful how much inspiration and practical help the music student can obtain in reading what these individuals have to say about music. Such men as Dr. Crane, Thomas Edison, Charles Schwab, Owen Wister, Rupert Hughes, Ralph Modjeski, Dr. Henry Van Dyke and others have given interesting and inspirational interviews to James Francis Cooke and their interviews along with a number of practical and helpful interviews with famous composers, singers, and pianists are in this book. Here is real pleasurable and profitable reading for music lovers.

LITTLE LIFE STORIES OF THE GREAT COMPOSERS

In Questions and Answers for Juvenile Clubs and Young Musicians

By Mary M. Schmitz **Price, 60 cents**

Offer No. 37—*Introductory Cash Price, 35c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

AFTER one has gone through this little book he will have quickly gleaned many of the most important facts about 18 of the truly great composers, their birthplaces, where they lived, their parents, their important works, their influences and when and where they died. The title and sub-title tell much of just what this book gives and how it is given.

WHAT TO TEACH AT THE VERY FIRST LESSONS

By John M. Williams **Price, 60 cents**

Offer No. 38—*Introductory Cash Price, 35c.*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

THE day is past when someone with a fair piano education may just decide to become a piano teacher and with no further teaching preparation become successful even in a small measure. This day and age is too intelligent for half-way methods and there are too many other attractions that make it difficult to hold the pupils' interest if the teacher has not studied the psychology of the situation and has not learned how to prescribe individually for each pupil. Every teacher will get many times the value of this book in the value of the advice and suggestions that will be obtained from it.

ELEMENTARY PIANO PEDAGOGY

By Chas. B. Macklin **Price, $1.50**

Offer No. 39—*Introductory Cash Price, $1.00*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

PIANO teachers, particularly young teachers, cannot give too much consideration to the information upon teaching made available to them through the published writings of those who have devoted years to the study of what makes for results in the field of musical education. There are chapters in this thoroughly practical book telling what to do in teaching Notation, Rhythm, Theory, and Technique. Others tell how to practice and the proper considerations in giving assignments, etc. This book will pilot the young teacher through the shoals of getting pupils started right.

HOW TO PLAY THE PIANO

By Mark Hambourg **Price, $1.50**

Offer No. 40—*Introductory Cash Price, $1.00*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

ALTHOUGH the great virtuoso who wrote this book has not visited America since 1914, he is recognized by thousands in the country as one of the master piano pedagogs. This book clears the way for the beginner and it is simple, admirably clear and accompanied by practical illustrations, diagrams and an abridged compendium of exercises daily practiced by himself.

HOW TO SUCCEED IN SINGING

By A. Buzzi-Peccia **Price, $1.50**

Offer No. 41—*Introductory Cash Price, $1.00*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

A PRACTICAL guide for singers desiring to enter the profession and a straight-forward discussion of good and bad things in the vocal art that will make teachers think and improve their effectiveness. The writer is a Master Teacher of the singing art and knows the shams and artificialities practiced by teachers and singers here and abroad and is frank to make mention of them in this very helpful book for all interested in voice study.

HOW TO SING

By Luisa Tetrazzini **Price, $2.00**

Offer No. 42—*Introductory Cash Price, $1.25*

INTRODUCTORY PRICE WILL BE WITHDRAWN OCTOBER 15, 1926

SOME of the 30 chapter heads of this excellent book for the teacher of singing or the professional or ambitious amateur singer are "Don't Wait to Be Found," "Qualities Needed," "Placing the Voice," "Coloratura Singing," "How I Sing an Aria," "Registers," "Style and Interpretation" and "Health, Diet, etc." A book full of basic truth and commonsense.

Our new edition of it will be ›de and every study passage will be carefully edited. This with both hands in the treble clef.

Offers Nos. 53 to 81 Good Only on ›ers Received Prior to Publication

Piano Solo Album

ALBUM OF FRENCH COMPOSERS

Offer No. 60—*Advance Offer Price, 35c.*

DISCRIMINATING pianists obtain real joy in an attractive music library and knowing the way in which worth while compilations are received by these pianists, we are issuing this volume of charming and graceful numbers by such composers as Saint-Saens, Godard, Widor, Dubois, Debussy, Pierne, Wachs and Lack. All of these numbers can be rendered by the average good pianist.

Piano Four Hands

NEW EASY FOUR HAND ALBUM

Offer No. 61—*Advance Offer Price, 35c.*

A GENEROUS number of second grade piano duets will be given in this album, along with some in the first grade and a few just touching the third grade. These will be tuneful numbers arranged somewhat in progressive order and it is apparent how valuable a collection of this kind will be to beginners in four hand playing.

THREE DANCES FOR FOUR HANDS
By Cyril Scott

Offer No. 62—*Advance Offer Price, 35c.*

THESE novelties for piano duet playing are about fourth grade and they are graceful flowing numbers that all pianists will enjoy playing in public or private. The harmonies are of somewhat modern qualities and careful and well interpreted renditions of these numbers will be most effective.

Violin Works

NEW FIRST AND THIRD POSITION ALBUM
A Collection for Violin and Piano

Offer No. 63—*Advance Offer Price, 50c.*

THIS will be an unusually good collection of violin pieces in every way and they will spur the student to further achievements in performing ability. When we announced an *Album of Favorite First Position Pieces* some time ago, the number of advance of publication orders was beyond our best expectations and since that album has been on the market it has enjoyed popularity far beyond that anticipated. Every effort is being made in this compilation to attain the same satisfactory results enjoyed by the *Album of Favorite First Position Pieces.*

VIOLIN METHOD FOR BEGINNERS
By Ann Hathaway

Offer No. 64—*Advance Offer Price, 40c.*

WE have much pleasure in announcing a new elementary violin book. Mme. Ann Hathaway, a well-known violinist and teacher, is American born, bred and educated. She was a pupil of the famous violinist and composer, Mr. Felix Borowski. This new book is strictly a First Position Method. It starts directly in the key of G, the natural key of the violin, and moves consistently and in the most practical manner from one step to the next. It is a complete instruction book, giving all the rudiments, together with diagrams for position, finger placing, bowing, etc.

FIRST GARLAND OF FLOWERS
Favorite Melodies in the First Position for Violin
By Julius Weiss, Op. 38

Offer No. 65—*Advance Offer Price, 35c.*

WE have been making every effort to have the *Presser Collection* as complete as possible in its standard study works for the violin. It has been very gratifying to note the manner in which our carefully edited and revised editions of various standard violin works have been received and violin instructors may confidently turn to this new edition of the *First Garland* for their future needs. These little study pieces with a piano accompaniment of simplicity are most pleasing and helpful to pupils who do not have much technical equipment as yet.

TWENTY-FOUR CAPRICES
For Violin Solo
By P. Rode

Offer No. 66—*Advance Offer Price, 45c.*

THIS is to be an excellently prepared publication of the celebrated Caprices that are in the form of studies for violin solos in all the 24 keys. These are indispensable studies for the advance violin student and we are sure of the reliability of our new edition after observing the fine work done upon it by Mr. Otto Meyer.

Violoncello

FUNDAMENTAL STUDIES IN VIOLONCELLO TECHNIC
By G. F. Schwartz

Offer No. 67—*Advance Offer Price, 40c.*

WE are now announcing for the first time the publication of a new and important work for the Cello. While not precisely a Beginner's Method, it is a work which can be taken up immediately after the student has acquired the rudiments. As a rule, those who take up Cello have either studied some other instrument or have some knowledge of the theory of music. Such students will be prepared to take up this book with enthusiasm. It gives practically and in detail just what is specified in its title, *The Fundamental Principles of Cello Technic.* The idea is to form at the outset correct technical habits rather than the mere playing through of study after study. The technical exercises given in this book are just such as the player needs, and as a reference book the student will return to it again and again even after he has passed on to other studies. The author is a very well-known and successful player and teacher.

Saxophone

DOZEN SONGS FOR SAXOPHONES
By Clay Smith

Offer No. 68—*Advance Offer Price, 45c.*

THIS is a real offering for those who play or teach the Saxophone. These dozen numbers for the Saxophone are to be published in a volume giving a solo and second part for the C Melody Saxophone. Another volume will cover solo and second E Flat Alto Saxophone parts and there will be a solo and second part in the volume for the B Flat Tenor Saxophone. With these volumes available, new solos may be secured for any of the various saxophones or duets for any two members of the Saxophone family. The piano accompaniment volume supplies the proper background in the solo or duet Saxophone work.

BEGINNER'S METHOD FOR THE SAXOPHONE

Offer No. 69—*Advance Offer Price, 40c.*

THE Saxophone today is one of the most popular of all orchestral instruments. Students and those who are contemplating studying this instrument, will welcome the announcement of the preparation of a new instructor prepared by a well-known saxophonist. This new method gets right down to the beginning of things, giving all the necessary rudiments, and starts the student off in the correct manner from the very outset. The book contains a splendid collection of studies and exercises, together with original and standard melodies.

Vocal Collections

FORTY NEGRO SPIRITUALS
Compiled and Arranged by Clarence Cameron White

Offer No. 70—*Advance Offer Price, 40c.*

THERE are Negro Spirituals and Negro Spirituals. Some are authentic and others are more or less imitations. Only the true spirituals have permanent art value and in the selection and arrangement of such, no one is better qualified than the well-known violinist and composer, Mr. Clarence Cameron White. We have in preparation a new volume of *Spirituals* which will contain only the best and most deserving of attention, including of course all the old favorites. These will be arranged for solo or unison singing with piano accompaniment. We feel confident that this will prove to be the best collection of its kind ever published.

NEW COLLECTION OF FAVORITE SONGS AND CHORUSES FOR ALL OCCASIONS

Offer No. 71—*Advance Offer Price, 10c.*

THIS book in addition to having a generous number of well known songs—favorites such as are effective for home circle, school use or community singing—will have some feature numbers individual to it. Here is an exceptionally interesting offering for those having anything to do with school or group singing. The compilers and editors are making a careful analysis of many numbers available and the result will be a well-balanced compilation with a wide appeal to singing groups of all ages. The prices will be very low both for single copies and quantities.

The "Advance of Publication Offers," presented by the Theodore Presser Co. each month, give the teacher and the active music worker opportunities to secure first copies of important new publications at prices considerably lower than any at which the works are offered at any time after publication. The "Advance Offers" are described every month in THE ETUDE, *under the "Publisher's Notes."*

Vocal Methods and Studies

THE BEGINNER'S VOICE BOOK
By Frantz Proschowsky

Offer No. 72—*Advance Offer Price, 60c.*

HERE at last is something genuine in the line of a Voice Book for Beginners. It aims to do for the beginner in singing, just what Presser's *Beginner's Book* does for the piano student. The author of this book, *Frantz Proschowski*, is one of the most successful of all vocal teachers. It is sufficient to state that he is the teacher of the famous artists, Madame Galli-Curci and Tito Schipa. This book begins at the very beginning, just like any instruction book, giving all the fundamentals, elements of notation, etc., including intervals and the structure of the scale. Then, it goes right into the elements of practical voice work with all the necessary exercises for breathing, tone production and vowel formation, together with copious explanatory annotations.

MASTER VOCAL EXERCISES
By Horatio Connell

Offer No. 73—*Advance Offer Price, 40c.*

THIS is a compilation of vocal study material selected from the exercises created by the greatest Masters of singing in the history of the art, from the old Italian School to the present and arranged for universal employment with the best methods of skilled voice teachers. Mr. Horatio Connell is one of America's foremost Baritones, was for a number of years the pupil of the great Julius Stockhausen, one of the greatest exponents of the "Old Italian School." It is believed that these exercises embody the traditional spirit and material of the foremost school of singing in history. Mr. Connell has made careful introductory comments with complete directions for practice with instructions in deep breathing, relaxation, articulation and tone production.

Operettas

FOLDEROL
A Musical Farce Comedy in Two Acts
By R. M. Stults

Offer No. 74—*Advance Offer Price, 40c.*

JUST as individuals who are prospects for an audience will be keenly interested in what "Folderol" is all about, so audiences witnessing a performance of this new operetta that we are to publish will be keenly delighted with its amusing developments and its melodious musical numbers. While advanced high school students or college students are sure to take up this musical play for some of their amateur theatrical activities, it also has qualities that make it suitable for use by any musical club, dramatic organization or any other group having the initiative to undertake performances of something of this character for pleasure or profit. Early delivery on advance orders is assured.

All Works Offered in Advance of Publication (Offers Nos. 53 to 81) are in Course of Preparation. Delivery Made when Published.

Operettas--Continued

PENITENT PIRATES
A Two Act Operetta for Young Men and Young Ladies
By Paul Bliss

Offer No. 75—*Advance Offer Price, 40c.*

IT is always a pleasure to go over the manuscripts of this popular writer, nor is this pleasure missing in later going over the same material in the engraver's proofs and if anything it is multiplied when reviewing the actual printed publication. This is due to those satisfying qualities that are ever present in the writings of Paul Bliss, along with clever individual points that give a freshness. Although this operetta is for young people, it is made particularly easy of performance, without lessening the effectiveness in the fact that the choruses are chiefly in unison. There is a clever plot and excellent possibilities for picturesque staging. This operetta will be ready for delivery soon and advance of publication orders should be entered immediately.

H. M. S. PINAFORE
Comic Opera
By Gilbert and Sullivan

Offer No. 76—*Advance Offer Price, 50c.*

WE have in preparation a new edition of this famous success. The collaboration of the great dramatist, W. S. Gilbert and the composer, Arthur Sullivan, resulted in some genuine art works, some of the most admirable light operas ever written. *H. M. S. Pinafore*, which heads the list, when first produced in 1878, ran in London for 700 consecutive nights. This work is still produced on the professional stage with success and it is one of the best possible works of its kind for amateur production. Its delicious humor and its tuneful solos and choruses, have a perennial appeal. Our new edition which will be printed from engraved plates, has been prepared with the utmost care.

ROMEO AND JULIET
Operetta for Men
By John W. Brigham

Offer No. 77—*Advance Offer Price, 40c.*

THE high school students or college men having an opportunity to engage in a performance of this burlesque operetta will sit down in their old age and relish recollections of it. It is full of fun for both performers and the audience, and so little is required for its production that even an impromptu stage or hall arrangement will not detract from the entertaining qualities of this forgivable burlesque on Shakespeare's classic, *Romeo and Juliet*. Lodges or any other men's organization can also use this to excellent advantage.

Every ch should have this sacred cantata in his or her personal library be thoroughly acquainted with its beautiful solos and splen choruses. This new edition will be published in ample time quantities being secured for proper rehearsals for the 1927 Le

NEW CHRISTMAS SERVICE
for Sunday Schools
By F. A. Clark

Offer No. 79—*Advance Offer Price*

MR. F. A. CLARK has to his credit some of the mo Christmas Services ever written. He has a vein of original melody that invariably proves appealing to young texts also are effective and theologically sound. The vari are well contrasted and each one is a gem in itself. Th Scriptural readings, recitations and tableaux, all appropriat

MASS No. 14 IN HONOR OF ST.
By Eduardo Marzo, Op. 203

Offer No. 80—*Advance Offer Price*

THE Chevalier, Eduardo Marzo, has made in his long ar time many substantial additions to the literature of Ch His Masses have attained enormous popularity. We no pleasure of announcing the publication of his latest Mass. to many requests, this is a Mass for Two Voices. This re able for Convent and School use and also in many Parishes not possible to sing always in four-part harmony. Many who this Mass played from the manuscript regard it as one poser's best. It is smooth and melodious throughout and w sing, it has a certain dramatic force, a very apt musical cha of the text. It is chiefly in C Major, with no extensive d the compass of the voices.

Music Literature

THE PIANIST'S DAILY DOZE
By Charles B. Macklin

Offer No. 81—*Advance Offer Price*

THIS is just the work for teachers to recommend to pup truly ambitious to accomplish something in piano playing. provides a practical system for daily attention to the devel improvement of the hands for the necessary requirements m in piano playing.

World of Music—(*Continued from Page 627*)

Isaac Van Grove's "The Music Robber," an opera founded on the attempt of Count Von Walsegg to palm off Mozart's Requiem as his own composition (Mozart is the central figure of the opera) had its world première as a complete work at the Cincinnati Zoological Gardens on July 4th. The first act had been performed at Chicago and at the St. Louis summer opera about a year ago. The score is said to be a combination of the jazz idiom and of Mozartian themes.

The Bach Choir made one of its all too rare pilgrimages from Bethlehem, Pennsylvania, when it appeared in the Auditorium of the Sesqui-Centennial Exposition, at Philadelphia, on the evening of July 8th. Eleven movements of the great "B Minor Mass" formed the major part of the program. In this Nicholas Douty, of Philadelphia, who holds the enviable distinction of having been soloist at every Bach Festival at Bethlehem, was the tenor soloist, with Emily Stokes Hagar as soprano. The last part of the program was given over to *a capella* performances of Bach "Chorales."

Fortune Gallo, impresario of the San Carlo Opera Company, is reported to be about to build, on Fifty-fourth Street, between Broadway and Eighth Avenue, a sixteen-story building, including a modern opera house and theatre, at a cost of two million dollars.

"The Monk of Toledo," a serious opera by E. Bruce Knowlton, had its première on any stage, in June, by the American Grand Opera Company of Portland, Oregon. This organization was formed with the primary purpose of allowing American composers to see their works performed and thus to promote the development of a national school of opera. A most worthy cause and aim!

Miss Adelaide M. Lee, of Detroit, Michigan, has been awarded the Estey Scholarship for pipe organ study at the Fontainebleau School of Music in France. This is the second time in three years that this distinction has been captured by a woman.

Herman Bellstedt, one of the galaxy of cornetists that shone in the second and third decades lately gone, died suddenly at San Francisco, on June 9th. A native of Germany, he was for some years soloist of the Gilmore and Sousa bands, and later was for some time at the head of a successful organization of his own.

"Rigoletto," and "Falstaff" are to be the operas performed, with Toscanini conducting, at a short season of September performances in the theatre of Busseto, birthplace of Verdi, when the twenty-fifth anniversary of the master's death will be commemorated.

Erratum—In the "World of Music" for August, it was announced that, in the recent Alberta Musical Festival, the first prize for sopranos went to Mrs. Gordon James, of Edmonton. However, later reports give this honor to Miss Ivy Snape, of Guelph, Ontario.

CONTESTS

A Prize of One Thousand Dollars is offered by the National Opera Club, for the female singer with a voice of the most outstanding quality, to be determined in the contest of 1927, conducted by the National Federation of Music Clubs. Particulars from Mr. E. H. Wilcox, National Contest Chairman, Iowa City, Iowa.

Ten Thousand Dollars in Prizes of five thousand, three thousand, and two thousand dollars each, are offered by the Musical Fund Society of Philadelphia, for the best chamber music compositions for three to six instruments. The contest closes December 31st, 1927; and particulars may be obtained by addressing the Musical Fund Society, 407 Sansom Street, Philadelphia, Pennsylvania.

A Prize of Three Thousand Dollars is offered by *Musical America*, for the best symphonic work by an American composer. The contest closes December 31st, 1926; and particulars may be had by addressing Musical America, 501 Fifth Avenue, New York City.

Prizes Amounting to Three Hundred and Ten Dollars, for the best unpublished Anthems, are offered by the Lorenz Publishing Company, of Dayton, Ohio, from whom all details may be had on application.

Three Prizes of Fifty Dollars Each are offered for the best musical setting of each of three hymns which were awarded prizes by the *Homiletic Review*. Copies of the hymn-poems and conditions of the contest, which closes September 30th, 1926, may be had from The Contest Editor, Homiletic Review, 354 Fourth Avenue, New York.

A "National Capitol Official Song" Contest is to be held under the auspices of the National Federation of Music Clubs. It is open to all American writers and composers, and full particulars may be had from Miss Beatrice S. Goodwin, Contest Chairman, 5 West Lenox Street, Chevy Chase, Maryland.

The National Federation of Music Clubs announces that, in the contest for a Prize of Five Hundred Dollars for the best Three-part Chorus for Women's Voices, the time for closing has been extended from August 1st to October 1st.

Educational Study Notes

(Continued from page 679)

Secret, by Charles Wakefield ıan.

DMAN

Mr. Cadman has indeed a secret, and one which is not easily learned—the secret of how to write songs which shall consistently be delightful and worth while. A new Cadman song is, therefore, an event. *I Have a Secret* is entirely charming; a very lovely and sympathetic setting of a lovely lyric. The composer is to be complimented on having the continued cooperation of such a gifted poet as Mrs. Eberhart, whose verses are quite super-abundant in imagery and poetic gesture. Having ics" is a very disheartening business, writer not so fortunate as Mr. Cadstify; and often, in complete despair, one's own words, or else turns, with the shoulders, to instrumental compo-

itset of this song, be extremely care- d a false portamento on the words summer." The portamento is excel- ingly used, but most singers abuse it In the present instance, do not ır voice from note to note, but move directly and cleanly, so that none of the intervening notes are heard.

The consonant D is of frequent occurrence in this song. If it is omitted in phrases like "as of old;" "croons a mother bird;" and (above all) "midnight and moonlight;" the result will be poor indeed.

The second stanza is to be sung with even greater expression than the first; and the climax "for you, for you" must be uttered with the joy bred of the possession of a regular one hundred per cent. gilt-edge secret which you are about to divulge to a worthy confidant.

Lead Thou Me On, by R. M. Stults.

This is a fine sacred song, with a strong textual basis. It is in the so-called "two-part" form; that is, in two identical halves (A-A). Or, if you desire, you can regard the 6/8 section separately, in which case the pattern would be A-B-A-B. Take this 6/8 section at a slightly increased tempo.

Mr. Stults is a resident of Philadelphia. Born in Hightstown, N. J., he later removed to Long Branch, L. I., N. Y., where he was a member of the faculty of the Long Branch High School. His studies were pursued mainly under the guidance of the famous teacher Frederick Brandeis, in New York City. In 1886, Mr. Stults went to Baltimore to live, and in 1898 he finally settled in Philadelphia. His ballads and comic operettas are well-liked, his song "The Sweetest Story Ever Told" having enjoyed enormous sales.

‹tment of Orchestras and Bands

ontinued from page 647)

‹tistic conductors who do not ealize that orchestration is writ- heard, and that such orchestral ıake music beautiful. They insist on that which we would ıost monotonous homogenity of h well could be replaced by a n at much less expense.

Let It Be Heard

;T GLARING example of such :e was in the case of the oboe solo *)verture to William Tell* that l recently when the accompani- ts were played so loudly that :h the greatest difficulty that we all make out the solo, although played it frequently and know e of it. Evidently there must ı some criticism on this per- for a short time afterwards, the same repeated by this or- ıd the solo came out as it should. rt played by the oboe in the is chiefly melodic, either as solo ato, also doubling other parts, ing to its great wealth in over- most effective in enriching the the ensemble. It is also, but ed extent, used harmonically in ects as fully characteristic as the 'cello. In large orchestras, ays been the prescribed right of to give the "a" from which ruments tune.

Compass

COMPASS of the oboe is two a half octaves; from b-flat below o the second "g" above the staff, considered the extreme note on ument. Two semitones above possible under favorable condi- not practicable for use. In fact, low the "g" are not advisable to ted in anything but solo work player is in full control and t to any restrictions as in orches- The real working compass of we would therefore say, to wo octaves. The extreme upper not advisable for rapid execu- me of these are made by special what are termed "cross finger- ing," an awkward condition which prevents quickness of execution. Also this brings about an impossibility of perfect slurring or connecting notes without breaks between them in tone.

The student is advised not to attempt sight-reading in ensemble work until he is advanced in the use of the various fingerings, of which there are in some cases several for the same note. By this means, it makes slurrings of certain passages possible, and also often betters the intonation which in some combinations may be faulty.

Examples of the use of the oboe are so frequent in the classics that it is difficult to select from such a number. A most excellent example, demonstrating the singing quality of the instrument, is the *andante* in Tschaikowsky's *Fourth Symphony*, where it starts off with an oboe solo of considerable length. Another, a very frequently quoted example, is the oboe in the *andante con moto* in Schubert's *Unfinished Symphony*, which is a most beautiful composition for the instrument. The oboe solo in the Symphony in C, by the same composer, although frequently quoted as an example, does not seem to us to be a happy composition to show off the instrument to the best advantage.

These are but a few examples taken from many. However, there will be no difficulty in finding more, as the music of the higher class composer abounds in them, which although not always the best to show off the capabilities of the instrument to advantage, are at least, capable of giving an intelligent idea of its beauty of tone.

Paderewski's Hands

By Hope Stoddard

SOMEBODY has suggested that a slow "movie" be taken of Paderewski's hands at the piano. Think what it would mean to follow every microscopic change of muscle, every intimation of controlled impulse, every preparation for the final assault; all suggesting the psychological processes themselves.

Then, too, graceful as waving grain and as mighty as the toiling sea would be the sweep of those hands. A picture to be handed down to posterity as a worthy companion to records of his music!

SUMMY'S CORNER

THE RIGHT THING TO DO HAS HAPPENED

The music publishers in general have reconsidered their attitude toward the teacher of music; they have decided to price their music on a basis that will permit a reasonable discount to the teacher.

Misinformation, a wrong conception of conditions prevailing in our line of business, and an unfair attitude toward the teacher, all conspired to establish the impractical and impossible.

The whole matter was conceived in error. We felt certain that it could not succeed, hence our stand against it.

The result of the contention left conditions virtually where they were, except that the order is that music shall not be marked at a price higher than it is intended to be sold for at retail. This we deem to be an entirely reasonable request, and is a condition that could just as well have been arranged for by mutual consent. The teacher is not, never has been, and cannot be classified as a retail purchaser.

The outcome will be a gradual, if not an immediate re-adjustment of prices and discounts; a re-adjustment that will be satisfactory to all that are open to fairness and reason, and which will have a tendency to stabilize the business; something that was sadly needed.

Very respectfully,

CLAYTON F. SUMMY CO.

The Right Thing to Do

By Anna M. Taylor

Miss Alcott was a lady who taught boys and girls how to play on the piano. She was going to give a musicale, but when she wanted to put Loretta Dean's name on the program, because she thought she was one of her best pupils, that little girl burst into tears sobbing, "I *can't*, I *can't* play with so many people looking at me."

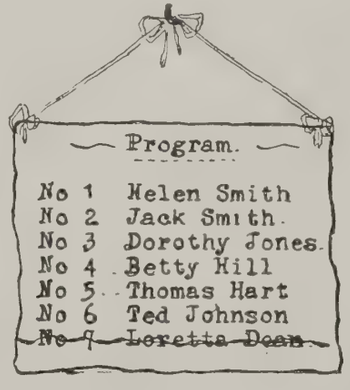
Miss Talcott's face showed her disappointment, but, putting her arm around Loretta she tried to persuade her to change her mind. Nothing she said or did could make Loretta forget the horror of being "*looked* at."

Feeling it was useless to try to gain her consent, her teacher told her to dry here eyes and she would take her name from the list, although she knew how grieved her mother and father would be not to see their daughter's name among the performers.

Loretta smiled gratefully, and, wiping away her tears on the corner of her apron, because she had left her handkerchief on the piano, she put on her coat and hat and, tucking her music roll under her arm, said "good-bye," hurried out of the door and skipped down the street without a thought of what her refusal to play had meant to her teacher.

She had not gone very far before she saw a crowd of people looking at something in which they were very much interested.

Loretta edged her way until she was in front of the crowd. What she saw was a boy who had fallen off his bicycle and cut his head. He was very white and Loretta thought he was going to faint, like her brother Joe did when he fell down stairs. Nobody tried to do anything until a young girl not very much older than Loretta stepped forward and, taking a clean pocket handkerchief out of her bag, bound it carefully over the wound after cooling his temples with water. The boy thanked her and said, "Gee, that makes me feel a whole lot better."



As she turned to go away, Loretta heard somebody say, "How *could* you do it with all those people *looking* at you?"

"I wasn't thinking about the people," replied the girl, "It was the right thing to do, and I did it the best that I could."

Loretta was ten years old and large for her age, but when she thought of what she had heard the young girl say, and remembered how foolishly she had behaved over people looking at her at the musicale, she felt as small as her baby brother, who was not big enough to reach the piano keys without being lifted on to the stool.

The more she thought of her selfishness and ingratitude, the more ashamed she felt, until, before she had finished her lunch she said, "Mother, please excuse me; I can't wait to eat any dessert because I've got to tell Miss Talcott something I ought to have told her before."

She ran so fast, it was almost a breathless little girl who stood tugging at Miss Talcott's front-door bell; and it was a very happy music teacher, who, when she opened the door was greeted with the news that her pupil did not want her name, "scratched off the program."

The day of the musicale came. The hall was decorated with bunting; for Miss Talcott had done everything to make the occasion a happy one. The friends and relatives of those taking part in the recital filled every seat, while the girls and boys having a part in the program were seated on the platform, in their prettiest dresses and best clothes.

When Loretta's turn came, she smiled and bowed to the audience, and seating herself at the piano played with such ease and precision that she was applauded until she was obliged to play her selection again.

Miss Talcott kissed her and thanked her for doing so well.

"It was the right thing to do and I did the best I could," replied Loretta, wishing that the young lady could know how much her words had helped her.

Mid-Summer Night's Dream

I dreamed a dream
One summer night,
That I had learned
My scales just right.

I'm trying now
To make it true;
I really wish
It were, don't you?

Club Corner

Dear Junior Etude:

Our music teacher has a music club which meets every month. We have on our program: Telling musical stories, reciting musical poems, playing solos, duets and trios. We enjoy it very much. When we play we have to tell who was the composer and something about him or her. Then in every June and December our teacher has a recital, to which she invites our mothers.

Our mothers see how we are getting along in our music.

We have a splendid teacher and she makes music interesting for us.

We hope we will see our letter in The Junior Etude.

From your friends,
Doris and Frances Ledbetter,
(Ages 11 and 12).

Dear Junior Etude:

Two years ago this past November, the Junior Music Club of Montrose Colorado was started with eight girls, under the supervision of Mrs. E. J. Braund.

The officers of the club are president, vice-president, secretary and treasurer.

The club now has a membership of about twenty-five.

This club meets every two weeks at the homes of the different members. We have volunteers' programs and sometimes one certain child has the program alone. We study different composers and have a program by some one composer.

We often give public programs.

One afternoon a Benefit Program was given for a little girl who is in the hospital.

The club belongs to the National Federation, and we expect them to help us in our programs.

Yours truly,
Maurine Hitchcock,
(Chairman of Committee)
Genell Pence,
Nola Nelson.

Question Box

Dear Junior Etude:

I am eleven years old and I have only taken music lessons since March of last year. I can read well, but I cannot memorize. If you could tell me a remedy I would be glad. It takes me nearly a week to memorize. I am the youngest going to school here.

M. M. (Age 11), Texas.

Answer—There is no really easy way to memorize; but to some students it comes much more easily than to others. As you say you are a good reader, you probably like to read more than to memorize, and consequently you develop your reading more than your memorizing. One of the great secrets in memorizing is to pay strict attention to what you are doing, to "concentrate." Another is to memorize only a few measures at a time, intead of a whole piece and the last is to have a great deal of patience and "stick-to-itiveness."

A Rondeau

By Lynne Roche

To play a note is lots of fun
If once the trick is well begun;
Just raise the finger, 'bout so high,
Hold it awhile, then let it fly
Quick to the key; and all is done.

But, should an o'er-ambitious son
Attempt a lively scale to run
Too soon; a fight 'twill be to try
To play a note.

Beware, my child, and widely shun
A goal by no due effort won;
Take time to test each tone; and vie
That each outsing the last; then nigh
Will be the time 'twill vex you none
To play a note.

JUNIOR ETUDE—Continued

A Trip Through Musicland

(*Continued from page 705*)

clear that we can see the little pebbles on the bottom—and it ripples along in such a graceful, easy, carefree way.

Here we are, coming out at the other end of the reservation. Which way shall we go now? The road to the right is Lazy Street. A few cars go down there; but what does the other sign say? "To Technic River Speedway." We'll go to the left. There is just a little short street before we enter the Speedway; but I think we had better stop at this filling-station and get some more Ambition.

All right, now we are off again.

Oh, there is the river! Isn't it wonderful? And just look what a strong, swift current it has! The Speedway is quite long, but very lovely.

Wouldn't you like to go a little farther and see Imagination Ocean? I knew you would. Then we must go inland for a while through the towns of Good Memory, Courage, Poise, Dramatic Highlands, and Expression-by-Emotion. Each of these towns is so interesting that we enjoy the ride immensely. Do you see that hill ahead? It is called "Never-Stop-Trying-Hill." We drive up it—and what a view greets us! That hill miles back is Beginning Hill; and do you see the Technic River? I do. And look! Straight down that street is Imagination Ocean!

Everybody's curiosity is aroused, so we drive down. We find ourselves on Inspiration Beach on the Ocean of Imagination. Let us go in bathing! All plunge in! This is the only beach in the world where the water and sand can inspire you this way and make you dream such wonderful dreams.

When we come out of the water, we get some "keep-it-ups," a special kind of confection sold only here. We have so much fun! And then—well—nobody wants to go back.

So we take a cottage in the "Colony of Workers," and stay—always doing our very best to give to the world something of all the wonderful Beauty we have seen and known!

Letter Box

DEAR JUNIOR ETUDE:

I am organist in our church. It is just a small church, but the playing is not so easy. I have to prepare four different pieces each Sunday. It is rather difficult to select pieces that will be suitable. The offertories must be somewhat soft and slow.

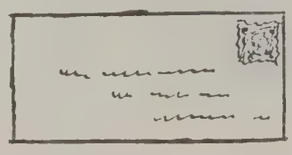
I began playing when I was eleven.

I am going to write again soon to tell you about our annual Eisteddfod.

From your friend,
CATHERINE DANDO (Age 13),
Ohio

DEAR JUNIOR ETUDE:

I have not seen many letters from Oklahoma, so I thought I would write.



I am only twelve years old, but am teaching music. I have studied piano seven years. I won a track meet when I was eight years old. Next summer I hope to study piano with a good teacher in Oklahoma University.

From your friend,
DOROTHY KIRK (Age 12),
Oklahoma.

The JUNIOR ETUDE *contests which have been discontinued during August and September will be resumed next month. The answers to the May contest will appear in October.*

DEAR JUNIOR ETUDE:

I hope I will see my letter in print. I am the secretary of the "Harmonia Mozart Club." Our motto is, "I can if I try." At our last meeting we decided to renew the subscription to THE ETUDE for our library, as there is such a demand for it. We all enjoy our club very much.

From your friend,
MARGARET E. ZECHIEL (Age 10),
Indiana.

DEAR JUNIOR ETUDE:

After reading the JUNIOR letters, I feel that I would like to have a part in them.

I am fifteen years of age, and a sophomore in high school. I live in California, in a very small place; and, not having any teacher here for the piano, I have to go to San José, twenty-five miles away, making fifty miles round trip, once a week, for my lesson.

My folks being poor and my lessons expensive, I am making my expenses by teaching piano to ten boys and girls, with the guidance of my teacher. I hope to start a music club soon, for I know it keeps interest aroused among the pupils.

My teacher has such a large class that she has to have five recitals, and they are divided into different groups. I played in the college group.

I live five miles from school, so I have to start early in the morning, and I get home late in the afternoon, which leaves only a short time to practice.

From your friend,
EVA WINIFRED HALL (Age 15),
California.

N. B. Here is another music student who loves music and is willing to undergo all kinds of inconveniences and trouble in order to take lessons. Do not such letters make some people feel a little bit ashamed of things, once in a while?

DEAR JUNIOR ETUDE:

I have enjoyed your page since last January, when I started to take THE ETUDE.

I saw so many interesting letters in this month's JUNIOR ETUDE that I decided I would write, too.

I am very much interested in music, especially that of the piano. I take piano lessons from the Ursuline Sisters at St. Patrick's Academy. I do not take lessons during the summer months and THE ETUDE helps me greatly to keep in practice.

I will enter high school next fall, and I intend to take up chorus work.

We have quite a list of musical talent in our little city. The opera "Fra Diavolo" was staged not long ago, and, within the last two school-years, the "Mikado," "Pirates of Penzance," and "Pinafore" have been given by the high school.

I am afraid my letter is getting too long.

From your friend,
HELEN C. DORAN,
Nebraska.

Edward Hagerup Grieg

Noted Norwegian Composeer, born 1843 died 1907

Composed many works for piano, violin, voice, orchestra. His compositions show marked Scandinavian characteristics. Perhaps you play his "Butterflies" or "To Spring."

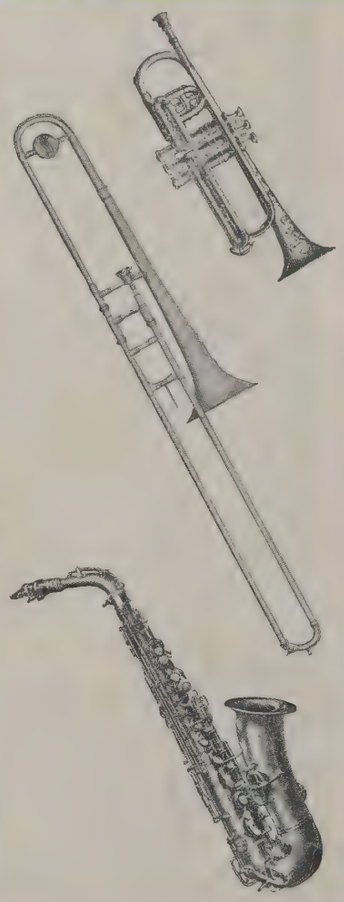
The Right "Gang" to Join



FINE, manly fellows, these chaps who play in the band! They like fun, and get a lot more of it than most others. They go places and see things, as few others can. For the band is in the spotlight wherever big things are happening.

Parents, to insure your boy's future, let him join a band. Big men in American business, statecraft and professions played in the band in their youth. Many earned their education with their talent. They know the fun, and the value of it. In any career, music helps the young man to success.

You fellows, who are out to make something of yourselves, start now with a Conn instrument. You'll learn to play it quickly. **Easy-playing** qualities, exclusive features, speed your progress; practice is real fun. Famous professionals prefer Conns. You can have the same instruments at no greater cost.

Conn will help organize a band in any school, legion post, lodge, scout organization or community. Write for full details now, no obligation is involved.

Free Trial, Easy Payments on any Conn instrument. In over 50 years' experience building high grade instruments Conn has won highest honors at world expositions. Send the coupon now for free literature and details of free trial offer.

Excellent Christmas Cantatas

The Awakening.....William Baines .60

Christmas Cantata for treble voices (Two Part). Very desirable for churches where men singers are not available. The music is excellent and the text well selected. Junior choirs can use this cantata. Requires a little over a half hour.

The Promised Child.....R. M. Stults .60

A Choral Cantata for Christmas for Mixed Choir and Solo Voices. A melodious cantata that a choir will enjoy singing. Each solo voice has grateful work and there is a special number for women's quartet or chorus, and also one for men's quartet. An effective 35 or 40-minute cantata. Words only. $2.00 a hundred.

King of Kings and Lord of All.....R. M. Stults .60

A new Christmas cantata with a pleasing variety of solos and choruses; not too difficult.

The Herald Angels.....R. M. Stults .60

A new and very attractive cantata based on the part taken by the angels before and at the time of the birth of Christ. An effective rendition may be given by an average church choir.

The Wondrous Light.....R. M. Stults .60

Adapted for the average choir. Solos and choruses well assorted. Telling the Christmas story in tuneful and well-written numbers. Brilliant and effective.

The Holy Night.....Lucien G. Chaffin .60

A short but very attractive cantata, suitable for a choir of any size, and effective even with a quartet.

The Greatest Gift.....H. W. Petrie .75

The Greatest Gift is brilliant, dramatic and effective throughout, without being at all difficult.

A Christmas Oratorio.....W. W. Gilchrist 1.25

An impressive work, for any choral society or large chorus choir. The music is dramatic and modern in tendency.

The King Cometh.....R. M. Stults .60

The work is divided into three parts: "A King is Promised." "The Incarnation," and "The King is Born." Suited for the average chorus or volunteer choir.

The Morning Star.....John Spencer Camp .60

A charming Christmas cantata. This work will make a splendid novelty for a special musical service.

Carols

Three Slovak Christmas Carols. For mixed voices. By Richard Kountz.

The melodies are authentic Slovak carol-tunes, dating from the late tenth and early eleventh centuries. Catalog No. 20255. Price, **10 cents.**

Christmas Praise. Six Carols, by H. M. Staton.

A fine set of carols, bright and festive, yet churchly and dignified; original musical settings to some well-known standard and traditional texts. Good for either the church or Sunday School. Price, **6 cents, $5.00** a hundred.

Standard Christmas Carols No. 1.

Standard Christmas Carols, No. 2.

Standard Christmas Carols—Two Parts, Treble Voices

Standard Christmas Carols—Men's Voices.

The very best and most popular Christmas carols. Price, **10 cents** a copy. **$6.00** a hundred.

Services for Sunday School

Christmas Night! Holy Night! A well-planned service. Singable Christmas Hymns, Responsive Readings and impressive little recitations.

The Christmas Story. The Sweetest Story Ever Told.

A very interesting and melodious service that will please Sunday School members.

Glad Tidings. Words and music by R. M. Stults and others.

A successful service, delightful in every particular and in great demand.

Joy of Christmas. Words and music by R. M. Stults and others.

Joyous music set to bright and appropriate texts, tuneful and catchy, echoing the true Christmas spirit and sure to please.

Christmastide Reverie. A Christmas service for Sunday Schools. Contains all recitations, etc., necessary for an entire service.

With Joyful Song. Complete Christmas service for Sunday Schools. Words and music by R. E. DeReef and others.

A brilliant Song Service, easily learned. Consists of twelve tuneful carols, interspersed with novel and appropriate exercises, recitations and readings.

Price of any of the above services: Single copy, 7 cents; dozen, 80 cents; 50 copies, $3.25; 100 copies, $6.00, all postpaid

Alleluia. Christmas Service of Praise. Words by Gertrude Knox Willis. Music by Mrs. R. R. Forman.

Will appeal to all those who are looking for a short service to be used in connection with other addresses and carols for a Christmas program for the young. Price, **20 cents** a copy.

OUR STOCK OF CHRISTMAS MUSIC IS NOT LIMITED TO THE NUMBERS NAMED ON THIS PAGE AND ANY DESIRED CHRISTMAS MUSIC, NO MATTER BY WHOM PUBLISHED, CAN BE FURNISHED PROMPTLY.

Fine Entertainment Material for the Christmas Festivities of the Young

OPERETTAS

The Crosspatch Fairies

By Norwood Dale **Price, 60c**

A Christmas play with music for little folks, giving a brand-new treatment of the holiday spirit. It may be used in Sunday School or Day School. The Mother Goose and Fairyland characters appear, and Mr. and Mrs. Santa Claus, of course. The story is exceedingly interesting and the music tuneful, sprightly and safely within the range of children's voices.

In Santa Claus Land

By G. M. Rohrer **Price, 60c**

A little Christmas play in one act, admirably adapted for use with Sunday School or day classes. An excellent performance may be given with very little preparation. Contains nine musical numbers, all tuneful and catchy.

CHILDREN'S SONGS

Happy Children

By Wallace Johnson

Catalog No. 19571 **Price, 25c**

A joyful little number that may be played or sung by a young performer.

Babies' Night

By M. Greenwald

Catalog No. 11796 **Price, 25c**

This is an easy little piano number with three verses of text that may be sung to the melody. The text is sacred in character.

Little Skeptic

By G. Spaulding

Catalog No. 11949 **Price, 25c**

This is one of Spaulding's melodious little piano solos with cunning text that may be sung by a little boy.

TOY SYMPHONIES

Christmas Toy Symphony

By H. D. Hewitt

Price, Piano Four Hands and All Parts, $1.50

Piano, Four Hands alone, 75c

Can be given with almost any number of instruments. Easy to rehearse and very brilliant. The performers will enjoy it as much as the audience.

Christmas Bells

By Arthur Seidel **Price, 40c**

Does not require many performers, as it is for piano, and three glasses, bells or metal bars and two or three players are sufficient.

Toy Symphony

By J. Haydn **Price, 25c**

Arranged for Two-Part Treble Voices to be used with instrumental arrangement

MUSIC APPRECIATION FOR THE STUDENT

By **J. Lawrence Erb**

"More important even than making music *understood* is making it *enjoyed.*" This spirit animates and pervades this remarkable new book. It is entertaining without being superficial; informative without being pedantic or dogmatic. American music and musicians are at last given the impartial consideration and representation which they deserve.....*net* **$2.50**

The DILLER and QUAILE BOOKS

By **Angela Diller** *and* **Elizabeth Quaile**

This very popular Series has two objects: To provide, in the earliest stages of the child's piano study, material of permanent value, which shall serve as a basis for the development of his taste. This material consists of folk-tunes and classic compositions. To provide a plentiful selection of pieces of real musical interest so carefully graded, both musically and technically, that the child is stimulated, but not overtaxed.

MASTER SERIES FOR THE YOUNG (PIANO MUSIC)

In 12 Volumes. Selected and Edited by **EDWIN HUGHES**

This unique Series gives the young pianist an assortment of fine material from the master composers for the piano. It fills a long-felt want in educational piano music. It is virtually a miniature *Schirmer's Library* of classical piano music. Each volume is a simple, reliable and progressive introduction to the individuality and characteristic style of the master in question. Every composition was written especially for the piano. All are here given in their original form. Carl Engel has written a delightful biographical and esthetic introduction to each volume. The masters represented are: BACH, HANDEL, HAYDN, MOZART, BEETHOVEN, SCHUBERT, WEBER, MENDELSSOHN, SCHUMANN, CHOPIN, GRIEG, TSCHAIKOWSKY.

THE GOLDEN CAGE

By **Arthur Whiting**

A Dance Pageant arranged from the Poems of William Blake by Catharine C. Smith, *net* **$2.00**

The instrumental Prelude is followed by seven pantomimic and choreographic Episodes, introduced and interspersed by the delivery of Blake's poems in monologue and dialogue form. Can be given with piano accompaniment or string orchestra of 1st, 2nd and 3rd Violin, Violoncello, Contrabass, Flute, Triangle and Cymbals.

THE SPIRIT OF THE SEA

Scenario by **Ruth St. Denis**

Music by **R. S. Stoughton**

Piano Score, net $1.00

A beautiful ballet for schools to give as a welcome change from the customary operetta. The choreographic pantomime pictures the adventures of the Fisher-boy with his alluring little play-fellows, the Sand Nymphs; and finally with the fascinating Spirit of the Sea, herself.

If not in Stock at Local Dealer's, order direct

3 East 43d St., G. SCHIRMER, Inc., New York

To the Teacher of Music

We prefer to distribute our materials through the local dealer. It so happens, however, that some teachers are located in territories which do not have the services of a music dealer immediately available. Also there are some dealers whose stocks are inadequate properly to accord the teacher "On Selection" privileges. To those teachers we offer to send direct such classifications of materials as they may specify, most carefully selected by specially trained clerks, in that branch of music in which the inquirer is interested.

If the teacher so interested prefers to advise us the name and place of business of his or her local dealer, we will, if that dealer be in proper standing with us, charge and send the "On Selection" material to that dealer, properly identified so that it will be brought promptly to the attention of the teacher. If the teacher chooses, he or she may make lists from the "On Selection" music sent by us and order same from the local dealer.

Our intention is not to solicit teacher-patronage from the legitimate dealer to whom it rightfully belongs, but rather to enable us to bring more intensively to the attention of those interested, the large quantity of new, interesting and improved materials which we are publishing continually and which otherwise may escape the teacher's notice.

Cordially yours,
G. SCHIRMER, INC.

Taking stock of your beauty

—at the end of a perfect summer

ON the one hand, you have health, radiance, energy! On the other, layers of tan, islands of freckles, coarsened skin, "squint lines" at the eyes that deepen into crowsfeet and wrinkles, open pores, and all the penalties of neglected beauty.

At the end of every summer, the salon of Helena Rubinstein is eagerly besieged with damsels and matrons who have enjoyed the summer all too well—and who now hasten to obliterate the relics of outdoor exposure.

For quickly clearing and bleaching the skin —for removing sallowness, tan and freckles — for youthifying and beautifying both the complexion and contour—daily use of the following Helena Rubinstein preparations is especially recommended at this time of the year.

The basis of beauty

VALAZE PASTEURIZED FACE CREAM—a marvelous cleanser—removes dust and grime thoroughly—keeps complexion smooth, protected, healthy. Excellent for all normal skins, also the only cream that positively benefits an oily, pimpled or acne blemished skin. *4 oz.* 1.00, *½ lb.* 2.00, *lb.* 3.50.

If your skin is very dry, alternate *Valaze Pasteurized Face Cream* with VALAZE CLEANSING AND MASSAGE CREAM "the indispensable quick cleanser"—keeps the complexion exquisitely smooth. 75c, 1.25.

To clear and whiten, follow with

VALAZE BEAUTIFYING SKINFOOD—"*the skin-clearing masterpiece*"—lightens, purifies and refines the skin, bleaching away tan, freckles and sallowness. The ideal beauty cream for daily use, the year round—creates a fascinating delicacy and whiteness. 1.00, 2.50, 4.00.

For very obstinate freckles or a heavy coat of tan, use VALAZE FRECKLE CREAM. Bleaches, freshens and tones up the skin. 1.50.

"Squint lines", wrinkles, crowsfeet

VALAZE GRECIAN ANTI-WRINKLE CREAM—richest of nourishing creams—feeds the underlying tissues, smoothing out lines, wrinkles, crowsfeet and filling out hollows. Unequalled for crinkled eyelids and old-looking hands. Prevents summer "squint lines" from forming into wrinkles. To keep youthful, pat in nightly, especially around eyes. 1.75, 3.50.

For smart finishing touches, use the flattering VALAZE ROUGES in *Red Raspberry*, a brilliant, colorful tone, Red Geranium, a youthful color or *Crushed Rose Leaves*, a subtle conservative shade. *Compact* 1.00, *Rouge-en-Creme* 1.00, 2.00. VALAZE LIP-STICKS to match 50c, 1.00. Scientifically compounded to guard even the most delicate skins.

Dispensed by trained and competent advisers at the better stores—or order direct from Dept. E-9

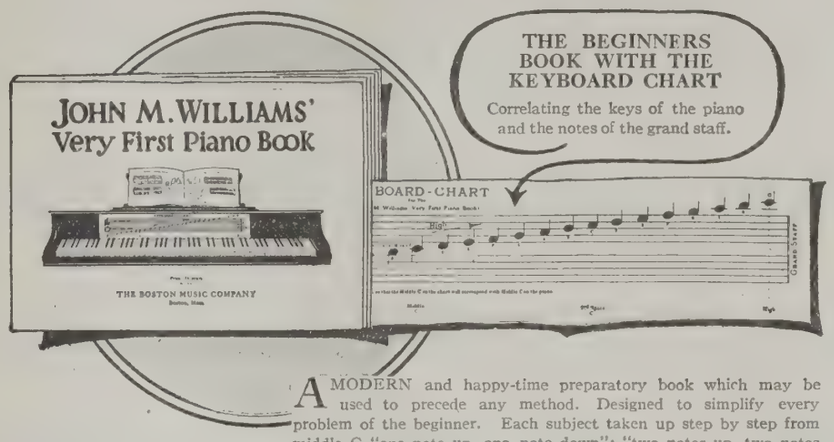
A Page for Progressive Teachers



For over twenty years the aim of The Boston Music Co. has been to keep its publications abreast of the very best educational tendencies in the musical world. To materialize this purpose, new works have been regularly secured from the most successful educator-composers, and every skilful artifice known in musical editing employed in their presentation. Moreover, the firm has consistently kept its "ears to the ground" in anticipation of giving the teachers exactly what they want in the manner and form in which they prefer it. The music offered on this page is worthy of the consideration of any teacher, and if it can not be examined by means of your dealer's "On Sale" facilities, write direct to the publishers.

University Extension Conservatory

The World's Largest Conservatory of Music

(Twenty-fifth Year)

If you were fortunate enough to attend a Summer Master School at a large music center this ye you gained much inspiration and many valuable ideas. Teachers from all over the country com Chicago during vacation time to further their music studies. They are anxious to crowd as much s as possible in a short summer term. Whether or not you have spent part of your vacation in impro your own ideas so you may get better results in your teaching for the coming Fall, you realize importance of constant study. You can continue your work throughout the entire year.

Get An Accredited Course

State Departments of Education recognize schools with high scholastic standing. Our Diplo Degrees and Teachers' Certificates granted by the authority of the State of Illinois.

Extension Courses Growing in Popularity Each Month

The greatest Universities in the Country —more than seventy-five colleges and 200 schools—have departments for correspondence instruction. The total mail-study enrollment in the United States is estimated at between four and five million students, which is nearly five times the whole enrollment in all our universities and colleges, great and small. Somebody in every fifth family in the United States is "taking a mail course" of some sort.

The method of teaching by mail is not new. Some of the ancient Romans left series of instruction letters that are virtually mail lessons. In England and Germany, more than a century ago, correspondence instruction was given in ethics, morals and politics. In Germany and France, many years ago, languages were taught this way; and in the United States the Chautauqua movement had already created a demand for mail instruction.

Study in Your Own Home with the Best Teachers in the Country

Earnest, ambitious students are invited to send for our catalog and sample lessons. Sent any obligation and they show how it is possible to get accredited courses without having to g from home for an expensive course.

We have been offering our courses through the ETUDE ads since 1908. If you haver for literature before, *do it now*. Check on the coupon below what particular course you wis have back of you the organized experience of the largest music training institution in the wo authoritative findings of able specialists, the actual procedure of the most successful teachers.

The Piano Course is by William H. Sherwood; the Harmony Course by Rosenbeck Protheroe; History, including Analysis and Appreciation of Music by Glenn Dillard Gun vanced Composition by Herbert J. Wrightson; Ear Training and Sight Singing by F. B. Director of Music, University of Illinois; Public School Music by Frances E. Clark; Chora ducting by Daniel Protheroe; Violin by Dr. Heft; Cornet by Weldon; Banjo by Frederick J. Mandolin by Samuel Siegel and Guitar by Wm. Foden.

MAIL THE COUPON TODAY!

If you are a teacher of music, take the time to tell us something about yourself. It w us in selecting lessons for you—lessons which will show you how to get better results and sa and make more money.

Wanted: Teachers in the different Cities for affiliation to take charge of our branch schools. If interested, mention in your inquiry.

The World of Music

Two American Compositions—Howard Hanson's new orchestral work, "Pan and the Priest," and Henry Hadley's symphonic poem, "The Ocean"—are to appear as novelties on the programs of the series of "prom" concerts, which began August 14, in Queen's Hall, London, under Sir Henry Wood. Few musical institutions of the world have done so much to encourage the new composer velop a popular appreciation of good have these "Prom" concerts.

rick Schalk has become a center sturbed conditions which involve the tate Opera (or United States Thea-bined). Memorials to Horatio Parker and Victor Herbert are late accomplishments. A bronze tablet has been placed on the birthplace of Parker, at Auburndale, Mass., by the American School of Normal Methods and was dedicated on July 26. A bronze bust of Herbert is to be placed at the southwest corner of the concert grounds of Central Park, New York, making him the ican composer to be thus honored leasure grounds.

Francisco Music Festival is to rt April, with Alfred Hertz and Dr. hke as conductors. A performance "St. Matthew Passion Music" is to g feature; also there will be a series al concerts with eminent soloists.

Irenée Bergé, composer, conductor and pianist, died at Jersey City, N. J., July 30. Born in Paris in 1867, he graduated at the Conservatoire where he was a pupil of Massenet, later became assistant conductor at Covent Garden, and in 1900 came to New York as a member of the faculty of the National Conservatory organized by Jeannette Thurber. In 1923 he won the $500 Prize of the National Federation of Music Clubs with his song, "Spring in Sicily."

The Three Choirs Festival of Worcester, England, was held from September 5th to 10th. It opened with Mendelssohn's "Elijah," included Elgar's "The Apostles," and "The Kingdom," Berlioz's "Te Deum," Ethel Smyth's "A Canticle to Spring," Beethoven's "Mass in D," and closed with the "Messiah." The London Symphony Orchestra supported the great Festival Chorus, under the baton of Sir Ivor Atkins. This is the festival which first gave prestige to our Horatio Parker by the performance of his "Hora Novissima."

Alessandro Scarlatti's Birthplace, which has been disputed by Trapani and Palermo, Sicily, seems to have been authenticated by a recent discovery in the Marriage Register of Naples which designates Scarlatti as "civitas Panormi." As Panormus was the ancient name of Palermo, this evidence seems to be conclusive.

Louis Fleury, one of the greatest flutists of our time, died recently in Paris, at the age of forty-eight. He founded in 1906 the Société Moderne d'Instruments à Vent (Modern Society of Wind Instruments), and since that year has been director of the Societé des Concerts d'Auterfois (Society of Ancient Concerts).

The Conneaut Lake Park Music Festival was held from July 17 to 25. Performances of Haydn's "Creation" and Handel's "Messiah," by a chorus of one thousand voices, the Rochester Philharmonic Orchestra and well known soloists, under the direction of Guy Fraser Harrison, were the outstanding choral events. An "American Ode," by Richard Kountz, written especially for this event, was another item of interest. Following this festival the Rochester Opera Company gave in August a season of two weeks of grand opera in English.

The Tercentenary of Dr. William Heather, the Tudor music-lover who founded the professorship of music in Oxford University, was recently celebrated at Oxford and by a special service in Westminster Abbey where he was a lay clerk.

Sir Edward Elgar has achieved the unprecedented by conducting a program of his own compositions for both the London Symphony Orchestra and the Royal Philharmonic Society. From the latter organization, with a past unexcelled in the world, he received the Gold Medal of the Society on the occasion of their concert.

Reginald Heber, author of "From Greenland's Icy Mountains," and Bishop of Calcutta, recently had a tablet unveiled to his memory, at Wrexham, England.

"Snowbird," an opera by Theodore Stearns, an American composer, and with its libretto on an original story of New England life, by an American writer, is to be produced in the Dresden Opera House early in the coming season, with Fritz Busch conducting.

The Committee of the "Old Vic" Theater is sponsoring a scheme for a joint theater, The Sadler's Wells, where they aspire to establish "a permanent opera company where young aspirants may gain an operatic training and where some of those English artists who are at present obliged to adopt foreign names and sell their talents to foreign capitals will be included." America, take notice!

"Venus and Adonis," a Seventeenth Century masque, by Dr. John Blow, teacher of Purcell, for whom he made way as organist of Westminster Abbey in 1680, and then again resumed the post on the death of the younger musician in 1695, was recently revived at the New Scala Theater of London by the Students of the School of Opera of the Royal Academy of Music.

The Milwaukee Liederkranz, under the direction of D. C. Luening, its seventy-eight-years-old choirmaster, has returned lately from a tour of forty concerts in Germany and Switzerland. Another series is planned for 1928, when it will go to participate in a song festival at Vienna. At Dresden representatives of thirty-three organizations, each carrying its own flag, greeted the singers.

Havana, Cuba, heard Beethoven's "Eroica" Symphony for the first time when it was played at a concert in the National Theater on the morning of July 18 by the Havana Symphony Orchestra, under the leadership of the brilliant young conductor, Gonzalo Roig.

PIETRO MASCAGNI

Mascagni will arrive in America early in September to conduct a series of performances of his works, by the San Carlo Opera Company, in Philadelphia, New York and Boston. Of particular interest will be his conducting of the American première of his latest opera, "Il Piccolo Marat (the little Marat)." This had its first performance on any stage in Rome in 1921 and has been described as the composer's greatest success since "Cavalleria Rusticana." The composer's first and only other visit to this country was in 1902.

The Grand Prix de Rome has been awarded to René Guillou, a native of Rennes, twenty-three years of age, who was a student at the Conservatoire from 1910 to 1917, when he won prizes in harmony, fugue, composition, piano, accompanying and history of music.

"Turandot," Puccini's posthumous opera, has been produced in Dresden with great success. Its oriental atmosphere, its spirit of romance, its wealth of pageantry, with the genius of the music, seem to have created another opera with a prospect of longevity.

The National Association of Organists met at Philadelphia from August 31 to September 3, with Henry S. Fry presiding. Discussions relative to the interests of the profession were led by prominent speakers; and there were recitals on the great Wanamaker organ, on the Atlantic City High School organ, and one by Firmin Swinnen while the convention attendants were the guests of Pierre S. du Pont at his sumptuous residence at Longwood, Delaware. On August 31st the organists were entertained at the Presser Home for Retired Music Teachers.

OTTORINO RESPIGHI

Ottorino Respighi, a leader among the famous Italian composers, according to late reports will be with us again in the coming season. His new symphonic poem, based on the life of Nero, is to have its first hearing in this country when it is played by the New York Philharmonic Orchestra during Signor Toscanini's season. Of the modern Italian composers Respighi has been an especial leader in creating in the larger forms.

The Historic Costanzi Theater of Rome has been purchased by the municipality at a reported price of 16,000 lire. It will have a new facade erected, commensurate with its dignity of position, and it is rumored that Mascagni may become its artistic director.

The Geography of "Summer Opera" is interesting, the Middle States seeming to furnish its most congenial soil. At Ravinia Park, Chicago; at the Zoological Gardens, Cincinnati, and at Forest Park, St. Louis, grand and lighter opera of a distinctly artistic type thrives each summer for a long season. Other cities might do worse than investigate these methods a little.

Two Hundred Opera Singers, five hundred actors and actresses, six music composers and other artists applied for and got the unemployment dole in the Schoenberg district of Berlin in the month of June. The popularity of jazz is credited with much of the ill fortune of "legitimate" music and musicians.

Ralph Lyford, after twelve years of zealous activity in Cincinnati, is taking a year for residence in Europe. Though he will make guest appearances in several musical centers, he will reside most of the time quietly in Paris for the purpose of devoting his time to the completion of several important scores which have had to await a time when his leisure would be sufficient for this purpose.

Sesqui-Centennial Music Souvenirs have found favor with the host of Sesqui visitors, and the free distribution of the Theodore Presser booklet, "Two Centuries in American Musical Compositions," has about exhausted the printings originally ordered. Subsequent editions will be distributed at the nominal less-than-manufacturing and mailing cost of ten cents per copy. John Friedrich & Sons, makers of high-grade violins, are among other musical exhibitors at the Sesqui and are distributing upon request a handsome souvenir brochure, containing handsome illustrations of fine instruments.

W. T. BEST

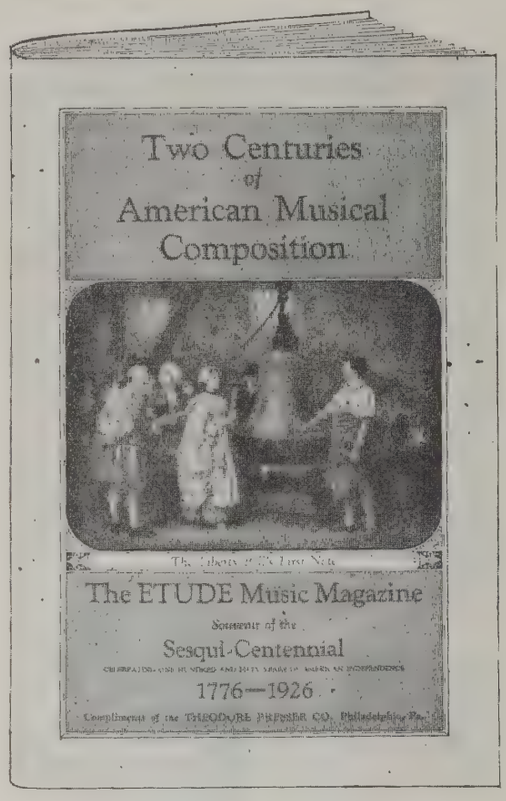
W. T. Best, the eminent British organist of the last generation, who founded the strictly secular organ recital, who was practically the originator of the popular organ-transcription, and who did more than any other man in Britain to make organ music popular with the masses, was born August 13, 1826, and his centenary has been lately observed in England.

The London String Quartet will visit the States again this winter, beginning its season with a concert at Hartford, Conn., on January 4, for which it will come from a tour of South America.

The Philadelphia Orchestra, under the baton of Leopold Stokowski, is announced for a season of eighteen concerts in European music centers next summer.

Permanent Opera Comique in New York is to be furnished by the Schuberts who have organized a company for a forty-weeks' season at the Century Theater. There will be revivals of the classic operettas of Sullivan, Suppé, Planquette, DeKoven, Herbert and others, each work to have a season of four weeks.

(*Continued on Page 780*)



It is the constant ambition of the editors and publishers of the "Etude" to make each issue of the journal worth many times more, in practical instruction, stimulating inspiration and real entertainment, than the price of the entire year's subscription. The music lover can not possibly find a better two-dollar investment.

OWING TO THE IMMENSE DEMAND

The First Printings of the

"TWO CENTURIES IN AMERICAN MUSICAL HISTORY"

Are Now Entirely Exhausted

This handsome SIXTY-EIGHT PAGE book was originally issued by THE ETUDE Music Magazine as a souvenir of the Sesqui-Centennial for free distribution. It contains over FOUR HUNDRED PORTRAITS OF AMERICAN COMPOSERS from Francis Hopkinson to the present day.

No other book in print has anything approaching this remarkable collection,—(not even books costing $3.00 or $4.00.) In addition to this it has SIXTEEN COMPLETE PIECES OF MUSIC in small size.

COVER IN THREE COLORS

THE enormous demand and the very great cost of manufacture makes it impossible for us to distribute any more copies without asking our friends *to share with us the cost of production.*

The book is invaluable to teachers who desire this rare collection for their work with their pupils. It is a monument to American musical achievement.

EVERY PUPIL IN AMERICA OUGHT TO HAVE ONE
EVERY CLUB MEMBER SHOULD HAVE ONE

Therefore we have extended our printings and shall be glad to send copies to all who desire them in any quantity for

10 CENTS A COPY

ONE DOZEN COPIES FOR $1.00 **ONE HUNDRED COPIES FOR $8.00**

The prices quoted are less than the actual cost of manufacture

ORDER PROMPTLY. WHEN THIS EDITION IS EXHAUSTED NO MORE WILL BE PRINTED

The Book cost thousands of dollars to publish

OCTOBER, 1926 | Single Copies 25 Cents | VOL. XLIV, No. 10

What Makes Mastery?

Recently we played over a collection of pieces by the late Carl Bohm. They were pieces that have sold by the hundreds of thousands and will still continue to give delight to many generations.

Bohm was a very prolific writer. He was exceptionally gifted as a tune maker. His music is always correct from the standpoint of musical grammar and musical form. Yet few would proclaim Carl Bohm as a master.

There is something very strange about this because Bohm had in his soul the making of a real master. He proved it with his wonderful song *Still as the Night*. If Schumann or Franz Schubert had written that song, either might well have been very proud of it. Bohm wrote other works of high character, but for the most part his best known works are just good enough to escape the curse of absolute banality. On the other hand they often make excellent teaching material for the kind of pupil whose mentality has not yet been sufficiently developed to enjoy work of a fine degree of musical development.

Works of this kind often contain melodic material superior to that to be found in some symphonies. Many of the great masters could have taken some of the Bohm themes and so developed them and expanded them as to make works of large dimensions and real musical worth.

This does not mean elaboration by any means. Bohm often elaborated to a tiresome degree. What he did in *Still Wie Die Nacht*, however, was to take a fine theme and develop it organically until it made a beautiful whole, with all of the parts subordinate to the central thought. This is what really constitutes mastery. We would, however, advise our readers to secure the Album collection of Bohm's works, which may be purchased at very slight expense, and note just how remarkable was this writer's melodic fecundity.

Music and Fairyland

Can you soar back over the years to your fairy days? Can you walk again with Aladdin, Cinderella, Little Red Riding Hood, as you did when these dream children of juvenile romance seemed so real and so dear? If you can you are a better teacher than the average, because you can place yourself nearer to the child soul.

All children love fairies. Once they are convinced that music is the plaything of elves and gnomes and sprites, it seems to mean so much more to them. Years ago an exceedingly conventional little waltz by Streabbog (Gobbaerts) was called "The Little Fairy Waltz." We remember it particularly because it was our own first little piece. Goodness, how we loved it! Incidentally, it was one of the most extensively sold compositions ever printed. Hundreds of thousands of little fingers have danced it out on the keyboard. There was very little of anything fairy-like about it but the name. That, however, was enough

A Schubert Issue

Next month The Etude Music Magazine will present its readers with another special issue, this time devoted to the works of Franz Schubert. There will be splendid biographical articles including a character study of Schubert by the well-known composer, Felix Borowski. The great Schubert-Tausig *Marche Militaire* will be the subject of a master lesson by the noted Russian pianist, Mark Hambourg, whose previous lessons in The Etude have attracted wide comment.

Are We at War?

There are more armored motor cars traveling the streets of America today than were on all the battlefields of Europe.

This is the report given personally to us by a representative of a bankers' detective agency.

America is apparently at war against brigades of guerrillas who are organized in a way that makes the robber barons of the Middle Ages seem like toy soldiers.

The armored cars are a present necessity.

But do we want to have their number multiplied many hundredfold in the future?

The only way to prevent this is to reduce the number of bandits and anti-Americans; and the only way to reduce these is to extinguish them or to breed fewer of them.

The truth is that America is now at war and does not realize it. The enemy is far more dangerous, far more strongly entrenched, than that which our ancestors encountered at Lexington and Valley Forge. If we are to perpetuate those ideals for which our ancestors gave their lives, the conflict can begin none too soon.

On the firing line are the teachers of America. The police, the judiciary and the penal institutions are wholly incapable of stemming the tide. Multiply them as we will, the army of the enemy is increasing far faster. Small wonder that at the great convention of the National Educational Association in Philadelphia last June, the conspicuous topic was "Moral Education;" and at the same time more attention was given to music than at any N. E. A. convention for fifty years. The main address of the convention, delivered by Dr. A. E. Winship, was a powerful oration devoted to "Music in Our Schools."

The public is beginning to realize that character education in the home, the pulpit, and in the schools, is the only solution of the great problem of fortifying the minds and souls of our youth to resist dishonesty, immorality and anarchy Our educational systems have been remarkable in providing for the "Three R's." We have developed high degrees of accomplishment and efficiency in intellectual training. The tragic weakness of this system, which makes for brilliant minds and fragile characters, is shown by the two abnormally bright Chicago youths, Loeb and Leopold, given the advantages of great wealth, only to culminate in the most hideous crime of the era —a crime which in itself was so epochal that it shocked millions into the realization of the necessity of taking means to prevent repetitions of such outrages in the future. The problem is whether the crime was really that of the unfortunate boys or of the educational system that permitted them to get into the mental state which made such an act possible.

Our readers know that for many years we have been hammering away at this problem, by promoting the "Golden Hour" ideal—a plan for the regular study and practice of character-building in the public schools, inspired by the invaluable force of music. Music and ethics combined cannot fail to have an immense influence upon the growing mind. More and more schools are introducing the idea, in various forms.

Speakers are advocating the importance of music as an antidote for crime. Mr. Geoffrey O'Hara, among them, is giving a very stimulating address upon "Music and Murder." The public press, all over the country, and particularly the *Saturday Evening Post*, is emphasizing the need of character training in the home and in the school. We present herewith a cartoon from the *Saturday Evening Post*, in contrast with one prepared to parallel it.

THE OLD-FASHIONED HOME AND HOME INFLUENCE, WITH THEIR RIGID DEMAND FOR STERLING CHARACTER BUILDING, ARE RAPIDLY VANISHING

This Picture Appeared in The Saturday Evening Post—Copyright 1926, by the Curtis Publishing Co., Philadelphia, Pa.

oad of their professional career.
So now to business!

Concerning Recitals

1

T MAKE your programs long;
ke them short. Remember that it
sense more tiring to listen than
m, and that a good thing becomes
e when unduly protracted.

2

place a classical work after a mod-
it is unfair to both works and is
cal misdemeanor!

3

sacrifice art to virtuosity, for this
g less than musical prostitution,
the desire to "show off."

4

be too free with your encores; it
dest and cheapens you in the eyes
ublic.

Concerning Platform Manners

5

rush on to the platform as if you
ching a train; it is both unneces-
undignified.

6

when bowing to your audience,
perpetual and ingratiating smile;
er you are an artist and not a head-

7

look inordinately pleased at the
applause: it gives the impression
u have never been applauded in
e before.

CYRIL SCOTT

Don't! An Article for Budding Professionals

A Brilliantly Witty, Satirical Article, Written Expressly for THE ETUDE by the Distinguished English Composer-Pianist

CYRIL SCOTT

8

Don't be coy with your audience: if you are young and pretty, it is irritating and superfluous, and if you are elderly it makes you look ridiculous.

9

Don't, while performing, think either of yourself or of your audience but solely of art and its interpretation.

Concerning Tricks of Pianists

10

DON'T SNORT or breathe loudly while playing, but learn to breathe silently and correctly. Proper breathing is never accompanied by noise.

11

Don't throw yourself about, or squirm and gyrate on the piano-stool; remember you are a pianist, and not an acrobat, a ballet-dancer nor a monkey. Remember also that the piano is not an orchestra to be conducted nor a child to be punished, but an instrument to be *played*.

12

Don't, in impassioned moments, jump on the pedal with your whole foot, but keep your heels well on the ground and press the pedals silently.

13

Don't roll yourself into a ball and put your head nearly on the keyboard, following, as it were, every movement of your fingers. The latter do not require scrutiny and your appearance is not improved by your turning yourself into a hunchback.

14

Don't perform tricks with your mouth or your tongue, because, if you do, the audience will be so preoccupied with *looking* at you that they will forget to *listen* to you.

15

Don't prelude each item with the same chords, usually of a banal nature. Should you possess no creative talent or gift for improvisation, then do not prelude at all.

Concerning Divers Things

16

EXECUTANTS—*Don't* practice so much that you practice all the music out of your souls and become automatons: remember that spontaneity is one of the greatest charms.

17

Don't take yourselves or your achievements too seriously: self-exaltation is more than often the cause of nervousness.

18

Singers—*Don't* forget that you are concerned with a double art—the musical and poetical combined; therefore literary culture is as important to your achievements as musical culture.

19

Don't be (or appear to be) so preoccupied with producing your notes correctly that interpretation becomes a secondary consideration: a really great singer is not merely a glorified megaphone but an orator and actor as well.

20

Don't ever mistake exaggeration for musical expression—true and charmful expression is always produced by beauty of tone and phrase, *never* by distortion.

21

Female singers—*Don't* make "catty" remarks about other singers: how can you ever be a channel for noble sentiments if you soil your minds with jealousy and pettiness?

22

Musicians in General—*Don't* be always talking or thinking "shop!" If you have only the one idea in your heads you will never be great artists, but only musical "tradesmen."

23

Composers—*Don't* worry over bad criticisms: remember that work which is too easily understood is seldom worth understanding and that all individualists have been berated for their early attempts.

24

Don't assume either that the critics or the public are a mass of fools merely because they do not understand you: even the cleverest men do not understand everything—the art of making an omelette, for instance.

25

Don't fail to cultivate the right wisdom-attitude while you are still young and a student, for a philosophical attitude of mind is a prophylactic against most troubles.

Commentary

1

IT IS A CURIOUS fact that so few recitalists have learned the art of brevity—are they afraid of appearing mean, or what is it? Generosity is no doubt a very excellent virtue, but even generosity must be tempered with wisdom, otherwise it becomes immodest. Are we certain that people always want all the things we give them? If they do *not*, we are merely encumbering their closets with so many white elephants. Thus, in the case of long programs, the recitalist lavishes musical food upon his listeners which they are unable to assimilate. Instead of going home satisfied they go home suffering from a "musical indigestion." *Enough is as good as a feast* runs the old proverb. Not so! Enough is *better* than a feast; the feast may produce heart-burn.

2

The placing of a classical work after a modern one on a program is sedulously to be avoided. Recitalists are sometimes guilty of this, but those who arrange the programs of orchestral concerts more frequently are so. However fine a classical work may be, it is apt to sound thin and colorless after a modern one—provided, of course, that the latter is not merely some clap-trap salon-piece. If you honor the old Masters, treat them with fairness.

3

Virtuosity can never elevate your listeners; it can merely tickle their senses and pander to their love of sensation. The greatest artists—like Kreisler, for instance, have achieved their greatness and fame through their power to touch the heart; only second-rate performers have been "pyro-technicians!"

4

Excessive encore-giving is a particular weakness of female singers—they trip back on to the platform almost before they have tripped off; and the audience, instead of being impressed, is merely amused in the unflattering sense of that word. The man or woman who gives too freely, whether it be presents or encores, is never appreciated: he is considered a bore who is suffering from conceit.

5

Time may be money, but in this connection time is not *dignity*, and undue haste is quite out of place at a concert where people are enjoying themselves at their leisure. But there is a further reason why performers should not rush on to the platform: a "comic turn" is an unsuitable prelude to a serious piece of music and creates the wrong atmosphere at the outset.

6

Don't be coy.

An ingratiating smile is less out of place on the lips of a woman than on those of a man, but in both cases it should be used with discretion and never be perpetual. The impression it creates is one of "toadying." The artist appears to be so afraid he has not produced a sufficiently good impression by his performance that he tries to "make good" by the methods of captivation and only ends in appearing ridiculous.

7

This aphorism requires no comment.

The Matronly Sylph

8

IT IS A strange fact that some elderly and very corpulent female singers are in the habit of behaving as if they were sylphs, fairies or at least young maidens; this is particularly unfortunate and entirely out of place on the concert platform, for it suggests the vaudeville "show-house" rather than the concert-hall. Both age and size are consistent with a certain dignity; therefore, why seek to destroy what poise already exists?

9

Every genuine artist possesses something of the mystic in his nature; therefore it is not irrelevant to say that he who is preoccupied with the things pertaining to vanity cannot be a true and unsoiled channel for that Divine Beauty which comes from God Himself.

10

A Viennese professor from whom I once took piano lessons had a charming, soft touch and other pianistic qualities, but his playing was entirely ruined by a habit he had of snorting and groaning like a traction-engine when it climbs a hill. The traction-engine, however, is not comic, whereas the professor was distinctly so—at first; though after a short while his noises became highly irritating. There is another pianist I could mention, who has recently acquired a European reputation, and who has contracted the same distressing habit. If a person in the audience were to snort and snarl and snore while the artist was playing, the latter would at least glare at him. As for his neighbors, they would probably ask him to leave. Therefore, O, artists, do not do to others what you would not have others do to you!

Don't punish the instrument.

The Simian Accompanist

11

NOT LONG AGO a fine and well-known vocalist went to Vienna and gave a recital after engaging a certain accompanist. The hall was packed with a fashionable audience and everybody looked forward to a great artistic treat. But they were disappointed—or rather the "treat" was of a different nature from what they had expected. This was due to "Monsieur the Accompanist." A few seconds after the singer had commenced her first song (some serious old Italian arietta) she was much surprised and extremely disconcerted to see her audience convulsed with irrepressible laughter. (It should be mentioned that she stood with her back to the accompanist.)

Her first thought flew to her appearance. Had she, perhaps, put on her dress back to front? No—all was in order. Finally she discovered that the eyes of the audience were riveted not on herself but on the gentleman at the piano. He was behaving like an emotionalized monkey. Every note he produced was accompanied by such contortions that the audience was oblivious to all else but his antics. The concert, from the singer's point of view, was a complete fiasco.

Don't rush on the platform.

12

A certain pianist of note, when he gets impassioned, jumps on the pedals with his whole foot, with the result that the noise of his heels resounds on the platform-boards and proves highly disturbing and unpleasant.

13

Nobody's playing is improved by contracting the chest: expanded chest gives strength and looks well; contracted chest causes weakness and looks bad. A hunchback is a subject for commiseration but not for *imitation*.

14

Performers should examine themselves sedulously to see whether they have acquired the bad habit of pulling faces, rolling their tongues into their cheeks, constantly blinking, screwing up their eyes or performing any other distracting tricks while playing. Numerous performers, I regret to say, are addicted to one or more of these objectionable habits. We should always remember that concerts are not given in the dark.

The Monotonous Prelude

15

FOR THE LAST thirty-odd years a pianist of renown has preluded each of the numbers on his recital programs with three chords of the dominant seventh. Why? Does he think them so ravishingly beautiful that he can never hear them sufficiently often, or is he lacking in inventiveness? Whatever the cause, the *effect* is musically disastrous. Those who prelude at all should beware of "vain repetition."

16

An old adage runs that "practice makes perfect," and so it does, but *too* much practice makes "Jack a dull boy."

17

It is only advanced souls who do not take themselves seriously. This sounds like a strange statement, I am well aware, but it is true nevertheless. There is nothing so important that it cannot be joked about at the right time, and the man who can joke about himself, his art and his achievements has learnt humility. When people take themselves too seriously they are apt to become morbidly introspective and neurasthenic; moreover, they are apt to *grind* instead of work, with a resulting lack of spontaneity.

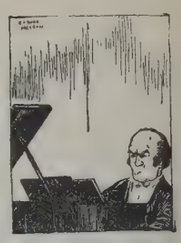
18

It is of the greatest importance that singers should be even more cultured than other executants, but unfortunately this is not always the case. It is, in fact, seldom the case. Yet how can singers expect to interpret poetry unless they possess a real taste for poetry? Besides, how can they select good songs to sing unless they have the necessary knowledge and culture to distinguish good verses from bad? As it is, the number of songs that vocalists *will* sing in spite of deplorable verses are not to be counted.

19

Don't be delighted with little applause.

It is largely owing to what I have stated above that so many singers appear to be too much occupied with their voice-production to bother sufficiently about their interpretation. If they were as fond of poetry as they are of music, this could not happen, for they would produce a perfect blending of the two arts.



20

It is only second-rate artists who resort to exaggeration. Their aim is to achieve originality of interpretation, but when all is said, they are merely swindlers. Distortion is not expression. What would we think of an orator who tried to gain his points by pulling faces? But, in the case of the orator, it is at any rate his own face which he distorts, and I suppose everybody must be allowed to do what he likes with his own face. But in the case of the executant, it is somebody else's compositions with which he takes liberties, and therein lies the difference.

Kitty, Come Here!

Selling One's Service

By W. F. Gates

THERE is an axiom in business—"If you have nothing to sell, don't advertise." A corollary is, "If you have something to sell and do not advertise it, don't expect to sell it." And these statements apply as much to the one who would sell his services as to the one who would sell merchandise, as strongly to the professional musician as to the merchant and manufacturer.

It is all very well to expect the world to make a path to one's door; but it first is necessary to tell the world who lives behind that door, and what he has to sell. It is necessary to create in the mind of the public a desire for what one has to sell and the equally important feeling that you are the one of whom the public should buy it.

One way to sell goods is to have a monopoly, to have something that no one else has—but no teacher of music can have that. What remains is for the teacher to have a plan of work and a personal manner that appeals strongly to pupil and parent. Once the pupil is secured, procure, as solid and rapid advancement, as the pupil's talent permits.

There was a day when the musician felt that advertising by the usual methods of print was beneath him; so he relied on gossip and word-of-mouth. Then he took a leaf from the book of the concert artist, after seeing that print—publicity—could be at once dignified and financially profitable. Today, the best teachers are the best advertisers.

The better artist, has better goods to sell; he advertises in a better way, and secures better results. The same is true of the teacher. If he advertises i
dignified way, in a cheap medium, he is classifi
public as "cheap," no matter what his abilities
he advertises in a small way, he gets small res
must advertise liberally in dignified mediums a

a waiting list. He has the goods; and the p
come to demand more than he can furnish.
satisfactory state of affairs.

Music That Endures

By ARTHUR ELSON

\KING UP the subject of this e, one is naturally forced to in- whether there are any recog- qualities that give permanence to compositions, while others have mporary vogue. To many people, merely a matter of taste—they piece or dislike another, without why, and divide the repertoire ic that endures, in contrast with at has to be endured, but there e certain qualities that make the rks last through the centuries.

note the apt saying that "Music here language ends," we are at to the idea that music is partly a f expressive power. The qualities y are often paralleled in music; ny comparative lists have been ith more or less accuracy. Bee- as been likened to Shakespeare, Milton, Wagner to Browning, nd Mozart to Pope and Dryden, to the lyric poets, and so on. , therefore, assume that some of dards of poetry will apply to

among these is a control of the f expression, the ability to say g worth while in a terse and strik- . Everyone can pick out many e bits of poetry, all the way from erbury Knight's

nd honour, freedom and courtesie"
irring call of Lilia,—
it,' she cried,
make us what we would be, good t.'"

rly, in music, one may cite dozens ples of expressive power from the tensity of the "B-minor Mass" to ve of Fate or the Transfiguration One of the first requisites for per- , then, is a well-expressed message arer. It may come in many styles, hasize one or more of several dif- ialities, all the way from the grace mann's *Arabeske*, or the delicate of Debussy's *Clair de Lune*, or the eling of Chopin's *G-major Noc-* the dramatic grandeur of a *Ninth ny* or of *Les Preludes*. But in ase the composer has shown the o express fully, and with controlled something that is worth while, and to all of us.

The Expressive Theme

IC is so intangible that the expres- veness of a theme is really a mat- psychological study. There have ny definitions of music, all the way Wagner's "Music is truth" to s assertion that "Music is the most e of noises." Fétis calls it "The ioving the emotions by combinations nd;" but there is an intellec- well as an emotional side to music, classics show.

elements that enter into the expres- of a theme consist of rhythm, and harmony. Of these, rhythm is sent. The wildest modern experi- has not yet dared to try to do with- and, incidentally, here's hoping that r will. It is ingrained in humanity, been felt as a necessity, from the ric footfalls of Pithecus Anthropus, was the gentleman's name, to the rokes in the *Scherzo* of Sibelius' mphony, or in the battle section of eldenleben."

dy, by itself, has not much appeal. to the musician it always affords a to supply mentally the harmonies uld go with it. But even in melody room for a wide variety of expres- , depending on succession of inter- vals, variation of rhythm, imitation, balance of measures against measures, and so on. As a striking example of the effect gained by shaping a melody properly, the first theme of the *Andante* in Beethoven's "Fifth Symphony" may be cited. In that composer's note-book, which contains the themes as jotted down when they first occurred to him, that passage is comparatively commonplace. But in the symphony, with almost no changes in rhythm or harmony, its effect has been so altered that a most powerful appeal results. There is no royal road to teach the student how to improve his melodic efforts, or else music would become a matter of manufacture rather than inspiration. The teacher can only make the student try something, and then point out improvements in individual passages, as they suggest themselves. When the young composer starts "on his own," however, the Beethoven example may show him the force of Carlyle's assertion, that "Genius is a capacity for taking pains." Like many definitions, this is only a partial statement of the truth, for inspiration is needed also; but the pains are surely necessary, if anything worth while is to result.

Harmony Mathematical

HARMONY is largely a matter of mathematical perception. The vibration-rates of the different notes in a chord have a more or less simple proportion to one another and seem related in effect; so that, as Browning made Abt Vogler say,

"Out of three sounds I frame,
Not a fourth sound, but a star."

It is the ability to notice changes in the proportions of the successive chords that enables the hearer to appreciate harmony. These figures for any one chord, as the student knows, may be quite simple, even going as low as three, four, and five for the notes of the six-four inversion of any major triad. The succession of two practically unrelated chords, with wholly dissimilar notes and intervals, will therefore produce a discord, because the hearer cannot readily grasp any underlying mathematical relation between the two. Not that discords may not be occasionally of dramatic effect, but the modern radicals who rely too much upon them will produce nothing of permanent character. Not that it is easy to find two absolutely unrelated chords, for the mind will note the changes in pitch or in size of intervals, if nothing else. But a continued succession of distantly related chords will tax the brain that is accustomed to follow music by its harmonic structure, just as a too closely related series will sometimes seem commonplace.

It does not follow, however, that the simplicity or complexity of chord relations is the only factor in harmony. Variety is said to be the spice of life; then there should be varying degrees of relativity in the same work. Yet even this does not explain why some harmonies sound better than others. There again the composer stands or falls by his choice of material. The harmonies of the first *Prelude* in the "Well-Tempered Clavichord" are simple enough; but they have a haunting beauty nevertheless, of such a compelling nature that they led Gounod to express their suggestion in the well-known melody that he composed for them. Another of the many examples of strong expression by simple means is found in the side-theme of Chopin's *C-major Nocturne*. Chopin is always very expressive; but one of his most striking bits, achieved with simple means, is found in the third full measure of this section, where the three lower notes (subdominant) are held, while a simple movement in the upper voice makes the harmony run through a dissonant major seventh (fourth degree), a more consonant minor seventh (second degree), and two positions of the subdominant triad, creating a most impassioned emotional appeal by the simplest of means. Incidentally, the sense of harmonic appreciation is what is lacking in those who are not musical; and the crudeness of many popular songs lies in their harmonic coarseness of effect.

In uniting themes and passages into larger works, the composer has many fairly definite forms at his choice. As every student of Theory knows, these range from the simplest of so-called song-forms, with contrasted periods, through the rondos, with longer or more numerous sections, to the sonata-allegro form, and the various other structures occasionally used in the large symphonic movements. In the classical times, the tonal art fully justified the saying that "Architecture is frozen music." Even in the freer compositions of recent years, one still finds the balance of sections, the contrast between different passages, and the due proportion that were so evident in the more definite forms of earlier years. Dating from earlier centuries, too, are the various contrapuntal forms, in which melody was supported by melody, or part by part, instead of by chords, though harmonies naturally resulted from the interweaving of parts. These various forms play their part in giving to music an intellectual as well as an emotional beauty.

Figure Treatment

IN ADDITION to the effect gained by the larger outlines of form, a most potent appeal to intelligent perception and enjoyment is made also by the devices known as figure treatment and development. Of the many important examples of this method of building up or embellishing a composition, one of the best is found in the first movement of Beethoven's *"Pastoral Symphony,"* in which a theme of a few measures is reiterated, wholly or in part, and made to form the melodic line of the entire movement. A musical figure may be put through many changes—transposition, changing of intervals, inversion, rhythmic imitation, and so on—in a way that enables a good composer to develop his themes, as the process is called, into a musical structure of most absorbing interest. Some devotees of melodic and harmonic richness consider this method of procedure rather arbitrary; and one very eminent Wagnerian friend of the present writer once accused Brahms of "musical dressmaking;" but figure treatment and development will always remain one of music's chief charms, in spite of its being held somewhat in the background during the present modernistic search for new harmonic effects.

What have been the works that have survived, and which of the foregoing characteristics do they exhibit? One might fill a history of music in answering this question; but a brief survey will fulfill the purpose of this article.

Passing over the few relics of ancient music, the Gregorian epoch, the music of Charlemagne's time, and the comparatively simple songs of the Troubadours and Minnesingers, which are mostly curiosities at present, one comes first to the contrapuntal schools. The music of these schools has been largely shelved, but enough of it remains in vogue to merit attention. At the very outset the student finds a famous composition from England—the so-called six-men's song entitled "Sumer is icumen in," dating from the year 1215. This is really a four-part canon, with two voices singing a bass accompaniment. The most noticeable quality of this song is the remarkable freshness and beauty of its melody. Of course the skill with which it is blended into a whole when taken up by the parts in turn, and carried through, as in a long four-part round, is most noticeable. Many other compositions of that time and later will show the same skill without the terse and clean-cut melodic beauty; for which reason no one cares to exhume them from the libraries where they lie buried. But there must have been many effective compositions in England at that time, as is proven by the writings of the Frenchman, Jean de Muris, who stated in 1325 that the composers of his day were falling below the high standards set by the English, and losing their effective directness of expression. In music, no less than in literature, brevity is the soul of wit; and composers who have little of interest to say, and who spin that little out in whatever happens to be the approved technical method of composition at the time, will not achieve any permanent vogue.

When England Led

ENGLAND still retained its prominence in the time of Dunstable, who lived while the early continental schools were developing. Then came the days of Flemish leadership, under Okeghem, who held high positions, but nevertheless made music a matter of arbitrary rules, using technical mastery to make puzzle canons, or to cause the setting of such dry subjects as the Genealogy of Christ. It is not surprising that this school did not last, that when Josquin de Pres brought back inspiration as a criterion, Luther could say of him, "Josquin rules the notes, while others are ruled by them."

Palestrina and Di Lasso represent the culmination of the contrapuntal schools; but their works are not by any means confined to set standards, like those of Okeghem's school. When they wished to write in the harmonic style, they did so. Churchgoers are all familiar with the beautiful "Alleluia" of Palestrina, for example, which seems harmonic in spite of its part-writing; while such a song as Di Lasso's "Mon coeur se recommande a vous," is entirely and freshly modern in style. It should be true now, as it was then, that the real composer will write good music, independently of what may be the technical fashion of composing at the time. He should have something to say that is worth saying and should say it with all his might. If his message is worth while, posterity will recognize its value. As an instance of this the student should examine the Fitzwilliam collection of virginal music. The virginal, popular in the Shakespearian epoch, was a box-like predecessor of the spinet, with a compass of not more than three or four octaves and with the light tone that one would expect of an instrument that could be picked up at will and carried from room to room. Yet the early Elizabethan composers wrote such expressive music for it that their works really demand the resources of the modern piano.

With the advent of the harmonic style, in 1600 and later, there was much that was experimental at first. The Italian violinists, such as Corelli, Tartini, and their pupils, led the way to the necessary control of expression, while the two Scarlattis and others developed opera and harpsichord music. Then the leadership passed to Handel and Bach, in Germany. Much of the music of Alessandro Scarlatti, like some of Handel's, is kept in partial obscurity, because the archaic form of the early

operas prevents their revival. But music of value will survive, despite handicaps, and the Scarlatti arias, no less than Handel's famous *Largo* (from "Xerxes," originally) or "Lascia ch' io Piango," will show, to alter the saying, that you cannot keep a good tune down.

The works of the great composers are too familiar to need any detailed description. In classical times the blending of intellect and emotion, best expressed in the well-defined but plastic sonata-allegro form, showed itself in the expressive fluency of Haydn and Mozart, the dramatic power of Beethoven, the melodic feeling of Schubert, the enthusiasm of Schumann, the inimitable grace of Mendelssohn, and the quiet intensity of Brahms. Then Rubinstein and Tschaikowsky led Russia to fame, while other countries developed other leaders.

The Classic Blend

WHICH OF this music wears best? To the writer, a long course of hearing and looking through the classics seems to show that the music showing its full share of the intellectual side seems to last longer in its effect than that which relies more on emotion. But this is set forth rather as a personal opinion than as a general truth. If one finds that the emotional qualities of Schubert lose power on repetition when compared with the grandeur of Beethoven, or if the richness of Tschaikowsky becomes cloying while the more formal shapeliness of Brahms keeps its effect, another hearer might find the reverse true in both cases. But there must always be some blend of the intellectual, as expressed in structure or design, with the emotional in order to give the music any permanence.

No less a modernist than Cyril Scott, admitted the necessity of present-day composers using some scheme or plan to replace the earlier forms that are now strictly followed. The transition, of course, came through the introduction of the symphonic poem, which had its origin in the program symphony of Berlioz, and was brought to its climax by Liszt and Strauss. Beethoven no doubt foreshadowed it in his *Ninth Symphony*, which made him say that all his previous work was as nothing to what he meant to plan afterwards.

If the symphonic poems are not based on one definite design, each will have its own structure, showing a balance of various sections and a judicious contrast between them. The program element (making the music tell a definite story) adds an interest of its own, that compensates for the lack of strict form; but even in such works as "Til Eulenspiegel," depicting the adventures of the famous mediaeval hero-rascal of that name, the recurrence of themes and passages gives the work a tonal design that is the reverse of formless.

Opera seems to need a style of its own, that not even the greatest of composers can necessarily achieve, though some have done so. Here emotional expression is more in the foreground—feeling, sentiment, passion, and intensity, rather than any highbrow methods. Wagner brought intellect to it, in the shape of guiding motives that could be built up into great orchestral *scenas*. But it was matter rather than manner that made his operas great, for he could write themes of tremendous power, which his imitators have not been able to equal. Opera must have something almost crude, tawdry, and blaring in effect to achieve what audiences expect in the way of dramatic power. The trumpet fanfares of the march in "Aida," for example, will always be far more popular and achieve far more numerous performances than the more involved and less dramatic measures of the same composer's "Falstaff."

The Search for Harmonies

MODERNISM, as arising from Satie's unusual effects, and from Debussy's whole-tone scale ideas, has developed into a search for new harmonies. As such, it is of course largely experimental, so that many works, now hailed with applause by large audiences and over-appreciative reviewers, achieve only a few performances before being shelved. In so far as the search for new harmonic effects are used to replace real inspiration, instead of as an adjunct to it, the resulting productions are bound to fail. But as Josquin succeeded Okeghem, so it is not impossible for a composer of the first rank to arise at present and to show a mastery of modern effects. At present, too many are ruled by the notes and have not the genius necessary to control them. Even if we are to have a school in which melody is relegated to the background, we need masters of that school rather than experimenters. If composition is to be nothing more than an attempt to find unusual effects, the present writer has often suggested an easy method for doing this. Let the would-be composer seat himself at the piano, with a recording device at hand. Then, with closed eyes, he may attack the keyboard at will, using a due sense of rhythm and variety of effect and finishing the work with some customary cadence. The result may be wilder than the "Wild Man's Dance," but many will acclaim it as an advanced modern work. This is not meant as a slur at the excellent qualities shown by numerous recent compositions, but is intended to show that the really great composer is a master of his effects and does not need to feel his way, just as the really great actor is he who is not swayed by the emotion of his part but creates his effects with cool precision.

The qualities that have made music last, from other schools and other days, may therefore be summed up as an interesting variety of rhythm, a control and conciseness in melodic expression that avoids any effect of rambling or diffuseness, a variety and depth of harmonic expression, and a proper use of form or design. These are what the composer should always strive for, without letting himself be limited by the special methods of whatever school or style may be in vogue at the time.

5. *What particular blend is made in the classic type of music?*

Safe and Sane Memorizing

By Lucille Pratt Gunter

SOME seem to have a natural ability for memorizing. In fact it is done with no conscious effort. But for others it is the most difficult part of musical study.

In memorizing we are shaping a mental picture that we want to be able to rely upon at all times. The idea is always to present the same mental picture in exactly the same way. The more correctly we do this, the more quickly will our task be accomplished for any one thing done over and over becomes a habit. If the memory performs by force of habit, we are given a clear field in which to think of interpretation and musical rendition.

Taking a small phrase or section at a time is the easiest and quickest way, as a small idea is more accurately repeated as to fingering, notes, rhythm, phrasing and pedaling.

"Daddy's" Musical Family

By Sidney Bushell

THE problem of giving the children a proper start in small towns and in places where there is no qualified music teacher, is an acute one.

The description of an attempted solution of the difficulty which has come to the writer's attention, may be of interest, possibly an inspiration, to others.

With the musical education of his children (as yet in the kindergarten stage), in prospect, the father, with a view to acquiring for himself a thorough theoretical grounding, invested some ill-spared dollars and many hard-won leisure hours, upon a certain widely advertised music course which he has now successfully completed.

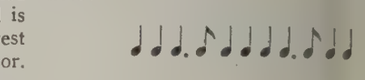
The next step was to contrive a method whereby the knowledge thus gained might be passed on to the children and so enable them to receive efficient instruction right in their own home.

A large blackboard was procured, upon which four sets of "five lines" were permanently scored. This board has been secured to the wall in a corner of the "music room" by two hinges. At the two sides, and as close to the edges as possible, two legs, also hinged, have been attached to the board. These are hung, and blocked in such a manner, that when the board is let down they swing out at an angle to rest against the wall where it joins the floor. Thus, when the board is not in active use for tuition purposes it is transformed into a very handy work table. When in position for lessons it is held securely in place by an ordinary screen door spring appropriately adjusted.

By this blackboard method it has been found very practicable to give satisfactory instruction in elementary fundamentals.

The lessons comprise talks upon the different clefs, how to recognize and name them; names of lines and spaces; leger lines and the reasons for their employment; the different values of the various notes; "accidentals," their shape and uses, the formation of scales, etc. The building up of common triads and afterwards locating and sounding them on the piano the children have found very interesting. They can readily distinguish between a major and minor triad by the sound. On one occasion during an ear test of this description the tutor played the chord of the dominant seventh, with the usual query:

'Is that major or minor?"



There was silence for a few while the chord was being mentasected, then came the answer, in dent voice, "It's *major*, but there's in it!"

Another splendid feature of this that during a lesson the children called upon at any time to demtheir knowledge upon the board.

One very useful lesson in rea where the instructor writes notes oing values, anywhere about the clchildren calling them out as writtencalls the note by its name value, follows with its position on the staf"Half-note."

"Half-note on E," and so forth.

In another lesson the tutor writes ber of different notes in a straight lthe pupils are required to sing "each note, simultaneously marking ation by clapping hands the requireber of beats. The introduction of a of action into the lessons is very pto them. They were taught the valdotted quarter by being told to mthis rhythm, taking a *hop* on the note:

If left to their own devices whfather is absent these children freconduct their own music class amongselves, the eldest assuming the dututor. This in itself has the educvalue of fixing in their minds detready grasped, and in its own peculidevelops initiative and originality.

In this family, also, they have irated what they term "singing That is, at the termination of a mealall are present, they sing the doto a tune which has been taught thethe blackboard during recent lessons endeavor to learn a new tune every

This opens up yet another possibilthe blackboard method as outlinedthe teaching of sight singing.

Already it is noteworthy how wchildren mentioned in this article, nosix years of age, can hold a melody,learned only a short while ago, agstrong counterpoint.

Variety in Recitals

By Edith Josephine Benson

TO AVOID monotony in recitals of easy piano music, the teacher must use every type of composition that belongs on programs of advanced music except, perhaps, that which contains thematic development. The foundation of variety is in the selection and arrangement of descriptive, emotional and dance solos.

The opening and closing numbers are no more important than the main part of the program, for the last-named can easily become monotonous. The first number may be a simple piece given by a very little child who plays excellently, or it may be a composition advanced enough to hold the interest over the next few easy pieces. Duets may begin or end the program; but their greatest usefulness is in breaking the continuity of solos. Duets for players of equal ability should be used sparingly because they are not very interesting.

Vocal and ensemble numbers are ive if the teacher knows how to training, but good vocal solos for cl are not numerous. The name of th accompanist should be printed.

The writer has sometimes ar groups according to the idea set forth group of duets was entitled *Melodies,* (a) French, (b) Dutch Russian, (d) Irish, each duet play different pupils. The selections of a group, *Three Chorales,* were also likewise by different pupils. The fir of a June program was called *The of Summer,* in which Mrs. H. Beach's charming *Summer Dreams* used with explanatory notes by a pup the second part of the same progra called *The Music of Childhood.* writer has learned that duets and numbers are most needed in the ma of the program.

"A trashy piece of work, which a world-renowned soloist may present with impunity or even with profit, will leave the audience of ever so good an upstart cold, while a great work is often more s ing to the pure musician in the hands, because the interpreter's pers does not obtrude itself unduly."

Solving Rhythmical Riddles

By LESLIE FAIRCHILD

YONE RESPONDS in some ee to a rhythmic stimulus. It is to be instinctive in man. The s its best to conform with a impulse, yet one may easily re- he power of rhythm and still be create it. There is a vast dif- tween keeping time and beating

rhythms are so complicated that it has great difficulty in master- However, with a knowledge simple principles and the use n arithmetic, there are no rhyth- ibinations that cannot be under- mastered by the student.

y rhythmically one does not possess any special inborn gift ig." All that is required is a common sense and the willing- unt aloud. "Trust no measure cannot count aloud," should be n of every student who desires a rhythmic consciousness.

Metronome

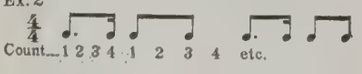
hesitate to use a metronome. s of what has been said about it, always find it a most efficient ful friend to assist you over the places. Seek its aid on all dif- ages. If you cannot count aloud he aid of the metronome, it is roof that you are not playing

Accents

r located accents are the means a composition its rhythmic Vith two or three beats to the he accent falls naturally on the Where there are four beats to e, the accents are on the first called the primary accent, and rd which is called the secondary n the case of six beats to the this secondary accent comes on n beat. Primary accents are al- ed with more force than sec- cents. For example:

ese normal accents be shifted arts of the measure, the rhythm yncopated.

Sub-Divisions



ole secret in solving a difficult l problem is to know how to sub-divisions in the measures. ay are the most complicated pas- ly understood and mastered. A n a composition is similar to an rule or scale; it has its many and sub-divisions of halves, eighths, sixteenths, thirty-sec- sixty-fourths. So, in consider- plicated rhythmical problem, we d the smallest unit in the meas- use it as a basis on which to entire group of notes in the This method will be explained etail in the examples that are to

An Inexcusable Fault

Newcomb relates that one of y's assistants declared that no knew the value of the short owing a dotted note, and she w an American who could give note its exact value in relation es around it. "In all my studies chetizky," said Miss Newcomb, l my experiences in taking pupils nd hearing others' lessons, I do not think there was any technical point that gave him so much trouble and annoyance as this one of the real value of the short note; a sixteenth after a dotted eighth, for instance, coming before an accent. There seems to be no end of difficulty in this little motive."

No matter how absurd this may seem, it is really a common fault among students and can be entirely eliminated if given a little consideration and thought. Let us consider the following example.

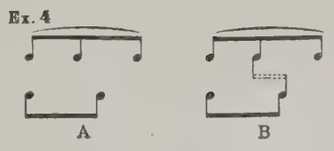
Ex. 2

The smallest unit to count in this measure is a sixteenth note. Since it will take four sixteenth notes to equal one quarter note or one beat of the measure, we count four to each group. This, you can readily see, will do away entirely with any uncertainty of the rhythm and will give to each note its just value. Another way is to conceive the sixteenth note as being a grace note and connect it closely with the note that follows it. *Harp Tones*, by George L. Spaulding, is a good example of this sort of rhythm and the student is also advised to play scales in similar rhythms such as:

Ex. 3

Irregular Rhythms

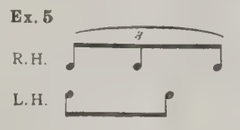
Another problem which seems most disconcerting to the student is the ability to play correctly such irregular rhythms as two against three or three against four.



I know that students have been advised to practice diligently with each hand alone and then put them together, but this method hardly simplifies matters. In the first place, two against three is more easily visualized if the teacher will connect up the two interior notes as shown in the illustration at "B."

MR LESLIE FAIRCHILD

Mr. Fairchild, one of the younger school of writers for "The Etude Music Magazine," is a mechanical expert who in recent years has seriously been devoting much of his time to Music. He is a pupil of Percy Grainger.

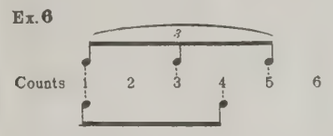


Ex. 4

Now then, if the student will count the sub-divisions of this interesting little figure, it will assist greatly in smoothing out the difficult rhythmical situation.

If you will follow closely the analytical example given below you will readily understand the method of sub-dividing any irregular group and will be able to master its rhythm. For example:

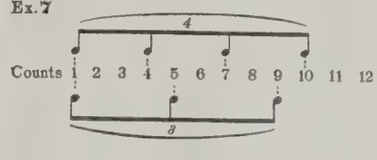
Ex. 5



Here we have three notes in the right hand against two in the left. Making a fraction of it gives us

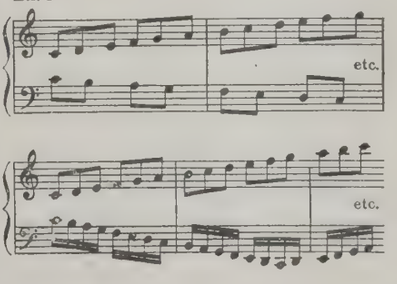
right hand..... 3 notes

left hand..... 2 notes



Now then, inverting the fraction gives us 2/3, which shows us that each note in the right hand must receive two beats, while each note in the left hand must receive three beats. If we multiply the two numbers together it gives us the exact number of counts used in working out the problem. The completed problem becomes:

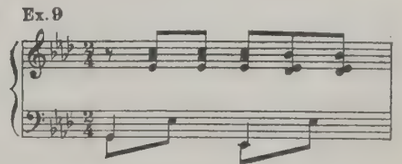
Ex. 6



Should the example be four against three or five against four, or some such arrangement, the solution is the same.

Ex. 7

The student might practice scales to advantage in these irregular rhythms, such as:



Ex. 8

Every thorough musician should be able to play these scales.

The student will find a good example of a study of two against three in the posthumous Chopin's *Study*, No. 2:

Ex. 9

Tempo Rubato

IN THE FIRST part of this article we have considered only the mathematical side of rhythm. There is, however, a more emotional, artistic and subtle side known as *tempo rubato,* a term over which the minds of many musicians are greatly befuddled.

Apart from the brief notes to be found in lexicons, only a few authorities have written anything upon the subject. Perhaps Paderewski's article on the subject is one of the best.

There seems to be some controversy over the meaning of the word *"rubato,"* which is the past participle of the Italian verb "rubare," which is derived from the Latin "repere"—to steal. Now we will not deal with the whys and wherefores of how or how not this word should be interpreted for musical purposes, but will give the general accepted uses of it. Perhaps a more fitting name would be "flexible rhythm" instead of *tempo rubato.*

The Metronome's Enemy

TEMPO RUBATO is the greatest enemy of the metronome, but when we have thoroughly mastered the use of this mechanical timekeeper we can turn to one which is more human and that one is the heart. When one is emotionally excited the heart does not beat with exacting regularity. Now if music is to be emotional it cannot possibly be played with clockwork precision, so *tempo rubato* is used. This simply means that there is more or less slackening or quickening of the rate of movement. This is a potent factor in playing music of an emotional character as it tends to lend variety, infuses life into it, emphasizes the expression—in fact it really idealizes the rhythm. Of course there are many dangers of exaggeration and its artistic use will depend upon the musician's musical background, culture, knowledge of the various styles and a fine sense of rhythmic balance.

Malwine Bree, who was an assistant to Leschetizky, gives some splendid advice regarding variations in tempo. "There is no composition which is played in a uniform tempo from beginning to end. Even in exercises this is allowed only in those practiced solely for finger dexterity. In the performance of other etudes, taste in style is by no means excluded, although in them its expression devolves chiefly on dynamic changes.

The changes in tempo must be so delicately graded that the hearer notices neither their beginning nor their end; otherwise the performance would sound "choppy." Thus, in a *ritardando,* calculate the gradual diminution of speed exactly, so that the end may not drag; and conversely in an *accelerando,* that one may not get going altogether too fast. In a *ritenuto,* moreover, many play the final tone a trifle faster, which abbreviates the *ritenuto* and gives the hearer a feeling of disappointment. Where an *a tempo* follows, it should quite often not be taken literally at the very outset, but the former tempo should be led up to gradually—beginning the reprise of the theme like an improvisation, for instance. Thus in the course of one or two measures, one would regain the original tempo.

Liszt's Figurative Teaching

ALMOST ANYONE can learn to play like a sewing machine but when it comes to the fine, delicate variations in rhythm it requires real musical talent. Liszt once gave an idea of *tempo rubato* to one of his pupils. "Look at those trees," said he, "the leaves and the small twigs are dancing about freely, but the large branches move but little, while the trunks are not swaying at all! Let that be your rubato."

Primitive Rhythms

WE OFTEN think of primitive music as being quite simple in its construction whereas a little study of the subject will convince one that the reverse of this is true in so far as rhythm is concerned. Many seem to think that what is called irregular barrings (that is, every measure in a composition being given a different rhythm such as 3-4, 4-4, 6-8, 2-4, etc.), is a distinctive and original touch when in reality it was used by the North American Indians and the Blacks of Africa. So you see the moderns are not looking half so far into the future as they are into the past for material to work with. In the North American Indian music one may hear the drum beats played in 2-4 time and the song in 3-4 time or the beats in 5-8 time against a melody in 3-4 time or the song may be sung to a rapid tremolo beating of the drum; the beats governing the bodily movements while the song voices the emotion of the appeal. One may often hear three rhythms, two of them contesting, someti syncopation yet resulting in a whole.

Rhythmic Phenomena

THERE IS RHYTHM in a recurrence. In the heavens planets revolve around their su exact measure. On earth the tides fall with rhythmic regularity and sons return at regular intervals— also follows the same rhythmi Rhythm has become wrought in organism of man and as B. S. M.D., writing in one of the medi nals, says: "General rhythm mar physical and spiritual manifesta life. There is rhythm in all bodi ments. All functions work in rh cyclic actions occurring in a rhyt ries. The structural arrangement is in harmony with rhythm. We a rhythmical in our life habits. Rh derlies all art. Rhythm forms of music, poetry, representative dancing." Thus rhythm becomes problem aside from its use in n

5. (a) What are primary accen Secondary accents?

How to Improve Your Sight Reading

By Grace May Stutsman

ONE of America's foremost musicians recently remarked that "sight-readers were born, not made." In other words, the instinct for grasping quickly large groups of notes and the ability to transform them into sound, while at the same time mentally seizing another group ahead, was to his mind a God-given gift. This is no doubt true; but it is also true that sight-readers can be manufactured up to a certain point by systematic application to the problem. There are at least three contributing factors:

Absolute familiarity with the keyboard;
Keenness of pitch perception;
Concentration.

Keyboard. Does a student "fumble" for his keys? If so, tie a handkerchief lightly over his eyes and have him locate the notes as dictated by you. Teach him the use of the groups of two and three black keys with reference to the white keys. Many students do not know how to use the sense of touch at all, especially beginners.

At first it is well to place the student's right hand on the keys, telling him his thumb is on middle C. Then ask him to locate E′, G′, F′, E′, F′, D′, C′. Other combinations should also be given. Try to make them tuneful as well as rhythmic. It is more interesting. After a drill with the right hand, the left hand should be taken with thumb on small G, and the drill repeated, after which both hands together should be done.

Next, start from the beginning, right hand alone, but have the student locate the position himself, thumb on middle C. Dictate: C′, G′, C″, B′, C″, A′, G′, E′, F′, D′, G′, G′, C′. Repeat with left hand, first finding the position with the left thumb on small G. Then both hands together. Other combinations should also be given for this.

The third step is to find intervals at dictation. By this time the student should have mastered key location, although the drills may have extended over a period of several weeks.

The intervals should cover the range of all major and minor thirds and sixths, as well as all perfect and imperfect fourths and fifths. If the student is too young to understand the meaning of minor and imperfect, confine yourself to major intervals. Even the youngest can, with a little practice, recognize 3rds, 4ths, 5ths, and octaves. These will do for a starter. The age of the student will also determine whether or not he can do them both hands together.

The fourth step applies to older students alone, and consists of locating triads and chords, both major and minor, as dictated by the teacher, *i. e.,* major triad on G′; major triad on A′; minor chord on G′; minor triad on F′; major chord on D′; major chord on C′. Repeat for left hand an octave lower.

Fifth step: Play any scale called for, both hands together, three octaves up and back at a speed of not less than 50=  in 4/4 time. Play any called-for arpeggio in root position and inversions at the same speed.

The student is now ready for drills without the use of the handkerchief.

Keenness of perception. For practice in keenness of perception turn to page 3 of the *Preparatory Exercises,* by Schmitt, Op. 16. Have the student watch the page while you play with the right hand alone Exercise 3, altering at least one note in the exercise, or in some way playing it wrongly. Make him tell the mistake. If he fails at the first attempt, play it a second time, exactly as at first. If he continues to fail, play it as written and see if he can tell you correctly. Strange as it may seem, the student will sense the mistake at this third trial, through hearing the exercise played correctly. If he does not, then go over it with him very slowly, pointing to each note as played, and when the mistake occurs let him hear the correction immediately.

Exercises 3, 4, 5, 6 are excellent for drill in thirds (broken). Exercises 7 to 16, inclusive, are good for other broken intervals. Always make at least one error, and more if you think the student can detect them.

On pages 9 to 11 will be found exercises in thirds which can be altered to suit the student's grade of ability, and on page 13, Exercises 178 and 182 should be played both hands together for at least four measures, with the same mistake in each hand. Then take Nos. 184 and 186, making mistakes in alternate hands. The value of this particular form of exercise cannot be over-estimated. Other material more conveniently at hand may be substituted for Schmitt, but it must, of necessity, be along the same simple lines as Schmitt.

Concentration. Concentration may be developed in a variety of ways, but there is space to mention but one or two.

First: Have the student listen while you play a major scale, carefully matching the tones. Ask him if he noticed any accent in the scale. If he did, play it again and have him be prepared to tell where it occurred; if he did not, proceed to the next step.

Play the scale again and accent the dominant ascending, and match the tones descending. Ask if he noticed the accent and where it occurred. Repeat t scale accenting the mediant and dominant ascendi matched descending. The student to tell where cents occur. Proceed along these lines, inventi own combinations.

The next step is to dictate to the student similar to these:

(*a*) With both hands play the scale of G m and back three octaves, with accented fifth a and no accent descending.

(*b*) Play the scale of F major with second a accented ascending, no accents descending.

(*c*) Play the harmonic A minor scale up a two octaves, with third and fifth accented a and fifth only accented in descending.

The last step. Secure some simple pieces of complicated rhythms, with nothing but single n each hand to play. Folk songs are so arrang by Dillar and Quaile, and by Henry Goodric Christian Schafer has an entire set of four boo cially for sight reading. Turn to the simples pieces and lightly draw a pencil line exactly bet two clefs, as though you were about to establis manent line for middle C. Instruct the student centrate on that line, but play what he can see ab below, each hand alone. Perhaps at first he be able to do a thing correctly. When the fi is complete, have him close his eyes for 60 secon try again, finally playing both hands together. be weeks before he is able to put both hands t but however long may be the period of drill, dis ment should never be allowed to enter the com

If the Schafer books are used, it is quite s draw the pencil line, as there are no marks of ex to distract the eye. As he becomes proficient c use of the line, but have him continue to focus part of the score, imagining the line to be there. he can do this he is ready to undertake tunes i occur intervals and triads. Thus he will g come to read the more complicated scores. account during this work should the student be to look at the keyboard. "Eyes ahead," is the throughout.

As has been stated above, these are only sug which are to be augmented and enlarged upon teacher, as space forbids an exhaustive treatmen subject; but if both teacher and student will perseverance and patience, a marked improvemen be observed in a comparatively short time.

Can I Develop Absolute Pitch?

By the Well-Known English Writer on Musical Subjects

CLEMENT ANTROBUS HARRIS

FOUR times a day, for six days e week, during about forty weeks ie year, the professional student returns to his instrument, after ɛft it long enough to have for- ie pitch of the last note played ie has a natural ear for absolute o have broken the sense of dis- ween the position of the player's n in repose, and that of any given he keyboard or fingerboard, and lispelled the sense of the pace at ie metronome was going. Add . occasions when the same thing and this makes *a thousand times a* he has missed a golden opportu- acquiring a sense of absolute e power to play without looking ngers, and an absolute sense of faculties of inestimable value tist whose medium is sound.

bsolute Pitch Unnecessary

AY BE admitted at once that ie of absolute pitch is not neces- ı to the most advanced musician, most of the great composers, specially, possessed it in a mark- e. Some are said to have been t, and rumor denies it to one of t eminent living music-makers. ırs ago a very interesting experi- s carried out at the Royal Acad- Music in London to determine entage of students who could and accurately name, blindfolded, e played or sung. The result hat *one in seven* possessed the

ent Sense of Absolute Pitch

WHILE there are, as we have ı, a few who possess an ear for pitch" by nature, and a few who -deaf" and had better not attempt usicians at all, there are a vast -the great majority of mankind— between the two. They have the erial for a sense of pitch which, raining, is of hardly any use at all, cely perceptible, but which with will become invaluable. It is not one will be able to start a tune re is no instrumena on which to

MOZART BEFORE EMPRESS MARIA THERESA

Mozart was regarded as one of the most precocious examples of absolute pitch and musical memory

sound the first note, but one's whole critical faculty and musicianship will be improved.

Difficulties

THOSE who would acquire this faculty are beset with one great difficulty: that is, as soon as a note whose pitch they know has been sounded, the opportunity for training in absolute pitch is gone! Thereafter any guess at a note will be influenced by the note they have heard, and will be an exercise in the perception of relative pitch only. It follows that the few moments spent at the piano or other keyed instrument *before sounding a note* offer a golden opportunity for mental training which it is folly to throw away.

As stringed instruments and the voice are almost invariably tuned or accompanied by a piano the opportunity is open practically to all musical scholars. The chief uses to which it can be put may be arranged under four heads:

Use I. Testing Conception of Sound

ON FIRST sitting at the piano or organ think of some note, and the particular octave in which it lies; mentally weigh or sense it; sing it; then test your guess by sounding it. If you find yourself wide of the mark, try thinking of some melody very familiar to you which begins with the note required: thus, if the note is A imagine yourself just beginning *The Old Hundredth Tune* which is generally set in that key. It must be pointed out, however that this test is not quite as reliable as might be thought, since the sensation in the throat gives the singer some idea of the pitch of the sound he is singing, from knowing the compass of his own voice, and whether the note is high or low in it.

A vocal student is often able to pitch a sound with remarkable accuracy if he can *sing* it, but guesses wide of the mark when asked to name a note sounded on an instrument. The form of the exercise should therefore be varied as much as possible.

Use II. Testing Perception of Sound

THE METHOD of training just explained develops accuracy in the conception of sound, that is, the power to call up or create a mental "vibration"—I suppose one must not say "vision"—of a sound not physically in existence. This is the highest function of the "mental ear." But, as testing it involves singing, it should, for the reasons just given, be alternated with exercises in the recognition of pitches.

That is, after a note has been sounded and a period of silence has elapsed long enough to make sure that there is nothing by which to measure the pitch, name the note which has been struck.

Pitch Tests

ANOTHER test is to approach the instrument with the eyes shut; play a note and guess what it is before looking at it. Having tested the correctness of your guess, close your eyes again, turn round once or twice, and then play two notes, one with each hand. If you cannot identify them, try to determine the interval between them. This however, is an exercise in *relative* pitch.

In some old pianos there is no board underneath the keys; their underside is open to the floor where black and white keys all look alike. In such instruments the hand may be placed underneath the keyboard, far back, beyond the pivots, and notes played by pressing the underside of the key upward. If the lid is down you will not be able to see what note you are playing, though you will know its position roughly. The perception exercise may therefore be varied in this way.

For testing the sense of *relative* pitch, pianos of this kind are particularly useful, since in playing two notes one has much less idea how far they are apart than when doing so by the ordinary method.

These tests may be largely supplemented by carrying about a chromatic pitch-pipe or listening to the countless musical sounds of definite pitch in nature—the buzz of bees, the lowing of cows, the creaking of a gate, the whir of the wind across a taut elastic—by means of which you may test your sense of pitch.

Use III. Aquiring the Sense of "Place"

JUST as before singing a note one must acquire a *sense* of its pitch, so, before playing a note, one must have a *sense* of its whereabouts. It will not do to look at the hands. It is impossible to read an intricate score and look at one's fingers at the same time. Even if the piece is played from memory, it is impossible to look at both hands while they make a wide skip in opposite directions.

Many, if not most, failures in sight-playing come not from inability to read, but inability to read and play at the same time. This is due to faulty teaching in the early stages: the student should have been taught to play from the first lesson without looking at his fingers. But let not such an one be discouraged. The existence of a sense of direction and distance apart from sight is one of the most extraordinary facts in the animal kingdom. It is most astounding, perhaps, in the case of birds and bees, but we humans possess it also. There are blind organists who will give after only a brief acquaintance with the instrument a two-hour recital on an organ of four or five manuals, a pedal-board, fifty stops and innumerable accessories, and play hardly a wrong note or commit a single error in registration!

Sense of Place

THE sense of *place*, like that of pitch, may be said to have both "absolute" and "relative" qualities—at least as applied to the pianoforte keyboard. The latter is in operation wherever the performer is playing without seeing the keyboard, and can be utilized at any time, and therefore does not concern us here. By an "absolute" sense of place I mean the ability to sit at the piano with the lid shut, close one's eyes, raise the lid, mentally select a note, and play it without looking for it. Before opening his eyes the student should endeavor to determine by the sound whether he has played the intended note or not. The test will then have a double value—the training of the sense of both sound and locality.

If the results are at first discouraging, the test may be modified by leaving the lid open; looking well at the note to be

played, putting one's hands behind one's back; then closing the eyes and striking the key.

Pitch and Place of Chords

AS COMPETENCE is gained, the exercise should be extended to chords, first with one hand at a time (both hands being exercised equally) and then both together.

As with the single note, the player should not look to see whether he has played the chord aimed at till he has first come to a decision on the point from the sound only. In some cases this will be quite easy. If the chord he determined on was a concord and the chord he has played a discord he will at once know that he has failed.

Is he then to open his eyes? By no means! To do so at this point would be to throw away a valuable opportunity! He knows what he has not played; now let him determine, without looking, what he *has* played. Then and then only let him look. Thus will he be training the sense of place and pitch at the same time!

But it may be that he has played a chord exactly like the one he intended, but at a slightly different pitch, for instance, a chord of E flat major instead of D flat major. As the relative position of the black and white notes is identical such a mistake may easily occur. In determining whether he has played the test correctly, therefore, he must be guided not only by the general effect or character of the sounds, but also by their acuteness or gravity—to use once again the scientific terms regarding pitch.

Fixing the Chord

WHEN a chord has been located correctly it is well to repeat it several times, closing the eyes or looking away from the keyboard and putting the hands behind the back before each repetition. After this has been done several times without a mistake, the chord should be played in different octaves.

Those who unfortunately have acquired the pernicious habit of excessive looking at the fingers will at first find these tests discouraging, but after a little practice will be surprised at the facility which they find themselves acquiring.

As a final test, combining pitch and place, the student, with eyes closed, may play a chord and sing *simultaneously* a predetermined note which forms part of it, for instance, the chord of F major, singing either F, A, or C. If the result is discordant he should try to diagnose the case, as before, with eyes closed, to determine whether the error was due to his hand or his voice: it may, of course, be either or both.

Use IV. Developing the Sense of Pace

EXACTLY the same use which may be made of a piano in relation to pitch may be made of a metronome in regard to pace. Fix on some metronomic speed—say *72*—and beat or count a few bars at what you consider this rate to be; then test your estimate by the metronome. I cannot myself recommend the plan of fixing some one pace in the mind and measuring others from it anymore than I would recommend fixing one note in the mind as a pivot-point. The whole object of these exercises is to get rid of measuring and substitute an independent sense of each note place or pace, taken separately.

In addition to estimating pace in the abstract it should be done in applied forms. Before determining the pace of a new piece by the metronomic rate given composer, the student should ver fully come to a conclusion as to the which *he* thinks it should be taken. and not before, let him compare h ing with that of the composer. T be an education in something muc than a mere clock-sense of time, in artistic sensibility.

The principle underlying all t ucational methods may be summar follows: *Never determine anyth mechanical means without first est it mentally. Use mechanism only of proof.*

Self-Test Questions of Mr. Harris'

1. *Is absolute pitch an essential t cal ability? Give reasons.*
2. *What per cent. of the genera possesses absolute pitch? What per a school of talented students?*
3. *How may an approximately sense of pitch serve the musician*
4. *How may the perception of p tested?*
5. *What are some valuable pitch*

When Shall I Stop Learning?

By Sid G. Hedges

THE most obvious answer to this is "Never!" It is an excellent answer. But the violin student is often faced with a difficult problem, when he considers whether or not he should give up taking lessons.

Many confuse the two things and consider that they finish learning when their lessons stop; but this ought not to be the case.

How many years should an amateur fiddler study?

It has been said of Franz von Vecsy:

"After three or four years of study he was master of the whole technic of the violin."

But against that can be set the famous dictum of Giardini:

"One should practice the violin twelve hours a day for twenty years."

Only a genius can expect to do what von Vecsy did in four years. The average player cannot hope to reach a very high standard in that time, assuming that he can spare only comparatively little time from his leisure.

And the daily twelve hours for twenty years is also unthinkable to most violin lovers. It is probable that the great Italian's eyes twinkled as he spoke it—the eyes of most people do when they repeat it. Such tremendous labors would most likely make another Giardini; and the ordinary amateur can neither spare sufficient time nor money. Besides, it is enough for most players if they can just play so as to give some enjoyment to themselves and to their friends. They cannot hope to reach even a professional standard.

For these then, the problem is real.

It is almost impossible to make any ruling about a definite number of years, because rates of progress vary so much; but some sound, general principles may be stated.

No violinist should finish lessons before all the positions are thoroughly known and vibrato is mastered. This should be an absolutely minimum standard of achievement.

Unless all the positions are known, a piece of music may be unplayable merely because some of its notes are too high. A knowledge of positions simply implies a complete knowledge of the fingerboard.

Vibrato improves violin tone almost incredibly. To stop without having learned this wonderful grace would be complete folly; but it ought not to be learned by the time a moderately advanced standard of playing is reached.

After all, if one is to live for eighty years, what do two or three additional years of study matter. When considered as a part of those eighty years, it seems quite an indifferent thing whether one finishes lessons at the age of twenty-two or twenty-five; and yet those three extra years of tuition will give a vastly increased capacity for giving and receiving enjoyment throughout the remaining half-century.

On no account should the student "drop the violin" for the tennis season, as some very foolish people do, with the result that when they restart they have to make up a very serious loss of what they previously had mastered.

The farther the student gets with his violin study, the more he will find there is to do. If the positions are "done," there is Kayser ahead; if Kayser has been studied, there are Mazas and Fiorillo waiting; when these are mastered, the great Kreutzer studies are yet to be conquered; and beyond them are Rode, Gavinies, and Paganini.

But the unequalled studies of Kreutzer will form a sufficiently distant goal for the average amateur—he need not rest until these magnificent compositions are known almost from memory. With Kreutzer mastered there is very little violin music of importance that need be feared.

But even when the day comes when lessons are abandoned, there should be no cessation of practice or progress.

Balzac has said:

"If Paganini, who made his soul speak thro strings of his fiddle, had let three days pass practicing, he would have lost, together with his p expression, the *register* of his instrument"—by w meant that union existing between the wood, t the strings, and himself. "This harmony once di he would have forthwith become an ordinary vi

Of course, his interest was increasingly sti as he played on his beautiful instruments; throughout his life he remained progressive.

Some day, the student's own judgment will ad to discontinue lessons—but on no account sh ever stop learning.

A Thousand Thanks to All Etude Readers

We desire to express our most sincere thanks to our friends for the great outburst of enthusiasm which has greeted "The Etude" Sesqui-Centennial Souvenir. We knew that this was something for which the American music public had long been waiting. No collection even approaching in small degree this gallery of four hundred and thirty-two portraits of American composers had ever been attempted before.. We feel repaid for the great expenditure of time, effort and money required to produce this souvenir. As many have written, it fills an important historical need. Your attention is especially called to the full-page announcement on page 712 of this issue.

The Marvel of the Human Voice

How Natural Methods of Training Produce Exceptional Results

An Interview Secured Expressly for THE ETUDE with

OSCAR SAENGER

Biographical

extraordinary achievement of scar Saenger, as exemplified number of his students who en members of the great Met- n Opera Company of New thirty-three or more), and having produced pupils who nowledged "stars," often suf- in number to take all the rôles in some Metropolitan ions, makes anything that Mr. may say upon the subject of ly of the voice of exceptional Mr. Saenger was born in n, New York. He studied in for six years with William midt. He then went into business with his father. One day he saw the announcement of a free scholarship at the National Conservatory and, at the age of seventeen, he appeared before the famous prima donna, Madame Fursch-Madi, who awarded him this scholarship in the institution founded by Mrs. Jeannette Thurber. There he studied with M. Jacques Bouhy, creator of the rôle of Escamillo in Bizet's "Carmen," remaining with him for some four years. He also studied the piano with Leopold Winkler and theory and harmony with Bruno Oscar Klein. At the age of about twenty he started to teach at the conservatory, his fee at that time being one dollar an hour. After remaining at the conservatory for nine years, he became a private teacher of voice. He sang in concert, opera and in oratorio with great success, and after a concert tour in Europe, had an offer to sing in the Royal Opera, Berlin, but was obliged to return to America.

Among the notable pupils of Mr. Saenger have been: Marie Rappold, the first exclusively American-taught artist to sing leading rôles in the Metropolitan Opera House; Frieda Hempel, Mabel Garrison, Queena Mario, Anna Fitziu, Paul Althouse, Orville Harrold, Riccardo Martin, Mme. Gerville-Reache, Florence Hinkle, Allen Hinckley, Josephine Jacoby, Leon Rains, Rudolf Berger, Henri Scott, Bernice de Pasquali, Kathleen Howard, Putnam Griswold, Christine Miller, Richard Hale, Melvena Passmore, and many others.

THE ETUDE *feels that it is very fortunate in inducing Mr. Saenger to present for the first time in this form many of the ideas which have led to his very great success as a singing teacher. Several of the Foremost Singers and Teachers of the world will be represented in future* ETUDES.

HE PROBLEM of making clear the essential elements which enter into the development of a ie singer is not so difficult as may appear. Generally speaking, we st of all, the instrument itself, and the performer. Unlike the study ther instrument, the singer is him- instrument. Of course, a great ends upon the raw material in ution of a vocal Stradivarius (or factory violin) if this simile makes er any clearer to you. There can gainsaying that some people are th tissue and muscles and vocal which are unquestionably superior of others from the very time of trance into the world. However, e of the ordinary individual can be ngly improved and developed natural methods, persistently and ntly pursued.

same may be said of the performer voice, because that is really what er is. If the singer's sense of sense of precision, sense of rhythm eral intelligence and spiritual en- ent are highly developed; and if ument itself is a good instrument, olved, we have the basis of a real So many singers imagine that the a little musical instrument, boxed at region of the throat known as m's apple, or the larynx. This is roneous, because the voice is the ndividual. Anything affecting any the body is likely to have not only ect effect upon the voice, but also direct effect. This is especially all digestive and nervous disor- d before we can consider anything must consider the voice as the en- nan being. It is not the bridge violin that is responsible for the f tone, but rather the entire instru- With the Stradivarius it is not he wood or the varnish that makes nderful creation, but rather the workmanship, the art that the as put into it.

efore, one of the very first things singing student to acquire is an rriage of the body. I have never a really great singer who did not at I have termed an ideal carriage. dy, as well as the voice of the must become idealized. Unless a as a fine body, capable of develop- gnificently in singing lessons, the are very frequently wasted. The nust be one hundred per cent. fit. starting singing lessons, especially are to be with an expert who is justified in asking high fees for his services, by reason of the demands upon his time, by all means see that you are physically fit. Get rid of your bodily ills. See that you are a well, healthy, enthusiastic, vibrating human individual. I often tell my pupils that the singer who is capable of properly interpreting some of the exhausting opera rôles must be in fine physical condition, better than the average prize fighter when he goes into the ring. I mean this. There is a call upon the physical forces and the vital powers of the singer that not one person in ten thousand ever realizes when watching the performance over the glimmering footlights.

OSCAR SAENGER

Inadequate Bodies

"VERY FREQUENTLY singers have come to me with promising voices, but with entirely inadequate bodies. It is almost a waste of time to try to sing without normal physical development. If you desire to be a great singer, remember that you must develop first of all your body. It is very pathetic indeed to encounter a large, beautiful voice, but with an inadequate body to sustain it, because of the demands made upon the singer. Of course, the study of singing itself tends to make a beautiful body. I remember, some years ago, a student that was sent to me by her doctor, with a confidential letter that there was a suspicion of incipient tuberculosis. She had a peculiar temperament; and, in order to get her to take the proper breathing exercises, it was necessary to have these administered to her in a way so that she did not suspect her real condition. I worked with her and gave her exercises in breathing and carriage which built up her body. She had a fair voice and she worked hard. To-day she is in splendid health, sings with success professionally, and is the mother of a number of children.

"Of course, a singer, particularly in opera, is obliged to sing in many positions —sitting, leaning, and sometimes groveling, on the ground, as does Jeritza in some of her dramatic rôles.

"First, the best position at the start in singing is to stand erect; second, lean slightly forward upon one leg and relax the other; third, relax shoulders; fourth, hold chest high, but never rigid; fifth, draw lower abdomen in slightly, but without tension; sixth, assume a feeling of buoyancy, lightness, flexibility, elasticity, as though you were about to fly.

"If the reader will review these points in order, several times a day for three or four weeks, he will find all his nature assuming this position. He may also notice that his health will tend to improve, that the circulation of the blood is benefited, and that the nervous tension disappears. The main thing, of course, is to avoid rigidity at all times. The arms, for instance, must hang easily at the side. It is futile to try vocal exercise until such a position becomes a matter of fact and literally a habit. As in all kinds of vocal study, this position should be repeatedly practiced before a mirror. The mirror is one of the finest teachers of a student, for the simple reason that when practicing before a mirror he is teaching himself, and the voice student who does not teach himself had better not spend time and money upon a teacher.

Loose Jaw, Loose Tongue, Loose Throat

"NEXT, the student must cultivate three things: a loose jaw, a loose tongue, and a loose throat. Just why the American way of speaking the English language should tend to cause rigidity in the foregoing organs is hard to tell. Not the language itself is at fault but traits of pronunciation handed down by care-

less or misinformed ancestors who have been so involved in the energetic and intense life which has been in a large measure responsible for the growth of America that they have given little thought to the desirability of beautiful speech.

"The inhibitions, the tightenings, and the abnormal tensions which have thus been acquired are ruinous to all attempts to produce good tones. In a great many cases, it is absolutely futile to try to produce a beautiful tone until these inhibitions have been removed. Vocal teachers would be saved an enormous amount of nuisance, and voice students would be saved a great deal of time and money, if the latter would go to a good master of the subject and develop proper habits of speech before applying to the singing teacher. More than this, the pupil must begin to watch his speech with the most meticulous care. It should not become artifical: but he should try to enrich his speaking tone with every word that passes his lips.

"We are looking forward to the time when there will be no topographical restrictions in speech; that is, there will be no South, East, West or North. No ancestral dialects persisting, but a beautiful pronunciation of English which will be one of the greatest attributes that can come to the singer. All vocal exercises are wasted if the student does not watch the voice in speaking. The scriptural injunction, 'As a man thinketh, so is he,' might be paraphrased to read, 'As a man speaketh, so singeth he.' The student naturally asks to whom should he go for models of a beautiful speech. Even the American stage is largely colloquial, having dialectical forms which are preserved; and although we might find in such actors as Sothern and Hampden fines models of beautiful English pronunciation and enunciation, the pupil will usually do better to follow the models provided by the best clergymen; that is, men of broad education and real world experience; men of taste and of character and learning. Go to the best churches and find your models there. A pupil will also be helped by reading such books as 'Technic of Speech,' by Dora Duty Jones, and 'Diction for Singers and Composers,' by Henry Gaines Hawn.

"You see, the pupil who really wants to save time and money can do a great deal of study of this kind, before ever thinking of going to a teacher.

"I Am the Tone"

"WE HAVE now come to a general realization of the fact that the student must feel that the voice is the instrument. I frequently tell my pupils to say to themselves, 'I am the tone, not the larynx.'

"After one has accomplished the relaxation of the jaw, tongue, palate, and facial muscles, and has achieved a fine bodily position, the student should next take up the matter of breathing. You will find that many teachers go so far as to advertise that they have their pupils breathe naturally. To me this has always seemed to be on a parallel with the art teacher who might advertise that 'pupils paint naturally.'

"In my experience, breathing must be taught. When a child is born, it breathes naturally, but very soon thereafter it begins to do the things it sees others do and uses wrong muscles. When it arrives at the age when it desires to begin the study of singing, it is very likely to have acquired a number of habits of breathing which are very objectionable. However, there should not be a great 'to do' about breathing. It is very simple. Before taking a breath, the diaphragm (that is, the heavy muscle forming a kind of domelike floor upon which the lungs rest) is in a convex position upward. As the breath comes in, the diaphragm flattens out, in that way creating a larger space below and making it possible to fill the lower lungs first. The room in the lungs is also increased by the outward expansion of the ribs. The pupil should have the thought first of filling the lower lungs, with the chest perfectly quiet, but not rigid, and the shoulders relaxed. With the last intake of breath, the muscles covering the lower part of the abdomen are slightly drawn in.

"This is, properly speaking, diaphragmatic costal breathing. The best way to know whether you are breathing correctly is to put your fingers below the breast bone and try to detect a slight outward movement of the upper abdomen with the intake of the breath. The best way to control these muscles and to exercise them is by lying flat on the back and feeling an outward and inward movement in this upper abdomen. The movement should be like that experienced when panting. Always remember outward and inward. This should be done rapidly at first and then slowly. An exercise of this kind, practiced persistently every day for a month, will develop the breathing muscles and expand the lungs very noticeably. Remember we breathe from down, up; but this does not mean raising the shoulders.

Vocalization

"AFTER having secured control of the breath, the next matter is vocalization. This does not mean merely singing up and down the scale, precisely and in tune. The first idea is to produce a beautiful tone; in other words, to perfect the instrument with which we sing. Caruso, before he passed on, gave me this message, regarding his method of producing a beautiful tone. Stand well; support the breath with the abdominal muscles and the diaphragm; chest high (but not rigid), and focus the tone in the upper teeth and hard palate, practically into the face. Caruso represented this by placing his hand in a cup-position over the bridge of his nose. He used to say he breathed with his back and felt the support of the breath in the back. While standing in this position, the pupil should sound the vowel 'ah' in the most convenient part of the voice; that is, the part where the least effort is required. This, at first, is an experiment; but it is only by means of many so-called empirical experiments that the ear with its innate sense of beauty and loveliness of tone quality begins to mold the tone into shape. A pupil should cultivate this sense of beauty so that he may hold in the 'mind's ear' a tone so clear, so pure, so rich in vibrations, so warm, so luscious and so resonant, that it is far above the average tone, and the teacher should help the student to realize this mental picture.

"Singing is largely a matter of the idealization of the tone through the mind, the soul and the spirit. In breathing while singing, it is best to breathe through the nose; one can, of course, breathe either through the nose or the mouth; but the preference should be given to the nose, although in rapid singing the mouth may be necessarily used.

"Let us assume you have developed a beautiful instrument, a vocal Stradivarius. Now it remains with you to get a technic of tone production. You must learn to color your vocal tone just as a Paganini, or a Kreisler would color the violin tone. The imagination plays a very strong part in this. The singer who attempts to sing without imagination may as well not sing at all. In fact, one of the first things the student should do, should be to develop the imagination. He must form the habit of having gorgeous concepts of color and form and poetry and drama. He must feel carried away by the wondrous beauty of a rose or a magnificent sunset. Before he utters a tone, he must suffuse his soul with these wonderful things; and when the tone comes forth, it must bear in itself all the beauty that the individual singer at that moment can put into the tone. Now let us assume that you are ready to sing.

"Now Sing"

"PERMIT the tongue to lie flat on the bottom of the mouth, as though it were so much jelly (this on the vowel ah). The tip of the tongue in this position usually touches the lower teeth. Now open your throat. There are two ways of opening the throat, laterally and perpendicularly. The sensation should be an up-and-down sensation of the throat, like a gentle yawn, and a lateral, smiling position of the mouth. Now stand before a mirror. In my studio I have mirrors 'all over the place.' Without them I should be lost. All my pupils practice regularly before the mirror. Feel a slight lifting of the muscles of the cheek as though just about to smile. Do not raise the muscles of the forehead. Let the smile be genuine, not strained. Look as beautiful and feel as radiant as you can.

"Think your beautiful tone and then sing it. The ideal attack of a tone is that which starts without any explosion in the throat (one time known as the *coup de glotte* and actually cultivated by mistaken singers). Now think your beautiful tone and produce it as though you were drawing it, pulling it but never throwing it. The ideal tone is one which seems to come from nowhere. As the violinist draws the tone with bow, you should draw your tone in singing. The focus that so many voice teachers talk about is a means of stimulating the imagination to feel that the tone resounds back of the upper teeth and back of the hard palate. The French have a way of saying this, to sing *'En masque,'* that is, 'in the face.'"

Mr. Saenger's excellent article is merely an example of the exceptionally high standard set by "The Etude" for the coming year in all departments. We shall shortly have the honor of presenting an important series of vocal articles by the great voice master Franz Proschowsky, vocal advisor of Mme. Amelita Galli-Curci and Tito Schipa.

Engaging a New Mu Teacher

By Julius Koehl

MANY a little genius has been by improper training in the beg Many a child's love for the glorious music, so necessary to his spiritual opment, has been thwarted by uni ing, unskilled instruction. Why n best in music? Perhaps, then, your ple would grow up critical in their where music is concerned. I firmly the younger generation would no lor "jazz-fiends," but patrons of the halls and opera houses.

The average mother engages a teacher for her child with less thoug care than she gives ordinarily to e ing a servant. In fact, when hirin of any sort, this same parent will d references and credentials and put t plicant through a veritable third regarding his former activities and capabilities. Not so when engag piano or violin teacher. The mother little about music, the father is di ested or knows less, but Mrs. Jones girl next door has a teacher who to the house and her fee is low. Th teacher of Mrs. Jones' daughter a a new student. If that mother and were placing their child in a doctor' how they would investigate the d reputation! If the mother were pu ing a new gown, how she would about comparing qualities and values a teacher of music? Oh, anyone will the start at least!

The beginning is the most imp stage in the study of music, whethe piano, violin, voice, or any other fo musical expression. The child shoul the best teacher and the best inst procurable.

The parent is well able nowadays termine a teacher's reliability. News run supplementary musical sections Sunday, in some cases bi-weekly; t magazines warn against the quack t and publish lists of the legitimate and private instructors of the city. consulting these sources, should the be doubt, seek the advice of an aut Here are a few points worthy o sideration:

Good instruction is not cheap, a best teachers do not travel from to house peddling their knowledge. teacher is always himself an ex musician. It is true, some of our g concert artists make very poor te because it is not to their liking to knowledge, and their highly strung ous systems do not prove capable extreme patience is required; bu scheme of things does not work th way. A poor performer is never teacher. One must know practical merely theoretically, how to impart edge to others. Different teachers about it in slightly different ways. question is, are the proper results att

I like l the names of the singers who sing my songs: Lena Little, Julie Marie Brema, Eliot Hubbard, einrich and others.

At Bayreuth

NEXT time I went to Europe was 1886, when, after a while in Lon- ined Mendelssohn and we went to h, when "Parsifal" and "Tristan lde" were given. The perform- ere splendid. Liszt became very ill, there. Mrs. Gardner, offering her placed a laurel wreath on Liszt's which made a great impression e other mourners.

Bayreuth, we went to Heidelberg rate the Five Hundredth Anni- of the University. My Mendels- iend, being a student at Heidel- came my host for the fortnight of s. Months before, two thousand s had been designed and made, ting the different periods of the ndred years of the university. as a great chronological pageant, pened the ceremonies, during the of which, "joy was unconfined." ere dinners, and dinners and some ners, with speeches, and speeches e speeches, and champagne, and ne and more champagne. Old, ged, and young students came rywhere to celebrate. The whole as filled; the students, wearing ilticolored caps belonging to the different corps, some of them leading bull- dogs "enleash" and, most of them, proudly displaying their scars. My friend made me a temporary member of the corps to which he belonged, so I was taken into the student life which, apart from the din- ners, consisted in drinking beer and sing- ing songs.

After the various dinners, in spite of having had more food and drink than was good for them, everybody repaired to the corps, where most of the rest of the night was spent in the above mentioned genial way. There were some more picturesque moments during the fortnight; for in- stance, when the Castle was illuminated, when rockets and Roman candles were shot out of the towers, and where the bridge over the Neckar, down below, looked like a blazing Niagara Falls. The same illumination took place on the last evening of the celebration, when two thousand students, in costume, made merry all night. The inner courts were bril- liantly lighted, tableaux were arranged, bands played, and, of course, there was no end of food and drink. On the "Great Tun," students danced, some of them challenging each other, planning for duels the next day, or later. As good luck would have it, a member of the corps of which I was a guest had been summoned to a funeral, so he offered me his costume, "a suit of mail," which I wore with great success.

Life on the Rhine

AFTER THOSE weeks of hilarity it was no wonder I was glad to go with Mendelssohn to his place on the Rhine where I stayed for a week or more; and when some of the Heidelberg students whom I had got to know came for a day or two, we made merry all over again. While I was there we spent a day going up the Moselle. The Moselle joins the Rhine near Coblence. About twenty miles above the junction of the two rivers is Schloss Eltz a wonderful old place, be- longing to the Counts Eltz who have lived there since the tenth century. As we were only tourists, we could not pay our respects to the family, but we saw the old Count sitting under his "vine and figtree."

Another Journey

IN 1888, with Eliot Hubbard, I sailed directly to France, taking first a little trip through Normandy. The churches and the architecture of other buildings and the Bayeux tapestry were interesting. Going west we went to Mont Michel, climbing up to the top of it. On the shoulders of the "Marquis de Tamber- laine," a picturesque imaginary nobleman, we were carried safely, avoiding quick- sands. At déjeuner we had the best omelette ever made, and chicken broiled by Madame Poulard, who was beautiful and adored by everybody who came to eat her omelettes and chicken. The walls of the inn were hung with pictures painted by various artists and presented by them to Mme. Poulard. We saw the tide come in, a great sight! Standing on the ram- parts, watching the tide come in, a native woman near us said: "Ah, Monsieur, vous pouvez courir aussivite que vous voulez, la marée vous attrapera toujours."

Now, skipping over the next few years, the events of which will be published later on in THE ETUDE, let me add a sketch or two about people, musical, artistic and social.

Having made many references in my Reminiscences to Wilhelm Gericke, may I say a few personal words about him? Gericke was the father of the Boston Symphony Orchestra, the post of which he held longer than any other conductor. His name is still one to conjure with. Last autumn he passed his eightieth birth- day and soon after that he died. When he came to Boston, he was forty. Coming from Vienna, where he had been one of the conductors of the Opera, Mr. Hig- ginson spoke of him as an "Ehrenmann," (man of honor), which he was, and always remained. What Gericke did, we all know. "The proof of the pudding is the eating thereof." His pudding was good, and we all enjoyed it for many years.

The Tavern Club

WHEN HE came, in 1884, from Vienna, I came from Berlin, after my two years of study there, we both immediately became members of the Tavern Club, where we lived in daily intercourse. As Gericke spoke but little English, and I having had two years of German training under Frau Dr. Hempel, we spoke only German, which was a strong bond. Every Saturday night, all music lovers, members of the Club, came back after the concert to supper, from the old Music Hall, in Hamilton Place. Mr. Higginson was always there. He and Gericke had much to talk over. Gericke was a bachelor, and we were all young, so we didn't mind whether we went to bed early or not. We had many genial evenings. Special evenings were celebrated at Christmas, and at "Narrena- bend" (All Fool's night), when the world was not ashamed to mention a German word.

The Lively Master

GERICKE was the moving musical spirit on all these occasions. No matter how tired he might be after re- hearsals he was always ready to take part in any "spree." On one of the "Narrena- bends," was a "Dime Museum," when Gericke, decoletté, with his black beard, was exhibited as "Madame Pastrana, The Bearded Lady, commonly called Herr (hair) Gericke!" Those were young and careless days when life was constantly on the move. The winters were full of interest. The summers were spent in Europe, usually.

After the musical season was ended Mrs. Gardner, every year, asked Gericke and me to pass a week with her and Mr. Gardner, at "Green Hill," in Brookline. After breakfast, Gericke and I took a long walk. The rest of the day was spent in varied pleasures, provided by our host and hostess. Green Hill was one of the loveliest places near Boston, with a charming house and music room, splendid trees, beautiful flow- ers, Japanese irises and a Chinese Water Garden, with a hazy atmospheric view over Boston from the hill. People came and went.

Mrs. Gardner was never at a loss to enter- tain herself and her friends. Russell Sullivan and I called her "The Queen," while Gericke was her "Capellmeister." She had no beauty of face, but a wonderful and illuminating personality, which drew about her all sorts and conditions of men and women. She was interested in every- thing that was happening and in every- body who came there. She had the power of getting the best out of each person and thing. She had a marvelous deter- mination about anything she *wanted* to do. When she broke her ankle, many years ago, in the old Music Hall, she was carried up in a hammock by her servants to the balcony, where she appeared at every concert. She knew no obstacle; in fact, obstacles were to her an inspiration. Her own charm, with her beautiful surround- ings, formed an unforgettable atmosphere of music, flowers and art.

Apthorp, the Critic

AMONG other interesting houses in Boston, let me not forget Mr. and Mrs. Apthorp. (Mr. Apthorp was the musical critic of the *Evening Transcript.*) For many years, their Sunday evenings were unique. Many times during the winter they gave little dinners of six or eight people, usually having some "high light" guest, like Paderewski, Melba, Sara Bernhardt, Coquelin, Salvini and others. After dinner, special friends were in- vited to meet the honored guest. Mrs. Gardner and Gericke were always there, besides members of the "younger set" with youth and beauty as a decoration. Mr. and Mrs. Apthorp were rare enter- tainers, giving hospitality in its best sense. Later in the evening, beer and cigars lent a Bohemian air to the occasions. Mrs. Apthorp appeared, carrying a large pitcher of beer in one hand, and beer mugs hang- ing on each finger of her other hand. As "Blue Laws" still obtained, dancing was not allowed until after midnight, but after midnight, it was "on with the dance."

Mr. and Mrs. Dixey didn't entertain in a large way, but gave charming dinners of ten or a dozen, frequently. Mr. Dixey being a lover of music and Mrs. Dixey being a lover of all things beautiful, they entertained artists, musicians and the "beau monde." Let me recall one when Lilli Lehmann was the chief guest. Her sister Marie and Van Dyke were there, also the Gerickes and others. After dinner Gericke, seating himself at the piano, played bits of Wagner, whereupon Lehmann began to sing *Tristan und Isolde,* and becoming more and more inspired, she sang the whole of *Isolde's Death Scene.* As the company was getting a little too serious, Lilli asked for a broom. Taking a broom- stick, she sang and acted the "Witches' Dance," from *Hänsel und Gretel.* Hilarity then knew no bounds; even staid matrons and maids joined in the dance. I remember one imitated a "Can-Can," that is, as nearly as possible.

An Artist's Toasting

JOHN SARGENT, at the time of the first instalment of his decorations for the Boston Public Library, the Library was opened by a formal supper of one hundred and fifty persons of both sexes. The architects of the Library, Messrs. McKim, Mead and White were there. Sargent was toasted. He hated being toasted, because it was an agony for him to have to respond. On that occasion, slowly rising, and grasping at the table, he began: "I want—I want—Mr.—Mr.

—Mead—Mr.—Mr.—White—Mr. Mead." With that, he sat down. As we walked home together, Sargent said, "Wasn't it awful!"

In London, from time to time, I dined with him and his mother and sister, who lived in Chelsea, near Sargent's house, which was at 31 Tite Street. After dinner, we all went to the theatre or opera. After the performance, the ladies went home while Sargent and I went off for a bit of supper. That was the time when he was at his best.

Once, while we were having a "sup" and a "sip," I saw him looking attentively at a man sitting at a nearby table; I asked if he thought the man would be a good prophet. Sargent said he thought he might. At that time he had been over in Amsterdam, looking for Jewish types, so his mind was full of them. In those days, he led a quiet life, seeing a few intimate friends, most of them musically inclined, Henschel, Shakespeare, Korbay and others. Sargent had a keen interest in music. He liked playing what is called "Four Hands," also he liked to play chess. As time went on, he mingled more in the "great world," but music continued to be his "second love," up to the last. I am proud to have known him intimately for nearly forty years.

May I close my "pen picture" of him, by recalling an incident which he told me connected with the Boston Public Library and its committee. In the beginnings of the library, Whistler was asked, by the committee, to decorate the north wall of Bates Hall. When the committee said, that they would be very glad indeed to have a *serious* work by Mr. Whistler, Whistler retorted: "I thank you, gentlemen, but it would be impossible to change the traditions of a lifetime. If anybody should wonder why that north wall panel remains undecorated, let him be referred to the above incident."

Enter the Prima Donna

EMMA EAMES was a woman of unusual beauty with a beautiful voice. She became a star, shining over two continents where she triumphed in Paris, London, New York, Boston and in all the chief cities of the United States. Many people remember how beautiful she was as *Juliet* in "Romeo and Juliet," and as the *Countess* in "The Marriage of Figaro." I first met and heard her at a musical party, given by Mr. and Mrs. W. S., of Boston, who were giving a "house warming" for their new house.

All society was there. One room, leading out of the music room, was unfinished, but had been converted into a palm garden, temporarily. A. R. the brother of Mrs. S., being the architect of the house, led Miss Eames all about on his arm. Passing in the throng, I overheard her say: "I never saw so many 'spoon corners' in all my life." Miss Eames was just nineteen and radiantly beautiful. After her successes on the stage, she left it, and retired to private life, living for some years in her native town, Bath, Maine. She now has established herself in Paris, permanently.

Mary Anderson

MARY ANDERSON (Mrs. de Navarro) was not only the most beautiful woman on the stage, but was of the most beautiful spirit, kind and thoughtful to everybody, devoted to her husband, children and friends. She forsook the stage, without a pang, because she chose the better part. Her marriage was ideal. During the World War, she played a number of times, at the Stratford Theatre, in London, in Manchester, in fact all over England and Scotland, realizing the sum of £48,000 ($240,000) for the Common Cause.

You will read more about the de Navarros (Mary Anderson) in another number of THE ETUDE. "Court Farm," their place in Broadway, was charming. Next to it lived Maude Valerie White. During "Cricket Week," she sprained her ankle, causing her to be laid up for some time. Miss White was a delightful person and most amusing, belonging to the late Victorian period of music. Her songs had a great vogue, sung by Marie Brema, Plunkett Greene and everybody else. On account of her lame ankle, she remained in bed. Being nearby, we used to go up to her room after dinner. Her spirits were not dampened by her accident. Being a great mimic, lying in bed, she imitated Queen Victoria. Putting a soap dish on her head, looking like a crown, and hanging a towel from the soap dish, imitating a widow's weed; she stuck her forefinger in her cheek and gazed at the picture of the Prince Consort, making a perfect likeness of the well-known photograph of the Queen.

Miss White was a wonderful talker, in a good sense. Once I said to Mrs. de Navarro, "I am sure Miss White never married because she had never given any man the chance to propose." The next day, Mrs. de Navarro and I were walking under Miss White's window; Miss White called down and said, "Tell Mr. Johns, that 'England expects every man to do his duty.'" The next day I returned to London, so I never had a chance to propose.

The Strathmores

A FEW YEARS later, I was again staying with the de Navarros. The Dowager Countess of Strathmore and her daughter, Lady Maud Bowes-Lyon, took a place near Court Farm. Lady Maud being a good amateur violinist, we made a good deal of music together, playing Brahms' Sonatas and other things. Both of the ladies were charming. Mrs. de Navarro had often told me of her visits at Glamis Castle, belonging to the Earl of Strathmore.

Everybody has heard of Glamis Castle with its "monster" (or as it was called, by the knowing ones, "the ghost") shedding gloom over the place, and over everybody in it, guests and everybody else. Mrs. de Navarro said that the sinister influence was indefinable, only it was there. I was interested to see the Countess of Strathmore in her simple surroundings at Broadway, where she seemed to be one of the most calm and serene persons imaginable, in spite of the shadow cast by the "monster" during her married life. The Dowager Countess of Strathmore is the mother of the Earl of Strathmore, and the grandmother of the Duchess of York. The Duchess may become the Queen of England.

The Devonshire Coast

ALL TRAVELERS have been along the coast of Devonshire, and most of them have been to Clovelly. My friend, Mr. Henry White, who was ambassador to Italy and France, gave me a letter of introduction to Mrs. Hamlyn, the chatelaine of "Clovelly Court." Mrs. Hamlyn owned everything in and out of sight, including the celebrated "Hobby Drive." Having presented my letter, immediately afterwards a servant brought a note, saying that "Mrs Hamlyn would expect Mr. Johns, with three other friends, to lunch."

As neither Mr. White nor I had mentioned the fact that I was traveling with anyone else, this all sounded most hospitable. The servant, in some way or other, had noticed that I was with three other friends at the inn. Of course, we all accepted the invitation with alacrity.

Mrs. Hamlyn sent her carriage to bring us from the inn. Clovelly Court is a splendid house and place, with a marvellous view of the sea from the cliffs. After luncheon we walked and drove everywhere. After tea Mrs. Hamlyn asked us to come back to dine at eight o'clock, which we did. The next day, we spent the morning exploring the "Hobby Drive" and other places, but before doing so, a note from Mrs. Hamlyn came, asking us to dine again. Not being able to resist such kindness, we again accepted. English hospitality can't be equalled "when the time, place and the liked ones come all together." Mrs. Hamlyn liked us and we adored her, her place and everything she did. Clovelly and "Clovelly Court" is one of the celebrated places in England. Let me add that our pleasure was largely due to the fact that we were so well introduced by Mr. White who has shown his friendship to me more than once.

The Personality of Rameau

By Victor Wynn

THOUGH he was one of the foremost musicians of France, comparatively little is known of Jean Philippe Rameau (1683-1764), a somewhat lonely, unlovely Belgian who was not only a great composer but was also one of the first to systematize the study of harmony. In "The Spirit of French Music," Pierre Lasserre describes him thus:

"He went unending, solitary walks, striding along the paths in the public gardens apart, and if any one forced him to speak to him, he seemed, we are told, 'to be coming out of a sort of ecstasy.' . . . His abstraction, however, is not the voluptuous slackness of an aesthete who dreads the harshness of human contact and the fatigue of practical affairs. It is the symptom of a strong and tenacious will that has a horror of scattered energies, and concentrates on the main issue, the *unum necessarium*.

"Business does not frighten him, and he handles briskly the men with whom he has dealings. He is known as a rugged character, energetic, imperious, brusque, crushing. He makes the artists who have to perform his works tremble. At rehearsals 'he used to sit in the pit, where he insisted on being alone; if anyone came to see him there, he would wave him away without speaking to him or even looking at him.'

"Here is another important detail—he was a miser; his was a solid, middle-class avarice, which growing on his stock of greatness and genius, stands out in high colors, and would have delighted Regnard and inspired his wit. But there is no reason to suppose that this avarice, even if it went somewhat beyond the limits of wisdom, ever reached the morbid stage. . . .

"He was a very tall man, and extremely thin, 'which made him look,' says Chabanon, 'more like a ghost than a man.' Grimm finds him 'as emaciated and shrivelled as Voltaire,' whom he resembled in appearance, but without having his mischievous physiognomy. The expression of his face was severe, 'all of his features were big and announced the firmness of his character.'"

HE who praises stands equal to the thing praised.—GOETHE.

"A good song is as if the poet had pressed his heart against the paper. . . . The low, musical rustle of the wind among the leaves is song-like. . . . The song-writer must take his place somewhere between the poet and the musician, and must form a distinct class by himself. The faculty of writing songs is certainly a peculiar one, and as perfect in its kind as that of writing epics."

—JAMES RUSSELL LOWELL.

Making the Most of the Year

By Ruth L. F. Barnett

IF ONLY there might be found a w knowing just how the new pupil is to turn out! Unfortunately this k edge comes at the latter end of tra so that one cannot especially pre technic for the soloist, theory fo teacher and harmony for the compos

If a teacher takes a new pupil o supposition that he is to remain one only, he is given the kind of tr that will be most helpful to him in ever line of work he may later unde He is led to an appreciation of what i in music and yet not forced to sit a piano an hour a day to do mere gymna The purely mechanical is the least h of any part of his work, though it is essary insofar as it enables him to easily the simple pieces that go into year work.

Having supplied him with fundam facts about the use of his hands, ounce of the teacher's energy is put training him to think. He is taught t put his finger upon a key until he is that it is the right finger on the righ He learns, too, that every note and rest has a definite value and must be at exactly the right point in the me

Then he learns to listen, to hun breaks in the legato and uncalled-fo cents. Finding such faults, he wa his hand to determine the cause and for improvement.

Also he learns the meaning of every and musical term that he sees, not by nition but by illustration. Thus he te his muscles to respond to the deman his ear. To help him toward insigh appreciation, he is shown how pl answer each other, and he is allow experiment to make them interesting.

At the end of the year, if he is to have talent, the pupil can begin tec work in earnest without the handic dealing with unfamiliar signs and s If, on the other hand, he sees his unf for music, he will be a better lawyer tor or business man for the training h had in listening and observation.

The Dictionary Habit

By Helen Oliphant Bates

A GOOD music dictionary shoul placed at a convenient place in every studio and pupils should be asked t up all words and signs which they d understand. Definitions which the looks up for himself are more apt remembered than those which are by the teacher, because in the f case the exact spelling of the words be noted.

Furthermore, when he is occupied finding out something for himself the cannot journey in fancy to the m picture theater or swimming pool as as he does when he is being told uninteresting foreign words.

But the greatest benefit to be d from making pupils find things ou themselves is that it teaches them h study and how to think independently further this purpose it is a good pl have the pupil write out the definiti his own words when he has "looked i

old of Leschetizky emphasizes pplicant had so well pleased him that he accepted her, without sending her first to one of his *Vorbereiters* (preparatory assistants). At the appointed lesson he simply gave her *view-points* on piano playing, and finally he told her what piece to bring the next time. Rather indignant, she told a fellow pupil that she had placed the substantial fee on the piano, as customary, but he had not even asked her to play; he had merely *talked* to her. This came to his ears, and at the next lesson he said to her: "My dear young lady, bear in mind that the lesson I gave you last week is the most valuable one you will have from me—provided you are keen to *follow up* the various viewpoints I explained to you."' . . . .

"No, I have not yet done any teaching," said my demure visitor in answer to the question.

The Young Teacher's Pet

"THAT IS WELL," I retorted, "for young teachers too readily dote on pet notions they regard as oracular, and this hampers their progress into broader fields. Some time ago a western teacher wrote that she wished to take a course 'to brush up her technic.' What she really needed was brushing up *mentally*, and I felt tempted to write her that a vacuum cleaner might be the appropriate implement for the purpose."

"I hope I shall not give you any cause to have such thoughts of me," laughingly retorted my new pupil.

"Do not fear; I may sometimes make use of metaphor, but such figurative talk is never intended to be sarcastic; and you will understand the point more quickly than through lengthy explanations Liszt taught much by metaphor; Leschetizky once told a young lady that she 'played like a cow.' The pupil concluded that she was not in training for dairy purposes and — perhaps wisely — discontinued her lessons."

Having arranged a lesson hour for the morning following, Miss Demure departed, assuring me that she, too, had already gained some valuable "viewpoints."

The Lesson on Hand Culture

MISS DEMURE appeared, promptly, at the appointed hour. She was asked to impress upon her memory the following simple, but *important regulations;* and these hold good for practically all of the exercises given in this course.

1. Do not take more than two (or at most three) of the exercises at a time. Practice each from three to six times, with each hand separately. At the end of a week change to the next key, and continue to change each week until you have gone through all of the keys. Professional pupils, who can do this twice a day, may change to the next key twice a week.

2. Practice an exercise several times *slowly first*, two notes to a count (metronome at about 80), then several times, gradually faster, and finally very fast. But unless you can do it with a full, large tone, it is useless to practice very rapidly. Continue slower, until your fingers have gained more strength. Even after you can play an exercise fast, always begin the daily practice by playing it *slowly*, several times, first. Always *press* very hard! Bear in mind: Rapidity can come only from assurance, assurance from strength, and strength, only from much *slow, deep pressure* practice. Always *count aloud;* the fingers will respond with greater precision, and will acquire strength in shorter time.

3. *The Position:* Do not sit far back on the chair; sit well forward; this gives freedom to the arms, and relieves the spine, hence you will not tire so quickly, and the feet can work the pedals more easily. Keep the feet near the pedals.

4. Sit upright, as when riding horseback, and hold the head erect.

5. Many pupils sit too high. This causes a harsh touch; while sitting too low weakens the tone quality. Adjust the stool so that your arms will be on a level line with the top of the hand.

6. *To obtain correct position of the hand:* Stretch the fingers out straight; now draw the finger tips, slowly, down until well curved; now place them on the keys. Do not permit the knuckles to protrude, nor crunch them down; the hand should be well rounded, yet appear table-like. Do not hold the thumb so low that it lies flat; this is a general fault. The thumb should be at an angle of 45 degrees from the key. Shape your hand position in this manner *several times a day.* Remember, the position will not stay as it is; it will either get better, or it will deteriorate. It will get better only if you do this several times a day, and do it for weeks to come.

7. Never permit any joint to kink inward, nor allow the finger to stiffen out, cramplike; weak fingers will do this. If fingers are very weak, one should not press too hard, until they have grown stronger.

8. *The Touch.* Impress on your mind these very *important terms:* The *Pressure* touch; the *Weighty* touch; the *Clinging* touch. This tri-unity will develop a large, healthy tone, if persistently observed.

9. One should not strike, but always press the finger down.

10. If your fingers cannot lift freely (at a good angle) fold your hands and force them back, first with one, then with the other hand. When practicing, lift them well. But if your fingers naturally lift easily, do not particularly try to lift them. The pressure touch, finally, is the more important.

11. As you drop a finger on the key, follow it with a deep pressure, and with this, pull the finger tip slightly toward you; at the same instant give a lifting pressure to the wrist, which should show "resistance" (weight)—then "relaxation." To acquire "wrist consciousness," move the wrist up and down several times as you practice. A rich tone quality depends largely on this wrist consciousness.

12. Always "listen," and criticize the tone quality you are producing. *Teach your ears how to think.* They will soon learn to be helpful teachers.

The Eighteen Cardinal Exercises:

Piano Technic can be narrowed down to *Scale, Arpeggio* and *Wrist* work. These fundamentals, concisely applied, form the quintessence of these exercises, which accounts for their economic efficacy, and that the limited number, when practiced with alert adherence to instructions, will provide ample material for two years' progressive self-study.

Ex.1

Do not be deceived by the apparent simplicity of this exercise. To play it with deep pressure, evenly, and finally rapidly, without stumbling, will tax even a much advanced player, and it will benefit such a one, as much as it will a beginner.

Now, play it, please.

No; that is *too fast;* and you did not play very evenly. Try again.

No; you did not *count aloud*—and you joggle your hand. Again, please.

Now, press—*press harder,* on every finger.

Such are the remarks I have to make to every pupil at the start.

Ex.2a

Ex.2a

Ex.2b

Ex.2b

Exercise No. 2 is one of several that will develop the weak 4th and 5th fingers, which must be the constant aim of every

ambitious piano student. Watch the thumb; keep it extended, and always well over the keys. Watch the legato in passing from one group to the next.

Necessarily this lesson is devoted largely to general directions, and to "viewpoints," which are essential for all of the exercises, and which the student should re-read from time to time, to impress them *lastingly* on his memory. The next lesson will give the sixteen other studies, and cover the instructions for all.

Self-test Questions on Mr. Lachmund's Article

1. *Where is the seat of Technic?*
2. *What are the usual defects in a student's playing?*
3. *How may figurative speech in teaching?*
4. *What is the best bodily pos playing the piano?*
5. *What three styles of touch effective?*

Little Life Stories of Great Masters

Biographies in Catechism Form

By Mary Schmitz

(In Response to a Definite Demand, a Series of These Little Biographies Has Been Republished in Book Form)

Edward MacDowell
(1861-1908)

1. Q. Tell something of Edward MacDowell's ancestry.

A. Alexander MacDowell, his grandfather, and Sarah Thompson MacDowell, his grandmother, were both born in Ireland, of Scotch-Irish parents, but came to America early in the last century. His mother Frances M. Knapp, was an American lady of English descent; his father, a New York business man.

2. Q. Where and when was Edward MacDowell born?

A. In New York City, December 18, 1861.

3. Q. Was MacDowell encouraged by his parents in his study of music?

A. MacDowell's grandparents were Quakers; and when the composer's father showed a fine talent for drawing it was repressed as much as possible. But Edward was encouraged by both father and mother in his talent for drawing and music.

4. Q. Tell something about Edward MacDowell's ability in poetry and drawing.

A. MacDowell made many attempts at poetry when he was quite young; and in later years his poems were so numerous and melodious that they were collected and published after MacDowell's death. He was very talented in drawing and often decorated his music books with clever sketches. One day in a music class he sketched the portrait of the instructor. He was caught at the work and the teacher carried the sketch to a famous teacher of art who begged MacDowell's mother to let him give the boy three years' instruction without cost to her. But the mother decided for a musical career for her son.

5. Q. Who were MacDowell's first teachers in music?

A. Mr. Juan Buitrago, a South American pianist, was his first teacher. Afterwards he studied with the famous Venezuelan pianist, Teresa Carreno, who had gone to New York when she was a little girl.

6. Q. When did MacDowell go to Europe to continue his musical studies?

A. In 1876, when he was fifteen years old, he, accompanied by his mother, went to Paris. He easily passed the examinations and was admitted to the conservatory and became the pupil of Marmontel, in piano, and Savard, in theory.

7. Q. Whom did he have as classmate in the Paris Conservatoire?

A. Claude Debussy, the eminent French composer.

8. Q. Why did he leave the Paris Conservatoire?

A. In 1878 MacDowell heard Nicholas Rubinstein play the Tschaikowsky "Concerto in B-flat Minor." He was amazed at the performance and concluded that if he desired to reach similar results he would have to employ different methods than those in use at the Paris Conservatoire at that time.

9. Q. Where did he go after leaving Paris?

A. After a short time at the Stuttgart Conservatory he went to Frankfort-on-Main.

10. Q. With whom did MacDowell study at Frankfort?

A. Raff was his teacher in composition and Carl Heymann in piano playing. Heymann was so impressed by MacDowell's greatness as a teacher that, when necessary that he resign, he recommended MacDowell as his successor. But as MacDowell was very young and an alien, he was denied the position.

11. Q. What conservatory appointed MacDowell head piano teacher?

A. The Darmstadt Conservatory, where he taught forty hours a week. He found it pleasanter to live at Frankfort and rode daily to the smaller city. During the long rides he studied German, French and English literature.

12. Q. When did MacDowell visit Liszt?

A. In 1882 MacDowell visited Liszt and played his first piano concerto for him. Eugene D'Albert played the second primo part. This concerto was dedicated to Liszt in appreciation of Liszt's kindness to MacDowell.

13. Q. How did Liszt show his interest in MacDowell?

A. Liszt insisted on having MacDowell's "First Modern Suite" given at the Allgemeiner deutcher Verein Convention, held at Zürich. MacDowell played it with great success. The following year Liszt again helped him by securing the publication of both the "First Modern Suite" and the "Second Modern Suite," by Breitkopf and Härtel in Leipzig.

14. Q. When and whom did MacDowell marry?

A. In 1884 MacDowell returned to America and married Miss Marian Nevins, of Waterford, Conn. Miss Nevins had been a pupil of MacDowell in Europe. After a month in America MacDowell returned to Europe with his bride.

15. Q. When did MacDowell return to America for a permanent residence?

A. In 1888, after several years of residence in Wiesbaden, where he wrote many of his less known works, he returned to Boston. Here pupils flocked to him in great numbers, and his orchestral works were performed by the leading orchestras. He made many appearances in recitals and with the Kneisel Quartette.

16. Q. When did the New York public first realize the genius of our American master?

A. In 1894 MacDowell played his "Second Concerto" for piano with the New York Philharmonic Orchestra, under Anton Seidl. All the critics were unanimous in their praise and found that at last America had a great master whose works were on a par with the great composers of other lands.

17. Q. When did MacDowell accept the position at Columbia University and what did he set himself to do there for the cause of music?

A. Mrs. Elizabeth Mary Ludlow endowed the chair of music at Columbia University with a fund of one hundred and fifty thousand dollars. Edward MacDowell was offered the position as Professor of Music. He set himself the task: 1. "To teach music scientifically and technically, to train teachers who shall be competent and compose." 2. "To teach music historically thetically, as an element of liberal culture."

18. Q. What compositions were written while teaching at Columbia University?

A. The famous "Norse Sonata" and the Sonata" for piano solo, and the "Sea Pieces," w among his greatest works.

19. Q. Tell something about the MacDowell home at Peterboro, New Hampshire.

A. When the composer first went to Columb versity he bought a New Hampshire farm. It of fifty acres of forest land and fifteen acres farm land. On it were a fine old house and some buildings. There in a log cabin in the woods most of his later compositions.

20. Q. What was the cause of the sad and tragi the greatest of American masters?

A. The great strain of work at Columbia, with private teaching and composition, caused the of the great brain. He resigned from Columbia but instead of resting he undertook more work. the signs of the decay of the magnificent intell noticed. In January of 1908, when just reaching h Edward MacDowell, beloved American compose on to his rest.

21. Q. Where is MacDowell buried?

A. At Peterboro, New Hampshire. On a bron on the crest of the hill, not far from the little where so many of his splendid musical thoug written down, are the lines he wrote as a motto last composition, "From a Log Cabin."

"A house of dreams untold
It looks out over the whispering treetops
And faces the setting sun."

22. Q. How does MacDowell rank as a song w

A. By many he is ranked with the greatest so ers—Schubert, Franz, and Grieg. "In the Wood Robin Sings in the Apple Tree," "The Sea," sh inspiration and a highly cultivated taste in music ground for the poet's thought.

23. Q. Name some of his shorter piano piece

A. "Witches' Dance," "Shadow Dance," "To Rose," "Scottish Tone Picture."

24 Q. What composition was inspired by the taken in Indian music?

A. The "Indian Suite" for orchestra.

25. Q. What is the object of the MacDowel rial Association?

A. To perpetuate the memory of MacDowell i helpful manner than a monument in stone or Here at Peterboro "people of approved talent ma the purpose of the special creative work, to li stated period to carry out their ideas." Mrs Ma from the proceeds of her lecture-recitals, has uted many thousands of dollars to the enterpri

Why Every Child Should Have a Musical Training

Prize Essay Contest. Prizes Aggregating $270.00 in Value

This great prize contest open to all readers of "The Etude" closes on December thirty-first at five P. M. It is described briefly on page 794 of this issue. No subject is of greater interest to the musical home, to the conservatory, to the private teacher of music, to the music club leader or to the music supervisors of our public schools. Alre a great many compositions have been received as there are twenty- prizes in all. The competition is the most interesting one ever augurated by "The Etude Music Magazine."

Queer Notation

By FRANCESCO BERGER

HAS BEEN described as universal language of all civ- nations. It is a question should not include so-called nes as well, for they certainly of their own, which appeals uch as ours does to us.

is so universal, it is by no orm. Different composers, ying identical musical sounds, ress themselves in identical ore than different authors do, g the same language, say it from one another. Shakes- ot say "good day, it's a fine quite the same words as ld, nor will Dickens say it ongfellow. And so it comes though Mozart may have in- convey something very like ad to say, he conveyed it in , which was not Bach's; and differs from Beethoven, both wrote symphonies. To se personal methods as "man- using too strong a term, but slight peculiarities exist, is true.

syncrasies of Notation

IS NOT only in their modes ressing themselves that the er—some of them carry their s into their notation. Schu- stance, is unmistakably Schu- he marks "ped." at the com- f a piece. In other composers ction signifies "use the pedal does *not* mean that with him. se the pedal in the course of hich is quite a different thing. vague and decidedly mislead- g, and, moreover, quite un- r any pianist sufficiently ad- lay Schumann at all, would l at his own discretion, with- the composer's indication.

s recorded of him be true, as unaccountably fond of the ur of the pedal, and did not do, at the muddle of conflict- es which non-intermittent ped- es. It is lucky for the world his personal fad, he did not pianist in public; for, had he reputation as a composer might fashion for this *olla podrida* discords, thereby adding an- ce to those which many a ert visitor already has to en- music has providentially through the discerning hands who knew better than to pre- his injudicious instructions.

mann's "Soft" Pedal

NN did not confine his affec- the "loud" pedal. He appears an equal *penchant* for the In no other composer of his we find such frequent use of In older masters its total ccounted for by the fact that in their days, been invented. age!) But Mendelssohn, Liszt were his contemporaries, ges are almost entirely free ne likes to think that Schu- nay have been so constructed unconscious of the ridiculous effect that *una corda* creates. e simply desired the passage red extremely *piano*, without deteriorated tone-quality which l produces.

To the question: "What can be worse than a flute solo?" we have all heard the witty answer: "A piece for *two* flutes." Equally so is the miserable tinkle of *una corda* intensified by the addition of the other pedal. The two in combination add insult to injury, and we may be thankful that, with his constant direction to use one pedal or the other, Schumann mercifully spared us the additional torture of both together.

Another peculiarity in Schumann's notation is his use, in many places, of the words *Aus der Ferne* to describe a "from afar" effect. How a pianist playing in New York is to make his music have a Boston quality, would puzzle a Paderewski as much as it would the writer of these lines. Probably the direction can be sufficiently followed by playing the passage with extra light touch, leaving the question of mileage to the imagination of the hearer. It is but one of several far-fetched expressions in which Schumann permitted himself to indulge—a good deal of that nonsense about the "David's bündler" marching against the "Philistines" is easily explained as the exuberant ebullition of an unbalanced mind.

Chopin's "M. V."

CHOPIN has the habit of frequently marking *"m. v."* in his music. He uses these letters as the abbreviation of the Italian words *mezzo voce*, which literally translated mean "half voice," and stand for "in an undertone." Applied to pianoforte music it is ludicrously out of place, though common enough in vocal music. Why he chose it as a substitute for the ordinary *"piano"* would be difficult to tell. He is known to have been an admirer of Bellini, then the idol of Italian opera worshippers; so perhaps, as an indirect compliment to that composer and his nationality, he adopted it, thinking that *"piano"* was no longer Italian enough for his purpose, having become so international. Be this as it may, the Irish music teacher was not wanting in the national wit of his country, when, in explaining to a pupil that *m. d.* meant right hand, and *m. s.* meant left, he added that *m. v.* meant whichever you please.

Besides this fad, Chopin was guilty of a far more serious one in his notation; for when in the course of a piece he has wandered far from its original tonality, he does *not* remove the early signature and substitute the new one, but retains the old, and is thereby under the necessity of employing heaps of "accidentals" (mostly "naturals") which crowd the measure on paper, and whose multiplicity is bewildering to the performer. Suppose the composition to have begun in F-sharp major, and to have modulated into G minor, the quickest way to call attention to this would be to alter the signature from six sharps to two flats, and that is precisely what he does *not* do. Consequently every F, C, G, D, A, and E that occurs has to be separately contradicted by a "natural," and every B and E has to be separately marked as flattened. It is a laborious process, responsible for many false tones and much bad language.

PROFESSOR FRANCESCO BERGER

Certainly one of the most astonishing personalities in the field of music is Professor Francesco Berger, of London, whose articles upon various phases of music continually appear in leading publications abroad and in "The Etude Music Magazine." Professor Berger was born in London over ninety-two years ago. Despite his generous years, he is still actively engaged in teaching in London and is very vigorous, as the youthful spirit of his articles indicates. Among his teachers were Moritz Hauptmann (1792-1868) and Louis Plaidy (1810-1874). He knew Moscheles, David and Dreyschock well. He started teaching in London long before the Civil War in the United States. One of his most intimate friends was Charles Dickens, for whom Professor Berger wrote much incidental music to accompany the dramatic events in which Dickens was always interested. In 1886 Professor Berger became a member of the faculty of the Royal College of Music and in 1887 also a member of the faculty of the Guildhall College of Music. He has given numerous tours as a pianist, written numbers of successful songs and pianoforte pieces, and has recently published an excellent set of little pieces for the left hand. Professor Berger looks out upon the world through optimistic eyes and with a warm heart. On the following pages we present one of his recent letters to the editor of "The Etude" as an evidence of his virile penmanship.

Raff's Invention

RAFF HAS NOT inaptly been styled the Balfe of the pianoforte. His abundant facility and unvarying tunefulness justify the description. He could pour out music in any form almost as readily as Mozart, and had he been gifted with only an ounce more genius, his other qualities would have been sufficient to rank him among the great ones. Lacking this modicum of divine fire, he stands in the outskirts of, but not within, the temple of Apollo's high priests. Of one merit, however, the world's estimate cannot deprive him. He *invented* a mark of his own to signify the sudden (not gradual) cessation of *crescendo*, by drawing a little vertical line at the close of the *foote* of the usual sign, thus . My design resembles a slice of cake, not altogether out of keeping with what leads to *forte* (for tea!)

He and von Bülow, and a few others, employ the word *quasi* in a wrong sense. In its original Italian it means "almost," *not* "like," which they imply, and therefore it is difficult to realize how one can play *quasi tromba* (almost trumpet), or *quasi timpani* (almost kettle-drum). The music may imitate the notes of these instruments, but surely no pianist can be expected to play like a trumpet or a drum. If it be desirable to tell the performer what his music is intended to represent, we shall soon find such annotations as "like the wind," or "like a horse," or "like a cradle," or "like a gondola," or a "sunstroke," or an "aeroplane," or a "cricket match."

On several occasions and in various places I have protested against the increasing practice in music notation of introducing other languages than Italian. Rightly or wrongly this language has for centuries been the accepted medium by which composers of all nationalities have communicated to performers how they wished their music to be rendered, so that music students had but to acquaint themselves with a few Italian words to know what to do. My own "vocabulary in four languages" gives the equivalent of Italian expressions in English, French, and German. But if the music student, in addition to these, has to be familiar with Dutch, Spanish, Russian and Scandinavian, he will have but little time left for his music, and will probably end by disregarding printed directions altogether.

The Careless Old Masters

IN THE OLDER editions of the classic masters we often find that they were very careless in their notation. They did not trouble to show by up or down turned stems whether the right or the left hand should be employed; their "ornaments" were frequently incorrectly given; and repeats, and *"da capos"* were left to the discretion of the player, instead of being determined by the composer. Modern editions of the older masters are in most cases far superior when supplied by accredited editors. But I am sorry to note in them a tendency to extend the value of an "accidental" into the following measure or even beyond. This is in direct opposition to an elementary rule in musical notation, which distinctly lays it down that the influence of an accidental is *limited* to the measure in which it occurs. If a piece is in G-major, and a strong C-sharp occurs in the fifth measure, you have no right to play C-sharp in measure six unless the sharp is again marked. If this has not been done the note C has *reverted* to its original natural condition. The insertion of a "natural" to mark this reversion is a precautionary measure which every careful player should resent.

It is well for us that so much of what the older masters wrote was so lastingly good when created that it has survived mis-interpretation, mis-printing, and mis-naming, to this day. And it is fortunate, too, that, though an inferior composition needs exquisite rendering to make it at all acceptable, a true masterpiece will bear inferior performance and yet charm and delight. The law of compensation is a blessed one.

Self-test Questions on Mr. Berger's Article

1. *In what way did Schumann make unusual use of the pedals?*
2. *What peculiar marking did Chopin favor, and was he apt in its use?*
3. *What limitation kept Raff from being "one of the elect?"*
4. *What general rule should be applied in the writing and application of accidentals?*
5. *In what particular ways were the older masters careless in their notation?*

Aids to Sight Reading

By Dorothy Bushell

WHEN a student is undertaking the study of a fresh composition, instead of letting him try over the right hand first and then the left, as is the usual manner, try letting him play the left hand at sight while the right-hand melody is being played by the teacher who also counts the time for him. It will be found that he reads much more quickly in his anxiety to keep up with the right-hand part. Moreover he grasps the whole meaning of the piece, and gets the rhythm at once.

This "duet" form of practicing a new piece is very appealing to young students. A new piece is always welcomed for the chance it gives to play duets. It is especially valuable to more advanced pupils who take a pride in quick sight-reading. With these it is well for the teacher to keep going, disregarding the pupils mistakes, and, by counting aloud, compel him to follow every note. Where he stumbles or misses a beat, let him pick it up as soon as he can, the object being to focus the pupil's attention. This method develops concentration better than anything else and also creates a desire on the part of the student to be able to read quickly.

It has been said that "the study of music is four-fifths brains and one-fifth fingers;" there is no greater proof of this than the cultivation of sight reading in this manner.

Well Done

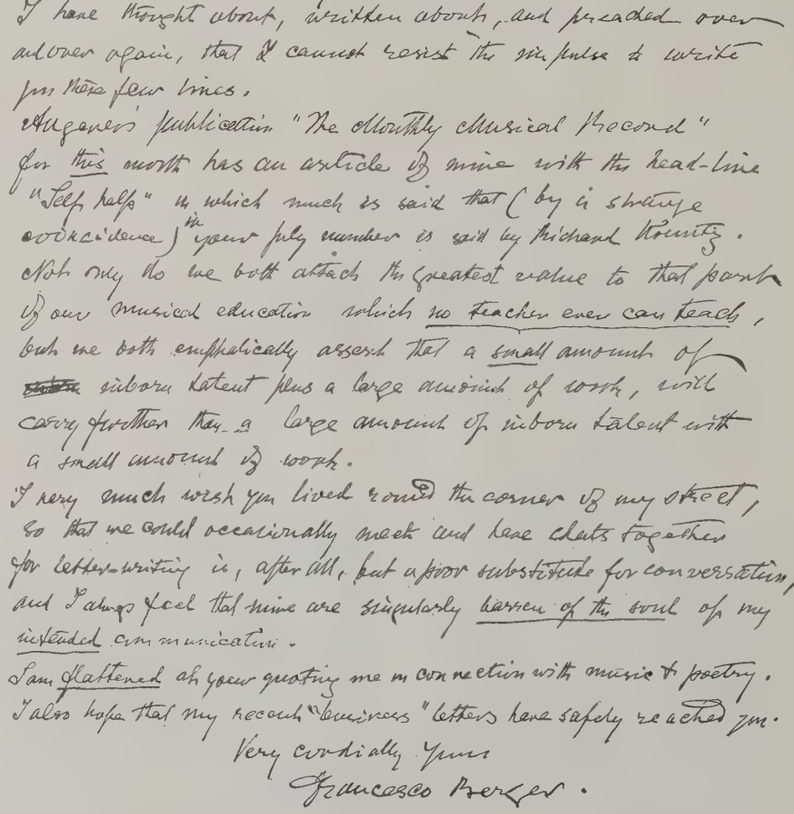
By Patricia Rayburn

"Even when a thing seems to be well done, it can always be improved upon."

A teacher remarked the other day—"Have you been playing your *Prelude* very often?"

Her pupil glanced up; "Oh, yes, several times."

"Have you practiced it lately?"



"*Practiced* it? Why, no. I *know* it. That isn't necessary."

"My dear, it *is* necessary. Your *Prelude* is one of the best pieces of music in its class and is therefore worthy of a perfect performance. It is a number into which you must grow. I expect you to continue practicing and working on that selection, not stipulating any time when you may lay it aside permanently."

The pupil stared in astonishment. "But —"

"You may practice, now and then, that Prelude for ten years, and still not play it as well as it *can* be played.

"Dig out the best of your old numbers every now and then, and practice them again, using the big tone, and trying new effects. And remember this: never drop a worth-while composition, for its interpretation can always be improved. No artist has ever yet reached perfection."

My dear old Cooke, 15.7.26.

"The Etude" for July contains so much with which I am thoroughly in accord, — so much which I have thought about, written about, and preached over and over again, that I cannot resist the impulse to write you these few lines.

In your publication "The Musical Record" for this month has an article of mine with the head-line "Self help" in which much is said that (by a strange coincidence) in your July number is said by Richard Kountz. Not why do we both attach the greatest value to that part of our musical education which no teacher ever can teach, but we both emphatically assert that a small amount of born talent plus a large amount of work, will carry further than a large amount of born talent with a small amount of work.

I very much wish you lived round the corner of my street, so that we could occasionally meet and have chats together for letter-writing is, after all, but a poor substitute for conversation, and I always feel that mine are singularly barren of the soul of my intended communication.

I am flattered at your quoting me in connection with music & poetry.

I also hope that my recent "business" letters have safely reached you.

Very cordially yours

Francesco Berger.

An Autograph Letter Recently Received from Professor Berger

The Saxophone Family

"THE saxophone is no youth," remarks Henry Osgood in *The American Mercury*. "Ingenious Adolfe Sax invented it about 1840; in 1844 a forgotten Parisian composer named Kastner introduced it into one of his long-forgotten operas; in 1845 it was officially adopted for French military bands. It was then something quite new, a brass instrument played with a reed. Before that all reed instruments were of wood. There are seven members of the family ranging from the sopranino down to the contrabass, though very few of the latter are now in existence, owing to their unwieldiness and the necessity of having a superhuman pair of lungs to play one.

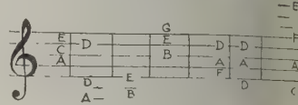
"The sopranino can climb up to the second G-flat above the treble clef; the baritone (the average orchestra has no lower bass) can drop down to D below the bass clef. There is plenty of room to write for them. They grow bigger according to the depth of their voices. What you see ordinarily when there are three players are two alto saxophones and a tenor; if there is a quartet, the fourth is a baritone. They all have bent-back mouthpieces and bells doubling back and up and out. When one or more of the players suddenly changes to a straight instrument, it is a soprano, and if there is one straight one about half as long as the others, that is little sopranino. They are all transposing instruments; that is, they sound a note quite different from the one actually written.

"Until the days of jazz there was practically no virtuoso saxophone technic because none was called for. In military bands (Sousa has carried a quartet for years) they wander quietly and unobtrusively about, filling in and enriching the harmonic background. Meyerbeer, Bizet, Massenet and Thomas all employed them as solo instruments, though making no great technical demands on them."

"It is a poor use of liberty which substitutes for art a new form of sulphuretted hydrogen." —SIR W. H. HADOW.

"Try to make some slight variation in the registration of each hymn during a service."—G. B. NEVIN.

Simple Suggestions to t Teacher of Small Chi



By Helen Tyler Cope

I. Do not neglect developing hand along with the right! Man make this mistake, although we left muscles are harder to contro urally weaker.

II. Study each child's nature its special likes and interests. I the first pieces, be guided by th edge. The title means much to l and pieces of technical limits t can usually be found.

III. Do not make the learnin notes dry and too "school-lik black-board and class work onc are more satisfactory and save ti busy teacher.

IV. Use the following spelling see how many words each can can be formed by the staff lette same time placing the letters for the proper lines and spaces, *i.e.*,

V. Never discourage a child! correction, impatience, and neve its efforts will utterly ruin the mo teacher with a child.

VI. Do not give too long le tired child will not accomplish Frequent lessons of short duratio for beginners.

VII. Strive to help all pupil such poise, that they will never to know "stage-fright!" Train th every opportunity to play in pub by gaining ease and nerve control

VIII. Use some system of them for promptness, regular hours, clean hands and well-ke as well as for good lessons.

IX. Make it a point to meet the parents, and to communicate 'phone or, if possible, a home vis time during the term. A vis child's home may change your e tude to that pupil; and to "han dren of this day a teacher must thing of psychologist.

X. See that a child is comfo fore starting a lesson. Cold hands, a tight collar or sleeve, n one and make a good lesson i

XI. If teaching at home, plan where it will not be interrupt least confusion distracts a child's and before it can concentrate ag of the lesson time is wasted.

The Long Vacatio

By Florence Belle Soulé

WHEN the beginner in mu studying for three or four mo stretch he forgets practically al has learned. Likewise the pup moderately advanced loses gro rapidly. Even a fully matured notices the difference when he st for that length of time.

The difficult work of a teacher ing hands to play and in teachi to think and ears to hear seem wasted in many cases. If parents dents would only realize that it ular practice that counts, the engaged in day after day that m they would arrange their vaca differently.

We all need vacations. A c air, new faces, new scenes an are essential; but the long, long does more harm than good.

The Drum Major

The First of a Series of Two Articles on the Drum Major in the Military Band

By J. BEACH CRAGUN, A.B., MUS.B.

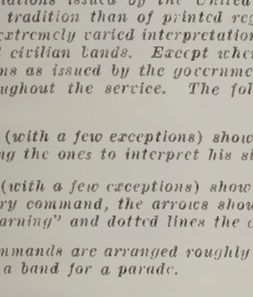
J. BEACH CRAGUN

Mr. Cragun, a graduate of Oberlin College, Oberlin, Ohio, and of Columbia School of Music, Chicago, is a trained writer and instructor as well as an experienced bandmaster. He was for nine years instructor in music at the University of Chicago and is now the head of the Cragun School of Music, Chicago, a school specializing in band and orchestra training. He is well known as a composer, his published works including a four volume method for saxophone, the first published concerto for that instrument, and many recital pieces in the smaller forms.

The military band is one of the fields in which Mr. Cragun may be recognized as an authority. Following are some of the bands of which he is or has been bandmaster: Oberlin College, Spearfish (S. D.) State Normal, North Central College, University of Chicago, 122nd Field Artillery, 124th Field Artillery, Mountjoie Commandery, Englewood Commandery, Bloom Township High School and Chicago Heights Elementary Schools.
—EDITOR'S NOTE.

FOREWORD

e various signals to be used by the drum major have never been fully covered by ining regulations issued by the United States military authorities. These are matter of tradition than of printed regulation and, as might be expected, have ijected to extremely varied interpretations at the hands of individual drum majors army and civilian bands. Except where noted, all signals conform to drill and regulations as issued by the government or to those accepted as traditional by sters throughout the service. The following additional points should be kept :



drawings (with a few exceptions) show the drum major as the band members see , they being the ones to interpret his signals.

drawings (with a few exceptions) show the drum major in the position of giving preparatory command, the arrows showing the motion during the brief interval ring as "warning" and dotted lines the command of execution.

signal commands are arranged roughly in the order of their probable appearance aking out a band for a parade.

1. ASSEMBLE

S signal is given to assemble the nd. The drum major goes to the elected, blows his whistle and the baton, as illustrated, to call r the musicians. The band falls ollows:

M. repre-
he drum

decorative tassels of the cord on ton should be so fastened that o not drag on the ground when um major assumes this position. military drum major is not made orative as is the case, often, in litary organizations. In the lat- may be uniformed exactly as the nembers of the band, while some the uniform cap to the bear- shako" shown in this picture. band leaders or organizations to add to the gay appearance of d by the use of a complete drum outfit such as is shown here.

1. ASSEMBLE

There is no preparatory command, and no command of execution. The whistle is to be used as little as possible. It is a signal of warning necessary in "Assemble" and "Countermarch," but to be used as infrequently as possible at all other times. (Posed for by Corp. H. L. B. Herson, drum major, 2nd Infantry Band, Fort Sheridan, to whom the author wishes to express appreciation for suggestions.)

2. STANDING AT ATTENTION

There is no preparatory command, and no command of execution. Heels together, feet forming an angle of forty-five degrees. Body erect, chest lifted and shoulders square, with head erect and chin drawn in. Weight resting equally on the heels and balls of the feet. Eyes front. (Wallace Meidell, drum major of Bloom Township High School, posed for pictures in this uniform.)

3. PLAY (Standing, without moving forward)

THE drum major faces the band, right arm and baton extended high enough for the back ranks to understand the order. He now is in the position which issues the preparatory command, "Play." It is by all means advisable to observe the "warning" indicated by the arrows in the illustration. Some such "warning" is essential to any good conducting, especially in the playing of the first note of a composition. This "warning" is not called for in army regulations, but is extremely practical. No conductor starts off an orchestra without some slight motion of the baton serving in this direction. It is equally necessary in the case of the drum major.

The drum major then beats time for the band alternating the two positions illustrated, the dotted line position coinciding with the main pulses of the music (or the first of each measure in ordinary marches in quickstep time.)

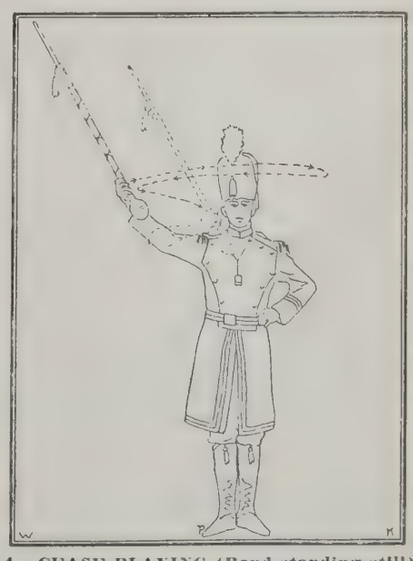
The motions used must be definite ones, especially the "down beats," and must come to a definite "stop" at the bottom of the motion, at which exact point is to come the pulse in the music. Musicians find it almost impossible to follow any conductor without a definite down beat.

4. CEASE PLAYING (Band standing still)

DO NOT use the whistle unless necessary. The left and right swings of the baton should serve as sufficient warning to make possible an effective stopping of the music either at the end of the composition or at any time called for by the situation at hand. Only the well trained band is able to stop in clean cut fashion with, possibly, a little extra "punch" on the last note, and at any time the drum major may desire. The somewhat elaborate warning signals shown in the illustration will prove a tremendous help in this direction. They are not called for by the training regulations of the United States Government, but are traditional and in wide spread use among army and civilian bands.

When the band does not play to the end of the composition, the musical effect is far better if the drum major stops the band on the first or main pulse of some measure in the music. If his musical training be insufficient to insure this, he may be given the cue at the proper place by the band leader.

Many marches end on the first pulse, or beat, of the last measure. The drum major must familiarize himself with all marches to be used by the band, or his signals may not coincide with the music.



3. PLAY (Standing without moving forward)

Preparatory command: Extend the right arm almost to its full length.

Interval of warning: Give about one and one half seconds to the motion shown in the arrows.

Command of execution: The arm motion comes smartly to a dead stop in the position shown in dotted lines.

4. CEASE PLAYING (Band standing still)

Preparatory command: The same as "Play."

Interval of warning: The left and right swings of the baton, coinciding with two beats of the music.

Command of execution: The arm comes smartly to a dead stop in the position shown in dotted lines.

A NEW DEPARTMENT OF PUBLIC SCHOOL MUSIC

Conducted Monthly

By GEORGE L. LINDSAY, Superintendent of Music, Philadelphia Public Schools

The Junior High School Chorus

Part I

THE JUNIOR High School idea has long been in the minds of educators with a vision. Experiments were made to supply the need of a type of education which would bridge over the gap between elementary and higher education. The pupil is going from the elementary school to the high school was faced with the problem of adjusting himself to an academic atmosphere which was not altogether sympathetic to his needs. In so doing he was often the unfortunate victim of the clashing ideas of elementary and higher education.

The pupil who could not quickly adjust himself to his new environment soon fell behind in his studies and quit in disgust at the end of the ninth or Freshman year, as it was called. The same pupil may have had a good record in the elementary school. Educators tried to solve the problem from an academic point of view by placing the teaching of subjects in the upper grades of the elementary schools on a departmental basis. This was a big move in the right direction, but it did not change the attitude of the high schools toward the individual needs of the growing boys and girls under their care.

The complexity of modern life has challenged educators to meet modern issues in life-work and its preparation. They are being met by the Junior High School idea. I call it an idea because it is not confined to the actual work that goes on in the school building dignified by the name "Junior High School," but reaches out to the broader aspects of the modern needs for training for better citizenship, in all school life. It gives not only ethical and vocational preparation but also provides a background of actual experience in the right use of leisure time.

The Junior High School Chorus

EDUCATORS appreciate the fact that music can and does play an important part in developing a happy social school life and spirit. The value of chorus or massed singing in the assembly and choral periods is well recognized in the Junior High School. There is no doubt of the fact that choral work in large groups is most acceptable to the pupils and the school principal because of the reaction in school spirit and *camaraderie*.

The handling of large choral groups which do not meet daily creates a problem for the music teacher to solve. It can be solved and large groups can be handled successfully provided that sufficient help is given to the music teachers. The music teacher can reach the individual pupils best in small groups, and the organization problem is comparable to any other class room activity, but the music teacher must consider the larger usefulness of chorus singing in the life of the school, and he must sacrifice some of the more intensive teaching of music to the rank and file of the Junior High School pupils.

Elective courses are provided for ninth year pupils who are especially interested in music; and music clubs are provided for all of the pupils who are interested in glee club, orchestra, operetta, appreciation and other music clubs.

The music teacher can make a happy compromise in the choral program by meeting the individual classes of a choral group separately once a week in the music class-room, and later meeting the entire group in the auditorium. This plan is ideal as it permits both types of work in music to be carried on. It is not necessary to teach all of the vocal parts to the small class group. Certain classes can be prepared on one or two parts and the real part work presented in the auditorium by merely combining the classes.

Many schools do not provide two periods of forty-five minutes each in the weekly schedule. Because of housing conditions the chorus music often has to be presented in the auditorium. Let us consider a plan which has proven successful in presenting choral music to large groups massed in the auditorium.

The Progressive Program

THE MODERN Junior High School contains classes of mixed pupils in the seventh, eighth and ninth years of school. There are six terms of work presented and the grades are numbered, 7a, 7b, 8a, 8b, 9a, 9b. This calls for six programs of music on the basis of one for each term of work. The choral groups should be kept separate in grade so as to maintain a general program of music of progressive difficulty. This is not difficult to do in a large school of one thousand pupils or more, but in the smaller school it is necessary to have two periods of chorus or more weekly in order to keep a progressive program in operation for each term of work and still maintain the large mass chorus work.

In the small school a different general program would have to be presented each term for the mass work. The regular program could be carried on in part in the single class lessons. The average Junior High School chorus schedule calls for two periods weekly for the seventh and eight grade pupils and one period for the ninth. The ninth grade pupils who are musical and sufficiently interested should be given an elective chorus of four periods weekly. This should count toward high school graduation on a laboratory basis of two semester hours or points of credit.

The glee club can take care of the seventh and eighth grade pupils who wish to have special work in choral music. The glee club should meet in the club periods or seventh periods. This is on an extra-curricular basis with no credit. The special chorus or vocal ensemble could combine with the glee club for regular or special work.

Music of Suitable Vocal Range

EVERY PUPIL should take chorus whether he is musical or not. The music selected should suit the grade and average age of the pupil. The pupils are in the early adolescent years and the changing voice of the boy presents a real problem in planning a program of music material. This fact alone presents a strong argument for a progressive program of material.

There are many theories advanced for the care and treatment of the changing voice of the boy. Many of these theories fail to consider that we are dealing in school with just the average boy who enjoys a lot of shouting in his play with consequent detriment to his voice. We are not dealing with boy choir singers who have been trained to sing "treble." The occasional choir singer or the exceptional boy-voice can be easily discovered and given a suitable voice part.

In the seventh grade the voice of the average boy has not changed, though a thickening of the lower tones is in evidence. This can be easily detected in the singing of the school assembly. In unison selections of a range from middle "C" to two-line "C" the massed effect is rich and full and the singing of the boys is quite prominent. When the range goes beyond the upper "C" the boys drop out or "scoop" down an octave lower. This gives the grotesque effect of the average upper grade assembly singing. The comfortable range for the changing voices of the boys in the Junior High School lies well below two-line "C."

The boys therefore should be assigned the alto part in three-part selections for unchanged voices and the boys of the eighth and ninth years with unchanged and changing voices which are alto-tenor should sing a part which is similar to a tenor part of alto range. Music of comfortable vocal range must be provided for all of the pupils, girls and boys. We must not forget that the girls' voices are maturing and must be protected from extremes in range. About fifty per cent. of the boys' voices are changed in the upper eighth and ninth grades.

Types of Music

THREE and four part music for soprano, alto and baritone or soprano, second soprano, alto-tenor (or alto) and baritone of limited range should be provided for the upper grades. The selections should be of short or moderate length, fairly easy and melodious. It is only in recent years that the need of music suitable for Junior High School use has received consideration. This need is now being supplied and literature covering this field is available.

It is impossible to sing standard four-part choruses in their original form. The tenor parts are of too extended a range and must be revised. This is also true of the bass parts. There are two types of music to consider, namely, that in which the vocal parts can be presented directly with the words in a rote-reading fashion and that which must be studied intensively because of the peculiarities of the voice-leading of the parts.

The first type is of a contrapuntal nature and each voice part is said to be a melody. The second type is of a harmonic nature which has the melody harmonized, whether it lies in the soprano part or not. Both types should be used and presented accordingly. Unison song and two-part material should be used in all grades. Three-part songs for unchanged voices should be presented in grades 7a, 7b and 8a. Three and four-part songs in which one part is in baritone range should be presented grades 8b, 9a and 9b. Songs of t parts with an optional baritone part sh be presented in grade 8a, since the with changed voices are in evidence

Division of Vocal Parts in the Lower T

THERE IS a popular idea that singing of children should be roarious. An advertisement appeared cently stating the fact that a certain day School had "uproarious singi Secular educators also hold this opinion of "hearty singing." Anyone has had experience with immature v knows that "it takes nine tailors to m a man" and that it takes many imma singers, singing easily and naturally carry a part in the average school ditorium.

Much valuable time can be used u "trying" voices individually. Very singing will be accomplished during first four weeks if this is attempted a large scale and much commotion result from the process.

Decide on a standard scheme of ing; that is, one in which all of the p can hear at least two other impor vocal parts beside the one being s Seat the boys together, either in the mi seats of the auditorium where they be observed easily, or on the conduc right hand. It is well to alternate first and second division of the voices in order to give all of the girl opportunity of singing first and se soprano respectively on certain select

No girl is called "contralto" and signed definitely to that part. M trouble and complaint from parents pupils will be avoided by assuring girls that the second part is "second prano" and in the lower soprano ra The music selected should confirm fact, of course. In the 7a, 7b an grades the boys should carry the thir alto-tenor part. This means that one- of the group is assigned the lowest The boys will do well with one part.

Division of Vocal Parts in the Upper T

IN grades 8b, 9a and 9b, enough of boys' voices have changed to su a baritone part. The boys with uncha voices should be seated to the left of boys with the changed voices. M three-part music for mixed voices has written which permits the boys to together in octaves without disturbing musical effect by an undue crossing the inner vocal parts. This maintains principle of keeping one part for the b Much of this type of three-part m should be used, at least until the baritones have found themselves voc It is not difficult to separate the boys changed voices from the rest. By s ing familiar unison songs, such as "A ica," in the key of F, the boys with cha voices are easily detected. All of the should sing together on songs of lim or low range while the girls remain si If the boys are taken individually will feel self-conscious and often resp unnaturally.

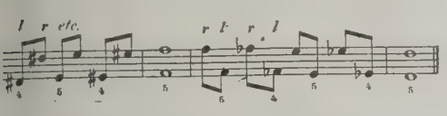
The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M.A.

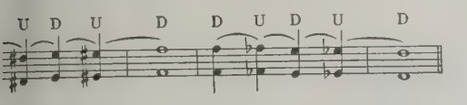
Professor of Pianoforte Playing at Wellesley College

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered Department. Full name and address must accompany all inquiries



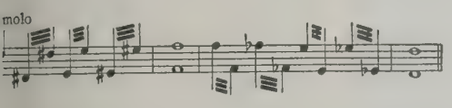
PROF. CLARENCE G. HAMILTON

The Tremolo—Accompaniment Chords

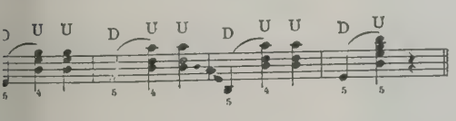


I have an adult pupil who finds it very tir-
o the wrists to play a tremolo.
The same pupil has difficulty in making
and jumps from a single note or octave to a
with any great amount of speed. This is
ially the case when reading the music.
J. A. M.

ie best conditions for tremolo playing are,
perfectly relaxed wrist, and second, the least
forearm rotation that will produce the desired



ip to the tremolo by the following exercises.
e given for the left hand, but may also be
o the right.



e legato, letting the hand rotate decidedly to
(1) for each low note, and to the right (r)
high note. And in the following:

t falls (D) in sounding each white key, and
) for each black key.

ne the motions described under Exs. 1 and 2,
ing very slightly as in Ex. 1, while the wrist
d falls as in Ex. 2. The tremolo should be
very softly, and the fingers should not rise
e keys.
low practice with the left hand alone is the
panacea for this trouble. But be careful to
the following motions, since accuracy is depend-
fly on the proper focusing of the hand over the

ie wrist fall in playing the lowest note of each
and let it rise with each of the upper chords.
, too, that all of the single bass notes are played
e fifth finger which should not be employed
e upper chords unless it is absolutely necessary,
easure 4.
ie hand move in a straight line from the low note
chord position, avoiding any undue flourishes.
ly, let it move directly from the last note of
easure to the first note of the next.

What is Music?

have had a much-disputed argument over the
nition of music. My friends all seem to get
y as far as that "music is one of the five beautl-
arts." Can you give me a clearer and more
cific definition? A. M. M.

s book: *Music, an Art and a Language,* Profes-
lding says:
define, in the usual sense of the term definition,
usic really is, will be forever impossible. The
leed that music—like love, electricity, and other
al forces—cannot be defined, is its chief glory."
npts at defining music often express merely the
of an individual or an epoch toward it. Per-haps, for instance, many will subscribe to Dr. Johnson's celebrated *bon mot,* that "music is the least disagreeable of all noises." In the eighteenth century, the philosopher J. J. Rousseau defined music as "the art of combining tones in a manner agreeable to the ear"—a sufficient description for a time when music's chief office was to amuse the potentates of the day and to make them forget their troubles.

Of course, as you suggest, music is one of the five fine arts, of which the other four are painting, sculpture, architecture and poetry. Any further definition must take into account what music deals with in the way of materials, how these materials are managed, and what are its chief functions. With these demands in mind, I will venture to give my own definition, which can be taken for what it is worth. It is that *Music is the art of expression through the medium of organized sound.*

How to Teach Chording

Practical methods of teaching "chording" are presented in two letters recently received. The first is from E. L. G.:

I was much interested in the question and answer about chording, in the July ETUDE. I, too, have been asked to teach how to chord.

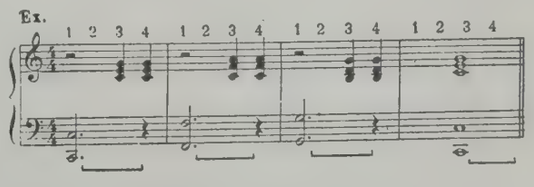
Because I believe that chords and arpeggios shape the growing hand to the piano, I give my beginners the triads in the key of C major on I, V, IV, V, and I. They soon learn these, and inform me that "Daddy thinks they are the prettiest things I play, and mamma likes to hear them, too."

After the scale and chords of C are familiar, I pass to G major, explaining how the black key occurs. Next I take some little melody in C or G, such as *Silent Night,* and have them sing it, playing the proper chords. Here is where the "gift of God" comes in; for, while everyone can play the chords and arpeggios, not all can fit the chords to the melody.

However, they all gain a valuable acquaintance with keys and tones. After all, the first object with a beginner is to develop a love for music; and what is more beautiful than a chord and its application? I also, by the way, teach them to change a major chord to minor, and the reverse. I hope Mrs. F. G. will try my plan.

In the second letter, note that the writer, Mrs. J. B., begins to teach chording only when the pupil is over ten years old. She says:

Your questions anent chording and extemporization prompts me to give you my experience.



I give the three positions of chords in my weekly work with each student over ten years of age. I find them beneficial in the following ways:

(1) Because they familiarize the student with the keyboard.

(2) Because they teach to play chords more efficiently.

(3) Because a student thereafter does not become confused when he sees a group of notes, even if there are five on one stem. He already has had three notes, so that the other two will be easily recognized.

After giving the chords with both hands together, I have the student break them up into arpeggios. Then I have him play the chords, using the pedal, and counting aloud. The lower octave is sounded on beat 1, the pedal descends on beat 2, then the right hand plays the chords on beats 3 and 4, as follows:

The writer then proceeds to show how these chords are applied to a given tune, such as *Home Sweet Home,* first in the key of C, and eventually in all other major keys. Meanwhile, too, the pupil's growing familiarity with fundamentals, such as the scales in thirds and sixths, major and minor chords, is applied to enrich the extemporized accompaniments. From the outset, the use of the pedal is taught. If the child is not tall enough to reach it, he is taught to press with his foot on a stool, so that he may acquire the right technic.

Professional Possibilities

I am a young man of twenty-one, and commenced piano study about two years ago. Since I have to make a living, I cannot give much time to music, which is meat and drink to me. In two years' time I have mastered four books of a five-book method, and have had thirty-two lessons. I practice an average of two hours a day.

My people tell me to forget my ambitions and turn to something more substantial, so that I am much discouraged. I cannot take more lessons at present, but can play any popular piece after reading it over a few times. I have mastered a number of the classics, such as Beethoven's Op. 13 and Chopin's *Waltzes.* I may state that my friends take pleasure in my playing, and that a music teacher commented on my expressive style. Please advise me. L. J. M.

I should say that you undoubtedly have musical talent, and that you have accomplished much in so short a time. But whether, under the circumstances, you could become a proficient or a professional pianist is another question, for the road to this goal is a long and steep one, and to traverse it one must be prepared to expend much time, labor and money.

If you have a good position in some other field of work, I advise you to retain it, and to devote what time you can find to self study in music. Then, if your enthusiasm still continues, perhaps the way will later open for more intensive musical work. You are still young, so don't give up hope!

Developing Speed

What can I do to develop speed? I am taking Liebling's *Selected Czerny Studies,* Vol. III, Heller's Op. 25, and pieces from THE ETUDE of grades 3-5.

My teacher says that I have talent and good fingering, and I can read music quickly, but my fingers seem stiff and I cannot play runs fast and clearly enough.

What grade am I in? BETTY.

Your lack of speed, I should say comes not from stiff fingers, but from stiff wrists. If you have accurately learned a composition at a slow tempo, the next thing to do is to give your attention to a perfect wrist relaxation. When this condition is attained speed will follow as a matter of course.

From time to time relaxation exercises have been given in this department of THE ETUDE. Look them up, and put them into operation.

You would probably be rated as between the fourth and fifth grades.

Exercises and Pieces

I have a pupil whose mother thinks that he has lost interest, and that I am giving him too many exercises. She asks me when I am to give him only pieces, and no more exercises. I am well satisfied with the pupil's work. What would you answer her? W. G. E.

Point out to the mother that, just as a carpenter must know how to use his tools before he can build a house, so a music pupil must go through a certain apprenticeship in the way of technical exercises before he is prepared to play pieces. Show her that he advances from grade to grade, first by securing the necessary technical equipment by means of the proper exercises, and then by applying these exercises to pieces that fall within the new grade.

Meanwhile, you may temper the severity of the purely technical work by giving an occasional piece that will apply the above principles and that will encourage both the pupil and his mother.

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

SCHUMANN'S EARLY SHORTCOMINGS

ROBERT SCHUMANN became one of the greatest of men, as he was one of the greatest of composers; but he was no plaster saint, and at the University occasionally got into financial scrapes, that led him to reveal some human weaknesses. "Schumann's frequent financial statements cannot be trusted," observes Frederick Niecks, in his newly published biography of Schumann. "The demands, trying in their amount and frequency, now and then embitter the life of the Schumann family, generally so loving and so mutually appreciative, and lead to interruptions of the letters and disturbance of the usual sweet concord. . . .

"Often the demands are not trifles, but a matter of a hundred thalers or more. Sometimes they border on the dishonest. Thus he writes to a brother to send him a bill of exchange, 'but don't tell Mother.' And to his mother he writes not to tell his brothers of his application to her. Worse are his requests to her to raise money for him to tide over the time till his coming of age. As I said, his statements as to his real expenditure cannot be trusted—for instance, the amounts of University fees, payments for language lessons, tradesmen's bills, and so forth. By the way, our proud young gentleman failed to pay his fees to the University, and was threatened with imprisonment and fine. How is this dishonorable conduct of Schumann's to be reconciled with his indubitable gentlemanliness and nobility of character? He himself knew that this contempt for money, this throwing it away, was a pitiable trait in him. He admitted the carelessness that made him throw his money out of the window. But his self-reproaches and good resolutions never had any result—they were forgotten as soon as uttered."

"How many persons try to become musicians without the first essential of musicianship—mental application!"—*Leschetizky.*

THE AUTHOR OF "LA VIE DE BOHÈME"

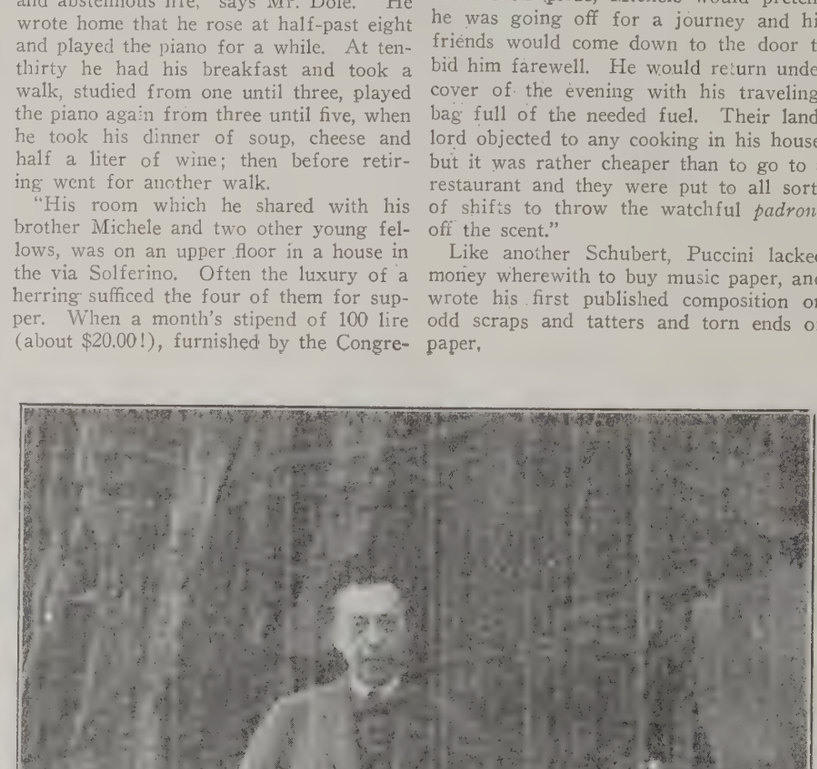
IN "My Recollections," Massenet tells us that he might have been commissioned to write the opera "La Bohème" which Puccini ultimately wrote, but that his publisher refused to let him, on the grounds that he was too intimately acquainted with personalities involved. "I would have been greatly tempted to do the thing," says Massenet. Of Henry Murger, author of the novel on which the opera is founded, Massenet says: "Like Alfred de Musset—one of his masters—he had grace and style, ineffable tenderness, gladsome smiles, the cry of the heart, emotion. He sang songs dear to the hearts of lovers and they charm us all. His fiddle was not a Stradivarius, they said, but he had a soul like Hoffman's and he knew how to play so as to bring tears.

"I knew Murger personally; in fact, so well, that I even saw him the night of his death. I was present at a most affecting interview while I was there, but even that did not lack a comic note. It could not have been otherwise with Murger.

"I was at his bedside when they brought in M. Schaune (the Schaunard of *La Vie de Bohéme*). Murger was eating magnificent grapes he had bought with his last louis and Schaune said, laughing, 'How silly of you to drink your wine in pills!'

"As I knew not only Murger but also Schaunard and Musetta it seemed to me that there was no one better qualified than I to be the musician of *La Vie de Bohème.* But all these heroes were my friends and I saw them every day, so that I understood why Hartmann thought the moment had not come to write that so distinctly Parisian work, to sing the romance that had been so great a part of my life."

PUCCINI'S STUDENT DAYS



PUCCINI, composer of "Madame Butterfly" and others of the most successful operas of modern times, had the usual experiences of poverty in his student days in Milan. In the new edition of Nathan Haskell Dole's "Famous Composers," an admirable condensed account of his life is given.

"He seems to have lived a very regular and abstemious life," says Mr. Dole. "He wrote home that he rose at half-past eight and played the piano for a while. At ten-thirty he had his breakfast and took a walk, studied from one until three, played the piano again from three until five, when he took his dinner of soup, cheese and half a liter of wine; then before retiring went for another walk.

"His room which he shared with his brother Michele and two other young fellows, was on an upper floor in a house in the via Solferino. Often the luxury of a herring sufficed the four of them for supper. When a month's stipend of 100 lire (about $20.00!), furnished by the Congregation of Charity at Rome, arrived in a registered package their landlord always managed to be present and extracted his rent before he would let them have the rest of it, and that was generally mortgaged to their provision-dealer.

"Occasionally they ran out of coals and in order to hide their impecuniosity and cloak their pride, Michele would pretend he was going off for a journey and his friends would come down to the door to bid him farewell. He would return under cover of the evening with his traveling-bag full of the needed fuel. Their landlord objected to any cooking in his house, but it was rather cheaper than to go to a restaurant and they were put to all sorts of shifts to throw the watchful *padrone* off the scent."

Like another Schubert, Puccini lacked money wherewith to buy music paper, and wrote his first published composition on odd scraps and tatters and torn ends of paper.

RACHMANINOFF IN CALIFORNIA

This remarkable portrait of the musical giant of Modern Russia was taken standing in front of one of the giant Sequoia trees in the Golden Gate State. Rachmaninoff is becoming more and more endeared to Americans.

PEACE—BOUGHT AND PAID

A CHARACTERISTIC story of Verdi in "Memories of a Musician" by W. Ganz, showing how the compos "Trovatore" and "Rigoletto" was fo seek respite from the consequences own tunefulness.

"A friend of mine who went Verdi when he was staying in a v Moncalieri found him in a room Verdi said, was his drawing-roon bedroom combined, adding, 'I hav other large rooms—but they are f things that I have hired for the seas

"Verdi threw open the doors and s him a collection of several dozen organs.

"'When I arrived here,' he sai these organs were playing airs fro *oletto, Trovatore* and my other from morning to night.'

"'I was so annoyed that I hire whole lot for the season. It has co about a thousand francs, but at all I am left in peace.'"

MICHAEL BALFE

BALFE and his pellucidly mel "Bohemian Girl" are not to be for even in these days of tonal gaudines strepitous Russian ballets. Wilhelm in his "Memories of a Musician" te something about him of human inter

"Balfe used to sit up at night posing," says Ganz, "and his devoted used to keep him awake by giving strong coffee. I believe he got a tho pounds for each opera from Messrs. sey & Co., but he generally spent his m pretty freely, and I remember he b himself a carriage and launched out other extravagances; and he was abou only operatic composer I ever saw about on horseback. Unfortunately h not save for a rainy day.

"He was a very pleasant and chee looking man. In his early days he studied singing in Italy and had sung on the stage; so he spoke Italian flu which came in very useful when he be the conductor of the Italian Oper Her Majesty's Theatre. He was a rate conductor, and did not only strict time, as some conductors do their beat is like the pendulum of a cl but also showed sympathy with the si by allowing them *tempo rubato* and *ritardandos* and *accelerandos* if they not overstep the rules of music or out of tune. Being a singer himsel knew exactly where to give way to sin

"Composing gave him no trouble came fluently to him, and he had the of melody, which, by the way, does count for so much in the present day."

USING ETUDE DEPARTMENT

THE idea of using ETUDE departm may be developed by introducing them the "Current Topics" discussion of mu clubs. This will be found especially b ficial to normal classes where the mem are preparing to teach. The ques should be introduced as debates, each m ber expressing ideas that he would c out if he should need to overcome an ob cle of such a nature in a pupil of his ow

To overcome the possibility of an the members reading the answers to questions asked in their own ETUDE should suggest that the questions be t from back numbers, say five or eight y back, if such copies are obtainable. A further suggestion, you might have member of the society obtain questions one meeting, another obtain other ques for the next meeting, and so on. A the questions have been thoroughly cussed, the one offering the quest should read the answers given, which possibly open up a further field for cussion.

A Master Lesson Upon Beethoven's Sonata Pathetique

Prepared Expressly for THE ETUDE by the Eminent Piano Virtuoso

WILHELM BACHAUS

'he Etude" has the honor to present this notable feature by one of t distinguished performers upon the pianoforte of the present era. ı Bachaus, born at Leipzig, March the 26th, 1884, is a pupil of eckendorf, a Moravian teacher, who was a professor of pianoforte at the Leipzig Conservatory for some thirty years. This unusual had been a student of science and philosophy at the Vienna and at delberg Universities and was well known as a musical savant. He d the keyboard genius of Bachaus and left nothing undone to de- 's great talent. Thereafter Bachaus spent a year with d'Albert and d a few lessons with Siloti. Although he appeared publicly at the age of eight, his real début did not occur until 1901. In 1905, he won the Rubinstein Prize at Paris, one of the great distinctions of the pianistic world. His public appearances in Europe revealed intellectual and emotional power of the loftiest order accompanied by one of the most astonishing technical equipments ever possessed by a pianist. His tours in America have been extraordinarily successful. His playing of Beethoven has brought him international fame as a Beethoven interpreter. This is the result of the most exhaustive study of all the details of the performance of the works of the great master. In the November issue Mark Hambourg will present a master lesson on Schubert's Military Polonaise.

HE SONATAS of Ludwig von Beethoven, standing as classical pillars in the great art of music, ly afford new opportunities for vestigation and admiration.

He Visits Vienna

"WE must now pass rapidly over the events of his youth; his first visit to Vienna at the age of seventeen, where he excited the admiration of Mozart; the beneficent influence of the von Breuning family upon his general culture; the patronage of the refined Count Waldstein; his early compositions some of which were lauded by Haydn; his second journey to Vienna in 1792; his studies in Vienna with Haydn and Schenk and the severe Albrechtsberger. In Vienna, his strong personality and his great genius soon made him a lion of many notable social events.

"Beethoven's compositions when they first appeared were regarded as extremely modernistic, almost as many in this day might look upon the compositions of Stravinsky, Bartok or Scriabine. For instance, Ignaze Moscheles describes his first acquaintance with the *Sonata Pathétique.*

"About this time I heard from some fellow-students that there was a composer recently come to the fore in Vienna who wrote the most curious stuff in the world—a baroque type of music, contrary to all rules, which no one could play and no one could understand; the composer's name was Beethoven. To satisfy my curiosity as to this eccentric genius, I betook myself to the lending library and procured a copy of Beethoven's *Sonata Pathétique.* I had not enough money to buy the work, but I secretly copied it out. I found the novel style so attractive, and my admiration was so enthusiastic, that I so far forgot myself as to mention my new discovery to my teacher. He thereupon reminded me of his precepts, and warned me not to play or study eccentric productions until my style was formed on more reliable examples. I disregarded this advice and acquired Beethoven's works one by one as they appeared, finding in them such consolation and delight as no other composer was able to give me.

He Named but Two

"IT IS said that the *Pathétique* and the *Lebewohl* (*Farewell*) are the only two of his sonatas to which Beethoven himself gave titles.* The sonata itself which was published as the *Grand Sonata Pathétique for the Clavier or Pianoforte, in C Minor* was issued by the house of Eder in Vienna in 1799. It was dedicated to Beethoven's important patron, Prince Carl Lichnowsky. Unlike most of the classical compositions of that day, it was in minor instead of major. Of Beethoven's thirty-six sonatas, for instance, twenty-six are in major and ten in minor. Of his nine symphonies, seven are in major and two in minor.

"The brilliant French critic and novelist, Romain Rolland (author of Jean Christophe), finds it difficult to see why Beethoven called this sonata the *Sonata Pathétique,* except for the 'sad and dramatic introduction theme.' The same author, however, draws our attention to the fact that in 1799, when the sonata was produced, Beethoven was just becoming conscious of the great tragedy of his life—his approaching deafness. Rolland quotes from a significant letter of Beethoven to one of his friends:

Beethoven's Deafness

"'I LEAD a miserable life indeed. For the last two years I have completely avoided all society, for I cannot talk with my fellow-men. I am deaf. Had my profession been any other, things might still be bearable; but as it is, my situation is terrible. What will my enemies say? And they are not few! At the theater, I always have to be quite near the orchestra in order to understand the actors. I cannot hear the high notes of the instruments or the voices, if I am but a little distance off. When anyone speaks quietly I hear only with difficulty. On the other hand, I find it unbearable when people shout to me. Often I have cursed my very existence. Plutarch has guided me to a spirit of resignation. If it be possible at all, I will courageously bear with my fate; but there are moments in my life when I feel the most miserable of all God's creatures. Resignation! What a sorry refuge! And yet it is the only one left to me!'

"In this sonata, Beethoven saw fit to omit the conventional minuet (as he did also in Opus 10, No. 1). The work is distinctly different in type from Beethoven's later work. One writer points out that it is more the prelude to an oncoming tragedy than the tragedy itself. Beethoven's employment of diminished-seventh chords in the introduction is in keeping with his apparent practice of using these chords to express sadness and pain.

Interpreting Beethoven

"BEFORE making a detailed analysis of the *Sonata Pathétique,* I would like to make a few remarks concerning the interpretation of the works of Beethoven, in general. You will discover in the compositions of Beethoven, even in his earliest works, occasional temperamental outbursts, such as are not to be found in the music of any composer prior to his time. This, in combination with many stories current about Beethoven's proverbial bad temper—which according to reports was supposed to have manifested itself in such incidents as throwing a chair or a plate or a cup at his servants, and other displays of uncontrollable anger—leads some mistaken students to the belief that they will catch the right spirit in which to interpret the masterpieces of the great romantic composer by playing certain passages with violent shakings of the head, throwing the arms about or otherwise punishing the

"I live only in my music"—Beethoven

WILHELM BACHAUS

"Nulla dies sine linea"—Beethoven

*Alfredo Casella in his recent edition of the Beethoven Sonatas says, "All these more or less romantic titles are apocryphal, invented by editors to attract the attention of the *dilettante,* and should figure neither in the edition nor in the program. The only sonata the title of which is attributed to Beethoven is *"Characteristic Sonata" Opus 81,* (L'adieu, l'absence et le retour). The *Pathétique Sonata* was so called by the editor, with the tacit consent of Beethoven.

piano. The result of such a performance is comparable with that of a snarling, growling lap-dog rather than a true interpretation of the real power and majesty of the Titan Beethoven.

"It should be understood that Beethoven did not make his art the playground for any exhibitions of his bad humors. We cannot in this age divine what may have gone on in Beethoven's mind and soul in meeting the obstacles, provocations and irritations brought to him by his servants and acquaintances, to say nothing of his sad fate. Therefore, it is not fair for us to criticize the great master. We have only to admire the magnificent manner in which he emerged spiritually and with greater soul power from every affliction which befell him. It is true that some storm of passion or some torrent of rage may have been the source of some of his inspirations. These were not manifested in his works, because of his interminable process of laboring to refine and mould his ideas into the great works of art which will forever remain in their final perfected form, among the treasured possessions of cultured mankind.

Hurried Writing

"BEETHOVEN did not throw his compositions upon paper in a rage or in a hurry. On the other hand, he laboriously kept note books in which he jotted down his ideas. He kept remoulding and improving the themes and their development painstakingly ridding them of all ignoble and superficial ingredients, so that in the end they become the very quintessence, the most intense and exalted expression of the original inspiration. In this you will find no bad humor, but rather a majestic aloofness, a firm and grim determination to conquer fate, a revelation of gigantic strength of purpose. The interpreter who tries to embody this in his work will ascend to somewhere near the lofty plane where Beethoven's works rightly belong.

"In the words of my famous teacher, Eugene d'Albert, in his notes to the Beethoven *G Major Concerto,* 'One must seek to interpret master works himself with the great spirituality of the composer, submerging one's own, probably far lesser, individuality.'

"It should be superfluous to mention that a perfect mastery of the technical side of any musical composition is the fundamental condition leading to its best interpretation.

Outdoing the Player-Piano

"THERE SEEMS to be a popular idea that since the player-pianos of the higher type can reproduce the notes of a composition with remarkable accuracy as to notes, time, rhythm, and all technical details, the performer in public should go to extremes in doing 'more than that.' That is, 'He should exercise all kinds of liberties and distort his interpretations into what is popularly conceived as "emotional playing" In such playing, allowance is made even for "wrong notes" as manifestations of the human element.'

"Of course, this is a fatal error, as only the perfect combination of all factors such as tone, technic, heart and intellect can be called art as distinguished from dilettantism. Even though the design of a building may be perfection in itself, if in the execution of that design there should be a mistake in the construction or an insufficient support anywhere, the building is likely to collapse. In similar manner any wrong note in the interpretation of a piece, any passage that is not perfectly shaped will be a blemish upon the work performed. Therefore we cannot consider the interpretation of a work apart from the technical mastery. The two form an indivisible whole. Beethoven's own very strong views upon this are indicated in his letters to Czerny, who was teaching Beethoven's nephew, in which he dwelt upon the importance of scale study.

The Printed Plan

"IT IS this which adds infinite charm to the art of musical performance. The printed music is nothing more than the composer's design. It resembles, in distant manner, the architect's plans, except that the architect must build in stone, steel, brick or marble, while the musical artist must erect with each performance a fairy structure of tones which dissolve into the listener's memories the moment they are played. The only way in which they may be preserved is by some of the playing devices, such as the Duo-Art, the Welte-Mignon, or the Ampico. No artist plays a composition precisely alike each time. Rarely do the interpretations of two artists more than approximate in their executions of the composer's notes his designs of the same composition. Therefore, the interest in musical interpretation is so varied that it is undying. Yet this does not mean that any great interpreters ever seek to exaggerate their interpretations. On the other hand, they are continually seeking, painstakingly and conscientiously, to come as near as possible to the composer's meaning. Notwithstanding this, the variations in the human mind and the human soul, to say nothing of the nervous and muscular systems, are so great that every interpretation is different.

The Sonata's Character

"AS ALREADY mentioned, the character of *Sonata Pathétique* is determinded by the severe and sombre nature of the introduction, which, though only ten measures long, is intensely dramatic. It bears the tempo mark, *Grave,* and the metronomic marking, ♪ = 69. This is given in some editions as ♪ = 66. Beethoven was for years an intimate friend of Maelzel, the inventor of the metronome. He labored to help Maelzel introduce his invention, but after the two friends had quarrelled, Beethoven said, 'Don't let us have any metronome. He that hath true feeling will not require it, and for him who has none, it will not be of any use.'

"The movement commences with stern *forte* chords, all seven notes of which should be struck at once. Any suggestion of raggedness here would destroy the entire impression of the movement. Kindly watch the pedal marks in this edition very closely. The pedal marks have been indicated very carefully. For the beginner, it is unnecessary to use the pedal more than marked. The *Sonata* permits of great variation in pedaling; but, as I have said, the notes themselves are no more than the design of the structure, and it would be literally impossible to insert all of the pedalings which an artist would instinctively use. Nor would this be desirable in the edition, because they would demand so much detailed and skilled practice that the student might misinterpret directions given without personal explanations and opportunities for experiment under the teacher. In general, however, the pedal should always be depressed after striking the chord, not with it. This is one of the first rules of pedaling. Another is that the release of the pedal at a definite moment is just as important as its introduction. The pedal is a tone blender; its employment is infinite in results and should be a subject for lifelong experiment of the serious artist.

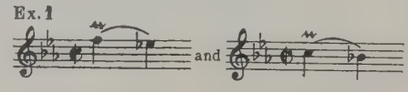
Use of Pedal

"THE PEDAL should be released after the first chord, precisely as indicated, before the next phrase which begins piano and ascends to an effective *crescendo* followed by a *decrescendo.* The second measure has the same expressional complexion as the first. Careful attention should be given in the first three important measures, to Beethoven's quite evident purpose to have the dynamic force develop with increasing intensity, reaching the crest of the wave upon the first chord of measure four, when the composition seems to become broader and broader, attaining a still further climax in the middle of the measure on the solitary A-flat in the right hand.

"In measure three, the student should take particular care to preserve the *tempo* accurately, and not be deceived into exaggerating the thirty-second rest. Comparatively few students play this measure quite correctly, as there is an aural deception.

"The dot over the fourth chord (F minor triad), in the fourth measure, does not mean staccato. The chord should be held just long enough to take the pedal, then both right and left hands should be released. In the nine-note group, terminating the run in measure four, the first four notes should be played in strict time as 128th notes followed by the group of five at a proportionately accelerated speed. The run should not be hurried.

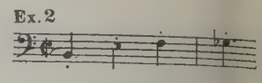
Beethoven's Diminished-Sevenths



"IN MEASURE five the composition changes temporarily to major, seeming to lose for the time being its forbidding character, for the first three-fourths of the measure, but this is harshly contradicted by the forceful diminished-seventh chords immediately following. Again, let me urge, do not punish the keyboard with violence here. The chords should be sombre and majestic without any suggestion of anger.

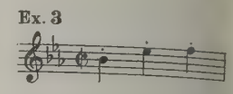
"The beginning of the *Allegro di molto* seems to be for most students the signal for a great rush, a furious onslaught. That, however, is a wrong idea. There should be something mysterious about it; at the same time, it must be absolutely clean and crisp in touch, an even *piano,* with perfect rhythm (neither accellerando nor crescendo in measure 14). Even the first chord in measure 15 is still *piano.* Always remember Hans von Bülows' maxim, *'Crescendo* means *piano, diminuendo* means *forte.'*

"This, doubtless, came from von Bülow's experience in teaching pupils to whom the sign *crescendo* meant loud, instead of growing from soft to loud, and *vice versa* with *decrescendo.* It is advisable to take the left pedal for measures 11 and 12. The *sf* in measure 13, which, by the way, must not be exaggerated, should, however, have a little support by a small accent in the left hand. Watch the *decrescendo* in measure 18, so that measures 19 and 20 will be a real *piano* again.



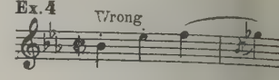
"At the entry of the second theme (in measure 51) do not let the left hand go over the right and the right in turn jump over the left, but rather pass the left hand *under* the right, which you can do very comfortably during measure 50, and the right will be easily within reach of the B-flat in measure 51. The *tempo* slows down just a trifle during measures 49 and 50. The section from measure 51 to 88 contains the most difficult passage in the whole movement, although it may not look it. I am referring to the series of *mordents.* They should be played, as marked in measure 57, all the way through and should never be allowed to degenerate into triplets, which would make the whole passage appear insipid and trivial. This is very difficult and requires a lot of patient practice. I find that the safest fingering is 2, 3, 2, each time, with the first on the following notes, with the exception of

Ex. 1



as in those cases it is almost impos bring the first on the black key w fect elegance, and therefore the fi must be 3, 4, 3, with the second fi the following quarter note. Th phrase

Ex. 2



must at all times be staccato all fou as also the three notes

Ex. 3

in measures 52, 60, and others. seems to be a temptation for some to slur the F with the G-flat in the ing measure, which must be ab avoided.

Ex. 4 Wrong

"There should also be no *cresce* those three notes, as it would weaken the significance of the exp melodious *sf* in measures 53, 54 an similar ones. The appoggiatura B measure 53 (and similar measures) *on* the beat, not before. The whole should be played *espressivo* and *ca* not hurried; M. M. ♩ = 138. The part of the theme (measures 56 should be given with more tone a nificance in the repetition of meas and again even more so in meas from which point the theme broaden and become more tranq tempo (not so much, however, as it *ritardando*) and diminish in ton soft *pianissimo* in measure 88. N next four measures should be *piano,* from measure 93 (*crescendo piano,* a very gradual *crescendo,* a not to reach a *forte* until measur The phrasing,

Ex. 5

which looks rather forbidding at fi to be understood more in a spiritua and may have been inspired by the t of the passage played on the violin, the phrasing would be actually carri as indicated and would result in tha fectly natural emphasis of the firs of each group, without any thought real *accent.* This is exactly what thoven seems to want here; the firs of each group to be struck with d and not to be held, in contrast wi four measures preceding, which still a more tranquil character, indicat the whole and half notes which s be carefully given their full value.

"In measure 113, there is a sudden on the second quarter. The right passage here should be practiced to perfection and evenness, and should like a ball rolling down the hillside, own weight. The bass notes, C, and B-flat, should be slightly accent in measures 114 and 116 and strong measures 118 and 120.

"It will be a useful lesson for my ers to put in the pedal marks themsel

Called by Press and Critics the Greates

The BRUNSWICK PANATROPE

World's first purely electrical reproducing musical instrument

Al Jolson, world's greatest comedian, says: "Records by your new electrical method reproduced on your new musical instruments are certainly 'musical photographs.' The lifelikeness of this music amazes me."

Brunswick Panatrope & Radiola. Panatrope combined with either 6- or 8-tube Radiola Super-heterodyne. Finished in American Walnut.

THE Brunswick Panatrope is the new invention which gives *electrical* reproduction to the new electrical records.

Four institutions whose names are household words united in the development of the Brunswick Panatrope. They are Radio Corporation of America, General Electric Company, Westinghouse Electric and Manufacturing Company, and The Brunswick-Balke-Collender Company.

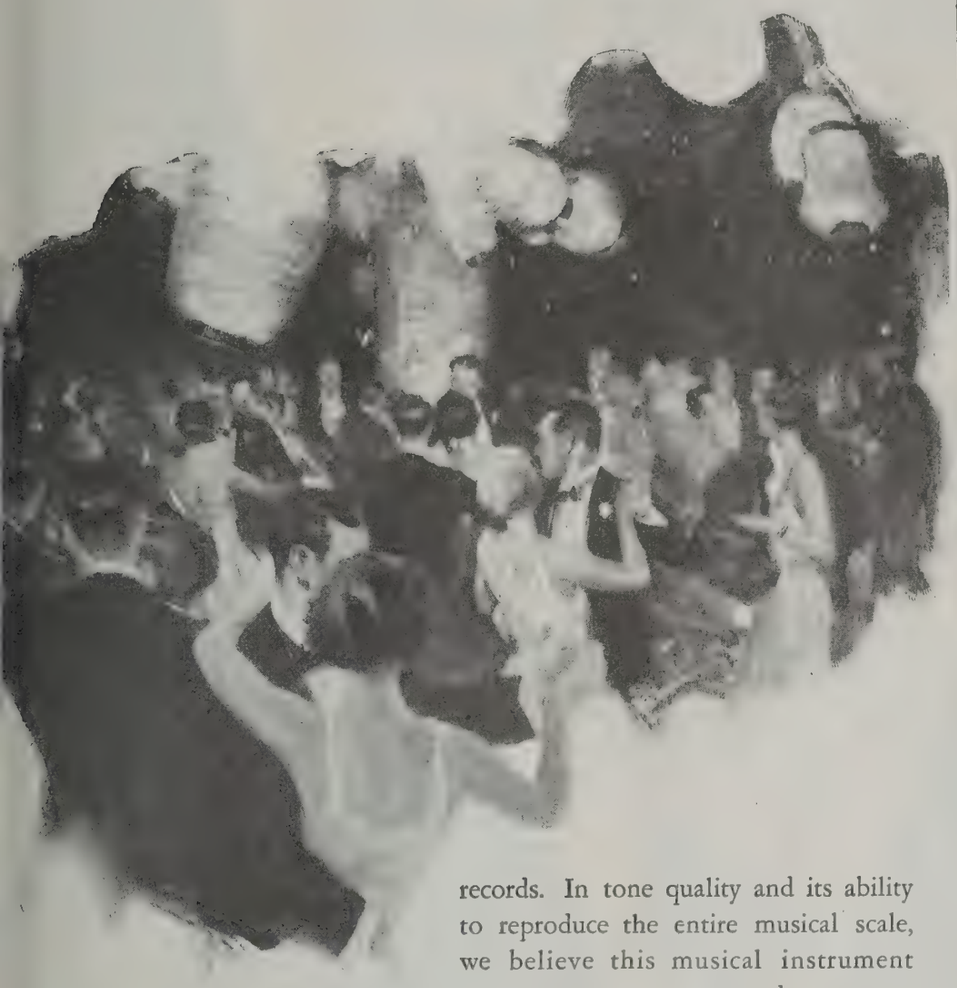
When this remarkable electrical reproducing musical instrument was first demonstrated in New York City and other music centers, it attracted more attention and comment than probably any other musical invention in history. The great metropolitan newspapers reported the first Panatrope demonstrations in front-page space. Critics as well as laymen were astounded at the unbelievably life-like music attained by this new method of reproduction.

Demonstrations of the Panatrope have continued in schools, colleges, and before public gatherings, until now more than four million persons have heard it. No musical event of its kind ever met such enthusiastic response and approval as have these demonstrations.

The Brunswick Panatrope offers possibilities for home entertainment unlike anything before it.

It has been called the greatest musical invention since the piano.

For radio, too



The Brunswick Panatrope may be had either alone or in combination, in one cabinet, with the Radiola Super-heterodyne. Thus it puts at your finger-tips all recorded music and the entertaining,

**$5000 for a name*

To find a suitable name for Brunswick's new musical instrument described on the opposite page, we offer prizes totaling $5000 (1st prize, $3000; 2nd prize, $1500; 3rd prize, $500) for the best name submitted with slogan not exceeding 10 words, describing its music. In the event of a tie, a prize identical with that tied for will be awarded each tying contestant. Contest closes December 15 at midnight. Write for free booklet giving all details. Address Dept. P-189.

usical Achievement of the Age

wsy programs of radio as well. The natrope may also be used as a loud eaker for your present radio set, with usical results equally superior to what u are accustomed.

is marvelous instrument is now ered in a variety of beautiful cabinets. operates entirely from the light ket; no batteries or outside wires eded.

Another triumph

unswick has also developed another usical instrument, as yet unnamed,* bringing out the music of the new records. In tone quality and its ability to reproduce the entire musical scale, we believe this musical instrument represents a very great advance over anything in existence, save the Panatrope. It does not utilize the electrical equipment of the Panatrope, and its prices are lower, ranging from only $115 to $300 (slightly higher west of Rockies).

Before you buy any musical reproducing instrument of any kind, or radio, hear the Brunswick Panatrope, the Brunswick Panatrope & Radiola, and the new Brunswick musical instrument as yet unnamed.*

Brunswick dealers will gladly demonstrate these instruments. If there is no Brunswick store near you, write us.

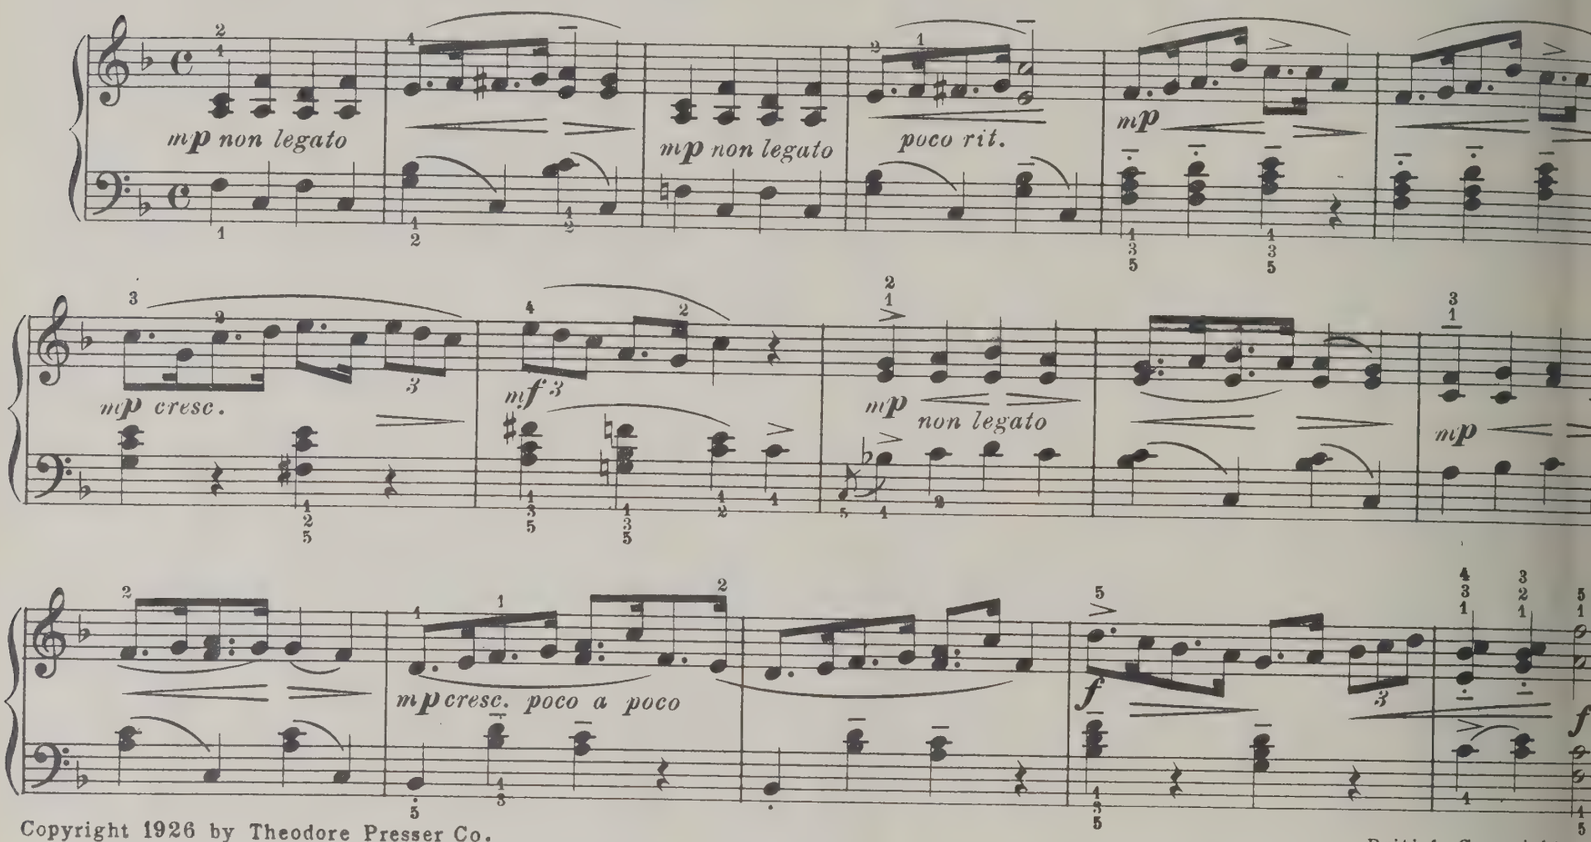
A vocal or instrumental number. Good for indoor marching. Grade 2.

THEODORA DU

1.

Left, right— left, right,
Not too fast nor slow,
Left, right— left, right,
Singing as we go;
Chest held out above the toes,
All the tricks a soldier knows,
If we march in perfect rows
We learn to walk just so!

Refrain



Left, right,— left, right,
Shoulders straight and true,
Left, right,— left, right,
But with motions few.
If we practice ev'ry day
We'll learn to walk the proper way,
As we sing this roundelay
Of left, right— left!

2.

Left, right,— left, right,
Eyes held straight ahead,
Left, right,— left, right,
With an easy tread;
Lips clos'd tightly, nostrils w
Lots of breath to take insi
Always marching with a pride
To do as our Captain said.

major and minor keys having the same *do*,
not confuse them with the "related keys,"
ctly called.
n measure seven, and similar measures, make
notes legato. *By the Gypsy Campfire* is
ellent practice in the interchange of staccato
legato. The second theme will need strong
enting.
Mr. Preston's work always displays medolic
tility and musicianliness.

ountain Zephyrs, by Georg Eggeling.

Mr. Eggeling is a German composer and
cher of repute. Born on December 24, 1866,
Braunschweig, he grew up amid cultural sur-
ndings. He studied piano and composition
h Professor Edward Frank and in the Braslau
nool. From 1890-1900 he taught piano, theory,
d other subjects in the Braslau Conservatory,
d, since 1900, he has headed a school of his own
Berlin. His compositions include many piano
ıdies and piano arrangements, songs, choral
rks; and so forth. He is also the editor of a
usical Lexicon.
This piece, *Mountain Zephyrs*, illustrates
ossing of hands. The repeated notes in the
flat section must be "cleanly" enunciated.
Mountain Zephyrs is also a good octave study.

**ne Pensee Romantique, by E. Saint-
Juste.**

Literally translated, the title of this number
gnifies "A Romantic Thought;" and if you
ill look in the dictionary (which I trust you
ten do, even though, like the man in the
necdote, you cannot quite "get the hang of the
ory") you will find that romantic really
eans "fantastic, fanciful, chimerical." This
the meaning here, we imagine.
Do not accent the first two measures of this
iece. They are like the preludial murmurings
f strings in an orchestra just before the entrance
f, say, an oboe or clarinet solo.
The word "morendo" means "dying away."
"E. Saint-Juste" is the pen-name of a well-
nown English composer.

**A Stately Measure, by E. Lumley-
Holmes.**

Mr. Lumley-Holmes, as might be expected
rom his compound name, is also an Englishman.
He lives in London, and is either a skilful
lutist or a skilful flautist, according to the height
of one's brow.
The swish of crinoline and the soft patter
of dainty feet moving slowly, but with con-
summate grace, to a stately theme!
The analysis of this composition is as follows:

1st section	C Major
2nd section	A Minor
3rd section	C Major

Before the return to the C Major theme, there
are several dominant cadences, and finally a
dominant 13th chord in C.
The form of the composition, then, is our
old friend A-B-A.
Notice the appoggiatura B-C in the first section.

Irish Reel, by N. Louise Wright.

This has all the appearances of a "reel" old
Irish reel. The left hand gives the effect of a
drone bass by its continual repetition of the
same notes, and forms a fine accompaniment for
the tune. Keep a very steady rhythm.

Marching Song, by Theodora Dutton.

Make the sixteenths short enough!
Sixteen measures leading to a Dominant
Cadence is one of the commonest occurrences
in music. This piece is, therefore, a good study
in elementary composition; see if you can model
on this a little original piano piece of your own.

**Evening on the Lake, by Herbert Ralph
Ward.**

Mr. Ward was born in Brooklyn, N. Y., on
Nov. 28, 1885, and to the best of our knowledge
is still a resident of that city. His lake,
if you please, is a *calm* lake; and your canoe,
gliding noiselessly along, sways ever so gently
and pleasantly as it cuts the clear water.
Get this swaying rhythm into your playing of
this number.
Affret. is the abbreviation for *affretando*,
which means "hurrying the pace."
The second theme is in E Flat, the sub-mediant.

Cuckoo, by Arthur Foote.

Just as there have been many butterfly and
"papillons" pieces, so there have been numerous
cuckoo selections, from the day of Claude Daquin
right down to the present; and this one, by
the noted American composer, Arthur Foote,
strikes us as among the best ever written.
The left hand answers the right hand very
splendidly—and you will kindly notice how
well the entrances of the theme are accomplished.
Be intensely careful about your phrasing,
particularly where the phrases run over the
bar-lines. If the pupil phrases the *Cuckoo*
poorly he will certainly rob it of much of its
character and attractiveness.
Practice the last eight measures separately
until mastered.
The climax of this piece is remarkably fine.
Arthur William Foote was born in Salem,
Massachusetts, in 1853. A distinguished pianist
and composer, he had his early training mainly
from Emery, Lang, and Paine. From 1878 to
1910 Mr. Foote was the organist of the First
Unitarian Church of Boston, and during the
years 1909-1912 was President of the American
Guild of Organists. In 1919 he received the
degree of Mus. D. (Honorary) from Trinity
College.
His writing is always strong constructionally
and always individual. He has composed a large
number of opuses in all the large and small
forms, and is also author of several books on
musical subjects.

Fairies' Jubilee, by G. N. Benson.

An exercise in staccato and legato. Notice
the fingering.
The second theme is in F, the sub-dominant of
the main tonality, C.
A fairy jubilee, though it has never yet been
our good fortune to attend one, must be a very
jolly sort of affair. Play this piece, therefore,
in a jovial manner.

**Summer Twilight, by H. P. Hopkins
(Organ).**

In this dignified selection, work for a legato
left hand.
Eight measures to the Dominant, and then
eight measures back to the Tonic, we find
here is perfect elementary form. Phrase the
left-hand part carefully as marked, and see that
the right wrist is kept very relaxed.
The A Flat section is attractive; then comes
the modulation through an Augmented Sixth
chord ("German Sixth") to the Dominant of
F.

Elegy, by R. Drigo (Violin).

Mr. Drigo, though not a Russian, was for-
merly conductor of the Russian Grand Opera.
At present he lives in Milan, Italy.
Observe the bold introduction, with the fine
strong chords, and the return to this effect at
the end of the *Elegy*.
After the introduction there is a moment of
subdued feeling, until the appearance of the
theme—a wondrously lovely and eloquent one.
This piece is in B Minor, of course, not
D Major; notice the A sharps (leading-tone
in B Minor) which dot the page. Grace notes,
under Mr. Drigo's skilful hand, take on great
effectiveness. In measure eight, for example,
the grace note lends extreme pathos and ex-
pressiveness.

God Cares, by Helen Nicholas (Vocal).

The words are eloquent in their assurance
of the continued care and watchfulness and
love of the Creator. *God Cares* is a powerful
lyric with a fine setting. Sound the *d* on God!
Otherwise the song will become almost mean-
ingless.
D Flat is a peaceful lovely key. *Piu mosso*
means faster.

Remember, by Perry W. Reed (Vocal).

This is one of the very best vocal numbers
we have seen for a long time. Mr. Reed writes
understandingly for the voice, and has a most
unusual gift for melody. Sing this song with all
the expression you can command and watch, with
an "eagle eye," for all the important consonants.
Mr. Reed, in his non-musical activity, is traffic
manager at Pensacola, Florida. He is, like
Vice-President Charles G. Dawes, an "auto-didact"
in music, which, simply expressed, means that
he has always been his own teacher. He has
assiduously studied the best of music, and has
read many books on musical subjects—with most
excellent results, as one can see. His twelve-
year old son is very musical and hopes one day
to compose; but he will have to work hard, mighty
hard, we feel, if he ever expects to write as good
a song as *Remember*.

**Land of My Heart's Desire, by Robert
Coverly.**

Robert Coverly was born in Oporto, Portugal,
of Scotch and Portuguese parentage. Not
until he was fourteen years old did he have
any instruction in music; then he had lessons
in Violin and in Counterpoint from a graduate
of the Paris Conservatoire.
Mr. Coverly's name first gained prominence
in London, through his lighter orchestral com-
positions. His success, however, is largely
owing to his charming, tuneful, unlabored vocal
compositions.
The walz tempo in *Land of my Heart's Desire*
is singularly seductive and pleasing.

(*Continued on page 790*)

Louis Quinze

PERIOD MODEL GRAND

All the luxury of the greatest period in French design, and the finished artistry of rich hand carving in mahogany, show in this most graceful and modern small grand. Musically it sets a standard for the five foot Grand, the type so favored today.

Ivers & Pond PIANOS

Combine the best traditions of old time Boston piano building with the most advanced scientific ideas. Built, as from the first, in *but one quality—the best*—by the same interests, with the same artistic ideals, they are used in over 600 institutions and 75,000 homes.

A new catalogue showing latest style tendencies in Uprights, Grands and Players mailed on request.

How to Buy

If we have no dealer near you, we can supply you *from our factory* as safely and advantageously as if you lived nearby. Distance is no obstacle. Liberal allowance for old pianos in exchange. Attractive easy payment plans. For catalogue, prices, and information of much value to any intending buyer, *write now*.

The Singer's Etude

Edited for October by Well Known Specialists

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

Practical Singing

By Homer Henley

SINGING HAS a practical technic which cannot be ignored. Lately I read a review of a new book on singing, written by a famous throat specialist. The review stated that the writer announces what he evidently believes to be an entirely new departure in the field of vocal art. The principles of the departure are contained in the following quotations: "Real art lies in the true expression of the meaning of the words made vital by psychological power, not by vocal effort." "The word and not the tone must be the leading factor in artistic singing." The book has chapters on "Correct speaking as the logical ground for correct singing," and "The cause justifies the means."

The worthy medico adduces the voices and singing of Caruso and Chaliapin as proofs of his contentions, referring to the latter as "one who has almost completely abolished concern for tonal effects." The word "almost" in the last quotation opens the door for much speculation. It must be allowed that Chaliapin is not alone in an "almost completely abolished concern for tonal effects," for any real artist, by the force of the urge of his art, must rise above tonal technic in the white heat of interpretation.

However, the foundation of technic must be there! Chaliapin's technic is surely under his every interpretation, as his public statements in an autobiographic story of his life attest; and Caruso was a life-long and consistent student of his own anatomy in relation to his singing, as a former book by this very same famous throat specialist admits.

Any intelligent teacher of singing will, of course, add his testimony to the immense and indispensable value of psychology in singing and in the teaching of singing; but I seriously doubt if these same teachers would give psychologic force the entire credit for vitalizing either voice or song, or both.

As for "the word, and not the tone" being the leading factor in artistic singing, there is certainly no new idea here, for David Ffrangcon Davies, the celebrated Welsh baritone, who was a pupil of Shakespeare and who later became vocal instructor in the English Royal Academy of Music, published in London in 1906 a book called "The Singing of the Future," which contained an exposition of the identical principles of the book by the famous throat specialist.

Importance of Exercises

NO ONE WOULD expect to play the piano by merely holding thoughts of psychological exquisiteness and ignoring finger exercises any more than one would look for a three-inch development of his biceps through "expressing" his fingers in delicate gestures. The singing voice falls into precisely the same category. Without those proper exercises which make for flexibility, dependability and endurance, the singing voice cannot, by its very nature, achieve its full and normal development.

Let us by all means admit the fact that some great singers worked out their own vocal problems; and, having admitted it, do not let us forget to declare the equally important fact that these formed but a scant ten per cent. of the host of great singers whose entire vocal training lay in the hands of their master-teachers. The training of those teachers was the training of the old Italian school of singing, based on obedience to the laws of respiration and resonance, pursuit of the beauties of phonation, and diligent practice of scales and solfeggi.

Truth always falls between two extremes, and we may in this connection, as ever, look for the solution of the vocal problem somewhere between the dry, hard-and-fast rules of the fanatical element of the old school and the wild over-shooting of the mark by the too extreme enthusiasts of the new.

Psychology is too powerful a force to be left out of the reckoning by thinking teachers. That tone-color and tone-quality reflect, to some extent, the mental reaction to the sentiment of the words of the song is readily acknowledged by those same teachers. But it is scarcely reasonable to suppose, by any of the laws of logic or even of common sense, that any singing worthy of the name can be done without the preliminary foundation of training of the physical units which are called upon to produce the voice. In other words, singing has a practical technic which cannot be ignored.

Independence of Tongue and Jaw

PERHAPS ONE of the most important of the foundational truths of vocal adjustment is laid down in the statement that the throat will be comfortably open if the independence of the tongue and jaw be established. This means that if the tongue can move freely while the jaw is in a state of unconscious repose, the freedom of the throat is assured. As a general proposition this will be granted without much demur, but the method of its accomplishment has always been a subject of the greatest vexation to teachers of the voice. The following exercise, if followed with exactness, will solve not only the problem of the open throat, but also that of the stubborn, stiff lower jaw, provided the exercise be done properly and persistently.

Select a comfortable middle note in the voice. On that note sing the sound of LAH (AH as in father), four or five times, without allowing the lower jaw to move, and using a mirror for a tell-tale. The tip of the tongue should generously brush the roof of the mouth from the back to the front, beginning at about the soft palate and ending on the upper front teeth. The sound of the long "L" or "UL," while the tongue is traversing the roof of the mouth, should be sufficiently loud to compel a proper breath intensity, and should, at the same time, set up the resonance of the head cavities in the same manner, as those cavities respond to certain French sounds. At the instant the "L" or "UL" is ready to open into the widened sound of "AH," the tongue should explode the "L" with a stroke resembling the sharp fall of a hammer on the side of a swinging locomotive bell. Indeed, the sound produced by this device can be made to sound so purely like the actual tone of a bell that I have known persons in another room from the singer (especially in the cases of a high female voice), to believe that a bell was struck, rather than that a tone had been sung.

At first little success will be achieved on the lower and lower-middle notes of the voice. Notes around the upper-middle will be found the most favorable for the production of this clear, effortless bell-tone. Remember, the jaw must not move; and if this seem difficult at first, the difficulty will pass with but a small amount of practice. It will also be noted by the experimenter that the sustained "L" or "UL" between the "AH's" will sound greatly like the pulsing overtones of a bell between strokes.

The jaw will now not only be deprived of its power to interfere with the tone, but it will also be found that the throat is in a condition of perfect freedom and openness, provided that the "AH" which the singer is attempting prove to be a true "AH" (the rarest and most beautiful vowel to be heard in song) for this cannot be sounded without the throat being perfectly free.

This exercise should progress by semitones from middle G to the G above, for sopranos and tenors; and from middle C to the D above for contraltos and baritones.

After the "AH" has been freed, four vowels should be sung on the same note: LAH, LEE, LAY, LAH; or LAH, LO, LAW, LOO. With these latter vowels the lower jaw is bound to move more or less, but care should be exercised to minimize that movement as much as possible. When the vowels are rightly sounded the vibratory sensation will be found to reside almost wholly in the spaces of the skull, above the mouth-cavity. Not that the sound known generally as "nasal" will be heard and felt, but that rare and subtle sound whose production is confined almost exclusively to the voices of the great singers of the world.

The exercise here set down is a sure road and a direct road—in fact, a short cut to the tone-quality employed by all of the great singers. Not that it is the only one; that would be stating the case unfairly. Five, at least, of the vocal "roads lead to Rome."

Singing the Initial Consonant

ANOTHER exercise is based on the following proposition: If the initial consonant of a syllable or word be sung as loudly as the vowel which follows it, then the placement of that vowel will be forward. Relative loudness implies relative breath-intensity; and so the breath-intensity necessary to produce a loud consonant will bring a following vowel on the teeth, *provided* there be no lapse of breath-pressure or hiatus of silence between the consonant and the vowel.

The consonants L, M, N, and R are probably the best to start with, and the dental sound of E (as in see), IH (as in sit), EH (as in set), and A (as in say), will be found the most complaisant of the vowel sounds in assuming the forward position of the voice. These sounds will be best followed with the practice of UH (as in love), AH (as in father), AA (as in sat), AW (as in saw), O (as in so), OO (as in stood), and OO (as in shoe), in the order named. After the consonants named above, a good order of sequence would be J, Z, V, B, D, G (hard), F, H, K, P, T, S, and the buzzes: TH, V, Z, and ZH. Begin the exercise on middle and comfortable note.

Let us take the consonant L and vowel E to start with, and sing LE times on that note loudly (that is, the degree of resonant vibrancy and tensity which is in entire consonance accord with beauty of tone; sufficient loud to soar ringingly over the tumu a great combined orchestra and ch and still all beauty). L, then, mus sung as loudly as any vowel ever Also, it must be sustained three or slow beats before the E is sounded. important that this be fully unders for the success of this exercise dep wholly upon the loudness (and consc intensity) of the consonant.

If there is no cessation of sound tween the consonant and the vowel will find, after but a few notes, that vowel will ring on your teeth as it ha done before. Having done the LE about six steps of your scale, progres by semi-tones, go to the sounds of and NE. The M and N will be f more difficult to produce loudly than the L, but they should still be don loudly as possible, and the amount o tensity engendered thereby will com sate for the lack of volume. Th should be rolled, as in the case of other consonants, for the space of slow beats.

It will be found that the succession the vowels, arranged thus, is the o most favorable for bringing them all the upper front teeth. A surprising gree of ease in the forward placemen the voice will follow the practice of exercise and a corresponding ease comfort in the regions of the throat, and tongue. Songs may now be un taken and the application of the prin of the loud consonant ushering in the tense vowel, *in exactly the same p* will be found to function with words as readily as in the exercise. It is course, understood that the exaggera necessary for the success of the exer should be gradually cut down (as mas of the principle is gained) to limits sistent with tone-intensity and beauty.

Applying Principles in Scale Practic

WHEN A FAIR working knowle of the two above principles gained, both should be used in every f of scale practice. Let the first note every scale be comfortably and ir produced by the throat-opening jaw-loosening principle of the first e cise, and vowels brought on the teeth the aid of the second, and then see t that every succeeding note of the s be kept in a like state of freedom and pingement on the teeth.

Great vocal principles are simple thi so simple as to appear platitudinous to unthinking. But it is the very facile c sureness of the persons to whom "a l knowledge is a dangerous thing" that vents them from recognizing that g truths are nearly always cast in the m of simplicity. The old Italian masters song said very little in the brief bits wisdom they passed on to posterity, what they did say was golden.

The world has lamented the "lost ar Italian *bel canto*," when that art, so from being lost, has been before it alw in the simple wisdom of the few g truths laid down by Tosi, Porpora, A cola, Pacchiarotti, Crescentini, De Ba Caccini and others. The whole of *canto* is there; always has been, and ways will be there.

Bel canto is to be attained neither taking thought only, nor by beautiful expressive pronunciation only. (Tho Johann Adam Hiller, the greatest tea of his time, did say, "well spoken is sung.") *Bel canto* can be attained if pupil will recognize the vital importa

enduring truth of the words of osi, written at the end of the nth century—words as vital and lay as they were then—"The voice be cultivated by a correct per- e of exercises in agility. Then e at the command of the singer ccasions. When a beginner has long practiced pure intonation, sustained notes, trills, phrases, and well-expressed recitative, and considers that the master cannot always be beside him, then he should recognize that the best singer in the world must ever be his own pupil, and his own master."

The Nose Sings, Too

By Charles Tamme

NOSE should sing every note. It ing with the most delicate *pianis-* well as with the strongest *fortis-* It is needed with the tenderest n as well as with the most dra- imax. *Bel canto* and *cantabile* exist; *staccati* are useless; and and *martellato* are only strenuous efforts, without the singing nose. great difficulty in establishing a nose is not in the learning how s comparatively simple—but in ng the singer to be willing to this way. For when he tries st, his voice sounds rasping and imself.

eason for this is partly because usually is rasping and ugly in crude attempts, and also because er finds it hard to adjust his hearing to the great difference the voice as heard without res- with very little nasal resonance, voice heard with a maximum of nance.

erance is the important precept time the student realizes how ier it is to sing this new way; ch sweeter and more brilliant e becomes; how much greater ying power!

nasal resonance is often recog- established by a sense of feel- ing for it is generally the most ry way. For nasal resonance certain quality of tone rather se of feeling, except, perhaps, in beginning when it is hard to between the two.

ngers, in seeking for the singing n the habit of singing *through* This is a habit comparatively rrect, and a much milder fault one of singing almost entirely asal resonance.

rd "vibrating" is probably more han the word "singing" in de- asal resonance; but for all prac- tical purposes it is best that the singer should think of his work entirely in terms of singing rather than in terms of vibrations or noises.

First attempts at nasal resonance sometimes cause dizziness. Such a state, however, is not of a lasting nature.

There are exercises especially helpful in encouraging the nose to sing. The best mechanical approach is by sustained vocalization with *ēē* or *ā* on all the notes in the singer's voice. The nasal consonants *n* and *m* used in connection with these vowels further help the singer to find the way. After using *ēē* and *ā*, as above, it is good to use *ah*. Another simple exercise is to take the first five notes of the scale and sing, up on *ēē* or *ā* and down on *ah*.

Memory is of great help in establishing a singing nose. When this way of singing has been found on *ēē* or *ā*, the student's memory tells him how the nasal resonance feels or sounds on these vowels and thus helps him to acquire the same on his other vowels. Also by means of his memory, he is able to retain the ability to make his nose sing.

There is one important warning in connection with the singing nose—to be sure not to mistake some contraction of the palate, or of the tongue or a tense throat for the singing nose. The sounds are somewhat akin. But the sound produced by contracting the palate, the tongue or the throat is usually tiring work, whereas with the singing nose it is easy. Look in the mirror and avoid all outward signs of strain. Be sure you are right. Then go ahead!

Once this resonance is obtained, it should never be absent from any tone in the voice. Every note should be attacked with nasal resonance. Deeper resonances, as, for instance, from the chest, may be added, as desirable or necessary; but foremost and always there must be the resonance in the nose.

Some Vocal Helps

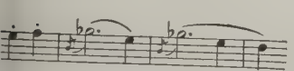
Master Lesson Upon Beethoven's Sonata Pathétique

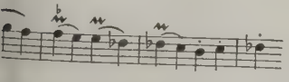
By Wilhelm Bachaus

(*Continued from page 736*)



ge from measure 223 to 290, as it
ds with the passage in the first
he *Allegro,* which I have marked

asure 297, we find the resumption
rave. In 297, 298, 299 and 300,
ge should be cumulative in in-
nd in measure 299 it might even
sible to become broader in *tempo.*
there should be no further
n measure 300. The concluding
ding chords in measures 299 and
d be played with beautiful *legato*
scendo.
easures 301-304 should be again
thout *accelerando* or *crescendo,*
er is reserved for measures 305-
orks out as follows:



p mf | *f* ≺ | *ff*
305 306 307

bvious that it would spoil the
nd the effect of this quick *cre-*
you were to start it before meas-

er to recapitulate, I would like
few words suggesting a poetical
f this movement, as it has forced
my mind. The opening theme
1) divides in two sections, namely
chord and the pleading motive.
e suggest the name 'opposition'
rte chord, and it will then appear
ero finds opposition in his way
e start, and he tries to conquer it
g. This repeats three times, the
e third time being the most in-
irtue of dynamics, tonal height
ion. We will notice the number
quite an important part as we
measures 5, 6 and 7, we find
g theme again, three times with
intensity interrupted by oppos-
(to the rhythm  thrice
This is the last time the oppositi-
in *fortissimo,* and it seems to
usted for the time being. The
o work right away (*Allegro di*
n brio) with the theme of at-
ures 11 to 15) which means un-
l, and already in measures 38
e seem to hear parts of some
ll falling down, and more so in
5, 46, 47 and 48. This is where
axes in his work, given to more
ctions. The phrase

ee times up to measure 71 and
owed by the phrase

petitions, intensified each time
ge in key. Still the rest can be
ary and work begins again in
at first *piano* and carefully,
to a climax in measures 99-
w start is made and a higher
ed in 111-112. Having achieved that much, the hero has a few moments of real joy and the measures 112-120, have certainly some likeness to a little boy rolling himself down a hill on a fine summer's day. However, in measure 121, he picks himself up in a second, for some new heroic effort, of which the chord in measure 134 is the final blow, *fortissimo.* (The repetition seems to be indicated more by adherence to the old-fashioned form than by inner necessity and is better ignored.) Now, *Tempo I, Grave.* Opposition is still there, threatening three times, and three times the pleading theme is heard, but this time not with greatest intensity the third time, but retiring into *pianissimo,* as if the hero had recognized that only effort would help, and pleading be of no avail. And new efforts are made (*Allegro molto*). Some haunting fears and doubts (measures 69-72 and 77-80) have to be conquered by the phrase in measure 83 repeated three times. A run of 8 measures leads to the recapitulation of the principal subject of the *Allegro,* which we have called 'the theme of attack.' It loses some of its sternness by the modulation into D-flat from measures 209-212, which passage is repeated three times with growing intensity. This leads once more into the passage of tender thoughts (the *mordente* episode) and through renewed activities with the two climaxes to the feeling of exhilaration from measure 279. The theme of attack again leads to a grand climax in 296. Now follow four measures of the greatest significance. Opposition apparently being entirely overcome, measures 297, 298, 299, each begins with absolute void. All the same, the pleading theme appears three times with increasing intensity, in fact the third time with greater intensity than ever before, almost an outcry, as if the loneliness of the victor was even harder to bear than opposition and struggle. A touching illustration of the solitude of greatness. Still, to quote Schiller, the strong man is mightiest by himself, and the movement closes with an overpowering assertion of strength.

"Although the *Sonata Pathétique* bears the early opus number 13, and is a work of Beethoven's first period, written before the age of thirty, the intensity of its appeal is so strong that we can only put it in a line with his greatest master works.

"Concentrate all the energy, psychic and physical, you have on the final four chords, which should be struck with vehemence and strictly together—striking the chords from a distance above the keyboard, with a combined movement of lower arm and wrist, which will bring the Sonata to a majestic and significant close."

Self-Test Questions on Mr. Bachaus's Article

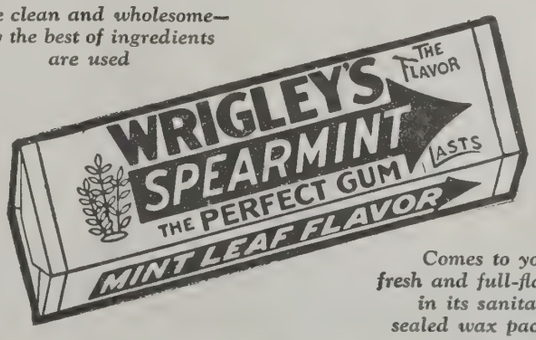
1. *What was the character of Beethoven's grandfather?*
2. *How did Moscheles obtain his first copy of the Pathétique?*
3. *What was Beethoven's method of composition?*
4. *Outline the execution of the introductory Grave of this sonata.*
5. *What do crescendo and diminuendo infer?*
6. *What was the "period" of the composition of the Pathétique; and how does it rank among the composer's sonatas?*

---

*rely is the utilization of music
processes a matter of senti-
her, to a considerable extent,
e materially to increase out-
ring about what may be termed
lly improved industrial spirit."*
—Hon. James J. Davis.

"The evolution of the Sonata form was the greatest triumph of design in music. This was not accomplished by any one man or at any single time or place. It is the consummation and concentration of all the greatest and the best of musical genius."
—Sir Dan Godfrey.

Those Waiting Moments



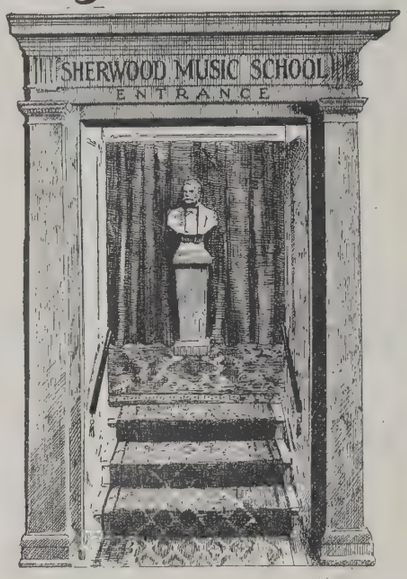
When nerves are tingling, muscles taut, mouth and throat dry—

Then it is that the nerve-soothing, mouth-refreshing, throat-clearing friendliness of Wrigley's Chewing Sweets comes into play.

Wrigley's is used and recommended by singers and speakers who like all other workers find it a helpful aid as well as delicious refinement.

These services that Wrigley's gives—like clearing the breath after eating or smoking—cleansing the teeth—improving mouth hygiene—make the use of Wrigley's an aid to refinement and a mark of good breeding.

Made clean and wholesome—only the best of ingredients are used



Comes to you fresh and full-flavored in its sanitary sealed wax package

The Gateway to a successful future

ARE you interested in teaching music? In the concert field? In theatre organ playing? In Public School Music? These are a few of the professional fields for which we can prepare you. We assure you an opening in your chosen line as soon as qualified.

Teaching

Students preparing with us for teaching may take positions in our Extension Branches, of which there are more than one thousand located all over the country, or in our Chicago Neighborhood Branches, of which there are more than thirty, with others in process of establishment.

Those who come to us with previous training and experience can very quickly qualify to take positions in our Chicago Neighborhood Branches, thus gaining further experience and earning money for their own study.

Theatre Organ

Since the establishment of our Theatre Organ Department, we have trained and placed organists in positions with salaries starting from $85 to $100 a week.

Students of piano and organ, who have developed instrumental technic and musicianship, can prepare to meet the requirements of theatre playing in a very short time. Good openings are assured.

Concertizing

Chautauqua and Lyceum tours offer salaries of $40 to $100 weekly. Concert engagements are usually paid for by the single appearance, the fee being $25 to $50 and upward.

Our extensive system of Branches enables us to provide ample openings for those we train for the concert field.

Public School Music

Our two-year course leads to a Teacher's Certificate, entitling the possessor to the Illinois State Teacher's Certificate and permission to teach, without examination.

Annual salaries of $1,500 to $2,500 are available, with large outside earnings through private teaching, choral directing, etc.

More openings than we can supply applicants for are referred to us every year from school authorities throughout the country.

Students May Register at Any Time

Write for Catalog mentioning **The Etude,** ***and telling us which phase of our service most interests you.***

Sherwood Music School

ing plans for chorus work in one, ree and four parts in grades 8b, 9a

First or Second Soprano	(Alto-) Tenor	Baritone	Second or First Soprano

Conductor
(1)

First or Second Soprano	Second or First Soprano	(Alto-) Tenor	Baritone

Conductor
(2)

First or Second Soprano		
Second or First Soprano	(Alto-) Tenor	Baritone

Conductor
(3)

(1) Boys seated in centre.
(2) Boys seated on right.
(3) Seating for narrow auditorium.

In the above diagrams, number one in each case works out most successfully as the boys are directly in front of the conductor. The accompanist should be on the conductor's right so that, when the lid of the grand-piano is raised, the tone will be reflected toward the chorus.

Books

CONSIDERING the double objective of preparing part songs which may be used in the assembly as well as in the choral program, it is well to have at least two sets of books for use in the auditorium. These books should be kept in racks placed on the backs of the folding or opera chairs.

A serviceable and comprehensive song book should be obtained, one which will furnish material for six terms of work on the basis of twelve or fifteen numbers a term. These numbers should be in one, two, three and four parts and in addition a fair amount of assembly material should be supplied. This book should be considered as basic material for chorus work and enough books should be secured to enable each pupil in the large choral groups to have his own copy.

In addition to this a community or small assembly song book should be furnished on the basis of one for every two pupils. This material will supply the needs of general assembly, seasonal and community singing. Now that we have considered the organization of the chorus work for the Junior High School, let us consider the details of carrying on the training of the large choral groups in intensive part-singing.

NOTE:—This article will be continued in the next issue when a full discussion of methods for presenting part music to large groups of Junior High School pupils will be given.

Used Piano Purchasing Reminders

By Fae C. Prouse

OULD be folly to select a used piano t first gathering important details it. Only expert tuners and dealers ios know the value and condition d ones. They pick them up but em in shape before they are ever upon the floor for sale.

use the used piano sold by the music often seems too high in price, the er blindly chooses an advertised ent in a private home or at public . Here are just a few hints to his buying less haphazard.

names of the standard make pianos given by a piano tuner or music Having found such a one the pe purchaser should sit down at the rd and play a few measures or other to try the piano so that he ar the tone. But the chances are that this instrument needs tuning. It is well to ask the owner when it last had a tuner's attention.

Next, it is well to make inquiry concerning the pitch of the instrument. A piano may be in tune yet pitched too low to use with other instruments. This pitch can be determined by anyone who plays a wind instrument or by a tuning fork. A piano out of tune or off pitch means a series of expensive tunings and possibly the buying of new strings for the ones broken when tightened. For this reason the purchaser should insist on a piano being tuned and put to proper pitch.

Rounded legs, curved cheeks, and uprights with ukulele attachment indicate an old piano, as well as fancy cases, yellow ivories and uneven keyboard.

OVER 200 YEARS OF MUSICAL INSTRUMENT MAKING

WURLITZER
REG. U.S. PAT. OFF.
Studio Piano

Your child should grow up with this piano

CHILDREN love music. Their instinctive desire to play the piano may be permanently lost unless it is given an early opportunity to develop.

Music is more than a parlor accomplishment. It exalts life, brings enduring happiness, enlarges character—provides a life-long capacity for creating friends and giving pleasure.

The sweet-toned Wurlitzer Studio Piano is well suited to the comfort of children and older folks. It is especially priced so low that no home can now afford to be without music.

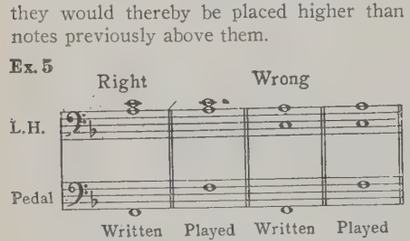
HE MUST strenuously bring his wits to bear on the problem, and he will find that it is not nearly so hopeless as it looks. There are a number of things he can do even in a piece which has a pedal part all the way through! In addition to passages for manuals only, already dealt with, he will prepare on the piano:

(2) *All passages in which the part next above the pedal part happens to make a good bass itself.* There are a great many such passages. But they can only be recognized by a player keenly sensitive to harmonic effects by natural gift, or who has studied harmony, especially the treatment of second inversions; the resolution of discords; and root progressions. No organist should be content without a knowledge of the theory of his art at least up to this point, if only for the sake of economizing his organ practice!

The student, moreover, should prepare on the piano:

(3) *All passages in which the left-hand part is silent*; this hand can then be used to play the pedal part;



(4) *All passages in which the left-hand part simply duplicates the right-hand part* (omit the left-hand part and play the pedal part instead);

(5) *Passages in which the right-hand part is silent.* These are not common, but an example will be found in the C-minor *Trio* of Bach, already quoted (bars 102-110). They may be practiced in two ways: (a) pedal part left hand; left-hand part with right hand; (b) left hand plays its own part; pedal part played by right hand crossing over left hand. This latter method is what is colloquially known as a "twister," and to attempt it will reveal how closely we associate the right hand with the upper part of the harmony and left hand with the bass, which, in turn, is why the latter is so prone to duplicate the pedal notes! But it is excellent practice, and the student who has mastered a passage in this way will find it child's play when he gets to the organ.

(6) He should also master at the piano *all passages in which the lowest notes of the left-hand part duplicate the pedal notes.* (That they are an octave higher than the pedal part does not matter, provided they are still the lowest notes of the harmony.)

(7) *All passages in which the pedal part is simple enough to be played by the left hand in addition to its own part.* There are many such passages, and the number may be still further increased by modifications which do not alter the harmonic bass in any essential particular, though they may shorten some of its notes. Thus (a) the pedal notes may be brought within reach by being played an octave higher than as written, provided that they are *still the lowest notes of the harmony,* but not if they would thereby be placed higher than notes previously above them.

Ex. 5

(b) A long-sustained note in the pedal part may be just firmly touched, the hand released, and the sound sustained by means of the damper-pedal, or if changing harmonics in the upper parts will not allow this, the remaining time between this note and the next one in the pedal part may be observed as though represented by rests. An example of this has already been given in the quotation from Bach's *C-minor Trio,* where the whole note may be played as quarter notes, with the touch known to pianists as organ tone, and indicated by a short horizontal stroke. In this case the device is particularly easy of execution,

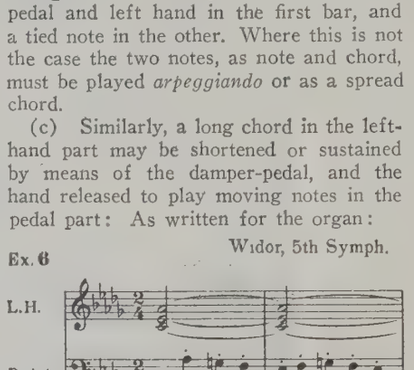
The Organist's Etude

Edited for October by Well-Known Specialists

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Etude Complete in Itself"

Getting Organ Practice on the Piano

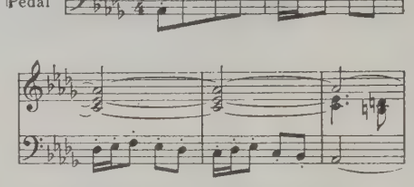
By Clement Antrobus Harris



Part II

owing to the identity of notes between pedal and left hand in the first bar, and a tied note in the other. Where this is not the case the two notes, as note and chord, must be played *arpeggiando* or as a spread chord.

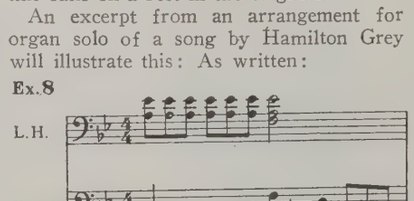
(c) Similarly, a long chord in the left-hand part may be shortened or sustained by means of the damper-pedal, and the hand released to play moving notes in the pedal part: As written for the organ:



Widor, 5th Symph.

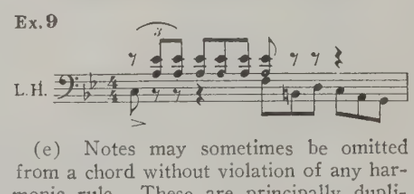
Ex. 6

As practiced for the piano:



Ex. 7

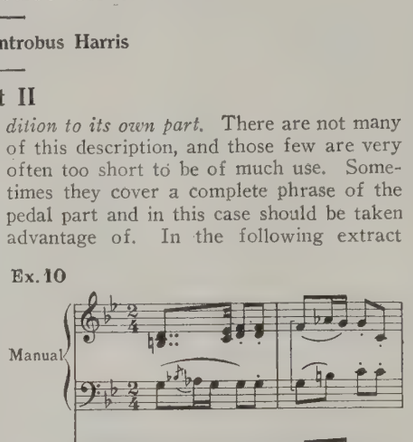
(d) Repeated chords in the left-hand part may have one or more iterations omitted. Care must be taken that there is always a note to receive the accent, unless this falls on a rest in the original.



An excerpt from an arrangement for organ solo of a song by Hamilton Grey will illustrate this: As written:

Ex. 8

As adapted for practice on piano:



Ex. 9

(e) Notes may sometimes be omitted from a chord without violation of any harmonic rule. These are principally duplicated notes, *e. g.,* a note in the right-hand chord may be omitted from the left, and the fifth of a chord (reckoning, of course, from its *root,* not necessarily the bass,) may often be left out without disadvantage, especially in the case of a dominant seventh. A bass note must not be omitted, nor a melody note.

(8) Practice at the piano will be advantageous, also, for: *All passages in which the left-hand part is sufficiently simple to be played by the right hand in addition to its own part.* There are not many of this description, and those few are very often too short to be of much use. Sometimes they cover a complete phrase of the pedal part and in this case should be taken advantage of. In the following extract

Ex. 10

from a well-known slow movement of Haydn's, the left hand will play its own part in the first bar and the pedal melody in the second and following bars, when the right hand will take the two manual parts:

Trios, when they can be played upon one manual without transposing either part an octave, furnish, perhaps, the greatest number of opportunities for the application of this device. The longest example I can recall is the sixteen-bar subject beginning in bar forty-three of the before-mentioned Bach *Trio.* Five bars of the right-hand part consist of an inverted pedal-point, and were it necessary (which it is not) this could be omitted without serious detriment to the harmony.

(9) Moreover, on the piano may be practiced *all passages over a pedal point.* The harmonic principle is that the lowest moving part above a pedal point must itself form a bass which would be satisfactory without the pedal point. Consequently the pedal may be omitted except at its beginning and end, at which point it must form part of the harmony, and the part next above might happen not to form a good bass without it. Generally it will be found practicable to reiterate the pedal note at the beginning of each bar or so, and in some cases to sustain it with the damper-pedal.

(10) The student may play through twice, *the whole composition, the left hand playing the pedal part, and the right hand playing firstly, its own part, and secondly the left-hand part, the right-hand part being omitted.*

This plan will be adopted only, of course, in those sections in which the expedients already named for playing passages complete in all parts do not apply. Some progressions will sound very bare and inconsequential, but they will never produce the bad effect which a wrong bass would; a as practice in reading, the playing of left-hand part by the right hand, will found excellent. Indeed, the methods h sketched out are very much akin to stu ing an orchestral score in sections, fi say, the string parts, then the wind pa and always keeping the fundamental b in mind. This is much more musicia than learning by rote.

An Objection

THE YOUNG student may object t when either hand is playing a p belonging to the other hand or to pedals he is not getting practice in fingering he must adopt when at the org This, of course, is so. But the admiss is simply saying, in other words, t practice at the piano is not usually to regarded as a substitute for, but *an dition to* organ practice. Simple music often be played straight away on organ after careful rehearsal on the pia While, in the preparation of more diffic music, it is rather an advantage than oth wise when the student is compelled play independently of finger-habit. obliges him to study music *as music* a not as mechanism. It stresses the f that his work should be mental rat than physical. Given fair efficiency manual and pedal technic, an orga who has learned even a difficult piece heart at the piano, and is haunted by in his "mind's ear," will be able to ren it quite passably on the organ at the f attempt. Proof of this may be seen the technical difficulties of the music wh expert organists not infrequently exte porize! On the other hand finger-habi treacherous: it may seem to serve one w a score of times, and then, under slightest attack of nerves, prove to b false support.

A great many compositions are now p lished in several forms for different inst ments and combinations of instruments voices. A careful comparison of a num of good organ and piano arrangeme *of the same pieces* will prove an invalua lesson in the art of adaptation. This especially the case if the music was or nally written for the organ and has b adapted for the piano by the composer, in the case of Guilmant's *Prayer Cradle Song.*

Passages for Pedals Alone

THOUGH, of course, the pedal p cannot be actually played by the at the piano, much can be done to fores and prepare for practice on the pe clavier.

Firstly, the footing—right or left fo toe or heel—can generally be determi and where necessary marked. The wh or at least any specially difficult passa should then be committed to memory. writer did most of his "grind" o village organ a mile from his home, even a delightful winding country along a good fishing stream did not alw allure him from the singing, humm buzzing, or whistling of any speci difficult pedal passages he was going practice. (Piscatorial considerations w allowed precedence on the way back!)

Even more than this may be done! late Dr. E. G. Monk of York Minster found a fellow student of mine (af wards the well-known Dr. Swinne Heap) playing the piano and appare trying to kick the pattern out of carpet at the same time! "No!" he plained, he was "only playing a pedal-sage on the floor!"

Registration

EVERY ORGANIST should have su mental grasp of his console that, ting at the instrument blindfolded he draw any stop, depress any composi pedal, and manipulate any other mechan

ssory. Then, when practicing organ
c at the piano, he should go through
actions of drawing and putting in
; and the like, in dumb show. This
impress the registration on his
ory.

hen the character of the music suits,
lamper and soft pedal may be used in
: of swell or composition pedals which
by corresponding positions at the
n.

Practice on a Dumb Organ

UDENTS who possess the "mind's
ar" in a marked degree, and when play-
on a dumb instrument hear the sounds
ally almost as clearly as when the
; are physically audible, can practice
n organ without turning on the wind. A friend of mine who was assistant organist at one of the English cathedrals got most of his practice in this way. If the church is open for private prayer, special care must be taken to draw and replace stops *inaudibly* (this, of course, should always be done) and to see that the pedalboard does not rattle.

Organ music often makes an admirable piano duet, one player taking the manual parts and the other playing the pedal part an octave lower than written in order to get the sixteen-foot tone and leave room for the manual player's left hand. This will afford admirable practice in sight-reading, time-keeping, and taking part in concert music: and players of equal capacity may take turn about and thus each learn both manual and pedal part.

The Chorale-Prelude

By Edward Gould Mead

AYING a chorale-prelude based on a
ile-melody or hymn tune which is fa-
r to the majority of the congrega-
gives to the service an atmosphere of
ual exaltation. Take, for instance,
horale-prelude on "St. Ann" by T.
us Noble, in which the broad, digni-
style of Croft's hymn tune is en-
ed by an effective setting, each strophe
e melody appearing at intervals in the
s to which the tuba is coupled. Im-
ately after the final strophe, the first
he is repeated on the tuba with super
e coupler, an awe-inspiring effect on
ge organ. If there is no tuba, the
dy may be brought out on the dia-
s.

other equally effective chorale-prelude
Ir. Noble is that on the air "Mel-
e." This is more in the style of free
writing as contrasted with the chordal
of the "St. Ann" prelude. The hymn
appears as a continuous melody played
e French horn stop, in the absence of
a gross flute or soft diapason may
ed. Both of these pieces are of a
m grade of difficulty.

er studying the type of chorale-pre-
based on the hymn tune of which
are a great many good examples by
sh and American composers, one
d study the forty-five chorale-pre-
for the liturgical year by John Se-
n Bach. They are found in Volume
of the Peters' Edition of his organ
s. These remarkable compositions
ased on the chorale-melodies of the
an Lutheran Church and are among
est of Bach's writings. Representa-
types are *Alle Menschen müssen*
n (Number 2) and *Erschienen ist*
errliche Tag (Number 15). In the
type the chorale-melody is enhanced
e addition of three parts in florid
erpoint. These parts may be played
e same manual as the melody with a
ration of soft eight and four foot
or the melody may be brought out as a solo on the swell with soft reed and strings and the middle voices on the great (or choir) flutes or soft diapasons coupled to pedal.

In the second type the chorale is treated in canon form with accompanying parts. The chorale is the highest voice, the imitative part entering two octaves lower in the bass, other parts being middle voices. The imitation is strict throughout and by means of a heavy registration (diapasons and reeds) should be made to stand out above the other two parts. Other pieces of this character are the eleven chorale-preludes of Brahms, *Opus* 122, especially Numbers 7, 8 and 10.

Among the most difficult and also most interesting of chorale-preludes are the "Choral-Improvisationen" of Sigfrid Karg-Elert, *Opus* 65, six volumes, typical examples being *Gelobet seist du, Jesu Christ* and *Macht hoch die Tür* both in Volume One. In the former the chorale-melody appears in the pedal with four parts added above in florid counterpoint in highly complex rhythm. For registration, eight and four foot flutes for manuals and sixteen and eight foot for pedal with couplers may be used at the beginning, adding forte and fortissimo combinations toward the end.

The second example is a virtuoso piece of advanced difficulty in the style of a free fantasia, the chorale appearing in manual and pedal partly in octaves. There is much florid counterpoint in the pedal as well as in the manuals. In the middle section there are several measures of rolled chords. The registration should be for foundation stops with the addition of mixtures and reeds for the fortissimo passages and full organ for the coda.

Any of these chorale-preludes would make excellent recital pieces as well as church service numbers. Concert organists would do well to include them in their programs.

The Opening Cadence

By Helen Oliphant Bates

E perfect cadence is supposed to end
ings; but there is one time when it
a good beginning, and that is at the
g of the church service, just as the
er and the choir take their places.
ong succession of about six to ten
s ending with the perfect cadence in
ey of the first hymn, played on the
rgan, will summon the last lingering
ers to their places in the pews and
ring those already in the church to
alization that all preliminary meas-
re now over and the service is to

Organ and Choir Questions Answered

By Henry S. Fry

resident of the National Association of Organists, Dean of the Pennsylvania Chapter of the A. G. O.

ill you kindly answer the following relative to the organ? 1. Name the inct classes of organ pipes, and deach. In which class are the Vox —Vox Celeste—Clarinet? What is a . Stop? Mention some of each class.

his question as well as the others in your communication are un- taken from some examination pa- The American Guild of Organists, ers to which are based on Lavignac's nd Musicians," from which we will ely in our answers. Organ pipes ivided into two distinct classes, *flue-* l *reed*-pipes. The flue-pipes of them- e of two kinds: *flute* or *open* stops, the column of air vibrates either sub-division in its entire length, pro- ly the fundamental tone of the pipe, ided into vibrating segments, emit- second or the third partial tone (in se the pipes are called Octavians onics); and *Bourdons*, or *stopped* ose extremity opposite to that by e air enters is closed or stopped. ase of stopped pipes the vibrating f air is reflected from the bottom of and must vibrate through its length hence the tone produced is the oc- w that which an open pipe of the gth would emit. The sound from ipes is not as clear as that from s, but this comparative dullness of very valuable contribution to variety , which is an important feature of

ops are also of two kinds—free reeds ve in the opening where they are thout touching its sides; and the eeds, which, as they vibrate, strike e or less force against the walls of which they command. The *Vox* nd *Clarinet* are *Reed* Stops, while *celeste* is a *flue* stop. Mutation stops whose pipes are so tuned as to the written sound, the note played, r more of its harmonics: thus when own stop of this variety, the ' is drawn, and Middle C is sounded, actually heard will be the G just top line of the treble staff.

flue stops are:

ason	Viole Celeste
	Vox Celeste
	Octave
	Fifteenth
chestre	Aeoline

ped flue-stops are:

	Stopped Diapason
edacht	Quintaton

-Stops are:

	Tuba
	Vox Humana
is	Bombarde
	Trombone
	Bassoon

ation Stops are:

	Mixture
	Sesquialtera
	Tierce

e a specification for an organ of s, containing flue stops (both string oice), reed stops, mutation stops or two specimens of the "Unda pe. Designate the class to which ing stop belongs.

would suggest the following specifi-

PEDAL MOVEMENTS

Balanced Swell Expression Pedal
Balanced Choir Expression Pedal
Balanced Great Expression Pedal
Balanced Crescendo Pedal (Not moving Registers)
Four Combination Pedals affecting Great Organ Stops (Pedal Optional)
Four Combination Pedals affecting Swell Organ Stops (Pedal Optional)
Three Combination Pedals affecting Choir Organ Stops (Pedal Optional)
Four Combination Pedals affecting Pedal Stops (Couplers Optional)
Great to Pedal Reversible
Sforzando Pedal Reversible
All Combination Pedals to be adjustable at the bench and to move registers.

COMBINATION PISTONS

Eight Combination Pistons affecting Great Organ Stops (Pedal Optional)
Eight Combination Pistons affecting Swell Organ Stops (Pedal Optional)
Eight Combination Pistons affecting Choir Organ Stops (Pedal Optional)
Four Combination Pistons affecting Pedal Organ Stops (Couplers optional)
Eight Combination Pistons affecting entire organ
One canceller or zero piston for each manual and pedal department
One zero piston for entire organ
All combination pistons to be adjustable at the bench and to move the registers.

While this specification includes forty-two speaking stops, two are borrowed (the Choir Tuba from the Great and the Pedal Second Bourdon from the Swell) and one Pedal stop (Bourdon 16 feet) is derived by augmentation from the Bourdon 32 feet. The specification is drawn with the Church Organ in mind, to be used also for Recital purposes, but not for theater use, which would call for a very different specification. Most churches of the present day would want Chimes included, but we have preferred to omit them rather than to sacrifice any stops. It would be preferable that they should be an addition to the instrument.

Q. In THE ETUDE *for June, 1925, in an article in the Organ Department, by Ernest L. Mchaffey, mention was made of modern courses of study for the organ. Clarence Dickinson and Edward Shippen Barnes were especially mentioned. I want to study the pipe organ by myself and have been unable to find out anything about these courses in music stores in P———, our nearest city. Can you tell me where these can be ordered, and the prices, or can you recommend any other courses for self-instruction on the organ? I read the Organ Department and find it especially helpful to a beginner.*

A. The books you refer to are probably "The Technique and Art of Organ Playing," by Clarence Dickinson. Price $5.00.

"School of Organ Playing," by Edward Shippen Barnes. Price $2.50.

For more rudimentary organ work without a teacher and as a preparation to the above works, we would suggest for your use a modern edition of "The Organ," by Stainer. The publishers of THE ETUDE can furnish you any of the books named.

Q. Name a French organ builder.

A. The most noted French organ builder was probably Cavaille-Col. He was succeeded by Charles Mutin, who now conducts the work.

"Art must be cultivated for its own sake. You may make money out of it, or you may not; but if the money-making is your first consideration then farewell to art."—S. MIDGLEY.

Music is Powerful-Uplifting-Educational

MUSIC in the home means that you have one of the best attractions you can possess to make your home the social center it should be for your children, their friends, and your friends.

Even tho you may not possess that finger agility you envy in Paderewski, you may still be able to play those old songs in a way that will please and stir you more than could the best artist.

You love music as do we all, and without any finger technique you may yet enjoy all the pleasure of personal performance when you own a good player piano; then you can play what you want the way you want it.

Should you desire the actual performance of the World's best artists reproduced in your own home you may have it thru the marvelous JESSE FRENCH (Welte Liscensee) Reproducing Piano electrically operated.

Music is as powerful an influence today as it ever was before—the means by which you may have it is more wonderful than ever.

JESSE FRENCH made instruments range from $350.00 to $2750.00

As the soil nourishes the tree-roots the gums nourish the teeth. And as the tree decays if you bare the tree-roots, so do the teeth decay if the gums shrink down from the tooth-base.

This condition is common. It is known as Pyorrhea. *Four out of five* people who are over forty suffer from it. Ordinary tooth-pastes will not prevent it.

Forhan's Preparation *does* prevent it if used in time and used consistently. So Forhan's protects the tooth at the tooth-base which is unprotected by enamel.

On top of this Forhan's preserves gums in their pink, normal, vital condition. Use it daily and their firmed tissue-structure will vigorously support the teeth. They will not loosen. Neither will the mouth prematurely flatten through receding gums. Further, your gums will neither tender-up nor bleed.

Gums and teeth alike will be sounder, and your teeth will be scientifically polished, too.

If gum-shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment.

In 35c and 60c tubes at all druggists in the United States.

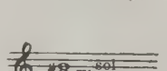
Question and Answer Department

Conducted by

ARTHUR DE GUICHARD

Always send your full name and address. No Questions will be answered when this has been neglected.



Only your initials or a chosen nom de plume will be printed.

Make your questions short and to the point.

Questions regarding particular pieces, metronomic markings, etc., not likely to be of interest to the greater number of ETUDE readers will not be considered.

Barbados, B. W. I., Asks Information.

Q. i. Does the term "tenuto" mean the same thing as the "fermata" or pause 𝄐 *? Please explain quite clearly. ii. I should like to excel as a pianist: which will be more helpful to me, general harmony, or keyboard harmony? Having little time to devote to music, I am constrained to choose. iii. In writing harmony exercises, is it correct to transpose all exercises to the normal key? For example: should*

be read E-G♯-B, or Do-mi-sol? iv. Kindly mention a standard text-book on breathing, for singers.—CURIOUS, BARBADOS, B. W. I.

A. i. *Tenuto* (abbreviation, *ten.*) indicates that the note or chord is to be sustained for its full time; sometimes a little longer, as a short pause. The pause signifies that the sound or silence is to be prolonged at the will of the performer, according to his appreciation of the composer's intention. ii. Keyboard harmony will help you more readily, provided you read, thoroughly, some treatise on elementary harmony (such as Stainer's). At the same time, depending upon the extent of proficiency desired by the player, *every pianist should study harmony and counterpoint as thoroughly as possible.* Many works cannot be adequately performed and interpreted without this knowledge. iii. This question is not altogether clear. However, if you ask for a choice between the Tonic-Sol-Fa system and the Old Notation, it is *Bonnet blanc, blanc bonnet* (as the French put it), or as the Cockney Englishman says: "Yer pies yer money an' yer 'as yer chice." Each has special merits the Tonic-Sol-Fa in Diatonic harmony and the Old Notation in Chromatic. In your examples, both are correct. I'ut there is no "transposition." iv. "The Art of Breathing,"—By LEO KOFLER.

Sub-Dominant and Sub-Mediant.

Q. Are the terms sub-dominant and sub-mediant to be understood as meaning the note under the dominant and the note under the mediant?—Elsie M., Troy, N. Y.

A. No. It is true that the sub-dominant is the note below the dominant, but that is only by chance, not design. It is also true that the word sub (Latin) means below, or under. But, in harmony, every sound bears relation to *the key-note.* Thus, the dominant is the fifth *above* the tonic, whether major or minor (C-G, or A-E; G the *fifth* of its tonic C, and E the fifth of its tonic A). The sub-dominant is the fifth *below* its tonic. So in the key of C major or minor, as in A minor or major, the dominant and sub-dominant are G and F respectively, or E and D respectively. The mediant or middle note between tonic and dominant, in C major, is E; in C minor it is E flat. For the same reason the sub-mediant, or under mediant, is the middle note between sub-dominant and tonic. A in the key of C major, F in the key of A minor.

Basso Ostinato; that is, an Obstinate Bass.

Q. What is understood by a Basso Obstinato?—M. A. M., Warren, R. I.

A. *Basso ostinato* (Italian) is an "obstinate," or persistent bass. It is a short figure in the bass, commonly called a "ground bass," above which are constructed frequently changing melodies and harmonies, the bass subject remaining the same. Consult *Passacaglia,* in C minor. Bach.

Nasal Quality of Voice—Tremolo.

Q. i. How can one get rid of nasal quality in the voice?

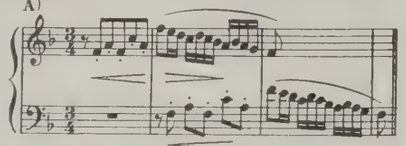
ii. Can you suggest some exercises to overcome a decided tremolo?

Choirmaster, Salt Lake City.

A. ia. Do not allow the tongue to slip back, but keep it in its normal position, *i. e.,* lying flat on the floor (or bottom) of the mouth, lightly touching the lower teeth all around. Sing with a wide open throat, directing the voice quietly but swiftly to the center of lips, using the vowel "o" as in "or."

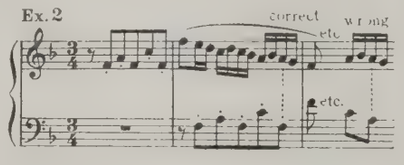
ib. Practice speaking on your lips in conversation and at all times.

ic. Get a practical demonstration from a competent teacher.



ii. Practice sustained notes, *piano,* with the smallest amount of breath. Remember that every atom of breath emitted must be employed in producing a musical note. Do not allow the diaphragm to sink in. No muscular pressure anywhere, especially at throat, larynx and diaphragm.

Bach's No. 8 Two-part Invention.



Q. In two different publications now before me of Bach's Two-part Inventions, No. 8. I find that the last note of the first measure of the subject is given as A in the one, and as F in the other. Will you please tell me which is correct (a) or (b)?—N. B. S., Constantia, Calif.

Ex. 1 Bach Two Voice Invention No. VIII

A)

Ex. 2

A. The correct note is the note F. Careful examination will show that the second measure of the bass repeats the treble first measure of the subject, note for note, the third beat being a skip of a fifth from C to F (from dominant to tonic). Compare these two measures with measures 12 and 13 and you will find exactly the same progressions as in the key of C: again in measures 17 and 18 the progressions are the same, but in the natural (or original) scale of G minor. In each instance the third beat is a skip of a fifth, dominant to tonic. A very good reason is seen for this skip to the tonic, instead of to the third, in the fact that the third is strongly marked in the accompanying part (an unnecessary accentuation of the third of the key) and the chord on the third beat weakened by the omission of the tonic and a doubled third.

B)

Advice to Some Questioners.

Nota Bene: Two correspondents, G. G. D., Columbus, Ohio, and H. L. McC., Buffalo, New York, ask for instruction how to play and how to interpret certain passages in certain pieces, nine in all, several of which are not in the possession of the present writer. These and similar correspondents will greatly facilitate replies and thus avoid disappointment by sending either the music in question or copies of the passages requiring elucidation.

Studies in Scales of Thirds and Sixths.

Q. Can you give me some good Etudes with scales in thirds and sixths? Uninteresting exercises of scales in thirds and sixths are simply out of the question for me, but if you will give me some good and interesting studies, I know I shall work away at them till they are mastered.—R. T., Vancouver, B. B.

A. If you required real technical exercises you would be recommended to practice those by Philipp and Joseffy. However, since you wish for studies you may find enough to interest you in Schirmer's *Library,* Vol. 996, Czerny's *Selected Studies;* in vol. 827, Cramer's *Fifty Studies;* and in vol. 403, Moscheles 24 *Studies.*

Your Compact

Four practical "reasons why" will enter into the choice of *your Compact* — fragrance — just the right shade for your complexion — convenience in use — and the beauty of the container.

And then that purely mental or sentimental reason which dominates all the others — the established preference of discriminating women for some one parfumeur's articles.

Made (by compression only) from their world famous face powders, the new *Compacts of Roger & Gallet* satisfy every practical and sentimental demand. Now offered in:—

Le Jade
The Precious Perfume
AND
Fleurs d'Amour
The most luxurious Perfume in the World

You will also be interested in the refreshing ***Talcs*** and ***Bath Salt Tablets,*** in both these fragrances; and especially in ***"Aftabath"***, a luxurious body powder, in ***Le Jade*** — large artistic metal box, with generous puff — just received from France.

Muscular Strain at the Neck

By Mary E. Hard

INCONVENIENCES are expected, sometimes even welcomed, in the violinistic field, for they serve only to whet the student's determination. But when an inconvenience becomes so burdensome as to detract attention from the work in hand it ceases to be a blessing. The pain at the back of the neck and across the shoulders comes under this latter classification.

It is caused, of course, by strain, but, strangely enough, other muscles become accustomed to strain. The left arm ached when it first was made to reach far under the violin: but soon the muscles adjusted themselves and the position seemed easy and natural. But the dull ache in the back is experienced by professional musicians, even by virtuosi.

It seems that the region at the back of the neck is filled with nerves and blood vessels. Particularly over the bony structure covering the base of the brain, the nerves are very near the surface and interwoven with other superficial structures such as muscle and ligament. These thinly protected nerves are connected with many more deeply placed.

Muscles in such close proximity to nerve tissues are not to be manipulated with the abandon of those of arm and finger. The peasant going gaily to market with a fifty-pound basket on her head may seem an exception, but in this case the head is held in its natural position, upright, and the muscular strain is slight.

On the other hand, the violinist must exert force in a sideward and downward direction. He supports not only his violin, by means of this downward and inward thrust of head and neck, but also the weight of his left fingers and hand, which are themselves exerting a counter thrust.

The muscles at the base of the brain are the sole supporters of this action.

The obvious cure is to cease playing for a time, but this is not always feasible. Another recourse is to massage gently the muscles involved: this will induce normal circulation and a more rapid adjustment. Also, the tension may be lessened considerably by turning the head far to the right bringing as hard a pull in the opposite direction as possible; by holding the chin at different levels as though there were low and high chin rests on the violin; by putting the head first as far back as possible and then as far forward as possible without bending the lower part of the back.

Such gymnastics, however, cannot be resorted to on the concert stage, and this is where discomfort is most unwelcome. The device used by at least one artist in a large Symphony Orchestra is to pretend to be hunting something on the floor. In bending over he stretches these stiffened muscles and thus alleviates the congestion.

These are only cures: there are no absolute preventatives, though there are precautions that might make the strain less uncomfortable.

The position, if correct, is not the huddled posture of curved back, hollow chest and raised left shoulder. It is one of ease, exuberance and strength. The left arm is as firm as a boulder: the right as unerring as fate.

A great violinist once said, pointing to the pupil's left arm and hand, "That is the artisan," then, pointing to the right, "and that is the artist. Give due respect to each."

"*As fit as a fiddle* is an old saying, and true. It applies to the fiddle as well as you; so keep both yourself and your violin in fine condition, and you may expect great results."—*H. I. Gonyon.*

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

Tone Production and the Vibrato as Applied to the Violin

By Max Bendix

MAGICIANS of the violin arouse the wonderment and admiration of their audiences by the marvelous and almost uncanny control they exercise upon the little instrument with four strings, which they manipulate; and one of their most mysterious and tremendous achievements is the power to produce a tone which carries to all corners of the auditorium and to the last row in the topmost balcony.

Have you ever stopped to consider how this tone is produced?

There are but two ways in which a disagreeable tone can be brought from a violin. These are:

1. By drawing the bow across the strings at any but perfect right angle. This will produce a scratch whether drawn lightly or firmly.

2. By pressing the bow on the strings so firmly as to bring the wood very near, or in contact with, the strings.

If the student stands at right angles to a mirror, and keeps his eyes on the bridge, he can, with patient application and practice, soon learn to draw the bow straight, and thus dispose of fault, No. 1.

The second is a more difficult obstacle to overcome, but as it has been accomplished by hundreds and thousands of violinists, there is hope for all.

I do not claim that my method is the only method to attain the desired result, but in the forty-four years of my teaching experience a great number of talented students have been developed by me, and *they all have had a good tone.*

The bow should be held and balanced between the second finger and the thumb. Pressure should be applied by the first and second fingers, and a counter-pressure by the thumb. This counter-pressure should be equal to the downward pressure of the fingers, thereby controlling the bow so that the wooden part cannot touch the strings. This will give the feeling that the tone is being produced between the fingers and the thumb.

By carefully following these principles for No. 1 and No. 2 the student will find it impossible to produce a scratchy tone. Having eliminated the scratch, he must work for charm, carrying power, and beauty of tone. This is induced by the judicious application of the

Vibrato

I advocate the use of the vibrato on every sustained tone on the violin, whether in etudes, concertos or concert-pieces, *not for sentimental or emotional expression,* but to give *life* and *carrying-power* to the tone.

The vibrato is produced by the infinitesimal raising and lowering of the pitch, and must be done rhythmically at a moderate speed. The question of "a little faster" or "a little slower" does not matter in the results, but it must be *rhythmical.*

The bow sets the string in vibration; these vibrations are conveyed to the bridge; the bridge vibrates the top of the violin; the top carries the vibrations to the sound-post which in turn sets in motion the air in the violin, creating sound-waves. These sound-waves are emitted from the violin through the F holes, and here is where the rhythmical vibration asserts itself.

When the vibration is rhythmical the sound-waves follow and support each other and so carry to the extreme ends of the hall. But when the vibration is *not* rhythmical the sound-waves will clash upon leaving the F holes and thus be destroyed, causing the tone to lose its life and carrying-power.

Intensity is brought about by increasing the speed of the vibrato and the volume of tone.

Use of the Pad

THERE is a great diversity of opinion among violinists, violin students, and teachers as to the use of a pad or cushion as an aid in holding the violin. It is probable that the majority of violinists use a pad of some kind or other. Many male violinists use a velvet pad placed under the coat at the shoulder, to fill out the latter and make it easier to hold the instrument. In the case of a girl or woman the pad has strings or ribbons sewed to its two upper corners. The strings are then tied at a convenient length and slipped under the chin rest.

There are several types of patented pads and contrivances to take the place of pads. One type is made to attach at one end to the tail-pin, the other end being attached by a rubber band to the lower left hand corner of the violin. Another type of pad is the one which is attached to the end of a metal projection which fastens to the chin rest. This pad or shoulder-rest possesses the advantage of not touching the vibrating surface of the violin at any point. Some players roll up a handkerchief and put it under the coat, or put a handkerchief or some sort of fabric across the chin rest.

Prof. Leopold Auer, the famous violin teacher, who has produced so many notable artists, is greatly opposed to anything in the nature of a pad. In his work, "Violin Playing as I Teach it," he says on this point; "Avoid resting the violin on the shoulder, or *vice versa,* shoving the shoulder *underneath the violin.* The placing of a cushion beneath the back of the instrument, in order to lend a more secure support to the chin grip, should be avoided. These are bad habits which one should from the very start carefully avoid, since they not only spoil the violinist's pose in general, but—and this is extremely important—*they make the player lose at least a third of the whole body of tone* which his violin—be it a fine or indifferent instrument, a powerful or a weak one—is capable of producing. Those violinists who rest the instrument against the shoulder and place a cushion at its back—both of which act as mutes—evidently have no notion of the disastrous effect this arrangement has on their tone."

Prof. Auer's pupils generally o their master's instruction to play t a pad.

I find that authorities differ gr regard to this matter of the pad. Thistleton, the English writer, say book, "The Art of Violin Playing pad is merely an aid to comfort, certain cases quite indispensable. all the violinists with whom I hav in contact during the past twe years, from Wilhelmj (the famou man violinist) downwards, have the use of a pad an advantage bling them to hold the violin withou effort; and, against the stateme there is a loss of free vibration, it mentioned that in all probability W had the biggest tone of any violin ever lived. If, however, you ca the violin quite comfortably in the position without a pad, well and There would seem to be no particu son in your case why you should u

Mr. Thistleton further says: "pad placed underneath the violin w siderably facilitate the obtaining of grip, but I have seen many a pla deavor to hold the violin in front body by using a pad the size of footstool."

Eugene Gruenberg in his work; Teaching and Violin Study" says teachers have agreed that the pose should be as natural and strained as possible. This, howeve to prevent opinions from varyin mously on the simple question of *hold* the violin.

"Some (Spohr and David) advi ing or thrusting forward the left s to give a firm support; most of the (Beriot, Singer and others) conde as unnatural, and counsel the res the instrument simply on the colla allowing the use of a small cush support so as not to inconvenie shoulder."

Courvoisier in his famous work Technics of Violin Playing," whi the endorsement of Joachim, says pad, "An excellent aid to a good a position for the violin, especially case of an illy adapted shoulder, jaw, is the use of a chin rest, and cushion or roll of cloth placed u coat or vest between the violin an bone. When the player wishes to head and shoulder from the str posed in holding the violin, he take time, either during the rests music or in passages which do not changes in the position of the le The use of the chin rest and obviate the need of raising t shoulder, a practice which is ve some."

A vast number of other opinio and con, on the subject of pads a ions might be quoted, so it will be be a case of where "doctors di Many eminent violinists have u cushion, and many other emine have not, so it is probable that the violin student after reading all t please himself in the matter.

Wise Fingers

By Esther Routh

WHAT does technic do anyw makes the fingers stronger (so do laying), quicker (so does typing flexible (so does knitting), wi now we are getting to the point. I the fingers to speculate and selec ways of playing this note or forces them to surmise on wha and in what position to play. them to accomplish the most diffic with the least possible effort.

All About the Positions

By Sidney Hedges

y a violin student, during the first nths, plays happily in first position gins to think he has got over his es well and will soon be a player. ne day to his horrified amazement is that *first* is only one out of a of positions—about fifteen of them. teachers make this much more ng than it need be. There may be positions, but they are not all like . They have, in fact, most varied The importance of a position is nt on the frequency with which d.

ng then in this fashion the follow- will give an approximate table of ative values.

t first position is used 100 times,
third " " " 60 " ,
fifth " " " 30 " ,
seventh " " " 10 " ,
second " " " 10 " ,
fourth " " " 10 " ,
sixth " " " 10 " ,
inder, perhaps, twice.

l be seen that out of the fifteen (½, 1-7 and 7-14) only those *ven* are of appreciable importance. itions above the *seventh* are, in y used on the E string, so that nsists of but four notes. The *tion,* which is below the *first,* is used at all. And even among the seven there are great differences From the table it will be seen odd numbers are of much the onsequence.

, it is best to learn first the most t, so that they get most practice me most familiar. Yet many insist on pupils learning them, nd so on, for no other apparent t that this is the numerical order. be better to learn the positions nore sensible order—*first, third, nd, fourth, sixth, seventh.* The as been put last because its notes high, and will not often be met l the student begins to play fairly music. And after these seven, ning positions may be considered. ying positions it will soon be dis- hat the work has two entirely spects—one is mechanical, the tal, and each will have to be con- parately.

here is the moving into the posi- discovering of the exact dis- ch the hand must travel up the d. Numberless repetitions will d before the muscles are trained the arm the necessary distance hanical precision.

y, when the hand is in its new here are the fresh notes to be or every finger will fall on an spot. This portion of the study mental—it is just a question of

ppens that the *third* is the easiest ns to reach. If the left wrist be properly held in *first* and the en drawn up so that the hand is carried up the violin neck, after about two inches have been traversed the palm of the hand will collide with the bottom edge of the violin, and the thumb with the end of the neck. If the first finger be now dropped on to the A string it will be found to stop the note D, which is played by the third finger in first position. The hand will then be in third position, and this colliding of the thumb and palm is an invariable and invaluable sign of this.

The method of shifting is of the utmost importance. On no account must the left hand grope its way up to the new position by pitching forward up the fingerboard. Shifting must be performed always from the shoulder. The upper arm and forearm must be drawn up, like a folding footrule, and the hand will thus be *carried* up the strings. The hand itself has no more to do with the movement than has one of the marks on the footrule. It is absolutely passive. This point cannot be emphasized too much. Active movement of the hand when shifting causes more faulty intonation than any other thing. *It is the arm that shifts!*

On pushing the arm back to first position the base of the first finger will arrive at the corner of the fingerboard; that is, the sign of first position. Shifting up and down between the clear bounds of first and third positions should now be practiced assiduously.

When some time has thus been spent, fifth position may be started. When the hand is in third position it will be found impossible to get higher up the fingerboard by moving the arm in the same direction as before. Instead, the elbow must be carried across the body, towards the bow-arm, and the left hand will thus be able to "get 'round the corner" into fifth position.

Shifting, on the violin, is almost invariably from one position to the next but one. In an ascending scale passage, for example, the positions used would probably be *one, three; five, seven;* or *two, four, six.* Here is another reason for the great importance of third position—it is the most convenient shift from *first.* So then the positions most to be practiced are—*first, third* and *fifth.*

Really, the amateur does not often require any others. The even numbers are used principally to fit awkward groups of notes which cannot conveniently be played any other way, as, for instance, the third pair of notes in the second octave study of Kreutzer.

Learning the notes of a new position can be done quite satisfactorily in an arm chair with a book of music or a fiddle on one's knee. It is a pleasant surprise for the learner to find that the notes of fifth position are the same as those of *first,* though one string lower.

Similarly, *sixth* is like *second,* and *seventh* like *third.*

Once the positions are mastered the least attractive stretch of all violin study is passed.

Fingerboard Gymnastics

By Hope Stoddard

iolinist strives for tonal effect. ys every means of technic and in his power, and listens with ancy of a *connoisseur.* Yet in iasm he often overlooks some mplest precautions against bad

these precautions is a steady assumes the right position and with consistency. Another is n of the hands, each assisting and supplementing the other. A third is the avoidance of jerks, plunges, scrambles and other ill-directed attempts at the spectacular.

Performances which are mere "fingerboard gymnastics" are apt to leave the listener with a headache and a half wish that the player had never studied anything beyond scales in first position and hymn tunes.

"WHOLE WORLD" VIOLIN COLLECTIONS INTEREST TEACHER AND PUPIL ALIKE

The brief descriptions given herewith of the violin collections in the "Whole World" Series should interest every violinist to the extent of sending for our free catalogue, containing the complete contents of each book.

VIOLIN PIECES the Whole World Plays
Contains 65 of the most famous standard compositions ever written for the violin.
Price, $2.00

MODERN VIOLIN PIECES the Whole World Plays
Contains 50 modern compositions which every teacher and player should know.
Price, $2.00

LIGHT VIOLIN PIECES the Whole World Plays
Contains 50 light compositions for recreative purposes. An ideal book for the "idle hour."
Price, $2.00

THE VIOLINIST'S BOOK OF SONGS
Contains 200 songs arranged for violin, with an obbligato part for a second violin.
Price, $2.00

OPERATIC VIOLIN PIECES the Whole World Plays
Contains 54 selections from famous standard and modern operas. The only book of its character.
Price, $2.00

CONCERT VIOLIN SOLOS the Whole World Plays
Contains 27 of the greatest violin solo compositions in unabridged editions.
Price, $3.00

STANDARD VIOLIN CONCERTOS the Whole World Plays
Contains the 10 greatest violin concertos, worth more than $25.00 in sheet music form.
Price, $3.00

AN ENCYCLOPEDIA OF THE VIOLIN
The only encyclopedic work on the violin ever written. Every teacher and student needs it.
Price, $5.00

New Musical Marvels in the Movies

Editorial

HE FIRST exhibition of the Vitaphone in New York City exhausted the superlatives of many metropolics. Here, at last, was a perfectly nized screen representation with ken word and with music. More is, the music was not a little, frail of sound but the full volume of ginal in a measure hardly believed

first presentation was given in the cent Warner Theatre in New York August.

ad the pleasure of being present at view given on the night before the . The invited audience was com- f some fifteen hundred representa- and women from all parts of the particularly those interested in coustical inventions and the stage. plause that met the first perform- monstrated at once that a new era ombination of the art of music and of the cinema had arrived.

ew invention is the result of years rch in the laboratories of the West- ctric Company and the Bell Tele- Company. The coöperation of the ck-Balke-Collender Company, The Talking Machine Company and the olitan Opera House were all re- o make the program possible.

Perfect Synchronization

ED THE synchronization was so ct and the effects so astonishing had to pinch oneself now and realize that this was a mechanical ction rather than the original. True ere occasional tonal lapses when " or "empty" tones were to be nd at one time the apparatus "ran In the orchestra it was obvious all of the instruments had been in recording. However, the ffect was so extraordinary that the tion of the experience more than these shortcomings.

may be the effect of this epoch- invention upon the musical pro- Certainly it is already in a stage nsidered as a "problem" by some. go, in company with the late Mr. we heard Mr. Edison's amazing to bring "Talking Pictures" before lic, combining his two extraordi- ventions—the phonograph and the h. Mr. Presser, with his charac- vision, noted then that it would be only a matter of time before the insufficient volume of the phonographic or sound reproducing principle would be amplified to any desired quantity. Now, it has actually arrived in an altogether unusual state of development. What effect may all this have upon performers and teachers?

Twenty or thirty years ago, when the methods of mechanical sound reproduction were new, thousands predicted that singers and performers and, of course, teachers, would have to seek other callings. There could be no opportunity for their advancement in face of such marvelous machines. What happened? The art of music and the profession of teaching music advanced enormously. Never have singers, performers and teachers been so much in demand—never have they received such extraordinary fees. Then came the radio. This was predicted as the doom of the musical profession. Imagine anyone saying that advertising a product would injure the industry. The radio has been of prodigious value in promoting the musical interests of everyone who has anything worth while to sell. The publishers of THE ETUDE have been having the best year in the history of the firm, and all of its prosperity is dependent upon the prosperity of musicians and teachers of music. Indeed, we find that our patrons are regularly employing the talking machine and the radio as indispensable adjuncts of musical culture in the home and in the studio. For years we have used them in our own work for this purpose.

Effect of the Vitaphone

WHAT MAY be the effect of this marvelous new invention upon employees in moving picture theatres? This is problematical. In smaller theatres it will take the place of small orchestras in some cases. But there will always be the need for the organ and the piano for special features. It is impossible to give an orchestral accompaniment to a flight over the North Pole unless the enterprising exhibitors send an orchestra in another airplane. At the same time there is always a demand for a fine orchestra "in the flesh." The indifferent and unworthy players may well look to their laurels. The public would far rather listen to an accompaniment by the New York Philharmonic than to a few scratchy fiddles and squawky saxophones. The general effect of the Vitaphone will be to compel higher standards of performance.

For the really worth while performers who have their vitaphonic pictures taken, the machine should prove a wonderful advertisement. We have always noticed that artists are never loath to have their pictures appear in print as frequently as possible. Therefore every vitaphonic reproduction becomes an astonishingly fine advertisement.

Many years ago, when the Victor Company was in its infancy, the famous baritone, Emilo de Gogorza, was persuaded with much difficulty to make records. He refused to make them under his own name, fearing that his professional standing would be injured. He made them under a *nom de plume*—or shall we say *nom de voix?* Soon his manager found that there were so many applications coming in for concert engagements by the remarkable singer in the name of the *nom de voix* that Mr. de Gogorza realized that there was no better advertisement for a singer than the well-made record. The vitaphonic records will, we predict, multiply the demand for the professional, concert and operatic services of the artist "in the flesh."

This great invention is being introduced by the famous moving picture producers, Warner Brothers, of New York.

STANDARD

GRAND AND UPRIGHT

Piano actions

MADE AT CAMBRIDGE, MASS.
SINCE 1888

True Tone—with every touch

Artist and beginner find that Standard Piano Actions transmit tone perfectly from keys to strings. The repetition is superior. The action is the heart of the piano's life. It governs its touch—and controls its tone. When you buy a piano be sure that you get Standard—the highest quality action in the world—the piano action made at Cambridge, Mass.

The Drum Major

(Continued from page 731)

5. FORWARD—MARCH (Without playing)

THE side view of the drum major is shown for purposes of clarity. This command is often given verbally, the drum major holding the baton as shown under "Marching at Attention." When the staff signal is desired it may be used as shown here. As is the case also in "Column, Right," "Column, Left;" "Right-Oblique;" "Left-Oblique," and "Countermarch;" the staff, in executing the preparatory comand, points in the direction in which the movement is to take place. Here it points directly forward.

The band steps off with the left foot on the down beat of the baton (dotted lines), after which the drum major may beat the time for a measure or two, or till the rhythm be established, when he should turn the baton under the arm in the position shown under "Marching at Attention." He should not beat the time (unless necessary to keep the rhythm or to increase or lessen the tempo) unless the band is playing.

The whistle, again, may or may not be used as a preliminary warning. The larger the band, the more necessary its use.

The drum major must be skilful in recognizing the three "cadences" established by our government. The term cadence refers to the speed or frequency of the recurring pulses of march music. The regulation cadence in quickstep (or ordinary march) time is one hundred and twenty-eight steps per minute with thirty inches to each step, or "pace."

6. MARCHING AT ATTENTION

THE drum major is shown marching at attention. The side view is given to make clear the position of the right hand and the proper angle at which the baton is carried.

The left hand rests on the left hip, fingers to the front, thumb to the rear.

The drum major, as already noted, must be skilful in establishing the correct "tempo" and length of step. These may both be varied in non-military functions, to great advantage. For example, a college or high school band, parading on the field between halves of a foot ball game, where no great distance is to be covered, and where a "peppy" appearance is especially desirable, will do well to increase the tempo somewhat beyond the regulation one hundred and twenty-eigth steps per minute, and to shorten the length of each step from the regulation pace of thirty inches to about fifteen or eighteen inches.

The extent to which the drum major is to resort to "showmanship," however, is to be held within bounds. His is a serious undertaking. It is the consensus of opinion at this time that he should be peppy and snappy, but in a more reserved manner than was formerly believed fitting. There is now very little indulgence in the pyrotechnics of stick whirling and throwing in the air, of prancing step and similar "monkeyshines." Considerable thought can be expended here to advantage.

7. FORWARD—MARCH (Play and march)

THIS differs from the command "Play" (band standing still) in the fact that the drum major faces forward. The band is to step off on the first main pulse of the music. This usually means the first note of the introduction, for very few marches begin with "up beat" notes, and these are to be avoided.

5. FORWARD—MARCH (Without playing)

Preparatory command: Usually verbal, but may be given with the baton as illustrated.

Interval of warning: Give about one and one half seconds to the motion shown in the arrows.

Command of execution: The arm motion comes smartly to a dead stop in the position shown in dotted lines.

6. MARCHING AT ATTENTION

There is no preparatory command and no command of execution. The drum major marches with eyes front, ready to correct the tempo of the drums, the alignment of the band, to execute "Column, Right;" "Halt;" or other desired movements.

The right arm is extended straight at the side, to differentiate this command from that of "Forward—March" (without playing). Hold this position long enough for each musician to comprehend the order before giving the warning and command of execution. If the band is too slow in seeing and understanding the signal, this signal is either held so low they cannot see it, or they are not well-trained. If, on the other hand, the drum major does not hold the signal long enough to give the band time to grasp the command, they will "straggle out" on the first few steps, and but few players will be heard on the introduction. The larger the band, the longer it will take for any command to "percolate" back through the whole organization. Depending somewhat on the size of the organization, it is the opinion of the writer that this and other preparatory command signals of the drum major should be held for an interval of between four and seven seconds before giving the warning interval and the command of execution.

7. FORWARD—MARCH (Play and march)

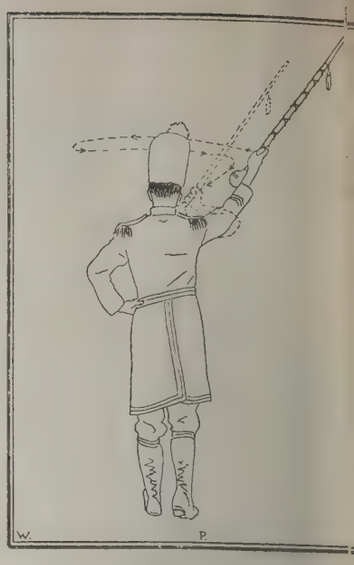
Preparatory command: Right arm extended straight at the side.

Interval of warning: Give about one and one half seconds to the motion shown in the arrows.

Command of execution: the arm motion comes smartly to a dead stop in the position shown in dotted lines.

8. CEASE PLAYING (Band marching)

THIS command is similar to that of "Cease Playing" (band standing still), except that the drum major faces forward. It is important that there be a definite stop in the motion of the baton at the end of both left and right warning swings (synchronizing with the two beats of the music) and at the position signalling the command of execution. As stated under the discussion of the command "Cease Playing" (band standing still), the command of execution should come (1) on the last note of the music or (2) on the first or chief pulse of a measure. Do not attempt to have the band cease playing and halt at the same time. Usually, the command "Halt" is executed before the command "Cease Playing" is issued, though the reverse may occur.



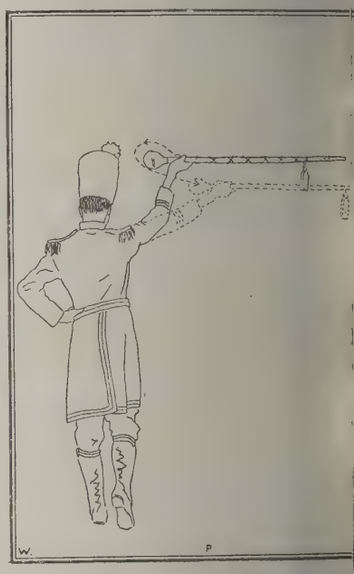
The wider the swing of the baton in the warning movements of this command, the more certain the drum major may be that all players see and understand the order.

The whistle may be used, especially in an untrained or a large band, as a preliminary warning preceding the two warning swings of the baton. It is far more necessary here than in the similar command executed while the band is standing still, for here the situation is complicated by the practical and not-to-be-overlooked difficulties arising in connection with playing on the march.

9. "COLUMN, RIGHT—MARCH"

THIS command is usually issued while the band is moving forward, but may be given from the standing position, in which case the forward movement would begin immediately with the execution of the "Column, Right."

As was the case in commands already discussed, the baton points in the direction in which the movement is to take place. It is equally necessary here to hold the baton in the position of issuing the preparatory command, for an interval long enough to enable *all* the musicians to see and understand the order. If the band is playing when this command is given, the preparatory



8. CEASE PLAYING (Band marchi

Preparatory command: The sam "Play."

Interval of warning: In this cas left and right swin of the bato incide with two full beats of the r

Command of execution: The arm m comes smartly to a dead stop in the tion shown in dotted lines.

9. "COLUMN, RIGHT—MARCH

Preparatory command: Hold the high, that it may easily be seen, poi in the direction in which the band turn.

Interval of warning: As shown i arrows.

Command of execution: The ar thrust smartly in the new direction, ing to a dead stop in the position s in dotted lines.

command (see illustration) is held ing a somewhat longer interval tha necessary in case the attention of musicians is not divided between signals of the drum major and the v ous difficulties to be met in playing the march.

After the command of execution, drum major faces the band, walk backward, and keeping in proper ali ment the front rank of the band.

It is very important that he hold h the forward progress of the band, to the extent of forcing the front r to do little more than "mark time," til the last rank of the band has ecuted the command, when, and when, he again faces forward and sumes the regulation thirty-inch p

10. "COLUMN, LEFT—MARCH"

Preparatory command: Hold the baton high, that it may be easily seen, and pointing in the direction in which the band is to turn.

Interval of warning: As shown in the arrows.

Command of execution: The arm is thrust smartly in the new direction, coming to a dead stop in the position shown in dotted lines.

10. "COLUMN, LEFT—MARCH"

WITH the exception of the matter of the direction of the turn, all instructions under "Column, Right" apply equally well here. The staff, or baton, points in the direction in which the movement is to take place, and there is the similar "warning" and thrust of the baton in the direction of the movement to follow as the command of execution.

It is again very important that the drum major face the band on the turn, from which position he is able to keep the players in proper alignment, and to hold back the forward progress of the organization till the last rank has completed the execution of the command and the whole band is ready to move forward in the regulation thirty-inch pace.

The execution of the commands, "Column, Left" and "Column, Right" are more difficult in the case of larger bands. When he has a band of more than sixty players to deal with, the author trains the players in all ranks except the first or first two to execute right oblique, as an assistance in turning the band in executing "Column, Left" and "Left Oblique," in preparing for "Column Right." This is not military, but is very practical in the case of extremely large bands.

Use the whistle, if necessary to call attention to the preparatory command.

(This exceptionally interesting article will be continued in THE ETUDE for November.)

The Far-Reaching Influence of the

KIMBALL

DURING the many years since the Kimball piano was first manufactured, this instrument has steadily filled a larger and higher place in the estimation of discriminating people. The influence has spread from small beginnings, until to-day probably more than 400,000 Kimball pianos, as well as other Kimball instruments, are in daily use. In homes, schools and churches, a steadily increasing number of Kimballs stand as witnesses to abiding merit.

There is a Kimball exactly suited to your home—a Grand, an Upright, a Reproducing Piano, a Player Piano, or a Phonograph.

CONN BAND INSTRUMENTS

***Wanted*: Young Men!**

—to become specialists in a field which will not only pay them exceptionally well but which will give them social standing and prominence!

TO young men looking for such an opportunity we have an unusual offer. Right now in numberless cities and towns in the United States, there is a great shortage of piano experts, technicians and tuners. The few masters there are, are earning large salaries for this exceptionally pleasant work. Their time is their own. They meet the best people and soon establish a wealthy clientele. We can fit you for this profession in approximately 12 short weeks' time!

FREE

Send for free booklet which tells all about our practical and thorough training course. Send for it now!

Now don't say you are not a musician! You don't need to be. In fact 50 per cent of our graduates never took a music lesson. And now they are earning from $250 to $500 a month!

This is the opportunity you are looking for. Pull yourself out of the rut. Make a place for yourself among the best people. Our complete course in our new $85,000.00 laboratory fits you for a real paying profession. You can do it. Others have with no better backing than you have. Find out the facts anyway.

Timely Suggestions

Invaluable Aids for The New Season and The New Class

Works by Dorothy Gaynor Blake

It is the fashion nowadays to refer to this composer as the creator of educational music that is the last word in up-to-dateness and progressiveness.

These are her most successful books.

One of the best and the most successful of beginners books.

Both treble and bass clefs taken up from the first lesson. Each hand plays one tone at a time in both directions from Middle C.

Price, 75 cents

Progressing gradually this book follows Melody Book One. Charming pieces characteristic of this composer's brilliant style. Free from all intricate technicalities.

Price, 75 cents

Simplifies the confusion which usually follows the first appearance of two or more notes on the staff.

Price, 75 cents

Studies and pieces planned in a definite way to show the use of the damper pedal.

Price, 75 cents

First grade pieces designed especially for harmonic analysis. A new idea for grasping the elements of music beyond the mere notes. Very easy.

Price, 65 cents

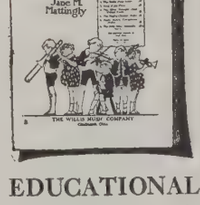
KROGMANN

Six Tone Miniatures ..... .65

One of the easiest collections ever written by this genius of musical compositions for the child world. The tuneful and bright melodies teach interpretation, legato and expression. Interesting little couplets head each piece, and every page is engraved with big notes.

KROGMANN

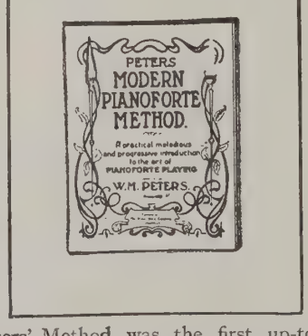
Tuneful Rhymes from Wonderland ..... .65



Contents: Morning Glory, Arithmetic Lesson, Big Bass Drum, Christmas Song, Land of Nod.

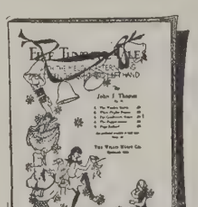
MATTINGLY

A Visit to Orchestraland ..... .65



As one very prominent teacher expressed it: "Just what I've wished for, it fills a long felt want."

This collection of choice little impressions of the orchestra for piano solo must really be played over to be fully appreciated.



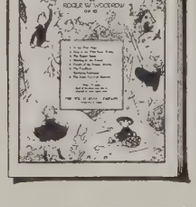
PETERS' MODERN METHOD

Pianoforte Playing

Peters' Method was the first up-to-date method to begin with the treble and bass clefs simultaneously. Its popularity increases annually. Many consider it the superior of all other methods. Once used, always retained.

Price, $1.00

THOMAS



Five Tuneful Tales .....

The object of this melodious co tion of easy pieces is twofold. Firs furnish the teacher with piece which the melody alternates bet the right and left hand, thus dev ing independence quickly; second provide with catchy tunes and material which pupils love to pla recreations.

M. BILBRO

Seven Sunny Stories .....

Contents: Why? Truant Baby Kitty, Watch Your S Oh! Canary, Seven O'Clock, Sing a Song of Summert Sing a Song of Wintertime.

WOODROW

In October Sunshine .....

This unusually interesting boo easy pieces, containing eight melod recreations, is full of the fresh doors. Each piece is well within ability of the first grade pupil and its special lesson feature.

Violin Questions Answered

By MR. BRAINE

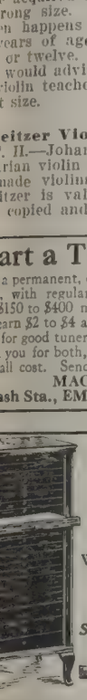
er Article.
B. S.—THE ETUDE of June, 1925, con- a lengthy article on Stainer and his vio- You can obtain this number by sending -five cents to the publisher.

ument of Correct Size.
G. B.—The child should have a violin y adapted to his size, as many bad hab- e acquired by having a violin which is rong size. You cannot go by ages, as en happens that one child of eight or ears of age is as large as another of or twelve. The matter is so important would advise you to take the child to a iolin teacher and get his advice on the t size.

eitzer Violin.
. H.—Johann Baptist Schweitzer was a rian violin maker of considerable fame, nade violins at Budapest. A genuine itzer is valuable. His work has been copied and there are thousands of im- itations scattered all over the world. You can obtain German factory-made imitations of Schweitzer's violins as low as $10 or $15. The value of your violin depends on whether it is genuine or an imitation.

One of the Millions
O. L. G.—A genuine Stradivarius violin is worth from $15,000 to $25,000, but there are millions of counterfeit Strads, so there is small hope of yours being genuine, although it is not absolutely impossible. Send your violin to an expert for an opinion.

Schweitzer Violin.
F. C.—I regret that it is quite impossible to give you any idea of the value of your violins without seeing them. Johann Baptist Schweitzer was a Hungarian maker at Budapest, who made some excellent violins, mostly copies of Cremona instruments. There are many imitation Schweitzer's; and the value of your violin depends on whether it is genuine or not. Your only course is to ship the violins to some dealer in old violins for appraisal.



Strad. Label.
J. C. W.—There are millions of violins with Strad. labels exactly like that in your violins. I cannot tell if your violin is genuine without seeing it. Send it to an expert.

Estimating Future Success.
S. J. E.—It would be pure guesswork for me to try to express an opinion of your talent and ability for the violin without knowing you and hearing you play. If you are studying under a good teacher, as you say, he would be the one best qualified to give you an idea of what you may expect to achieve in the future. Your letter fails to give the all-important information of when you commenced to study. If you have a good foundation, laid in childhood and early youth, and have great talent for the violin, I should judge that you have an excellent chance of improving your technic very greatly. If you are really ready for the Zigeunerweisen which you say you are studying you must already have a large technic, as this is a difficult composition. As you live near New York, I would advise you to get auditions with two or three leading New York violin teachers. They could tell you what your chances are for the future.

The Build of the Bow.
M. C.—A good bow is of the greatest importance in violin playing. 2. Your question of what constitutes a well-balanced bow is well answered by the famous violinist, Ludwig Spohr, in his "Violin School." Spohr says: "The stick of the bow should have a beautiful, uniform bending by which the *nearest approach* to the hair is exactly in the middle between the point and the nut." In other words, the deepest part of the curve of the stick should be in the *middle*, equi-distant from point and nut. Cheap, inferior bows rarely fulfill this condition. The most frequent fault is to have the curve nearer the point than the nut. 3. Bows differ slightly as regards weight. The average is about two ounces. Some players prefer a slightly heavier bow than others. The great violinist, Ole Bull, a man of large build, used bows two inches longer than ordinary, and considerably heavier than the average. 4. "The Bow, its History, Manufacture, and Use," by Henry Saint George, published in the Strad Library edition, London, England, is a standard work on the bow.

Homework on a HOHNER Is Fun!

Music plays an important part in the education of the boy and girl; and to-day the harmonica is playing an important part in musical education.

Any child can quickly learn to play a Hohner Harmonica with the aid of the Free Instruction Book available to music teachers and others through dealers or direct.

There are no long hours of study and practice—just a few minutes a day, at home or in the school—and very soon the pupil will be playing popular, classical and operatic selections.

Homework on a Hohner is *fun!* It teaches accuracy, rhythm and expression—the basis of a musical education. If you are interested in knowing the possibilities of the harmonica as "a stepping-stone to serious musicianship," write M. Hohner, Inc., Dept. 204, 114 East 16th Street, New York.

FREE BOOK OF INSTRUCTION

This interesting and helpful booklet comprises 16 pages of simple instruction illustrated with charts and pictures, and includes six popular musical selections arranged for harmonica and piano. Copies in any quantity will be supplied upon request.

Hohner Harmonicas are endorsed by such prominent group educators as—

Peter W. Dykema, Prof. School Music, Columbia University, New York.
Dorothy Enderis, Ass't Supt., Milwaukee Schools.
W. A. Gore, Supt. Schools, Webster Grove, Mo.
Nellie C. Hudd, Principal Mozart School, Chicago.
Harry Keeler, Principal, Lindblom High School, Chicago, Illinois.
Edward Randall Maguire, Principal Junior High School 61, N. Y. C.
W. H. Wheeler, Principal, Alton Community High School, Alton, Illinois.

—AND MANY OTHERS—

Edition Wood

THE B. F. WOOD MUSIC COMPANY'S

Graded Movements

from BEETHOVEN'S SONATAS

An important series especially designed to enable young pianists to receive an earlier insight into the works of Beethoven than is usually possible.

These carefully selected and graded movements may be played by younger students where the use of the entire sonata would be impossible because of technical difficulties beyond their capabilities occurring in other movements of the same sonata.

The old practice of depriving a pupil of the study of Beethoven because he, or she, were not capable of mastering the *whole* work can now be overcome. The series thus supplies a long-felt want to both teacher and pupil.

CONTENTS

Book 1—*Edition Wood No. 991*

VERY TEACHER CAN PROFITABLY USE

NEW WAY MUSIC DEVICES

(PATENTED AND COPYRIGHTED)

Result of years of experience in teaching music, and analyzing problems of teacher and pupil.

NO MATTER what method or system you now use you will find these simple, practical devices—

Make class or individual instruction more interesting—practical—thorough and efficient—with less time and effort on part of teacher and pupil.

Order Today—The minute you see their simplicity, versatility, completeness and capacity, you will wonder how you ever got along without them.

1 *New Way Keyboard and Staff Reader*
—The most valuable device created in years. Teaches student not only to read accurately and rapidly, but to play what is read. The correlation of staff and keyboard is made perfectly clear by means of sliding lettered buttons. The teaching of Sharps, Flats, Scale Construction, Chord and Interval Building is greatly simplified by the use of this Reader. As essential and accurate as the multiplication table. Every pupil should have one. $2.00 each. (Special discounts on quantities to Teachers and Schools).

2 *New Way Time Value Indicator*
—Two color hanger—22 x 22. For teaching note and rest values, and comparative values. $1.50 each

3 *New Way Wall Board*
—Invaluable for school room or studio use. Enables teacher to illustrate any point to any number of pupils at the same time. Size 28 x 36. Made of material that permits erasing. $5.00 each.

4 *New Way Practice Pad*
—Something entirely new for class dictation work and home practice. Mystic Pad permits instant erasing. 50¢ each (Quantity Discounts on request).

5 *New Way Degree Cards*
—A deck of cards showing every note in music from the fifth added space below the bass staff to the fifth added space above the treble staff. Gives thorough drill in actual note reading. Also interesting games for home, class and club use. $1.50 per set (Discount on quantities).

A Six Day Normal Course in **New Way Class Piano Foundation Work** Including the use of New Way Music devices, will be conducted the week of November 21, 1926, at **Horner Institute, Kansas City Conservatory** Kansas City's Great Civic Institution

Songs of Modern Child Life (Cloth) ..... Price $1.00

The contents of this posthumous book is the "crowning glory" of the life work of Jessie L. Gaynor. Here she has given us verses for songs which will appeal to modern children and are particularly adapted to those who have not lived close to nature and her creatures. She has also, in this volume, supplied, upon request, songs to be used in connection with the work of The Council of Public Safety and of Child Health Organization of America. In the simplest way, Mrs. Gaynor has set down the first principles of Child Hygiene which include the establishing of regular and healthy habits and an early observance of the taste for cleanliness and purity in mind, body, food and surroundings..

Thanksgiving and Christmas Music Suitable for Your Needs is Easily Obtained

Choirmasters, Organists and Sunday School Workers can be helped in their selection of appropriate music for these festive occasions by the Presser "On Sale" plan. If you have tried this service before, use it now and be assured that it is better and more efficient than ever. If you have not taken advantage of this liberal offer to send sample copies of music for selection, write us to-day for your Thanksgiving and Christmas music, both for choir use and solo numbers, voice and organ. Sunday Schools will soon be starting rehearsals for the Christmas service or entertainment. Our catalog includes some excellent selections of this kind and we will gladly send these, too, for examination. The comprehensive Theodore Presser Co. catalog and our experienced music clerks are at your service. An early request for material will enable you to enjoy sufficient time to make the best possible selection.

New Christmas Service for Sunday Schools By F. A. Clark

The title of this publisher's note is all descriptive to those who are interested in publications of this character, since Mr. Clark's reputation is well established as a writer of material of this kind.

This service will carry the Sunday school through an interesting hour or two at Christmas time, giving melodious and joyful numbers for Sunday schools to sing, as well as other program material and readings to round out the service.

This service is practically ready for delivery now and a single copy may be secured for 5 cents, postpaid.

How Theodore Presser Company Helps Teachers To Get Acquainted With New Music

One of the music teacher's daily problems is that of securing fresh, useful and attractive music for teaching, recital and recreation needs. It is not always an easy matter to find just the right things at a nearby source of supply and in any event, it takes a lot of valuable time. A good supply of "On Sale" music for ordinary requirements is of prime importance, but in addition every teacher should be in frequent receipt of really new and unfamiliar compositions of a kind likely to fit into and agreeably supplement the standard material used. Our plan of sending new music On Sale meets this need. It provides teachers with a dependable supply of really new teaching pieces, carefully selected and edited for the purpose. This new music while mainly in the earlier grades also includes more advanced pieces and study material of a highly useful character. Under the same plan we also offer "On Sale" new vocal music (songs and duets, both secular and sacred), new organ music and new violin music. Each of these classifications is handled separately; consequently, subscribers must in all cases indicate their choice of one or of more than one kind of new music. A postal card request giving the necessary information, will enter any teacher's name on our new music mailing list. It is to be particularly understood that this offer carries no obligation to buy any music not actually used. Like any other "On Sale" music, it may be kept until the close of the season and every unused number may be returned for credit. The first lot of new music will be ready to go out early in October and additional assortments will follow at monthly intervals until April. Ask for NEW MUSIC ON SALE in your next order or send a postal card request for it. Say whether wanted for piano, voice, organ or violin.

School of Octave Playing—Section 2, Seven Octave Studies By Th. Kullak

This volume which we have published previously in sheet music printed from large plates, will now be added to the *Presser Collection,* in a new edition printed from freshly engraved plates of the usual size. This is the book that many will identify as beginning with the well-known octave study frequently called, "From Flower to Flower." It is about the best octave book ever written for students somewhat advanced.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

Master Vocal Exercises By Horatio Connell

This is a compilation of vocal studies selected from the works of the Great Masters of singing, from the representatives of the old Italian school up to the present, and arranged in logical and progressive order according to the best modern methods of teaching. Mr. Horatio Connell, one of America's foremost baritones, was a pupil of the great Stockhausen, and is himself a very successful teacher of singing. Mr. Connell has supplied copious annotations, including directions for practice and instructions in breathing, articulation and tone-formation.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

An Excellent Stock of Music for Amateur and Professional Orchestras and Bands

The extraordinary growth of interest in orchestral playing during the past few years has resulted in the formation of innumerable groups of ensemble players, large and small, professional and amateur; there are large and small organizations of both kinds and it is often difficult to distinguish one from the other, so well balanced and so thoroughly are the amateurs trained and directed. This statement applies with equal force to bands except that these usually are not confined to as small a number of players as may be used effectively with stringed instruments. All these organizations need music—more and more of it—and publishers have not been the least remiss in providing effectively arranged music in all degrees of difficulty, especially of the kind that appeals not only to the players but, also quite as essentially, to their audiences. We have watched the growing demand for ensemble music and have given special prominence to all publications of this kind that have more than passing merit, thereby assembling a complete stock of every worthwhile production in school, amateur or professional orchestra and band music. We are prepared to lend expert assistance in selecting such music and will send these band and orchestra works on liberal examination terms. Catalogs, sample parts and other information will be cheerfully furnished on request.

New Organ Collection

Some years ago we published *The Standard Organist.* This is a collection of forty-three miscellaneous organ pieces printed from special large plates. Our new collection, now in preparation, will be of the same size and scope; not less than sixty-four pages and with about an equal number of pieces. These pieces are chiefly by modern and contemporary writers, such pieces as have not appeared in any other collections. All are practical to play excelling in melodic content and in contrasted styles. This is just the book for the busy organist to have at hand for emergency use. The pieces are of average difficulty.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Forty Negro Spirituals Compiled and Arranged By Clarence Cameron White

There is very great interest nowadays in *Negro Spirituals.* We believe that the true and authentic *Negro Spirituals* have definite musical value. Together with the older American Folk Songs, the melodies of Stephen Foster, the aboriginal Indian themes, and the Spanish-American music of the great South-West, they offer basic musical materials for the American composers of the present and of the future. The well-known violinist and composer, Mr. Clarence Cameron White, who is abundantly qualified for the purpose, has undertaken for us the compilation of a new volume of *Spirituals.* This will contain only the best and most authentic numbers including the real old favorites. These will be arranged for solo or unison singing with special new piano accompaniments harmonized by Mr. White.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

Violin Method for Beginners By Ann Hathaway

When we presented the manuscript of this new work for an opinion to a well-known violinist and teacher with very practical ideas, he reported to us that it was the best elementary violin method that he had ever seen. We feel confident that violin teachers in general will agree with this opinion. This is strictly a First Position method and it lays a splendid foundation for any of the more advanced books and studies. It is up-to-date in all respects.

The special introductory price in advance of publication is 40 cents per copy, postpaid.

The Beginner's Voice Boo By Franz Proschowsky

We have had great success w various *Beginners' Books.* There reason why the idea should not ha applied to the *Voice* long before t it has needed just the right man Mr. Franz Proschowsky, the tea Madam Galli-Curci and of Tito Sc believe to be just this man. This gins at the very beginning, giving fundamentals, elements of notati including intervals and the stru the scale. Then, it goes right into cal voice work, breathing, tone pr and vowel formation.

The special introductory price vance of publication is 60 cents p postpaid.

Mass No. 14, in Honor of St. Joseph, Op. 203 By Eduardo Marzo

The Masses by Chevalier Marzo sistently excellent and this *Mass* is no exception. Elevated in charac highly effective, its flowing diato ody will be found very pleasing a able. The composer, imbued w beauty, spirit, and significance of t has set, in powerful climaxes, its features; and as contrast, with peaceful repose with which he has *Benedictus* and *Sanctus.* Th arranged for two voices is one tha prove most useful in convent schoo young choirs where four-part sin rather difficult.

Our patrons have an opportunity tain this Mass while it is being p for publication at the low advan of 35 cents, postpaid.

Secular Two-Part Songs for Treble Voices

We have in preparation a new c of secular two-part songs suita school or club use. These songs a melodious character and of modera pass. They are all easy to sing b attractive both as to text and music is much demand for collections of ture. None of these pieces will h peared in any other book, all are temporary writers and every nu a gem.

The special introductory price vance of publication is 20 cents, p postpaid.

The Very First Pieces Played on the Keyboard By N. Louis Wright

N. Louise Wright is a composer specialized in elementary teachi terial. Her newest work, *The Ver Pieces Played on the Keyboard,* is tempt to provide for the needs of t young student who has mastered th ments of notation and whose h formed at the keyboard. These littl could be used in connection with a dergarten method and with either private instruction. The pieces a simple (hardly out of the five-fing tion in either hand) and they a short; only eight to sixteen meas length. They will be printed in ou est-sized note with generous spacing little piece has an appropriate te titles; such as *See-Saw, Game of J I'm a Little Soldier,* etc.

The special introductory price vance of publication is 25 cents p postpaid.

Twelve Piano Etudes for Young Students By Mathilde Bilbro

One cannot have too many first studies. It is well to use as much as possible in elementary work and the studies to suit the individual s This new book by Mathilde Bilbro the good qualities; the studies ar dious, they are easy to play, but same time each one has definite and technical value.

The special introductory price vance of publication is 30 cents p postpaid.

ner' s Method ie Saxophone

Three Dances for Four Hands By Cyril Scott

Cyril Scott is one of the best liked of modern composers. Many of his piano solos are extremely popular. This recent *Opus,* now in press, is a set of three original pieces for four hands. While they are in modern style, they are not extreme. They are in atmospheric style and at the same time they have definite melodic outline and they will be much appreciated by good players who are on the lookout for knowledge.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Album of Study Pieces In Thirds and Sixths

The average American piano student is not content to spend hours and hours practicing dry technical exercises and the progressive teacher, realizing this, is constantly seeking new and attractive material that will be just as effective in producing the desired results. To supply this demand we have recently published four volumes of *Study Pieces for Special Purposes* devoted respectively to scales, trills, arpeggios and octaves, and are now preparing another entitled *Album of Study Pieces in Thirds and Sixths.*

These volumes contain bright, interesting piano compositions, mostly by modern writers, that contain a generous amount of work upon the particular technical figure to be mastered. The ability to play thirds and sixths fluently is a prime requisite in the playing of modern piano compositions and the student can begin to acquire this technical facility with these study pieces, as in the other volumes of the series, in the early part of the third grade.

The advance of publication price is 30 cents, postpaid.

Beginning With the Pedals of the Piano By Helen L. Cramm

The pedal is such an essential part of the piano that one cannot too soon become familiar with its use. Nowadays the pedal is taken up much earlier than was formerly the case. Miss Helen L. Cramm, whose elementary educational writings are so well known, has made a most interesting and very practical little book on the use of the pedal. These studies might be taken up in first grade work and they are just right to use on into the second grade.

The special introductory price in advance of publication is 30 cents per copy, postpaid.

Album of French Composers

All those who derive pleasure through a wide acquaintance with the literature of piano music should have this collection in their musical library. We have placed on the market in past years collections of individual composers and special groups and the gratifying reception given these volumes inspired the compilation of the Album of French Composers, for which there is such excellent material available. One can readily imagine what this album will contain when the compilers sought representative numbers of such composers as Saint-Saens, Godard, Dubois, Debussy, Wachs, Lack and others. This collection not only supplies things pleasing to the average good pianist, but it also makes a piano album that teachers will find very acceptable for pupils moderately advanced. In looking over the contents of this book, prior to writing this description, we find that it is so well along in the progress of production that it is highly possible that this will be the last month it can be secured at the advance of publication cash price of 35 cents.

Rich Memories

One year ago, the offices of The Theodore Presser Company were filled with employees of long standing, choked with sorrow and apprehension because all realized that they were close to the passing, not merely of a great man, but of a great friend.

Theodore Presser, worn with the labors of years and racked with pain was valiantly struggling to remain with the co-workers he loved and the great educational, philanthropic and business institutions he had founded. Although physically incapacitated in a large measure, he was mentally keen and alert to an astonishing degree, until within a few hours of his passing. He met the end with a man-like bravery none can forget. Deeply imbued with the Christian's faith in immortality, he departed this life with his heart filled to the last moment with his long-abiding interest in music and in music teachers.

The organization of four hundred workers which it had taken Theodore Presser some forty years to build, responded at once and sensed the very great responsibilities that had been passed on to them. The magnificent work of the great founder must be carried on with even greater energy, with wise judgment, with high ideals. Every executive, every employee, from the top to the bottom, then proceeded to give one of the finest demonstrations of loyalty and co-operation that could be imagined.

New enterprises were undertaken. New and important improvements in service and appearance were instituted. A new spirit of energy pervaded the whole establishment. The wonderful driving force of Theodore Presser, his great virility, his progressive spirit, was so powerful that we can hardly realize that he is not with us in person every day. Were he to return, he could not fail to rejoice at the remarkable way in which all who knew him have kept the faith and have continued and expanded the notable work he founded.

We have been greatly blessed by prosperity since his passing. We know that this prosperity is by no means entirely of our making. It is due in very large measure to our wonderful friends who have also been inspired by the ideals of Theodore Presser and who have written us time and again that they are thrilled to witness the development of these ideals to meet our ever-increasing modern needs.

Advertisement

Romeo and Juliet Operetta for Men By John W. Brigham

Following the unusual success achieved by his earlier operetta, *Cleopatra,* Mr. John W. Brigham has again taken one of the drama's classical masterpieces, *Romeo and Juliet,* and has burlesqued it broadly. College and high school boys find keen pleasure in indulging in musical and dramatic productions, and in this forgivable burlesque on Shakespeare's classic they will find the ultimate in wholesome fun and delightful entertainment.

This operetta can be so easily produced that it may be done on an impromptu stage with a few accessories; hence its adaptability to easy rendition in lodges or any men's organization where spontaneous, mirth making entertainment is required with a minimum of effort.

This operetta is now being offered at the advance of publication price, 40 cents per copy, postpaid.

H. M. S. Pinafore Comic Opera By Gilbert & Sullivan

Recent revivals of this comic opera have proven that it has lost nothing of its original charm, wit and brilliancy, though both librettist, W. S. Gilbert, and composer, Arthur Sullivan, have passed away, and contemporary light operas are almost forgotten. This most successful of the Gilbert and Sullivan operas is a genial satire upon English officialdom and applies it to human nature in general, interspersing the delightfully humorous lines of the book with Sullivan's sparkling melodies which are whistled universally. For amateur production this work is unsurpassed. The new edition of this famous light opera which we are now preparing with the greatest care will be printed from engraved plates and will be priced during the advance of publication period at 50 cents per copy, postpaid.

Dozen Songs for Saxophones By Clay Smith

The editors are now entirely through with their part in the publication of this interesting offering by Clay Smith and with the proofs of the engraver's work all completed, our publication department is certain to have the various parts of this Saxophone Collection through the printers and binders within a short time.

It is possible with this work to present solos with any of the Saxophones, or duets for any two members of the saxophone family, with or without the piano accompaniment, since there will be a volume giving a solo and second part for the C Melody saxophone, one giving the E flat alto saxophone solo and second parts and a similar volume for the B flat tenor saxophone.

This collection should be a boon to the concerts of school orchestras, since it gives a chance to introduce saxophone novelties in the program.

Advance of publication cash price is 45 cents, postpaid, for the piano accompaniment and 30 cents for the saxophone parts.

Twenty-four Caprices for Violin Solo By P. Rode

In these *Twenty-four Caprices in the form of Studies for Violin Solo in all the Twenty-four Keys,* by P. Rode, we are adding a vital work to our violin catalog. This fine work is used after the Kreutzer Studies, and, in fact, is considered one of the three indispensable works of advanced violin technic, viz.: Kreutzer, Rode and Fiorillo. This new edition will be edited by Mr. Otto Meyer, the personal representative of Sevcik in this country. Mr. Meyer has done the editing of a number of other recent works in the Presser Collection, and we are sure that this new edition will meet with the approval of all teachers who demand the best in educational publications.

The special introductory price in advance of publication is 45 cents a copy, postpaid.

Continued on page 790

THE PRESSER PERSONNEL

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Oswold Blake

We give considerable attention to the organized Colleges, Conservatories and Schools of Music throughout the country because of the great volume of music purchases coming to us from these musical educational institutions and within our Mail Order Service Department, we have a special organization for the purpose of giving Schools and Colleges of Music every possible assistance.

Mr. Oswold Blake is in charge of our School and College Department. We sought him out for this position early in the year 1925.

He was born of musical parents in England and started his own musical career as a Choir Boy. In 1900 he was engaged in the John Wanamaker Store, Philadelphia, where he soon came into prominence as Director of its Musical Activities. This past summer Mr. Blake has been playing host to the thousands visiting our booth at the Sesqui-Centennial.

His reputation as a Tenor Soloist of first rank has called him to Concert and Church engagements beyond the city in which he makes his home and his knowledge of the Voice and Conducting took him to Tiffin, Ohio, to teach in the Conservatory of Music of the Heidelberg University back in 1919.

The Theodore Presser Co. always has made it a point to have an organization well acquainted with the needs of its patrons and Mr. Blake, with the capable assistance of others who have been in our organization a number of years, is busy every day serving our friends in institutions devoted to musical education.

Brehm's First Steps for Piano Beginners

We are about to print a new edition of a work which has already found considerable favor among teachers. It is a compact and practical modern instruction book, not too long and all of it very much to the point. Just such a book as will pave the way for any graded course of system of instruction. Our new edition of this book will be revised and somewhat enlarged.

The special introductory price in advance of publication is 25 cents per copy, postpaid.

New Collection of Favorite Songs and Choruses For all Occasions

This is an all-around singing book for everybody. It will contain songs suitable for all sorts of occasions, including patriotic and sentimental numbers, sacred songs and hymns, folk songs, favorite tunes, humorous numbers and in short, anything that might be demanded for Community Singing or for social gatherings. The prices will be extremely low both for single copies and in quantities.

The special introductory price in advance of publication is 10 cents per copy, postpaid.

First Garland of Flowers for Violin and Piano By Julius Weiss—Op. 38

A very popular set of violin pieces that has long been a favorite with teachers, as it presents excellent material that is attractive to the young pupil who has as yet not acquired much technic. These little pieces are all in first position, and having a piano accompaniment, the ambitious beginner is able to have the thrill of playing a "piece" at a very early stage of his musical training. This edition of *First Garland* will be edited with the same care that has been shown in all our other recent additions to the well-known Presser Collection.

At the special introductory cash price in advance of publication of 35 cents per copy, postpaid, there is a great demand for this popular work.

New Easy Four Hand Album

All of our various four-hand collections have proved extremely popular. This new one will be made up of pieces that have not been used in any of our other books, pieces which are already proven successes. The volume will be carefully graded, the pieces beginning in the first grade and progressing on up to the beginning of the third grade. Some of the most popular writers are represented by their very best four-hand numbers. Young students will take great delight in playing from this book. For developing steadiness and a true sense of rhythm, nothing is so good as four-hand playing.

The special introductory price in advance of publication is 35 cents per copy, postpaid.

Fifty Easy Melodious Studies For the Pianoforte By A. Biehl, Op. 7

One of the first volumes to appear in the beautiful new design that is to ornament the title pages of volumes in the Presser Collection, will be this valuable teaching work. The studies of A. Biehl are well and favorably known to piano teachers and to most of them this volume needs no introduction. This *opus* consists of elementary exercises in mechanism suitable for the student in the early second grade of any standard graded course, such as Mathews', and it provides interesting study material well up to the third grade. While this book is in preparation we are booking orders for first copies "off the press" at the very low price of 30 cents a copy, postpaid.

Withdrawals from Advance of Publication Offers

Two excellent piano teaching publications and two clever and delightful musical plays are taken from our advance of publication offers this month and copies no longer can be secured at the low prices at which they have been offered in previous months, prior to their publication. In the four following paragraphs will be found the titles, short descriptions and the prices of the works that have been withdrawn.

Five Little Tunes for Five Little Fingers. Pieces for the Left Hand Alone, by Mildred Adair. Teachers will find this a very helpful teaching adjunct since it helps young students to develop left hand facility and also familiarizes them a little with pedal effects. These pieces are about grade 1½. Price 60 cents.

Twelve Melodious Studies Featuring Scale and Chord Formations, by Carl Wilhelm Kern. An excellent set of studies for the teacher to use in developing pupils beginning third grade work. Price, 90 cents.

Folderol. A Musical Farce Comedy in Two Acts, by R. M. Stults. An excellent musical comedy for any amateur group to present. Among other features, this musical comedy introduces a highly interesting minstrel show. The complete vocal score, price, $1.00.

Penitent Pirates. A Two-Act Operetta for Young Men and Youg Ladies, by Paul Bliss. There are so many good things that can be said in favor of this excellent operetta that it is difficult to refrain from giving a lengthy description of it. It is very effective and entertaining with its clever plot and melodious music, yet it is particularly easy of performance, since there is little part singing demanded in the choruses. The complete vocal score, price, $1.00.

Premium Workers Obtain Holiday Gifts by Securing "Etude" Subscriptions

It is not too soon to consider the holiday gift season. This is the best season of the year to secure new ETUDE MUSIC MAGAZINE subscriptions. Music teachers are busy, music lovers are enthusiastic, students are preparing for their fall work—everyone is an ETUDE prospect. Earn any or all of the gifts shown on the inside back cover of this issue and you will save the annual drain on the purse when the Christmas gift question crops up. Send $2.00 with each new subscription and you will soon be able to earn any or all of these splendid rewards.

THE PRESSER PERSONNEL

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

James J. McKenna

Mr. McKenna started as a youth in the music business 17 years ago and now stands as a thoroughly experienced music salesman, although young enough to give promise of being able to devote to the music business in the future nearly double the years given in the past.

Mr. McKenna started in the Music Department of one of the leading Department Stores of the country and found his contact with the music world so interesting as to seek larger opportunities in this field, coming with the Theodore Presser Co. in 1913.

Mr. McKenna supervises the filling of the Mail Orders from Philadelphia and its suburbs. He also finds considerable time to give personal service to our Retail Store patrons.

We are favored with considerable business from the Music Schools conducted by Sisters and Convents and Mr. McKenna gives particular attention to the calls made upon us for music publications by the Sisters' Musical Schools and Academies in and about Philadelphia.

Mr. McKenna, like many other experienced music clerks in our organization, is a vital spoke in our wheel of "all-around" service to music buyers.

We make it a point to hold such competent and conscientious individuals in our organization as can be seen by the fact that Mr. McKenna has been with us since 1913 continually, except for 18 months spent in the service of our Country during the World War.

Renewal Time

Most ETUDE MUSIC MAGAZINE subscriptions expire in the fall. Don't let your subscription lapse. Some subscribers delay with the result that ETUDE service is interrupted. The coming numbers are going to be exceptionally fine judging from the elaborate plans laid by our Editorial Department. The cost of renewal is only $2.00 for one year, $3.50 for two years.

Change of Address

Always mention both old and new addresses when advising of a change of address. Our files are arranged geographically by state and town; therefore both addresses are necessary. If any copies go astray, let us hear from you promptly, particularly following the above rule where change of address has been made from one town or state to another.

Warning

Swindling canvassers have been particularly active in the past year. Protect yourself against the smooth tongue of a swindler. Do not accept hard luck stories. ETUDE representatives are equipped with our official receipt books and are nearly always located permanently in the town in which they take subscriptions. Pay no money to strangers. We cannot be responsible for cash collected in our name without our authority.

Educational Study Not the Etude Music

(*Continued from page 765*)

Could I Forget, by Georges Ber

Georges Bernard is a French compo dent in Paris, whose pianoforte composit given him a considerable degree of pr M. Bernard's writings are always techni interpretatively worth-while—seldom d substance. The present example of his hibits graceful, well-formed melody, rh varied, good in dissonantal effect. every composer, you know, who can ha sonance effectively; the tyro's choice a duction of these intervals is generally fo vapid.

The scheme of tonalities in *Could I* effective if simple—A Major, E Major jor, D Major, and A Major. These closely related keys.

The D Major trio is pleasing; the rhy is mainly ♩ ♩, which offsets the rhyth main theme which is ♩ ♩. In the n the A Major theme, the tendency of the student would be to over-accent the sec Do not do this. Accent the first bea otherwise marked.

The climax of this piece is altogether ac Do not sustain the last chord, since in poser's manuscript the word "sec" equivalent, "secco," meaning "short" cato") is written above it.

Could I Forget is fine practice in octa ing, and also in doubly-sharpened n Some players become quite terrified at den appearance of a double sharp—whic course, silly and to the overcoming of w recommend compositions such as this on Bernard's.

Sonata Pathétique, 1st Movement, van Beethoven.

Inasmuch as the eminent pianist Bachaus gives, elsewhere in this issue, a ve and very thorough lesson on this moven are relieved of the necessity of further on the matter. The date of composi this sonata (we have not yet seen Mr. article, but presume it says as much) or seven years after Beethoven adopted as his home.

Allegretto, from the 7th Symphon L. van Beethoven.

Andante, from the Surprise Symp by Joseph Haydn.

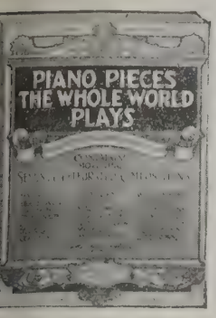
These arrangements present in the possible form these imperishable themes prise, we may say, is a relative qualit the first performance of the "Surprise phony several ladies are reported to have at the sound of the *sforzando* chord af modulation to the dominant, whereas the most timid of the fair sex would p no more than "bat an eyelash" or perhap slightly forward in her seat.

As you all know, *allegretto* means mod quick; *andante*, moderately slow ("walking", "going", "moving").

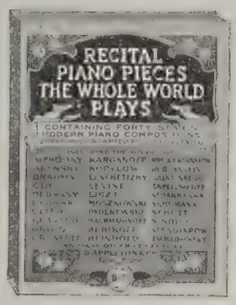
Three Dances, No. 3, by Cyril Sco

The ETUDE recently had the pleas publishing No. 1 of these dances, and time a few remarks anent Mr. Scott a work given in these "Study Notes" co All the waltzes in this set are characteri Cyril Scott's style, the especial featu which we may, in general, sum up as f broadly-flowing and very pleasing melody; rhythm; clear and fairly reasonable form; and a fondness for empty fourth fifths, and for major and minor ninth In this third waltz, as in the first, th poser has chosen to weave into a ver fabric his intriguing little pattern. The as thinly textured as the opening secti Maurice Ravel's lovely *Pavane pour une defunte*. The second waltz of the set, longer than the others and more Sc is much less thinly constructed—it contains polyphony, richer and thicker harmony.

The technical difficulties of the third wal almost non-existent. Establish a good r and the waltz waltzes right along in fine



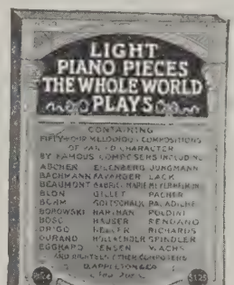
Another Cure For Stag Fright



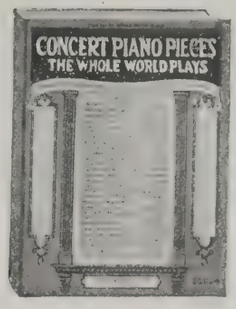
By May Hamilton Helm

A MUSICIAN of wide experience said she had never known stage-fright she sang, but that when playing the p she always had the uncomfortable fe that some one would bite her back back-bite). A fellow sufferer advised to sit or stand where she could look the faces of her hearers a few mi before she went on the stage.

She found that this worked like a ch When she had seen her audience she ized that they were just human be like herself. Looking at them as fri made her more desirous of pleasing th Consequently she forgot herself in effort to do her best.



THE "WHOLE WORLD" SERIES OF USEFUL PIANO COLLECTIONS



The collections of piano music in the "Whole World" Series not only cover all grades of difficulty, but also all kinds and classes of music, so that they may be utilized for either teaching, recital or recreative purposes. Teachers and music lovers in general will find these books both useful and convenient, while the economy of purchasing standard piano music in this form cannot fail to make itself immediately apparent.

The postpaid price of the books illustrated is $1.25, except "Concert Piano Pieces" the price of which is $3.00 in paper and $5.00 in cloth.

The "Whole World" Series contains collections for voice and for violin as well as for piano, and every teacher and music lover will find the new complete 56-page catalogue (containing the titles, descriptions and contents of all the books) both interesting and useful. All the books in this series can be procured at modern music and book stores at the publishers' prices. The "WHOLE WORLD" MUSIC SERIES complete catalogue will be sent gratis to any reader of the "*Etude*," in the U. S.

Musical Composers, Attention!

We offer the following twelve prizes:

One 1st prize of $150.00 for the most attractive unpublished anthem submitted.

Two 2d prizes of $75.00 each for the next two most attractive unpublished anthems submitted.

Three 3d prizes of $50.00 each for the next three most attractive unpublished anthems submitted.

Six 4th prizes of $35.00 each for the next six most attractive unpublished anthems submitted.

$660.00 in 12 Prizes in Cash

All anthems submitted must be in our hands not later than February 1, 1927.

Send for our special announcement folder outlining all conditions and rules of the competition.

Lorenz's 6th Anthem Competition

We publish about two hundred anthems a year. By our method of distribution, these anthems are sung by not less than 20,000, in some cases, by as many as 35,000 singers within about two months of publication. The demand for so many new anthems every year constitutes a large opportunity for anthem writers, and this anthem contest is our earnest invitation to them to embrace it.

"EVERYTHING IN MUSIC PUBLICATIONS"

IF IT IS AN OBTAINABLE PUBLICATION YOU CAN GET IT PROMPTLY FROM THEODORE PRESSER CO., 1712-1714 Chestnut Street, Philadelphia, Pa.

An unequaled stock of music publications and a large corps of experienced clerks make possible the rendering of prompt, accurate service. Prices on any publication quoted cheerfully. Special service features of interest to teachers. *Ask about them.*

New Books Reviewed

Das Neue Musik Lexikon. 729 pages. lished by Max Hesse, and bound in bo Price, $8.00.

This is a translation and an enlargeme *The Dictionary of Modern Music and cians*, edited by A. Eaglefield-Hull. Int to be all-inclusive, it naturally falls som short of its aim, like any other book of a lar nature is bound to do; but its value is considerable, all the same. The notice authoritative and to the point, the Eng and German matter being particularly plete and exact. We are glad, by the w find mention of Mr. George Bernard Shaw *The Perfect Wagnerite!*

The translator is Alfred Einstein, the critic and editor. His preface is interes and pertinent.

How to Write a Good Tune. By Frank terson. Bound in boards, 122 pages, and lished by G. Schirmer, Inc. Price, $1.50.

Laying the foundation of a new sc (which is the avowed effort of this tre is generally a good bit of a task; and whe science consists in the analysis of anythi absolutely elusive as the qualities of a melody, the founder needs a great de courage and extreme perseverance. Mr. terson has done well at his task, and hacked with insistence at the Gordian which confronts him. He presents to reader a wealth of carefully chosen mel from which he proceeds to deduce facts a set up criteria—and the results are a interesting, sometimes impressive.

The "Table of Tune Elements" is, to way of thinking, very much worth pr ing. Certain of the terms are not exactl most felicitous possible, but the list whole is well considered.

Mr. Patterson is particularly to be co mented upon the catholicity which char izes his selection of examples. "Tootsie "Ten little fingers" unblushingly appear by side with Strauss and Tschaikowsky we, for our part, think this is not at a sembling sacrilege. These "popular" have become so because they possess c of those very indefinite qualities which make up a "good melody."

The Mad-Song. By Mabel Wagnalls. bound; two hundred and fifty pages. Fi Wagnalls Company, publishers. Price,

Those who like their bread spread with their practice interspersed with gay wa their theoretical instruction glamored romance, may well read this colorful no the Russian virtuoso who achieves the ingly impossible to save her lover and he ter from disgrace.

The book accomplishes the double pu of being musically correct and emotio powerful. Better still, it submerges both ends in a truly sympathetic developme the characters of the hero and heroine th their love for music and for each other.

ETUDE RADIO HOURS

Resumed

Owing to the immense respons from our readers who hav found the ETUDE RADIO HOURS of great educationa value, they will be resumed a follows:

Station WIP

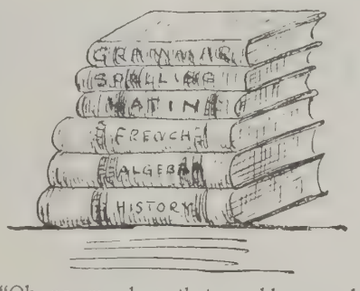
His-Name!"'
aughed. "You're right, as usual,
She said, "But you'll not be able
me that way again, on a new



Princess Zenia's Folly

By Gertrude Greenhalgh Walker

"DEAR me, Mums, I don't see how I am going to find time to practice these days," said Beth, who is a freshman at High School, as she looked at the armful of school books she had put on the library table. "Exams are coming and every teacher has given us home work."

"Well, I wouldn't worry just now dear," replied her mother. "When you study, concentrate, and see how much more work you will accomplish than when you allow yourself to get all fussed up looking at every book and really seeing none."

"But mother, I have just got to pass the exams, and if you would only call up Miss Brown and tell her I am going to discontinue lessons for awhile, it would give me that hour a day extra for school work."

"Oh, no, my dear, that would never do. That is unfair to so many. First, Miss Brown has given you your lesson hour in a most convenient time; and now in the middle of the season, when she would not have a likely chance to replace the pupil, it would be most ungrateful. Secondly, Dad and I enjoy your music; and it is a comfort to us both to listen to your playing. Thirdly, you owe it to yourself. Then it would never do to make the mistake that Princess Zenia made."

"Princess Zenia, who is she?" queried Beth.

"Princess Zenia is the little princess who lost her great moment in life through her over-anxiety to grow up too quickly. It was not deemed necessary in olden days for little girls to have book knowledge. They were trained in household arts, which included weaving. Each little princess was taught how to weave gold cloth, from her earliest childhood; and she had to weave so many inches each day and was not allowed to cut it until she had grown into a young lady and her hand was claimed by a Prince. Then, amid a great ceremony the threads were cut from the loom and she presented the mantle to the Prince.

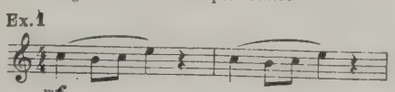
"One day Princess Zenia was busy in the castle weaving her allotment for the day, when looking out of the window she espied a gallant coming up the road on a beautiful white charger with gaily waving plumes, 'Oh my,' she thought, 'he is my Prince;' and so anxious was she to greet him and present the mantle that she cut it immediately and was at the door to greet him.

"The Prince rode up to the door and was admitted to the castle. There stood Princess Zenia with shining eyes and her length of cloth of gold. Alas! The Prince was a tall man, and poor Zenia had been weaving but a short time. He took the mantle, and placing it over his shoulder said, 'My dear, this was never intended for me. Your knight has not come yet.' Poor child! She took the cloth back to her room and tried to piece it back on the loom, but it was of no avail. The broken threads could not be taken up again, and she could not make up for the years she had cut away, so Princess Zenia went through life without her Prince by her side.

"Now, little Beth, you cannot cut the threads of your music work just yet. you must have patience and learn to weave melodies a little while longer. Remember,

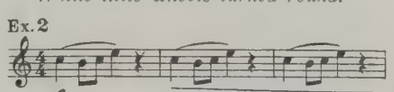
"'A Quitter never Wins and a Winner never Quits.'"

The Scissors-Grinder's Song



(With Actual Motive)

By Mrs. Olga C. Moore

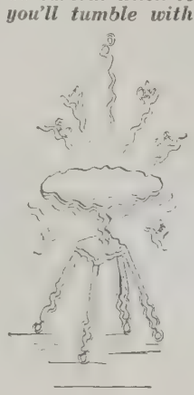


One busy summer's day,
When it was hot at noon,
I heard the scissors-grinder's truck
Ring out this simple tune.

On down the street, it came;
And with a cheery sound,
As always this same tune rang out,
While little wheels turned round.

Ex. 1

Ex. 2



(For two very small children. One could recite the words, while the other plays the tune.)

Piano Stools

By Margaret Clarke Russell

Piano stools are full of fun
When your practicing is done;
Do-Re-Mi-Fa, and up you twist,
Even squeaky notes assist;
Fa-Mi-Re-Do, and down you twirl,
Any little boy or girl;
Do-Re-Mi-Fa-Sol-La-Si-Do
Singing as around you go;
But do be careful when to stop
Or off you'll tumble with the top.

Question Box

DEAR JUNIOR ETUDE:

I would like to know how many hours must a pupil practice a week, who is planning to go to a conservatory this fall.

E. O. (Age 12),
Massachusetts.

Ans. A question like the above really cannot be answered. Everything depends upon the pupil's ability, state of advancement, ambition, and other qualities as a student.

Playing Soldiers

By Mrs. Ray Huston

I love to play that I'm a soldier
During practice hour,
Fighting in the "War on Notes"
With all my strength and power.

When passages quite difficult
Present themselves to me,
I muster my ten fingers and
Defeat the enemy.

And if at first I cannot play
A measure quite "just so,"
I try and try—and pretty soon
Again defeat the foe.

I bravely play my scales—both hands,
And master every one,
For that means honor to my side—
Another victory won.

What used to seem so hard and dense
Now doesn't worry me,
For in my battle I have found
New strength and power, you see.

It's fun to be a general
Of ten young stalwart men,
I know I'll never, never dread
My practice hour again.

JUNIOR ETUDE—Continued

The JUNIOR ETUDE *contests were discontinued during August and September and are resumed this month.*

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty pries each month for the best and neatest original stories or essays and answers to puzzles.

Subject for story or essay this month—"The Sonata." Must contain not over one hundred and fifty words. Any boy or girl under fifteen years of age may compete whether a subscriber or not.

All contributions must bear name, age, and address of sender written plainly, and must be received at the JUNIOR ETUDE office, 1712 Chestnut St., Philadelphia, Pa., before the twentieth of October. Names of prize winners and their contributions will be published in the issue for January.

Put your name and age on upper left hand corner of paper, and address on upper right hand corner of paper. If your contribution takes more than one piece of paper do this on each piece.

Do not use typewriters.

Competitors who do not comply with ALL of the above conditions will not be considered.

CHURCH MUSIC
(Prize Winner)

During the awful persecutions in Rome, the Christians, living in the catacombs, sang songs believed to have been Greek, modified by Hebrew influence. When Constantine accepted Christianity in 325 A. D., the authorities of the church saw that they must reform the music then in use, and they established systems of singing for the church. The inventor of these church scales is unknown. There are several names associated with church music. Pope Gregory is generally supposed to have been the first one to set forth the system of scales known as Gregorian chant, upon which much of the church music of to-day is based.

MARGARET F. MCKEEVER, (Age 11),
New York.

CHURCH MUSIC
(Prize Winner)

Ah, how soft and melodious should be those strains which are offered to the Most High! One who plays church music should not deign to play jazz, because these two classes of music are extremely opposed to each other. Not every one can play church music. It needs many hours of hard study to be able to play an accompaniment well.

Our choir has its own organist. She is only fourteen but has taken music for five years. Our director teaches us expression; that is, when to sing loud, moderate or soft. She also teaches us that when we sing loud it should also be sweet.

Though not all of us may be destined to be players of church music, yet we should all practice and strive to have our music accompanied with the same sweetness, for we may some day play with angelic spirits above the clouds.

MIRIAM GOLD (Age 13),
Wisconsin.

CHURCH MUSIC
(Prize Winner)

Church music is deeply interesting to me, because I am taking pipe-organ lessons from a blind organist.

Our greatest composers were educated in churches, and have returned to the church what they have reaped from it. Bach, Mozart, Haydn and Beethoven all wrote wonderful church music; but Handel was the greatest of all church music writers, and his wonderful oratorios, such as the "Messiah," should surely inspire everyone and make them desirous of living better lives.

My teacher's Sunday afternoon organ recitals are broadcast on the radio, and although he has never seen the beauties of the universe, he can make our entire land happy by listening to the wonderful sounds which he causes to come forth from the church organ. He has promised me that I may broadcast a recital in less than a year, if I continue my daily practice of two hours.

ROBERT JONES (Age 13),
Indiana.

Answer to May Puzzle

1, Bach; 2, Verdi; 3, Chopin; 4, Gluck, 5, Handel; 6, Bellini; 7, Weber; 8, Beethoven; 9, Schumann; 10, Purcell.

Prize Winners in May Puzzle

Wylie Handwright (Age 12), Texas.
Mary Ellen Simpson (Age 15), Missouri.
Emily Anne Wiley (Age 12), Georgia.

N. B.—To make the puzzle answer come out, most of the JUNIOR readers noticed that the word "though" in No. 8 should have been written tho'. It was sent to the printer this way, but he did not realize that the spelling was part of a puzzle, and changed it to "though."

Honorable Mention for May Puzzles Contest

Doris Hedley, Edith Nelson, Genevieve Milligan, Ivan Johnson, Ruth Worman, Mabel Olive Pickett, Antoinette Savoy, Paula Studt, Vida Tomlinson, Fern Rath, Armand Coté, Henry Gay, Jr., Frances Newburg, Helen Estabrooks, Edna Eichstaldt, Ruth Elizabeth Houston, Evelyn Gillings, Loraine Eisele, Helen V. Winters, Henry G. Stoner, Jr.

Honorable Mention for May Essays

Ruby Rogers, Arlouine Roseeians, Emily Jean Cox, Helen Myers, Howard Bolhret, Carl Hancock, Grace Levenhaupt, Hazel Pierce, Helen Jeanette Branch, Helen M. Sharp, Althea Foster, Virginia Edwards, Ivan Johnson, Mary Stansel, Hilda Fenyo, Maebelle Ream, Elizabeth Whitney, Mary E. Housberger, Marie A. Long, Mildred Zoa Moore, Lavinia Campbell, Marie Henchy, Patrice Taylor, Margaret Newhard, Mary Jane Hodgson, Mary Donohue, James Campbell, Dolores Arnade.

Honorable Mention for May

Mary Albright, Robert Jones, Vivian Bronard, Alvin Glondemans, Billy Hegner, Nye Spencer, Loretta Reese, Hortense Phillips, Branford Miller, Uriel M. Steinberg, James Campbell, Rylllis Batzler, Fay Cameron, Violet Chanlelin, Grace Levenhaupt, Upton Zeisler, John Karvoner, Elizabeth Whitney, Catherine Cavanaugh, Evelyn Albrecht, Mary Waters, Evelyn Perkins, Annesley Thompson.

DEAR JUNIOR ETUDE:

My teacher has formed a club for her piano students. The club is divided into two smaller clubs—the C♯ Club for the younger children and the B♯ for the older children. I am in the B♯ Club and I learn many things. At every meeting each one must play a piece from memory. Besides that we write notes, play musical games and do many other things.

From your friend,
ALVIN GLONDEMANS (Age 12),
Wisconsin.

DEAR JUNIOR ETUDE:

Although I am sixteen years old, I still enjoy the JUNIOR page. I have taken THE ETUDE for several years and enjoy it very much. I find the piano and organ music useful. I also play cornet. The Girl Scouts here have formed a bugle and drum corps which some day will be very good.

Don't you think it would be pleasant if you had a correspondence list of the Juniors who care to write to each other?

From your friend,
DOROTHY HARRINGTON (Age 16),
Massachusetts.

N. B. As the JUNIOR ETUDE has a great deal to put into its page and a half, there really is not space for correspondence lists; and besides, such things are not always advisable. The addresses of writers living in other countries, who are too far away to enter the contests, are always printed; and sometimes, for one reason or another, the address of writers in this country are printed. The addresses of prize winners can be supplied to any one sending a stamped and addressed envelope.

HAVE YOU HEARD
the Great
SOUSA BAND
play
"SEA GARDENS"
by
James Francis Cooke?

One of the really sensational hits of the Season

As a third and fourth grade piano solo, "Sea Gardens" has the peculiar qualities of "fitting the hand" and "sounding very much more difficult than it really is"—qualities that mean much for teachers.

Piano Solo — Price, 35 cents
Piano Four Hands — Price, 50 cents
Pipe Organ Solo (Arr. by Dr. Orlando A. Mansfield) **Price, 40 cents**
Two Part Chorus (Arr. by Nicholas Douty) **Price, 12 cents**
Concert Orchestra (Arr. by Wassili Leps) **Price, 50 cents**
Concert Band (Arr. by Wassili Leps) **Price, $1.00**

PRIZE CONTEST— Twenty-Five Prizes

What Can You Say on This Subject?

WHY EVERY CHILD SHOULD HAVE A MUSICAL TRAINING

FOR years THE ETUDE MUSIC MAGAZINE has devoted a great amount of space to indicating how a musical training is of great value to the child in developing rapid thinking accuracy, self-discipline, memory, good taste, muscular, mental and nerve co-ordination.

We have brought to our readers' attention the opinions of many of the greatest thinkers of the time, pointing to the fact that the training received in the study of the art, particularly in the study of an instrument (including the voice), has a very great significance in the fields of Religion, Education, Sociology, preparation of the mind for higher accomplishments in Art, Science and Business, in Musical Therapeutics, and other inspirational themes. Now we should like to have an opportunity to print the boiled-down opinions of some of our readers upon the subject at the head of this column.

PRIZES

First Prize—A Musical Library
Valued at One Hundred Dollars ($100.00)
A complete list of the books included in this valuable prize was published on Page 626 of the September ETUDE.

Second Prize—A Musical Library
Valued at Fifty Dollars ($50,00)

Third Prize—Twenty-Five Dollars Cash

Fourth Prize—Fifteen Dollars Cash

Fifth Prize—Ten Dollars Cash

Additional Prizes

For the next ten Essays which, in the opinion of the Judges deserve recognition, a Cash Prize of Five Dollars each will be awarded.

Following this in order will be ten more prizes, each consisting of a subscription to THE ETUDE for one year.

CONDITIONS

The contest closes December 31st, 1926. All manuscripts must be in our office at 5 P. M. on that date.

Anyone may contribute. It is not limited to subscribers to THE ETUDE.

The Essays must be between three and four hundred words in length.

The Essays must be written on one side of the sheets of paper. Kindly write as legibly as possible. When feasible have the Essay typewritten.

Address "THE ETUDE Prize Essay Contest," THE ETUDE MUSIC MAGAZINE, Philadelphia, Pennsylvania.

Be sure to put your name and address at the top of each page of manuscript.

Essays accompanied by return postage will be returned. All others will be destroyed within one month after the closing of the contest.

When the opinion of the Judges is divided between the merits of two approximately excellent manuscripts, neatness of appearance, clearness of expression and punctuation will be taken into consideration.

Balkite makes you this gift:

A series of concerts by WALTER DAMROSCH *and the* NEW YORK SYMPHONY *broadcasted by 12 radio stations*

On October 23rd, at 9 P. M. Eastern Standard Time, Walter Damrosch and the New York Symphony Orchestra begin a regular series of Saturday Night Concerts over 12 radio stations: WEAF, New York; WEEI, Boston; WGR, Buffalo; WFI, Philadelphia; WCAE, Pittsburgh; WSAI, Cincinnati; WTAM, Cleveland; WWJ, Detroit; WGN, Chicago; WCCO, Minneapolis-St. Paul; KSD, St. Louis, and WDAF, Kansas City.

The Fansteel Products Company, manufacturers of Balkite Radio Power Units, under whose auspices these concerts will be given, count themselves very fortunate in being able to make this contribution to the cause of better broadcasting and good music. These programs will make available to music lovers throughout the country the world's best music played by the best musicians.

That the concerts may be of the greatest possible value they will be of a dual nature. On one Saturday night Mr. Damrosch will broadcast with his orchestra. On alternate Saturday nights Mr. Damrosch alone will give a piano lecture recital of the type that has already made him famous throughout the country. As far as possible Mr. Damrosch's recitals will be based on the concert to follow, from which Mr. Damrosch will play and explain important parts.

These concerts will place at your disposal one of the world's most renowned orchestra leaders, a man who has perhaps done more for music in America than any one other person, whose experience with the musical world covers more than 40 years, and who in his lifetime has known many of the greatest musicians in the world, including Liszt and Wagner. They give you a symphony season in your own home with an orchestra that many have travelled thousands of miles to hear. They will be a liberal education in music.

Many students of music to whom these concerts have already been announced are planning to organize clubs to hear and study the programs, and secure the greatest benefit from this opportunity. This announcement is made at this time in order to give you ample time to form your plans. The newspapers will give more detailed announcements later.

Carols

Three Slovak Christmas Carols. For mixed voices By Richard Kountz.

The melodies are authentic Slovak carol-tunes, dating from the late tenth and early eleventh centuries. Catalog No. 20255 Price, 10 cents.

Christmas Praise Six Carols, by H. M. Staton.

A fine set of carols, bright and festive, yet churchly and dignified; original musical settings to some well-known standard and traditional texts. Good for either the church or Sunday School. Price, 6 cents, $5.00 a hundred.

Standard Christmas Carols, No. 1.
Standard Christmas Carols, No. 2
Standard Christmas Carols—Two Parts, Treble Voices.
Standard Christmas Carols—Men's Voices.

The very best and most popular Christmas carols. Price, 10 cents a copy. $6.00 a hundred.

Excellent Cantatas

The Awakening.....William Baines $0.50

Christmas Cantata for treble voices (Two Part). Very desirable for churches where men singers are not available. The music is excellent and the text well selected. Junior choirs can use this cantata. Requires a little over a half hour.

The Promised Child.....R. M. Stults .50

A melodious Choral Cantata for Christmas for Mixed Choir and Solo Voices that a Choir will enjoy singing. An effective 35 or 40-minute cantata. Words only. $ 00 a hundred.

King of Kings and Lord of All.....R. M. Stults

A new Christmas cantata with a pleasing variety solos and choruses; not too difficult.

The Herald Angels.....R. M. Stults

A new and very attractive cantata based on the taken by the angels before and at the time of the b of Christ. An effective rendition may be given by average church choir.

The Wondrous Light.....R. M. Stults

Adapted for the average choir. Telling the Christ story in tuneful and well-written numbers. Brilliant effective.

The Holy Night.....Lucien G. Chaffin

A short but very attractive cantata, suitable fo choir of any size, and effective even with a quartet

The Greatest Gift.....H. W. Petrie .75

The Greatest Gift is brilliant, dramatic and effective throughout, without being at all difficult.

A Christmas Oratorio.....W. W. Gilchrist 1.00

An impressive work, for any choral society or large chorus choir. The music is dramatic and modern in tendency.

The King Cometh.....R. M. Stults .60

This work is divided into three parts: "A King is Promised," "The Incarnation," and "The King is Born." Suited for the average chorus or volunteer choir.

The Morning Star.....John Spencer Camp .60

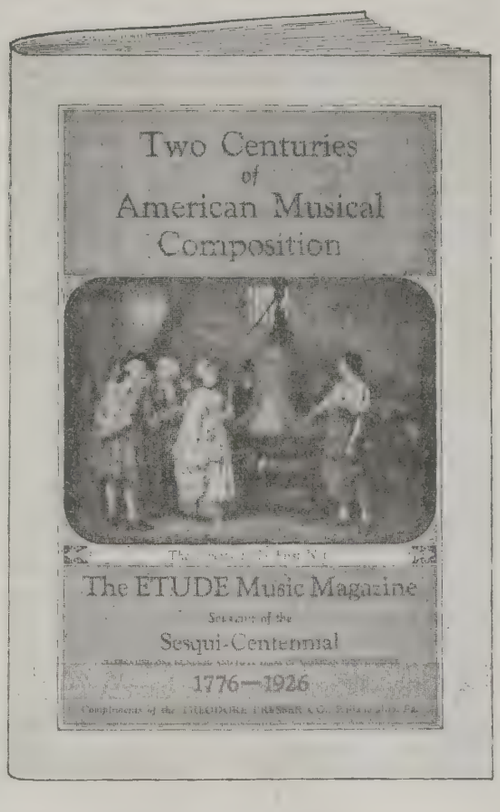
A charming Christmas cantata. This work will make a splendid novelty for a special musical service.

Prince of Peace.....J. Truman Wolcott .75

The text of this inspiring cantata is chiefly from the Bible, following somewhat the lines of Handel's "Messiah." The solo parts are well divided, and are interspersed with strong and telling chorus numbers.

OUR STOCK OF CHRISTMAS MUSIC IS NOT LIMITED TO THE NUMBERS NAMED ON THIS PAGE AND ANY DESIRED CHRISTMAS MUSIC, NO MATTER BY WHOM PUBLISHED, CAN BE FURNISHED PROMPTLY.

CHOIRMASTERS—Any of the above may be ordered for examination or tell us the capabilities of your choir and soloists and we will send suggestions



THEODORE PRESSER CO., *Music Publishers and Dealers,* 1712-1714 Chestnut Street PHILADELPHIA, PA.

OWING TO THE IMMENSE DEMAND

We Have Made Arrangements to Furnish Additional Copies of

"TWO CENTURIES IN AMERICAN MUSICAL HISTORY"

At a Nominal Price to Partially Cover Printing and Mailing Cost

This handsome SIXTY-EIGHT PAGE book was originally issued by THE ETUDE Music Magazine as a souvenir of the Sesqui-Centennial for free distribution. It contains over FOUR HUNDRED PORTRAITS OF AMERICAN COMPOSERS from Francis Hopkinson to the present day.

No other book in print has anything approaching this remarkable collection,—(not even books costing $3.00 or $4.00.) In addition to this it has SIXTEEN COMPLETE PIECES OF MUSIC in small size.

COVER IN THREE COLORS

THE enormous demand and the very great cost of manufacture makes it impossible for us to distribute any more copies without asking our friends *to share with us the cost of production.*

The book is invaluable to teachers who desire this rare collection for their work with their pupils. It is a monument to American musical achievement.

EVERY PUPIL IN AMERICA OUGHT TO HAVE ONE
EVERY CLUB MEMBER SHOULD HAVE ONE

Therefore we have extended our printings and shall be glad to send copies to all who desire them in any quantity for

10 CENTS A COPY

ONE DOZEN COPIES FOR $1.00 **ONE HUNDRED COPIES FOR $8.00**

The prices quoted are less than the actual cost of manufacture

ORDER PROMPTLY. WHEN THIS EDITION IS EXHAUSTED NO MORE WILL BE PRINTED

The Book cost thousands of dollars to publish

The

Beauty Cream for Busy Women

FOR girls and women whose activities leave little or no time for that all important daily attention which assures a good complexion, HELENA RUBINSTEIN, the noted beauty specialist, provides an effective, quick beauty treatment in one unique preparation — VALAZE PASTEURIZED FACE CREAM.

Differing from any other cream you have ever used, Valaze Pasteurized Face Cream is the basis of the famous beauty regimen at the Helena Rubinstein Salons.

VALAZE PASTEURIZED FACE CREAM combines within itself all the virtues of a simple, corrective and protective, beauty treatment.

Cleanses perfectly
Molds out the "tired look" about eyes and forehead
Cools, soothes, refreshes
Protects the skin from coarsening effects of sun, wind and weather changes
Revitalizes the skin
Creates a complexion of velvet smoothness
Keeps skin of hands and elbows pliant
And is, in addition, an excellent make-up base.

Give yourself a daily two-minute treatment with this unique cream and note the decided improvement within the short space of two weeks.

Excells for Oily Skins

This remarkable cream is incomparable for all normal skins and because of its unusual absorbent properties, is the *only* cleansing cream that positively benefits an oily, pimpled or acne blemished skin.

VALAZE PASTEURIZED FACE CREAM

4 oz. 1.00, ½ lb. 2.00, 1 lb. 3.50

VALAZE FINISHING TOUCHES—scientifically compounded of the purest ingredients—safeguard and enhance the complexion. Powders 1.00 to 5.50, Rouges—Compact 1.00. Rouge-en-Creme 1.00 to 5.00. Lipsticks 1.00, 1.50. Cupidsbow—*new*—the selfshaping lipstick 1.50. Sold by the better stores everywhere or may be had direct from Dept. E-11

Now You Can Realize Your Musical Ambitions

housands of musicians and teachers feel the need of higher and more advanced training in music as a means of greater accomplishment and sed income. Perhaps you, too, have felt this need. If you have exhausted the possibilities of your present musical training, then you should he future your careful consideration. There are endless higher positions in music—greater opportunities—ready and waiting for you just as is you are ready for them.

Study in Your Own Home Under Master Teachers

you can afford the time and the large amount of money necessary to attend a Resident Conservatory, then you have a wide choice of rade musical institutions. If, however, like thousands of ambitious men and women, you must pursue your musical training in the time er from your regular duties, and at a nominal expense, then the University Extension Conservatory offers you the sure, proven and guar- l means to the attainment of your highest musical ambitions.

Ideal Courses for Beginners and Students

nts and those wishing to take up the Study of Music he most approved and authoritative methods will find dents' Courses ideally adapted to their needs.

are remarkable in their simplicity and thoroughness, from the first rudiments of Music by easy, progres- os to real proficiency and accomplishments. The lessons fusely illustrated with photographs from life and with explanations of every important point, so that a h understanding of proper technique is insured.

istruction is individual and under the personal direction ly qualified teachers who keep closely in touch with the s progress by means of a very wonderful system of ition papers throughout the course.

u wish to take up the study of music, or, like many 's of music lovers who enroll with us each year, you resume the study after having been obliged to discon- temporarily, be sure to write for particulars of our . We will have a very inspiring message for you.

ousands of Letters Like These in Our Files

s Certified Teacher

e successfully passed the State Board Examinations now an accredited teacher in the State of Oregon. I to your Normal Piano Course, for I tried to pass the tion before, but was not proficient in the answers, and Then I saw your ad in THE ETUDE and determined to Course. It has been successful, and I am very grateful.
MRS. LULU E. DIEBEL, Seaside, Oregon.

Chorus Won First Prize in Interscholastic League

Conservatory has received considerable advertising me, as my Junior Chorus recently won first prize in rscholastic League. They competed with seven schools of which are large independent schools. I feel that f my success is due to Mrs. Clark's course in Public Music. MRS. ELSIE V. POST, Glen Flora, Texas.

erwood Normal Course Systematic And Complete

Sherwood Course has taught me many things I have never heard any of my private mention. The course has enabled me to increase the size of my class and I can't our methods too highly. I recommend them to all.
MARY ELLEN FOLEY, Owosso, Michigan.

one—Result of Weldon Course

Weldon lessons have benefited me much. My tone is clearer and better, and the as greatly improved. My breathing has also improved to a great extent, and I at the high tones are much easier for me than ever before.
PAUL BLOEDE, 615 R 124th St., Cleveland, Ohio.

in Convent Praises Courses

a graduate of your Harmony, History and Advanced Composition Courses I want hat I think your courses cannot be improved upon. While they are not in any *hort* road to success, they surely are a most *safe* one. I trust that this year will u a large class of eager new students, and that they will enjoy the work as much
SISTER M. AGNITA, 60 Broad Street, Providence, R. I.

Teacher Increased Size of Class

will acknowledge my Harmony Diploma. At the commencement of my studies , I was a violin teacher with plenty of time on my hands. My class has grown times that size. I command an increased fee and have a waiting list.
SAMUEL GRIFFITHS, New Bedford, Mass.

Musical Training of University Grade

This great Musical Organization—now in its 25th successful year—offers to ambitious men and women Musical Training in Normal and Advanced Subjects of the highest grade. Our Diplomas, Teachers' Certificates and Bachelor's Degree are granted by authority of the State of Illinois.

Extension Training has received the endorsement of the World's greatest Educators. Practically every great resident University now offers accredited subjects by Extension Methods, and it has been found that such work is often of a higher grade than that done in the class room.

The highest type of Musical Training by Extension Methods, as developed and perfected by the University Extension Conservatory, is not an experiment, not a makeshift, but has proven its value and soundness in the careers of thousands of musicians and teachers who owe their success entirely to the personalized and painstaking coaching of this great school.

Courses of the Highest Authority

All University Extension Conservatory Courses are the work of America's greatest Authorities and Teachers. The names of Sherwood, Protheroe, Rosenbecker, Gunn, Heft, Weldon, Clark, Crampton, Siegel, Wrightson, Stiven, etc., are known and honored throughout the Musical World. The Extension Courses in Music they have prepared for you have received the endorsement of such great Masters as Paderewski, Damrosch, Sauer, Moszkowski, Sousa, and countless others.

Send for Sample Lessons—FREE

The World of Music

NKE HARLING

"Deep River," a new opera-drama, by W. Franke Harling, to the libretto of Laurence Stallings, had its world premiere at the Shubert Theater, Philadelphia, on the evening of September 24, winning the approval of a house filled with critical music-lovers. At the close of the second act the composer was called before the curtain to receive a ten-minute ovation. Then, at noon e 26th, more than a hundred leading lovers and prominent members of the ssion gathered at the Penn Athletic for a luncheon complimentary to the oser, the librettist and Mr. Arthur Hopthe producer.

e Right to Collect Royalties from broadcasters, theaters, and other users sic for profit, was won by the American y of Composers, Authors and Publishers, h a decision in August by the Department of Justice at Washington, D. C.

e "Magic Flute" is announced as the evival of the Metropolitan Company's , and it will be given during the opeek of the season. How delightful the neous Mozartian melodies will be to the fter batterings by much that passes as rnism" in music.

Choir of St. George's Chapel, sor, has been invited by the Canadian ment to visit Canada in January, for rpose of giving programs of English music until Easter. The Dean of r and Dr. Fellowes, musical director of oir, will accompany the organization.

nch Operas by Entirely French are reported to be assured us this sea- an arrangement which General Direcitti-Casazza of the Metropolitan has vith the officials of the Opera-Comique s for the bringing over of a group of emost singers. After a series of perces in New York, a tour of the principal an cities is contemplated.

Annual Worcester Festival was tober 6-9, with Albert Stoessel conductnorus of three hundred voices supported New York Symphony Orchestra. At the concert Verdi's "Manzoni Requiem" g commemorating the twenty-fifth anry of the composer's death. For this ists were Helen Traubel, Sophie Brasarles Hackett and Fraser Grange.

rner began "Tannhauser" in while stopping at a modest inn in the ving of the castle of Schreckenstein assig; and its romantic atmosphere is have inspired much of the Wartburg f the second act. All of which is re- by the sale of the estate to a Czech s Club which will demolish the castle a modern building on its site.

e New American Singers—Florsgen and Louise Loring, sopranos, and apaport, tenor, have been added to the f the Chicago Civic Opera Company.

AVINSKY

The La Scala Orchestra symphonic concerts of the last season resulted in a deficit of one hundred and fifty thousand lire (about six thousand dollars at present rates of exchange). A large part of this is charged to the one thousand dollars' fee paid to Igor Stravinsky for each playing of his concerto, the largest ever paid in Milan to an artist excepting the one hundred and fifty l lire paid to this same composer for his "Petrushka" and "Le Rossigilan, also, has its "good angels," and l patron of symphony, Count Cicogna, d the deficit.

st of Bizet, composer of "Carmen," erected in the lobby of the Casino ouse of Spa, Belgium. As a feature ledicatory program, Jacques Bouhy, interpreter of the rôle of *Escamillo*, wreath of laurel upon the bust. A nce of "Carmen" completed the cereith M. Bouhy occupying a prominent

Hurdy-Gurdies are to be banished from the streets of Seattle by a reformation which started in the Police Department. Here is a police department which ought to receive popular ovations on a coast-to-coast tour.

William T. Giffe, an honored American musician, died recently at Seattle, Washington, at the age of seventy-seven. Born in Portland, Indiana, he was one of the pioneers in spreading musical culture in the Hoosier State. He was long active in public school music, and was a well-known composer and author, having published a number of music books. A veteran of the Civil War and active in the work of the G. A. R., he was a member of the famous Grand Army Quartet which was a popular feature of all meetings of the organization. Mr. Giffe was a personal friend of the late Mr. Theodore Presser.

An American Tenor, Thaddeus Harvey (Taddeo Harvé) sang the tenor role in a performance of "I Puritani" at the Bellini Festival held in Catania, Sicily, the latter part of June, to commemorate the one hundred and twenty-fifth anniversary of the composer's birth.

"Bella Donna," an opera by Samuel Harwill, of Salt Lake City, is to have an early première in Milan whither the composer will soon go, having won a five-years' fellowship in the Royal Academy of Music of that city of operatic fame.

Municipal Summer Opera in St. Louis this summer broke all former records of the organization by drawing a gross attendance of 539,750, more than sixty thousand beyond the number for last season. Advocates of grand opera in English will be cheered by the report that, though the organization produces mostly light operas, the largest attendance of any week of the twelve was attained by "Il Trovatore," which thus achieved an honor held by "The Merry Widow" since 1923.

The Museum of La Scala, Milan, often said to be the most valuable collection of operatic relics in the world, was recently visited by thieves. Among the items missing are a sword, once the property of Napoleon, the jewels of the famous dancer Marchionni, and valuable manuscripts including the original scores of several operas.

The Famous Hallé Orchestra of Manchester, England, because of demands of the musicians' union, has drifted into financial shallows, and a movement to raise an endowment is being considered. The organization can well be proud of its honored past and of the great contribution which it has made to the musical culture of Great Britain.

The National Association of Negro Musicians, which convened in Philadelphia early in August, went on record against the "exploitation of Negro art by white people," and urged that "every effort be made to keep Negro spirituals from being commercialized and cheapened by their use on the vaudeville stage and in theaters and other places which do not provide a proper setting for them."

More than 1,500,000 people listened to the Edwin Franko Goldman Band concerts on the campus of New York University and in the Mall of Central Park, during the past summer.

The Annual Salzburg Festival was held this year from August 7th to 29th, with leading singers from the Vienna Opera House and Bruno Walter as conductor. As usual, the works of Mozart held the chief interest with two productions each of "Don Giovanni" and "Abduction from the Seraglio," also his instrumental compositions appearing on many programs and furnishing the entire fare for one quartet and one orchestral feast.

Isidore de Lara, the English composer, has fallen heir to one million francs, and an extra fifty thousand francs as executor's fee, by the will of the Dowager Princess of Monaco, widow of Prince Albert I. Before marriage the princess was Miss Marie Alice Heine, of New Orleans, and her friendship with the composer had begun some forty years ago.

Puccini's Villa at Terra del Lago is being transformed into a national museum and it is here that the body of the great composer is soon to be entombed. Premier Mussolini is chairman of the committee in charge of the shrine and King Victor Emanuel is its patron. A monument to the composer is being erected on the shores of the lake; and the government has contributed one hundred and fifty thousand lire to the project.

Meyerbeer's "Les Huguenots" is written to a libretto woven about the massacre of St. Bartholomew in 1572. The bell which Charles IX of France ordered rung as a signal for that night's terrors still hangs in the square tower of St. Germain l'Auxerrios, constructed in 1435.

EDWARD MACDOWELL

The $300,000 MacDowell Colony Endowment Fund, which it is hoped soon to complete, is to be aided by a "Children's Crusade" which is to be organized through the instrumentality of the Junior Clubs affiliated with the National Federation of Music Clubs, under the presidency of Mrs. Edgar Stillman Kelley. This retreat for creative workers, dedicated to the memory of probably our most gifted American composer, is no less a monument to the devotion of Mrs. MacDowell, who, just as Clara Schumann gave the ripest years of her great pianistic art to the disseminating of interest in Robert Schumann's compositions, has made a life-work of giving permanence to the ideas and ideals of her great husband.

The Second "Old-Time Fiddlers' Contest" was held in the Municipal Auditorium of Apollo, Pennsylvania, on September 2. There were prizes for fiddlers over fifty and a trophy for those over sixty-five. With Apollo entertaining the Old Fiddlers, there must have been "A Hot Time in the Old Town."

The Rehabilitation of Italian Opera and regaining its former prestige throughout the world is the object of the government at Rome. The famous San Carlo of Naples has been reacquired by the community and prizes in unlimited numbers are offered. Any work recommended by a council of judges may win an award of as much as one hundred thousand dollars, four-fifths of which is to be used as a subsidy for the management producing the work, and the other fifth to be divided between the composer and librettist.

C. A. WOODMAN

Clarence Albert Woodman, general manager of the Oliver Ditson Company of Boston, died suddenly on September 9. Born of old New England stock, and a descendant of John Alden, he became a Ditson employee as a lad in 1874. On the death of the founder of the company, in 1888, Mr. Woodman's comprehension of the spirit and methods of the firm brought him rapid promotions, till in 1907 he was made general manager of the house. He had a laudable ambition to sustain the Oliver Ditson Company's position as one of the leading music houses of the world, and, in achieving this, preserved a charming personality which made him one of the most loved and respected men in his phase of business life.

"Rose Marie," the American musical comedy, has broken the records for the famous old Drury Lane Theater of London, having some time ago celebrated its six hundred and twenty-fifth performance with receipts of more than two and a half million dollars.

Negro Music is having its day in Europe. The most popular entertainments in Paris are the all-black revues, and Negro tunes are being sung everywhere. At Marguerite d'Alvarez recent concert in Queen's Hall, London, the most applauded song of the great Peruvian-American contralto was "Nobody Knows the Trouble I've Seen."

Folk-Dancing was a unique feature of the recent wedding of Dr. R. Kenworthy Schofield of Trinity College, London, and Joan Morris, both of whom are members of the English Folk-Dance Society. The bridal couple led a Morris Dance from the church to the place of the reception which followed.

At The Teatro Colon of Buenos Aires a brilliant season of international opera closed on the evening of August 10, with a gala performance of "Tannhauser." Among the cast were the following singers familiar to opera goers of "The States:" Karin Branzell and Gustav Schützendorf, of the Metropolitan, and Alexander Kipnis, of the Chicago Civic Opera.

One Hundred Years as Bell-Ringers of Southwark Cathedral (London) has just been completed by the Mash family. Formerly known as St. Saviour's, Southwark, six of its bells were purchased from Henry VIII. The grandfather of the present incumbent helped to ring the muffled peal for the death of George IV in 1830.

The Teatro de la Scala, the acme of the sumptuous of its time and still the largest in Europe, was opened in 1776, so that it, too, celebrates this year its Sesqui-Centennial. It has seven tiers of boxes with circles and galleries above. Why not love Italy in America, when she gave us Columbus, our greatest *divas*, as well as Caruso, and the model of our "Diamond Horseshoes" to which they should sing.

RUDOLPH GANZ

Rudolph Ganz, conductor of the St. Louis Symphony Orchestra, was recently called to Washington, where the French Ambassador conferred upon him membership in the Legion of Honor, in recognition of his advocacy, during the past twenty years, of modern French music. Also, he recently has been elected as a corresponding member of the Royal Academy of Florence, Italy.

The old Teatro Lirico of Milan has been purchased by the municipality—another link in the movement to nationalize the leading opera houses of Italy.

Woodwind News, in its callow youth of Volume 1, No. 2, has come to our desk, a most welcome visitor. Skillfully edited, and typographically a work of art, it should find a cordial welcome and helpful existence among players of these instruments so fascinating in tone and execution.

It is the constant ambition of the editors and publishers of the "Etude" to make each issue of the journal worth many times more, in practical instruction, stimulating inspiration and real entertainment, than the price of the entire year's subscription. The music lover can not possibly find a better two-dollar investment.

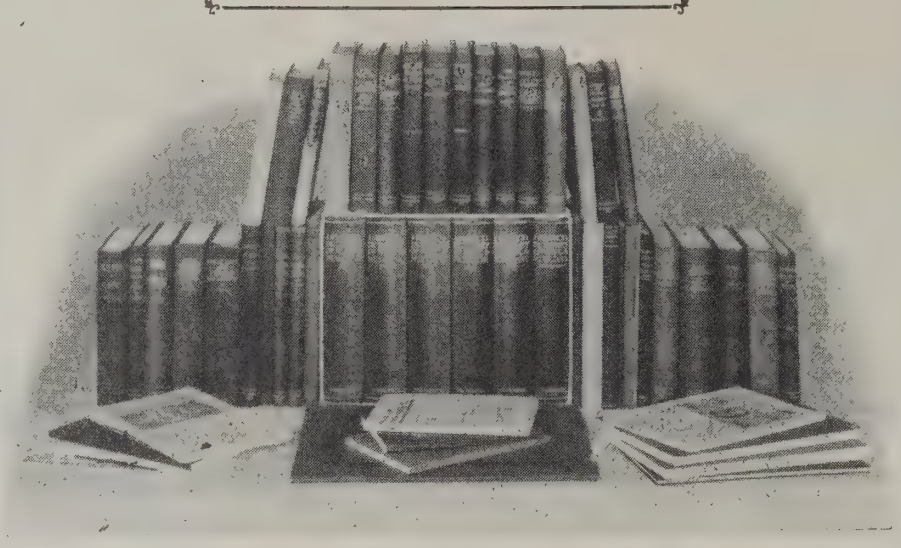
Prize Contest



Twenty-Five Prizes Open to All Etude Readers

"WHY EVERY CHILD SHOULD HAVE A MUSICAL TRAINING"

What Can You Say on This Subject?

For years THE ETUDE MUSIC MAGAZINE has devoted a great amount of space to indicating how a musical training is of great value to the child in developing rapid thinking, accuracy, self-discipline, memory, good taste, muscular, mental and nerve co-ordination.

We have brought to our readers' attention the opinions of many of the greatest thinkers of the time, pointing to the fact that the training received in the study of the art, particularly in the study of an instrument (including the voice), has a very great significance in the fields of Religion, Education, Sociology, preparation of the mind for higher accomplishments in Art, Science and Business, in Musical Therapeutics, and other inspirational themes. Now we should like to have an opportunity to print the boiled-down opinions of some of our readers upon the subject at the head of this column.

A One-Hundred Dollar Musical Library

CONDITIONS

The contest closes December 31st, 1926. All manuscripts must be in our office at 5 P. M. on that date.

Anyone may contribute. It is not limited to subscribers to THE ETUDE.

The Essays must be between three and four hundred words in length.

The Essays must be written on one side of the sheets of paper. Kindly write as legibly as possible. When feasible have the Essay typewritten.

Address "THE ETUDE Prize Essay Contest," THE ETUDE MUSIC MAGAZINE, Philadelphia, Pennsylvania.

Be sure to put your name and address at the top of each page of manuscript.

Essays accompanied by return postage will be returned. All others will be destroyed within one month after the closing of the contest.

When the opinion of the Judges is divided between the merits of two approximately excellent manuscripts, neatness of appearance, clearness of expression and punctuation will be taken into consideration.

FIRST PRIZE

A Musical Library, Valued at One Hundred Dollars ($100.00)

Just think what a boon this wonderful library would be in any School or Home!

The following works selected from the publications of the Theodore Presser Company, at the regular retail prices, constitute this prize.

PIANO

Descriptive Analyses of Piano Works, *Edward B. Perry* $2.00
Stories of Standard Teaching Pieces, *Edward B. Perry* 2.00
Great Pianists on Piano Playing, *Jas. F. Cooke*.... 2.25
Basic Principles in Pianoforte Playing, *Josef Lhevinne*..... .60
Principles of Expression in Pianoforte Playing, *A. F. Christiani* 2.50
Piano Playing with Piano Questions Answered, *Josef Hofmann* 2.00
Well Known Piano Solos and How to Play them, *Chas. W. Wilkinson*..... 2.00
Science in Modern Pianoforte Playing, *Mrs. Noah Brandt* 1.00
Master Lessons in Pianoforte Playing, *E. M. Bowman* 1.50
The Embellishments of Music, *L. A. Russell*..... 1.25
The Pedals of the Pianoforte, *Hans Schmitt*..... 1.25
Pianoforte Study, *Alex. McArthur*..... 1.50
How to Play the Piano, *Mark Hambourg*..... 1.50

GENERAL

Grove's Dictionary of Music and Musicians.....$20.00
Old Fogy, His Musical Opinions and Grotesques, *Jas. Huneker* 1.50
Reminiscences of a Musician's Vacation Abroad, *Louis C. Elson*..... 1.00
The First Violin, *J. Fothergill*..... 1.50
Music and Morals, *H. R. Haweis*..... 2.25
Music Study in Germany, *Amy Fay*..... 2.00
Mistakes and Disputed Points in Music and Music Teaching, *Louis C. Elson*..... 1.50
Music and Culture, *Carl Merz*..... 2.25
Choir and Chorus Conducting, *F. W. Wodell*..... 2.00
Piano Tuning, Regulating and Repairing, *J. Cree Fisher* 2.00
The Education of the Music Teacher, *Thos. Tapper*..1.75
What to Play—What to Teach, *Harriette Brower*... 2.00
Business Manual for Music Teachers, *Geo. C. Bender* 1.25
How to Understand Music, in 2 volumes, *W. S. B. Mathews* 4.00
Musical Progress, *Henry T. Finck*..... 2.00
Musical Mosaics, *W. Francis Gates*..... 2.00
Indian Music Lecture, *Carlos Troyer*..... .50

HISTORICAL

Standard History of Music, *Jas. F. Cooke*.....$1.50
Complete History of Music, *W. J. Baltzell*..... 2.25

BIOGRAPHICAL

Secrets of the Success of Great Musicians, *E. Pirani* $2.00
Anecdotes of Great Musicians, *W. Francis Gates*.. 2.00
Music Masters, Old and New, *Jas. F. Cooke*..... 1.25
Life Stories of Great Composers, *R. A. Streatfield*.. 2.25
Celebrated Pianists of the Past and Present, *A. Ehrlich* 2.50
Portrait Biographies:
Gallery of Distinguished Musicians, *A. S. Garbett*. .75
Gallery of Eminent Musicians, *A. S. Garbett*..... .75
Gallery of Musical Celebrities, *A. S. Garbett*..... .75
Great Men and Famous Musicians on the Art of Music, *Jas. F. Cooke*..... 2.25

THEORY

Harmony Book for Beginners, *Preston W. Orem*...$1.25
Theory and Composition of Music, *Preston W. Orem*..1.25
A Treatise on Instrumentation, *E. Prout*..... 1.00
Musical Forms, *Ernest Pauer*..... 1.00
Ear Training, *Arthur E. Heacox*..... 1.00
Primer of Facts About Music, *M. G. Evans*..... .60

VOICE

Great Singers on the Art of Singing, *Jas. F. Cooke*.$2.25
What the Vocal Student Should Know, *Nicholas Douty* 1.00
How to Sing, *Luisa Tetrazzini*..... 2.00

SECOND PRIZE

A Musical Library, Valued at Fifty Dollars ($50.00)

This library may be selected from the foregoing list to the total of Fifty Dollars.

THIRD PRIZE—Twenty-five Dollars Cash. FOURTH PRIZE—Fifteen Dollars Cash. FIFTH PRIZE—Ten Dollars Cash.

ADDITIONAL PRIZES

For the next ten Essays which, in the opinion of the Judges, deserve recognition a Cash Prize of Five Dollars each will be awarded.

Following this in order will be ten more prizes, each consisting of a subscription to THE ETUDE for one year.

THE ETUDE MUSIC MAGAZINE, Theodore Presser Co., Publishers 1712-1714 Chestnut Street Philadelphia, Pa.

THE ETUDE

NOVEMBER, 1926 | Single Copies 25 Cents | VOL. XLIV, No. 11

A Splendid Season

THE BRISK November days are here and the season is now in full swing. Never has a musical season started with such vim and such real interest.

America is alive with things musical from coast to coast. The appreciation of the art is so great that parents everywhere realize that the child who does not have his musical opportunity is being deprived of one of his real birthrights.

The radio, the talking machine and the player piano have proven splendid missionaries of the music teacher. Parents now comprehend that the student who is actively engaged in studying a musical instrument is getting a kind of mind, muscle and nerve training that cannot possibly be secured in any other way.

Shades of Plato! What would the old philosophers who climbed the heights to the Parthenon have thought of the America of 1926? All that they preached and taught about music—all of their wonderful ideals of music's proper part in education and in the state—is being developed in America to an extent that they could hardly have dreamed possible.

It has not come to this wonderful appreciation without an enormous amount of foundation work upon the part of noble men and women of yesterday. The late Dr. Gunsaulus, of Chicago, used to say that every great accomplishment of man was first a dream, then a plan and finally a deed.

The dreams of Lowell Mason, Theodore Thomas, Edward MacDowell, Eben Tourjee and Theodore Presser are now deeds.

The procession of earnest students to music studios is unending. The value of their training to the American state was realized by the late Dr. Eliot, former president of Harvard, more than by any other general educator of his time. It was Eliot who pointed out the immense value of music as a mind trainer. His great work is done, and as he sleeps in the little New England cemetery he must surely dream once more of the wonderful renaissance of music study in the new world.

We congratulate the teachers of America and the students of America upon their extraordinary activity this season.

The Man of a Thousand Melodies

SCHUBERT has been called "the man of a thousand melodies;" but that is a libel upon his enormous fecundity, because he might better be termed the man of two thousand melodies. Probably no composer of history produced so many themes. It is inconceivable that, in the short span of thirty-one years, any human could pour forth such an amazing number of themes, many of them immortal.

His Opus 1 is reputed to have been his famous song, "The Erl King," to which Breikopf and Hartel give the date 1815. Schubert was then eighteen years old. As a matter of fact, however, he commenced writing before he was thirteen years of age; and in 1810 he wrote a composition with the grewsome title, "Corpse Fantasia," for the pianoforte, arranged for four hands. The manuscript consists of thirty-two closely-written pages with one dozen sections. One peculiar characteristic was that each section ended in a different key from that at the beginning. During the next year he wrote *Der Vatermörder* (The Father Murderer) and *Hagar's Lament*. This piece assumed the dimensions of a Cantata and was such a remarkable revelation of the work of a fourteen-year-old boy that Salieri at once recommended that he be placed under the instruction of a noted teacher, Ruzicka, who soon pronounced the same verdict given by a former teacher, "God has been his teacher. He has learned everything."

Nevertheless, Schubert fortunately continued to receive the mundane training of Salieri and profited greatly thereby.

Notwithstanding his copious outpouring of melodies and his great natural achievements, Schubert was possessed with what might in this day be called an inferiority complex right to the end. This composer of many of the world's greatest masterpieces (including no less than 603 astonishing songs) came upon the scores of Handel's oratorios at a time when Schubert was only a short distance from the end of his career. He studied them carefully and then exclaimed, "I see how much I still have to learn; but I am going to work hard with Sechter and make up for lost time." He actually did visit the famous contrapuntalist, Sechter, and arrange for lessons. He was, however, too weak and too worn down with overwork, disappointment and poverty to carry on his ambition.

The last work of Schubert is not accurately determined. When he was on his death bed he worked industriously with the proofs of his song cycle, "The Winter Journey," a pathetic prophecy of one of the most tragic deaths in the history of art.

The Advance in Radio

HAVE YOU ever known of anything so astonishing as the way in which the radio has become a common household necessity within the space of two or three years?

It took the telephone, the talking machine, the typewriter and even sanitary plumbing almost a generation before they became household fixtures. Electric refrigeration was in actual use on a large scale for years before the householder looked upon it as a practical substitute for the iceman. The automobile was the toy of the venturesome rich for two decades before we all found out that we could not live without one.

With the radio, however, the instruments seemed to come down out of the skies like a cloud. The first sputtering and squawking toys were so marvelous that many families have had in the space of a few years several successive instruments, so amazing has been the improvement of the various types of receivers.

Now, with the supply of electric power merely a matter of sticking a socket into the house power, the improvement in tone and volume is so remarkable that it seems incredible. With the vast increase in the number and the quality of the programs given, the radio is just as much a domestic necessity as the water supply.

THE ETUDE has conducted ETUDE radio hours over the station WIP (Gimble Brothers, Philadelphia) on the second Thursday of every month, and over the station WLS (Sears Roebuck Foundation, Chicago) on the third Tuesday of every month, under the direction of D. A. Clippinger. These stations were resumed in October with great success. It is our ambition to increase the number of these educational programs in other cities, if possible. We are glad to hear from our friends who get these programs over the air, and welcome suggestions from all.

The more fine music we have introduced into the home over the ether waves, the greater will be the demand for music and music education.

On the second Thursday of November THE ETUDE Radio hour (Station WIP, Gimbel Brothers, Philadelphia, 8:15 P. M., Eastern Standard time) will introduce the phenomenal twelve-year-old child prima donna, Miss Rebecca Smith ("Adelina Patti the Second"), pupil of Mr. Julian Jordan, composer of the famous "Song that Reached my Heart."

Candling Crania

If crania could be candled like eggs the work of the teacher would be lighter but possibly less interesting. It is great fun finding out what is inside the pupil's mentality and then working with that mentality in the way most likely to produce profitable results.

In all that we learn from the teachers who are working with abnormal minds, in the "hospitals for mental hygiene," as asylums are always called in this enlightened day, we are astonished by the accomplishments of music. Under the direction of trained physicians who have been found very sympathetic toward the work, it has been possible to stimulate interest and bring back to varying degrees of normalcy individuals who have been for months little more than babbling fools. Occupational therapy also produces most beneficial results; but in many cases music seems to be a very valuable bridge from nebulous mind conditions to mental control, and ofttimes to cure and discharge from the institution. Our readers have been made acquainted with the remarkable work of Dr. Willem van de Wall in this connection.

If music is of such obvious value in helping to coördinate mentally sick individuals, how great must be its value with normal individuals. We cannot candle crania to see whether the grey matter is or is not likely to become addled; but we do know that music is one of the things which, all other conditions being equal, is of undoubted importance in maintaining a healthy brain condition.

The Fittest

There is nothing in which the survival of the fittest is better illustrated than in the way in which certain melodies seem to be invested with a kind of inexplicable longevity while other melodies fade away like snow in April.

Here is a mystery which musician and psychologist find it impossible to explain. Why, for instance, does the plaintive "Londonderry Air" survive while many other contemporary tunes with unquestioned beauty have become literally extinct? The secret is not in the words, for this very melody has had many different poems applied to its beautiful lines.

The public's ultimate decision is impossible to divine. Music publishers of all ages have employed experts to select material. The best experts are merely those who score the highest average. These same experts often make miserable blunders. Often too much success makes them over confident and careless in their decisions. The same applies to book publishers. Mark Twain, after he had issued the Memoirs of General Grant and made a small fortune from it, put out a number of works which proved all but disastrous.

Picking melodies for publication is really the basis of success in music publishing; because, when all is said and done, the thing which gives permanence to a musical composition is usually that very elusive thing called melody, even more than workmanship and highly trained musical skill. Stephen Foster had neither of these last and his melodies are literally imperishable.

Heliotherapy

During many years we have had numerous letters from teachers of music who have overworked themselves in the pursuit of their art and have described themselves as "nervous wrecks." The best remedy for this is not to do it, but after the damage has been done the cure sometimes has meant medical treatment and rest, frequently at a cost far too high to be borne lightly by the average teacher.

During the past year we have noted so many astonishing results from light therapy (photo-therapy) and heliotherapy (sun therapy), particularly in the cases of those who have undergone the strain of very exacting and confining sedentary work, that we cannot refrain from writing this non-musical editorial to tell about it.

Musicians undergo a mental and emotional pressure which few people realize. The task of teaching music demands the very best in the teacher. After some lessons teachers are literally exhausted. At the end of a season they show the effect of this drain upon their vitality.

By means of sun baths—exposing the body to the rays of the sun, particularly the morning sun, so that the skin becomes pigmented gradually day after day—there is (where no serious organic trouble exists) a most remarkable restoration of vitality. In fact, the whole body seems to be invigorated. The cheapest and best medicine in the world is in the heavens.

Light therapy has been the subject of volumes of clinical reports. Certain skin and lung diseases seem to have no other effective enemies. Artificial suns (the quartz-lights) supply in northern climes in winter what cannot be procured out of doors. Your physician knows all about this, and if you ever feel that your nerves have reached a point where you need attention, ask him to tell you about sun baths and light baths.

One famous American musician, who was in despair because he could not find a cure for a serious nervous malady, has just written us: "I am everlastingly grateful to you for your advice to take up sun baths. They have benefited me enormously."

The benefits are too wonderful not to pass the suggestion on to our musical readers.

Half-Baked

The reason for the failure of hundreds of music workers is not that of ingredients, but rather that the student has not remained in the artistic ovens long enough to produce a perfect product. Realizing that perfection is a goal rather than an accomplishment, it is nevertheless true that, because so few ever approach half-perfection, the waste of artistic human material is appalling.

The Europeans attribute this waste in America to our insatiable ambition to exhibit a product before it is complete. We try to jam into a few weeks of intensive study what would take a European student years to acquire. Because some extraordinary talents have been able to make miraculous progress in a very short number of weeks does not mean that all students can do this.

Talent is of two kinds. One represents the music workers who, like Mozart and Schubert, seem to require little or no instruction. They seem to be born with the knowledge and the skill. Their teachers stand astounded in witnessing their uncanny progress. Others, as Schumann, Beethoven and Brahms, are like diamonds—they require long and hard grinding before they reach their most beautiful polish.

On the other hand, there are students who study too long before testing their powers. They grow stale and sometimes discouraged. In our editorial of much-mixed metaphors, it might be well to say that every task, every composition, every study, should in itself be completely baked, never half-baked. In this way, in the end, the product as a whole will not be half-baked.

The teacher at the student's recital should take every precaution not to exhibit a pupil in any composition which cannot be played with real mastery. This may mean less difficult compositions for some aspiring pupils, but it is far better to have our cakes come out of the educational oven "browned to a turn" than to have them half dough.

A Great National Event

The Sesqui-Centennial Exposition in Philadelphia has performed a delightful service for The Etude Music Magazine. It has brought to our threshold thousands of friends whom we have met for the first time. Over seventy thousand visitors have registered at our display in the Liberal Arts Building. They have been most enthusiastic about what Secretary of State Kellogg terms "The finest Exposition I have ever seen." From a standpoint of Art, Music and Education, this exhibition has been unsurpassed. Better see it before it is too late. It would take weeks to see it all. But, above all things, "drop in" to see us.

Character Sketch of Schubert

By the Eminent Composer and Teacher

FELIX BOROWSKI

This is the second in a notable series of Character Sketches of the Great Masters by Dr. Borowski

...T IS AT ONCE interesting and remarkable that each of the great composers should have had personal characteristics and idiosyncrasies which set him ...rt from his fellow-immortals. The ...de and savage robustness of Beethoven's ...perament—never softened by constant ...ociation with the elegant aristocracy of ...enna—made him a very different person ...m the delicate and shrinking Chopin. ...ndel's imperious forcefulness and his ...faltering cocksureness made him a unique ...ure among the master-musicians of the ...rld; and it would be hard to find another ...at composer who was the personification ... the domestic virtues as was Bach. It ...re easy to continue with a catalogue ... contrasts—the dreamy languor of Rob... Schumann with the gentlemanly vivac... of Mendelssohn; the egregious egoism ... Wagner with the polished self-effacement of Liszt; the philosophic and optimistic *bonhommie* of Haydn with Tschaikowsky's spirit mixed with melancholy and ...rs.

...In the gallery of the immortals Franz ...ter Schubert is the chief representative ... Bohemia, to which he belonged by temperament as well as by inclination. "A gay ...e, but a terrible one," wrote Henri Mur...r, of the existence of those debonnaire ...ppets who dance through the pages of ...cènes de la vie de Bohême." And it held ...y moments and some terrible ones for ...hubert, the subject of this sketch. Yet ... is impossible to believe that he could ...ve been happy or contented with the ...ll-ordered progress from the cradle to ...e grave that is the lot of the average ...eller upon earth.

Impenetrable Reserve

...N AT LEAST one respect—and in that ... one only—does Schubert's character re...mble that of Frederic Chopin. This was ... the impenetrable wall of reserve which ...h built around his soul. Both had de...ted and loyal friends; but in neither case ...l even the most intimate associates come ...o touch with the real man who sat en...nched behind the barrier which hid him ...m the world. It is this barrier which ...uses it to be difficult to make an accu...te diagnosis of Schubert's personality; ...t it has not made it an impossibility. For ...en the most inscrutable person cannot ...event his actions and a stray word here ...d there from opening a little window ...rough which one may look, as in a glass ...rkly, and see into his mind.

One reason why Schubert hid his heart ...m those who were nearest and dearest ... him was that he was extraordinarily ...y. Now this shyness has been a pecu...rity of other composers, but it has taken ...er forms. With Brahms, for instance, ... took the form of aggressive self-repres...n, and he would often say a flighty or a ...uel thing when really his spirit was ...ved by tenderness and warmth. And ... would say it in order to mask the real ...eling which lay beneath.

His Physiognomy

...O OUTWARD view Schubert was ... not of the stuff of which heroes can ... made. Sir George Grove, who wrote in ...s famous dictionary the most sympathetic ...graphy of the composer in existence, ...clared that "Schubert was not sufficiently ...portant during his lifetime to attract the ...tention of painters, and although he had ...re than one artist in his circle, there are ...t three portraits of him known." These ...rtraits, the author goes on to state, were ...spectively the pictures made of Schubert ... Leopold Kupelweiser and W. A. Rieder, ...d the bust upon his tomb. Sir George, ...wever, was not altogether accurate, for ...ere are other pictures of the composer of ...rlkönig," than those which he enumer...ed. Moritz von Schwind made a sketch ... Schubert as he appeared in 1825, and he drew two other pictures which he brought into existence long after the master had been put into his grave. Johann Ender also drew Schubert, and so did Joseph Teltscher, who published a highly characteristic lithograph of his friend in 1828—the year in which Schubert died. There is a lithograph, too, by R. Hoffmann, and a water-color painting ostensibly by Franz Weigl. All these pictures disclose an interesting but by no means handsome countenance.

Schubert's friend and first biographer, Heinrich Kreissle von Hellborn, painted in words a picture rather less flattering than the pencils of the composer's artist-friends had drawn. "His round and puffy face," he wrote, "low forehead, projecting lips, bushy eyebrows, stumpy nose and short curly hair, gave him a negroid countenance which corresponds with that which is to be found at the Währing churchyard." Kreissle adds,—"However uncomely, nay almost repulsive, his exterior, the spiritual and hidden part of the man was noble and abundantly endowed." The unprepossessing exterior of Schubert was accentuated by his stumpy figure—the composer was only five feet and one inch in height—and by the general untidiness of his person. It was his friend and former schoolfellow, Joseph von Spaun, who once told Schubert —partly in jest—that he looked like a drunken cab-driver. But there was one feature which in Schubert's countenance caused those who looked upon it to forget his insignificant nose and tallow-like complexion. His eyes, so bright and beaming that they seemed to strike fire through his spectacles, were the mirrors of a beautiful soul, the outward expression of genius as rare as it was fine.

Schubert's Shyness

THE SHYNESS in Schubert, to which reference already has been made, was one of the negative qualities which, while it endeared him to his friends—who were moved to a half-tender protectiveness by reason of it—was the cause of much of his social non-success and consequent loss of prestige as a composer. For, in the early nineteenth century at least, the prosperity of musicians too often depended upon the amiable interest which they aroused in wealthy or influential patrons.

When Vogl, one of the most important singers at the Court Opera, was prevailed upon by Schubert's friends, Schober and Spaun, to meet the composer with a view to interesting himself in Schubert's songs, the tenor could scarcely have been favorably impressed by his first view of the creator of them. "Schubert entered," Spaun wrote, "with shuffling gait and incoherent stammering speech to receive his visitor." Yet Vogl was only temporarily alienated by the composer's awkward diffidence. He was destined to become not only one of the master's firmest friends, but also one of his best interpreters.

Schubert's friends, who had his success so greatly at heart and who realized how important it was that he should mix in society, used to lecture him upon his indisposition to do what other musicians had to do in order to further their interests. "He himself," wrote Kreissle, "never expressed a wish to mingle with others in society, where he was forced to put away his innate shyness, reticence and a good-natured nonchalant manner, but could not escape yielding occasionally to friendly pressure put upon him." But when Schubert was prevailed upon to put on his best coat, comb his hair and otherwise make himself appear like a gentleman, the results were generally unhappy, rather than the reverse.

Schubert Meets Beethoven

ON ONE OCCASION a meeting was arranged between Schubert and Beethoven, by Anton Schindler, who, an intimate friend of the composer of the "Eroica" Symphony, had made the acquaintance of Schubert and admired his genius. "In the year 1822," wrote Schindler, in his biography of Beethoven, "Franz Schubert set out to present in person, to the master he honored so highly, his variations on a French song (Opus 10). These variations he had previously dedicated to Beethoven. In spite of Diabelli accompanying him, and acting as spokesman and interpreter of Schubert's feelings, Schubert played a part in the interview that was anything but pleasant to him. His courage, which he managed to retain up to the very threshold of the house, forsook him entirely at the first glimpse he caught of the majestic artist; and when Beethoven expressed a wish that Schubert should write the answers to his questions (for the master was totally deaf at that time), he felt as if his hands were tied and fettered. Beethoven ran through the presentation copy and stumbled upon some inaccuracy of harmony. He then, in the kindest manner, drew the young man's attention to the fault, adding that the fault was no deadly sin. Meantime, the result of this remark, intended to be kind, was utterly to disconcert the nervous visitor. It was not until he had got outside the house that Schubert recovered his equanimity and rebuked himself unsparingly. This was his first and last meeting with Beethoven; for he never again had the courage to face him."

Schindler was wrong as to the last statement; for it was he who, when Beethoven was on his deathbed, in 1827, showed the master some of Schubert's songs and, in answer to Beethoven's interest in their creator, brought him in company with Anselm Hüttenbrenner to the great man's side. Nor was that the only occasion. Schubert went there again, but the mists of death already were settling on Beethoven's eyes and that hasty, impulsive speech of his was apparently about to settle into eternal silence. Yet he saw Schubert and made some signs with his hand; but no one could tell what he wanted to convey and Schubert left the room overcome by emotion.

Offends von Weber

DEPLORABLE as was Schubert's awkward shyness in society, he was quite able to assert himself when he thought the occasion called for drastic action. When Carl Maria von Weber visited Vienna, in 1824, in order to rehearse his opera, "Euryanthe," word came to him that Schubert—whom he already knew—had made unfavorable criticism concerning his new work and that he had declared it to be inferior to "Der Freischütz." Weber, who was having the usual troubles which beset composers who are dealing with opera managers, was nervous and inclined to resent slights, fancied or otherwise. "Let the fool learn something himself, before he ventures to criticise me," he said of Schubert.

Schubert received Weber's remark with the unfailing certainty which is insured by solicitous friends and acquaintances who are delighted to set geniuses by the ears, and, having inwardly digested it, betook himself to the lodging of the composer of "Euryanthe," carrying with him the score of the opera "Alfonso und Estrella," which he had written a year or so before. Schubert's work having been duly examined, Weber proceeded at once to the matter of

Schubert's animadversions on his own opera. To his astonishment and disgust Schubert not only repeated his strictures on "Euryanthe," but proceeded to enlarge upon them. Weber completely lost his temper. "I tell you," he shouted as he threw "Alfonso und Estrella" on the table, "that first puppies and first operas are always drowned!" But Schubert remained cool. "Alfonso und Estrella" was not his first, but his twelfth dramatic production.

Schubert as Conductor

PERHAPS the consciousness that he had the best of it, made Schubert determine to keep friendly relations with Weber intact. Nor was the composer of "Alfonso" less resolute when, at a rehearsal which had been arranged at the instance of Vogl to bring Schubert a conductorship at the Court Theatre, he put on the stage some scenes in order to demonstrate what he could do. The text for this music had been written by the manager of the theatre, Duport, and Nanette Schechner had been engaged to interpret the soprano music in Schubert's work. At the first rehearsal, held with piano, the vocalist found the principal aria too long and the accompaniment too overloaded. She entreated the composer to make the necessary alterations, but Schubert bluntly refused to change a single note. At the orchestral rehearsal the strain proved too great for Mme. Schechner. She broke down in the middle of the aria and sank exhausted into a chair which was standing by the proscenium arch.

Schindler, who was present at the rehearsal, described the remainder of the incident as follows: "There was a dead silence throughout the house and consternation in every face. Then Duport was seen going from one to another of the principals and discussing matters with the singer and the chief musicians present. Schubert sat through this painful scene like a marble figure, with his eyes fixed on the score before him. Then after a long interval, Duport advanced to the orchestra and politely addressed the composer in these words, 'Herr Schubert, we will postpone the performance for a few days, and I must beg of you to make the necessary changes in the aria at least in order to make it easier for Mme. Schechner.' Several of the musicians in the orchestra joined in begging him to yield. But Schubert had listened with increasing anger to the speech, and shouting out, at the top of his voice, 'I will alter nothing,' he shut the score with a loud bang, placed it under his arm, and marched home. Thus there was an end to all hopes of the appointment."

The Irritated Schubert

THERE CAN BE no doubt that when he was irritated, Schubert threw off his timid diffidence and, with it, not a little of that gentleness of manner which so endeared him to his friends. It was, indeed, his habit of boxing the ears of the children in the first grade of his father's school, when he was annoyed by them, which—if we are to believe Schmidtler—led to his dismissal as teacher.

Even if Schubert had shown more tact at this rehearsal with Mme. Schechner and had won his appointment as conductor at the Court Theatre, it is doubtful whether he would have been able to hold it long, for no man was less adapted to occupy a position which would entail regular habits and well-ordered routine. The composer was well aware of this himself; his applications for various posts—which were generally made at the instance of his friends—were handed in with hesitation and reluctance; and when they were rejected (as they always were) the applicant himself was the only one who rejoiced. It was his inability to understand the most elementary principles of business, too, which kept Schubert always poor.

There was really a demand in Vienna for his works, but only the publishers of them made money. Schubert sold the copyrights of six songs in his "Winterreise" to Haslinger, for a dollar and a quarter; and the great *Quintet for Strings, in C*—in which perhaps there is more loveliness than in any other work of its kind—for six dollars. Nor did the composer fare better with other chamber music works. The E-flat major trio for piano and strings brought him a little more than three dollars, and that after months of negotiation and expenditure of large sums in postage. Nor did Destiny cease from her ironic gestures after poor Schubert had given up his struggle with poverty and the battle with an indifferent world. For after his death, in 1828, an official inventory was made of his effects and everything which he had possessed in the world was valued at twelve dollars. This included all the unpublished compositions which Schubert left behind—a vast number—and the cash value of all of them was declared to be two dollars and twelve cents!

Schubert's Industry

THERE IS something pathetic in the ineffectual industry with which Schubert strove to bring beauty to his fellowmen. That the two dollars and twelve cents' worth of manuscripts, with their burden of ineffable charm, could be given existence, Schubert labored incessantly all his life. He rose early in the morning and began composing directly, often even before he was dressed. Frequently Schubert slept in his spectacles so that he could start work immediately he woke up, and having begun he continued for six or seven hours at a stretch. "When I have done one piece I begin the next," he once told a visitor who called on him the year before he died. And the piece which had been completed he thrust into a drawer and often never thought of it again.

It does not take a very long acquaintance with Schubert's music to discover the current of melancholy which flows languidly through it. It was, indeed, in his works that the composer was unable to hide the real Schubert. On infrequent occasions he did, indeed, let the world into the secret of his unhappiness and in words rather than in tones; but such words were wrung from him by experiences of misery or disappointment. "Picture to yourself," Schubert once wrote to his friend, Kupelwieser, "a man whose health can never be re-established, who from sheer despair makes matters worse instead of better; picture to yourself, I say, a man whose most brilliant hopes have come to nothing, to whom the happiness of proffered love and friendship is but anguish, whose enthusiasm for the beautiful—an inspired feeling at least—threatens to vanish altogether; and then ask yourself if such a condition does not represent a miserable and unhappy man.

'My rest is gone, my heart is sore,
Never, alas, shall I find it more.'

"I can repeat these lines now every day, for each night when I go to sleep I hope never again to wake; and every morning renews afresh the wounds of yesterday." And on another occasion Schubert said, "My music is the product of my genius and my misery."

The Merry Schubert

IT WOULD BE doing injustice to Schubert's character if the impression were to be given that he was continually living in the gloomy territories of misery and woe. If in secret he was often unhappy, Schubert was also full of fun when he found himself in congenial company. And congenial company, for him, constituted those bosom friends who lived with him in the merry kingdom of Bohemia. They were good fellows all, but they were not fools. Schubert did not consort with such. When a new member was introduced into the circle, Schubert would look to one and another of his companions and ask, "Kann er was?" ("Can he do anything?"), and it was in consequence of that continuous interrogation that the composer was nicknamed "Kanevas" by his friends.

It was in the Viennese coffee-house that Schubert and his companions set the stage for their jollities. One of his favorite jokes was to play *Erlking* on a comb with grotesque emphasis on the more dramatic portions, and this used to evoke peals of laughter from the crowd. Schubert laughed but little himself, and when he did laugh his mirth was a hoarse suppressed chuckle. Johann Mayrhofer, the poet with whom Schubert lived for some time, was accustomed to tease his companion and he used to charge at Schubert with a sword-stick that had a bayonet tied to the end of it; and as he plunged at the composer he would cry in the Viennese patois: "Was halt mich denn ab, du kloaner Raker?" ("What can stop me, you little rascal?"). Schubert would thrust him back, saying: "Waldl, wilder Verfasser" ("Waldl, you wild one!").

Although the master—like so many other composers—was unable to dance, he would improvise waltzes and galops by the hour for the edification of his friends. It would seem that in these tavern festivities Schubert would occasionally accommodate his system with more strong liquor than was good for it. W. von Chezy, who published a volume of "Recollections" of the master, declared that when Schubert arrived at that stage of bibulousness in which his will was weaker than his wine, he would retire to a corner and "nurse himself comfortably into a passion." The culmination of this metamorphosis arrived when Schubert turned himself into what Chezy termed "a laughing tyrant." "He would destroy everything he could," wrote that author, "and that without making a noise—glasses, plates, cups and other objects—and would sit simpering and screwing up his eyes in to the smallest possible compass." While Schubert's alcoholic excesses were probably not numerous and scarcely likely to do permanent injury to his health, it is certain that the Bohemian life, which meant late hours and irregular meals, took their toll of the master's years.

The Feminine Influence

ANY DISCUSSION of a great composer's character would be incomplete without some reference to his reactions to the gentler sex. Women played so important a role in the lives of certain masters of music—Beethoven, Chopin and Wagner, for example—that much of their music would not have come into existence at all if it had not been for the feminine influence upon it. In the case of Schubert there is little evidence to show that any passion, great or small, ever dominated his life. The countesses and baronesses in Vienna who so worshipped the illustrious Beethoven had no thought for the shabby, uncouth, poverty-haunted man who was occupied (although no one suspected it) in making glorious history for his country's art.

Yet there was one exception. The Countess Caroline Esterhazy, the younger of two daughters of Count Johann Esterhazy, had been a pupil of Schubert in Vienna and at the Count's country estate at Zselész. She was eleven when Schubert was first engaged to give lessons—at two gulden a lesson—to the young ladies; and it would seem that both the Count and his wife felt a mixture of friendliness and pity for the composer, for he was invited on various occasions to the

Franz Schubert

AS OTHERS SAW HIM:

BEETHOVEN

"Surely, the divine spark lives in Schubert."

GRILLPARZER

"He gave music to poetry and poetry to music."

GOETHE

(Commenting upon Schubert's setting of his poem, "The Erl King")

"I hardly know how to express myself. He has made the whole work a living picture."

SCHUMANN

"Time will never bring us another Schubert."

LISZT

"Beautiful sounds, freshness, animation, dream pictures, sorrow, comfort, tears and flames, pour from his heart."

BRAHMS

"Where is there a genius like that of Schubert, soaring so gloriously to the heavens."

RUBINSTEIN

"Bach, Beethoven and Schubert are the highest points in music."

The Marriage of Rhythm and Rubato

By HARRIETTE BROWER

IN THE BEGINNING was Rhythmus," was the dictum of Dr. Hans von Bülow; and every one has come agree with him, even if the self-evident th has not been realized before.

Rhythm is a far-reaching word and ans much. Books have been written on theme—books which go deeply into subject but are apt to confuse the stut with a multiplicity of words. A simeasy definition is required. Mathews ls Rhythm *Measured flow;* another s, *Rhythm is the Metre of Music.* In sic there must always be the sense of ving movement, for music does not stand l—unless it stops. And if it is "measd" it must have beats and accents.

So this great principle of beat and act we try to teach among the first things wn to a beginner. If we are faithful, not only try, we insist, in season and of season, that this principle shall be lowed. Two weapons of our warfare inst indolence and neglect of this vital nciple are: Counting aloud and use of metronome. What battles we have to it with those who have not learned to y in time, yet insist our weapons will se them to become dry and mechanical. spite of opposition we persevere, and reward comes when those with whom have labored *can* play two, three, four, , six or more notes to a beat—*can* alnate such groups of notes yet give them rect "time spots," with exact feeling rhythmic or "measured flow."

But such understanding of rhythm does come over night—except perhaps to especially gifted. It starts with the bener who learns to play one note to the t, while counting with metronome. Soon econd note is added, giving two notes a beat; later three are used and then r. As you see, the whole scheme is thmic from the start, especially so when ents are added. A student, whose train is developed in this way, has an almost orn sense of rhythm, beat and accent, ich is never lost or forgotten, even in formless modern music now so much fashion. It is good to have rudder and npass—a well established rhythmic se—when one is cast adrift on a shore- sea of sound.

With these fundamental principles well unded, the player advances to a wider look on Rhythm, found in the group- of smaller forms into larger, also into egular and varied forms and longer ases.

Artistic Rhythm

OME OF the masters try to tell us such so-called mechanical preparation artistic rhythm is quite futile and no avail, since the latter is quite differ- from the former. With all respect for ir opinion, we feel—and have proved—t such preparation is not useless but, on contrary, is of the greatest value in derstanding the artistic rhythm. The yer must be able to define and use meanical rhythms (so called) before he can artistic rhythm understandingly. This plies to the general student, not to the v gifted souls who feel the throb and lse of the music naturally, and take etic license as matter of course. Perps what they call artistic rhythm would me under the head of what we have rned to call *Rubato*—at least the veil beeen them is very thin.

Let us look a moment at the other side the picture.

Rubato

WHAT IS THIS magical word whose meaning seems so mysterious and le understood by the usual piano student? We are told the word means *robbed or stolen,* but how or what? We are also told that it is used principally in instrumental music; as a sort of rhythmic license, to emphasize the expression; that, in a general way, this most important and effective means of expression is left to the discretion of the player, and is permitted in the music of modern romantic composers, with the exception of Mendelssohn, who disliked any liberties taken with rhythm in his compositions, unless specially marked by him; and finally, that rubato must not be tried on the classics, for it would be sacrilege towards Bach, Mozart or Beethoven.

Thus spoke authorities over forty years ago. After that came Paderewski, who showed us that even the classics can be warmed into life by a judicious use of rubato. Dr. William Mason used to wax eloquent over the great Pole's poetic and rhythmically flexible interpretations of Bach and Beethoven, which he said, was not after the cut and dried manner of the schools, but filled with romantic feeling, due largely to the intelligent use of rubato. And why not?

Mating of Rhythm and Rubato

WHEN IT IS seen that a touch of rubato gives life and color to the quietest and most severe canvas, the question at once arises: "How can I add this brightening touch to my own playing? How can I join artistic to mechanical rhythm—how harness license with severity, poetry with prose, the matter-of-fact with the romantic?

It must all be done within reason, after careful thought. Perhaps the composer whose music lends itself the most readily to this quality, is Chopin. Of course you will answer that his music is easiest to ruin with excess of rubato. True, but we will not go to extremes. Remember we have had a thorough preparation of rhythmic training, which acts as ballast and holds us back from undue exaggeration.

Listen to what Paderewski himself says about Tempo Rubato in connection with Chopin's music. "This music, at once tender and tempestuous, tranquil and passionate, heart—reaching and overwhelming; this music which eludes metrical discipline, rejects the fetters of rhythmic rule; this music bids us hear and know that our nation—our land—the whole of Poland, lives, feels and moves in Tempo Rubato.

"Why should the spirit of our country have expressed itself so clearly in Chopin, above all others? Why should the voice of our race have gushed forth suddenly from his heart, as a fountain from unknown depths? The average Polish listener, unfamiliar with the art and literature of music, hears the masterpieces of Bach, Mozart and Beethoven with indifference, at times even with impatience. Polyphonic ingenuities, lucid enough to the trained understanding, are inaccessible to his ear; his mind loses its way in the mystery of fugues. But let Chopin's voice begin to speak and our Polish listener changes immediately. His hearing becomes keen, his attention concentrated; his eyes glisten, his blood flows more quickly, his heart rejoices, although tears are on his cheek. Be it the dancing lilt of his native Mazurka, the Nocturne's melancholy, the crisp swing of the Krakowiak; be it the mystery of a Prelude, the majestic stride of a Polonaise; be it an Etude, vivid and surprising; a Ballade, epic and tumultuous, or a Sonata, noble and heroic; he understands and feels all."

The Paderewski Background

SO RHAPSODIZES the Polish artist. Surely if any one can play with the true rubato spirit, he should be able to do so. Yet he preserves the pulse, the beat, the rhythm, even in the national music he so eulogizes. He, too, has a background of exact rhythmic fiber. For any one who is willing to play scales and arpeggios by the hour as he has been known to do, must have plain, exact, everyday rhythm, no matter how much rubato and nuance he uses to interpret Chopin, and the classics. All of which reverts to our first proposition, that of a clear understanding and drill in principles of rhythmic exactness.

It was Chopin who often said to his pupils: "Let your left hand be your conductor; it should keep time, even while your right hand plays rubato."

This idea—that one hand can play in exact rhythm while the other plays out of rhythm—has been much disputed. It has been called impossible by some, ridiculed by others. Yet, in spite of all, the principle stands: "One hand should keep time while the other retards or accelerates." We are told Chopin was a good time keeper, and that, notwithstanding measure-freedom and rubato liberties, he never overstepped the limit of moderation, or interrupted the general flow of rhythmic movement.

It seems that rubato is actively present in a number of ways:

1. As a temporary retard or accelerando;

2. When certain notes are protracted beyond their accustomed length; while others are quickened;

3. Both hands retarding or hurrying at the same instant;

4. Left hand keeping reasonably strict time, while the right hand hurries or retards slightly. This has been called the most beautiful way of all, and is the truly artistic rubato. Furthermore, this is in reality the true marriage of rhythm and rubato.

Most of these ways of applying rubato to modern music, can be studied by watching the performance of any of the great masters of the instrument, though naturally some of them employ it more than others. It is used by Gabrilowitsch when he wishes to sing a soulful melody on the piano. Friedman gives us the dainty capriciousness of the mazurka through sustaining here and there a prominent note for a fraction beyond its time-space and then hastening some less important notes. Brailowsky, though a Russian, has made such a deep study of the music of Chopin, that he is familiar with everything that master wrote. He enters so thoroughly into the spirit of this music that the appropriate fluctuations and slight nuances of tempo and rhythm seem to come to him naturally. Yet in general he preserves the necessary measured flow of movement, so that nothing is distorted or out of shape.

Applying Rubato More Generally

IT MUST NOT be supposed that the music of Chopin is the only kind that yields itself to the expression of rubato. Even the beauty of the classics can be engoverned by good taste and continence. Yes, in Bach also, can these time nuances hanced by an occasional flexible rhythm, occur, though used sparingly. In this same manner Dohnanyi recently played some Mozart, choosing a movement containing various running passages, ascending and descending. Not only were these running passages played with beautiful shadings but the top note of each figure was also slightly dwelt upon—just enough to take away the squareness and sameness.

Listen: Guiomar Novaes is playing the first movement of the Schumann Concerto. Note the solo, top of third page, piano score. Here is a melody in eight notes, eight of them to each measure. She is not playing them "straight along," for some are stressed more than others, some are held a little longer, others are a shade quicker. Yet the effect is regularity of rhythm, according to the conductor's beat. This is but one illustration—a hundred more could be culled from the same performance of this great work. And so with other distinguished artists; their use of this vitalizing effect is well nigh endless.

Style in Playing

WHY IS IT that the playing of some pianists now actively before the public quite fails to interest us? They can generally play all the notes of the pieces on their programs, they have reasonably good technic, with some understanding of dynamics, for they can play soft and loud. What then is the difficulty? They seem entirely to lack that illusive something which we call, for want of a better term, style. It is not what they do but what they do not do that ruffles us. We decide that playing correct keys with some degrees of light and shade, and keeping time, are not enough to interest us in that person's piano performance, even though he might be playing an entire Chopin program. I mention this composer as I feel that his music would induce any one, not a block of wood, to introduce some time-shadings into the score. But no—he uses but little or no rubato. Can such a thing be imagined in the music of Chopin? In short he does not play with style. He has never tried, or rather has not succeeded in expressing his own emotions in playing; he does not unite rhythm with rubato.

The Polish pianist, Ignaz Friedman, will take that same Chopin program, and it will at once blossom into life. There will be tiny shades of rubato in almost every measure, though not pronounced enough to disturb the measured flow of rhythm. And now, under his hands, the music speaks; now it interests; now it has *style*. Much the same result would be obtained from other well known painists.

The player who failed to interest us may say: "How can I acquire this desired style in playing—how make the music speaking and alive?" While doing the technical things here suggested, why not study lives of the composers you try to interpret. Interpret did I say? At present you only seem to play the notes. Learn about the master who set down those notes on paper and thus left his thoughts to the world as a precious heritage. Find out his mental characteristics, also under what circumstances he wrote certain pieces. Did he try to tell stories in his compositions, or did he only want to express sheer beauty in tones? Music that voices a dramatic story may be more difficult for you to express than the kind that speaks through beautiful forms alone, as in classic music. But either of these—in fact any kind of music—needs the saving grace of time-nuance or rubato, in a greater or less degree. And it is the union of rubato and rhythm that will help awaken the music to life!

In our brief discussion of this arresting theme, two facts have been stressed. First, the necessity of a background, a foundation of solid and exact rhythmic proficiency, a thorough grasp of rhythmical problems before variations can be successfully applied. Second, that while rubato gives added charm to interpretation, it

must not distort the rhythmic flow, nor destroy the melodic line. We are told rhythm is the life of music. Granting this—then rubato is the life of rhythm. Rubato is the human element, the tender touch, the soulful quality, the vitalizing principle, which charms and uplifts, when wedded to reliable rhythm.

(4) *How does the newer idea differ from this?*

(5) *In what ways may rubato be actively present?*

What Does "Technic" Mean To You?

By Floyd Matson

"Technic!" What a vast field it covers, and how often it is mistreated, especially by young students, to whom it suggests endless toil! In reality it means many things. Four outstanding classifications come to me:

First, there is the technic, relative to the mechanical part of playing, consisting of hand development, instrument construction, and so forth. This is a very important class, but not the only class, as many believe.

Second, there is the technic of tone. In this class comes much of the beauty of piano playing. To produce the tone combinations, pedal and hand relations, to listen for the right tone in the right place, opens up the doors to gorgeous fields of color, sunsets, mountains, oceans and all Nature. When we reach this stage, our music begins to be real, to produce beauty and reproduce art.

Third, there is the technic of being artistic, to use the right thing in the right place, the proper dynamics, tone, tempo, and so forth. Perhaps into this class come the things that lead to supremacy; for those who can control themselves, who can give enough and not too much, can have soul (not artificial "soul"), rise above the mediocre, the amateurish, and become great.

Fourth, there is a large, perhaps somewhat nebulous vastness, "Effect." Ah, the subtle thrill of a Paderewski, the sighing Chopin of DePachmann. Effect! The combination of tone, pedal, dynamics, technic, brains, talent and genius to make the right effect, not on the audience, but on yourself. For, if you intend to affect others, you must start at home and affect yourself. When your soul responds to your own playing, others will also respond. Go about your technic, knowing that as you progress, there opens for you gardens of trees and flowers, romance and exotic loveliness, all in the beauty of your own soul developed by yourself. And beyond the trying years of drudgery, always "just around the corner" lies the rainbow's end!

The Question of "More Pep"

By B. H. Wike

Frequently you will hear someone engaged in musical work say, "Play or sing this or that piece with more pep." Now, playing a thing with "more pep" means, with too many performers, playing it faster in order to make up in speed and swing what is lacking in understanding and accuracy.

Indeed at times you will find some of our grand old hymns taken with "more pep" until the meaning of the words is actually lost in the rush of movement. It would be hard to say whether the "jazz" spirit has anything to do with it or not, but there seems to be a tendency to copy some of its faults. Likewise, playing Handel's *Largo* as if it were a simple waltz destroys all the beauty of the piece, because this composition has, as one of its inherent qualities, a naturally slow tempo.

Then there is an ambition among some performers to imitate a celebrated musician who has speed, accuracy and understanding, all three nicely balanced. But too many amateurs think that speed is the main asset. The more keys they can strike and the more tones they can produce in a given moment is to them an index to their musical qualifications. "More pep," aside from an irrational tempo, often means botchy work amounting to inaccuracy of tone and quality, poor phrasing, perhaps none at all, and a desire in the performer to be regarded as possessing a really musical temperament.

When will people realize that there is such a thing as slow music which can be made just as beautiful, wholesome and satisfying as the faster kinds? Each, the fast and slow, has its place and should be so countenanced. Remember, too, that there are many variations of tempo between the fast and slow. Which, then, is called for as the one expressing "more pep?" Or, is it spirit and energy that are really meant instead of hurry and violence?

Gaining the Pupil's Confidence

By Caroline V. Wood

A teacher should always have time to listen to a child who wants to tell about things in his own child world. Perhaps it is a new sword, a dog or a doll. By acting interested and pleased you will be able to get closer to him as his teacher. In fact, you will not only gain his confidence, but also, by knowing how to appeal to his individual nature and mind, very often turn these conversations to account by using them as a basis for comparison in driving home musical ideas.

Scaling the Technic Ladder

By Norman Lee

There is no royal road to a good technic; of course, some have more natural facility than others. They have the fingers, so to speak, but the most gifted and the best endowed must nevertheless tread much the same path to success.

My friend, Mr. X., acquired technic through steady practice of finger exercises, scales and arpeggios for an hour and a half every day. From nine-thirty to eleven A. M., six days a week, he went steadily at them, each hand separately, then both hands together. Scales in unison, in thirds, in tenths and in sixths, scales in contrary motion, scales in double octaves, double thirds and double sixths. They were played very slowly at first, then increasing to a terrific speed.

He gave several hours a day to pieces, but nearly half of his practice period was devoted to scales. Even during vacation time, he spent one hour a day on them.

When he went to Paris to study, the first remark his music-master made was, "What a fine technic! Though you have other faults, as for technic you are in the class of foremost concert players. How did you get it?"

He answered, "Scales and exercises without ceasing during several years for an hour and a half a day."

The moral is: practice, practice, practice, your scales! The pieces will take care of themselves.

A Piano Lesson in Vaudeville

By Ralph Kent Buckland

One of the greatest technical difficulties for the advanced pianist is the gazelle-like jump into the upper reaches of the keyboard which, from time to time, in intricate compositions, must be made with a whole handful of notes, with no scale, arpeggio or climaxing chord, but only the slightest interval given in preparation for accomplishing of the feat. Persistent practice granted, it is largely a matter of confidence, and a correct mental attitude. As a factor in bringing this about, of no slight import is emulation. Displays of skill and muscular control in other lines of endeavor must be viewed in comparison, and lessons in surety derived therefrom.

The knife thrower cannot afford to have a misdirected motor impulse sway his throwing arm as he outlines with knives the figure of the girl standing flat against the board into which the keen knife blades bury themselves. A miss would mean a deep wound, perhaps even the life of his partner in the act. The knife thrower does not miss!

The man who balances the large, steel ball, of which the weight and hardness has been duly demonstrated, on top of a long pole, in turn balanced on his back-tilted forehead, is a wonderful lesson in control. After holding the ball in its balanced position for several minutes, with a sudden jerk he dislodges it. He catches the pole on its way down, and the heavy ball strikes the floor back of him with a resounding thud. The slightest error in calculation would mean, not a slightly jarring musical discord, but the horror of a crushed skull.

Is there not something to be gained by a consideration of such displays of skill outside the confines of instrumental technic?

Mental Tests

By Charles Knetzger

A bright and ambitious high-school boy, who had been frequently reproved by his music teacher for want of attention to details, received a severe jolt when taking a mental test in English at his school.

The literary information test contained statements like the following: "George Eliot wrote ('Ramona,' 'Mill on the Floss,' 'Vicar of Wakefield,' 'Vanity Fair'). Underline the one which is needed to make the sentence a true statement." The student gave a hasty glance at the first sentence and quickly underlined "Ramona" and "Mill on the Floss." The other sentences he hurried over and finished them in a few minutes. The remaining time he spent waiting impatiently for the next test instead of looking over his work. The result was a score of ten which could easily have been fifteen or even twenty, had he been careful.

When the examiner called attention to the error in the first answer, the student said, "But George Eliot did write 'Romola' and 'The Mill on the Floss!'"

"Yes," said the other, "but this is 'Romona' and 'The Mill on the Floss.'"

The student related the incident to his music teacher, who took occasion to bring home to him a fact which had failed to impress him before, namely that his failure to be more than a third-rate player was not due to lack of ability or mental capacity but to carelessness in attention to detail. This it was which caused him to form the habit of playing a piece at sight without even looking at the key or measure signature and disregarding entirely the tempo mark. Wrong notes, mistakes in fingering, skipping over rests, no attention to phrasing and expression marks, holding the pedal over harmonic changes, were but some of the results of his haste and inadvertence.

To discover that his mentality had been rated lower than that of some of his fellow-students whom he had considered intellecually his inferiors was for him a bitter but most effectual lesson.

Musical Smiles

By I. H. Motes

A Terrible Mix Up

Young Wife (at telephone).—Oh, Charles, do come home. I've mixed the plugs in some way. The radio is all covered with frost and the electric ice box is singing "Moonlight and Roses."

—

A Rent Hog's Way

Tenant.—You've got to make the woman in the flat above stop singing or reduce my rent.

Landlord.—I'll fix it up all right. I'll raise the rent on her so high she won't feel like singing.

—

His Offense

Half.—Why did you get thrown out of the Glee Club?

Note.—For singing.

—

Off the Key

Little Jack and Betty were singing. Jack was singing tenor and Betty was doing her best to sing soprano, but not with great success.

"Pshaw!" said Jack, derisively. "You can't sing. You can't even keep the air."

Betty, who was four, after a long silence, said: "All right, Jack, let's sing some more. I've got some air now."

The Violinist.—I want an E string.

The New Salesman.—Would you mind selecting one for yourself, sir? I 'ardly know the 'es from the shes yet.

"Quo Vadis Piano?"

"Which Way is Pianistic Art Turning?"

An Interview with the Distinguished Pianist, Composer and Editor

IGNAZ FRIEDMAN

Biographical

Ignaz Friedman, who made his American début in 1920, has a distinished record in Europe and in South America. He was born February , 1882, at Podgorze, near Cracow, Poland. His father was a violinist d a musical director, who also played the piano. He gave his son his first sons, and the child soon developed into a "wunderkind." His general ucation was unusually thorough. After the customary academic work, entered the University of Leipzig, where he studied history under Adler d composition under Dr. Riemann, in the same class with Max Reger. He next studied piano for three years under Leschetizky, and for five years was his first assistant. He then taught alone for five years, having many distinguished pupils. His piano pieces, songs and string quartets—he has ninety published works—reveal him as a musician with delightful melodic gifts and fine artistic tendencies along modern but rational lines. He has completed the editing of all the Chopin works, and many of the masterpieces of Liszt, Bach, Beethoven and Schumann. In Europe Mr. Friedman's recitals are thronged by professional pianists.

ANYONE WHO has made even the most superficial examination of musical activity in all parts of the rld, during the past twenty-five years, confronted with the fact that the ma- ity of the younger men have been sat- ed with nothing less than sheer icono- sm. It seems as though they were con- ually crying, 'No matter what we do, us do it in a radically different man- , whether it be beautiful or not.' In t, one must realize that the tendency been toward what musicians of the er school unqualifiedly call cacophony, her than what has been previously ntified and established by the great sters of the past as melodic, harmonic formal beauty. With this distinctively ferent means of presenting musical ught, there has come an entirely new ationship of the art to the pianoforte.

The Stylists

FROM THE great composers of the 17th, 18th and 19th centuries we come rn to the great writers (Berlioz, Chopin, lf, Reger) who were first of all styl- . The word composer or componist es from com-ponere, that means put- together a musical idea according to value on rules, harmony, polyphony, m and rhythm, in opposition to the er method of building the idea out of lf in architectural fashion. After the ists we arrive at the period of what called in German *Sektanten*, sectants mannerists (Debussy, Ravel, Mous- gsky and others). It seems that out the word *manie*, mania has been made. this surrounding, we see mostly niacs," rather than mannerists. This er was and never will be the source m which great developments arise. daism, Cubism, Atonalism, Polyton- m, Privitism, Infantilism, are in di- opposition to what the word art sig- es. They can serve as means possibly n end, but as established forms of art have no reason to exist. It is the which counts and not the diction, ther you take it in the field of sound, painting, or in literature. We can ex- n most of the revolutionary ideas of world with the vocabulary of the le. Anatole France, the greatest French ter of the nineteenth century, has not iched the French language by a single d, but with hundreds of ideas. The e Day Glories" of super-modernists sibly brought us thousands of new ds, sounds and mixtures, but no ideas ept some which will rapidly expire.

The pianoforte is primarily an indirect cussion instrument. The sounds are sed by the blows of felt hammers upon ating strings The modern piano mech- m makes these blows susceptible to a t number of gradations of force; and s these gradations, together with the gling of harmonics, brought about by ingenious use of the damper pedal, give the piano its charm and individ- ty.

"We say that one player is a colorful player and the other player is not a colorful player; but, as a matter of fact, the only difference in tone color that exists in the realm of the pianoforte, is the difference that exists between one pianoforte of one make or one period, from that of another. The tone of the pianoforte itself is just as distinctive and identifiable as is the tone of the flute or the French horn or the violin.

"What bearing does this have upon modern music? The music of most of the moderns demands, first of all, a great variety of color. Some sarcastic critics have gone so far as to say that many of these moderns have depended upon the prismatic palette of the orchestra to make up for their lack of invention and melodic and harmonic beauty. However this may be, when these so-called modern compositions are translated from the orchestra to the piano keyboard, there is a very perceptible loss in character and loss in beauty. Of course, there is a similar loss when, for instance, a Beethoven Symphony in a Liszt arrangement for the pianoforte is played in the best possible fashion on the pianoforte by the finest possible players.

IGNAZ FRIEDMAN

Keyboard Limits

"THE MAJESTY of the orchestra is gone, but, nevertheless, the classic foundations of the composition itself are so strong, so clear and so majestic that the effect of a Beethoven Symphony, played upon the piano, whether as a solo or a duet, is sufficient to inspire the audience with the greatness of the master-piece. On the other hand, some of the modern compositions, when played upon the piano, sound woefully inefficient. Therefore, it must be clear to the reader that music of this kind is turning away from the instrument rather than turning toward it. In the broadest sense, it seems to me that keyboard music found its limits in the type of things of Debussy; because nothing more advantageous can be done with the piano with this so-called modern material. In fact, if we wish to keep within the serious possibilities of the instrument itself and of beautiful pianoforte playing, we must return to music evolved from the classic and romantic schools. This does not mean that we shall play nothing but Beethoven, Bach, Mozart, Haydn, Schumann and Mendelssohn. Think of Liszt, Chopin and Brahms, Ravel and Scriabine. Here are composers who have drunk deep at the wells of classicism and romanticism and yet have, by dint of their great genius, produced new, fresh and thoroughly original works that are great contributions to the literature of the instrument and, at the same time, are based upon the canons of an older art.

"Of course, no modern pianist who is really capable of writing for the piano, would think that he was producing great masterpieces if he were merely imitating the style of, let us say, Scarlatti, Galuppi or Bach. It would be perfectly possible for a very ingenious person to counterfeit the style of Haydn or Mozart, but this would not be original composition. That is not what I mean. I mean composition that shows a thorough acquaintance with the best in the classic and romantic schools and at the same time bespeaks an entirely original personality. I am often asked whether the so-called modern music is something which would require the special technic of the pianist. Apart from the freak pieces which expect the pianist's hands to do things quite as unreasonable as the demands made upon the listener's ear, modern pianoforte music of the post-Debussy type makes no particular demand upon the player. In fact, a great deal of the so-called modern music is in many ways simpler than the great technical obligations which Liszt required

"I consider Chopin, Bach and Mozart the three most solid, the most fundamental and therefore the most difficult obligations upon the pianist. I mean they are difficult because they demand, first of all, beauty of tonal expression, great clarity and exceptional transparency of sound (perspective). Whoever can play the works of these three composers well is indeed a master of the pianoforte. I know of many excellent Beethoven and Liszt players who fail in Mozart and Chopin. The opposite is rare. In the performance of the modernistic composers' works, one must have a good knowledge of the pedal, a somewhat extraordinary memory and finally what is called in German *"mintmik,"* that is, the ability to imitate peculiar effects through sound combinations.

The Pedal in Modern Composition

"IN MODERN composition, a great deal is expected of the pedal, but unfortunately, the pedal is used entirely too much as a kind of musical smear. It is a very trifling matter to take a composition

THE GARDEN OF SCHUBERT'S BIRTH HOUSE

"For Lycidas Is Dead, Young Lycidas"—*Milton*

By STUART PADDINGTON

I

A RECENT re-reading of the facts of Franz Schubert's life, to refresh in the mind the salient features of those thirty-one years of golden melody and sweetness of character which make up the story of the master, brought us in sequent musings to an especial contemplation of Schubert's early death. Would added years have meant new works and greater lustre—or had Schubert shot his arrow? No one can say.

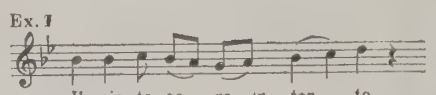
Precocious Genius

Four of the greatest names in modern cultural history may be readily associated with his in this matter of an early "cutting off": Mozart, Chopin, Shelley and Keats. Few of these men reached the age of thirty-five, while poor Keats died at the pathetic age of twenty-six; all of them have left works of such beauty that they will be forever remembered by posterity. Study this list of names more carefully and it will gradually become evident—what came to us after much mulling over the matter—that in two ways (exclusive of the renown which all possess in common) these men bear striking resemblance to each other. First, all were very prolific in proportion to the number of their writing years; and second, all possessed, as the ultimate essence of their work, what may be termed ethereal melody.

Franz Schubert wrote upward of twelve hundred opuses in his short life, and his ideas often literally came too fast for him to set them down on paper. This figure will be seen to compare very favorably with the number of compositions by others of the great composers. Wolfgang Amadeus Mozart was surely prolific; operas, symphonies, sonatas, quartettes, poured from his pen at a prodigious rate. As for Keats and Shelley, though the production of neither was enormous, both turned out a considerable quantity of the world's finest poetry.

Ineffable Melody

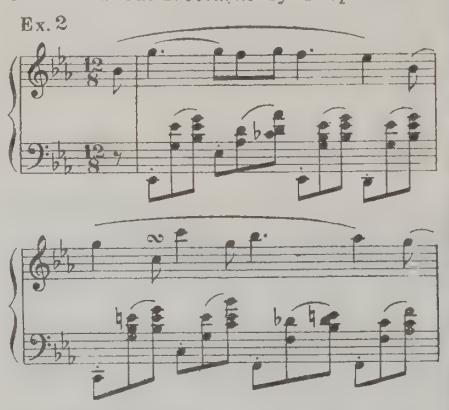
The other point of resemblance is not so easy to explain, not so tangible. Each of these men, be it said, seemed to have drunk—deeper than other mortals—at the very fount of Mĕlody, the eternal springs of which it is not given to many to approach. Ineffable is the melody which invests such lines as these from *Endymion*:



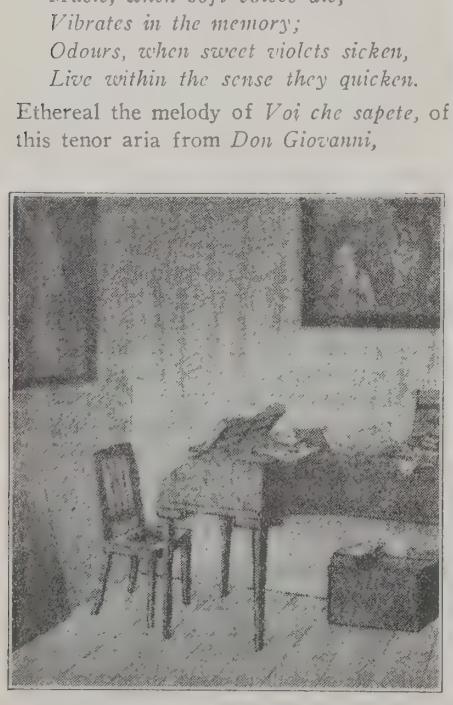
A thing of beauty is a joy forever;
Its loveliness increases; it will never
Pass into nothingness.

Or these of Shelley's:

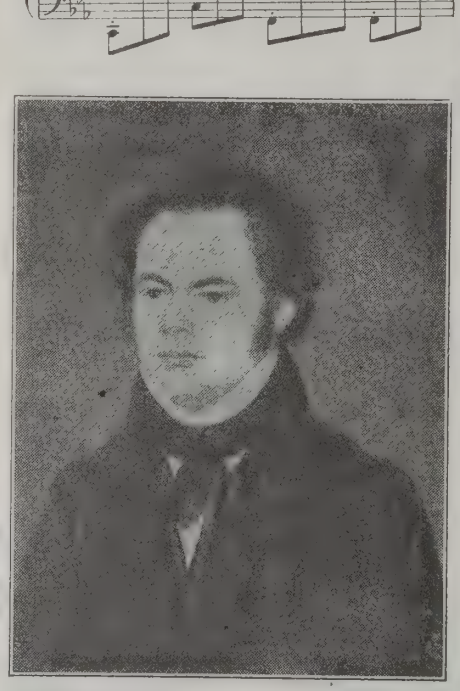
Music, when soft voices die,
Vibrates in the memory;
Odours, when sweet violets sicken,
Live within the sense they quicken.



Ethereal the melody of *Voi che sapete*, of this tenor aria from *Don Giovanni*,



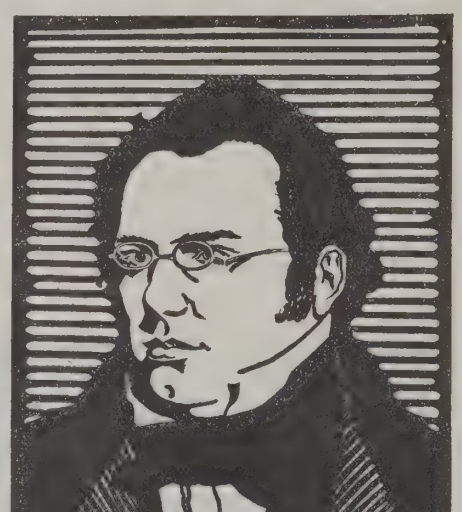
Ex. 1



of this famous *Nocturne* by Chopin:

Ex. 2

SCHUBERT'S WORKROOM



A CONTEMPORARY OIL PAINTING OF SCHUBERT BY W. MAHLER

Ineffable, refulgent, ethereal melody, gladdening the soul of the listener: this is the beauty which brought fame to these writers. It is seldom absent from their work, and is the whole secret of their endless renown.

II

The second point of resemblance has bred a thought which, while doubtless not original, may be of interest.

A RECENT SKETCH OF SCHUBERT

Melody, we believe, is half the substance of heaven. Its constant echoing there is the expression of the peace which is not known on earth; it is the tale of the radiant good which, shining from the All-Lustrous, floods through the heavenly aisles and shatters in dulcet cadenzas against the lofty vaults. Melody is the song of everlasting life that, here a surmise, is there a fact.

Now, when any poet or musician touches the lyre with a certain too celestial stroke, he is anticipating a beauty which may not be known while mortals are still mortals—and therefore the Guardians of Melody above speedily and jealously remove the offending hand from the lyre, calling the player to his proper element in the great choruses of heaven.

The Unworldly Quality

The reader will say: "But what of Wagner, Beethoven, Gluck, Gounod? They lived to past middle life, but that did not affect their music. What of *Isolde's Love-Death* or the *Andante* from the *Fifth Symphony?*"

Being neither so negligent as to forget nor so naive as to try to exclude the marvelous melodies which crowd the whole history of musical composition, we would submit that here lies the point: the ethereal, *unworldly* quality which we find in the melodies of these men who died so prematurely is almost never duplicated other composers. In Wagner, Beethov Franck, and the rest, there is always "alloy of living." Life, with all its picturesqueness, is probably in the fo ground, certainly in the middle-distance

III

In conclusion, may we repeat the sta ment—made by many previous writer that the great *Unfinished Symphony* is epitome of Franz Schubert's life. T eighth symphony and the tenth (C Majo are of supreme significance in the stu of the master.

Schubert's Cheerfulness

There used to be an idea, rather curr even among the well-informed, that Sch bert's symphonies are merely enlarg songs, partaking not at all of the req site symphonic qualities. This notion, ha pily, is fast becoming extinct. The *Unf ished* is as lovely and as symphonic anything imaginable. Schubert's dow right sweetness of character, his cheer nature, and the tragedy of his uncomplet career are here set forth in a music whi is beyond description. As long as m have ears to hear and hearts to feel, th Lycidas shall be remembered—and reme bered with gratitude, adoration, and dee unreserved affection.

Thoughts From Schubert

Fragments Quoted from the Limited Wr ings of the Tone Poet

"O MOZART! Immortal Mozart! Ho many and what countless images of brighter and better world hast tho stamped on our souls!"

"Man is like a ball between chance an fashion."

"The greatest misery of the wise ma and the greatest happiness of the fool based on conventionalism."

"Now I know nothing more! To-mo row I am sure to know something fresh Whence comes this? Is my understandin to-day duller than it will be to-morrow because I am full and sleepy? Why doe not my mind think when my body sleeps I suppose it goes for a walk. Certainl it cannot sleep."

"Grief sharpens the understanding an strengthens the soul, whereas joy seldom troubles itself about the former and make the latter either effeminate or frivolous

"Faith is far ahead of understandin and knowledge; for to understand any thing I must first of all believe something

"Fancy! Thou unsearchable fountain a which artists and philosophers quench thei thirst."

WHERE SCHUBERT DIED

Practical Lessons in Hand Culture

By the Noted Liszt Pupil and Exponent

CARL V. LACHMUND

With Eighteen Original Exercises for Self-Study Covering Two Years

Part II

EFORE TAKING up these exercises the student should re-read Part One to impress upon his memory the ewpoints." Do not imagine you "know" m; make them your own, as a back- ound for all of your work in the various dies explained this lesson. Concentrate the directions given. Remember, it is the llow pupil who things the teacher issy;" the keen pupil appreciates that it not what you study, but how you prac- e it, day by day, that will bring the sure ults.

While average pupils cannot avail them- ves of a regular course in harmony, ery teacher should give applied harmony, least to the extent of the simple major d minor chords, the diminished seventh ords, and the dominant seventh chords, th their different "positions" (inver- ns). Even this little, well digested, will a great help in reading, memorizing, lifying, fingering, and in developing the —teaching the ear how to think. . . .

Ex.3 Major 2nd Position 3rd Position Minor

Here we have a major triad in its simple rm; a triad consists of the root, the ird, and the fifth: c, e, g, respectively. change this to a minor triad you will ver the third, changing the e to e flat. ar in mind that in the inversions, e is ll the third (the original third) even it is the lowest or highest note of the ree. Practice these different positions th each hand separately, taking two or ree keys each week, and keep it up for veral months at least, to develop a *full,* t mellow, tone, in playing chords. In ost of the exercises you will "kill two rds with one stone;" that is, you accom- sh several purposes, not merely the one ost apparent. These chords require wrist *sticity, resistance,* and *relaxation.*

Now let us try it. Shape your hand st (see directions in Part One)—place gers on the keys well back—raise the rist higher than normal—now pull the nd toward you, as you press the keys wn vigorously—but *listen as you play*— ike your ears think.

"Did that chord sound mellow, yet full? d it seem to rise out of the piano and at toward the ceiling?—No?—it sounded ak?"

Well, you did not press vigorously ough—try again.

No, that was *harsh*—your wrist was too ff; it lacked elasticity.

Try it out repeatedly, and *watch it for nths,* until you have formed the habit playing chords always with this wrist uch, proper resistance, and relaxation nsciousness. Aside, it is most important *know* these simple chords. Ask six erage pupils, or teachers, and not two ll play the simple chord of F-sharp nor correctly.

Ex.4 2nd Pos. 3rd Pos.

Arpeggios. These rules apply for all the arpeggio exercises (Nos. 4, 9, 12,).

a. Press the chord down first—hold it—move the wrist up and down, and sideways as you *press*—this will "shape the hand."

b. Practice all arpeggios through three octaves.

c. Watch the thumb—do not *drop the wrist* as you play the thumb—this would jar it—but keep the thumb at an angle of 45 degrees from the keys (not flat on the keys).

d. Observe the dip—as you pass the thumb under, lift the *outside* of the hand—this aids the "dip"—watch this, every time you pass the thumb under.

e. *Expand the fingers before you play the first note*—and keep them expanded.

f. Make it a rule to watch the fingers that are *not playing*—do not allow them to cramp.

g. Keep the fingers curved, always—do not permit them to show the finger nails.

h. Even when you have advanced, *always* play an arpeggio several times *slowly first,* with a deep clinging pressure to each finger—then grow gradually faster, but count aloud, or you will not do it gradually. As you grow faster do not permit the tone quality to thin out, nor continue if it does so, for it will *not benefit* you—it requires *more slow practice.*

Ex 5. Right

Left

The diminished seventh chord is one of the most interesting in harmony (pages might be written about its significance). It is formed on the leading note, seventh degree in minor. This is a simple way to form it: place the thumb on *c*—now with the second finger check off (skip) two half steps, then play the 3rd (e flat)—you may repeat the words "skip two, take the third"—do this with each finger, and observe that there will be two keys between any of the two fingers—now you have *c, e* flat, *g* flat and *a.* Practice this repeatedly on all keys until you can place your fingers quickly. Now play the chord—press, and so on as in Ex. 4. Play the exercise a dozen times.

a. Accent the beats vigorously.

b. Start on *a* (4th finger), accent *a* descending, and *e* flat (2nd finger) ascending.

c. Start on *g* flat, accenting 3rd finger descending and the *same* ascending.

d. Start on *e* flat (2nd finger) descending and accent (4th finger) ascending.

Then with the left hand similarly (though reversed). It is not an easy exercise to do well.

Ex.6

The wrist-finger staccato. The combination of the finger staccato, with that produced by *wrist* action, is a very important part of technic. The staccato should be done primarily by the hand, with the *wrist joint;* but when the runs are so fast that the wrist cannot do it, the "finger joint" staccato is added to the motion. Practice it first without moving the fingers at all; then add the finger staccato. This is done as follows: as the finger tip strikes the key, slip it off into the palm of the hand. Practice the exercise slowly, two notes to the count (metronome at 58); then gradually more quickly to 120; then start at 60 playing *four* notes to a count, and increase rapidity. With increasing, the wrist joint will refuse to act; but study slowly more, every day and make the wrist joint persevere. In time, improvement will reward you.

Ex.7 Right

Ex.7

This is a study to strengthen the 4th and 5th fingers. Here is the trick: as you play the 5th finger, stab the key by giving the wrist a fling toward the 5th finger. Hold the wrist higher than customary: This will aid you. At (b) a different trick is required in accenting the 4th finger. Drop your wrist a little as you play the 5th finger and then flip it upward in playing the 4th. These are devices of modern piano technic that will develop additional strength surprisingly.

Ex.8 Right

Left

This is great for finger independence and strength; do this as a preparatory study first. Hold fingers 5 and 3—play 4 and 2—play, press, then lift, pull. Speak these words as you suit the action to each word; then hold 4 and 2, and play 3 and 1; then do the same going back. Do this very slowly.

Practice the exercise proper on three keys for three days. After the second week go up chromatic scale and back, without a break in time—very legato in connecting groups. Do this for ten or more weeks.

Ex.9 Right

Left

Follow the Arpeggio rules. Do not play four to the count, but always triplets; this avoids jarring the thumb as it brings the accent on a different finger at each beat. Study the ones on white keys first, c-d-e-g-b-d, and so on; and finally those on black keys; in one position only.

Ex.10 Right

Left

I owe this study to Isidor Seiss, pupil of F. Wieck, the father of Clara Schumann. Wieck doted on *wrist elacticity,* and on the *weighty* touch, years before Leschetizky's time. When Seiss met with some difficult measure in a Concerto or other piece, he would invent some study to develop the technic and would practice it in varying keys and ways. This is an excellent thing to do. The present study was devised to overcome a difficult measure in one of Beethoven's great Sonatas.

In 10 (a) and (b), flip the hand up, from the wrist joint (not the entire forearm). Do not permit a break in time, between the triplets. Insist that the second finger catch each note with assurance.

In 10 (b) watch the *fifth* finger.

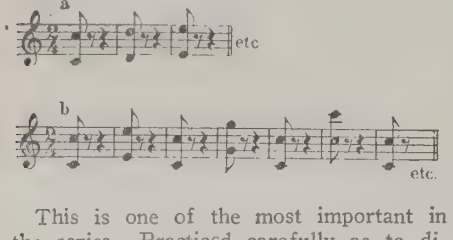
Ex.10 Right

Left

In 10 (c), and 10 (d), a different action of the wrist is required. As you will observe, these are *all legato.* Hold the hand

loose; do not stumble. Take these in a new key every week, until you have finished all keys.

Ex.11



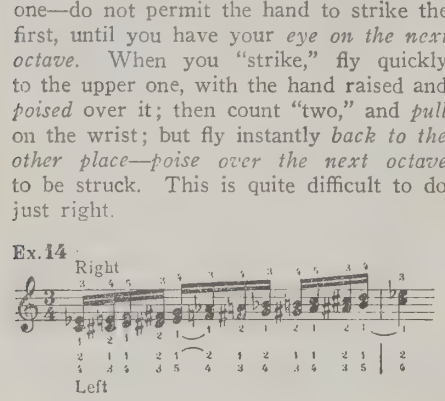
Legato Octaves. Use the 4th finger on all black octaves. Slip (slide) from one octave to another; but do not permit the fingers to leave the keys, in doing this. Lift your wrist, then drop it as you pull toward you; this will aid the legato. (Imagine that the keys are covered with mucilage).

Ex.12 Right

Left

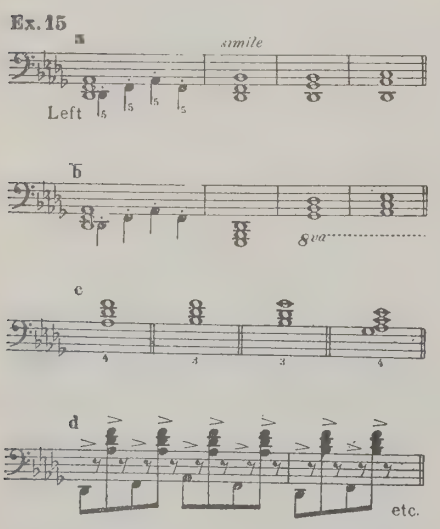
Observe Arpeggio rules, and practice in triplets only.

Ex. 13



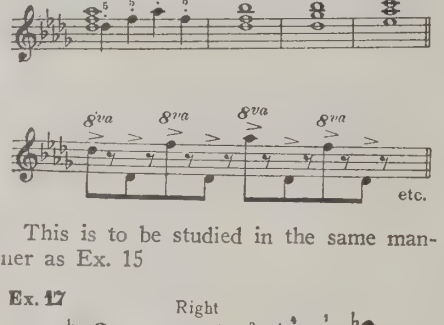
This is one of the most important in the series. Practiced carefully as to directions, it will develop great strength, quickness, and assurance in the wrist, for leaps.

13 a. Count aloud always—"one, two" (met. 72). "Get ready" (pull your hand up from the wrist joint), "strike" exactly when you say "one," but make the hand *fly back* instantaneously to the same position. As you count "two," *pull* on the wrist to stiffen it—then on "one" strike the next key vigorously—*forte.* Move only the wrist joint, not the entire forearm. Go up one octave and return, and take your time in doing it. Do not do this study rapidly.



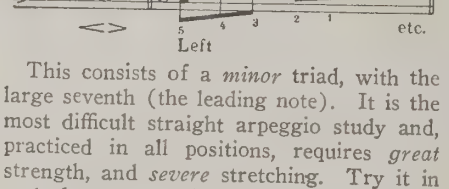
13 b. But here is the *important trick.* Few pupils get it well. Suppose you are to strike a low octave and then a higher one—do not permit the hand to strike the first, until you have your *eye on the next octave.* When you "strike," fly quickly to the upper one, with the hand raised and *poised* over it; then count "two," and *pull* on the wrist; but fly instantly *back to the other place—poise over the next octave* to be struck. This is quite difficult to do just right.

Ex. 14



The fingering of chromatic thirds is easily learned by this procedure: the thumb, and *2nd* finger, play the *lower* part (using the thumb twice at *e-f,* and at *b-c*). Then practice the *upper* part, using *3rd* finger only, on *black* keys, and 4-5 at *e-f,* and at *b-c.* Practice each part separately until you have *formed the habit,* and it will come easily. Treat the left hand similarly, only reversed; always remember that the left hand must reverse the order of the right. Note that the 2nd and 3rd fingers play black keys only.

Ex. 15



Exercises 15 and 16 are *exceedingly important,* and will develop great assurance in staccato skips, as required in the left hand work of Chopin Valses, and Liszt Rhapsodies, or the right hand skips of the Liszt-Paganini *La Campanella Caprice,* in all of which most pianists are lamentably deficient. Have you ever observed how many pupils will miss the quick basses with the left hand, either with the fifth finger, or in the chords? The writer's experience is that the fifth finger can be made to play with almost unfailing assurance by the following method. The basses, to be played by the fifth finger, are shown in the chords of 15 a, with *stationary low* note; while 15 b is a second study with *changing low* basses. Practice these with the fifth finger alone—always lift hand, not the arm—stiffen the wrist—then strike a quick, severe blow (as in exercise 13), then fly back, and hold the hand *poised,* and still, for the next stroke. Now observe this trick: as you play the fifth finger do not look at it, but pretend you are playing the *octave with it. Watch the thumb,* and you will soon learn to strike the fifth finger correctly, almost without fail. Then practice the four chords, as shown in the upper octave at 15 c—then both parts together, as shown at 15 d. Practice it in the black keys first, *d*-flat, *e*-flat, *g*-flat and so on, and finally in the white keys *c, d, e,* and others. Each key should be practiced *several weeks.*

Ex. 16

This is to be studied in the same manner as Ex. 15

Ex. 17

This consists of a *minor* triad, with the large seventh (the leading note). It is the most difficult straight arpeggio study and, practiced in all positions, requires *great* strength, and *severe* stretching. Try it in such keys as *g*-sharp minor, or *c*-sharp minor, and you will realize its difficulty. It is a study of a lifetime. Practice it in triplets only. Note: An excellent device to loosen too closely knit knuckles, and to acquire an easier stretch, is this: take three corks about as thick as your 4th finger; press these between the fingers; now close and open the hand several times slowly; then hold closed a few moments. Do this for some weeks.

Ex. 18

Practice these scales in thirds, four octaves, very legato. Do it in all the keys with the same fingering. Press hard.

Teacher—Mother—Pupil

By Florence Belle Soulé

THAT co-operation is the key to success is a fact that applies to music as well as to other activities. The progress of the pupil depends very largely upon the interest and help of the mother.

The wise mother understands that the love of music and its cultivation will make her children more cultured and more popular than will any other attainment. She understands the value of music and knows that regular practice, regular lessons and her own interest are all necessary in the process of building musicians.

When the teacher plans the work and the mother co-operates in seeing that lessons are properly prepared, results are quick and lasting.

This situation means an enthusiastic pupil, a satisfied parent and an encouraged teacher.

The Musician's Library

By Dr. Annie Patterson

IT HAS been sometimes alleged that the musician is not a reader; that is, in the literary sense. Notable exceptions, however, occur to one's mind, among whom it is only necessary to mention Schumann and Wagner, both of these composers undoubtedly seeing attraction in books, being also themselves scribes of no mean order. Yet there are many artists, mainly executive ones, who say, not without reason, that they have no time for anything save perhaps their daily paper, the most interesting part of that being the all too limited musical notices. Time is, of course, a considerable factor, in more senses than one, in the life of a busy professional musician. Yet, if one is interested in any particular direction, it is wonderful how even the busiest people find time for what they want, or think needful, to do.

Now it cannot be denied that general reading, even if it be largely concerned with one's own occupation, is very essential for anyone who would take what is usually described as a broad outlook on life. Let us see if we can briefly indicate on what lines the musician's reading might be made both helpful and enjoyable to him, and in what way it can be managed with the least expenditure of time.

Apart from news of the day, even concerning his art, the musician will do well to take in regularly the leading musical magazines, THE ETUDE, with its informative and educational departments, forming, in our opinion, the ideal of what such a monthly publication should be. It is assumed, also, that the serious student will stock his bookshelves with all standard works touching upon his special department. Leading publishers will always be able to supply details of indispensable textbooks for singers, instrumentalists (of various kinds), theorists and teachers. Two or more good histories of music should certainly be added to the list of books dealing with the chosen art; whilst biographies of musicians are among the most instructive as well as interesting volumes that f low-workers could read for these g information and experience of how oth of their calling came to distinction.

Again, the specialist—such as a violini for instance—will do well not only gather records of his own instrument, l also a knowledge of orchestration gene ally, and, indeed, acquaintance with a kindred topic will never come amiss to hi We musical people are all too much i clined to get into our own little groove and, what is worse, to keep there. A dri into the open—in the way of fresh exper ences in the world musical—will do us u bounded good. The few odd minutes when one is resting between lessons other engagements—can always be hel fully filled by the books.

Still more to avoid narrowness in t outlook, we would also commend the mus cal reader, were it only in his spare mo ments, or holidays, to take up some pastim or hobby, and collect literature dealing wit that subject. Games of all kinds, china old pictures and stamp-collecting, all hav been known to fascinate the artistic mind and these form a pleasant relaxation fo their devotees, necessitating a certai amount of informative literature if the fa vorite topic be pursued in the true spirit o research.

A still more fruitful source of genera reading could be supplied by material fo the study of, say, a natural science (acous tics, in scientific departments, which i really needful for the fully educated musi cian). General history forms another grea theme of perennial interest, and widening of outlook. Nor, in its place as a whole some recreation from serious thoughts, i well-written fiction to be despised. Nothing rests one more than the dipping into a good novel, if it be even for ten minutes at a time. In fact, everything, as long as it is good, may well find a place in the musician's library; and the more variety the better.

Wisdom of Women Musical Workers

What Women Musicians are Thinking

"The permanent quality of an artist's work depends in some mystical manner on the genuineness and multiplicity of his points of contact with life. More than this is needed, of course—the not wholly negligible matter of talent, and adequate technical equipment.—DAME ETHEL SMYTH.

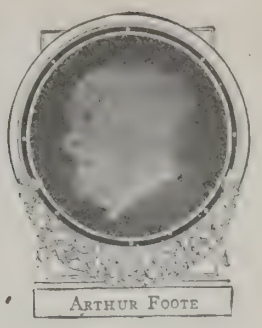
"We do not mean to eliminate all difficulty from the artist's life—that being part of his development—but we desire a change of attitude toward the creative American when he offers work of a high order and on a level with his foreign colleague."—ELEANOR EVEREST FREER.

"I can see no reason why a woman cannot have a home and a career as well; and, if you ask me, I believe that the women who say that it is impossible are simply not deeply interested in one thing or the other."—YOLANDA MÉRÖ.

"Propaganda, you know, can not do everything. One can not build up music in a grown person or in a great number of persons simply by intellectualizing about it. It must be bred in the bone first of all, and cultivated then with a minimum of self-consciousness."—ELISABETH RETHBERG.

"We are in the midst of the vital period of musical development. It means that this country is the place for the student of to-day. He can get everything here and more than he can get abroad. He can hear the music he needs, the unusual music, the variety and interesting music that he should hear."—OLGA SAMAROFF.

"If I ever teach I shall try to impress on my pupils the importance of singing for the joy of it—of singing because they love it. I would also try to teach them to perfect an ideal and then concentrate on it, and not to confuse confidence with conceit. Confidence is necessary to success, while conceit is more than likely to spoil it."—MERLE ALCOCK.



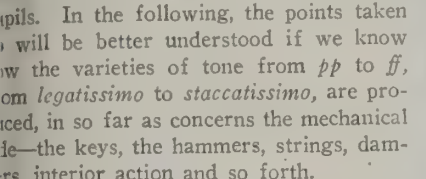
"There is something so wonderful about music, so uplifting. But then, I have devoted myself to it. Other people do not get so much from it; perhaps because they do not feel as I do. That is destiny and as it should be. We cannot all be doing the same things, and if all loved music so intensely where would the other beautiful arts and necessary businesses come in?"—GUIOMAR NOVAES.

"We must have outlets for our emotions. Qualities and impulses of the right kind, when given due scope, enhance the zest and happiness of our lives; when thwarted, starved or denied, they turn to poison within us." —OTTO H. KAHN.

Some Unconsidered Details Often Neglected

By the Eminent American Composer-Teacher

ARTHUR FOOTE

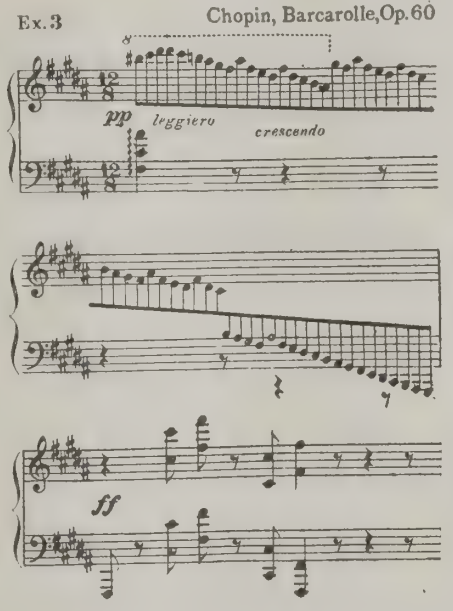


THE MANNER of writing for piano has always been determined largely by its mechanism, a knowledge of hich is desirable for both teachers and ıpils. In the following, the points taken will be better understood if we know w the varieties of tone from *pp* to *ff*, om *legatissimo* to *staccatissimo*, are proıced, in so far as concerns the mechanical le—the keys, the hammers, strings, damrs, interior action and so forth.

It is helpful to the pupil (and interestg to him, also) for the teacher to exain very early in his instruction that e key is practically a lever, of which the rt out of sight is several times as long that appearing on the keyboard; that is lever is so balanced that the ends of e keys touched by the fingers will rise d return to normal position after beg played unless held down firmly by e fingers; that this force is exressed by a certain number of ounces his makes it clear why not only the uscular action of the fingers must be nsidered, but the weight of the arm well); that when the key is depressed ickly the tone is naturally made *f*, a *p* sulting from slow action of the fingers.

It is of value to the pupil to realize how e style of writing at different periods s been influenced by the mechanism of e clavichord, harpsichord and the piano 1826, as well as that of to-day. When e action of the piano was light, with but slight dip of the keys, and little resistıce to the finger-tips, the tendency was wards exceedingly rapid passage work ıd quick *tempi*, the reverse being the case -day (Hummel and Brahms are exames of both extremes). An example of e unmusical rapid *tempi* that were enıuraged by the light piano action of a ındred years ago is seen in the metroome marks of Czerny's studies, and of s Bach editions. It is odd how a once ıvorite piano figure has nearly disapeared (that of repeated notes in quick *mpo*), owing to its extreme difficulty of erformance with our heavier action. Ocısionally, however, we still find it, as, for xample, in the *Caprice Espanol* of Moszowski—

Ex. 1

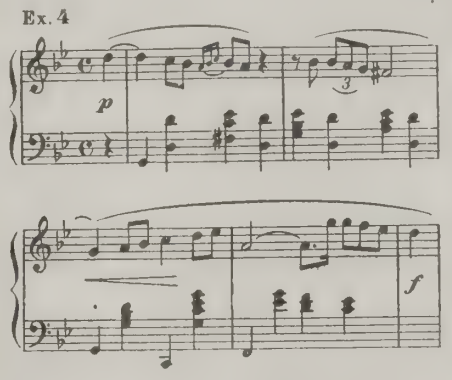


Now, as to the manner of using fingers depressing the keys, it is agreed that here are two quite different ways called hammer" and "pressure" touches. In the rst of these the fingers are raised and he keys put down percussively, struck rom varying distances and with varying egrees of force. Other things being equal, he higher the finger has been raised and he quicker its descending movement, the igger the tone. From this is to be deuced that a scale played softly must void a high hammer touch, though one hat is to be *f* demands it. With the Beethoven extract that follows

Ex. 2 Beethoven, Op. 13

the fingers could not possibly get the power required if kept close to the keys, while in that from Chopin

Ex. 3 Chopin, Barcarolle, Op. 60



they begin close and must be raised more and more (within limits) as the *crescendo* progresses. It is often, then, the case that scales and all passage work frequently demand more or less high finger action; but since the tones so resulting are not as beautiful and cannot be played with such variety of color as when the fingers play close to the keys, it is a fair way of putting it to say that *hammer touch should not be used unless it is the only way of producing the desired result.* With arpeggios and double thirds, for example, it is practically always needed; for arpeggios must always be distinct, and nearly always *f*. It is a practical impossibility to play double thirds without considerable raising of the fingers.

Especially in expressive playing is it a problem to manage the keys so that the percussive nature of the piano shall obtrude as little as possible. As to this point (which even now is too little considered by the average player) it is interesting to realize that ideas considered "modern" to-day were familiar to some, at least, of the players of many years ago, and to read what Thalberg has to say in his famous preface to the *"L'art ou Chant"* transcriptions which were composed as illustrations of this side of piano playing. "In many cases the keys should be caressed rather than struck, kneaded, as it were, with a boneless hand and fingers of velvet. The keys should not be struck from a distance. The fingers should actually touch before depressing them." Beethoven's remark is famous: "Place the hands over the keyboard so that the fingers need not be raised more than is necessary; this is the only way by which the player can *generate* tone." The preceding quotations do not apply in rapid playing in most cases, but have much point when we come to consider really slow playing to melodies and to chords.

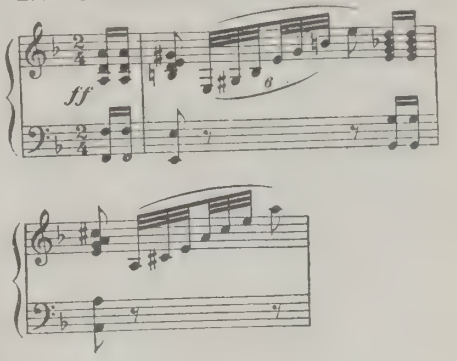
The term "pressure" touch is not fortunate, and is misleading in that it encourages the student to *push hard* at the keys with some stiffness. A better way of putting it would be "pulling" (for that is really what we do) with the finger tips. The keys are manipulated in the manner described by Thalberg, the result being beautiful tone capable of the greatest possible variety. In the slower playing it is practicable *continually to adjust the fingers so that they touch the keys before depressing them.* As an extreme example of this, the *Nocturne*, Op. 37, No. 1, of Chopin, is perfect, both as to melody playing and chords,

Ex. 4

for it demands to the utmost the variety and charm of tone that this manner of playing gives. With chords of more than three notes it is best (and practically necessary) to adjust previously the shape of the hand so that when this is placed on the chord the fingers lie on the right keys, or exactly over them and very close. In chord successions the changes in the shape of the hand and in the position of the fingers may be very rapid indeed, as will be observed if we play a series of dominant sevenths, taking away the hand after each one and looking at the inside of it to see how differently (and rather stiffly) the fingers are shaped. Obviously, rapidity in such chord playing is restricted,

Ex. 5

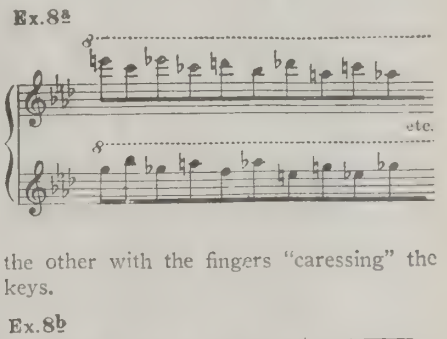
this resulting mainly from the fact that the fingers lie best in a flatter position on black keys than on white.



Chords of three notes, on the other hand, frequently occur in very rapid succession, being played at the wrist.

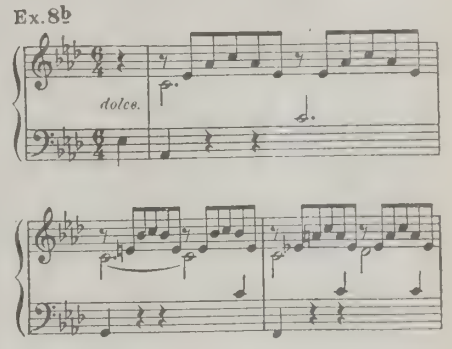
Ex. 6 Beethoven, Op. 2, No. 3

The following is an excellent example of the two ways of handling the keys,



Ex. 7 Mendelssohn: Variations Serieuses

the chords being played close to the latter with the arm, while the arpeggios demand rather high finger action.

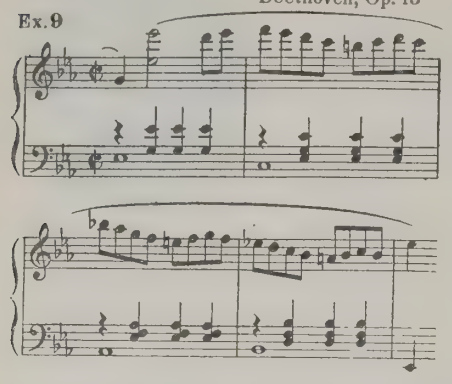


In the familiar *Liebestraum* of Liszt we find two extremes, the cadenza being played with a decided hammer touch,

Ex. 8a

the other with the fingers "caressing" the keys.

Ex. 8b



Of *legato* and *staccato* the average player has but a superficial knowledge, being misled very often with regard to the latter by incorrect notions formed in childhood. The teacher ought to make it clear that there is a wide variety of touches between *legato* and *staccato*. The form ranges from *legatissimo* in which tones actually overlap so that there is a sounding together (so slight that no real blur results) of each successive pair to a sort of playing that is rarely *legato* at all, nor yet really *staccato*, being, as it were, on the border line between the two. So with *staccato* we can range from a touch just *not legato*, to that which is crisp as possible.

In *legato* a great deal depends on whether hammer or pressure touch is used. For instance, in rapid playing of a melodic character (as distinguished from pure passage work) we need clearness as well as expressive shading of tone, and therefore are forced to employ a certain amount of finger actions, since otherwise the passage would sound blurred when

played at the speed demanded; with slow *tempo* no blur is felt.

Ex. 9 Beethoven, Op. 13

Extreme *legato* finds its place in slow playing, then, as in the following (Rubinstein, *Romance in Eb*):

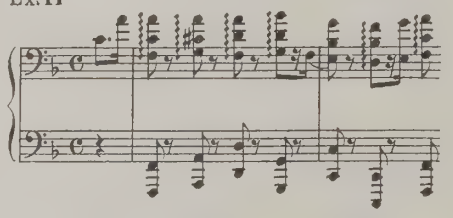
Ex. 10

While a good example of the difference between it and a *legato* requiring a certain amount of finger action is furnished by the first two and the last two pages of Chopin's *Impromptu in F♯ Major,* Op. 36.

What degree of *legato* or *staccato* shall be used must be left to the taste, musical feeling and experience of the player, since unluckily our means of showing this with definiteness in printed music for the piano are quite inadequate.

As to *legato,* there is one thing of the greatest importance to which not nearly enough attention is paid, that is, that above "F" on the fifth line the tones do not sound as loudly, do not last as long, and, naturally, do not blur so readily as those in the part of the keyboard below this note. Contrarily, below middle C the blurring, especially with dissonances, begins to show unpleasantly, becoming intolerable as we descend to the lowest octaves. It is, then, obvious that as we get into these dangerous regions especial pains must be taken that the playing shall be made clear by using more finger action, by getting the fingers quickly away from the keys after playing them, and, below "A" in the first space of the bass clef, by even resorting to a touch that is not really *legato* at all. As an example of the desirability of this, the passage work of the *Chromatic Fantasie* of Bach will serve; the scale passages will sound as a mere jumble of sound if played with true *legato* when they go below middle C.

The faster we play the louder we play, and the lower on the keyboard, the greater becomes the necessity of keen listening and of extreme care to avoid indistinctness. It may be added that the distance the listener is from the piano makes a real difference, for what appears to be clear to the player sitting at the instrument may become quite blurred fifty feet away. We must adapt ourselves to conditions.



What is Staccato

WHEN we come to *staccato, the fact* must be faced that most pupils have a really incorrect conception of it, believing that it *always* implies a very crisp touch. An understanding of the actual meaning of the word "detached" (a pretty elastic term) clears this matter up, however. The fact is that there is quite as much variety in *staccato* as in *legato,* the former being in some cases as crisp as possible, in others a moderate shortening of the tone, while it sometimes is practically just *not legato.*

As is the case with *legato,* we have, unlike the players of stringed instruments, but inadequate means for expressing the gradations by printed indications. Formerly (we find Beethoven making a great point of it) there were two kinds in common use, the dot (.) which was understood to prescribe a note one-half of its normal value, and (') which designated a note of a quarter of its normal value. This custom has, however, been abandoned by composers for a good many years, while as to the older music (in which we really ought to observe this distinction) it is so hard to find to-day an edition that is trustworthy on this point that we have to fall back on our musical feeling and common sense as guides. There are luckily, however, two varieties of *staccato* that have a definite way of performance. The so-called *staccato-legato* (or *non-legato,* as some name it) is indicated by . . . . or - - - -, the second calling for rather longer and heavier tones. An excellent way by which the pupil can learn it is for him to play a scale with one finger as nearly *legato* as may be, having the fingers touch the keys before depressing them, and then without striking them. This is often improperly called *portamento,* a word indicating something impossible of execution at the piano while natural and easy for stringed instruments.

The second type, called the *up-staccato,* affords an excellent means of getting the very crisp touch. The fingers should be touching the designated keys with the wrist slightly depressed, or at any rate not higher than level. Then, with a very quick, sudden pressure of the finger tips the wrist should be quickly thrown up (almost with a jerk), the hands rebounding from the keyboard, though naturally as little as possible. As a very great variety of force can be exerted at the finger tips, we control a range of tone from *pp* to *ff* perfectly, while the quality is also beautiful, percussion being eliminated. This sort of *staccato,* however, cannot be used in rapid playing, as the hand has to adjust itself anew for every note or chord. In the slow movement of the Beethoven *Sonata,* Op. 1, No. 2, we have a remarkable example of (*a*) real *legato,* (*b*) *staccato-legato, and* (*c*) *up-staccato,* as also in the third fourth and fifth variations in his Op. 26. In the following

Ex. 11 Schumann, Op. 23, No. 4

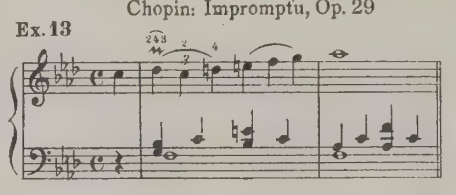
this *up-staccato* enables us to obtain a stronger singing tone with the little finger as compared with the rest of the chord.

Rapid *staccato* of single notes is to be played mainly with the finger action: chords of three notes in rapid succession at the wrist (Ex. 6). *Staccato* double thirds are made easy by first being practiced *legato* with the usual high finger action, and then in the same way, *but detached.* This is a safe method of solving a rather difficult problem.

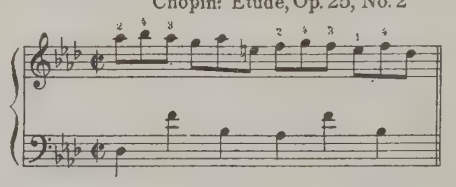
Fingering is often a bugbear to pupils. This is indeed not to be wondered at when one thinks of the difficult, complicated and useless markings often found in music that has been "edited." The teacher should point out that the more difficult the passage, and the greater the speed required, the more aided are we by good fingering consistently adhered to; that, as a rule, the better the player, the more carefully is fingering considered, while, the simpler and more sensible the latter, the easier will it be acquired automatically. The pupil should be taught to use his common sense (for he is going to need it always) by sometimes marking his own fingering and having this analyzed and criticized by his teacher.

The worst feature of the fingering of much of the edited music of to-day comes from the adoption of a certain idea for which Hans Bülow was chiefly responsible: that when a note is repeated, whether slowly or rapidly, the finger must be changed at every repetition. It was a bad day for piano playing when this doctrine was so generally accepted.

In the following is an example of the two ways of looking at this matter. By using the same finger with the repeated note we are taking not only the easiest and surest way, but one which enables us to make shading and expressiveness in the tones—



Ex. 12

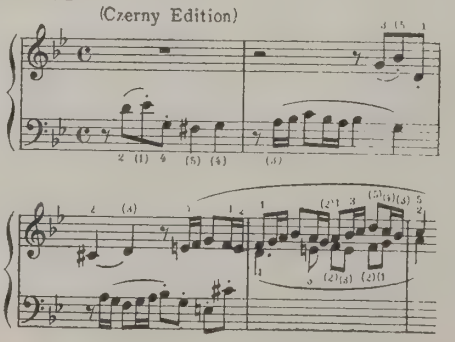


Schubert, Op. 94, No. 2.

This principle has been carried even further (a *reductio ad absurdum*) by editors who also change the finger, even if there is a different note played between the two repeated notes:

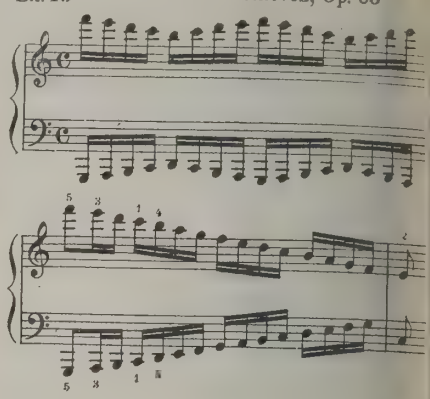
Ex. 13 Chopin: Impromptu, Op. 29

Chopin: Etude, Op. 25, No. 2



Students ought to be encouraged to think for themselves as to fingering, not to believe, because it is *printed* and made by a supposedly intelligent editor, that it must therefore be right; in other words, not to adopt any absurdity they may meet, but to use common sense and observation.

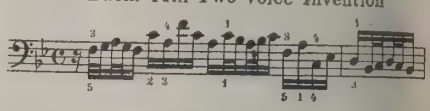
In beginning the study of a new composition the teacher should, of course, be exacting in demanding that the fingering, if sensible, be followed absolutely and made automatic. If it is bad in any way, however, it should be changed before the pupil gets it fixed in his mind and fingers.



As to deciding the question of *how much* fingering shall be written in, one thing is certain: the teacher who puts a fingering mark over nearly every note makes an inexcusable mistake. The value of such marks diminishes, according as they exceed the number really needed. The practice designed to prove the teacher a very knowing person, really stamps him as incompetent. The following is an illustration from an edition of the *Well Tempered Clavichord* which, though comparatively free from superfluous fingerings, nevertheless contains a few. In the following these are enclosed in parenthesis.

Ex. 14 Fugue, Vol. 1, No. 16 (Czerny Edition)

A few basic principles: That the hand should not *keep* changing position without necessity: that a simple fingering is always preferable to one hard to learn and to remember; that with scales, arpeggios, double thirds, and so forth, fingering which has been rendered automatic through long practice should be strictly adhered to unless there is a very good reason for the contrary; that if for any cause we are obliged to begin a passage with a fingering other than the regular one



Ex. 15 Beethoven, Op. 53

we should get back to the latter as soon as is practicable.

As an illustration of the unnecessary awkwardness resulting from frequent alterations in the position of the hand, the following speaks for itself:

Ex. 16 Bach: 14th Two-Voice Invention

The upper fingering is that of the old Peter's edition; the lower being suggested as preferable.

1. *Describe "hammer" and "pressure" touches.*
2. *How do legato touches vary on different parts of the keyboard?*
3. *In what two ways is the staccato-legato touch indicated?*
4. *What is the value of the up-staccato touch in piano practice?*
5. *Give four rules to be followed in fingering a new piece.*

Inspiring Confidence

By Lucille Nancy Wagenfeldt

THOSE few words, "I know that you can do it," are a great incentive to work. To let a pupil feel that there is doubt as to his ability is most discouraging. But belief in him, confidence in his capacity to do the work and carefulness in letting him be aware of this confidence is an urge to progress.

The pupil decides that he must accomplish what has been assigned because his teacher believes he can. He appreciates the fact that there is this belief in his power to achieve, and it is his desire to increase it.

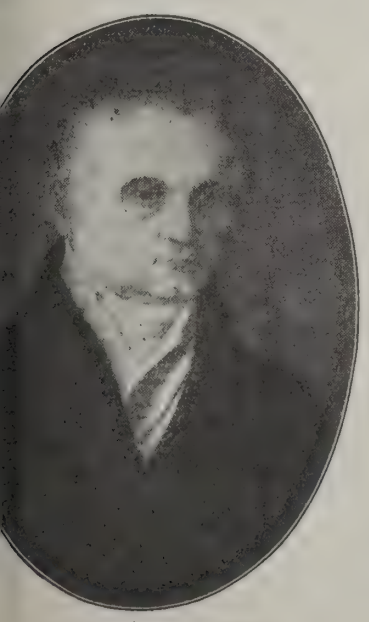
Sometimes, when the student sees a new piece or etude which is a little more difficult than the one he has been playing, he thinks he will not be able to learn it. The first thing to do is to change this thought of "I can't" to "I can and I will." "I can't" means "I will not try." As long as this is in the mind, there will be no advancement.

The teacher, however, knows that his pupil can learn it if he will just try. Make him believe he is able to do it. When this belief is established and he begins to work in earnest, half of the battle is won.

Schubert's Life in Anecdote

By DR. WILLIAM ROBERTS TILFORD

LL LIFE is a chain of incidents. The great adventure is momentous to everyone, quite apart from the that some, like Alexander, Napoleon, ıi, Milton, Wagner and Roosevelt, their days in a series of exciting iences; while others go through the with little more thrill than that which ; through the accomplishment of hard The testy Handel, flitting about ɔe, peppering his days with quarrels, ot be said to have accomplished more the powerful Bach who rarely went ɔm his fireside.



: life of Schubert has long since been the subject of romances, plays and s. This in itself invites the invention : poet and it is difficult to tell exactly authentic are all of the interesting ɔtes associated with him. Far from a valiant adventurer, he was a most man who shrank from publicity and l for one great life privilege the ɔm to pour forth his beautiful music. ɔre is a decided tinge of pathos in the of his life. That he sensed this is ıced by his music; but at the same the amount of sprightly composi- ıe turned out reveals the great genius ng through his tears, his poverty, his ons and the obstacles which fate before him during most of the short one years of his existence.

rty-one years! Think of it! Schu- immense achievements were passed on mortality at an age when many of rofessional men of to-day are just ing their careers.

Schubert's Peasant Background

E COURTYARD to Heaven, num- ɔer seventy-two in the Lichtenthal t of Vienna, was the home of a Moravian school master, Franz Schu- and his wife (Elizabeth Sitz) a n, who, like the mother of Beethoven, een a cook. There on January 31, little Schubert was born. He was ed the next day in the Catholic h zu dem Heil, taking the name of ather. A small salary and a very family made life a constant struggle Schubert home. Nevertheless the who outlived his son two years, gives llowing picture of the great com- ; childhood.

ıen he was five years old, I prepared ɔr elementary instruction, and at six him to school, where he was always the first among his fellow-scholars. ıs fond of society from early youth, as never happier than when he could his hours of play in a circle of joy- mrades. When he was eight, I gave reliminary instruction on the violin, t him practice until he could play

SCHUBERT'S FATHER

A JOYOUS SCHUBERTIAN PARTY

easy duets pretty well: after that, I sent him to attend the singing-class of Herr Michael Holzer, choirmaster in Lichtenthal. Herr Holzer often assured me, with tears in his eyes, that he never had such a pupil. 'Whenever I want to teach him anything new,' he would say, 'I find he knows it already. The result has been I have not given him any real instruction, but have only looked on him with astonishment and silence.'"

A Master Begging for Music Paper

SCHUBERT'S BROTHER Ignaz then started to teach him but soon realized that the little genius was outstripping him. In 1810 he is reported to have written his first piece, a setting of Schiller's "Ein Leichenfantasie." In the same year he sang and played the violin in church so remarkably that he was admitted at once to the Emperor's choir school, "The Convict." There, despite the fact that his plain grey clothes were exchanged for a gold-laced uniform, the life was extremely austere, the discipline severe and the food so meagre that we find the child begging pennies from his brother to buy rolls. The musical opportunities were however extraordinary, because we find that there were daily orchestral rehearsals in which the little fellow took part as a violinist. Thus he came to know the works of Haydn, Mozart, Beethoven, Cherubini, Mehul and others.

In the Convict orchestra, Franz was seated directly behind Josef Spaun, nine years older than the newcomer. He timidly told Spaun that he had written a number of compositions and eagerly desired to write more but could not afford money to buy the manuscript paper. Spaun at once found the wherewithal and Schubert was delighted beyond everything. It is said that at this time he cultivated his extremely neat, fine, closely written methods of putting down his thoughts on paper so that the paper might not be wasted.

A Wrong Estimate

IN SOME unaccountable manner there has arisen the wrong conception that Schubert was more or less of an uneducated lout. When we learn that at the Convict all students had to pass strict examinations in French, Italian, Drawing, History, Mathematics and Geography it becomes evident that Schubert's educational background must have been fairly comprehensive.

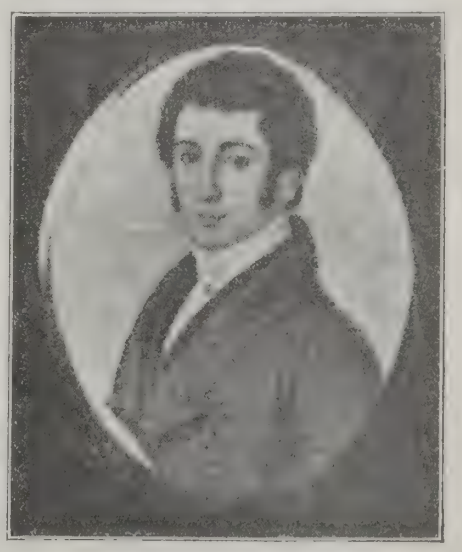
From 1813 to 1817 Schubert came under the instruction of the dramatic Antonio Salieri. Salieri was one of the leading operatic composers of his time. He wrote no less than forty operas none of which are retained in the present day operatic repertory. He was a brilliant personality, a fine looking man with a very testy temper. His chief claim to fame is that he was the teacher of both Schubert and Beethoven. He was amazed with the genius of Schubert and expected that he would become a great operatic composer. In a moment of enthusiasm he told the boy that he was already able to write operas. Schubert disappeared from his lessons for a long time and returned with the manuscript of a three act opera "Des Teufel's Lustschloss (The Devil's Palace of Pleasure)."

Schubert later rearranged the opera but was forced to pledge it as security for a debt to his friend Anselm Hüttenbrenner (he in whose arms Beethoven died in 1827). Later Hüttenbrenner's servants used the manuscript to light a fire and it was totally destroyed.

The Father's Plans Frustrated

SCHUBERT'S FATHER was determined that the son should become a teacher. Accordingly he was installed in the school where he remained for three years. Schubert, with his marvelously alert and creative mind, found teaching very distasteful. He had no patience with stupidity and, difficult as it may seem to believe, he was extremely severe, often boxing his pupils over the ears. For this reason the father finally consented to have him give up the work of teaching. During these three years his work in composition was by no means neglected, as he wrote no less than three hundred and ninety-six songs, or over two songs a week.

Once he was convinced of the son's talent, the father was not loath to recognize it; because, when his first *Mass in F* was given at the Lichtenthal church in 1814, the father went to the great expense of presenting his son with a "five octave piano," an enormous improvement over the oldfashioned "chopping block" upon which he had been obliged to practice. Pianos today are ordinarily seven and a quarter octaves in size.



"The Erl King"

THE COMPOSITION of *The Erl King*, near the beginning of the year 1816, was destined to bring Schubert's works to much wider notice. It is reported that when Schubert first heard the poem he was possessed by a kind of creative frenzy and could hardly wait until he got the notes down upon paper. The minor ninth in the passage "Mein Vater, mein Vater, Jetz fasst er mich an," a harmony long since passed into the commonplaces of modern discords, was considered so extraordinary that one of Schubert's former instructors was called upon to explain it to the group at the Convict when they heard the song for the first time. The song reached wide currency in manuscript form, thanks to the enthusiasm of Vogl who sang it in many private homes. It was not accepted for publication however until six years after it was written, when the composer-publisher Diabelli issued it. Over eight hundred copies were sold in which Schubert shared one half the profits.

Schubert was always a friendmaker. In fact, if it had not been for his friends his plight would have been far worse than it was. We have already mentioned Spaun and Hüttenbrenner. To this circle came the great tenor, Johan Michael Vogl (1768-1840). Vogl was the court opera singer and a man of decided influence. His name touched immortality however only because of his fortunate friendship with Schubert. He was literally Schubert's mouthpiece. Although he was thirty years older than Schubert, he lived twelve years longer. Vogl's voice had a very wide compass and he could therefore sing many songs which would have been impossible to the ordinary tenor. His influence upon Schubert was particularly beneficial in bringing the young composer to realize that he must compose for a public as well as to please himself. Schubert was inclined to be introspective. Vogl at their first meetings pointed out, "You are too little of an actor, too little of a charletan; you squander your fine thoughts instead of developing them." This sounds a little bit odd, coming from Vogl, who was a fine classical scholar and had excellent literary and artistic taste.

Vogl's Influence

THE IMPORTANCE of this friendship can only be estimated when we read that Vogl visited Schubert every morning for a long period of years, advising with the composer, helping him to select fine texts, and then even declaiming the poems in dramatic fashion so that Schubert might realize their literary possibilities. In one way the affiliation is said to have been injurious to the practical phases of Schubert's song composition. The range of Vogl's voice was so great that he could

ANSELM HÜTTENBRENNER
Friend of Schubert and Beethoven

sing works that are prohibitive to the average singer. This accounts for the extraordinary range in many of Schubert's songs.

Schubert was enormously industrious. By the time he was twenty he had written over five hundred works, including five symphonies, operas, cantatas, sonatas, quartets and numberless immortal songs.

In 1818 Schubert was engaged as musical instructor in the home of the famous Esterhazy family at Zselész, Hungary. Here it was his privilege to live in comfort, even luxury, free from care and poverty, with abundant time to compose. There was only one thing lacking—artistic sympathy. The situation was too much for Schubert and at the end of three years we find him back with his old companions in Vienna. At that time Rossini was meeting with immense success in the Austrian capitol. Vienna was opera mad. Schubert was extremely ambitious to be successful in this field. He wrote no less than eighteen pieces for the stage, including several three-act operas. None of these remains in the operatic repertory of to-day, not because they did not contain musical passages of notable beauty and fine workmanship but because poor Schubert never had a really fine libretto.

The Meeting with Beethoven

QUITE naturally Schubert looked up to the towering genius of Beethoven and anxiously aspired to meet the older composer. Finally this was arranged by Beethoven's friend Schindler, who tells of the meeting in his own words.

"In the year 1822, Franz Schubert set out to present in person the master he honoured so highly with his variations on a French song (Op. 10). These variations he had previously dedicated to Beethoven. In spite of Diabelli accompanying him, and acting as spokesman and interpreter of Schubert's feelings, Schubert played a part in the interview which was anything but pleasant to him. His courage, which he managed to retain up to the very threshold of the house, forsook him entirely at the first glimpse he caught of the majestic artist, and when Beethoven expressed a wish that Schubert should write the answers to his questions,* he felt as if his hands were tied and fettered. Beethoven ran through the presentation copy, and stumbled upon some inaccuracy of harmony. He then, in the kindest manner, drew the young man's attention to the fault, adding that the fault was no deadly sin. Meantime the result of this remark, intended to be kind, was utterly to disconcert the nervous visitor. It was not until he got outside the house that Schubert recovered his equanimity and rebuked himself unsparingly."

The failure of Schubert's operas, as compared with the great success of those of Weber and Rossini, robbed the composer of much of his naturally happy disposition. To this was added a tragic infatuation for the daughter of Count Esterhazy.

Caroline Esterhazy was seventeen and beautiful. Schubert adored her in silence; and it is said that she understood his affection. The social chasm between them was one which could never be bridged. One was a poor musician and the other a member of one of the most aristocratic houses in Hungary. "Why do you never dedicate anything to me?" asked the young countess. "Because," replied Schubert, "everything I ever did is dedicated to you." After his death they found the *Fantasia in F Minor* significantly written as a pianoforte duet dedicated to Caroline Esterhazy. The Countess did not marry until sixteen years after Schubert's death when she was nearly forty.

Meanwhile, Schubert accepted the decision of fate with fortitude. He wrote to one of his friends:

—*Beethoven was then quite *deaf*.

A SCHUBERT EVENING

"Grief sharpens the understanding and strengthens the soul. In order that these lines may not perchance mislead you to a belief that I am unwell or out of spirits, I hasten to assure you of the contrary. Certainly that happy joyous time is gone when every object seemed encircled with a halo of youthful glory, and that which has followed is the experience of a miserable reality, which I endeavored as far as possible to improve by the gifts of my imagination (for which I thank God). People are wont to think that happiness depends upon the place which witnessed our former joys, whilst in reality it only depends on ourselves, and thus I learned a sad delusion and saw a renewal of those of my experiences which I had already made at Steyr, and yet I am now much more in the way of finding peace and happiness in myself."

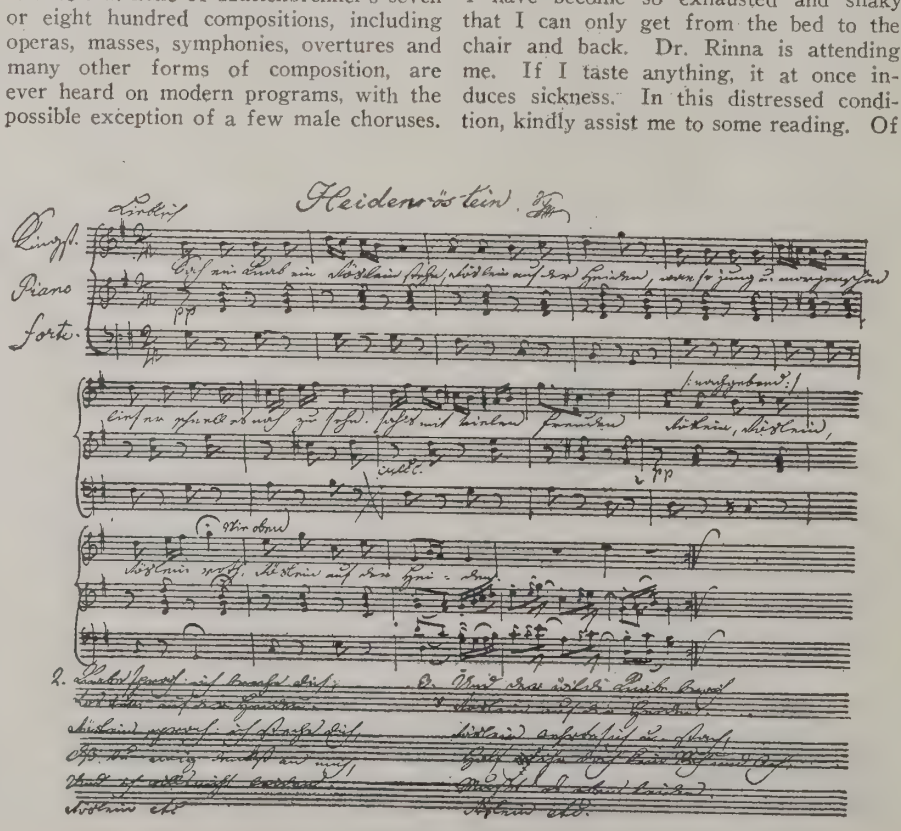
Beethoven's Death

SCHUBERT, it is reported, was very greatly depressed by the illness and death of Beethoven in 1827. The younger composer visited the great master several times in the company of Hüttenbrenner and Schindler. Viewing them from his death bed Beethoven said, "You, Aselm Hüttenbrenner, have my mind; but Franz Schubert has my soul." It is interesting to note that none of Hüttenbrenner's seven or eight hundred compositions, including operas, masses, symphonies, overtures and many other forms of composition, are ever heard on modern programs, with the possible exception of a few male choruses. Schubert was one of the thirty torch bearers at the elaborate public funeral of Beethoven. He was dressed in the customary mourning, with white roses and white lilies fastened in the crepe upon his arm.

Schubert's compositions brought him a very slight revenue, despite their great number. He did not compose in the popular style and the publishers of that day looked upon him as a questionable business venture. Posterity was to pay enormous sums for the same compositions; and it seems incredible at this time that there was so little market for Schubert's works in his lifetime. In 1828 he gave a concert which brought him a sum of about one hundred and fifty dollars (worth possibly ten times as much then as to-day). This sum he spent freely as was his wont and was soon again in need.

A Victim of Overwork

SCHUBERT, although abstemious in eating and in drinking, was continually intoxicated by his work. He was gradually burning himself up on the altars of his art. In November, 1828, he wrote to his friend Schober (Schubert's last letter):



[*Nov.* 11, (?) 1828.]

DEAR SCHOBER,—I am ill, and have eaten and drunk nothing for eleven days. I have become so exhausted and shaky that I can only get from the bed to the chair and back. Dr. Rinna is attending me. If I taste anything, it at once induces sickness. In this distressed condition, kindly assist me to some reading. Of Fenimore Cooper, I have already read "The Last of the Mohicans," "The Spy," "The Pilot" and "The Pioneers." If you have anything else of his, I entreat you to bring it with Frau von Bogner, at the coffee house. My brother, who is conscientiousness itself, will duly bring it or anything else to your friend, SCHUBERT.

In such a condition he easily became a victim of the dreaded typhus fever. A few days later, November 19, 1828, after receiving the Holy Sacrament of the Church Schubert passed into immortality.

At the request of the composer he was laid to rest in the Vienna Cemetery, just a few feet from the last resting-place of Beethoven.

A list of his few worldly goods at the time of his death is pathetic. What millionaire has given to the world a fortune to compare with the artistic and spiritual bequests of Schubert?

"THE HEDGE ROSE" IN MANUSCRIPT OF THE COMPOSER

Self-Test Questions on Dr. Tilford's Ar

1. *What can be said of Schub ancestry?*
2. *From whom did Schubert re his musical education?*
3. *What was the quality of his ge education?*
4. *Tell the story of the composition publication, and the influence upon S bert's career, of "The Erl King."*
5. *What celebrated tenor had a st influence on Schubert's works, and h*
6. *Tell of Schubert's meeting with thoven.*
7. *Were Schubert's compositions munerative to the composer?*
8. *What were the circumstances of death?*

Schubert in Romance

THE *Moderne Welt* some years issued an excellent Schubert number which Wilhelm A. Bauer contributed highly interesting article upon "Schu in Romance." It is quite easy to see the famous composer has become the ject of novels, plays, operas, moving ture films and so on. His life, his h fulness in the hands of his all-control genius, elicit sympathy.

The best known of these works the astonishingly successful "Das D mäderlhaus," with the musical score veloped from themes by Franz Schub and arranged for the stage by H rich Berte. This work appeared in An ica, in a different arrangement known "Blossomtime" and has already been u the stage for nearly ten years. In Am ica, in England and in Germany m different companies have been playing operetta at the same time. It has been of the greatest revenue producers in theatre during recent years.

Another operetta appeared in Leip in 1920 known as "Hannerl und Schube

The romance of Schubert and Countess Esterhazy formed the ba ground for a novel by Hella Hofmann. was called "The Blond Countess." T same subject was treated in a novel Viki Baum, entitled "Abend in Zseli In fact there have been numerous sh treatments of the same romance.

The most successful novel upon the li of Schubert is, unquestionably, that Rudolf Hans Bartsch, known as "Schwa merl" (Leipzig, 1912).

There have been several moving pi ture presentations of Schubert, here a abroad. "Schubert's Last Love," given Vienna, in 1925, was one of the best know and one of the most artistic.

"Our taste in Germany is for lon things; but short and good are be ter."—MOZART.

How to Read Music Accurately, Rapidly and Comfortably

By MRS. PAULINE MALLET PREVOST ORNSTEIN

Mrs. Leo Ornstein, wife of the famous virtuoso composer, herself a pianist and educator of distinction, writes upon a subject of great practical interest to all music lovers.

MANY MUSIC STUDENTS labor under special difficulties, owing to the fact that they are poor readers. It has been said that reading is a gift, and that a good reader is born rather than made. Nevertheless, it is possible for those who find reading particularly difficult, to become so proficient that their lack of native facility in that direction will in no way hamper their general musical progress. If this difficulty be not given separate consideration it is likely to retard the entire musical growth and to make the preparation of lessons slow and inadequate.

It may be helpful to observe wherein lie the essential differences between the good and bad reader. We must realize that the reading of music is similar to the reading of a language. Just as groups of letters form words, and many words a sentence, so in music groups of notes form chords, and series of chords define keys and formulate musical phrases. The good reader sees all of these symbols as related and compounded, while the poor reader can grasp only their fractional elements. One who reads rapidly is conscious of seeing neither notes nor letters, scarcely even words or chords, but still larger sections of the design, and hence at a glance absorbs the contents of the whole phrase. He is able to do this because, either through knowledge or pure instinct, he analyzes and reduces what he sees into group symbols. Where no actual visual obstacle exists, it is usually the failure to do this, which causes a variety of blindness, because too much detail is seen. It is the proverbial case of the man who could not see the woods because there were too many trees.

Relating Chords and Cadences

WITH MANY, the process which relates chords and which senses cadences, is purely intuitive. With others who have not this natural facility, it must be the result of some study of harmony and musical structure. Without this analysis, either conscious or unconscious, a page of music presents much the appearance of a chapter printed in some unknown language, having no punctuation, even no spaces between the words, to indicate their beginnings and endings. A person familiar with the language would have no difficulty in deciphering the meaning at a glance; but one commencing its study would be at a loss to separate one word from another. No wonder the reading of music is a laborious process when it appears thus unorganized, since each note must be calculated, and no relationship is felt between the various integral parts. Add to this the problems of counting time, arranging a possible fingering, and finding the location upon the keyboard, and we have a collection of difficulties that seems insurmountable.

Probably the first point to master in overcoming all these problems is that of time. This should be studied away from the piano, tapping the rhythms, as it is purely a matter of training the eye and rhythmic sense. For purposes of study, the best results will be obtained from taking a collection of pieces having various time signatures. Glance at a page of one, without looking at the signature, and see how quickly the eye can detect the time from the general context. At first, the student will search until he finds some simple and clear evidence such as a measure containing exactly four quarter notes, or three quarter notes, or six eighth notes. Later he will be able to discern the time in a measure of two half notes, a dotted half, two dotted quarters, and more complicated combinations.

Where to Commence

IT IS NOT wise, in learning to read, to commence at the beginning of a piece, to look at the signature and then count it out measure by measure. This can be done later after one has acquired greater familiarity with the general aspect of various rhythms. The important thing, at first, is to teach the eye to roam over the page, picking up as much instantaneous information as possible. This habit of wandering over the page with the eye, scanning quickly first a measure here and then another there, is a great help. It develops a certain visual flexibility which enables one later to look ahead with ease. This is a most necessary habit in reading. The eye of the poor reader is apt to find itself glued to the note which is in the act of being played. Long after all that is essential has been observed, and the eye should be travelling forward, it will remain with a kind of inertia, resting, until the cycle is completed, the note played and heard. Then only is it ready to look forward to see what follows. This is a habit fatal to any speed in reading, every effort must be made to teach the eye to rest but a moment at any one point.

Notice how the arrangement of the notation is calculated to help the eye to catch quick impressions of the rhythmic subdivisions. The four sixteenth-notes which equal one quarter, are all grouped together and separated from the next group, thus:

Also the two eighth notes, or, for instance, an eighth and two sixteenths, are probably written thus:

The various rhythmic units are nearly always separated from each other. Where quarters are the units, for instance, try to see each quarter of the measure as a bunch of notes forming a block in the rhythmic structure. Later, each quarter may be subdivided into eighths, sixteenths, or thirty-seconds, as occasion may require.

Perhaps the next example to be scanned may be in six-eighth time. Notice how this differs from the writing of six-eighth notes in a measure of three-quarter time. In six-eighth time the eighth is the unit of measure. Six-eighth time is what is known as compound time. It is in reality two measures of three-eighth time with the barline between every other measure erased.

Hence the notes are grouped three and three, thus:

indicating the rhythmic derivation. There are two accents in six-eighth time; the heavy accent on one, and a lighter accent on four. Each of these represents the first count of a measure of three-eighth time. Whereas if the time be three-quarter, with each quarter subdivided into two eighths, it will be written accordingly.

Here there would be but one real accent, although the second of each group of two-eighths is naturally even lighter than the first eighth of each group. To this extent, one might feel that there were relatively three accents in the measure; one heavy and two very light. It would be counted "One, and, Two, and, Three, and," instead of "One, Two, Three, Four, Five, Six," as it would be in six-eighth time. Hence of the six counts it would be the first third and fifth that would be relatively heavier in three-fourth time. The eighths, in this case, would correspond to sixteenths in three-eighth or six-eighth time, and would be grouped similarly.

Secrets of Printed Page

A LITTLE study will make evident how many hints lurk in the printed page of music which the eye must catch and quickly transmute into pulses and subdivisions of time. After the larger groupings can be recognized almost instantaneously each unit whether half, quarter, or eighth, should be equally divided into counts equivalent to the most rapid note contained within the group. If, for instance, a sixty-fourth note appears in one of the quarters of the measure, sixteen should be counted to that quarter. There would be sixteen sixty-fourth notes to one quarter. Suppose your quarter was subdivided thus:

You would count one in each of the sixty-fourth notes, two to each of the thirty-second notes and eight to the eighth note. You would thus have the exact time values of each note. Too many students are satisfied if they get these approximately right; but it is important to form the habit of counting time with absolute exactness. If care be taken in this regard, the very common fault of playing out of time would be largely obviated. It has its origin mainly in careless reading of rhythmic values.

When the scanning of even the most complex rhythmic subdivisions has become rapid and easy, away from the piano, the time is ripe to again scan the page, this time to obtain facility in determining the various keys through which the music passes. This should still be studied away from the instrument as we are at present concerned only with the appearance of modulation as presented to the eye on the page.

Study the Obvious

THERE ARE some things which seem so obvious that one is tempted not to call attention to them and yet even a very little experience with teaching proves how many apparently obvious truths may remain unutilized. A knowledge of key signatures is one of these often ignored essentials. Three sharps indicate no more than a little decoration of the engraver to many students. A routine familiarity with all scales, major and minor, is absolutely indispensable to facility in reading, as it is

Mrs. Pauline Mallet Prevost Ornstein

to any understanding of harmony or form. The greatest difficulty in scanning for keys, where there is not a thorough knowledge of harmony, lies in the fact that one becomes largely dependent upon accidentals; and it is often difficult to distinguish those sharps, flats and naturals which have harmonic significance from those which are only neighboring notes or altered scale steps and without modulatory meaning. In order to determine modulations with certainty a knowledge of harmony is requisite. But for purposes of reading, a great deal must be inferred from what little the eye can quickly grasp. A very facile reader is not always one who plays every note exactly as it is written, but one who can separate essentials from non-essentials. While playing all important elements, he will add as much of the less important as his proficiency permits.

Studying the "Waldstein"

LET US for a moment glance at the well-known *Waldstein Sonata* of Beethoven, to find what can be seen readily to indicate the transitions from one key to another. We notice that the first movement begins in C-major. The C-major chord repeats on successive eighths until the last quarter of the second measure. This should be sensed in a moment and the eye, instead of resting on each repetition as it is played, should immediately look forward to seek the first change. We see an F-sharp which should instantly suggest some form of G chord to follow. The third measure fulfills our expectation and is entirely built upon the G chord. In the fourth measure we see a C-sharp, but it is only a grace note and is immediately contradicted by a C-natural; hence, we assume it is only a transient accidental and probably a neighboring note.

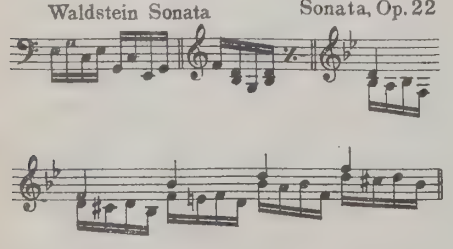
In the fifth measure B-flat is evidently part of the harmony. This would indicate the key of F and the F chord follows in the sixth measure. In the seventh measure the B-natural is again but a neighboring note and B-flat and A-flat in this measure indicate F-minor. In the tenth measure the B-natural foreshadows a return to C, but we notice that in the eleventh measure E-flat and A-flat appear. These, together with the B-natural, indicate C-minor rather than C-major; and the twelfth measure proves our assumption right, giving us the C-minor chord. Considerable practice of this sort of analysis is exceedingly helpful for facility in reading, because consciousness of the relation of the notes one is reading indicates so clearly what one may expect. Look for a moment at the twenty-ninth measure. Here the chord remains the same throughout and, if understood, is seen simply to repeat in different positions descending. No new notes enter and its first and last position are all one need see.

The more accurately one can sense this sort of thing at a glance, the freer the mind and eye are to roam forward and, finding the next real difficulty, dwell upon it with the time saved from easier places. The eye will sometimes detect a problem far in advance and, by studying it during every available moment, solve it before it is reached. Often in this way a difficult fingering can be arranged or a chromatic or irregular phrase read with accuracy. Chords which recur again and again will finally become recognizable as a whole and the single notes will no longer need to be seen, general characteristics being sufficient to identify an old friend.

The Difficult Sense

ALL OF THE foregoing has been practiced with the eye. Some will find this the most difficult sense to cultivate for reading. An entirely different set of difficulties, however, is experienced in the effort to co-ordinate what the eye sees with the activity of the hands in playing. Needless to say the more the eye has been able to apprehend, the more easily the hands can prepare positions. It is for this reason that the training of the eye must precede the actual practice of reading, since only when general outlines are recognized can fingering be planned and problems of execution considered. For instance, if we know we are in the key of B and see an ascending scale line, it is not necessary to read every note. It may be assumed to be the scale of B and we have only to notice the first and last notes and apply the fingering of the scale. But the ability to do this implies a practical knowledge of, and familiarity with, all scales and their fingerings. The location of sharps and flats must be quite subconscious. Not only this, but also as we are called upon to read arpeggios and figures of all sorts. These should be separately studied and applied to different keys and chords. As they appear in compositions under consideration, they should be analyzed and transposed.

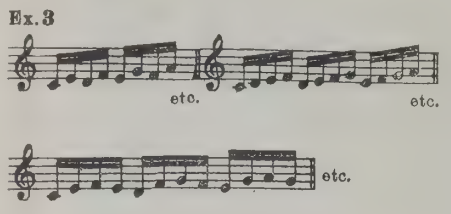
For instance, this figure from the rondo of the same sonata:



Ex. 1

is simply a chord skeleton and Beethoven repeats the figure on different chords. In the third measure it appears on the dominant seventh instead of the tonic; and later it appears curtailed and altered, through various keys. The student should take figures such as the following which are built upon chords and apply them to every chord he can think of in all keys.

Ex. 2



Waldstein Sonata Sonata, Op. 22

He should extract figures from every piece he studies and apply them thus until he becomes so well acquainted with his keyboard that once the shape of a motive is grasped, he has but to recognize to what chords it is applied and what is its relation to the general pattern.

After much work has been done, improvising on figures and themes at the piano, without music, it will be advisable to combine the earlier process of eye analysis with its practical application, by actual reading at the piano. In doing this it is very important to keep the eyes on the music and to measure, by feeling, the distances on the keyboard. If the eyes are watching the hands, they will lose their place on the music every time they look away. In any event, they are needed to look ahead in every spare moment. The muscular memory of the hands can take care of finding the place on the keyboard, provided that this has been separately developed by sufficient work with scales and figures. These should be practiced without looking at the keys, in order to develop the sense of touch measurement to the most acute degree. Scales should be played, not only in their simple form, but also for instance thus:

Ex. 3

They should also be practiced with the hands, not only an octave apart, but also a sixth apart, a tenth apart, and in parallel and opposite directions; until, in fact, any figuration of notes along the scale line feels familiar and natural and can be played with the eyes shut.

Keep Strict Time

NO MATTER how slowly it may be necessary to play, when reading, everything should be played in strict time. The regular recurrence of the beat forces one to hurry to find the note. This rhythmic drive is still more emphasized when reading duets or ensemble with another person. Here the time must be counted accurately in order that both keep together; and after all preparatory work has been done, combined practice is the best when possible.

When the right foundation has been laid, a good reader is developed just as a good technician, by daily practice. Learning to read is much like the study of a language. The eye will, little by little, extract meaning from associated rather than from dissociated symbols; finally it will lose the sense of detail and see only the group as a single symbol. Cadences which continually recur will be recognized and the chords which compose them will be sensed even before they are actually seen.

An excellent method after all earlier steps have been perfected is to assign a certain number of days to a given composition; this not with the idea that the piece is to be memorized or even worked out in detail, but purely from the reading angle, to be as fluent as possible. Either one or two new pieces may thus be undertaken each week. At the end of the time, whatever the condition of the pages studied, they should be dropped and new ones commenced for the following week.

This system is helpful because it develops the kind of memory which is most useful in reading. A short visual memory enables the eye to reconnoitre. A good reader can carry a momentary picture, often, of many measures. This faculty also has to be developed and is encouraged by a limited repetition of the same text. It must not be understood that the above has any reference to the manner in which pieces are to be prepared for lessons. The preparation of such pieces should be carried out with extreme care in every detail. It is only during the time particularly devoted to the correction of poor reading, that the foregoing instructions are to be followed. Gradually the ease in reading acquired will make more rapid the preparation of new compositions for a lesson; but it must never be forgotten that while much detail must of necessity be skimmed over when results at first sight are desired, nevertheless, in careful and painstaking study, lie the foundations of learning to play the piano.

Self-Test Questions on Mrs. Ornstein's Article

1. *How does the rapid reader see things?*
2. *Where shall we begin a piece, for practice reading?*
3. *How shall the printed page be first studied?*
4. *How shall repeated chords be read?*
5. *How shall we apply study to chord figures?*

Why and When the Fourth Finger

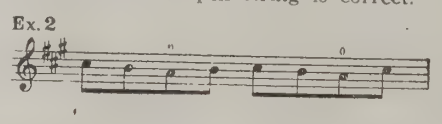
By Ben Venuto

SOME teachers, in a commendable but unwisely-considered effort to make the beginner's task more simple, allow the use of the open string even where the fourth finger is indicated, in the first position. Others go to the opposite extreme and so insist on the use of the fourth finger that they unwittingly give their pupils the idea that there is something in general incorrect or inelegant about *any* use of the open string.

Both these extremes may be easily avoided by merely following faithfully the fingering given in any well-edited instruction book or studies; but the very best teaching is to explain the principle of the thing and encourage the pupil to think it out for himself.

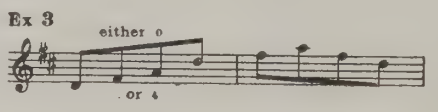
The true principle is simple, namely this:

When a note may be played either on open string or with the fourth finger, choose that method which will call for the least changing of strings.



For instance, the following example, by use of the fourth finger, may be played entirely on the D string, and to use the open A would be clumsy.

Ex 1



On the contrary, in the next example, as one is on the A string anyway, it would be even more clumsy to use the fourth finger for A. The open string is correct.

Ex. 2

Where a change of strings must of necessity occur at the place in question, as in

Ex 3

the pupil may be allowed either method that comes more naturally and easily.

Practicing New Scales

By Wilfred E. Despard

THE following method of teaching each new scale will be found helpful.

1. When giving a young pupil a new scale, have him play slowly with each hand separately while you point out the notes.

2. Make him play both hands together and count four beats to each note as follows:

3. Have him practice like this for one week after which the tempo may be increased. It is preferable to take scales in two octaves.

Advertising to Get Pupils

By Patricia Rayburn

MUSIC teaching partakes of the nature of both a profession and a business. In the latter capacity, advertising is a necessary adjunct of its practice.

The music teacher has his wares to spread before the public just as has the merchant. There are a number of ways in which people may be informed of the merit of the teacher's work and new pupils thus obtained.

First of all comes real ability as a teacher, and interest in both music and one's students. If an instructor is earnest, serious, and has all the qualifications that one who teaches should possess, his pupils will serve as his greatest and best advertisement. This is as it should be. The recital in particular gives an interested public an opportunity to see the products of the teacher's work. If that work has been good, desired results in the nature of a broader field will be obtained.

Do not stop with this, however. It is necessary to go farther.

There are literally hundreds of avenues of advertising. Through newspaper notices, through attractively-written personal letters to parents with eligible children, pointing out the advantages of musical knowledge; through personal calls, through innumerable channels that a little thought makes apparent, a teacher may secure the desired hearing.

Do not hide your light under a bushel. No matter how great your ability and merit, you must blow your own horn a bit to have it heard. Search out new and original ways of advertising—above are a few suggestions—and let the world know about you.

Music For All Occasions

PERHAPS no more sensitive literary portrayal of the childhood of a musician has ever been drawn than that of *Jean-Christophe,* the central figure in Romaine Rolland's great novel.

"Like all children," we read, "he (Jean-Christophe) hummed perpetually at every hour of the day. Whatever he was doing—whether he were walking in the street, hopping on one foot, or lying on the floor at his grandfather's, with his head in his hands, absorbed in the pictures of a book, or sitting in his little chair in the darkest corner of the kitchen, dreaming aimlessly in the twilight—always the monotonous murmur of his little trumpet was to be heard, played with lips closed and cheeks blown out. His mother seldom paid any heed to it, but once in a while she would protest.

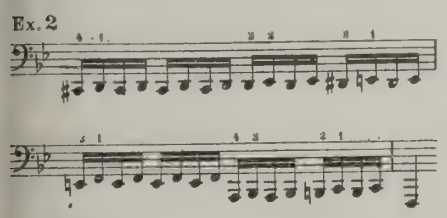
"When he was tired of his state of half-sleep he would have to move and make a noise. Then he made music, singing it at the top of his voice. He made tunes for every occasion. He had a tune for splashing in his wash-basin in the morning, like a little duck. He had a tune for sitting on the piano-stool in front of the detested instrument, and another for getting off it, and this was a more brilliant affair than the other. He had one for his mother putting the soup on the table; he used to go before her blowing a blare of trumpets. He played triumphal marches by which to go solemnly from the dining-room to the bedroom. Sometimes he would organize little processions with his two small brothers; all then would file out gravely, one after another, and each had a tune to march to. But, as was right and proper, Jean-Christophe kept the best for himself. Every one of his tunes was strictly appropriated to its special occasion, and Jean-Christophe never by any chance confused them. Anyone else would have made mistakes, but he knew the shades of difference between them exactly."

Beethoven's Piano Sonatas and How to Teach Them

By PROFESSOR FREDERICK CORDER
Of the Royal Academy of Music, London, England

Part V

Sonata No. 11, in B♭ Major, Op. 22

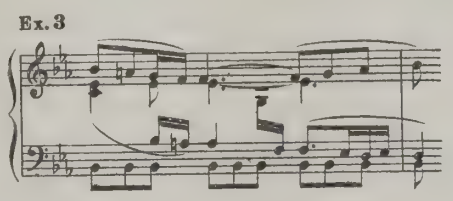


WITH THIS WORK we discard the term "easy" and acknowledge the advance which Beethoven demands in our technic. While the subjects are just a trifle square-cut and formal, their profusion (there are no less than six different phrases to the second subject of the first movement) and variety of rhythm, raise this Sonata to a very high plane of composition. Impetuosity and energy mark every measure of its first movement, and the powers of the left hand are not spared. Therefore must we not scruple to employ the thumb on a black key, and such-like devices which are forbidden to the beginner? For instance, the unison passage beginning at the eighth measure cannot be firmly played without using the left hand thumb on the first of every four notes, black as well as white. At 10 Beethoven has written Mordents for the right hand; but at the pace we are going it is impossible to get the three notes in, so they are generally reduced to simple acciaccaturas, and these the left hand also is able to play, so the passage is usually taken thus.

Ex. 1

At 22 the left hand has a very brilliant passage, the fingering of which must be well looked to. A great deal of 4, 1, and 3, 1, is advisable, the last measures going

Ex. 2



The second of this unique display of "second subjects" is severely bold and requires careful phrasing. At 34, where the double thirds grow to larger intervals, there will have to be considerable slipping of fingers, to maintain the legato. Beware, too, of breaking up the right hand arpeggios at the second group. Further on, at 48, the jumps of broken octaves demand much care. But this right-hand passage, from 44 to 56, is so brilliant and effective that no one can grudge the labor that has to be bestowed on it. Two more striking phrases bring the exposition to an end, with just a hint of the opening, for fear it should have become forgotten in the long series of subjects. All these require the broadest contrasts of tone and style of which you are capable. In playing this portion, I like to think of a collection of portraits of athletes.

The Dovetailed Fragments

IT IS VERY interesting to note how apparently mechanical fragments out of the various subjects are taken and fitted together and how triumphant is the result. The principal subject recedes into the background, becoming a mere suggestion for the flourishes which separate the canonic imitations founded on the scale figure (62). When this has been repeated thrice the right-hand flourish takes the lead for awhile and the left accompanies. Since one would naturally use the pedal to each measure, there was not much point in writing each quarter-note separately; but it was meant to imply an abnormally heavy bass. After 14 measures of this the left hand resumes the offensive by converting the scale figure into a new subject in the bass. Three repetitions of this, murmuring more and more softly, bring him to his real objective, a low F, the dominant of the original key. This reached, a gradual revival takes place, while the harmony "stays put" on a chord of dominant 7th for nearly twelve measures (not to mention a pause) which makes it quite a relief when the original subject reappears. Having so bombarded us with subjects in the exposition, the composer felt that any further matter in the way of a *Coda* was not wanted and so made his recapitulation act simply up to its name down to the last emphatic cadence, as if to say, "That's that!"

The next movement, marked *Adagio con molt' espressione,* is in 9/8 time, so we have to bethink us which is the unit of beat which is to be *Adagio.* As a matter of fact it is the dotted quarter-note; but I don't know how you are to tell. The quiet accompaniment chords were carefully surmounted by dots and slurs, indicating *mezzo-staccato* touch, but surely they can only be played one way. The *pp* mark was sufficient, the melody above demanding necessarily to be the prominent feature. I have noticed a common fault with engravers is to substitute *appoggiaturas* for *accacciaturas* in these and similar places, the tiny difference of the stroke through the tail rendering the error one easy to be overlooked. The player would not be likely to be misled here (first three measures), the character of the ornament being so obvious. The trills in 8 and 10 begin, as usual, with their upper notes and are best made to consist of six notes to the eighth-note. To maintain the *legato* in the second subject, especially in the middle melody, the division of the notes between the hands had better be modified thus:

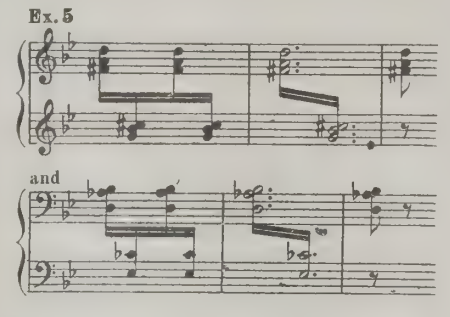
Ex. 3

The same at 21, taking only G with the right hand and all the rest with the left. At the end of measure 27, it is obvious that the middle Eb should go with the right hand. It is not so obvious that at 30 the bunch of grace-notes (*grupetto*) should come *upon* and not before the beat, thus turning the dotted quarter-note into a group of four notes. At the latter part of 33 the phrase in octaves is difficult unless you can adroitly slide the thumb and help out with the fourth finger. If your stretch is very small you will be forced to let the left hand abandon its last two G's of the measure and come to your assistance, sustaining the G's meanwhile by means of the pedal, but you can see why this is undesirable.

In the bit of duet, or imitation which follows, the right hand has the difficult task, thrice repeated, of making the waning cadence of one voice simultaneously with the starting of the second. Endeavor to endow them with a different quality of tone, if you can. The six sixteenth-notes then become (at 39) a figure of accompaniment in sextolets, murmuring along for quite a time, while a mournful scrap of melody wails out against the rippling flow. I must leave you to find out the few places where the left hand can save the right from using its thumb twice on successive notes.

The second half of this movement presents no fresh difficulties unless the *cresc.* at the end, culminating in a *pp* (the previous time it was only *p*) may be regarded as one. This is a strangely sad and wistful piece, considering that it is in a major key.

The Minuet which follows is graceful and placid in character. The figure which pervades it



Ex. 4

seldom indulges in a chromatic note for the second of the four, but the avoidance of this in 6 was, I fear, because it would have *looked* so shocking to have written G♯ against the G♭ of the left hand. Certainly it would have sounded better than B♭, and being merely a passing note, could have hurt nobody's feelings.

The triple trills which come in the second half of this Minuet would be written

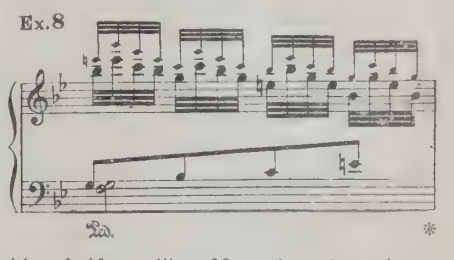
Ex. 5

in the present day, enabling the player to get a very much better *crescendo.* It is curious that Beethoven never employed this devise, which Bach invented many years before and used with great effect. At the end he gives us—or rather, demands that we should give him—his favorite sudden *piano.* The *Trio* is an honest bit of left-hand work, and I would advise you to finger it for yourself, playing through the part alone, to discover what will best suit you. By the way, in fingering a passage do not overdo the thing. As a rule you merely want to mark any irregularity. Nearly every "edited" copy tends to bewilder the eye by a mass of superfluous fingering. None at all is far better than too much.

Using the Repeats

OF COURSE you must make all the repeats and the *Da Capo* in this movement. I have heard more than one indifferent amateur complain that the final Rondo of this Sonata is dull and uninteresting. Few are the pieces by Beethoven which deserve this reproach; what can it be in the work of the performer which fails to arouse interest? Lack of rhythmical variety tends to dullness. Beethoven is always on his guard against this fault and substitutes other attractive features in unexpected places. Observe the long phrases of the subject. Hum the melody through and notice how taking breath at the end of the first and third measures would weaken it. Then a long run of three-and-a-half measures with a steady *crescendo* topped by a *piano* cadence! The second half of the tune is in octaves, demanding clever sliding of the right-hand thumb and use of the fourth and fifth fingers for the upper notes. Keep a smooth, but quiet bass. The modulating subject wants to sound vigorous and decisive in contrast. In 19 the trill occupies the first beat of the measure (you must count four eighth notes) and the accent of "two" falls on the little B♮, giving you an even run of four notes on this second beat. It would have been better to write it thus:

Ex. 6



The new rhythm in the middle of 22 is apt to cause bewilderment by reason of the cumbrous notation of the period. Nowadays we should write:

Ex. 7

leaving the sustaining of the notes to the pedal. If you still fail to catch the accent set these words to it, "Never mind—pick it up!" and you will be all right; but after three repetitions of this take care when the time relapses into simple eighth-notes again, that you do not go too fast. At 32 comes a flourishing passage for the right hand. If you find the downward skip at the commencement of every other measure very awkward, you might pop in that second thirty-second note with the left-hand thumb, but this would have to be done very neatly and lightly. At 35 the composer evidently was forced to alter the position of his arpeggio because his instrument had no top notes

Ex. 8

Alter it if you like. Next there is an interesting bit of imitation to lead back to the main subject which it appears to seek to anticipate, the two hands grotesquely seeming to say, "I'd rather you went on with it"—"Far best if you went on with it"—"Nothing of the sort, you must go on with it"—and so on. It would appear that Beethoven expected the player to make a five-note turn in 42 and 43, where he has marked a trill, but four or even three notes will be as much as most people can get into the space of one sixteenth-note. The protesting lower part at last leaves the work to the treble, who (like a nervous man making a speech) gets finely flurried over it. On no account divide up the final rush with which he plunges into the subject; it would quite spoil the effect.

This subject is gone through without any modification, as the custom demands; and the "middle subject" which follows, presents the unusual feature of beginning like that at 18, only in B♭ minor. After a modulation to F minor this is followed by a bustling passage, which one longs to play with alternate hands, but which one must not. Then we have a curious contrapuntal

treatment of the previous phrase, first in two parts, then in three, then with both hands in double-thirds. Notice in this version that the two eighth notes are slurred, where one would have expected to find them strongly accented, as they have hitherto always been. I suppose he thought a change was desirable, but it is not so effective in the new version.

The second return home is managed in a quite different way. It aids smoothness if the middle Eb at 112 be taken with the right hand; but the corresponding place at 114 cannot be thus facilitated. Next we have all the first part of the movement recapitulated (with the dominant portion transposed, as usual) and then occurs a sort of premature entry of the subject in the upper octave and in the sub-dominant. As if realizing its mistake it falters and finds its way cleverly back to the right place, but having drifted into triplets, makes the proper last entry a charming variation in that measure, the left hand meanwhile keeping placidly on with its accompaniment in twos. There is little trouble in fitting these two together until the octaves come (173). The triplets then being broken—that is, shorn of the first of each three—the bass must be felt to supply the gaps and the two hands must "beat as one," as the poet says. The last two pages are by no means easy, especially for the left hand which has a strugglesome time with scales, while the right hand keeps trying to get back to the "middle subject." In the end both pay courteous compliments to one another; and "that's that!"

Self-test Questions on Professor Corder's Article

1. *What particular demands are made on the left hand in the first movement of Sonata, Op. 22.*
2. *What "engraver's fault" occurs in the "Adagio," and what distinction should be made?*
3. *How shall dullness be avoided in the "Rondo?"*

Measuring the Child

By Eutoka Hellier Nickelsen

THE very young child should be able:

1. To indicate the melody line.
2. To discover certain scales that make up the runs or passages in their studies and pieces.
3. To build a triad on each scale tone.
4. To build a four-toned chord on each scale tone.
5. To recognize chords of rest.
6. To recognize chords of unrest.
7. To determine by ear an octave, triad and four-toned chord.
8. To recognize, by means of pre-keyboard training, various instruments by their quality of tone.

Note: The teacher should blindfold the pupil and have him listen very carefully to such instruments as the piano, guitar, violin, cornet, and so forth.

The Creed of the Student of Music

By Mary M. Pleasants

As to the Art of Music:
I believe in its educational power.
I believe in its aesthetic power.
I believe in its spiritual power.
As to my teachers:
I believe in their knowledge.
I believe in their judgment.
I believe in their interest in me.
As to myself:
I believe in strict obedience to teaching.
I believe in my power to learn.
I believe in regular, faithful practice.

Practical Hints on Memorizing

By May Hamilton Helm

OFTEN the best of pupils will, as they express it, get "rattled" in playing in public, but experienced teachers can always distinguish between mistakes made for the first time through nervousness and those ground in by incorrect repetitions.

To avoid the latter, the most important thing is to see to it that the first reading be a careful, thinking one. By many thinking repetitions, habit will be formed. Repetitions engrave bad as well as good "tracks," however, so beware how the first track is formed. "Correct habits are necessary to establish accurate finger or manual operations. Correct mental habit comes first from conscious mental direction practiced systematically and persistently until the mental direction becomes subconscious and therefore without appreciable mental effort." This is taken from a well-known typewriter's manual, but the principles of habit-forming are the same for typewriter or piano. Every one knows that it is easier to form new habits than to break old ones.

Four phases of memorizing are emphasized in nearly all works on this subject: Visualizing mentally the printed page; gaining a thorough analytical knowledge of the music, of its harmony and musical form; acquiring a muscular sense of the passages; and hearing the music played, as a sort of echo in the mind.

The first is sometimes called the photographic method. After a pupil photographs the printed page of music on his mind, he is simply reading it, though the page be removed. This method of memorizing is inadequate for the musician's or actor's purpose. One cannot conceive of Sothern and Marlowe seeing the text of *Hamlet,* when they present the play!

The second method, the analytical, has its place in the process of memorizing, but a pupil might know all about the structure of a composition yet be unable to play it.

Muscular memorization, the most popular and least reliable, nevertheless has its use. The recommendation to remember by touch each key as pressed is useful in some instances. But it is unsafe to depend wholly on this sense. Too many pupils know by experience what it is to be "lost" in playing a piece they had memorized through the muscular sense and thought they knew perfectly.

The best method is to listen for the sound of the piece, recurring faintly in the mind. However, neither is it safe to depend on this alone nor to think too far ahead. In reading aloud, when the eye travels faster than the tongue, it is hard to avoid making mistakes. So, in music, whether the printed page be seen or the music heard, it is disastrous to transfer the thoughts to a distant passage. One musical idea should become firmly fixed before proceeding to the next.

Musical Lollipops

(With Apologies to the Author of "Musical Laughs.")

By Clyde Norwood

A FRIEND of mine, a native of good old Hamburg, Germany, is sometimes reminiscent over some scenes of her childhood. She and her brothers and sisters seem to have been a favored group of youngsters. In their home was a true love for music, a really musical atmosphere. The mother had a beautiful voice and had sung much in public. The father was a liberal patron of music. One of his duties was to escort artists to the podium at concerts and recitals. This required his presence at the best concerts, and naturally his charming wife accompanied him, often with the children.

In the city of Hamburg, in those days, each symphony concert was preceded by a public rehearsal for which tickets were sold and a considerable audience assembled. On a certain occasion, during the reign of Hans von Bülow as conductor of the symphony, this little incident occurred.

In the audience sat Mme. Amalie Joachim, wife of the famous violinist, herself one of the most distinguished *lieder* singers in Germany. Those who have heard Mme. Joachim in recital remember her queenly bearing and dignified manner. But the singer had a fund of humor behind her serious mien and dearly loved a good joke. During the concert, in the softest part of the music, a few short yelps were heard. Bülow scowled prodigiously, and everybody looked at everybody else. All seemed perfectly innocent. Only a few favored ones knew the sounds came from Mme. Joachim's tiny pet dog, which she had concealed in her large muff and had pinched at the opportune moment.

My friend's father, as a lover of music, was partial to the song of the nightingale, and used to attract many of these birds to his garden by feeding them a particular food they liked. Julius Stockhausen, the eminent baritone and singing master, who was a frequent visitor in this musical household, had a peculiar birdlike whistle, which he used to attract the nightingales. He would begin to whistle far down the street. The birds would hear and follow him, till he came to the garden. There he would stay and whistle to them, while they would sing as if to split their little throats.

One of the most precious memories of my friend is of Jenny Lind's party for the children. While visiting in this Hamburg home, its hostess arranged a children's party for Jenny Lind who had promised to sing to them. Some two dozen children from families of friends had been invited.

It was a great day for the dear children. They came dressed in their prettiest, daintiest clothes, with hair in curls or neatly braided, and faces shining with expectancy. At the right moment they marched into the large music *saal,* and stood in a semi-circle to greet the singer as she entered and walked to the piano. She carried in her arms a wonderful wax doll that could walk and talk and was almost as big as a real child. She had brought it all the way from England to show to them.

And then she put down the wonderful doll and began to sing. It was Taubert's *Kinder Lieder* (Children's Songs) that she sang. It is said no one ever before—or since—could sing these songs like Jenny Lind. There were the *Little Drummer,* the *Bienchen zum, zum, zum,* and all the rest of the lovely things, one after another.

And after she had finished, the children filed past the great singer, to shake her hand, and thank her for it all. And she had a pretty and kind word for each of them.

After that there were dainty things to eat, and a little merry making. But the memory of that singing by the gracious artist, and the lovely songs which are so seldom heard nowadays always remained with the children, and with their elders who were present, as a vital possession.

Forgotten Foundations of Music

By W. Francis Gates

ONE CAN enjoy and understand the music of to-day only by acquiring a fair amount of knowledge of the music of the past. That is one good reason why students of music should study the history of the art.

But beyond students there is the general musical public which gets its musical knowledge only from what it hears and which never sees the inside of a "History of Music." That this public may realize the road along which music has travelled it is well to present in concerts occasionally works of Haydn, Mozart, Scarlatti, Bach, and others of by-gone days.

It must be remembered, however, that these men themselves were the flowering of centuries. Every composer's work is founded on that which preceded his. Without this foundation it is only a bit of chaos.

For instance, Bach was a monumental genius; but Bach was a development, a summary and an extension of his times. The same may be said of Mozart and Beethoven. Between Bach and Beethoven there were many lesser lights whose work had a bearing on what followed though the period was less than a century. The lesser men gather together the materials; the greater men use them.

Works of men who helped, though possibly in a somewhat obscure way, to make musical history, were represented recently by the New York Symphony Orchestra, under Bruno Walter, in the performance of a symphony by Johann Christian Bach, the eleventh son of Sebastian Bach. This son of an illustrious father, was called "the Milanese Bach," because he went to Milan, in 1754, was a pupil of Padre Martini and was organist of the Milan Cathedral for two years. He lived in an atmosphere entirely different from that of his early German home, the latter being one of counterpoint, the former of melody. Consequently, he absorbed something of the Italian style which gave his symphony more of joy and less of austerity. He even wrote operas in the Italian style. One may well imagine with what feelings his father might have heard them!

Johann Sebastian Bach and his twenty-two children furnish not merely an interesting page in musical history, but several significant chapters, where it is good to linger. The recent concert of this little-known Bach is an example of what can be resurrected from the past to point to the foundations of the present status of art.

It is well to hear a bit of "foundation music" once in a while just to extend the knowledge of the structure of art and the appreciation of those many smaller men who in time evolved from their mass other men of towering genius. However, one might enjoy looking at the foundations of the pyramids but not care to descend therein every week.

The Poorly Paid Schubert

Hundreds of Schubert's song manuscripts were sold by him to publishers for twenty-five cents apiece. It is estimated that at no time in his life did his income exceed about $500.00 a year. Here is the pathetic official inventory of all Schubert's worldly goods at the time of his death:

Three dress coats, three walking coats, ten pairs of old trousers, nine waistcoats, one hat, five pairs of shoes, three pairs of boots, four shirts, nine neckties, nine handkerchiefs, thirteen pairs of socks, one towel, one sheet, one mattress, one bolster, one quilt, a quantity of old music. Value of all, fifty shillings ($12.50).

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M.A.

Professor of Pianoforte Playing at Wellesley College

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered Department. Full name and address must accompany all inquiries

Minor Scales—The Pipe Organ

(1) I find it very difficult to teach pu- s between the ages of nine and twelve minor scales. They have no trouble th the major scales, which I teach by rachords, and they finger them nicely. though I have explained many times as refully as possible the relation of a nor scale to its major, it seems very rd for them to understand, and it is nost impossible for them to remember e fingering. Please give me some sug- stions as to the formation of the minor de and its fingering that may prove lpful.

(2) I am planning to take up the study the pipe organ soon. Will you suggest text-book that will give me the neces- y introductory information regarding e organ, something of its construction, e different stops, pedal and so forth?

MRS. H. W.

) The minor scales are always some- of a problem for young pupils, and ld therefore be taken up very slowly e easier ones first—in the order A, E, , G, C and F. All these are fingered tly like the majors which begin on same keynote.

should teach first the harmonic minor. r explaining the signature relation be- n the major and minor modes—C ma- and A minor, G major and E minor, so forth—you may let the pupil begin ne minor tonic and follow the signa- implicitly, adding, however, a sharp he seventh tone.

) The standard book for the infor- on you want is Stainer's *Organ er.* This book also furnishes a series aluable exercises which extend from eginning to a considerable degree of ncement.

Replenishing Ideas

teacher who gives an average of forty ns per week, says:

am very glad, indeed to be so busy; I get rather blue and discouraged at es, and want to ask you if it isn't wise a teacher frequently to take up a rse of study and get new ideas in ching. I have always had a dread of ting into a rut in my work. I am too y to study during the winter, but could e a summer course.

Another question: Do you think it wise a teacher to take all grades in piano. is it better to specialize in either be- ning or advanced work?

M. M.

ere is always the danger of running f one continually pours out informa- to pupils and does not refill the er. Even during the busiest season hould manage to save some time for mprovement. Make out a list of s to keep up or learn, and devote at fifteen minutes per day to systematic upon two of them. Also, have a on music or a kindred subject con- ily at hand, and read an equal time day, taking note of important items. mmer courses are now the salvation any teachers like yourself, and are at private camps or institutions, also ny of the colleges. I strongly advise taking such courses, not only in piano ing, but also in music theory, his- and so forth. Much of the benefit of courses, too, comes from the inter- ge of ideas with fellow students.

I believe that it is more inspiring as a rule to take all grades of pupils, as the opportunity occurs. True, this is an age of specialization; but, carried too far, such limited fields are apt to narrow one's vision.

Key-Signatures

Miss M. K. M. sends the following suggestions as to how the key-signatures should be taught:

Your correspondent in the February issue on "Examination Questions," gives a rule for telling a key-signature which, to my mind, is not as absolutely certain as the one I use.

In sharps the key-signature is one half-step higher than the last sharp. In flats the key has the same name as the next to the last flat. I have a fancy that it is more logical to establish the key from the beginning, rather than the end of a composition.

My pupils are taught to write all their major and minor scales, and never to play them "from a book."

Perhaps the surest way to determine the key of a given piece is to examine both the beginning and the ending chords. Sometimes the beginning is vague as to the exact key; in which case the final chords must settle the question. An instance of this kind may be found in Beethoven's *Sonata,* Op. 31, No. 3, first movement, where the key is not fully established until the eighth measure.

Careless Fingering

What can I do to correct a pupil twelve years old whose fingers break in at the last joint? She is large for her age, and her hands are abnormal in that she seems unable to control them well enough to keep the fingers from bending. She is a new pupil, and I cannot seem to impress upon her the importance of logical fingering, of which she is in great need. No matter how easy a piece is, or how completely the fingering is marked, she never fingers it right, but puts her thumb on black keys when she should not and starts to finger any run at all 1--2-3-4-5, and so forth. What shall I do to correct these faults?—H. W., JR.

Have your pupil practice five-finger exercises in "scratch" position—that is, with the fingers held firmly curved, as though she were going to scratch someone. As she grows older and her fingers become less flabby, the problem should be simplified.

Probably she has never been taught to notice the finger numbers, and to connect them with the proper motions. So you should do everything possible to compel such attention. Here, as usual, slow practice is the chief panacea. When she begins on new material—a study or piece—have her practice for some time with each hand by itself, and require her to name each finger-number out loud before she plays the corresponding note. At the lesson, if a mistake in fingering occurs, let her draw a ring around the finger-number with a blue pencil.

Another helpful device is to have her write in the fingering wherever possible. Let her supply the fingering for notes where the numbers are not written down, and also for repeated passages where it is omitted. Occasionally choose a simple piece which has but little fingering marked and let her finger it according to her own judgment.

Staccato Octaves

How should a pupil be taught to play staccato octaves? According to Dr. Mason, *Touch and Technic,* Vol. 1, Sections 33 and 34, they should be played with the free-hand touch, moving from the wrist, but with the forearm moving slightly at the same time. Nevertheless in Vol. IV, Section 1, Dr. Mason says, "The proper octave touch is that of the 'Up-arm,' described in Vol. 1, Sections 30-34." Which of these two methods is the more generally used in the principal training colleges and for examination work in general? INQUIRER

There is no discrepancy in the two statements quoted, since each of them involves a slight upward throw or jerk of the forearm, which, if the hand be kept properly loose at the wrist, results in a sort of "flop" of the hand upon the keys. This is a variety of the "hand touch," often described in these columns, and is the proper method of playing staccato octaves. Observe that the hand is not "pulled backward," but is *thrown* slightly upward from the wrist.

This method of playing staccato is, I believe, the one most often used by modern teachers, and should therefore pass muster in examinations.

Forearm Rotation

With reference to your answer to "Technic for Beginners" in THE ETUDE for May, 1925, you advise a close-finger position and forearm rotation for a brilliant technic.

I am studying with a teacher who uses this method of forearm rotation, and I find that it has enabled me to play relaxed (I had played with stiffened muscles for years), but my fingers do not seem to gain strength. How can I remedy this?

R. M. S.

Most of the modern teachers employ to a greater or less extent the principle of forearm rotation, which has been especially stressed, however, by Tobias Matthay.

Most important of all, however, is the ability properly to relax the muscles. But it must be remembered that such relaxation does not mean a generally flabby condition in which the hands merely flap about the keys. While the shoulder muscles are relaxed, for instance, the biceps muscle of the upper arm is constantly called upon to hold up the forearm; and while the wrist muscles are kept plastic, the fingers should retain the necessary firmness to attack the keys with confidence.

Probably your trouble is not so much that your fingers are weak as that your muscular force and arm-weight are not properly directed *over* and *into* the keys. The throw of the hand from the wrist, the weight of the forearm and full arm, and the force arising from forearm rotation may all be utilized as needed to drive the keys down. It is only as these various factors are concentrated upon the key that tone-power is secured. Consequently, any motions such as jerking the hand awav from the keyboard or throwing the arm into the air are worse than wasted.

Concentrate your force directly upon the key, therefore, and you should soon acquire the desired amount and control of tonal strength.

PROF. CLARENCE G. HAMILTON

An Advanced Student

I have finished all of Czerny's *Books,* Cramer's *Studies,* The *Sonatas* of Haydn and Mozart, Mendelssohn's *Rondo Capriccioso,* Beethoven's *Moonlight Sonata,* and so forth. I started taking lessons at twenty-one and finished this work in two and a half years. I practice from three to five hours a day, but cannot memorize any of these pieces.

Can you tell me what grade I am in?

MRS. L. D.

The pieces you mention are well within the eighth grade, so that this grade evidently represents your advanced work.

Complete mastery of a piece, however, involves committing it to memory; so you should cultivate this side of your piano education. Take a short and somewhat easy piece, and begin by memorizing very short passages—say four or eight measures—making this work an important item in your daily practice. Remember that, to be of any value, memory work should involve absolute accuracy as to notes, fingering, rhythm and technic. Herein, indeed, is its chief importance, since it involves absolute finish as to details.

A Promising Pupil

I have a boy pupil, sixteen years of age, who has been studying for eight years. He seems to possess remarkable talent, has boundless enthusiasm and ambition, and is very industrious. He plays such compositions as the Chopin *Polonaise,* Op. 53, and the Grieg *Concerto* beautifully. He wants to become a virtuoso. Should I encourage him in this idea or not, and if so, would it be best for him to go to a college for a few years, taking a music course and also broadening his general education, or should he go immediately to a first-class conservatory? I have told him that the concert field is much overcrowded, but all negative advice seems to increase rather than decrease his determination to become a concert pianist.

W. L. C.

If the boy is a good general student and is getting the requisite preparation, I should advise his going to college and obtaining his academic degree, if possible, even if this course entails the neglect of his music to some extent. For the career of a virtuoso is a vague and uncertain one, while a solid educational background will enable him to take a high stand as a teacher, whether he succeeds in the concert field or not. There is a growing demand for musicians of broad culture; and I should endeavor to turn his ambition toward this end, rather than toward the career of a mere expert player.

But if this advice doesn't work, encourage him to carry out his own plans, for such "boundless enthusiasm" sometimes levels mountains!

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

IN THE ORGAN-LOFT WITH FRANCK

CESAR FRANCK, long organist at the church of Sainte-Clotilde in Paris, used to improvise for his pupils, among whom was Vincent D'Indy. D'Indy gives a touching account of these experiences in his biography of the composer of *The Beatitudes* and the *Symphony in D Minor*.

"Here in the dusk of the organ loft of which I can never think without emotion," says D'Indy, "he spent the best part of his life. Here he came every Sunday and feast-day—and, toward the end of his life, every Friday morning, too—fanning the fire of his genius by pouring out his spirit in wonderful improvisations which were often far more lofty in thought than many skilfully elaborated compositions; and here, too, he assuredly foresaw and conceived the sublime melodies which afterwards formed the groundwork of *The Beatitudes*.

"Ah! We know it well, we who were his pupils, the way up to that thrice-blessed organ-loft—a way as steep and difficult as that which the Gospel tells us leads to Paradise. First, having climbed the dark, spiral staircase, lit by an occasional loop-hole, we came suddenly face to face with a kind of antediluvian monster, a complicated bony structure, breathing heavily and irregularly, which on closer examination proved to be the vital portion of the organ, worked by a vigorous pair of bellows. Next we had to ascend a few narrow steps in the pitch-darkness, a fatal ordeal to high hats, and the cause of many a slip to the uninitiated. Opening the narrow *janua coeli*, we found ourselves suspended as it were midway between the pavement and the vaulted roof of the church, and the next moment all was forgotten in the contemplation of that rapt profile, and the intellectual brow from which seemed to flow without any effort a stream of inspired melody and subtle, exquisite harmonies which lingered a moment among the pillars of the nave before they ascended and died away in the vaulted heights of the roof."

I find that, in art, people are so apt to enthuse over that which they do not understand.—SIR LANDON RONALD.

HOW TO PLAY BACH

HENRY T. FINCK in "Success in Music" quotes some hints by Hans von Bülow, one of the greatest of all pianists, on the art of practicing Bach:

"'I play—that is, practice—daily seven hours, the first of which is invariably devoted to the *"Well-Tempered Clavichord."*

Regarding the performance of a Bach prelude, he said to a pupil: "'Do not accent regularly the first and third beat, but *accent the changes in the harmony*.

"'Accents must not be used to excess else they lose their effect. If we underscore every word we emphasize none.

"'Make pauses for breathing.

"'At the close of a Bach prelude we must retard only when there is an accumulation of harmonies.....

"'Do not play too fast. You must bring out the harmonic and melodic beauties, and you cannot do that if you treat the piano like a sewing-machine.

"'Always play Bach's pieces first without their ornaments.

"'You must study Bach's cantatas; his declamation is wonderful; he blended word with tone as no one after him did except Wagner.

"'You must learn to know Bach as a writer for the voice in order to appreciate his instrumental works and to play them correctly on the piano. Bach is above all things a melodist.'"

RIMSKY-KORSAKOFF AS A "SEA-DOG"

IT is difficult to remember that Rimsky-Korsakoff was originally a naval officer and conducted his first symphony in naval uniform, yet according to Rosa Newmarch in her book on "Russian Opera," the future composer of the sea-voyage in "Scheherezade" profited by his experience however distasteful it may have been.

"The following letter, written to Cui during his first cruise on the *Almaz*, reveals nothing of the cheery optimism of a true 'sea-dog,'" says Rosa Newmarch; "but it does reveal the germ of *Sadko* and of much finely descriptive work in his later music.

"'What a thing to be thankful for is the naval profession,' he writes; 'how glorious, how agreeable, how elevating! Picture yourself sailing across the North Sea. The sky is grey, murky and colorless; the wind screeches through the rigging; the ship pitches so you can hardly keep your legs; you are constantly besprinkled with spray and sometimes washed from head to foot by a wave; you feel chilly and rather sick. Oh, a sailor's life is really jolly!'

"But if his profession did not benefit greatly by his services, his art certainly gained something by his profession. It is this actual contact with nature, choral in moments of stress and violence, as well as in her milder rhythmic moods, that we hear in *Sadko* the orchestral fantasia, and in *Sadko* the opera. We feel the weight of the wind against our bodies and the sting of the brine on our faces. We are left buffeted and breathless by the elemental fury of the storm when the Sea-King dances with almost savage vigor to the sound of Sadko's *gusslee*, or by the violent realism of the shipwreck in 'Scheherezade.'"

PADEREWSKI, THE STATESMAN

RECENT Polish history reminds us once more of the great part played by Paderewski who gave up piano playing to become the premier of Poland after the war. His ability as a statesman is interestingly discussed in "My Musical Life" by Walter Damrosch.

"People," says Mr. Damrosch, "do not realize that he was, consciously or unconsciously, preparing himself for just this opportunity all his life. He had always dreamed of a united and independent Poland. He knew the history of his people, their strength, and their weakness. It is said that one day he played before the Czar, who, congratulating him, expressed his pleasure that a 'Russian' should have achieved such eminence in his art. Paderewski answered: 'I am a Pole, your Majesty,' and, needless to say, was never again invited to play in Russia. His mind is one of the most extraordinary I have ever come in contact with. All the world knows what he has achieved in music—his inspired interpretations, his prodigious memory, and the subtle range of colors of his musical palette, but not so many know of his interest in literature, philosophy, and history; and it took the Great War to demonstrate that as orator and statesman he ranks as high as musician. I heard him make a speech on Poland during the Exposition in San Francisco in 1915 before an audience of ten thousand, in which he gave so eloquent a survey of Poland's history and of her needs and rights as to rouse the people to a frenzy of enthusiasm. . . . I believe that Colonel House pronounced him to be the greatest statesman of the Conference; and it was only the cynical Clemenceau who said to him: 'M. Paderewski, you were the greatest pianist in the world and you have chosen to descend to our level. What a pity!'"

WHITEMAN'S ORCHESTRA

"COME on, boys! Give it a lick! What do you think you are—a symphony orchestra or something?"

With these inspiring words Henry Osborne Osgood commences an entertaining article on "The Anatomy of Jazz" in a recent issue of "The American Mercury" in which the new art of jazz is described with musicianly skill.

He continues: "Past midnight, on the bare stage of the Garrick Theatre, lighted by one glaring white bulb high up in the flies, Paul Whiteman, in sweater and felt hat, throned on an old wooden chair cornerwise upon a prop platform from 'Arms and the Man,' faced thirty-odd players, a motley crowd whose temperaments and temperatures ranged from sport shirts with neither coats nor vests over them through conventional white shirt-sleeves to business suits, sweaters and even overcoats.

"As I sat bundled up out in the cold auditorium listening to the rehearsal of that extraordinary first operatic experiment in jazz, George Gershwin's one-act sketch, 'One Hundred and Thirty-fifth Street,' I imagined to myself the surprise and, I am sure, the joy that even so recent a master of orchestration as Nicolas Andreivitch Rimsky-Korsakoff, who died less than fourteen years ago, would have experienced could he have dropped in and taken a seat beside me.

"Peculiar is the right word for that orchestra, particularly from old Nicolas' standpoint. Fifteen years ago it was not dreamed of; ten years ago it was an infant; only two years ago was it brought to its present stage of development, and it will keep on changing and growing."

"With an apt pupil, the pure technic foundation principles can be acquired in a few weeks. Developing these principles to a high state of virtuosity is the work of time and depends on the aim and talent of the student."—HENRY HOLDEN HUSS.

IN THE DAYS OF "IOLANTHE

THE revival of the Gilbert and Sulli opera, "Iolanthe" in New York provo a somewhat lengthy article in the N York *Tribune* relating the curious tu of fortune suffered by the composer the time he wrote its lovely music. H are the abbreviated facts:

On June 1, 1882, Sullivan's mother d and the composer was heart-broken w he composed the music and rehearsed opera. But this was not all. "The p miere of *Iolanthe* occurred on Nov. 1882. As Sullivan was on his way to playhouse he purchased a late edition an afternoon paper. In it was displa the disastrous failure of the broker firm.....with which were deposited all funds."

Yet with never a word of his misf tune, Sullivan took his place on the c ductor's stand, tapped his baton on music desk, and *Iolanthe* was on. "Un his seemingly inspired leadership the op progressed along ever-mounting waves enthusiasm."

Following the success of this premi Gilbert and Sullivan, greatly daring, vited Gladstone to witness a performa *Iolanthe* is of course a caustic satire the House of Lords. Gladstone had n qualities but a sense of humor was the most prominent of these. It was fea he might frown upon the quips and cra of the *Lord Chancellor*. However, great man was pleased. He not only wr a cordial letter of appreciation, but a days later Sullivan, the composer, beca "Sir" Arthur Sullivan. Thus *Iolan* conceived in grief, produced in the face disaster, was for its composer the fo dation stone of revived fame and fortu

LESSONS BY BEETHOVEN

"TO THE acrobats of the key-board w abounded in his day," says Henry T. Fin in *Success in Music*, "Beethoven refer contemptuously to pianists 'who prance and down the keyboard with passages which they have exercised themselve *putsch, putsch, putsch;* what does th mean? Nothing....As a rule, in the c of these gentlemen, all reason and feeli are generally lost in the nimbleness their fingers.'

"Regarding Beethoven's method teaching, Riis says: 'When I made a m take in a passage, or struck wrongly no or leaps which he often wanted specia emphasized, he seldom said anything; but my fault was in expression, or a crescen or in the character of the piece, he beca angry, because, as he said, the former w accidental, while the latter showed la of knowledge, feeling or attention. himself very often made mistakes of t former kind, even when playing in publ

"To Czerny who was instructing nephew Beethoven wrote: 'With regard his playing, I beg you, if once he has g the right fingering and plays in go time with notes fairly correct, then o pull him up about the rendering; and wh he is arrived at that stage, don't let h stop for the sake of *small* faults. I point them out to him when he has play the piece through. Although I have d little in the way of teaching, I have alwa adopted this plan; it soon forms *musicia* which, after all, is one of the first ai of art, and it gives less trouble to b master and pupil.'"

How to be a Drum Major

The Second of a Series of Two Articles on the Drum Major in the Military Band

By J. BEACH CRAGUN, A.B., MUS.B.

Part II

J. BEACH CRAGUN

Mr. Cragun, a graduate of Oberlin College, Oberlin, Ohio, and of Columbia School of Music, Chicago, is a trained writer and instructor as well as an experienced bandmaster. He was for nine years instructor in music at the University of Chicago and is now the head of the Cragun School of Music, Chicago, a school specializing in band and orchestra training. He is well known as a composer, his published works including a four volume method for saxophone, the first published concerto for that instrument, and many recital pieces in the smaller forms.

The military band is one of the fields in which Mr. Cragun may be recognized as an authority. Following are some of the bands of which he is or has been bandmaster: Oberlin College, Spearfish (S. D.) State Normal, North Central College, University of Chicago, 122nd Field Artillery, 124th Field Artillery, Mountjoie Commandery, Englewood Commandery, Bloom Township High School and Chicago Heights Elementary Schools. —EDITOR'S NOTE.

FOREWORD

The various signals to be used by the drum major have never been fully covered by he training regulations issued by the United States military authorities. These are iore a matter of tradition than of printed regulation and, as might be expected, have cen subjected to extremely varied interpretations at the hands of individual drum majors i both army and civilian bands. Except where noted, all signals conform to drill and raining regulations as issued by the government or to those accepted as traditional by andmasters throughout the service. The following additional points should be kept i mind:

. The drawings (with a few exceptions) show the drum major as the band members see him, they being the ones to interpret his signals.

. All drawings (with a few exceptions) show the drum major in the position of giving the preparatory command, the arrows showing the motion during the brief interval serving as "warning" and dotted lines the command of execution.

. The signal commands are arranged roughly in the order of their probable appearance in taking out a band for a parade.

11. "BAND—HALT"

THIS command is often given verbally, in addition to its frequent use with the aton. When the baton signal is used, hold ie preparatory command for an interval ufficient to insure that the rear rank of the and have seen and understood the order. .fter the command of execution, the bands- ien execute two more movements: 1, one iore step forward, and 2, the other foot either left or right) is brought smartly ito the position of standing at attention.

Do not attempt to give the command and—Halt simultaneously with the com- iand Cease Playing. This is possible; ut it is much better to stop the forward rogress of the band, *then* the playing, r *vice versa,* with separate commands.

A clean-cut execution of the command and—Halt is one of the most diffi- ult things to teach the amateur band, specially if executed while the band is laying. Some will invariably stop play- ig with the halt in forward progress or ill straggle on a few steps after the re- iainder of the band has halted.

This suggests mention of the element of ersonality. The successful drum major iust be an inspiring leader and drill mas- r. His personality must win discipline id coöperation. Whether marching or anding at attention, his players give evi- ence that they have been taught that it a "full time job" to watch at the same me rank, file, music, position, spacing id the signals of the drum major.

12. "RIGHT OBLIQUE—MARCH"

ATTENTION already has been called to the fact that in all changes in the direction of the movement of the band, the staff points out the new direction when held in the position of issuing the *preparatory command.* In Right Oblique—March, the staff, held high that back ranks may see, points out the new direction at an angle of 45 degrees incline to the right of the old line of forward progress.

Only the front rank turns at once in the new direction. The other ranks continue the old line of forward progress till they come to the point at which, the first rank pivoted, when each executes a similar movement.

The drum major may or may not find it necessary or helpful to face the band during the execution of Right Oblique—March. The larger the band the more necessary it will be found that he do so. In case of doubt, facing his band is certainly the only position from which he can help straighten out alignment and spacing. And it is a well-trained band, indeed, whose players do not need help in these matters, especially if this command be executed while the band is playing.

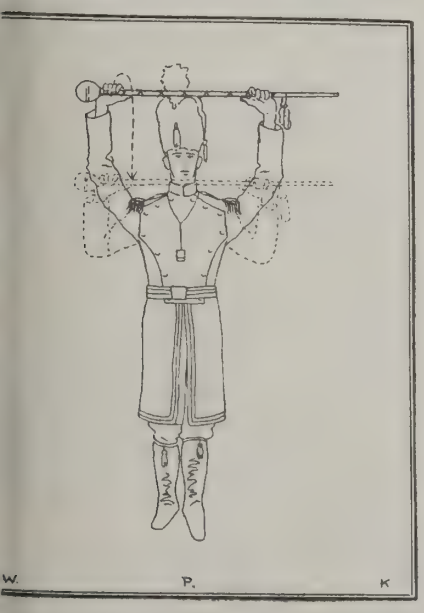
As advised under Column Right—March, the drum major should hold back somewhat the forward progress of the band till the last rank has executed the command, when, and only when, he again faces forward and resumes the regulation 30-inch pace.

13. "LEFT OBLIQUE—MARCH"

HERE the staff points out the new direction at an angle of 45 degrees incline to the left of the old line of forward progress.

Excepting only the matter of *direction,* the execution of this command is identical with that of Right Oblique—March. These two commands will be used, mostly, in maneuvering the band into some certain position of importance or convenience.

A special and practical word to the would-be drum major—several matters have been discussed above as being difficult for the band. Here is a matter of practical procedure that must be studied out with care by every successful drum major. The preparatory command position of the baton must be held *long enough* to enable the order to "percolate" back to the rear of the band. The momentary flash of a signal will not suffice. It has already been stated that, in the opinion of the author, each *preparatory command* should be held from four to seven seconds (see 7. Forward March). This interval should be lengthened, possibly, in the case of a large band *playing,* at the time of the issuing of such a command as Left Oblique—March. Devote no small amount of study and experiment to this matter.



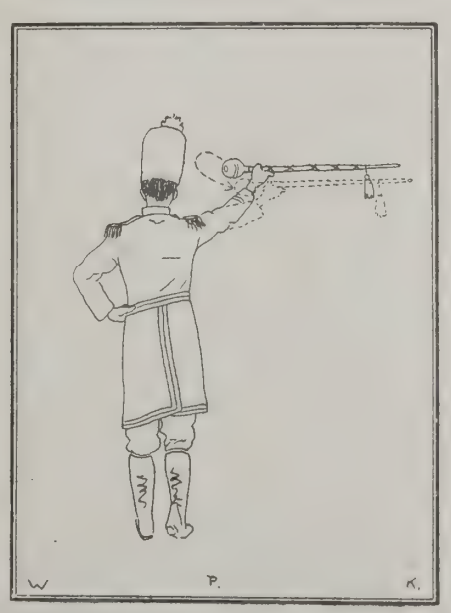
The use of the whistle is again a matter of option. In the small band of sixteen to twenty-five players, it need not be used. In bands between twenty-six and fifty, its use is recommended. Still larger bands will find it indispensable.

14. "COUNTERMARCH—MARCH"

THIS command is an important one. Because of the frequency with which it is used and the difficulty of its execution, it will be given double space.

Various bands and drum majors exhibit more individual interpretation in the issuing and executing of this command than is the case with others already taken up. The interpretation here presented conforms with both government training regulations and non-regulation but wide-spread usage among both army and civilian bands in all parts of this country.

The illustration shows the drum major just as he has turned facing the band, with the staff pointing out the new direction, and in the position of issuing the *preparatory command.* The front rank marches in the old direction toward the line at which the drum major turned. As he passes the front rank, the drum major again turns, marching backward in the new direction through the band. When he sees that the front rank has reached the line at which *he* counter-marched, he blows one sharp blast on his whistle. This is the signal for each front rank player to execute the command Countermarch. Each front rank man to the right of the drum major turns to the *right about,* and each man to his left to the *left about.* Each file follows its front rank leader, going forward in the old direction to the same line at which the drum major established the Countermarch, then following its leader through the band.

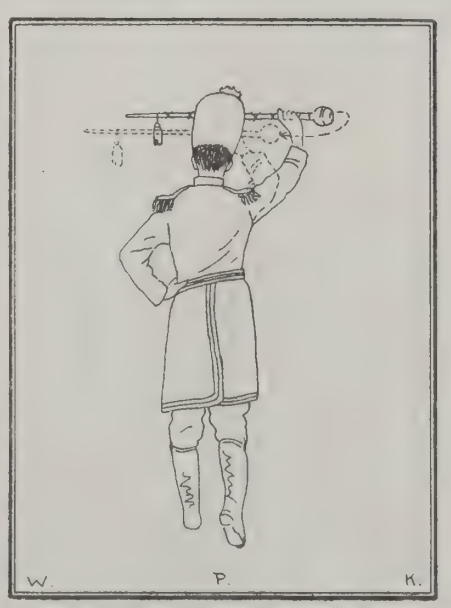


11. BAND—HALT

Preparatory command: Sometimes verbal, sometimes with the baton as illustrated.

Interval of warning: Give about 1½ seconds to the motion shown in the arrows.

Command of execution: The arm motion comes smartly to a dead stop in the position shown in dotted lines.



12. RIGHT OBLIQUE—MARCH

Preparatory command: Hold the baton high, that all may see it, pointing in the new direction.

Interval of Warning: Give about 1½ seconds to the motion shown in the arrows.

Command of execution: The arm motion comes smartly to a dead stop in the position shown in dotted lines.

13. LEFT OBLIQUE—MARCH

Preparatory command: Hold the baton high, that all may see it, pointing in the new direction.

Interval of Warning: Give about 1½ seconds to the motion shown in the arrows.

Command of execution: The arm motion comes smartly to a dead stop in the position shown in dotted lines.

14. COUNTERMARCH—MARCH

Preparatory command: Issued as the drum major himself executes the countermarch, the baton pointing toward the band in the new direction.

Interval of warning: While front rank marches forward to the line at which the drum major countermarched.

Command of execution: A sharp blast of the whistle when the front rank reaches this line. (*Continued on page 870*)

A NEW DEPARTMENT OF PUBLIC SCHOOL MUSIC

Conducted Monthly

By GEORGE L. LINDSAY, Superintendent of Music, Philadelphia Public Schools

The Junior High School Chorus

Part 2

THE ELYSIUM of the Junior High School music teacher would be a place where pupils could read part-music with words, spontaneously. Unfortunately this is not the case in the average school. There are many reasons why sight-reading ability breaks down in the Junior High School. The pupils are in the adolescent stage of development and drill work or practice does not contain the old element of interest that it held for the same pupils in the associative period, that is, in grades four, five and six. To maintain skill in sight-reading, daily practice is required and general chorus work in the Junior High School is not given daily nor is the maintenance of sight-reading technic by daily drill considered worth-while.

We must appreciate these facts when we meet Junior High School pupils in the choral periods and meet the situation with a plan or plans which will obtain quick results and also provide for the development of musical experience on the part of the pupils. It has been said that "there is no one lazier than the adolescent boy, unless it is the adolescent girl." While this may be as true as many trite sayings, it also must be said in defense of the adolescent that no group of school pupils can rise to greater heights of inspiration and effort under proper leadership than those of Junior High School age. We must supply this inspiration and urge-to-do in presenting music in the mass choral periods.

Choral Methods

LARGE CHORAL groups cannot be handled like small ones. The average plan for rehearsing small choruses is on a rote-reading basis. A single part is practiced by certain individuals while the rest await their turn. In due time each part is built up and then all of the parts put together. If the chorus is an experienced group of singers, the four parts may be attacked simultaneously. Adults can be rehearsed in this way with success.

Little or no objection is made by the average choral conductor to quiet conversation being carried on while single parts are being studied. There is a certain social value in this practice as adult members of a chorus are compensated by the social contact as well as the enjoyment of singing. While glee clubs could be carried on in this way it is impossible to use general methods for large choral groups. The element of the waste of time for one group of pupils to practice a part while the majority remain silent must be considered and talking will create confusion and make for little progress. We must adopt for our slogan, "Every pupil works all of the time."

Presentation of Contrapuntal Music

IN PRESENTING music, each part of which is considered a melody, it is possible to teach each part directly with the text to the whole choral group. This amounts to the same problem as teaching the same number of unison songs as there are parts in the selection. The difficulty comes in putting the parts together.

It is fairly easy to teach two-part songs of a contrapuntal nature but increasingly difficult to develop three and four parts by using text only. If the selection is not too long, and if each part has a strong melodic flow, then three part selections can be taken with text. After the entire group has learned, say the third or lowest division, then the entire group should learn the next higher part. These two parts should be put together. The pupils chosen to sing baritone and second soprano should now sing these parts. The residue of the pupils, that is, those assigned to sing first soprano should sing the second soprano part or help the boys by singing the baritone part an octave higher. If either part is weak then these pupils may help that part or be used to strengthen both parts. The first soprano should now be presented in as short a time as possible and all three parts put together. The success of this work depends on the choice of material and very little forcing can be done if the material proves too difficult.

Presentation of Harmonic Music

WHILE A certain amount of contrapuntal chorus music should appear in every Junior High School chorus program, also the music of harmonic content should be presented. This will give an opportunity to carry on work in music reading and call for the use of Latin syllables, especially in developing the middle or sustaining harmonic parts. There is nothing finer than the massed singing of four part material in chorale or hymn style. The pupils have an opportunity to read music and the regular use of harmonic music will establish the value of a working knowledge of sight reading or at least prove the value of the use of Latin syllables for following the exact notation of the vocal parts.

Music of harmonic type is generally short and while dignified and beautiful it is not necessarily ecclesiastical in style and is quite often set to secular text. The inner parts of well written harmonic vocal music have an element of melodic interest and furnish experience for a background of the study of harmony. If enough of this material is included in the choral program then the Junior High School music teacher is covering the need for the continued use of the sight-reading development which has occupied a considerable part of the music preparation of the lower grades.

Division of the Choral Period

THE MUSIC teacher may adopt various methods for presenting part music, but the elements of interest and cooperation on the part of the pupils must be considered in planning every lesson. The music teacher or teachers must plan each lesson and each term program, with the same care that a teacher of English or Science is compelled to do. Strength of musicianship must be reinforced by painstaking preparation and energetic application.

The teacher who dilly-dallies or plays for time in starting promptly loses the respect of the pupils, who are only too quick to sense any weakness in a leader. No detail should be overlooked regarding seating, keeping of records, placing of books and material, position of piano and accompanist, position of the conductor's stand and provision for the many mechanical details of organization. The teacher must be prepared to start the lesson on the scheduled time. A blackboard or chart showing the musical program for the period should be ready. As soon as enough of the pupils arrive, the accompanist should be directed to play an introduction to the first number and the pupils present should be prepared to sing on a signal from the conductor. The psychological effect of starting the choral period with singing instead of talking and waiting for tardy pupils will be obvious.

Let us consider the division of a choral period of forty-five minutes into types of work. Five minutes may be taken for a familiar unison or two part song, at the beginning. This will socialize the group and prepare for intensive study of new part work. Twenty or twenty-five minutes should be devoted to this. Then should follow a short period of music appreciation or a presentation of current events in music. This may take five or ten minutes and the lesson should close with a familiar unison or part song which may have been selected for repertory use.

The Intensive Choral Period

THE TEACHER who wishes to present part music of harmonic type must use a plan which will insure quick results. The following is a plan used for the development of harmonic part music and calls for the active participation of all of the pupils all of the time.

Junior High School Intensive Choral Period

I. Sing a unison song or a well-known part song, for interpretation. Devote special attention to diction, phrasing and tone color.

II. New intensive part work (after a review of the material developed, if any).

1. Begin with the lowest voice part, say the bass, and develop as in (a), (b), (c) and (d) below. Transpose the key to make the pitch comfortable, if necessary.
2. Take the alto-tenor part and develop it as in (a), (b), (c) and (d).
3. Take the bass part, singing syllables with rest of the group singing the syllables of the tenor part.
4. Take the alto part as in (a), (b), (c) and (d).
5. Take the bass and tenor parts against the rest of the group singing the alto part, all with syllables.
6. Take the soprano part as in (a), (b), (c) and (d).
7. Take the bass, tenor, alto and soprano parts with syllables.
8. Review the selection several times; first, with syllables; second, by humming or using a neutral syllable such as "loo"; third, with the words.
   (a) Pupils scan the text rhythmically.
   (b) Pupils sing the syllables while the pianist plays the part.
   (c) Pupils sing the syllables unaccompanied. Memorize if possible.
   (d) The particular group assigned to the part should sing the words while the rest of the group sing the syllables, until the part is easy. The pianist should play throughout letter "d."

III. Music appreciation.

IV. (a) Review a new part song or one well liked.
   (b) Take an inspirational unison song, of strong musical content, for closing.

The above plan may be modified to suit the reading ability of a large Junior High School choral group. Many of the steps may be omitted if the group is strong, but if the group is weak in sight reading it is well to work out each step and take advantage of every opportunity to repeat each vocal part. It is possible to teach a four-part selection of hymn tune length to an average large group of Junior High School pupils in one lesson by using this plan.

Teachers and Accompanists

IN THE large Junior High School, two teachers should be elected to teach mass chorus music. It is only fair to assume that the principal who asks his music teachers to handle groups of two hundred pupils and upwards at one time should support the music teachers by assigning other teachers to act as proctors on the basis of one teacher to each one hundred pupils. The average class numbers thirty pupils in the Junior High School and the music teacher is often expected to handle many times the average "teacher load."

If two music teachers are provided, it is not necessary to use proctors for the small chorus. One teacher should direct and the other play the piano. The teachers should alternate in the work of directing and accompanying. If one music teacher directs the first-period chorus, then the second teacher should direct the second-period chorus. The teachers should change this order weekly in order that each teacher may have the opportunity of directing every group. It goes without saying that the music teacher should be a capable accompanist and not expect a pupil or a group of pupils to act in this capacity. It is possible to engage a professional accompanist to do this work, and many aspiring young professional teachers are anxious to serve at a nominal fee.

Organization of Choral Periods

IT IS CUSTOMARY to assign teachers to act as proctors whenever lessons in any subject are given in the auditorium to a large group of Junior High School pupils. It is the duty of these teachers to assist in taking attendance, to observe and record deportment, and to help in every way to make the efforts of the teacher giving the lesson a success.

Many of these auditorium lessons do not call for active participation on the part of the pupils, as they may be required to listen and take notes. The music work calls for active participation, and it is unwise for the music teacher to have to stop and call attention to an individual pupil who is not coöperating, and yet the work of the individual pupil must be ac-

(*Continued on page 880*)

The Famous Schubert-Tausig "Marche Militaire in D"

A Master Lesson Prepared Expressly for THE ETUDE by the Distinguished Russian Piano Virtuoso

MARK HAMBOURG

FRANZ SCHUBERT was born in Vienna on January 31, 1797, and died there on November 29, 1828. He is buried in the Vienna town cemetery just three graves off from Beethoven. In his short life he enriched the world by composing some of the most lovely music that exists. Unfortunately he was unrecognized during his lifetime for the supreme genius that he was, and consequently the thirty years of his existence were a continual struggle against the direst poverty, and when he died he was in complete destitution. His fertility as a composer was simply amazing and he found time to make the enormous output of one thousand and thirty-one compositions, in spite of his early death.

The "Marche Militaire," which is considered here, was originally written by Schubert as a duet for four hands for the pianoforte, and the present and usually played version of it has been transcribed by Carl Tausig as a piece for two hands on the same instrument. Tausig was one of the most remarkable musicians and pianists of his day. Born in 1841, at Warsaw, and, like Schubert, not destined to live long, he died in Leipzig of typhoid fever in 1871. He was an ardent disciple of Liszt to whom he was taken at the early age of fourteen to study the pianoforte. Liszt spoke of him as the "Infallible with fingers of steel," and one of his fellow-pupils described his first performance before Liszt thus: "A devil of a fellow who knocked us clean over with the octaves in Chopin's *A-flat Polonaise!*"

A Grand Style

TAUSIG'S STYLE was grand, impassioned, and of noble quality; and his transcriptions for the pianoforte show fine musicianship and a knowledge of the powers of his instrument which equal those of his master, Liszt, and display most brilliantly the true virtuoso capacity of the pianoforte in the best sense of the word.

"Marche Militaire" is one of three marches written by Schubert, and is the only one of the three which has become well-known and extremely popular. This is chiefly owing to the present excellent transcription of it by Tausig who has rendered it a quite remarkable work for the piano, though as a matter of fact the music itself cries aloud for orchestral effects. The charming Trio which forms the second portion of the piece is very Hungarian in character and contains much delightful and characteristic melody. The whole work must be played with a martial rhythm and the buoyant swing of the Magyar spirit, but with much variety of tone in order to avoid too great feeling of ponderousness in the performance.

The introduction, consisting of the first six measures, gives the *tempo* which governs the whole march; and this must not be too fast, but rather controlled with a certain deliberateness of rhythm. The opening measures of this introduction must convey the impression of the beats of a drum, and there should be short accents on the first notes of each measure in both hands.

A Good Beginning

THE BEGINNING must be played *pianissimo* and a *crescendo* in the fifth measure leads up to the "A-flats" in unison in the sixth measure which should be held a little over their true value and create in fact a brief *fermata.* This pause serves to give more emphasis to the main theme of the march which is ushered in at the seventh measure. The first beat of each measure during this opening subject must be well marked and a short sharp rhythmical accentuation be given to the chords in the right hand. Continuing to the fourteenth measure, the passage in octaves in the right hand should be played very lightly with a small accent on the first octave of the passage on "F." Proceeding, in measures 16 and 17, the first two eighth-note chords of each measure ought to be given with slightly more deliberation of time, and be especially punctuated by accents; but measure 18 should be in strict *tempo* again.

Arriving at measure 19 there should be an accent on the first eighth-note beat of the measure, and in measure 21 a *crescendo* can be introduced on the first and second eighth-notes, and then *diminuendo* again on the third and fourth eighth-notes, with an accent on the third eighth-note. The reiterated A-flats in both hands in measure 22 ought to be played *piano* in tone, but imitating as far as possible the call of the trumpet, with a little *crescendo* at the end of the measure culminating with an accent on the first eighth-note beat of measure 23, and then a sudden *piano.* A continual *crescendo* should grow up from this *piano* in measure 23 onwards to measure 26 and, still proceeding, should lead to a *forte fermata* on A-flat in measure 28. To facilitate the passage in measure 27, I take the upper note of the last octave in the bass with the right hand, using fingers 1 and 5 of the right hand for the octave "F," and for the ensuing octave in measure 28 on A-flat I take 1 and 4 with the right hand, and 2 in the left hand on the single remaining A-flat. Measure 29 should begin *mezzoforte,* the first eighth-note in the bass being made to sound like the beat of the big drum, and the rhythmical sixteenth-note figures being brought out very precisely and distinctly like trumpets.

SCHUBERT PLAYING AT THE HOME OF HIS FRIEND VOGL

Study Rhythms

PROCEEDING still in *mezzoforte* tint, accents should be given on the first and second beats of measure 35, while the octave passage in measure 36 must again be played very lightly, as previously the same passage which occurred in measure 14. A little accent on the first octave of the passage, namely on "F," and a slight *crescendo* to the first beat of measure 37, which should also be accented, completes the presentation of measures 35, 36 and 37. In measures 38 and 39, similar deliberation of *tempo* and punctuation can be given to the first two eighth-note chords of each measure, as in former measures 16 and 17. I emphasize also each of the three chords in measure 40, and in measure 43 start *piano* and *crescendo* up to the accented third beat and continue the increase of tone until the first beat of measure 44.

After this the rhythmical figure in sixteenth notes on the second half of the first beat of measure 44, commences with a sudden *piano,* then grows louder with an accent on the last eighth-note beat of the measure to an accented "G-flat," in *mezzoforte,* on the first beat of measure 45. Measure 46 is echoed in *piano* again and in measure 47 the first two octaves are loud, the second two are echoed an octave higher softly, then the soft tone continues during the first and second eighth-notes of measure 48, but becomes louder on the third and fourth eighth-notes until it reaches the accented *forte* chord on the first beat of 49. The rest of the notes in this measure, however, drop at once to a sudden *piano* which remains throughout measure 50 with an accent on the first chord of this measure. The first two chords in measure 51 should be performed a little slower with an accent on the first of them, and the remaining two can then be faster and louder, with an accent on the first of these two as well. In measure 52, continuing the *crescendo,* the beginning two chords must be strictly in *tempo* and the final ones eased down somewhat in time and with *diminuendo* in tone.

Variations

A NEW variation of the theme is introduced in 53, and here the *tempo* should be very measured, exact, and *piano* in expression. Arriving at 56 there is a figure in the left hand, written in the treble clef, that ought to be brought out like a trumpet sound with accents on the two last eighth-note beats of the measure, especially the final one. In 60 there is a staccato eighth-note chord in both hands, on the second beat of the measure, which must be struck very abruptly, and the hands lifted right off before attacking the next two sixteenth-note octaves on "B-flat." In the following measure there is the beginning of a *crescendo,* with slight broadening of *tempo* on the two eighth-note chords forming the second beat of this measure. The rise in tone continues gradually up to measure 65, where the main subject of the march is taken up with great zest and enthusiasm.

The repeated "A's" in both hands in 64 should be played somewhat slower, to give more emphasis to the main theme which arrives at the beginning of 65. Also the trumpet-like figure in the bass of measure 65 on the second half of the first beat must be made prominent. In 72 an accent should appear on the first octave of the scale passage starting on the second half of the first beat, and the same accent should be present in the bass chord which is struck with it. In 76 the chords should be played with much accent and some deliberation; also accents must be given to the rhythmic chords in both hands in the following measure.

There is an accent on the first beat in 81, and in the next four measures there are *sforzandi* marked on each beat, with *crescendo.* In 85 I give an accent on the first beat of the measure, and in 88 I vary the time, playing the two eighth-note chords on the second beat of the measure more slowly, with an accent on the last one, and take up the next measure in *tempo.* In 91 and 92 there commences a descending passage in staccato octaves in the left hand beginning on the note "F-flat." This descending passage must be well brought out with an accent on the final chord of measure 92, in both hands. A similar octave passage occurs in 95 and should be given significance in the same way, with a *crescendo* leading on to measures 96 and 97. At the 100th measure the tone should be *fortissimo,* with a big emphasis on the last eighth-note octave in the measure, and the subject should be attacked in 101 in a rather slower and more ponderous style and with all the *fortissimo* that it is possible to put into it; for this part of the piece represents the culminating expression of warlike triumph and the music should continue in victorious mood right down to 122. From 109 the *tempo* ought to accelerate a little and in 114 there should be a sudden *decrescendo* to *mezzoforte* on the second beat of the measure, rising again with accents on the third and fourth eighth-note chords, and a broadening of *tempo* back to *fortissimo* in 115.

A return to strict *tempo* should be made in 110. In 122 there is a sudden *diminuendo* and in 123 a *ritardando* leading us into the tuneful *Trio* in six flats.

The Trio

IN THIS Trio the melody must be brought out with a singing tone. The *arpeggii* in the first two measures should be played harmoniously, and also these measures ought to be performed more slowly than the next two, and the whole Trio should give the impression of fancifulness and flexibility. It will be found to contribute to the smoothness of execution to divide the octave passage in 127, and play it with both hands as follows: Right hand fingers, 1, 2, 3, 4, taking the last sixteenth-note octave with the right hand. The left hand takes fingers 5, 4, 3, 2. The melody in 126 in the right hand should be accented on the first and second beats of the measure and played with a light rhythmic swing. Measure 130 must be like 126, and the sixteenth-note passage in 131 should be fingered similarly to the one in 127. The next four measures, 134-137, can be given faster and with more tone, a *crescendo* being introduced in 135, but dropping down again in 136. In 137 the hands should be raised before attacking the new thirty-second-note figure which appears on the last half of the up beat and this new figure must emerge humorously and sharply defined with little accents on the first of each thirty-second-note group. Measures 144 and 145 are similar in style and finger treatment to 126 and 127, and so are measures 148 and 149, as also 152 and 153 are like measures 134 and 135. In measure 157 there is a *crescendo*

and the melody which is now in the left hand must be distinctly apprehended.

Dynamic Effects

A DECRESCENDO comes again in the beginning of 158, and yet another crescendo at the end of that measure. The trill on "D" marked in the left hand in the 159th measure and commencing on the second half of the first beat, I take with the right hand and make a long pause on it, trilling all the time. Supported by the triplet figure starting in 160, the melody in the lower quarter-notes in the right hand must be prominently brought out with singing tone. I use the thumb on each of these quarter-notes and third and fifth fingers on the sextuple notes. In 162, I give little accents on the first and second beats in the measure to impart a Hungarian character. In the next measure I take with the left hand "C-sharp," which is the first of the four lower thirty-second notes of the passage on the second beat in the treble; whilst the best fingering for the two final sixteenth-note thirds of the same passage is 3/1—4/2, with the right hand. Starting then once more the sextuples in 164, with fingers 2 and 3, I again play the quarter notes with the thumb.

Continuing to measures 168-169, I create a variation of tone color by playing the figure on the first beat in each measure *forte* and echo it *piano* on the second beats. In 171, the fingering is the same as in 163, and at the end of the last figure in measure 173, I make a slight pause before attacking decisively and in *tempo* the next phrase in 174. Proceeding to 175 there are thirty-second notes in the left hand which I turn into a kind of trill, playing as many notes as it is possible to get into the allotted time. I accelerate somewhat in the two following measures, 176 and 177, playing the sextuples in the right hand with alternate swelling and diminishing of the sound like something continuously rising and falling. In measures 178 and 179, a big *crescendo* should rise up to the summit of the passage and drop to *piano* again in 180.

There is a *crescendo* marked in the music in 181, but I do not make this one; but play the two eighth-note thirds on the first beat in the treble in 182, with some broadening of the time, hastening up again, however, on the two other eighth-note thirds in the same bar, and making an accent on the trill which occurs on the C-sharp in 183. The music from here onwards to 207 is a repetition in other tonalities of what has already been, and must be treated in the same manner. At 207 the Trio ends and the figure resembling the drum beat reappears and should be rapped out ponderously and with smartly emphasized rhythm, to create a fitting atmosphere for ushering in the military *Tempo Primo Vivace* which returns in 208.

A Tempo

THIS TEMPO PRIMO is practically identical with the opening part of the piece which starts at 23, and it is therefore not necessary to note anything more in it, except at 232, where I introduce a further variation of *tempo* by playing the octaves in that measure rather slower, and those in the next measure considerably faster, but return to strict *tempo* again in 234. Also in 238 the two "E-flat" octaves in the right hand, where it is marked *treble fortissimo*, ought to be given much more slowly and emphatically, especially the second of the "E-flats," and the same point can be signalized at the similar "D-Flat" octaves in 242.

A new variation of the structure arises in 250, with the melody in the left hand. But this theme should stand out well from the accompanying octave runs in the right hand. I play the whole of the next eight measures, up to 258, rather slower than the original *tempo*, and only speed up again at 258.

Arriving at 271 I give a tremendous accent on the first "B-flat" of the thirty-second-note group on the second beat, endeavoring to produce the effect of the clashing of cymbals. I do the same on the "A-flat" of the group in the following measure. In 273 I play a little slower, but with very sharply defined rhythm, and I play 274 in *tempo*. In 275, 276 and 277 the cymbal effect should once more be made as in measures 271 and 272; whilst in 277 and 278 I make a big slow down of the time in order to give more significance, and then return to *tempo* in 279. A considerable *ritardando* in 286 is effective at the end of the great descending passage in octaves, and then 287 must be in the original time again. The final passage in 297 should be made to sound as much like trumpets as possible, and thus terminate the march in a fanfare of martial triumph.

Self-Test Questions on Mr. Hambourg's Article

1. *How did Schubert add to the riches of musical literature?*
2. *What was Tausig's style of playing?*
3. *How has he displayed this in the "arrangement" under consideration?*
4. *What was the form of the original composition?*
5. *What characteristics did Schubert give to this work, other than those of the instrument for which it was written?*
6. *What are secrets of its continued popularity?*

Schubert's Regular Daily Habits

IN the excellent life of Schubert by E. Duncan, the writer gives an excellent idea of Schubert's daily life:

"Schubert's daily habits were simple, and almost monotonous in their regularity. He was an early riser, and it was his custom to begin the day with composition—pursued half-dressed or even in bed, it was a matter of indifference—or with experimental extempore playing on the pianoforte of ideas which were afterwards to be jotted down. This exercise continued till the breakfast hour, after which work was resumed, and briskly carried forward until two o'clock in the afternoon. Then he would repair to a restaurant, usually the Gasthaus, where he could dine for a Zwanziger (8½d.)—a sum not always at his command. Dinner over, he was free for the rest of the day, which would commonly be spent in walking in the delightful surroundings of the city. In Schubert's later years he was to be found at Bogner's coffee-house from 5 to 7, smoking a pipe and enjoying the conversation of friends. The evening was sometimes devoted to the theatre, after which there would be supper at the Gasthaus, and perhaps a final visit to Bogner's café. Not an infrequent alternative to such a programme would lead to an afternoon call on Fräulein Anna Milder, on Madame Lacsny-Buchwieser, the Esterhazys, with whom he was on friendly terms without regard to music, or to the rooms of Madame Sofie Müller (the great actress) who had the courage on one of these occasions to sing "Die junge Nonne" *at sight*. A fine summer evening would take precedence of any town appointment, and Schubert and his friends would stray at their own sweet will, regardless of everything but the enjoyment of the hour.

"Tavern-life in Vienna was a mere commonplace to a bachelor, who would naturally resort to such places, just as in London a man would repair to his club. Beethoven, surrounded by his friends, might any day be seen at the Gasthaus, where he often dined, and where, no doubt, Schubert looked on him with an interest and regard of which the great man was perfectly oblivious. Schubert had, of course, at various times other favourite tavern-haunts, such as the 'zur Ungarischen Krone.' in the Himmelpfortgasse, where he and his companions were wont to foregather,* or the 'Zum rothen Kreuz,' where his brother Ferdinand joined him at dinner. Ferdinand did not mix with the troop of friends which commonly surrounded the composer; his younger brother Carl (the painter), on the contrary, often frequented the round table of intimates which was wont to assemble of an evening. Poets and painters have brought many a modest little inn into notoriety, surrounding them with a fragrant memory which speaks enchantment to succeeding generations.

"It is doubtful if any such place before 1826 ever witnessed the birth of so beautiful a work of art as the setting of 'Hark! hark the lark,' which the Währing beer-garden saw brought to light. One Sunday in July, Schubert, Doppler and others were returning to Vienna from Pötzleinsdorf, and strolling through the village of Währing, they espied there a friend, Tieze, seated at one of the tables of the 'Zum Biersack.' They agreed to call a halt, and Schubert sat down beside Tieze, and began to turn over the leaves of his book that was lying open on the table. Suddenly he stopped and, pointing to some verses, exclaimed, 'Such a lovely melody has come into my head; if I had but a sheet of music paper with me.' The resourceful Doppler drew some lines on the back of a bill of fare and, then and there, in the midst of all the attendant noise of fiddlers and skittle-players, of waiters running here and there in different directions with orders, in the full hubbub of a holiday crowd, Schubert wrote that lovely song—truly 'a wonderful sweet air, with admirable rich words to it.' Beer-gardens deserve better of mankind in consequence. There is another view of tavern-life of our hero which is not so pleasant to contemplate. The authority for the succeeding remarks is found in W. Chezy's 'Recollections of my Life' (vol. ii. p. 292).

"Schubert became overfond of good wine. He even took a curious pride in the accidents which resulted from over-indulgence. When the juice of the grape flowed in his veins, he would retire to a solitary corner, and there nurse himself comfortably into a passion. Chezy assures us that 'he became a laughing tyrant'—whatever that may be—'and would destroy everything he could, without making a noise—glasses, plates or cups—and sit simpering and screwing up his eyes into the smallest possible compass.' When the Kellner came for the reckoning, the guest placed his hand quietly underneath the table, and the number of fingers he held up indicated the number of measures consumed. It is also said that his illness was aggravated by carelessness in these tavern matters."

Other Schuberts

THE same Schubert is well known in musical history, although the Schubert family itself cannot be said to have the lofty standing of such musical names as Bach, Couperin or Puccini. There have been a number of musicians of high order who have borne the name of Schubert, or its variants—Schubart, Schuberth, Schobert and others.

In fact, when Schubert presented the song, *Erl King*, to the publishers, Breitkopf and Härtel, they had never heard of any Franz Schubert except the Royal Church Composer of Dresden, a man fifty years old. They accordingly sent the manuscript of the younger composer to the older one in Dresden. He was very indignant and insisted that someone was trying to trade upon his good name and accordingly kept the manuscript for evidence.

Schubert's brother, Ferdinand (1794-1859), although engaged most of his life as a teacher, wrote church music of a high order.

Franz Schubert, son of the Dresden Konzertmeister we have already mentioned, was born 1808 and died 1878, and became famous as a violinist and Konzertmeister. He published many compositions for violin.

Johann Friederich Schubert (1770-1811), was a musical director and violinist of Cologne who published many compositions and produced an opera, "The Nightly Appearance."

Joseph Schubert (1757-1812), was a violinist in the court orchestra of Dresden. He published much music for string instruments and produced four operas, to say nothing of fifteen masses.

Louis Schubert (1828-1884). Born at Dresden, he went to Russia in his teens and attained high distinction as a violinist and as a Konzertmeister. He was also noted as a singing teacher, and produced four operas.

Maschinka Schubert (wife of Konzertmeister Franz Schubert) was a noted stage soprano as was his daughter Georgine (a pupil of Jenny Lind).

Julius Ferdinand George Schuberth (1804-1875) founded the music publishing firm of J. Schuberth and Co. of Leipzig and New York.

Karl Schuberth (1811-1863), eminent cellist, was born at Magdeburg. His enormous success in Russia led to his engagement for twenty years as the musical director of the University at Petrograd.

Johann Schobert (doubtless the same family name) was born in Silesia (?). He died in Paris 1767. He is reported to have been the first composer to use the pianoforte in chamber music compositions. Mozart greatly admired his works.

C. F. Daniel Schubart (1739-1791), was born in Swabia. He wrote numerous operettas, cantatas and pianoforte pieces.

*"Writing to Spaun in 1822, Schober remarks with surprise, 'We found "Die Krone" completely deserted.'"

CHOOSE YOUR PIANO AS THE ARTISTS DO

Bachaus plays only the

Baldwin

MOST exacting of pianists, Bachaus finds in the *Baldwin Piano* the perfect medium of musical expression. In his own words, "The *Baldwin* satisfies the highest demands. The tone is noble and brilliant, the mechanism perfect."

For its enduring purity and resonance, for its perfect concord of tone and action, the *Baldwin* is the choice of exacting musicians the world over—on the concert stage and in the home.

In any *Baldwin* you will find a new revelation of your musical dreams. Visit the *Baldwin* dealer near you.

BALDWIN Uprights, *$850 and up,* Grands, *$1400 and up;* Reproducing Models, *$1850 and up.* Convenient payments if desired.

A SUGGESTION

Choose YOUR piano as the artists do. The book, "How Artists Choose Their Pianos," will help you in selecting the instrument for your home. We will gladly send you a copy free. Address

Max Rosen — Friedrich Schorr
Albert Spalding — Richard Strauss
John Charles Thomas — Willem Willeke

—these artists find in Brunswick's "Light Ray" electrical recording (music by photography) reproduced on the Brunswick Panatrope the perfect medium for their art.

THE Brunswick Panatrope marks an epoch in the music-life of the world. It is the FIRST purely electrical reproducing musical instrument.

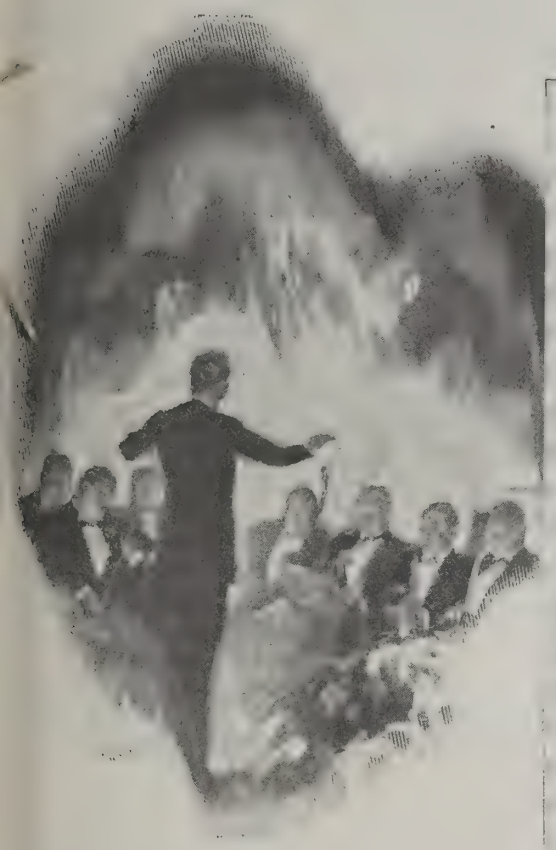
Electrical reproduction of music means music as it really is. True to life—a musical photograph!

So overwhelmingly beyond anything the world has known is the music of the Panatrope that the first demonstration of this instrument in New York City was the news of the day in the papers the following morning. Critics and laymen agreed that here was by all odds the most remarkable reproducing musical instrument they had ever heard.

The Brunswick Panatrope brings you not only the music of the new electrical records but that of radio as well. It is obtainable either alone or combined in one beautiful cabinet with the Radiola Super-heterodyne. The Panatrope may also be used as the loud-speaker unit for your radio, with musical results equally as superior to what you are accustomed.

This remarkable instrument operates entirely from the light socket; no batteries or outside wires needed.

Until you hear the Brunswick Panatrope you cannot realize the difference between its music and reproduced music as you have known it. It is merely exercising good judgment to refrain from buying anything in the field of music or radio until you have heard and seen this remarkable invention. Otherwise what you buy today, no matter how wonderful it may seem, may fall obsolete tomorrow before this amazing instrument.



Another triumph

The Brunswick-Balke-Collender Company has also developed another musical instrument, as yet unnamed*, for bringing out the music of the new records. In tone

New Brunswick Records by the "Light-Ray" electrical method (music by photography) are now on sale every Thursday.

g 10 words describing its music. Contest
ses December 15th at midnight. In event of a tie for any prize offered, a prize identical in all respects with that tied for will be awarded to each tying contestant.

Write Dept. P-192 for free booklet describing this contest. Or, ask your Brunswick dealer for a copy. It is not necessary to have the booklet in order to compete, but it may help you immensely.

You can hear the Brunswick Panatrope, the Brunswick Panatrope & Radiola, and the new Brunswick instrument as yet unnamed* at any Brunswick dealer's. If there is no Brunswick dealer near you, write us.

An amazing development in recording

BY old methods of recording, the energy to move the recording needle on a disc of soft wax had to be developed by the actual sound waves entering a horn. Because some sounds, notably in the middle register, had more "needle-cutting energy" than others, it was impossible to record the entire musical scale. Furthermore, the artists had to be arranged in awkward positions and to exaggerate their music.

By Brunswick's "Light-Ray" electrical method of recording (music by photography) a beam of light is reflected on a photo-electric cell from a tiny mirror weighing but 2-100th of a milligram. The slightest sound causes this mirror to vibrate and the beam of light to vary as it plays on the photo-electric cell. Amplifiers "step-up" these vibrations and a recording mechanism registers them. Thus every note is recorded *naturally*. The artists perform with perfect freedom.

We believe the "Light-Ray" electrical process, exclusively Brunswick, makes records unequaled in *naturalness* of tone, yet the Brunswick Panatrope plays *all makes* of records with the extraordinary brilliancy and beauty characteristic of this instrument.

The Home Beautiful Contains a Grand

Thousands of homes now enjoy this beautiful Baby Grand

BRAMBACH built the first small grand piano. Today, this beautiful Baby Grand is known and used by music lovers the world over.

Its popularity is easily understood when these facts are considered.

First, it is a compact, beautifully-proportioned instrument less than five feet in length. It is so small it takes no more space than an upright and fits into even the smallest corner of the house or apartment.

In addition to its convenient size, the Brambach possesses deeply resonant tone and wonderful responsiveness—due to the patented Grand Action and the Brambach Tone Expander.

Easy to own one

Because of the enormous Brambach production, this remarkable grand piano is priced surprisingly low, $650.00 and up, f. o. b. New York City. On convenient terms, if desired. Distributed by leading music houses everywhere.

It is so beautiful and individual in line and finish that its low price comes as a surprise.

Mail coupon below for further information and for a paper pattern showing the exact space requirements of this beautiful Baby Grand. The pattern will be mailed with our compliments.

Educational Study Notes on Music in this Etude

By EDGAR ALDEN BARRELL

ilitary March, by Franz Schubert.
›mments on this March are not neces- in these columns since, elsewhere in issue, the world-famous authority, k Hambourg, carefully explains in a er-lesson the technical and interpreta- difficulties.

tter Without Chatter, by C. Blanco *z Study*).

ost so-called "Jazz Studies," you know, fail to hit the mark; they are neither enough music nor good enough jazz ıcceed. This *Patter Without Chatter,* ıe contrary, seems to satisfy both de- ls and provides a fine test of one's city for syncopated playing.

hile examining this composition, the which kept recurring to our mind was enious" (uttered with an exclamation :). The series of seconds in measures of the Secondo are ingenious; passage in the Primo is ingenious; and the e tonal effect of the piece is ingenious. study requires quick, deft fingers and roughly relaxed mechanism.

lonaise, by Franz Schubert.

e great care to discriminate between ato and legato passages. In the o, in measures 5-8 after the first double- ee to it that the left-hand part is clear smooth. In the Trio notice the Imi- ı between the hands; Schubert was in- ly fond of this trick and often used it. ıubert showed great good judgment, rs, in picking out contrasting themes ny piece. The first theme of the *aise* is broad and beautifully balanced; our-note theme of the Trio is choppy nirably suited to the imitative effects yed. This number is extremely char- istic of the master.

The Quest of Pierrot, by Frank H Grey.

ANK H. GREY

Pierrot is a character willed us from old French farces, which in turn had come by him from the Italians. Originally a valet, he soon developed the appearance and character for which he is ıoted—and the white-faced fellow, in suit adorned with large buttons, who rching for his Pierrette, is familiar all.

Grey, a short biographical notice of appeared in these columns recently, elected pleasing and piquant themes s piece. The transposition, up an oc- of the first theme is effective. The ı in D Minor—played *doloroso* r)—we may take as descriptive of ɔt's feelings when his young lady tem- ly casts amorous glances at some gentleman. The right-hand part, in ection, consists mostly of appoggia-

Trio must be played *leggiero,* and ın absolute lack of the *rubato* suited rest of the piece.

a Ghost Flower, by Thurlow Lieurance.

LOW LIEURANCE

This is a little gem, easy technically but very difficult in the matter of interpretation and coloring. The careless performer will judge that, because *To a Ghost Flower* is short, it consequently merits small expenditure of pains. What falsity of logic!

The left-hand arpeggios, though not complex, had best be practiced separately.

Minuetto in B Minor, by Franz Schubert,

The octaves must be clearly and cleanly enunciated—and the whole *Minuet* calls for strong accentuation. Notice the good effect (often used by Schubert) obtained by tying the last note of one measure to the first of the next.

The measure before the Dominant Cadence in D—that is, the measure marked *fff*—contains an Augmented Sixth chord. In this composition it should be noted in how many different harmonic ways the composer approaches the same point of rest.

Thematically, the Trio is of more interest, the flowing melody being in splendid contra-distinction to the angular ruggedness of the first theme.

Morris Dance, by James H. Rogers.

The Morris (or Morrice) is one of the famous old English dances, the spirit of which Mr. Rogers has convincingly caught in this little number. His piece is attractive both melodically and rhythmically. In measures 5-8 make the fourths (in the right-hand) non-legato. Non-legato is the half-way house, you know, between legato and staccato.

When the left hand has reiterated fifths—like the oft-repeated C-G of the *Morris Dance*—the effect is called a Drone Bass and is strongly reminiscent of bag-pipes. Always accent a Drone Bass.

Do not make much of a retard on the last five measures of this dance.

Dance of the Medicine Man, by Wm. Berwald.

This is a very active dance indeed; so active, in fact, that when the medicine man finishes it we are certain that he may omit his "daily dozen" for some time with impunity.

In measures 3-4—and similar measures—accent the *first* beat as marked.

WM. BERWALD

In the scale of G Minor, which is the main tonality of this piece, the seventh or leading tone is F sharp; and the lowering of this (which gives F natural) establishes an Indian atmosphere. Oriental music also employs the flatted seventh extensively.

Keep the left wrist loose for the staccato notes.

In the C Minor section—sub-Dominant of G Minor—the right hand triplets add a characteristic touch. Note the telling dissonance in measures 15 and 17 resulting from the simultaneous sounding of D flat and C natural.

The Coda of Mr. Berwald's *Dance of the Medicine Man* is brief but excellent, and continues the aroma of barbarism. Notice the Augmented chord in the next to the last measure; this composer has a great fondness for Augmented chords.

William Berwald was born in Schwerin (Mecklenburg), December 26, 1884; studied under Rheinberger, Bussmeyer and others. From 1889 to 1891 he conducted the Philharmonic Society in Libau, Russia, and in 1892 he came to Syracuse University—at Syracuse, New York—where he is now the head of the department of theory and composition. From this university he received the degree of Mus. Doc. in 1912.

Mr. Berwald has composed in all the forms, and his music has taken many prizes.

The Singer's Etude

Edited for November by the Eminent Vocal Specialist and Composer

NICHOLAS DOUTY

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

The Songs of Schubert that Everyone Should Know

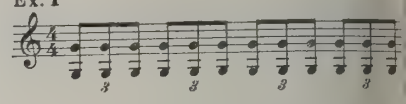
By Nicholas Douty

"THE MOST poetic of all musicians," Liszt said of Schubert; and one can imagine the answer of the stern-visaged Abbé to the daring spirit who might, somewhat timorously, venture to ask him, "What are the best of Schubert's songs?" "Study them all," one can almost hear him say, "for Schubert was the greatest song writer that ever lived."

Nor can better advice be offered to the earnest student, even at the present moment. The more than six hundred songs of Schubert are an inexhaustible mine of melody, comparable to those of no other composer. The romantic Schumann, too much in love with his Clara Wieck to be entirely self-critical, wrote here a masterpiece and there a banality. Robert Franz, an old-fashioned gentleman in a faded frock coat and an ancient top hat, composed superb, poetic songs in a style too austere ever to be thoroughly popular. The tangled rhythms of the magnificent lieder of Johannes Brahms require the exercise of an active musical intelligence to appreciate them.

The songs of Schubert, however, are fountains of appealing melody. No man, before or since, was able to capture such an endless succession of lovely tunes. Some are as simple and folk-like as "Turkey in the Straw;" others as homely as "Way down upon de Swanee Ribber;" some as sentimental as "The Red Sarafan;" others as alluring as "La Paloma." No musical education is necessary to understand them: they intrigue alike peasant and lord, child and philosopher. They are difficult to play and they require that the singer shall have at his command every attribute of his varied art. Long-sustained tunes like "The Sea" or "Ave Maria" will tax his breathing and his knowledge of *Bel Canto*. Rapid songs like "The Trout" or some of the "Songs of the Miller" need the lightest tongue action and the clearest enunciation. "Margaret at the Spinning Wheel," "The Erl King," and "The Omnipotent" are intensely dramatic and sound the profoundest depths of emotion. Above all, the singer must be something of a poet, too; for the songs of Schubert are a perfect wedding of words and music.

The Methods of Genius

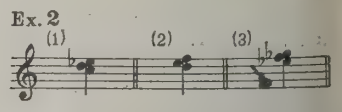


THE GENIUS arrives at his goal not by the slow processes of thought and education, but by rapid intuitive perceptions impossible for the normal mind to perceive or understand. Often he does not reason, but he jumps to his conclusions with unerring accuracy. Schubert, one of the greatest of musical geniuses, composed with such rapidity that it was not unusual for him to write from four to six songs in a single morning. During their composition his mental concentration was so extraordinary that he appeared to be in a condition approaching clairvoyance or sleep walking, and he seemed to be oblivious to external events. It may be that this combination of genius and clairvoyance enabled him, a poor, unknown, friendless youth, with comparatively little education, to produce, at a very early age, those masterpieces whose impeccable technic, depth of emotion, knowledge of vocal effects, control of form and maturity of style, have never been surpassed.

For example, the first of his truly great songs, "Margaret at the Spinning Wheel," was written in October, 1814, when he was only seventeen. There is not the slightest sign of immaturity, of lack of control here or of understanding of his subject. The tragic story of the young country girl, used as a tool by Mephistopheles to arouse the dormant passion of the rejuvenated Faust; her pure love, her seduction, her misery and shame, are painted with unerring strokes in this short song. It seems as if almost the whole of the first part of Faust were crowded into these few measures. A whirring, monotonous figure in the piano, representing the spinning wheel, accompanies the voice from beginning to end, for even if love is over, work must go on. Only at the climax, where Margaret remembers the ecstacy of their kisses ("And oh, his kiss") is this figure interrupted by a few dramatic, dissonant chords. The whirring figure is then resumed growing ever more and more soft and monotonous; and the song ends leaving Margaret alone, friendless, forsaken.

The "Erl King"

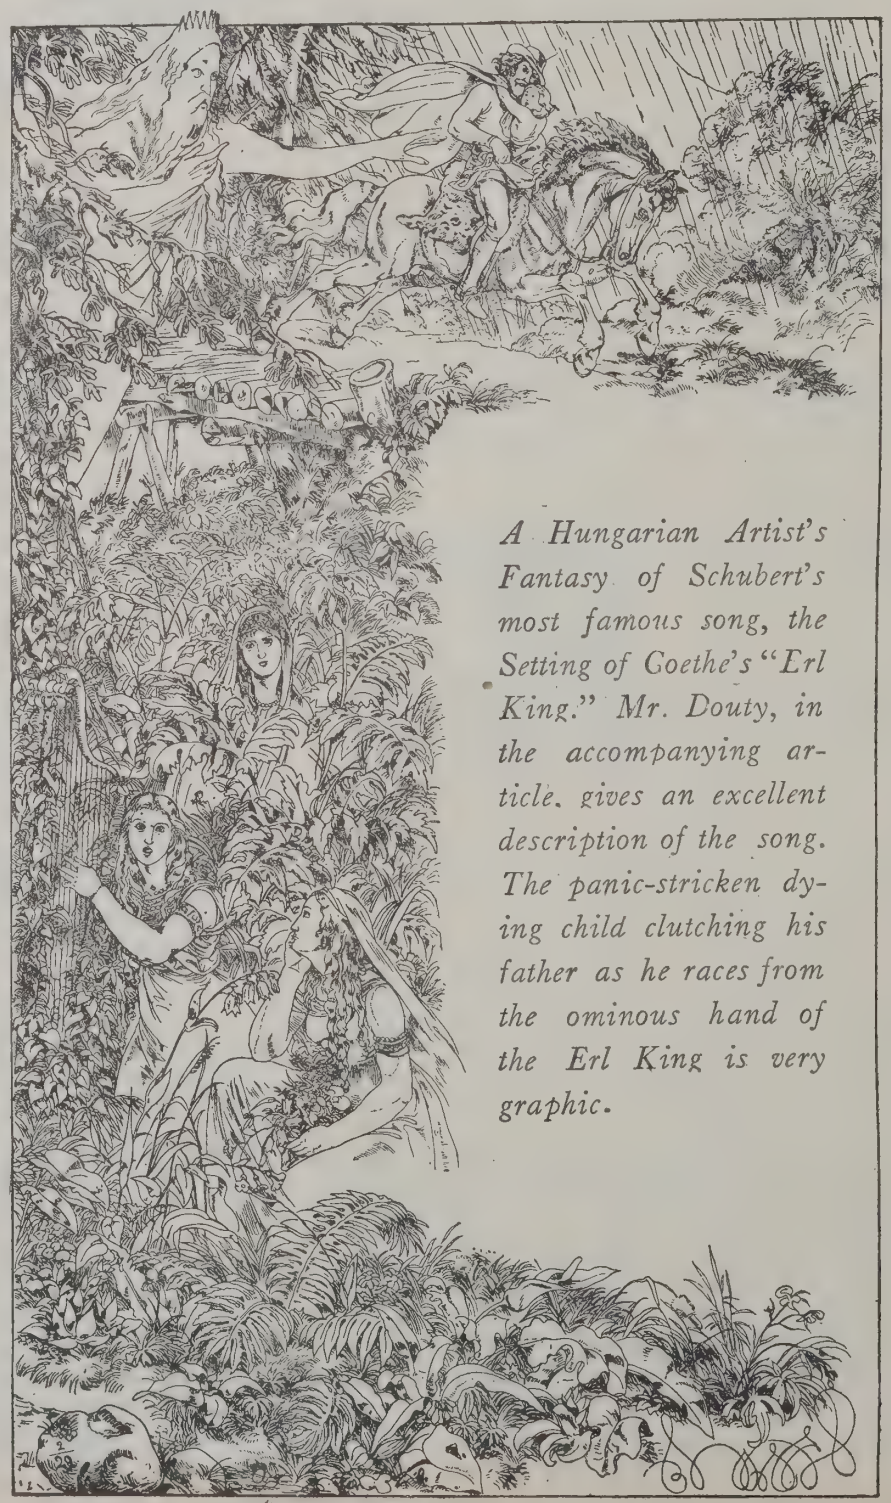
THE BEST KNOWN of all Schubert's songs, "The Erl King," was written during the next year, 1815. Spaun tells us that Schubert, all aglow with the beauty of the poem, wrote this very developed and complicated music "as fast as pen could travel over paper." Goethe's famous ballad tells of an anxious father, hurrying his horse homeward, his sick son in his arms. In his delirium the child sees in the moving willows the figure of the Erl King; hears in the murmur of the wind through the trees the enticing voice of the Erl King's daughter. A protruding branch touches him, and his fevered imagination turns it into the icy hand of the Erl King trying to tear him from his father's grasp. The father soothes the child as best he can, urges his tired horse onward still faster, only to find when he reaches home that the child is dead in his arms. Again Schubert uses the characteristic motive in the piano as the basis of the entire song. This motive, in triplets



Ex. 1

ever repeated, represents the galloping of the horse. Though it varies a little in form and tempo (for no horse can gallop always at exactly the same speed), it slowly works up and stops only when the journey is done and the courtyard of the father's home is reached. Then in solemn tones the singer recites the death of the child, and the sharp chords ring down the curtain upon the tragedy. This is one of the songs that "Age does not wither nor custom stale." The frightened, tearful voice of the sick child, the soothing notes of the father, the alluring sounds of the Erl King's daughter, sensed rather than heard, the fearful threat of the Erl King, are unerringly depicted in a masterly manner.

The dissonance produced by striking the contiguous tones simultaneously is used here for the first time. Three times it occurs, always higher, louder and shrill, and at its last appearance one feels that the soul of the child leaves its body. The dissonance



Ex. 2

is always sung and played (in triplets) *fortissimo*. It takes a great artist, not a great singer alone, one who has lived and suffered, to present to an audience an adequate performance of this thrilling, tragic, musico-dramatic story. Ernestine Schumann-Heink, great artist and great woman, remains its most wonderful interpreter.

"The Trout," written in 1817, is as light, charming, delicate and happy as the two other songs just quoted are despairing and melodramatic. It tells of a poet, wandering idly by a brook, delighted by the beauty of nature, but somewhat disturbed by the sight of a fisherman angling for a trout. He is reassured because he knows that as long as the water is clear the fish will be able to see the man and will not allow himself to be caught. So the man cruelly muddies the brook; and, alas, the trout is soon dangling from the hook.

Again the piano plays a darting phrase representing the quick, erratic motions of the trout, upon which is superimposed the clearest, lightest, most transparent tune that ever issued from the brain of man. For two stanzas the gambols of the fish continue, and one feels certain that he will not be caught. But, in the third stanza, the same rhythm continuing, the accompaniment changes from a clear major to a mean, cunning minor, as the fisherman sullies the brook, and the voice turns to a wail of regret. Why must pain be inflicted upon any creature, even one so small and useless as a trout, upon so bright a Summer's day? This mood of sadness lasts but a few, brief measures, and the song ends as it commenced, with the da

A Hungarian Artist's Fantasy of Schubert's most famous song, the Setting of Goethe's "Erl King." Mr. Douty, in the accompanying article, gives an excellent description of the song. The panic-stricken dying child clutching his father as he races from the ominous hand of the Erl King is very graphic.

phrase in the piano and the clear, it tune in the voice.

A Simple Masterpiece

"EATH and the Maiden" was written in the same year, and Schu- thought so much of it that he used it n in the second movement of his *D r Quartette*. It is one of the simplest is great songs. A child might play notes of it and a young girl sing it; oh, how much of the pain of living eded to sound the depths of emotion ined in it! It tells of the coming of h to a young girl, who, terrified at the n, cries out for her life to be spared. lemn, soothing tones Death calms her , assuring her that in his arms she sleep the last sleep safely and well. simple tunes, both in the minor key, xcited and tragic, the other sad (for is always sad), yet quiet and calm, up the whole song. At the end, the low tones of the voice and the ge of the Death melody from minor ajor produce an effect of ineffable which few songs can rival.

is the custom to make a little fun of Serenade." Louis Elson calls it a al bonbon and H. T. Finck declares t is not one of Schubert's best. The arity of a song is not at all depend- upon the opinion of the critics; so one wonders why they do not learn more modest in their pronounce- . It is the age-old, ever-new story lover strumming his guitar and sing- is heart out under his mistress' win- If his voice sounds somewhat sad is strumming somewhat monotonous and if they find no echo in her heart, y be because Schubert was never a ite with women. They love the cavalier," the man of action. Schu- was always the dreamer of dreams. song is one hundred years young, g been written in 1826.

A Deathless Melody

"AVE MARIA" is a soulful version of the old Latin hymn to the Virgin Mary. Here we have an unforgettable melody, so beautiful in itself that it may be entirely divorced from the words, yet lose little of its effectiveness. Arrangements for almost every instrument and set of instruments exist. One hears it in church, in the movies, in the theatre and in the concert hall, and yet never tires of it. Even the violinists torture it upon the rack of their double stopping, without entirely killing it. Played and sung as Schubert intended it to be, it falls upon the ear like a benediction.

"Hark, Hark the Lark," full of the colors of the sky and the sound of bird voices, and "Who is Sylvia," pure and virginal as a sweet young girl, are set to the marvelous verses of Shakespeare. "Impatience" is the rapturous song of the lover, not sad and pining like "The Serenade," but strong and confident. In the cycle, "Muellerlied," "rivulets dance their wayward round and beauty is born of murmuring sound." "The Omnipotent" is a broad, bold, strong melody, praising in heroic mood the God of Nature and of Life. "The Winter Journey" and the cycle written in 1827 contain "Good Night," "The Linden Tree," "Frozen Tears" and "A Dream of Spring," four gorgeous gems.

One despairs, indeed, of choosing the best of Schubert's songs, because they are all so great. Buy, then, the complete songs of Schubert, in some carefully edited edition, free from mistakes. Study them all in the original German before you proceed to an English translation. You will find your efforts well rewarded, for you will never reach either the top or the bottom of them. They are unfathomable in depth and their melodies reach up as high as the heavens. Schubert may not have been the greatest musician of all, but he was certainly the most inspired.

Messa Di Voce

By L. Huey

E highest test of production and con- voice building lies probably in the to employ the *messa di voce* not only medium but also in the high voice. who is unqualified for the task of g on this subject will invariably be- y advising that this most important of the vocal art be taken up at Some even go so far as to claim o omit it renders its final mastery difficult. To the rank and file this s very reasonable. "The *messa di* said a recent writer, "should be from the very beginning."

n, again, one who does not know his ss will from the start associate the of *messa di voce* with increasing and shing the tone on a given pitch. ppears most reasonable because that ctly what *messa di voce* means—rais- e tone from piano to forte and re- g to piano on a gradual swell.

method of practice, however, is not ed on the essential fundamental or tional principle upon which the *mes- voce* is built. Such premature prac- fact, retards the pupil's progress to a marked degree. On the other hand, the pupil who is correctly taught from the start, even with the first tone he utters, is laying the foundation for the mastery of this most important branch of vocal technic.

The production of the sustained, pure limpid legato is the foundation of the *messa di voce*. Before one can hope to increase and diminish the tone in anything like an artistic manner one must first be able to control its sustained production *without* increasing or diminishing the volume in the slightest degree, maintaining meanwhile purity of tone and clarity of vowel. Obviously, without the ability to do this, artistic mastery of the *messa di voce* becomes impossible.

Moreover, it is unnecessary, when the voice is properly produced, to approach the study of the *messa di voce* independently at any stage of tone building. The tendency, in the artistic mind, to employ the voice in this manner automatically develops as the technic ripens into an efficient vehicle of thought transmission.

E art of interpretation is second only creative art in the great field of music e time, thought and culture necessary elop it are heavy prices to pay in this hurry and short cuts and the buy- f somebody's else ideas."—*Gilderoy*

INFORMATION AND BOOKLET UPON REQUEST

Musical Pointers for Musical Parents

Conducted by
MARGARET WHEELER ROSS

"The Etude" takes pleasure in announcing a new column in which pithy paragraphs ill appear periodically from the pen of Mrs. Ross, who has had wide experience in is field. Address all inquiries to Educational Service Department (attention of arents' Department), "The Etude Music Magazine," 1712-1714 Chestnut Street, Phila-lphia, Pennsylvania.

Write questions on a separate piece of paper bearing the above address and give our own name and address in full. Answers will be published under only the itials of the inquirer.

Make all questions brief.

No questions except those of general interest to the greater body of "Etude" aders will be answered in this department.

Vacation days are done, the children e back in school, the house is cleaned, e fall sewing well under way, and the sy band of Etude Mothers are getting e children back to their music lessons d systematic practice.

It is more than probable that this will a trying time for mother. If the les-ns have stopped entirely during the cation period, she may expect the in-itable discouragement of taking them up gain, with the loss of facility and the rgotten rudiments.

A friend came recently with an inter-ting problem; and because, unfortunately, involves a condition of which too many nd mothers are unconscious, and from hich too many good teachers must there-suffer, it shall be passed on.

Her complaint was that her daughter, n years of age, who had been taking ssons for more than two years, could t play the most simple composition with-t stumbling and seemed always in the ocess of learning something new, never ving anything completed. She had anged teachers several times but the con-tion was not remedied; and she was ady to conclude that all music teachers re either incompetent or especially prej-liced against her little girl.

Now I know Betty—an adopted child a family of people no longer young, ith plenty of money, who humor her ery whim.

I am positive that here is no question wrong methods, incompetent teachers, faulty instruction. Betty is over-in-lged and undisciplined; the teacher is anged whenever Betty complains; and tty is certain to complain if any dis-pline is attempted.

She is the type that every teacher knows d dreads. The spoiled, humored, petted, satisfied little girl who thinks every her pupil's "pieces" are "prettier" than ose given her; who wants to try every mposition she hears another pupil of ual grade play; and who frets, pouts d refuses to work on those given her, she is not allowed her will. Being ways humored at home and given what e wants, she rebels when her desires e refused and chafes under the unac-stomed discipline. She is the pupil who ils and discredits every recital the acher gives and who runs off for lessons with somebody else if insistence upon perfect work is demanded. She is the flitting, changeable type who will not concentrate upon anything long enough to master it. She is the sort of little girl who will pertly shake her locks and her skirts and tell you she can have "all the music she wants;" and you know it is true and are helpless.

Now it was my unpleasant duty to tell this mother the truth, and as kindly as I could I tried to make her see that she had it in her own power to remedy the situation. I told her she should not expect the impossible of a teacher, and made her understand that if Betty is to have any satisfaction in a musical future it will depend upon her.

After a heart-to-heart talk I advised her as follows: That at the out-set this fall, having decided upon a teacher, she must determine to stand firm against changing, and to give her unqualified support in every demand made by the teacher; that she must be frank and perfectly honest with the teacher selected, speaking unreservedly of Betty's difficulty, and the history of the many changes and the reasons therefor; that she must acknowledge her own mistake in allowing the condition to exist and determine to coöperate with the teacher to the extreme limit. After explaining the situation she should request the teacher to select some two or three attractive new pieces of Betty's limitations, and some two or three melodious exercises of like grade. Then, together, they should demand that these things be perfectly and artistically learned from the text and at least two of the compositions memorized before anything else is attempted. Furthermore, she should see to it herself that at least ten minutes a day is spent upon scales and finger work of a purely technical quality, and that this work is painstakingly and accurately done. I advised her either to pursue this plan to the letter or to stop wasting her money and Betty's time on music lessons.

Do your part towards making a musical home in a musical America by arranging a feast of music for the nourishment of the mind and soul on Thanksgiving day just as you will provide a feast of other goodies for the gratification of the bodily senses.

"Quo Vadis Piano?"

(Continued from page 807)

very little definite line and daub it h the pedal. It is an entirely dif- matter to take a simple Mozart or a Bach Fugue or a Chopin e and play these things beautifully. t, it may be said that the simpler ce, the greater the demand upon the anship of the performer. The com- ns of such composers as Satie, Mil- and Schönberg will sometimes al- very great elasticity of treatment is very hard to form a criterion of s to whether they are played better way or another. In the field of usic, however, the condition is very it and if one plays a Mozart Sonata all the world knows it in a few s. In fact, with the mixture of tone in some of the modern orchestral itions, I have been repeatedly told chestral players that some of the performers have stood upon the tor's stand, bâton in hand, conduct- ir own compositions with apparent tion and delight, although the per- s in the orchestra actually knew ese same composers were listening es of mistakes through commission ission upon the part of the orches- The question is whether the com- themselves really know what they ng. This is true all down the line. mpler the composition, the more it is to perform it well.

instance, a medium good player ake Reger's splendid Variations and it sound well, but I have heard a so-called excellent pianist play a Sonata in a way that was very m being masterly. When you get own to the subject, a great deal of in pianoforte playing depends upon rity, the definiteness of line, the tive, if one may call it that. Such of the pianoforte as Hofmann, ne, Rachmaninoff and Bachaus re- e works of the great composers in that would have been delightful to nposers themselves.

reason why so much piano playing eresting is that it is spread all upon face; it has no depth, no character. emes and the motives and the sub- nd the ornamentations are all de- to the ear as though they came one kind of a machine. Like a inting, fine pianoforte playing must epth. How can this be expressed ds? You perhaps remember the ereoscope whereby the ordinary aph was given charm and depth, ne looked at the picture through it. well played composition should have reoscopic depth, this clarity, this rence and herein rests the great the pianist. With his ten fingers, be able to play and bring out the hts of the main themes and at e time subdue in their relative im- , all other themes and accompani- nd also portray those inevitable ristics of human beings and com- such as temper, humor, sorrow, rcasm, decisiveness and abandon. plains perhaps why in the editions ld masters, we find so little in the descriptive text printed as marks ession upon the page. On their ipts could not be found such de- words as "with energy," "con "sur le second plan," "Etouffé," ," "effleurant," "de lontano," or as compositions published in England livelier here, please," "very snappy," on. The older composers left ings to the fantasy and the im- of the player. With some of our dern compositions, often destitute sy, it is apparently thought neces- mark these things in the text; poor pianist is obliged to play the rôle of an actor simulating feelings which are not his and perchance are in effect very far from those of the composer, so that the effect of this upon the auditors will lose all suggestion of flatness or tameness or lack of character. The masterpiece is a living thing, as the spring in all its beauty, to the composer's mind.

Perspective

"AFTER ONE has acquired a sufficient technic, the main object in piano teaching should be to get this purpose, this sense of values, this perspective, in playing. This one cannot obtain through anything but a great deal of thought and practice. This is why so many of the great piano teachers in the past have advised performers to practice more with the mind than with the fingers. Sometimes they have given this advice without telling just exactly what it meant.

"I do not like to pose as a conservative; but really there is no new thought in pianistic art that I am able to advise. The best modern pianistic thoughts are the old concepts of the art, dressed perhaps in new clothes.

"If there is to be a great advance or a significant change in the piano playing of the future, I am satisfied that it will come from the manufacturers before it will come from the composers or the pianists. Indeed, if the manufacturer can produce a piano with new tonal possibilities in the realm of the well-tempered scale, or if a composer can devise new and worthwhile ideas which may be executed through the means of piano playing possibilities of the present, a new style, a new profile and new potentialities of the art will be revealed. Any attempts in any other directions result merely in farce or, at best, transient advances. The really serious musician is not he who vacillates from this to that, just as the flappers of the present day change their dresses and their methods of wearing their hair. The real artist has more sacred and more important ideals to serve.

"Let us wait for the Messiah!"

Self-Test Questions of Mr. Friedman's Article

1. *What ideal was established by the great masters of the past?*
2. *What is the means of charm and individuality in the use of the modern piano?*
3. *Who are the three "most solid" composers?*
4. *Which type of music makes the most exacting demands upon the interpreter?*
5. *Why is much piano playing uninteresting?*

Have You Really Tried It?

By Dorothy Bushell

A BOOK of new pianoforte pieces by any composer is fascinating to a quick sight reader. Is it not tempting to try over a piece that "looks nice?" Not very easy, perhaps, but alluring.

It is natural to pick out all the tidbits; but have you ever made yourself play steadily through a difficult piece which you rejected at first sight? The time is perhaps strange, and, for the first few bars, you cannot get the intended rhythm. You tell yourself that it is not at all tuneful.

But, remember, the composer evidently had some object in writing it. Study the piece well beforehand, working out the time and rhythm. *Seek the motive of the composer.* He took the trouble to write it. Is it not worth while to give it a fair trial?

Watch a Child's Face

—when the vivid, appealing tones of a Kimball Piano are creating a pageant of dream-pictures out of a simple melody.

Throughout the last half century, no influence has accomplished so much in bringing to the American home a readier appreciation of the better things of life —a happier spirit, a breath of romance, an atmosphere of culture.

The Organist's Etude

Edited for November by Well-Known Specialists

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Etude Complete in Itself"

ORGANISTS SHOULD possess a theoretical knowledge of orchestral instruments as well as their functions. If to this be added some practical facility in the working of Instrumentation, so much the better. For, apart from other considerations, there are particular reasons for readiness on these points. It may be well to review them.

Arrangements of orchestral works should as far as possible represent the coloring of the originals. But arrangements vary. Some are merely suggestive; others are more particular. In dealing with the latter, the modern organ co-operates with the player through affording, by means of its accessories, facilities for the approximate presentation of the orchestral scores. But even here one needs to be prepared to make the best of things according to the range or limitations of different organs. In order to effect this reasonably well a knowledge of the original coloring is valuable when there is any question of modification or expansion of imitative combinations.

Then again an organist is likely to have to make arrangements for himself, at times, especially in the department of church playing. Another point is that among the listeners at recitals there are likely to be some who are accustomed to hear a proportion of the arranged numbers in their native orchestral settings, and expect an approximate or, at least, suggestive presentation by a recital or cinema organist who, if he is informed sufficiently, can do more than give a performance of the music itself. The same applies, of course, and in an even greater degree to what may be termed *partial arrangements.*

Church Playing

COMPLAINT IS sometimes made by church-goers that they seldom, if ever, hear the resources of their organ according as they are given by the specification of the designer and the guarantee of the builder. Sometimes there may be more than a little in this dissatisfaction. More color is listened for: the regular organ combinations become a trifle monotonous from constant use, proper as they are from a church point of view. But colorings are not unecclesiastical provided that a player has good reasons for making them, and in their making exercises good taste and judgment.

The accompaniment of anthems, solos, concerted numbers, and chanting can be rendered with interest and help by an occasional quasi-orchestral undercurrent. The interest will be obvious and the help will center in the enhancement of voice effects to which may perhaps be added a better appreciation of the music and verbal text. Quiet horn effects, suggeseted woodwind and strings (either of the latter alone or in combination), a restrained filling-in by the brass—all such are not only legitimate when exploited discreetly but make a difference akin to that between sunshine and shadow, and an unchanging and uniform outlook. Yet, underlying all, the inherent character of the organ will not necessarily be interfered with.

The Small Orchestra in Church

ON SPECIAL occasions a small orchestra is sometimes used to supplement the organ at church services and recitals of sacred music. Here the organist is likely to be confined in the arrangement of the music to whatever aggregation of instruments he may happen to have at his disposal. Such an orchestra will necessarily be limited or varied according to circumstances in its make-up, thus rendering it imperative that the arranger's skill and judgment be equal to requirements. Let us suppose that such an orchestra ranges from ten to fifteen players. What balance is best in the different cases? Let him try the following division which will be found reasonably useful:

Ten players: one flute; one second clarinet (used for harmony only); one cornet; one trombone; the string quintet; to which may be added tympani (or two small drums).

Twelve players: add to the above, one second violin and one second cornet, using the cornets as horns.

Fifteen players: add a first violin and an oboe.

In arranging for any of these aggregations care needs to be exercised in getting a representative orchestral effect, especially seeing that the same be *substantial* without suggesting thickness. "Top and bottom" effects mean not only faulty instrumentation but also poor support.

Then again the treatment of the organ in co-operation with the orchestra will necessarily be different from that of its usual rôle, particularly as regards the imitative registers represented in the orchestra, these being sparingly used—if at all. More attention should be given to filling-in effects that will be *felt.* On the other hand, the string-toned registers may be freely used.

The Organ and Orchestral Study

By William Reed

Knowledge of Orchestration Desirable

THE FOREGOING suggestions will seem to include a fairly "large order." They are, however, important—so much so that organists generally should realize the desirableness of being sufficiently informed concerning orchestral matters, theoretically, at least. It goes without saying, of course, that if an organist plays any one of the orchestral instruments a little (even one of the strings), he starts with an advantage easily increased by further study of a subject that is fascinatingly interesting. If he happens to be without any knowledge of orchestral instruments, he should lose no time in acquiring it.

It is best to start with the study of a small work on Instrumentation: then, after mastering the string family, the organist may proceed to the reading of string-quartet scores, and next to the other divisions of the orchestra, using scores of the small orchestra of Mozart and Haydn. Later, he will find time to attend orchestral performances and, with full scores in his hands, read, mark, learn, and inwardly digest actual results. There is no better way of acquiring a good idea of Instrumentation, short of practical work in a good orchestra, whether it be large or small.

The Anthem, Its History and Place in the Service

By Frank L. Sealy, F. A. G. O.

Part 1

IF ONE should make a synopsis of the various musical portions of church worship, the last analysis would comprise the service or ancient mass, the antiphonal chanting of the Psalms, congregational singing and the anthem.

In making a study of sacred praise, one is inevitably drawn into a resumé and acknowledgement of our indebtedness to that ancient people whose religion was antecedent to the Christian faith. To them we are indebted for an important part of our service. I am referring to the Book of Psalms which in one form or another is used by all denominations. Allow me to recall to you some facts which are of interest.

As we all know, the Book of Psalms is a commentary or religious reaction of the author or authors to current events in their own lives, or that of the nati reflections on events dim in the persp of the past as a faded dream; but charmed touch of poetry their memo been kept alive and transmitted to u broken by the long years that have el

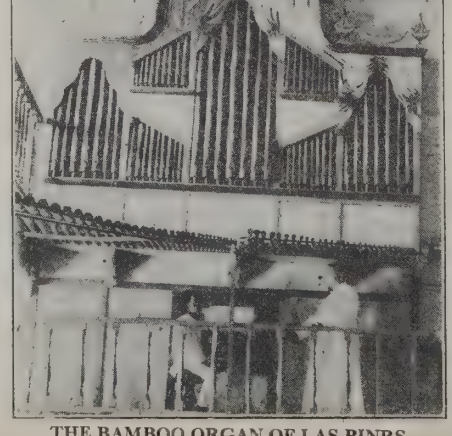
How vital a hold these great ou ings, of the soul had on pious He can hardly be estimated. When Pe his first Epistle writes: "He that woul life and see good days, let him refra tongue from evil and his lips that speak no guile," he is quoting fro Thirty-fourth Psalm. In Job we quotation from Psalm 30. Psalm and 134, sometimes entitled Songs c cent, sometimes Songs of Degrees, be called Pilgrim Songs, and were ably sung by pilgrims on their jour Jerusalem. Psalms 113 and 114 others, such as the 136th, refer t going out of the Israelites from under the leadership of Moses. Psal "When Israel out of Egypt came," supposed always to have been sung Feast of the Passover, and probabl sung by Christ and His disciples o Thursday night nearly 2,000 years The Psalms were called the Boo Praises. David was probably the fo but the collection was formed gra and was collected and arranged in time, about 536 B. C. They were u public service and for private de It is inferred from the structure Hebrew poetry that they were su chanted antiphonally. Only thirty were without title, titles such as, firs Liturgical character of the Psalm ond, the instrument to be used in p the accompaniment to the Psalm; the meter or melody to which it w be sung.

Hebrew Instrument

It is known that the ancient He never invented a musical instrument. ery kind they used came from an civilization, such as their early neig the Chaldeans, and later on the Egy They used stringed instruments, wi struments and percussion. The exil Babylon, who sang "By the wate Babylon we sat down and wept wh remembered Zion," never forgot th consecrated by so many shifting days and years of joy and sorrow; the course of centuries, in the enf sojourn of the Hebrews among st peoples, and with the dispersion o Levites, the special guardians of e thing pertaining to the service, all k edge in regard to the instrumental of the Temple and the Psalm melodie ished. But the words lived.

At a very early period in the histo the church it became the custom, whi priest was preparing the oblation d the celebration of the mass, to sing phonally a chant; from this cam motet, and from that came the an The only difference between the and the anthem is a difference in caused by the different period in the anthem had its birth. Queen beth early in her reign issued injun granting permission for the use "hymn or such like song" in church

A First Hymn



The earliest record of its use a chapel royal was mid-Lent Sunday in about which we read: "And service cluded, a good anthem was sung." early state the motet must have b fairly gay and lively composition, about 1600 Morley in his introducti music speaks of a motet as "a song for the church either upon some hym anthem, or in such like," and cons that the name is given in opposition other, which they called *cantus firmus* which we commonly call plain-song the name of moving—"moto"—was because "it is in a manner quite con

A Bamboo Organ

THE accompanying picture of a bamboo organ in the Philippine Islands at Las Piñrs, Rizal, was sent to THE ETUDE through the kindness of Sister Marie Claudia of Belgium, who, for years has been a very good friend of THE ETUDE.

The picture was sent to her by another sister in the Philippines who describes the organ thus:

Here is something which will interest you, an organ whose big pipes are in bamboo. It was made more than a century ago, by a Spanish Franciscan Monk, and the natives of a village near Manila. The most ancient (the oldest) have transmitted the secret of the preparation of the bamboo to render it sonorous to the following generation, but they keep it carefully. It is said that one of the conditions is to bury the trunks of the bamboo during several years in the sand. The Father in white is a Belgian missionary, who has, for a long time, been Curate of this village and has had the organ repaired. He is actually our Chaplain and it is to this Church that we go to Mass when we pass a few days' vacation at the seaside at San José de las Pinrs.

THE BAMBOO ORGAN OF LAS PINRS

ther, which after some sort and in of the other standeth still."

as in very early times secular melo- id popular ballad airs were often r the *cantus firmus,* in contrariwise the motet, although the music be solemn enough, was frequently very profane words, and to such an that the church, corrupt as it was, decrees forbidding the use of the n the service. Gradually a keener f what was reverent and fitting led use of words from the Psalms and portions of the Scriptures—always, se, in the Latin.

was the origin of the motet, and ne was to survive to our own day. le of the ancient motet was contra- and to modern ears might not ap- The style of this ancient form has irly well imitated in modern times ndelssohn in his motet for female "Laudate Pueri;" by Gounod with todia Matutina Usque ad Noctem," Mors et Vita;" in Barnby's "As ve Borne the Image of the Earthly," ecially Samuel Wesley's "In Exitu

Louis Spohr wrote a number of horal works which might be called such as his settings of the Eighth, -third and One Hundred and Thir- salms. The last three should be nown, as they were worthy of the n of large choirs.

e all, as being greater than all, men- ould be made of the extraordinary es of this form by Johann Sebas- ch, such productions as the five- motet, "Jesu meine Freude," or the eight-voiced one, "Singet dem ." Mark the extreme limits of the ities of contrapuntal weavings.

estionably one of the most glorious in the history of the motet was ixteenth and early seventeenth cen- That was the time when Palestrina, sus and Gabrieli on the continent, llis, Farrant and Byrd in England, oing their work. It was undoubt- e greatest period in the history of ld for pure polyphonic vocal writ- art quite equal to the great work nitecture and sculpture that was one on the continent by Michelan- nd his fellow workers. Edward on, of Oberlin, in his invaluable A History of Music of the West- rch," says: "The world has never ed a more absorbed devotion to a rtistic idea, neither has there ever since the golden age of Greek e another art form so lofty in ex- and so perfect in workmanship polyphonic church chorus in the its maturity. That style of musi- which was brought to fruition by such men as Josquin de Pres, Orlando Lassus, Willaert, Palestrina, Vittoria, the Anerios, the Gabrielis and Lotti is not unworthy to be compared with the Gothic cathedrals in whose epoch it arose, and with the later triumphs of Renaissance painting with which it culminated."

In England this was the period of bluff King Hal, the boy King Edward VI, Bloody Mary, Good Queen Bess, James I, the Scotch pedant and bigot, and Charles I, who "never said a foolish thing and never did a wise one," finally losing his head. It was also the age of Michelangelo and Martin Luther and Shakespeare. It was also the age of great discoveries on land and sea. It was a time when all minds were alert. New land, new worlds, had been discovered; great advances had been made in physical science. It was one of the wonder periods, but a turbulent one.

Recall what happened in those years: England, under Henry VIII, renouncing her ancient allegiance to Rome and becoming, with many forward and backward steps, Protestant. Henry, brought up a strict Roman Catholic, sometimes alarmed, sometimes attracted by the movement led by Luther, one day the recipient of the title of Defender of the Faith from the pope, for his pamphlet attacking Luther, another day sacking and demolishing monasteries and religious houses; at one time professing with enthusiasm his intention to maintain the Catholic doctrines in all their ancient purity, and at another sanctioning the publication of the whole Bible in English.

No wonder many church composers were in a state of mental confusion! They were in danger of being burned alive for using English words, or hanged if, perchance, and taking the chance, they had used Latin.

Many of the motets of this period were written to be used either with Latin or English words. A great deal of the old church music undoubtedly was destroyed when the great religious houses were done away with. We have a number of examples of the culmination of the great motet style, but examples which would have enabled us to trace the gradual growth are missing.

Great revelations in knowledge of the world in which they lived! New ideas in regard to their own physical body! New conceptions in regard to their relationship to their Maker! Why should there not be new modes of expression in music?—*The Diapason.*

(This article will be concluded in the December ETUDE.)

Wants New Organ Pedal

C. T. REYNOLDS, when giving the ntial address before the Organists' tion, of Liverpool, said:

re are two very curious facts con- with the calling of an organist which pply to that of other musicians, and e consider them we are constrained : that organists are perhaps a little !!

learn to play upon an instrument belongs to someone else, and which hardly ever hope to possess. And we sometimes try to play music annot be played. Imagine a person ; to play a piano or violin knowing would always have to borrow an instrument every time he wished to practice, and could never have one to call his own.

"When I speak of music which cannot really be played, I refer to certain arrangements from orchestral scores. A difficult pedal passage occurs, employing both feet, which renders the use of the swell pedal impossible, and yet there is a *crescendo* marked. Until the day comes when a method of using the swell pedal is invented, leaving both feet free, this difficulty will remain. These are two points on which an organist is handicapped."—*The Diapason.*

---

ough art a man can get the best life. The saving of a country depends on its artistic activities. a is artistically alive and, if you want to keep your musicians in England, you have got to show them that you want them here and that music is not a side-line, but vital thing."—EUGENE GOOSSENS.

THEATRE ORGANISTS

Direction: CHARLES H. DEMOREST and HENRY FRANCIS PARKS
Famous Theatre Organists

FALL TERM NOW

Students have lessons and practice before the Screen provided by the College in its studios. New two, three and four manual Wurlitzer and Moeller theatre organs for lessons and practice, owned and operated by the College.

COURSE OF STUDY

A two-year course. Varied to suit the individual student.

FIRST YEAR

First Term: First working registration, arranging of popular ballads, semi-classic ballads. Themes for feature films.

Second Term: Preparation for news reel playing, arrangement of piano numbers for the organ, waltzes and marches. Characteristic numbers arranged.

Third Term: First studies in adapting orchestrations to the organ, first studies in jazz playing, second or double-touch, playing of song-slides. Comedy film.

Fourth Term: First actual screen work, the news reel, comedy film, classification and construction for feature films, cuing short and long feature film, thorough preparation in adapting music.

SECOND YEAR

First Term: Repertoire, transcriptions of violin and orchestral music, orchestral overtures adapted, first actual screen work in playing the feature film, scenics, cartoons, travelogues, etc.

Second Term: Modulation and improvisation for all types of films, memorizing for important situations, dramatic music such as misteriosos, furiosos, etc. Actual dramatization of all kinds of films, meeting actual conditions of the theatre, improvisation including waltzes, marches, intermezzos, jazz, melody work.

Third Term: All scenic effects such as storms, falls, thunder, trains, etc. Constant practice before screen.

Fourth Term: Devoted entirely to screen work by those who have followed the complete course, and opportunity will be given to play before invited audience, so that practical experience may be gained fitting the organist for public work.

LENGTH OF COURSE

The time which will be consumed in covering the course will be determined to a large extent upon the ability as organists of those who take it. Students who never have studied organ previously will require two full years to finish the course. Experienced organists may cover it in one year.

NOTE—*Church and concert organists of experience are eligible to enter the Advanced Course.*

STUDENTS MAY BEGIN STUDY AT ANY TIME

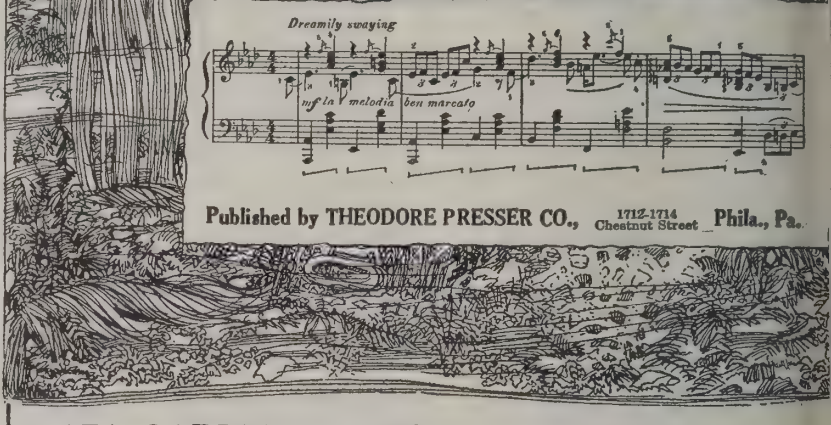
SEA GARDENS

By JAMES FRANCIS COOKE



A Sensational Success

TEACHERS EVERYWHERE ARE DELIGHTED WITH "SEA GARDENS"

THE popularity of this composition is due to the poetic and dramatic painting of marine wonders. Its haunting first theme suggests the beauties of the colorful submarine gardens, then there is a 'cello-like second theme, suggesting undulating seaweed and anemone, and a dramatic third theme, suggesting the crashing surf, and then just a breath of the coral reefs of the Far East.

It has the peculiar quality of being readily playable and easily taught, but produces the pianistic effect of a difficult composition. For this reason, and because of its teaching qualities, piano teachers have found it

Organ and Choir Questions Answered

By HENRY S. FRY

President of the National Association of Organists, Dean of the Pennsylvania Chapter of the A. G. O.

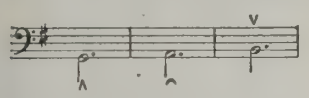
Q. I should appreciate very much a list of standard organ books and the names of some new ones, with music of easy and moderate difficulty. Ours is a small two manual organ which has a good variety of stops, a beautiful tone and good balance.

A. You might find some of the following useful for your purpose—

Twelve Pieces for Organ....Theodore Dubois
The Organ Player.....P. W. Orem
Standard Organ Collection (Parts 1 and 2)..E. E. Truette
Parker's Organ Collection (Vols. 1 and 2)
Five Pieces for Organ.....William Faulkes
The Modern Organist.....H. R. Shelley
Organist's Offering for Church and Recital..P. W. Orem
Book of Organ Music.....J. H. Rogers
Organ Repertoire.....P. W. Orem
Thirty Offertories for the Organ..J. H. Rogers
The Contemporary Organist....C. H. Morse
The Church Organist.....C. H. Morse
Album of Transcriptions for the Organ..H. J. Stewart

A recent publication, "The Organist's Handbook," by Gillette, gives quite a lengthy list of organ books, and in quite a number of instances includes the contents of the book.

Q. In some organ music which I have I find two kinds of signs indicating the heel and two kinds of signs indicating the toe in the pedal part sometimes in the same piece. An example of this is "Offertory," by W. G. Wrate, page 11, in "Organ Melodies," by C. W. London, in which I find for the right toe both ∨ and ∧ and for the left heel both ∩ and ∪. Would you kindly tell me the difference in meaning?



A. The following marks are sometimes used to indicate pedalling—notably in the American Edition of Guilmant's Organ Works:

∨ ∪ ∧ ∩

Left Toe Left Heel Right Toe Right Heel

are placed below the staff. We do not, however, approve of this marking as it is not easy to read quickly.

At present, the more frequently used method of indicating the pedalling is to place the marking over the staff when right foot is to be used and under the staff when left foot is to be used. ∨ or ∧ is used to indicate toe and O or ∪ is used to indicate heel. The pedal marks you refer to in the Agate *Offertory* are no doubt an error, and the passage near the bottom of the page you specify would be marked:

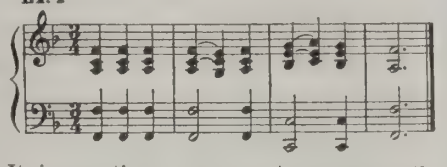
Q. Will you please give the names and addresses of all manufacturers of reed organs in the United States and Canada? Which of these manufacture multiple manual and pedal-bass organs? For about how much can such an instrument be acquired?

Can you recommend some books on the building, repair and tuning of reed organs?

Can reeds be voiced in the same sense that pipes are voiced, i. e., can they be made to imitate various instruments truly?

How are reeds tuned? Is it true that once a reed organ is tuned it never gets out of tune?

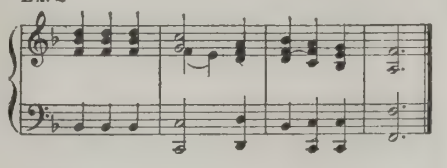
Why are there not more reed organs built on the same plan that pipe organs are built; that is, why do they not sometimes substitute reeds for pipes? It would be a great saving in space and expense. Is there any firm in America that builds reed organs to specifications in the manner that pipe organs are built?



A. So far as we know the only builder engaged extensively in the manufacture of Reed Organs (except small portable ones) is the Estey Organ Company of Brattleboro, Vermont, who also manufacture multiple manual and pedal-bass reed organs. These instruments range in price from $620 to $1275. We cannot give you the names of any books pertaining to building, repair and tuning of reed organs. Perhaps the firm mentioned can give you advice along these lines if you will write them.

Reeds can be voiced to vary somewhat in the color, but not to the same extent as pipes. In tuning reeds they are scraped on the heel to flatten them and on the tip to sharpen them. We do not think it true that once a reed organ is tuned it never gets out of tune—though it is probably true that they do not give much trouble so far as tuning is concerned. As the tone of a reed organ is not as satisfactory as that of a pipe organ, they are not as extensively used. The firm mentioned above would probably build a reed organ according to a suggested specification. We would suggest your writing them fully for the information you wish, as their long experience will enable them to answer more intelligently on the subject than we can.

Q. I am playing for church services on a pipe organ which has several much used pedal notes in bad condition. It will probably be several months before an expert tuner will be available. Is there any way of playing the tones which will be an effective substitute for the generally accepted method—that of playing the bass notes with the pedals?



A. There is no entirely satisfactory way to accomplish what you desire. You may, however, improve matters somewhat by playing your hymns in the following manner (using the first line of the well-known hymn-tune "Hursley" as an example) Soprano, Alto and Tenor parts being played with the right hand, the Bass part with the left hand.

Ex. 1

It is sometimes necessary to rearrange the parts slightly when the right hand cannot play the tenor part where written—for example, the last line of the same tune may be played as follows:

Ex. 2

These examples are given to show distribution of notes and on the organ would not be played exactly as written, as many of the repeated notes might be tied over with better effect. It must also be understood that this method is suggested only as a "makeshift" and it would be advisable to have the pedal board trouble remedied as soon as possible.

Q. Would it be possible for you to give me specifications of what you should consider a good three manual church organ to cost around ten thousand dollars?

A. A three manual organ built by a good, reputable builder, for the amount you name would necessarily be rather small. The following specification might suit your purpose, though, of course, we should prefer a larger instrument if funds were available. This specification may even exceed your figure somewhat.

THE CURTIS INSTITUTE OF MUSIC
ENDOWED BY MARY LOUISE CURTIS BOK

Where Personal Instruction is Given by World-Famous Artists

The primary purpose of The Curtis Institute of Music is to seek out unusually talented students and to provide for them a musical and cultural background that will enable them to become finished musicians in the best sense of the word.

For brilliance of attainment, the Institute's faculty is probably unrivaled anywhere. The heads of the various departments are artists of world-wide reputation, and personal instruction is given by them to students who qualify. Of equal eminence are their colleagues, the other teachers.

Complete courses in preparation for the concert stage or for teaching are offered in voice, piano, violin, harp, viola, violoncello, orchestra, etc.

Its endowment removes it from commercial considerations. For those who can pay, tuition fees are very moderate. To those of exceptional talent who cannot pay, financial exemption is granted.

For further information address
THE CURTIS INSTITUTE OF MUSIC
629 RITTENHOUSE SQUARE, PHILADELPHIA, PENNSYLVANIA

The various Departments of The Curtis Institute of Music are under the personal direction and supervision of the following members of its faculty:

Marcella Sembrich, *Voice;* Josef Hofmann, *Piano;* Carl Flesch, *Violin;* Louis Bailly, *Viola;* Felix Salmond, *Violoncello;* Carlos Salzedo, *Harp;* Leopold Stokowski, *Orchestra;* Reginald O. Morris, *Composition, Theory,* etc.

cience proves the danger of bleeding gums

Forhan's FOR THE GUMS

BRUSH YOUR TEETH WITH IT

FORMULA OF R.J.Forhan, D.D.S.

NEW YORK CITY

SPECIALIST IN DISEASES OF THE MOUTH

PREPARED FOR THE PRESCRIPTION OF THE DENTAL PROFESSION

COAST defense protects the life of a nation, gum defense the life of a tooth. On the gum line danger lies. If it shrinks through Pyorrhea decay strikes into the heart of the tooth.

Beware of gum tenderness that warns of Pyorrhea. *Four out of five* people over forty have Pyorrhea—many under forty also. Loosening teeth indicate Pyorrhea. Bleeding gums, too. Remember—these inflamed, bleeding gums act as so many doorways for disease germs to enter the system—infecting the joints or tonsils—or causing other ailments.

Forhan's positively prevents Pyorrhea, if used in time and used consistently. As it hardens the gums the teeth become firmer.

Brush your teeth with Forhan's. It cleans the teeth scientifically—keeps them white and clean.

If gum shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment.

Question and Answer Department

Conducted by

ARTHUR DE GUICHARD

Always send your full name and address. No Questions will be answered when this has been neglected.

Only your initials or a chosen nom de plume will be printed.

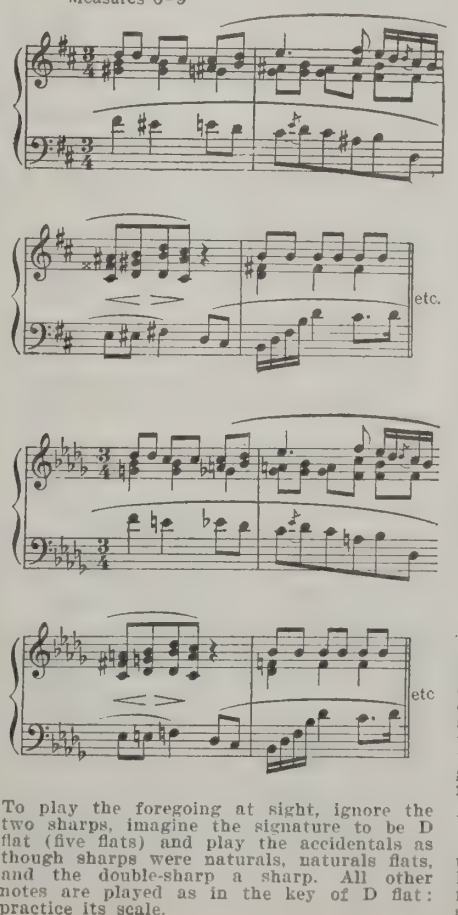
Make your questions short and to the point.

Questions regarding particular pieces, metronomic markings, etc., not likely to be of interest to the greater number of ETUDE readers will not be considered.

To Cancel or Not to Cancel Accidentals: that is the Question.

Q. Is it the best musicianship to cancel accidentals of a previous measure by writing in the proper flat or sharp in following measure; is it not calculated to confuse; and is it not quite generally understood that an accidental applies only to its measure unless repeated in the next?—G. M., Beaumont, Texas.

A. Your statement of the rule as to accidentals is correct, that is, "an accidental applies only to its measure"—except in the case of a note so altered occurring on the last beat of a measure and being repeated on the first beat of the next measure. In this instance the accidental is understood to have force without being written again. However, the modern practice is to indicate all accidentals; it avoids confusion.

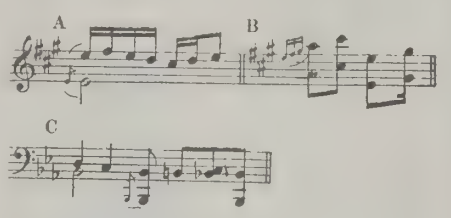


How to Transpose.

Q. I am an accompanist but a poor one seeing that I cannot transpose. Accidentals trouble me even in simple things. What is the best way for me to proceed?—R. C., Portland, Oregon.

A. This question is too important and too wide in extent for adequate treatment in this department. The subject shall be fully treated later. For ordinary transpositions of a degree of a half-tone ascending such as from flat signatures to sharp signatures and *vice versa*, it may suffice to say that all that is necessary is to ignore the group of sharps or flats at the beginning of each stave, substituting for it (in your mind) the signature of the new key. If the original key is in flats, the accidentals occurring therein will be changed: sharps to double-sharps, naturals to sharps, flats to naturals, double-flats to flats. If the original key is from sharps to flats, descending, the accidentals occurring will be changed: sharps to naturals, double-sharps to sharps, naturals to flats, flats to double-flats. Example:

Chopin, Prelude, Op. 28, No. 6



Measures 6-9

To play the foregoing at sight, ignore the two sharps, imagine the signature to be D flat (five flats) and play the accidentals as though sharps were naturals, naturals flats, and the double-sharp a sharp. All other notes are played as in the key of D flat: practice its scale.

Grace-notes or Ornaments.

Q. Will you please tell me how to play such a figure as this half-note with grace-note from the fifth measure of Grieg's "Norwegian Dance?" (A):

Also, the first beat with ornament of measure thirteen of the same work (see "B")? What is the name of the ornament? Is this example (see "C"), from Londonderry Air (ETUDE, *November*, 1925) *treated the same as "A"?*—MARIE G. WHITLA, Alberta, Can.

A. Play this figure as an arpeggio and sustain the alto E throughout the measure, with the thumb or with the pedal. (B) Play the first beat of the treble of measure thirteen *with* the bass-note; it is called a *coulé* or glide. (C) Is treated as at (A).

Piano Accompaniment for Church Singing.

Q. I am accompanist of a small church which uses a piano only. Please tell me how the hymns should be played to give the greatest support for congregational singing. Should the bass-notes be played in octaves and chords, or as the music is written? Should the left hand be louder than the right? Should the treble part ever be played in octaves and chords? When long tones occur, as at the end of verses and at Amens, *should these be filled in by bass chords to keep time for the congregation? How much and what part of a hymn should be played for an introduction? How should the pedal be used in hymns? What kind of music is most suitable as an offertory for which a piano solo is expected?*—W. P., Culdesac, Idaho.

A. The strongest support for congregational singing is best supplied by playing full chords with the right hand, that is, playing the melody with the right hand in octaves and filling in the alto and tenor thus making a full chord for the right hand, the bass being played in octaves by the left hand. It will be found advisable at times to play the right hand full chords an octave higher than written, the bass marking the time strongly in octaves but never louder than the right hand. The pedal (the damper pedal, wrongly called the loud pedal) should be used with each chord, but care should be exercised to take it up before a change of chord to avoid discord occasioned by the clashing of different combinations. For introduction to a hymn, play the first four measures or so, make a slight pause, about two beats, then attack the hymn. For offertory piano-music it would be best to submit the matter to the clergy. It is, however, always safe to play one or other of the lovely slow movements from the sonatas, quartets, symphonies and masses of the great masters: Beethoven, Mozart, Haydn, and so forth.

How Long to Learn the Multiplication Table?

Q. About how many pieces should be given a pupil during a term of forty lessons; during one of twenty-four lessons?—CHARLES B. H., Louisburg, Kans.

A. How long did it take you to learn the Multiplication Table? And how long the other boys in your class? You answer that it depended upon how slow or how quick you and they were in learning. Just so. It is the same in music. Your aim should be *not* to see how many pieces you could learn in a given time but how many you can play perfectly.

Various Questioners.

C. C., of Bend, Oregon; G. G. D., of Columbus, Ohio; L. E. A., Chattanooga, Tenn.; H. L. McC., Buffalo, N. Y. and others are referred to the paragraph entitled "Advice to some Questioners," in this issue.

Sweet as the pipes of Pan

AUSONIA

a new note in fragrance

RECREATES an old Italian perfume of the luxury-loving days of Pompeii.

The early Greeks gave the name to the whole of Italy. It meant to them happiness, laughter and beauty—power, fertility and fame.

AUSONIA has no flower fragrance. It is suggestive more of the East, the Orient, which in those early days furnished Italy with all of its many perfumes. Yet it is like no present day fragrance.

AUSONIA is warm, enveloping, tenacious. Paris says its fragrance is mildly intoxicating. To the American sense, its instant appeal will be the suggestion it gives of *sweet cleanliness.*

ROGER & GALLET artists have been experimenting for years to obtain just this fragrance. Bottles and boxes are new in form and color and most artistic. First importations include

EXTRACT
TOILET WATER
FACE POWDER

AUSONIA will take high place with *Fleurs d'Amour, Le Jade, Violette de Parme* and the many other world famous creations of

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

The Violin Teacher

By James A. Harrison

THE SUCCESSFUL teacher is not necessarily the one who makes the most money: he is the one who produces the largest percentage of good players. To do this he must develop latent musical ability whenever possible, at the same time keeping all of his pupils interested in their work. One pupil leaving a teacher through dissatisfaction will do that teacher great harm by disparaging his system and his ability as an instructor.

It is absolutely necessary that the violin pupil's interest be kept up all the time. He is learning to play an instrument which is admittedly one of the most difficult. The slightest lack of interest on his part is liable to mount up difficulties to the point of absolute discouragement.

The violin, next to the human voice, is the most beautiful of the means of musical expression. This point the teacher should emphasize at each lesson. He should give a few minutes' talk on the violin—its possibilities, history and so forth—and play for the pupil a short passage of some classic illustrating different branches of violin technic. In this way the pupil begins to regard his violin as something more than a mere piece of wood. Also he aspires to play like his teacher, an ambition which, once aroused, wins half the battle.

However good a violinist the teacher may be, he must bear in mind that the best player is not of necessity the best instructor. A good teacher sees to it that his pupils are always looking forward with impatience to the next lesson. He gives them a reason for everything he tells them regarding their studies. He keeps in touch with the latest improvements in all branches of his art. He studies the instructive material in the various musical magazines and is always on the lookout for any new device that will help him keep his pupils' enthusiasm.

The Young Beginner

THE YOUNG beginner is the teacher's hardest problem. If he can guide a beginner to a successful conclusion of the first grade he has accomplished just as much (and probably more if the beginner be slow) than if he conducted an older pupil through the Kreutzer *Etudes*.

Each pupil must be taken individually and his physical characteristics studied. No two are alike; consequently what applies to one is useless in the case of another. A short, round-shouldered pupil with short fingers naturally has to bring his muscles into play differently from a tall, straight pupil with long fingers.

The teacher should try every means available to make his pupil handle his instrument in the orthodox way, but if he is unsuccessful after a fair trial, he should experiment and try other methods. A pupil who is physically deformed in some way may thus become a fairly efficient player, though it would be impossible for him to do so by adhering to the regular methods of handling his violin.

The orthodox way of mastering the tied staccato stroke (with a loose wrist) was given a fair but unsuccessful trial by Wieniawski. One day, in despair, he tried the stroke with a stiffened arm and met with great success, developing a staccato which was admired in his later years.

Yet enough emphasis cannot be laid on the absolute necessity of the teacher giving the traditional way of mastering any branch of violin playing a thorough trial before other ways are considered.

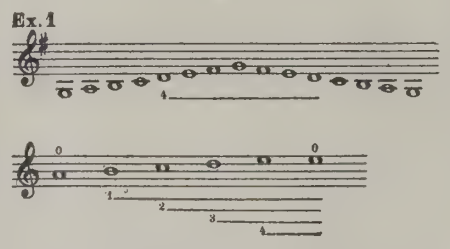
Another requisite of the successful teacher, probably the most important, is patience. Irritability with a backward pupil is bound to result in the loss of that pupil. If the teacher really sees that a pupil is wasting his time in attempting to become a player, the proper thing is to tell him and not continue giving him lessons and taking his money.

The pupil will no doubt realize the teacher is right and will discontinue lessons in the proper spirit. No reflection will thus be thrown on the teacher's reputation.

Problems of Position

THERE ARE one or two problems which most pupils find difficulty in solving. The first is holding the violin and bow naturally. Individual physical traits govern this to a very great extent and demand the teacher's strictest supervision. The pupil's wrist will keep resting on the back of the neck of his violin. The teacher, after explaining why the wrist should be kept away from the neck, should gently force it into proper position with his bow when the pupil is playing. This is a better plan than stopping his playing and correcting his position verbally.

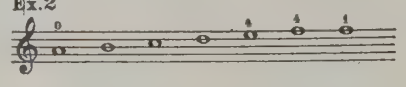
A good plan is to give the pupil after each lesson a report sheet, which contains an estimate of his week's practice, his practice instructions for the next week, and any points to which he must pay special attention.



Muscle Strain

EACH NEW exercise and position is liable to cramp the pupil's hands and arms for a while. As soon as he feels this cramp he should at once cease playing and massage the cramped muscles until they feel as if they were burning. Then he should continue his playing.

This will quickly accustom the pupil to the strain on his muscles caused by the new exercise. Thirty minutes' practice with one or two intervals of massaging will do much more good than hours of forced drill at the end of which the pupil is greatly fatigued and cramped.



The fourth finger is another great obstacle to many a young pupil's progress. Here again the teacher has to study the pupil's particular weakness and invent exercising material to do the necessary strengthening. The following exercises, however, are guaranteed to give in most cases independence and strength to the naturally weak fourth finger:

Ex.1

The thirteenth measure of Kreutzer's *Ninth Etude* should also be given to the young pupil as soon as possible. The third finger should fall on the string at the same time as the fourth, care being taken that the fourth only is heard. The pupil should then be given practice in stretching beyond the position, as follows:

Ex.2

After the student has a fairly good mastery of the first position, the left thumb should receive a little attention. Many authorities give special positions for the thumb, and just as many say to let it rest where it naturally finds the easiest position. It is best to prescribe no special position, but to let the pupil practice for one week with the thumb stretched as far as possible toward the bridge. This is going to be a miserable week for him, but he will be amply repaid.

His thumb will have acquired the natural position intended for it; his fingers will unconsciously have developed a habit of more perfect intonation, and his whole hand will be more suitably developed to attack the higher positions.

The Higher Position

WHEN IT IS time to start the st of the higher positions, the tea er's attention is again called to pupil's individual traits. Perhaps a g deal of experimenting is necessary bef the pupil gets the knack of sliding his h up and down the violin.

The first necessity is a firm grip v the chin. Here the round-shouldered p has the advantage, while the strai shouldered one in most cases has to us pad, which should be selected by teacher after he has experimented v different thicknesses of handkerchiefs

The teacher should insist upon an audible change of position right from start, for if the pupil gets the habit making the whining sound as his fin slide along the strings, he will have a h task to drop the habit. For this rea the glissando should be omitted until otherwise good portamento has developed.

The vibrato should also be omitted later on in the pupil's studies. Whe introduce its study should be left to teacher's judgment, as he knows his pu ability much better than the writers of instruction books. The teacher should sist upon a very sparing use of the vibr and mark on the pupil's music those n which can be so played.

Right Hand and Arm Technic

THE BOW deserves a whole text b to itself. Many excellent works bowing are available for the yo teacher. No special rules can be down for all pupils. The formation wrist, hand, length of fingers, and forth, govern the way of holding the and attempting the various styles of b ing. The teacher, right in the begin has naturally studied the pupil's hand its weakness, and the pupil, by the he is commencing to study various st of bowing, should have a fairly good of the bow. If the student experie difficulty in mastering any one style, teacher should experiment by letting alter the pressure of his grip on the s In the different jumping styles a per stroke may be accomplished by m raising one or more fingers from the or pressing a little more or less with thumb and forefinger. Some perfor have a perfect saltato and raise the fo finger from the stick; others raise fourth and second; others keep all fin down, and so forth. The amount of used should also be experimented with, being greatly varied with different pla

The teacher will be amply repaid i occasionally gives the pupil artificial monics to practice. These give the a delicate touch with the bow practically possible to be developed otherwise, and give absolute certainty of intonation.

While on the subject of bowing, p soon get tired of practicing the usual ing exercises. Results are obtained more quickly if these exercises are sionally augmented with old-time d tunes. These immediately give the an added interest in bowing, as we excellent practice.

"The Devil's Dream" is an excellen ercise for quick string transition in *ma* and whipped strokes. "The Irish Wa woman" provides excellent practice saltato. "The Girl I Left Behind can be used as an exercise in comb slurs with detached strokes. The te can arrange any of these old tunes others to meet the requirements of pupil's bowing studies.

Development of Tone

TONE IS AN effect into which ind uality enters more than any branch of violin study. It is not common for the pupil to develop a b

A Lost Art

SPEAKING of the making of Cremona varnish, such as was used by Stradivarius, Guarnerius, Bergonzi and other famous Cremona violin makers, a process which is now a lost art, the Springfield, Massachusetts, *Republican* says:

"The secret of the old Cremona varnish would be invaluable if it could be recovered, but when it was going out of use nobody seemed to have thought it worth while to preserve it for posterity. Probably it was no secret but merely a craft, developed empirically and handed on from generation to generation. The ingredients were probably such as the market afforded, and the violin makers very likely took what had long been supplied to the painters for varnishing their pictures. When the demand ceased those gums and pigments may have ceased simply to be kept in stock; and no precise record of their nature was kept so that more could be obtained from the original source.

"The disappearance of this varnish which collectors nowadays prize so highly was a typical example of the march of progress. Some ingenious inventor produced a varnish that seemed to give good results and dried much more quickly, thus eliminating one of the most tedious and costly parts of the manufacture. Before, each successive coat had to be given plenty of time to dry thoroughly, and this required dry, sunny weather such as could not be counted on even in sunny Italy. One by one the makers went over to the more efficient modern methods, and by 1750 the old art was practically extinct; when an effort to revive it was made half a century later its secrets were irrecoverably lost."

than the teacher. All the teacher do is to tell the pupil of the many gs to be done to effect a good tone.
uch has been written on the psy- ogy of tone, but one fact is outstand- -the violin answers to the almost un- cious sentiment of the player more any other instrument, and this senti- is the decisive factor in the pupil's after he has mastered the bow, in- tion, vibrato, embellishments, and all ittle twist of the wrists, fingers, arms even the whole body.
his is why the teacher should play a for the pupil at each lesson. The will admire his tone, and uncon- sly will mould his own to correspond If his unconscious ideas of a good are better than his teacher's, he will ne develop a quality of tone superior s.

It is important to practice double notes each week, beginning right from the first lesson on the open strings. The teacher should give two or three new chords each week (not forgetting those which exercise the naturally weaker fourth finger). By the time the pupil is ready for more advanced studies, his left fingers and bowing arm are thoroughly accustomed to this style of playing.

LASTLY, the pupil should not be given tasks much too great for him; neither should he be kept at one lesson only, for several weeks, until he has every note of it perfect. This is discouraging and may cause lack of interest. He should be taken further on in his instruction book, at the same time practicing the difficult exercise each day until mastered.

Watch the Bridge

e inexperienced violinist will save elf much trouble and considerable se if he will keep a close watch on ridge to see that it is, at all times, perpendicular position, not leaning towards the fingerboard. As the gs of the violin are tuned, they pull e top of the bridge, and gradually it out of its perpendicular position ds the fingerboard. After repeated gs, if the bridge is not pulled back place, it gets to lean over more and Gradually it gets to lean so much some day a particularly energetic g brings it down with a smash, break- he bridge and often causing the -post to fall with it.
en such a catastrophe happens dur- public appearance it is a serious . For, unless a violinist carries an violin with him (as he seldom does) less he can borrow one ready tuned, out of commission for the balance e evening; that is, as far as good g is concerned. Even if he has an bridge and sound-post setter at hand air the damage, it will take some time to make the repairs; and the will not stand reliably in tune for st of the evening. All this trouble e avoided by looking at the bridge each tuning to see that it is per- ular.
t any time more than one new string be put on the violin, it is best to ff the old and put on the new strings a time instead of all at once, tak- re to bring the top of the bridge o the perpendicular after each new has been drawn up to pitch. In ay accidents to the bridge can be d.
od bridge which is perfectly fitted violin and gives good tonal results ery valuable bit of wood. It is a y to break it as a new one may not give nearly such good results. Keeping the bridge to the perpendicular also prevents it from becoming warped, an accident which will surely happen if the bridge is allowed to sag. Watch a good professional tune his violin; you will note that he never fails to keep his eye on the bridge to see that it is straight.

A good bridge will last for several years if carefully looked after. However, it is a good idea for the violinist who does much public work to have an extra bridge in his case, which has been carefully fitted to the violin, and is an exact duplicate of the one he is using. Accidents often happen to the bridge from some cause or other and it is very convenient to have an extra bridge which has already been fitted and can be used at a moment's notice.

Young players trying to straighten up their bridges often have difficulty in the operation, and break a good many bridges while they are learning how. It is easiest done by sitting down and placing the violin between the knees, then grasping the bridge firmly at the top between the thumb and first and second fingers of each hand, and working it back to a perpendicular position. In doing this it is better to use a slightly twisting movement rather than to try and pull the whole top of the bridge back by main strength, as one is likely to lose control over it and pull it completely down. A little practice will enable the student to do the trick without any mishaps.

When the sound-post falls as the result of the bridge breaking, it is a double calamity since it may not be possible for the student to get it in the identical position it occupied in the first place. For this reason it is wise to mark a ring around the foot of the sound-post with a lead pencil so that if it falls it can be set up in its original position.

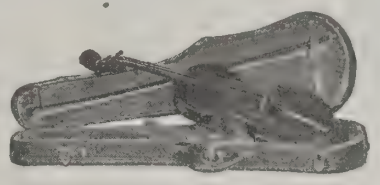
The Vibrato

By B. Emery

violin vibrato is really a very slight g and heightening of the original It stands to reason, therefore, that change is too noticeable, it produces t of wrong intonation or of sliding d forth on the string. The extreme the finger should be kept firmly on int while the hand performs its us motion with great rapidity. In y the slight changes up and down n such quick succession that they are fused into the one, original tone with the difference that the sound waves are kept in constant fluctuation and not made rigid after the first impulse.

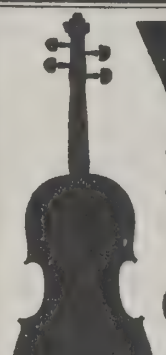
Since the vibrato, properly executed, tends to intensify and lend a peculiar charm to the tone it adorns, it should be used with discrimination, never, for instance, with notes played in rapid succession or in mere connecting passages.

ll the stories of the world of music inst conductors: orchestras come their share also. None, however, pointed than that told concerning Dublin opera house, where an interrupter in the gallery had made himself a nuisance. At last cries arose of "Chuck him out!" whereupon a resigned voice besought, "Don't waste him, kill a fiddler with him."—Musical News and Herald.



Vega

MASTER REPRODUCTIONS



Vega Violins are finished with a Cremonese oil varnish in detailed reproduction of every mark of use and age customary to a genuine old master. Each violin is subject to two years' seasoning process, then graduated and adjusted by experts.

OPERATIC VIOLIN PIECES THE WHOLE WORLD PLAYS

"Operatic Violin Pieces The Whole World Plays" differs in design, character and scope from any collection along similar lines ever published. It not only presents a comprehensive survey of the entire romantic and modern opera field, including the fifty-three finest productions of the Italian, Russian, Bohemian, French, German and English schools, but the form in which the music excerpts are arranged also differs entirely from the usual old-fashioned "selections," and still more antique "potpourris." Really vital melodies alone are featured—in many instances a single aria or dance movement has been sufficient. The arrangements vary sufficiently in technical difficulty to make the work interesting and useful to players of all degrees of proficiency, and the violinist who plays it over from cover to cover will have learned fully the true appreciation of "mood" in opera.

Here is the Complete List of Opera Selections

Africaine
Aida
Bartered Bride
Bohemian Girl
Boris Godounoff
Carmen
Casse-Noisette
Caucasian Sketches
Cavalleria Rusticana
Cid, Le
Coppelia

Christmas Services and Entertainment Suggestions

A Fine Variety of Services and Entertainment Material for the Christmas Festivities of Young Folk

We have other publications in which you may be interested. Tell us what you want.

Services for Sunday School

Christmas Night! Holy Night! A well-planned service. Singable Christmas Hymns, Responsive Readings and impressive little recitations.

The Christmas Story. The Sweetest Story Ever Told.
A very interesting and melodious service that will please Sunday School members.

Glad Tidings. Words and music by R. M. Stults and others.
A successful service, delightful in every particular and in great demand.

Joy of Christmas. Words and music by R. M. Stults and others.
Joyous music set to bright and appropriate texts, tuneful and catchy, echoing the true Christmas spirit and sure to please.

Christmastide Reverie. A Christmas service for Sunday Schools. Contains all recitations, etc., necessary for an entire service.

With Joyful Song. Complete Christmas service for Sunday Schools. Words and music by R. E. DeReef and others.
A brilliant Song Service, easily learned. Consists of twelve tuneful carols, interspersed with novel and appropriate exercises, recitations and readings.

O Little Town of Bethlehem. A Christmas Service for Sunday Schools.
Solos, duets, choruses and recitations in which all members of the Sunday School may take part. Accompaniment for piano or organ.

Star of Promise.—By F. A. Clark. This service will carry the Sunday School through an interesting hour or two at Christmas time, giving melodious and joyful numbers for Sunday Schools to sing, as well as other program material and readings to round out the service.

Price of any of the above services: Single copy, 7 cents; dozen, 80 cents; 50 copies, $3. 25; 100 copies, $6.00, all postpaid

Alleluia. Christmas Service of Praise. Words by Gertrude Knox Willis. Music by Mrs. R. R. Forman.
Will appeal to all those who are looking for a short service to be used in connection with other addresses and carols for a Christmas program for the young. Price, **20 cents** a copy.

Operettas or Musical Plays

The Crosspatch Fairies
By Norwood Dale **Price, 60c**
A Christmas play with music for little folks, giving a brand-new treatment of the holiday spirit.

In Santa Claus Land
By G. M. Rohrer **Price, 50c**
A little Christmas play in one act, admirably adapted for use with Sunday School or day classes.

Santa Claus' Party
By Louis F. Gottschalk **Price, 10c**
Can be produced without scenery and with very simple costumes, although full directions are given for a very elaborate setting. Time of performance, 15 to 20 minutes.

Musical Recitation

(With Piano Accompaniment)

The Night After Christmas
By Frieda Peycke **Price, 35c**
Catalog No. 18366
This is a very clever number for an accomplished reader, or a bright youngster with the assistance of someone at the piano.

Songs for Child Singers

Happy Children
By Wallace Johnson **Price, 30c**
Catalog No. 19571
A joyful little number that may be played or sung by a young performer.

Babies' Night
By M. Greenwald **Price, 30c**
Catalog No. 11796
This is an easy little piano number with three verses of text set to the melody.

Little Skeptic
By G. Spaulding **Price, 30c**
Catalog No. 11949
This is one of Spaulding's melodious little piano solos with cunning text that may be sung by a little boy.

Santa Claus is Here
By F. J. Bayerl **Price, 30c**
Catalog No. 17960
This is a real Christmas song for a young soloist, but it can be made additionally effective by the use of a triangle or bell ad libitum in accordance with the marking.

Toy Symphonies

Toy symphonies are real novelties for the program. They utilize such toy instruments as the cuckoo, rattle, tambourine, castanets, bells, anvil, pop-gun, cricket, slapstick, sand blocks, etc.

Christmas Toy Symphony
By H. D. Hewitt
Price, Piano, Four Hands and All Parts, $1.50
Piano, Four Hands alone, 80c
Can be given with almost any number of instruments.

Christmas Bells
By Arthur Seidel **Price, 50c**
Does not require many performers.

Kitchen Symphony
By H. Kling **Price, $1.00**
Piano With Six Kitchen Utensils

Minuet from Symphony in E flat
By W. A. Mozart (Arr. by J. Schulhoff)
Price, 50c
Piano Solo, Castanets, Tambourine, Triangle, Drum, Cymbals and Bell Chime.

Violin and Piano

Christmas Bells
By M. Greenwald
Catalog No. 17112—First Position
Price, 40c

Christmas Night
By J. Pietrapertosa
Catalog No. 840—Third Position
Price, 60c

Piano Solo Numbers

These are excellent numbers, mostly for young pianists, and they will fit well in Christmas entertainments and also in piano pupils' recitals conducted by teachers at Christmastide.

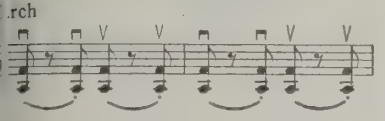
Violin Questions Answered
By MR. BRAINE

sian Fiddles."

E. R.—There is a very large number of s branded or labeled, "Rigat Rubus, St. burg (Russia)." These violins mostly rounded corners, and are popularly as "Russian" fiddles. They are usu- actory fiddles and of doubtful value. d not give you the value of your violin it seeing it.

ubmitting Articles.



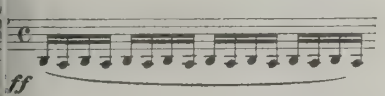
X. R.—I cannot say in advance whether rticle would be of a suitable nature for ation in the ETUDE. If you care to sub- it will be carefully read. If not avail- t will be returned to you if you enclose postage.

Through Dealers.

G. V.—If your Camillo Camilli violin ourte bow are genuine, you can likely em through some of the leading dealers violins in the large cities. These deal- ght buy them outright, or sell them for commission. You can get the address h dealers by looking through the lead- usical papers and magazines.

ge of Six-Eight March.

L. P.—The best and neatest way of bow- e following passage from the second part of a 6-8 march is as marked



wo of the chords to each bow stroke.

ing the Vibrato.

K.—Of course, the easiest and surest f learning the vibrato would be to go e experienced violin teacher and have each it to you. Once the principle is you, you can work it out for yourself. n get helpful suggestions by sending for ovember, 1922, number of the ETUDE. ollowing works have good chapters on brato: "The Violin and How to Master a Professional Player, and "Violin ng and Violin Study" by Eugène Gruen-

Octave Sign.

X. M.—The sign, 8va....., over notes, that all the notes under the dotted line be played one octave higher. 2.—The e you send from the first violin part *Poet and Peasant Overture* by Von is written in abbreviated form. Writ- t it stands as follows:

counting this passage count one to each of four notes, four beats to the measure.

ory Quality" Violins.

V.—The name, Friedrich August Glass, en used by way of trade-mark on thou- of violins made in factories in Germany, in the Mittenwald. The majority of violins are of "factory" quality and of moderate value. Some are better than . I can not tell you the value of your without seeing it.

an "Guarnerius!"

F.—The word "Germany" on the label r violin indicates that it is not a genuine erius but a factory-made copy manu- ed in Germany. The real Guarnerius were made in Italy.

try in Strad Varnish.

L.—The color of all Stradivarius violins exactly the same, as the master used rowns, oranges and yellows, alone and binations. He had the eye for color he great Italian painters had; and his g and varnish are extraordinarily rich eautiful. 2.—There is not more than ance in a million that your violin is a e Strad. If you care to go to the ex- of learning exactly what it is, you will o send it to an expert dealer in old .

or Appraising Violins.

. G.—I would advise you not to try to our supposed Stradivarius violin until ve the guarantee of a well-known ex- iat it is a real Strad. The odds are a to one that it is an imitation. 2. Pos- ve dollars would be a fair average for charged by good experts in appraising n, that is, giving the maker's name or ool of violin making to which it prob- elongs. Some charge more than this; less, and often no charge at all is made the violin submitted is very crude and e value.

ingless Label.

. D.—The Strad label in your violin nothing since counterfeit labels are in vast numbers of violins by the man- ers. Of course, it is not *impossible* our violin is genuine, but the odds are usly against it. From your description I should judge that it is a factory imitation of a Strad.

Factory "Fiddle."

L. S.—Your violin cannot be a genuine Stradivarius since the label states that it was made by Friedrich Aug. Glass in imitation of a Stradivarius violin. It is evidently a fac- tory fiddle of no great value.

Ebony Trimmings.

R. D. C.—By all means get a violin with genuine ebony trimmings. Many cheap vio- lins are fitted with imitation ebony trimmings consisting of ordinary hard wood stained black. This imitation ebony lacks the hard- ness and stiffness of the real ebony, and, as a result, the pegs are apt to twist and break. Also, the pressure of the fingers causes little gutters to form in a very short time in the fingerboard under the string. If you decide to have your present violin repaired, insist on genuine ebony pegs and fingerboard. They are well worth the difference.

Adjusting the Bow.

H. W. C.—Just how far the hair should be from the stick of the bow, when screwed up for playing, depends somewhat on the stiffness of the stick. If the stick is extremely limber, the bow must be screwed up comparatively tight. A safe rule is to screw the stick to a point where it will not touch and grate upon the string when pressure is applied in playing. Even very good violinists differ on the ques- tion of how tight the bow should be screwed. Many violinists and students make the mis- take of having it screwed up too tight. When adjusted for playing the bow stick must still retain its inner curve. 2.—If your violin is not caked with rosin under the bridge and is otherwise clean, you can keep it so with a clean cloth. If it is dirty and caked with rosin you can obtain at any large music store a mixture (in tube form) which will clean it. 3.—The difference between the major and minor scales lies in the position of the half steps. The major scales are made up of in- tervals of whole steps and half steps, the lat- ter coming between the third and fourth and seventh and eighth notes of the scale. The melodic minor scale consists also of whole and half steps, the half steps lying between the second and third and seventh and eighth notes of the scale, ascending, and between the sixth and fifth and third and second notes, de- scending. A course in theory of music would help you to understand the major and minor modes.

Broken Bow Tip.

J. C. B.—A broken bow tip can be repaired in one of two ways, either by putting on an aluminum repair tip which can be purchased at any large music store or by splicing on a new wooden tip. The aluminum tip is not hard to put on, but splicing on a new wooden tip so that it will hold is an expert job for a good bow repairer. 2.—Studying the violin will not interfere with your piano work in any way, always presupposing that you have enough time to devote to each. Many stu- dents trying to study both instruments give but little time to either, with the result that they make real progress in no direction. As you are an advanced pianist this hardly ap- plies to you.

Pupil of Amati.

C. L. M.—Francesco Ruggieri was a famous violin maker of Cremona. He was a pupil of one of the Amatis. He made violins of two types, one slender and rather small, and the other large and similar to the grand pattern of Nicola Amati. His violins are very beauti- ful as to design, finish and varnish and are rare and valuable. The following is a copy of one of his labels:

Francesco Ruggieri detto
il per Cremona 1673

The Late Starter.

W. C. R.—Without hearing you play it would be somewhat difficult for me to attempt to predict just what you might accomplish in the future. You have had a very late start, but the two years of violin study you had in early life will help a great deal. The best plan is for you to study the violin with a really good teacher in a large city nearest your home. In a very few lessons he will be able to tell you just what you might accom- plish. To become a real master of the violin one must start in the days of childhood and keep at it persistently for eight or ten years; but those who begin later can accomplish a good deal if they have talent, even if they do not master the instrument thoroughly. 2.—As to whether you can advance sufficiently to play in a theatre orchestra, much depends on what class of music the orchestra would play. Many theatre orchestras in the larger cities play music of considerable difficulty— standard overtures, operatic selections and the like—while, in the smaller cities and towns, theatre orchestras, especially those in the small movie theatres, play music of a very easy grade. You might no doubt work up to a point where you can play in a theatre orches- tra where music of a medium grade is played.

Fleury Violin.

H. R. R.—Benoist Fleury was a French vio- lin maker who worked in Paris approximately from 1755 to 1788. His instruments bear a good reputation in the trade. The following is a copy of one of his labels: "Benoist Fleury, due des Boucheries. Fauborg St. Germain a Paris. 1760." If your violin is a good specimen of this maker it should be worth what you paid for it.

The
Premier Aristocrat Small Grand Model
5 feet, 3 inches long. Price, $725, f. o. b. New York

"IT'S a mighty good small grand"—this is how teachers and pupils nationally regard the reliable, popular priced Premier.

Do not let another day go by without examining this instrument, detail for detail. A revelation in quality and performance.

Run your fingers over its keys at your Dealer. If not on sale in your community, please inform us. We shall tell you where the Premier may be ***seen*** and ***heard***.

Send for our art brochure—"The Magic of Music"—it tells the whole story of this remarkable small grand.

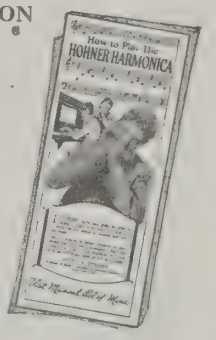
Homework on a HOHNER Is Fun!

Music plays an important part in the education of the boy and girl; and to-day the harmonica is playing an important part in musical education.



Any child can quickly learn to play a Hohner Harmonica with the aid of the Free Instruction Book available to music teachers and others through dealers or direct.

There are no long hours of study and practice—just a few minutes a day, at home or in the school—and very soon the pupil will be playing popular, classical and operatic selections.

Homework on a Hohner is *fun!* It teaches accuracy, rhythm and expression—the basis of a musical education. If you are interested in knowing the possibilities of the harmonica as "a stepping-stone to serious musicianship," write M. Hohner, Inc., Dept. 204, 114 East 16th Street, New York.

FREE BOOK OF INSTRUCTION

This interesting and helpful booklet comprises 16 pages of simple instruction illustrated with charts and pictures, and includes six popular musical selections arranged for harmonica and piano. Copies in any quantity will be supplied upon request.

Hohner Harmonicas are endorsed by such prominent group educators as—

Peter W. Dykema, Prof. School Music, Columbia University, New York.
Dorothy Enderis, Ass't Supt., Milwaukee Schools.
W. A. Gore, Supt. Schools, Webster Grove, Mo.
Nellie C. Hudd, Principal Mozart School, Chicago.
Harry Keeler, Principal, Lindblom High School, Chicago, Illinois.
Edward Randall Maguire, Principal Junior High School 61, N. Y. C.
W. H. Wheeler, Principal, Alton Community High School, Alton, Illinois.

—AND MANY OTHERS—

HOHNER Harmonicas

A Violin Teaching Help

By ARTHUR HARTMANN

LITTLE SUITE

For Two Violins in the First Position

Very helpful material for violin pupils, being in the form of teacher and pupil duets. These little pieces illustrate the Open Strings, String Crossings (wrist), Finger Exercises, the Trill and Tremolo, the Pizzicato, the Chromatic, and in the "Teacher's Part," Double Stopping and the Arpeggio. This is exceedingly interesting material that the "wide-awake" violin teacher will appreciate.

How to be a Drum Major

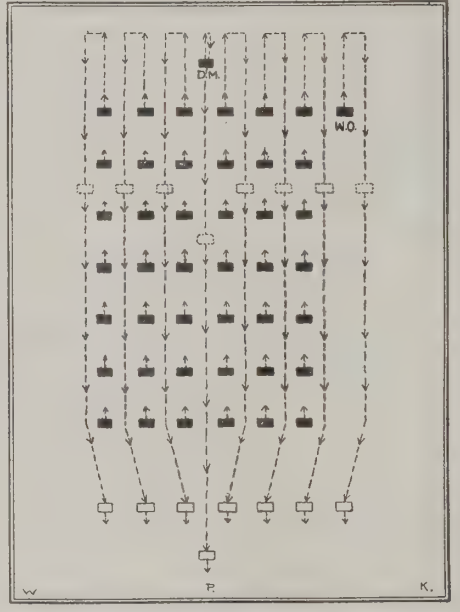
(Continued from page 821)

15. DIAGRAM OF THE "COUNTER-MARCH"

THE accompanying diagram illustrates the movements of the men in a band of ordinary size executing the Countermarch. A great deal of careful rehearsal will be needed prior to its successful accomplishment.

The following points are of especial importance in connection with the execution of the Countermarch.

1. Do not hurry. Shorten the pace to the 15-inch half step all you want, but *do not hurry.*



2. Hold baton as under Band—Halt while marching backward through the band. When you have passed the rear rank, lower it to the level of the shoulders, and "push back" that section of the front rank which is tending to forge ahead of the rest of the line.

3. Hold the front rank on a line while they are *marching through* the band (see diagram).

4. After front rank passes the rear rank, the files close in toward the center, resuming the proper 30-inch interval between files.

5. The drum major is still marching backward, facing the band, and holding the band back to a short half step. This should be continued for a few measures to give opportunity for each rank and file to correct its alignment.

6. Then, and not till then, should the drum major again face forward and resume the regulation 30-inch pace.

15. DIAGRAM OF THE COUNTER-MARCH

Each square represents a musician, D. M. the drum major and W. D. the Warrant Officer Band Leader. The arrows indicate the direction of the action.

16. "DIMINISH FRONT—MARCH"

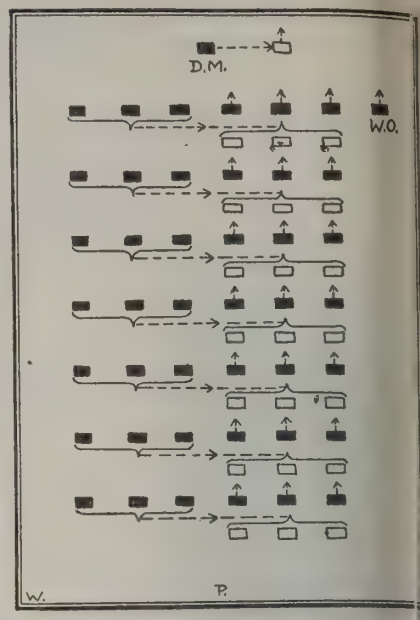
THIS command will be found more than convenient in taking the band through a narrow gate, down a narrow street, one well blocked with traffic, or in other restricted spaces. Its execution is not a matter of great difficulty but is effective in gaining the applause of the crowd, as it is quite spectacular when executed with precision.

The left half of each rank simply executes right face, drops in behind the right half, executes left face and adopts the length of step necessary to bring about the regulation 60-inch distance between ranks. The rear rank will have to "mark time" and the front rank to continue ahead in full 30-inch pace for several measures to bring this about.

The illustration shows the proper position for the *preparatory command.* This is usually given and the movement executed on the march, although it can be done standing at attention. In the latter case, the band should "mark time" during the execution of the **movement**, and the marking of time should be halted with precision at its conclusion. When executed from standing at attention, the drum major should face the band in giving the *preparatory command* and the *command of execution,* and should march backward before the extending front rank till he sees that the movement has been completed, when he may halt the band in the usual manner or may face about and lead them forward. In either case he moves sideways somewhat to a position in the center of the new arrangement.

16. DIMINISH FRONT—MARCH

Preparatory command: Hold the baton at an angle of 45 degrees as illustrated.
Interval of warning: Give about 1½ seconds to the motion shown in arrows.
Command of execution: Drop the left hand smartly to the level of the right.



17. DIAGRAM, "DIMINISH FRONT"

IN CASE there are four men or less in each rank, the author advises that there be no such breaking of ranks. Simply let the players "bear to the right" into close formation.

The diagram gives a fairly accurate idea of the operation of this movement in the band of ordinary size. The black squares represent the bandsmen in the original full front position, the white squares indicate the new positions to which the left half of the band moves, and the arrows show the direction of the action.

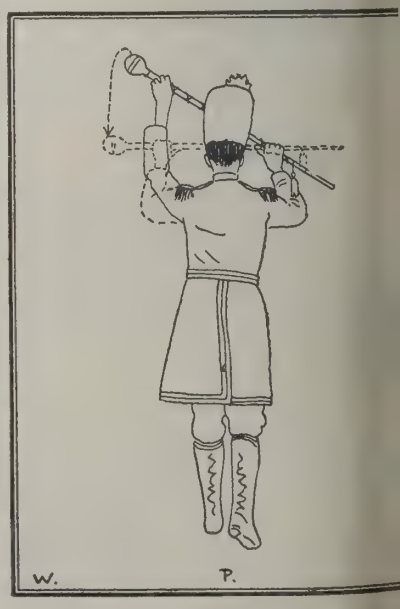
The diagram shows the original 7 ranks, and shows the crowding in of 7 new ranks, but does not show the gradual lengthening out of the band till the proper 60-inch space is restored between all ranks. This has been mentioned in the preceding discussion. To put it another way: the right half of the front rank marches straight ahead in full 30-inch pace, but the right half of all of the other ranks does not do so till the left half of the rank ahead is in position, has picked up the full 30-inch pace, and the proper 60-inch space attained. As already stated, this means that the rear of the band marks time for several measures till the organization has been elongated to just double its original length and narrowed to just half its original width.

The editors and publishers of THE ETUDE in their efforts to make each issue of this predominant musical magazine inspiring and stimulating, as well as instructive, have planned an unsurpassed band and orchestra department.

17. DIAGRAM, DIMINISH FRONT

A spectacular movement, easily executed, and one proving of great convenience in the successful maneuvering of the marching band.

18. "INCREASE FRONT—MARCH"



THIS, of course, is just the reverse of the Diminish Front just discussed. In both, the chief source of difficulty will be found in the matter of getting *all* members of the band to *start* the call for action with snap and precision.

In executing this command, it is the *front* of the band, and not the rear, which marks time till the completion of the execution of the order.

On the *command of execution,* the front rank marks time, while the second rank bears to the left and resumes its original position as the left half of the first rank. The remainder of the band shifts similarly and at the same time, gradually moves forward till proper 60-inch space is restored between all ranks.

The drum major, too, has half-stepped to the left in order to resume his position in the center of the new and longer rank.

This command may be executed either on the march or from a "standing at attention" position, in similar fashion to that pointed out in the discussion of the command Diminish Front—March. In fact, it is the experience of the writer that the best way to practice these movements is to let them be executed by a "marking time" rather than a "marching forward" basis.

18. INCREASE FRONT—MARCH

Preparatory command: Hold the baton at an angle of 45 degrees as illustrated.
Interval of warning: Give about
seconds to the motion shown in arrows.
Command of execution: Drop the
hand smartly to the level of the

THE SALUTE WITH THE BATON"

HE drum major uses this salute for himself or to represent the entire when passing by officers, when re-ıg men present, and so on. It is to be either marching or standing at at-n.

e staff is brought to a vertical posi-ball up and opposite the left shoulder, pointing straight down toward the d, This position is to be held for a l equal in duration to that of the ıry band salute.

left hand rests on the left hip, to the rear.

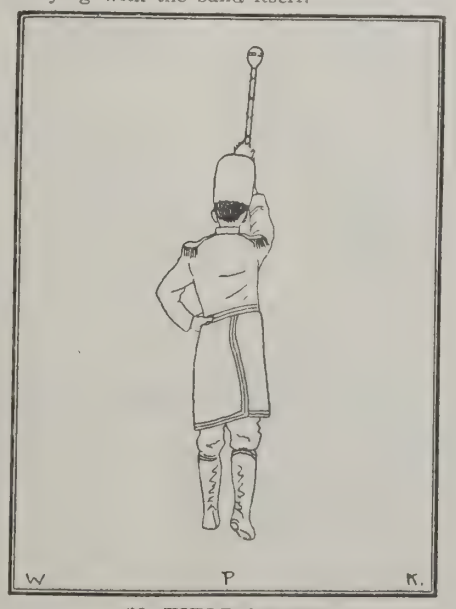
en the drum major is not carrying aton, he uses the regulation hand ry salute. When marching with the and carrying the baton, he always he salute with the baton as shown e illustration, and never shifts the from his right to his left hand in to free the right hand for the regu-hand military salute.

e that the position of the staff during endering of "To the Colors," the dent's March," and other Honors is y different from the position here ated. This will be discussed under ıe Colors" and "Honors."

ıg the baton into the position shown considerable "snap" at the end of the ıent. Note that there is no change grasp of the baton. The ferule, or is simply inverted and the left wrist as the left hand "snaps into" the l position.

19. THE SALUTE WITH THE BATON

There is no **preliminary command** or **command of execution.** The salute represents the drum major personally or the entire band unit whom he represents. It is in every way simply a substitute for the regulation band military salute.



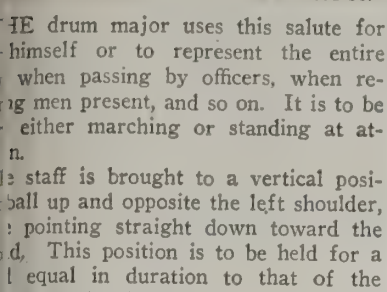
20. "FIELD MUSIC"

THE term "Field Music" refers to that necessary addition to every marching band which is forward of the deep, throbbing, military type snare drums and of the bugles, which are usually in the key of F.

Many fine marches exist calling for one or both types of field music. These are very effective when so played. Any band having considerable parade or other marching work to do will do well to develop both drum corps and bugle corps sections of the field music. These can play independently and can work up numbers together in addition to playing the field music parts to such marches as call for this addition of one or both of these sections in one or more strains of the music. In this way the field music can relieve the band as well as add that peculiarly military throb to the music which can be obtained in no other way.

The illustration shows the drum major issuing the *preparatory command* for the field music to play. There is no *command of execution.* The sergeant in charge of the field music gives the *command of execution* by his section within the next few measures after the issuing of the *preparatory command* by the drum major.

The drum major may stop the playing of the field music in the same manner in which he executes the command Cease Playing with the band itself.



20. FIELD MUSIC

This baton signal for the field music is issued with the ball up instead of the ferule. The illustration shows the preparatory command. The command of execution is given by the sergeant in change of the section.

E ETUDE conducts a "Special Notice" tment to aid its friends and readers to the ETUDE audience of 215,000 when they to secure a musical position, offer a musical n, or when they seek to sell or secure ing musical. *Nothing in the nature of a business is entitled to the very low word rate charged on Notices.*

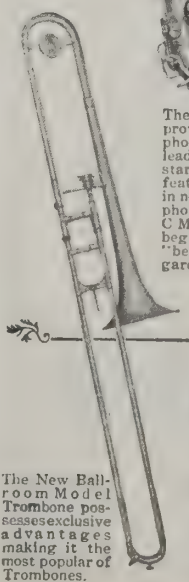
Who's *the* Popular Boy?



The New World SymphonyTrumpet is used and endorsed by the foremost symphony trumpeters.

The Conn Improved Saxophone, used by leading popular stars, has many features found in no otherSaxophone. The Conn C Melody is the beginner's best "bet"; ask regarding it.

The New Ballroom Model Trombone possessesexclusive advantages making it the most popular of Trombones.

THE boy who plays a Conn is the most sought for fellow in his crowd. He's welcome everywhere, because he brings zestful, cheering music that everybody likes.

A Conn saxophone is a key to social prestige; it can be a great help to success in any career. Professional playing, whole or part time, is highly paid and fascinating; opportunities are open everywhere. Many of America's leaders in business, the professions, and statecraft, have earned their education with their musical talent.

With a Conn *you* can win this pleasure and profit *quickly.* Exclusive, easy-playing features speed your progress. Our simpler key system is easier to master; hydraulic expansion process makes easier blowing, more beautiful tone, perfect scale; drawn sockets with rolled edges and new foil pads eliminate trouble and improve tone.

Free Trial, Easy Payments on any Conn. Select the instrument which appeals to you; try it in your own home. You can own it by small monthly payments. Send the coupon or write now for free literature and details of trial offer.

The Conn Band Service Department helps in organizing bands and orchestras. Individuals and organizations are invited to write for information; no obligation.

The Gateway to a successful future

ARE you interested in teaching music? In the concert field? In theatre organ playing? In Public School Music? These are a few of the professional fields for which we can prepare you. We assure you an opening in your chosen line as soon as qualified.

Teaching

Students preparing with us for teaching may take positions in our Extension Branches, of which there are more than one thousand located all over the country, or in our Chicago Neighborhood Branches, of which there are more than thirty, with others in process of establishment.

Those who come to us with previous training and experience can very quickly qualify to take positions in our Chicago Neighborhood Branches, thus gaining further experience and earning money for their own study.

Theatre Organ

Since the establishment of our Theatre Organ Department, we have trained and placed organists in positions with salaries starting from $85 to $100 a week.

Students of piano and organ, who have developed instrumental technic and musicianship, can prepare to meet the requirements of theatre playing in a very short time. Good openings are assured.

Concertizing

Chautauqua and Lyceum tours offer salaries of $40 to $100 weekly. Concert engagements are usually paid for by the single appearance, the fee being $25 to $50 and upward.

Our extensive system of Branches enables us to provide ample openings for those we train for the concert field.

Public School Music

Our two-year course leads to a Teacher's Certificate, entitling the possessor to the Illinois State Teacher's Certificate and permission to teach, without examination.

Annual salaries of $1,500 to $2,500 are available, with large outside earnings through private teaching, choral directing, etc.

More openings than we can supply applicants for are referred to us every year from school authorities throughout the country.

Students May Register at Any Time

Write for Catalog mentioning* The Etude, *and telling us which phase of our service most interests you.

Sherwood Music School

Look Inside the Piano for this Trade-Mark

WESSELL, NICKEL & GROSS NEW YORK TRADE MARK

The Sign of the World's Standard Piano Action

Insure Your Piano Purchase!

CAREFUL buyers make the *piano action* the determining factor in the selection of a piano. They know that the three essentials of piano quality—*tone, touch, and durability*—are largely controlled by the piano action. Isn't it most important, therefore, that *your* piano be equipped with the best of actions?

When you insist on the Wessell, Nickel & Gross action in a piano or player you obtain the *world's highest-priced piano action* and all that this implies. In addition, you make certain of obtaining a *quality piano*. For the Wessell, Nickel & Gross action is found only in pianos of established worth.

WESSELL, NICKEL & GROSS
Established 1874 New York City

When you Buy an Upright, Grand, Player or Reproducing Piano—Insist on the Wessell, Nickel & Gross Piano Action.

Educational Study Notes

(*Continued from page 853*)

Romance (*for left hand*), by Richard Krentzlin.

In a piece for left hand alone, the greatest care must be exercised in observing which notes are melody and which are accompaniment. This having been decided, keep the latter suppressed and let the former be played *marcato* and *cantabile*.

This number has been carefully edited and the pupil would do well to follow the fingering indicated. Practice the scale passages separately.

Hickory Sticks, by L. Renk.

Mr. Renk is not to be confused with the austere Herr Rinck of organ fame.

This piece, with the very imaginative title, is lots of fun to play—and fine exercise in the interlocking of the hands. The analysis would be as follows:

16 measures in C Major
8 measures in A Minor (contrast)
8 measures in C Major

Hickory Sticks is splendid exercise in staccato playing.

Postlude in D Minor, by E. S. Hosmer (organ).

The organist will find in this an unusually strong and musicianly postlude, thoughtfully constructed. If your time-sense is rather undeveloped, count the beginning of the *Postlude* in half-beats; this would bring the first note of the piece on the "and" after four.

In measures 3-4 notice the imitation in the left hand and, later on, in the Pedal.

The tonality scheme of Mr. Hosmer's piece is as follows:

D Minor
B flat Major
D Major (trio)
D Minor

This is a felicitous selection of keys, all being closely related. The B flat Major section contains a very lovely church-like theme. Phrase it exactly as marked; that is, in the second measure let there be a breath between the third and fourth beats, and similarly with the rest of the melody. Organists who make no pauses in playing a broad cantilena are an abomination. How would you like to hear a singer—were such a thing possible—go on and on, without phrasing and without pauses?

In the Trio, practice the Pedal alone until you can play it strictly up to time.

Serenade Andalusienne, by Maurice Arnold (Violin).

This Serenade of Andalusia is a finely wrought and melodically charming violin offering. The triplets and the grace-notes give a Spanish atmosphere; also the repeated notes—as in the ninth measure of the violin part—which must be dwelt on.

A Major, like E Major, is a cheerful key. Transpose this *Serenade* into D flat and note how somniferous it becomes. Hazarding a guess, we would say that probably sixty per cent of all the successful Spanish-style piano pieces are written in sharp keys.

The F sharp Minor division of this piece is particularly pleasing. Very difficult it is, too. Its low notes afford splendid opportunity for richness of *timbre*. See how cleverly the climax is reached, and with what naturalness and unassailable logic we are led back to the first theme.

Slentando means slackening the time; *calando*, decreasing in loudness and speed.

The thrill on the high E is effective. The melody, obviously, is now in the piano part.

This is an unusually good number. Make it rhythmic as possible, color it every bit you can, and employ—where necessary—a well-balancing *rubato*.

Hallowe'en March, by Edmund Parlow.

The evening before All-Hallow's (All Souls') Day is called Hollowe'en—and this is one of the evenings when children, with their pumpkins and costumes and jesting, make the world forget most easily that it is old and tired and disillusioned.

To this march—a good one—picture them swinging along, celebrating an anniversary the significance of which they are ignorant, but having a grand and glorious time.

Watch out for the staccato notes!

The middle section is in C, the Sub-Dominant of G. In this section do not accent the left hand part unduly.

Who is Sylvia, by Franz Schubert.

Who is Sylvia is one of the most famous of all the Schubertian *lieder*, ranking with the *Serenade* and *Am Meer* in point of popularity.

In the second and fourth measures of the voice part—and similar measures—accent the *first beat*, not the *second*.

Remember the *d* in words like "commend," "lend," and, above all, the two *d*'s in "adored."

Three measures from the end(voice part) make the sixteenths light, dwelling principally on the first of the group. The first note of any group is the most important, you know.

Broaden out the melody considerably for the last four measures.

This song demands very legato singing and intense expression on all the important words. Study every word and every consonant—for only thus can you give the complete and exact coloring to the text. If the German words are used, the consonants (though not formed so near the front of the mouth) must be especially vigorous.

Rose of Sevilla, by Lily Strickland.

LILY STRICKLAND

Miss Strickland was born in Anderson, S. C., and received her musical training largely at Converse College in that state and from private teachers in New York City. From 1907-1910 she held an organ position in Anderson; in 1911, when she was married, she removed to New York and at present she lives, temporarily at least, in Calcutta, India. Three operas, many songs and piano pieces are among her writings.

We predict an immensely favorable reception for this Spanish number. If, after singing it, you dream at night of moss-hung castles and beautiful señoritas and plinky-planking guitars, we shall not be surprised. *Rose of Sevilla* is authoritatively, not pseudo, Spanish.

The second measure—with the sixteenth rest, followed by the sixteenth notes—is typical of Miss Strickland's style.

Saviour, Breathe an Evening Blessing, by N. I. Hyatt.

N. IVING HYATT

A very lovely reposeful solo setting of one of the best sacred poems ever written. Like *Who is Sylvia*, this song demands a good legato.

If an organ instead of a piano accompaniment is used, we suggest the following registration: Swell, soft'; Great, Melodia or Dulciana; Pedal, Bourdon, 16'. Play on Swell—using Swell Pedal *judiciously*—until the singer reaches "'Till the Perfect Day Before Us," which should be accompanied on the Great. Then return to Swell, gradually diminishing the tone.

"One thing more about jazz, and an important thing. It is commercial, pure and simple, and art is not a thing of commerce. One can see then how the art of music influenced by jazz becomes an art of commerce or no art at all."—CESAR THOMPSON.

Wanted: Young Men!

—to become specialists in a field which will not only pay them exceptionally well but which will give them social standing and prominence!

TO young men looking for such an opportunity we have an unusual offer. Right now in numberless cities and towns in the United States, there is a great shortage of piano experts, technicians and tuners. The few masters there are, are earning large salaries for this exceptionally pleasant work. Their time is their own. They meet the best people and soon establish a wealthy clientele. We can fit you for this profession in approximately 12 short weeks' time!

FREE

Send for free booklet which tells all about our practical and thorough training course. Send for it now!

Now don't say you are not a musician! You don't need to be. In fact, 60 per cent of our graduates never took a music lesson. And now they are earning from $250 to $500 a month!

This is the opportunity you are looking for. Pull yourself out of the rut. Make a place for yourself among the best people. Our complete course in our new $5,000.00 laboratory fits you for a real paying profession. You can do it. Others have with no better backing than you have. Find out the facts anyway.

Enthusiastically Praised by the Press and the Musical Public.

These books embody **117** conferences with the world's greatest musicians, composers, pianists, singers, conductors, authors, poets, public men on all phases of the art of music.

These three fascinating books, written in non-technical language, contain instruction, information, inspiration and advice from the foremost men and women of the age related to music.

These important conferences embrace the teaching value of scores of lessons with the greatest living artists and teachers of music.

There is no collection nearly so comprehensive in the practical field of helping the music lover and the student who really desires to advance in the knowledge and appreciation of music.

The author and compiler, after years of training and practical experience as a teacher in New York City, started this collection of conferences which have required twenty years to collate and present in the present form.

The conferences demanded great diplomacy, an understanding of four languages and an estimate of the musical educational needs of the American student and the American music lover which could be acquired only by the experience gained from years in the editor's chair of the world's largest musical magazine, reading thousands and thousands of questions from music lovers.

The Same, arranged for Four Hands, one iano.

The Same, arranged for Six Hands, one iano.

MASTER SERIES FOR THE YOUNG

In 12 Volumes. Selected and Edited by EDWIN HUGHES

This unique Series gives the young pianist n assortment of fine material from the master omposers for the piano. It fills a long-felt ant in educational piano music. Each volme is a simple, reliable and progressive inroduction to the individuality and characteric style of the master in question. Every omposition was written especially for the iano. *Complete Descriptive Booklet on request.*

DILLER & QUAILE BOOKS

This very popular Series has two objects: To provide, in the earliest stages of the child's piano study, material of permanent value, which shall serve as a basis for the development of his taste. This material consists of folk-tunes and classic compositions. To provide a plentiful selection of pieces of real musical interest so carefully graded, both musically and technically, that the child is stimulated, but not overtaxed.

HAZEL GERTRUDE KINSCELLA'S WORKS

The great success of the Kinscella books and pieces is due to their undoubted practicality. All of the principles they embody are the result of careful experimentation in the composer's own activities. These works are recommended by supervisors in the public schools. Most of them are Schirmer Scholastic Series Volumes.

Many Little Separate Solos and Duet

XMAS

KING CHRISTMAS; Children's Opera *By* FRANCES McCOLLIN

Amusing text set to sparkling music. The action takes place in a courtroom, with the presiding Judge, Attorney General, Court Clerk, claimants, and jury present. One by one, the claimants give evidence to their fitness to be crowned "king of the holidays"—New Year's Day, Valentine's Day, Washington's Birthday, May-Day, Independence Day, Hallowe'en, Thanksgiving Day, Christmas Day. After hearing all the evidence, the jury renders its decision in favor of Christmas Day. The rhythmic and melodious music is easy to sing and play; yet by no means commonplace. The individual solos of the claimants are varied in spirit, and characteristic of the different personifications.

SONG: The Bethlehem Cradle—J. Victor Bergquist (Low)....*net* .50

MIXED VOICES: The Christmas Quest—F. Leslie Calver (Four-part chorus) (Octavo 7179)....*net* .20

JUNIOR CHOIR: The Frost was White—Lucina Jewell (Carol—Unison Chorus) (Octavo 7183)....*net* .10

The Weeping Babe—Lucina Jewell (Carol—Two-part chorus) (Octavo 7184)..*net* .10

PIANO SOLO: Christmas Night (La Notte di Natale)—Enrico Mineo....*net* .50

MELODIOUS FOUNDATION STUDIES for VIOLIN $1.50, net

By JOSEPHINE TROTT

The title of this volume is a very concise, yet complete statement of the contents. The 203 tuneful little pieces, many for two violins, by Josephine Trott, are melodious, and therefore interesting to the student; their mastery lays a correct and firm foundation upon which to build the superstructure of future development, to any height....**$1.50** *net*

Our Musical Souvenir of The Sesqui-Centennial

We expended considerable to give as wide a distribution as possible to something in the nature of a permanent musical souvenir of the Sesqui-Centennial Exhibition and outstanding figures in the musical world and thousands of music teachers throughout the country have praised the souvenir that we have distributed liberally and freely, with the most complimentary expressions upon it.

Immediately after the distribution of first copies, requests began to reach us for additional copies. In many instances teachers having large classes or music workers conducting music clubs, wanted copies to insure every member of the classes or clubs receiving one.

For us to bear the cost of furnishing free copies in such a quantity as these requests began to represent was prohibitive. Nevertheless, we sensed a still greater demand and to avoid disappointing any we increased the quantity originally decided upon, with a view to letting those interested have them at a nominal price that would mean sharing with us the cost of production.

This souvenir is 68 pages with a beautiful cover in colors and it contains a dozen and one complete pieces of music in miniature form, but large enough to be of practical use and, in addition to some interesting text matter, there are portraits of 432 American composers, with the birthplace and birth dates given wherever possible, and the death dates of those deceased.

With these contents, is it little wonder that so large a quantity of these souvenirs are being demanded of us? Teachers may secure any quantity under one dozen at the rate of 10 cents a copy, one dozen copies will be supplied for $1.00 or one hundred copies for $8.00.

Wait for the Holiday Offers In December Etude to Choose Gifts for Musical Friends

In the December issue of the ETUDE the Theodore Presser Co. will present special holiday prices on many excellent publications and articles that make most desirable gifts for those interested in music. A gift that shows individual thought behind it always is the most appreciated gift and a musical gift to a friend who is a musician, a music lover or a music student will indicate individual thought in its selection. These holiday offers will present as suggestions for gifts to music lovers, music students and music teachers, quite a few fine musical literature works and for the music student or musician, there will be a wealth of suggestions in the collections of piano pieces, songs, violin numbers and organ compositions. Our musical jewelry novelties that we carry in stock also will prove a great help to the teacher desiring little remembrances for pupils and also in the gift line, we have quite a complete stock of music satchels, musical pictures, etc.

New Music On Sale

Thousands of busy music teachers take advantage of our plan of sending small packages of brand new music at monthly intervals during the teaching season. In fact, many teachers are glad to get these packages all the year 'round. By this means opportunity is given to get acquainted with fresh and attractive teaching material in all grades without obligation to purchase anything not found useful. Any teacher who sends in a trial order is sure to be well satisfied with the material furnished and is at liberty to cancel the order at any time. "New Music" like other "On Sale" music may be kept until the close of the season before making any returns whatever. A postal card request mentioning the kind of music wanted—piano, voice, violin or organ—will bring the next regular lot to any teacher wishing it.

Dozen Songs For Saxophones By Clay Smith

When bringing attention to the advance of publication offer on this work last month, we felt that it would be the last time that it would appear in our monthly advance of publication offers; however, the many works that our printers and binders have had to handle in the last month in order to produce various new publications and replenish our stock of many of our best catalog numbers, have delayed the printing and binding work on this collection of saxophone solos by Clay Smith; and therefore, we are continuing it on the advance of publication offer for November, but this is positively the last month. This collection will be issued with three saxophone volumes and a piano accompaniment volume. The saxophone volumes will respectively cover the C Melody Saxophone, the E Flat Alto Saxophone and a similar volume for the B Flat Tenor Saxophone, each volume giving a solo part and a second part for the particular saxophone it covers. In this way it is possible to present solos with any of the saxophone or duets for any two members of the saxophone family. The advance of publication cash price for the piano accompaniment is 45 cents and the saxophone parts are 30 cents each.

Christmas and Thanksgiving Music

Now is the time when the energetic and resourceful Organist and Choir Director prepares for the two remaining musical services of the year, Thanksgiving and Christmas. Excellent choir and organ music is available for the Thanksgiving service and we will gladly send a selection of either or both for examination.

Why wait until the last minute when you can plan your Christmas program now and have no worries on your mind during the pre-holiday season? We are in business to help you and a request for material now means that the package will reach you more quickly than it will later on when the mails are congested.

In addition to the standard numbers in our catalog, we are presenting the following new publications that we feel certain will interest anyone seeking new Christmas music:

Alleluia, Alleluia, (Organ).....*W. D. Armstrong*
Song of the Angels, (Duet Soprano and Alto).....*R. M. Stults*
And the Angel Said, (Vocal—2 keys).....*Frances Pitts Grant*
Yuletide (Vocal).....*F. A. Williams*
Christmas Chimes (Three-Part Chorus).....*F. Leslie Calver*
Hark a Burst of Heavenly Music (Anthem).....*R. M. Stults*
Wake and Sing (Anthem)..*Norwood Dale*
In the Beginning was the Word (Anthem).....*R. S. Morrison*
Bethlehem's Star (Anthem).*Paul Ambrose*
God Is Man Made Manifest (Anthem).....*R. M. Stults*
Sing, O Sing this Blessed Morn (Carol Anthem).....*J. Christopher Marks*

We also have special services for the celebration of Christmas in the Sunday Schools and a large and excellent collection of Cantatas for choirs that intend to use the larger works, rather than anthems. Sample copies of these or any other numbers we publish for Christmas will be sent 'On Sale' to Choir Directors and Organists for examination.

The Beginner's Voice Book By Frantz Proschowsky

Here at last is a beginner's voice book that accomplishes various purposes, never presented in any book of its kind before. In fact, we have gone over the entire field of vocal instruction and we have not found a single book which we would consider in all respects, a good beginner's book for the singer. This work has been cut out of the solid rock by a real master of voice; the vocal adviser of Madame Galli-Curci and Tito Schipa. The policy of the book is to leave nothing unexplained at any step. It will not only present all the necessary instruction required by the teacher in such a book, but will present vocal exercises and also some exercises of a very simple character at the keyboard to teach tonalities, etc. Mr. Proschowsky has supplied the work with a series of remarkable anatomical drawings which he has made himself. The advance of publication price is 60 cents, postpaid.

New First and Third Position Album—A Collection for Violin and Piano

While we have such successful violin and piano collections as Album of Favorite First Position Pieces, Violinist's Popular Repertoire, Standard Violinist, Selected Classics, Operatic Selections and others on the market, we have in our catalog many excellent violin numbers unused in these collections and where it might be difficult for an individual buyer to seek out a representative group of some of the best of these numbers, we can readily select a generous number and place them in a convenient album that teachers and amateur performers could use to advantage. Such a volume is now in the process of preparation and it will include numbers in the first and third position. While the exact title for this collection has not been decided upon, we are accepting advance of publication orders for it at the price of 50 cents a copy, under the title of New First and Third Position Album.

Mass No. 14 in Honor of St. Joseph Two-Parts, Treble Voices By Eduardo Marzo, Op. 203

One of the most frequent re received from those who have in c the direction of the music in Catholic Church is that for easy M A Mass that can be sung after a fe hearsals, or one that does not make demands upon the voices is eagerly s The Chevalier Marzo in this, his Mass, admirably meets these require Moreover, the Mass, from *Kyrie* to *Dei*, is one of the most melodious we ever heard and is always in keeping the sublimity of the text. While this is suited primarily for convent scho or in choirs where the male voice s is somewhat lacking, the range of is so limited, particularly in the so part, that it may be sung by a choir of men and boys, the boys, of c singing the soprano part and the me alto. Catholic Choir Directors and O ists should take advantage of the o tunity afforded to secure a copy o interesting Mass while it is being o at the low advance of publication price, 35 cents, postpaid.

Twelve Piano Etudes By Mathilde Bilbro

Mathilde Bilbro is well known to teachers through her very successfu of studies such as "Twenty-five Me for Eye, Ear and Hand Training," " dies in Difficult Keys," etc., and in tion works such as "Bilbro's Kinderg Book," "Bilbro's First Grade Book others, and now we have the good f to present to teachers these "T Piano Etudes," a work for young that promises to gain as much succ this same writer's other successful Each one of these twelve etudes specific technical purpose and d musical value. They are virtually grade study pieces with real educa content. Advance of publication price is 30 cents a copy.

Beginning with the Pedals of the Piano By Helen L. Cramm

It is given to some people in the to combine practical musical know with charm. Helen L. Cramm, after years of actual experience at the board with hundreds of children, d to write musical works for the Her success has been remarkable. knows how to produce works, which a wonderful charm for children. I new book, she has accomplished the difficult task of showing the little just enough to gratify their curiosi to the pedal and at the same time foundation for future pedal work. book is of such a character that, alt it is suitable for children, it is e suitable for the ordinary adult, who to learn the main principles of peda with the least possible effort and the est possible results. The advance of lication price for this book is 30 c copy, postpaid.

Forty Negro Spirituals Compiled and Arranged By Clarence Cameron White

Mr. Clarence Cameron White, many look upon as the greatest vi and composer of his race, and a authority upon all negro music, has pared for the Theodore Presser Co a series of Forty Negro Spirituals, sel from resources in many instances en new. This is a work of very promise, one that we expect will be addition to the literature of mus America. Mr. White is the Preside the National Association of Negro cians and has had exceptional facilitie compiling this work of unusual char The advance of publication price nounced last month, was 40 cents a This was an error, because the wo one of much larger dimensions and necessary for us now to announce a vance of publication price of 75 cen all orders received after October the teenth.

Vocal Exercises atio Connell

Connell, the distinguished baritone and pupil of the great sen, has a splendid reputation, n artist and a teacher, in Europe America. In Germany, he was one of the greatest of all Bach At present, he is one of the lead- ers of the faculty of the Curtis of Music in Philadelphia. He iled a series of vocal exercises, rtly upon his long work with sen and partly upon his experi- all manner of methods. The he result of a lifetime of study. certain that it will be used by teachers for the important pur- which it is designed. The ad- publication price is 40 cents a tpaid.

Octave Studies—School ave Playing—Part 2 o. Kullak

making an entirely new edition set of Octave Studies, perhaps widely known and for years, y, the leading work of its kind. the composer is now chiefly the author of these studies form- econd part of his "School of Oc- ying." Up to the present our edition of the "Seven Octave has been in the large sheet form, re engraving a new set of plates tudies will be added to *The Pres- ction.* Advance of publication cents, postpaid.

Three Dances For Four Hands By Cyril Scott

The great modern English master, Cyril Scott, has furnished us with the manuscript of one of the most original and distinctive contributions to our catalog. The "Three Dances" have a charm and vitality all their own. They are obviously modern in every measure, but at the same time most interesting. The advance of publication price of this collection is 35 cents a copy, postpaid.

Beginner's Method For Saxophone

We do not promise to have this saxophone method ready in a very short time, because great care will be given to its production and even though it appears, as originally planned, to be an outstanding method for the teaching of this interesting instrument, the experts supervising its publication want to consider carefully every note and every word included in the exercises and instruction given in it. During the time that it will take to prepare this method it is being offered in advance of publication at the special price of 40 cents a copy, postpaid. Those interested in saxophone instruction should place their orders now, so that when the work appears, they will be sure of a copy at this low price. H. Benne Henton, one of the greatest of all saxophone players and also an accomplished composer for the saxophone, will personally supervise the preparation of this method.

Violin Method For Beginners By Ann Hathaway

This violin instruction book is being added to our catalog, not because it is merely good, but because it is an outstanding offering to aid the teacher of violin beginners in obtaining very satisfactory results with these beginners; however, it does not attempt to carry the pupil out of the first position, leaving this to other books and studies that the teacher might utilize after having given a good foundation with the material in it. All the way through, this instruction book shows the work of a clear thinking, progressively minded and exceedingly practical experienced teacher. Advance of publication cash price on this method for beginners is 40 cents a copy.

The Pianist's Daily Dozen By Charles B. Macklin

The Pianist's Daily Dozen is a unique work by a practical and successful teacher, who realized that by means of highly concentrated effort and well formulated exercises a great amount of the unnecessary technic could be cut out. Mr. Charles B. Macklin has done what can only be described as an exceedingly "smart" thing in getting up this book. It is the kind of a book that the professional musician will identify at once as a work with real assistance in it. Mr. Macklin has studied the hand carefully and has prepared these exercises to feed to it and nourish it with rational exercise, if such an expression may be used. The advance of publication introductory price is 30 cents per copy, postpaid.

First Garland of Flowers Favorite Melodies in the First Position for Violin By Julius Weiss, Op. 38

This little work has long been a very valuable and popular aid to the teacher, being excellent teaching material and also attractive to the young pupil who has not as yet acquired much technic. These little pieces are all in first position, and having a piano part, the ambitious beginner is able to play a real "tune" at a very early stage of his musical training. This edition of *First Garland* will be edited with the same care that has been shown in all our other recent additions to the *Presser Collection.*

At the special introductory cash price in advance of publication of 35 cents per copy, postpaid, there should be a great demand for this popular work.

Secular Two-Part Song Collection

This collection will prove most useful as its contents will be instructive as well as entertaining. A wealth of carefully chosen numbers with regard to melodic content and two-part facility will be featured. The texts used present much variety in character, including several unique and humorous songs excellent for encore use. Special introductory price in advance of publication is 20 cents per copy, postpaid.

New Organ Collection

This is to be a reasonably priced collection made up in the same form as the *Standard Organist,* an album that we have previously published. It will have a greater number of pipe organ numbers in it than usually found in expensive cloth bound collections for the pipe organ, yet it will not cost a third of what these collections usually average. The busy church or theatre organist will find this a serviceable collection to have at hand for the great variety of demands made upon him, since there will be a good variety in the contents. Special advance of publication cash price is 35 cents a copy, postpaid.

Fundamental Studies in Violoncello Technic By G. F. Schwartz

Next in importance to the violin section of the orchestra is that of the 'cello. Good performers upon this instrument are not many and almost any player of moderate ability finds it an easy matter to secure employment. The 'cello is also a most grateful instrument in the hands of the concert artist and in ensemble combinations, such as the string quartet, it is indispensable. The writer of this work reveals a comprehensive knowledge of his instrument and, acting on the presumption that the beginning student on the 'cello is more matured than the average beginner on other instruments such as the piano and violin, he presents in logical sequence the fundamental principles for acquiring a solid foundation of technical proficiency. A useful set of exercises is included together with directions for use of the book with the standard 'cello studies of the great masters of the instrument. This work should prove especially valuable to the self-help student, particularly one who has some knowledge of violin playing. The advance of publication cash price on this book is 40 cents a copy, postpaid.

New Collection of Favorite Songs and Choruses for all Occasions

Although this album, consisting of over 150 songs, has been planned principally for all-around singing purposes or community singing it will prove a most welcome addition to the song-books published for school use. The contents, aside from the familiar favorites, will include new and easy arrangements from the works of Schubert, Gounod, Bach, Liszt, Meyerbeer, Flotow, Sullivan, Drigo and others. The special introductory price in advance of publication is 10 cents per copy, postpaid.

Twenty-four Caprices For Violin Solo By P. Rode

The Twenty-four Caprices for Violin Solo by P. Rode, which will soon be ready for publication, will be a very valuable addition to our ever increasing *Presser Collection.* This fine work is used after the Kreutzer Studies and, in fact, is considered one of the three indispensable works of advanced violin technic, viz: Kreutzer, Rode and Fiorillo. This new edition will be edited by Mr. Otto Meyer, the personal representative of Sevcik in this country. Mr. Meyer has done the editing of a number of other recent works in the *Presser Collection,* and we are sure that this new edition will meet with the approval of all teachers who demand the best in educational publications.

The special introductory price in advance of publication is 45 cents per copy, postpaid.

(Continued on page 878)

World of Music

(Continued from page 798)

Tullio Serafin, who has been so popular as an interpreter of Italian opera for the Metropolitan Opera Company, has been recalled to Italy to become director general of the historic Teatro Costanzi of Rome where the season will open in December. It has been rumored that this is but an indication of the interest "Il Duce" Mussolini is taking in the cultural and artistic life of "The Land of Opera."

The Male Chorus was born in Boston, according to John R. King, president of the Chicago Mendelssohn Club. "Just as the so-called Irish potato came originally from Virginia," he says, "so the German singing societies had their origin in New England."

"March 26, 1927" will mark the one hundredth anniversary of Beethoven's death. Many forms of celebration of the event are already under way in Europe, America and all the musical world. The man who, a century after death, still holds a favored spot in the hearts of the world may be said to be fairly sure of immortality.

The San Carlo Opera Company opened its 1926-1927 season by a performance at the Century Opera Company of New York, of the perennial "Carmen," in which Lorna Doone Jaxson made her first metropolitan appearance with this company, winning a considerable success as the cigarette girl.

The Philadelphia Orchestra will give one hundred and two concerts during the coming season, of which seventy-eight will be in its home city, the largest number of resident concerts to be played by any American orchestra.

Carlos de Campos, president of the Brazilian State of Sao Paulo, has written the musical score of an opera, "Caso Singolare," which may be freely translated "A Piece of Singular Luck." The opera recently had its first performance by the Mocchi Opera Company at the Municipal Theater of Rio de Janeiro, attracting considerable attention.

Special "Industrial Nights" have been arranged by the management of the Chicago Civic Opera Company, on which the "house" will be sold to the employees of such enterprises as railroads, packing-houses, department stores, or to large educational institutions.

The Banda di Roma, which achieved such distinction under the leadership of Alessandro Vesella and carried its tours into England, Germany, France and Spain, is in danger of disbanding. The patronage which the government has been giving to orchestral concerts at the Augusteo seems to have turned the tide of popular favor.

The Church of San Francisco Maggiore of Assisi has celebrated the seven hundredth anniversary of the death of its founder, on October 4, 1226, by a series of organ recitals of the music of Palestrina, Beethoven, Mozart, Rossini and Verdi. Padre Virgilio Guido, who for thirty years has played the great organ of St. Francis, gave the programs.

The San Francisco Opera Company opened its 1926-1927 season on September 21st, with a gala performance of "Martha." Special scenic equipment was installed for the occasion.

CONTESTS

A Prize of One Thousand Dollars is offered by the National Opera Club, for the female singer with a voice of the most outstanding quality, to be determined in the contest of 1927, conducted by the National Federation of Music Clubs. Particulars from Mr. E. H. Wilcox, National Contest Chairman, Iowa City, Iowa.

Ten Thousand Dollars in Prizes of five thousand, three thousand, and two thousand dollars each, are offered by the Musical Fund Society of Philadelphia, for the best chamber music composition for three to six instruments. The contest closes December 31st, 1927; and particulars may be obtained by addressing the Musical Fund Society, 407 Sansom Street, Philadelphia, Pennsylvania.

A Prize of Three Thousand Dollars is offered by *Musical America,* for the best symphonic work by an American composer. The contest closes December 31st, 1926; and particulars may be had by addressing Musical America, 501 Fifth Avenue, New York City.

Prizes Amounting to Three Hundred and Ten Dollars, for the best unpublished Anthems, are offered by the Lorenz Publishing Company, of Dayton, Ohio, from whom all details may be had on application.

Three Prizes of Fifty Dollars Each are offered for the best musical setting of each of three hymns which were awarded prizes by the *Homiletic Review.* Copies of the hymn-poems and conditions of the contest, which closes September 30th, 1926, may be had from The Contest Editor, Homiletic Review, 354 Fourth Avenue, New York.

A "National Capitol Official Song" Contest is to be held under the auspices of the National Federation of Music Clubs. It is open to all American writers and composers, and full particulars may be had from Miss Beatrice S. Goodwin, Contest Chairman, 5 West Lenox Street, Chevy Chase, Maryland.

The National Federation of Music Clubs announces that in the contest for a Prize of Five Hundred Dollars for the best Three-part Chorus for Women's Voices, the time for closing has been extended from August 1st to October 1st.

THE PRESSER PERSONNEL

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Charles F. Ebner

In 1911 a lad by the name of Charles Ebner was taken into our establishment to run errands.

At that time our business was exceptionally large for a music publishing and music dealing house, but with the rapid strides music has made in the years between, along with the development and expansion of our business, our establishment has grown in the years that Mr. Ebner has grown with us.

For a number of years he was highly valued for his services in our Book Department, because of his accurate, careful and faithful performance of his duties. The Book Department embraces all collections of music such as piano albums, vocal albums, violin albums, Sunday-School Song Books, Church hymnals, in fact all albums and books of music no matter for what instruments or for what purpose, including all instruction methods, opera scores, cantatas, operettas, etc., etc.

Mr. Ebner was in the Book Department before he went into the service of his country for two years during the War and he returned to this department after the War. The last season, however, he has filled the very important position of making the final checking upon the great mass of orders that come to us from music dealers in all parts of the country, not only for our own publications but for other publications carried in our unequalled stock. With Mr. Ebner attending to the checking of trade orders, we feel confident that our music dealer patrons are being served with all the accuracy and dispatch possible.

H. M. S. Pinafore Comic Opera By Gilbert and Sullivan

The passing of time seems to have no effect on the popularity of the Gilbert and Sullivan comic operas. "H. M. S. Pinafore" in particular is performed year after year in all parts of the English-speaking world. This opera, without doubt, laid the foundation for the world-wide success and popularity of "The Pirates of Penzance," "Patience," "The Mikado" and many other sparkling creations of two wonderfully gifted geniuses, W. S. Gilbert and Arthur Sullivan. The continued, and we may say, growing demand for "H. M. S. Pinafore" makes it worth while for us to publish an entirely new edition of this popular work complete in all details as known and performed everywhere. It is a clean, humorous satire highly diverting and without the least objectional feature. It is easily performed by amateurs and is so tuneful and lively that it almost directs itself. Before publication, the introductory price is 50 cents a copy, postpaid if cash is sent in advance.

Beware of Swindlers

Magazine representatives are busy everywhere and in the next few weeks many will call on you. Be careful to whom you pay money. Unless the representative is personally known to you or can prove to your own satisfaction that he is a bona fide magazine subscription man, pay him no cash. If there is any doubt in your mind, take his name and address, send the order to us and we will allow him the credit to which he is entitled. Daily receipt of complaints makes it imperative that we caution our musical friends to exercise the greatest care. We cannot be responsible for the work of crooks.

Seven Last Words of Christ Lenten Cantata By Theodore Dubois

This famous work is one of the best and also one of the best known of the many musical settings of the story of the Crucifixion. It enjoys a continuous and growing popularity due to its musical and dramatic qualities. The demand has grown to such an extent that we feel fully warranted in making our own edition of this splendid oratorio-cantata. Mr. Nicholas Douty is making the English version from the original Latin and both texts will be included. Our edition will be on the market in advance of the Lenten Season and copies will be available for choir rehearsals in the early part of the year. Before publication, orders will be accepted at 50 cents a copy, postpaid.

Fifty Easy Melodious Studies For the Pianoforte By A. Biehl, Op. 7

These standard studies will soon appear in a brand new edition, new plates and editing, and will be added to the celebrated *Presser Collection of Standard Studies and Classical Compositions.* Many teachers who use these studies with students in the early second grade will welcome this announcement. These and any others who desire copies of this excellent work upon publication, may order now at the very reasonable price, 30 cents, postpaid.

Brehm's First Steps for Young Piano Beginners

That there is a demand for a work of this kind is evident in the excellent sale of our other beginner's books that present the first lessons to the student entirely in treble clef notation. On many occasions, especially where two children in a family begin studying at the same time, the teacher recognizes the wisdom of giving them study books with different titles, even if these books present the subject in a somewhat similar manner. It is for this purpose, as an alternate book, that we believe this work will be most frequently used, but it is such a meritorius little instructor that it is certain many teachers will give it preference. In advance we are offering this work at a special price of 25 cents a copy, postpaid.

Offers in Advance Of Publication Withdrawn This Month

We have given, in previous issues of the ETUDE, space describing "Album of French Composers," for the pianoforte, "Romeo and Juliet," opera burlesque for men by John W. Brigham and "New Christmas Service," by F. A. Clark; therefore, we will not take much space in these notes to describe the works upon which we are now withdrawing the low advance of publication cash price.

Each of these works is certain to prove a success in its respective field and individuals interested in knowing more about them may secure single copies for examination. Below are given the prices at which these works are now procurable.

Album of French Composers. This is a collection of fourth, fifth and sixth grade piano numbers that will interest the good pianist and moderately advanced student. Price, $1.00.

Romeo and Juliet, operetta for men, by John W. Brigham. A fine, mirth-provoking novelty for a little over a half hour's entertainment by any high school or college men's singing organization. Price, 75 cents.

The Star of Promise, new Christmas service by F. A. Clark. This is a complete Sunday School service of a very acceptable type. Single copies 7 cents, dozen 80 cents, 50 copies $3.25 and 100 copies $6.00.

Magazine Catalog

The new catalog is now ready, showing combinations of the best magazines with ETUDE at substantial savings. Drop us a post card for your copy showing how you can save money by ordering two or more magazines combined with ETUDE.

Splendid Premiums Given for New Etude Subscriptions

Send post card for our new premuim catalog which is just off the press. You will find many articles suitable for Christmas gifts. You can do your Christmas shopping from this catalog without one penny cash outlay. Any music lover will be glad to give you a year's subscription for ETUDE if you will only show a copy of our splendid magazine. Remit $2.00 with each order, make your selection and the gift will be promptly sent.

The following is a Sample List of Premiums and the Number of Subscriptions necessary to secure them

Warranted Silverware
Sterling Silver Handles

Salad Fork.....3 subscriptions
Tomato Server.....2 subscriptions
Cream Ladle.....2 subscriptions
Cake Knife.....2 subscriptions
Berry Spoon.....3 subscriptions
Bread Knife.....3 subscriptions
Pie Knife.....3 subscriptions
Cheese Knife.....1 subscription

Cuff Buttons

Park Rodger, jiffy, specially designed for soft cuffs, one new subscription

Comb for Bobbed Hair

Every woman with bobbed hair should carry one of these in her handbag; folds up and is fitted in a water-proof case; only one subscription

Pocket Comb and Nail File

Always handy, packed in neat leather case; one subscription

Powder Box and Compact

Either brass finish, neatly ornamented, or enamel top, hand-painted; indicate your choice. Either makes a delightful gift. High-class compact powder, the celebrated Ambre de Russie Odeur, noted for its captivating fragrance; only one new subscription

The Most Recently Designed Choker

Indestructible pearl bead with substantial safety catch. You will be surprised and delighted with this really delightful choker; only one subscription

Effanbee Doll

Here is a doll that any little girl will be glad to love. It is a real baby because it won't wear out. You can wash its face, dress and undress it and even drop it on the floor. It says "Mama" so naturally that it seems lifelike to the most sophisticated; only three new subscriptions

The Best Christmas Gift— Etude Music Magazine

You cannot buy a more acceptable gift for any music-loving friend than a year's subscription to ETUDE MUSIC MAGAZINE. Coming as it does each month, the ETUDE is a perpetual reminder of your friendship, thoughtfulness and good wishes. Where requested, a beautiful three-color Christmas card bearing the donor's name is sent to the subscriber. Do not delay placing your order. Send at once and we will begin the subscription with any number designated. If the friend is now on our subscription list, the new gift subscription can begin at the expiration of the present subscription.

THE PRESSER PERSONNE

Introduci our patro to the high trained an experience Members our Sta who ser them dail

Mr. Rene Sainson

Behind the scenes of Mast Opera performances, there is an i dividual responsible for the orga ization attending to the mechanic details that must work satisfa torily for perfect staging. Such position parallels that of Mr. Sai son's in our organization and gives us pleasure publicly to a knowledge his intelligent and faith ful performance of his duties. is he, who, as Assistant Superi tendent of our Buildings, must b responsible for the supervision details handled by our mechanic corps.

This means considerable, as w have thousands of square feet office and stock room space tha must be perfectly lighted; ther are numerous pieces of office machi ery to be kept in perfect runnin order; there are repairs, carpentr work and painting, not only throug out our own business quarters, bu throughout the upper floors of ou three big buildings that are rente out as offices and studios.

In making it possible for othe members of our large organizatio to work in convenience and com fort, he contributes considerabl toward our aims to give the acm of service to our patrons.

Mr. Sainson was employed by u in 1902 and he worked up to be sub-head in our Order Dept. befor being appointed to his present re sponsible position. Even when ou organization was smaller a natura adeptness for things mechanica caused Mr. Sainson to prove o value along these lines in the day when our establishment did not re quire a group of artisans such a we now have under his direction.

A Timely Suggestion for Beginners on the Piano

TEN LITTLE RECREATION SONGS AND PIECES

By STELLA MORSE LIVSEY

CONTENTS

DOLLY'S LULLABY	DAFFODILS
MAY DAY	SPRING FLOWERS
HERE WE GO	THE ROBIN'S MESSAGE
DANCE WITH ME, DEAR TEDDY BEAR	WHEN GRANDMA DANCED THE MINUET
PUSSY WILLOW	MARCH OF THE DANDELIONS

THE tedious beginnings of music are as nothing to children when the *first* study material is imbued with attractiveness, brightness and the "play spirit." Indeed by starting little pupils right, their ultimate success is virtually assured.

In this little collection, children devour the contents without thinking of study. What they have learned shows in their playing, and their minds are not overburdened with tiresome details and vexing problems in the process. This is as it should be.

The little "recreations" are provided with words, and in all cases are given words which stimulate the imagination (again the "play spirit").

Every teacher owes it to himself or herself to examine this work at the nearest music store.

SUMMY'S CORNER

Violin and Piano Transcriptions of Uncommon Merit by

ARTHUR HARTMANN

GAVOTTE (P. Martini) . . . . . $ .75
The charm and grace of this 18th century dance is distinctly enhanced by its transition here into the realm of violin music, for which it seems to be particularly fitted.

PETIT MINUET (A. Kopylow) 75
Another bright and animated number which is admirably designed for violin treatment and arranged with skill and artistry. Utilizes the first and third position.

CRADLE SONG (Franz Schubert) 40
The interpretation of this song through the idiom of the violin results in a most desirable number for this instrument. Sympathetic, with an unusually artistic development.

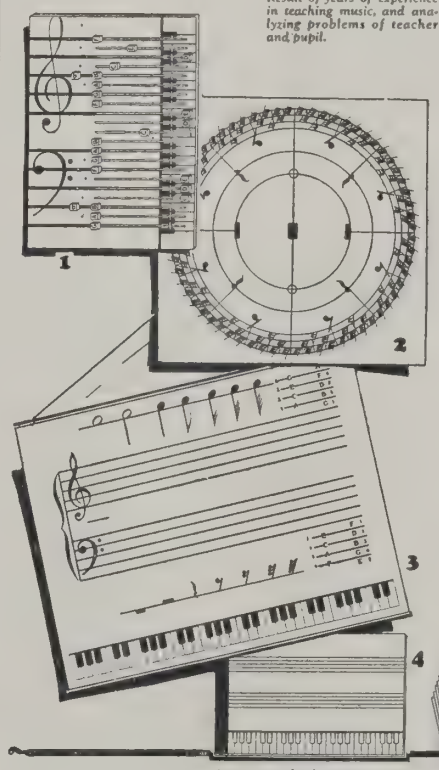
CRADLE SONG (N. Rimsky-Korsakov) 50
This beautiful melody, Russian in character, responds most naturally, to the singing tone of the violin. Through Mr. Hartmann's rare art of transcribing, the number is thus imbued with a true violinistic character.

A New Violin Work

VIOLIN BOW TECHNIC

By Henry Hoaré . . . . . Price, $1.50

A series of studies covering every fundamental principle essential to the technic of Violin bowing. An exhaustive treatment of a subject on which Violin artistry largely depends.
Rational and straight-forward in the mode of presenting. Every point logically reasoned out for the benefit of the student.
Its value is attested by the many favorable comments received from noted artists and teachers.



CLAYTON F. SUMMY CO., Publishers
429 South Wabash Avenue Chicago, Ill.

EVERY TEACHER CAN PROFITABLY USE

NEW WAY MUSIC DEVICES

(PATENTED AND COPYRIGHTED)

Result of years of experience in teaching music, and analyzing problems of teacher and pupil.

NO MATTER what method or system you now use you will find these simple, practical devices—

Make class or individual instruction more interesting—practical—thorough and efficient—with less time and effort on part of teacher and pupil.

Order Today—The minute you see their simplicity, versatility, completeness and capacity, you will wonder how you ever got along without them.

1 *New Way Keyboard and Staff Reader*
—The most valuable device created in years. Teaches student not only to read accurately and rapidly, but to play what is read. The correlation of staff and keyboard is made perfectly clear by means of sliding lettered buttons. The teaching of Sharps, Flats, Scale Construction, Chord and Interval Building is greatly simplified by the use of this Reader. As essential and accurate as the multiplication table. Every pupil should have one. $2.00 each. (Special discounts on quantities to Teachers and Schools).

2 *New Way Time Value Indicator*
—Two color hanger—22 x 22. For teaching note and rest values, and comparative values. $1.50 each

3 *New Way Wall Board*
—Invaluable for school room or studio use. Enables teacher to illustrate any point to any number of pupils at the same time. Size 28 x 36. Made of material that permits erasing. $5.00 each.

4 *New Way Practice Pad*
—Something entirely new for class dictation work and home practice. Mystic Pad permits instant erasing. 50c each (Quantity Discounts on request).

5 *New Way Degree Cards*
—A deck of cards showing every note in music from the fifth added space below the bass staff to the fifth added space above the treble staff. Gives thorough drill in actual note reading. Also interesting games for home, class and club use. $1.50 per set (Discount on quantities).

A Six Day Normal Course in **New Way Class Piano Foundation Work** Including the use of **New Way Music Devices**, will be conducted the week of November 21, 1926, at **Horner Institute-Kansas City Conservatory** Kansas City's Great Civic Institution

Character Sketch of Schubert

(Continued from page 804)

family country seat. It was in 1824, when he was living with the Esterhazys at Zselész, and when the Countess Caroline was seventeen, that Schubert is supposed to have fallen in love with her. When on one occasion the girl asked Schubert why he had never dedicated anything to her, the poor, faltering lover forgot for a few seconds his blundering awkwardness and he rose to what was perhaps the supreme moment of his life. "Dedicate something to you?" he said, "Why should I? Everything I have ever done is dedicated to you." But that was the end as well as the beginning of the romance. There is nothing to show that Countess Caroline Esterhazy reciprocated Schubert's tender feeling; and even if she had, the social chasm which yawned between the fair scion of the Esterhazys and the son of the humble village schoolmaster made any association other than that of pupil and teacher impossible.

For the rest, Schubert's interest in femininity, which never seems to have been extensive, was confined to the more lowly representatives of it. It was the occupants of Count Esterhazy's kitchen rather than those of his salon who occupied Schubert's notes when he penned his infrequent letters from Zselész. "The cook is a merry fellow," he wrote, "the lady's maid is thirty; the housemaid is very pretty and often pays me a visit; the nurse is somewhat ancient; the butler is my rival."

Perhaps, after all, one need not expend upon Schubert an over-abundance of sympathy in regard to the Countess Caroline affair. Neither he nor any of his friends —like Mayrhofer, Bauernfeld, Schindler, von Chezy—had much to say about any charmers who may have lit the fire of Schubert's inspiration. The man who looked "like a drunken cab-driver," who had no tact and no pretty speeches, who died worth twelve dollars, and was waited upon by fame only after he had been lying in his tomb for two decades, was not the romantic figure who would be likely to drift into the dreams of women who were fair.

Self Test Questions on Mr. Borowski's Article

1. What type of life appealed most to Schubert?

2. Describe Schubert's general appearance.

3. Describe Schubert's natural disposition.

4. What quality pervades most of his music?

5. In what way did his love for composition show itself?

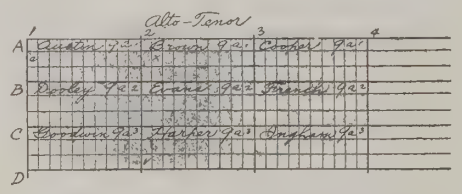
Public School Music Department

(Continued from page 822)

counted for. If the proctors are not advised by the principal, they may be at a loss and feel that their presence is unnecessary. The following explanation will serve to enlighten these teachers concerning their duties and secure their full cooperation.

Duties of Proctors

SATISFACTORY results can be obtained only when the conductor is relieved from all responsibility except that incident to the professional work at hand. Cooperating with the conductors, therefore, there should always be a sufficient number of proctors to attend to



1. Taking the attendance.
2. Observing and recording deportment.
3. Observing such pupils as from time to time are making no effort in the work, and instigating and encouraging their vocal coöperation.
4. Seeing that all pupils are properly supplied with books and are intelligently at work on the proper page and part.

It has been observed that when the proctors are participants with the pupils in the work and assume vocal leadership in the parts upon which the several groups of pupils are at work, such participation by example and inspiration lifts the result in dignity, tonal and artistic effect far above what otherwise would obtain.

Marks for Effort

IT IS OBVIOUS that it is impossible to rate pupils according to musical ability in the mass choruses. There is need, however, to give report marks for effort in music. Charts should be made out by the music teachers. Paper printed in quarter-inch squares can be used. Each block may be regarded as a music lesson and the proctors can take the charts and record absence with an "A," lack of participation with a check mark, "V," and disorder with a cross, "X."

The names on the charts should appear in the order of seating and a chart or charts supplied for each vocal group; that is, soprano, contralto, tenor and bass. The following is an example of a part of a record chart for an alto-tenor group of boys:

The letters to the left represent rows, and the numbers, the seats in these rows. There are enough blocks for twenty lessons, and report marks for the first report can be written in the block for the last lesson taken. The average pupil may receive "G" (good) and the outstanding and coöperative pupils "E" (excellent) for a mark. Those who are absent may be reduced to "F" (fair) or lower. Those failing to coöperate may receive "P" (poor) or "D" (deficient). It will be observed that few pupils will need low ratings if this system is used and followed up.

Much more might be said of organization, but the true success of the work lies in the vision of the music teacher in planning and carrying out program projects. Under inspirational leadership and guidance, the mass choral work in the Junior High School has great possibilities as a medium for developing the cultural and social life of the student body.

Articulation in Song

To THE ETUDE:

I want to express a word of appreciation for your Voice Department in THE ETUDE. It is an inspiration to read your well-written articles and I never fail to find something especially good for some pupil at his particular state of progress.

The first sentence in the article by Watson Lyle in the May issue has such a deep significance that I wish every voice student could comprehend its depth.

Don't you think that voice teachers are usually too negligent in their concern for the general musicianship of their pupils?

I hope to see more articles on Articulation, pronunciation and enunciation. What voice student, and teacher also, does not need them? Thank you. WINIFRED HANLON.

JUNIOR ETUDE

CONDUCTED BY ELIZABETH A. GEST

Mozart

By Leonora Sill Ashton

In this master's work you see
Notes of sweetest melody;
Golden harmonies are there
When his music fills the air.
As a child he played full well,
So the ancient stories tell;
Learned to write the music page
At a very early age.
Music flowing glad and free,
That is Mozart's history.

"And I Thought You Were So Neat"

By Edna M. Schroeer

Sally ran all the way home from her usic lesson, and as soon as she got home e sat right down and cried as if her little art would break.

"And I thought you were so neat, Sally." ose were the very words Miss Sweet had ed; and Sally had worn her pretty, new, nk apron, too, for the first time, especially r her lesson, and she thought she was so at.

"I am neat. I did look neat. I know I ı," she kept repeating. "What did she ean, I wonder? What could she have eant?"

"She means you should keep your music at as well as yourself, Sally, dear," said ittle fairy.

'Well, I do keep my music neat. See w clean and pretty it looks. The only rks there are on it are the ones she puts it herself, so there!" said Sally, getting ittle excited.

'Here, here, honey, I didn't mean that all; of course your music is neat—that y. I meant you should always play atly."

'How do you mean? I thought I did."

"Well, when you don't play all the notes they are written and watch all the marks composer puts there for you, to help u play correctly, that isn't neat. Now, you see what I mean?"

'Oh, yes; I see now. You mean I should vays be particular about how every single ie sounds just as I always try to be about w my hair looks, and how my dress ngs, and especially how long my finger-ls are—or, rather, I mean how short they so they will not hurt the pretty keys. Miss Sweet always tells me—that's what ı mean, isn't it?"

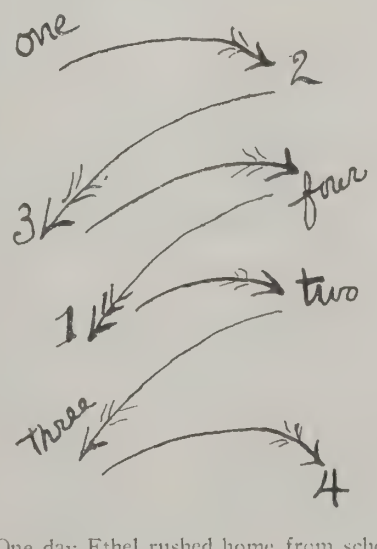
'Exactly," said the fairy.

'I'll always be as neat as neat can be in playing, after this; you just see if I'm ," said little Sally, going to the piano, l playing over her lesson very neatly in-d.

Keep your muscles well relaxed,
Keep your knuckles round,
Keep your fingers very firm,
Your playing well will sound.

The Girl Who Didn't Count

By Mrs. Paul J. Leach



Ethel played the piano very well for a girl of her age and was quite proud of her own ability. She liked to play for people, and she usually liked to practice; but there was one thing she did not like to do. She did not like to count out loud, or even to herself. She never took the trouble to study out carefully the time of a piece or exercise. She did it by ear and by guess. Notes which were written over each other she played together; and notes which were written in between she played between. Her music sounded fairly well, but her time was not always accurate.

In vain her teacher told her to count. She would count for a measure or two, but her voice would get weaker and weaker and soon fade away entirely. You know how that is, don't you? Ethel never liked to play duets with the other girls. She said it was because they could only play easy ones, but the girls told each other that Ethel's time was jerky.

Ethel's mother worried about this a good deal. She tried to get Ethel to count when she practiced. But Ethel always said:

"What's the use? People like my playing as it is, and besides I hate to count, so I'm not going to bother. You never heard anyone at a recital or concert counting out loud!"

Her mother patiently explained that practicing and playing in public were two different things, but Ethel still refused to bother with counting.

One day Ethel rushed home from school in great excitement.

"Just think, mother," she exclaimed, "we are going to have an orchestra at school!"

"That will be fine," her mother answered. "Tell me all about it."

So Ethel explained that the music supervisor was organizing it and any one in the school who played an instrument could join.

"But, of course," she said, "they only need one pianist. There will be a try-out for that position tomorrow afternoon. I'm sure I can win. Even if I am only in the

sixth grade, I play better than those eighth-grade girls."

"Well," her mother replied, "if I were you, I would begin right away to practice counting. The most important thing for the pianist in an orchestra is accurate time. I am sure the supervisor will consider that in making her choice."

But Ethel refused to heed this advice. She started to work on her hardest piece and spent every minute on that. She really played it in a very brilliant manner, and so she went to school the next morning in a very confident frame of mind.

But she came home in tears. Her mother tried to comfort her and finally Ethel was able to tell her about the trials. Each girl played her piece first and the supervisor selected the two best. Ethel was first and an eighth-grade girl was second. Then the supervisor had these two play "The Battle Hymn of the Republic." Here again Ethel did very well. But the most important test came last. They were asked to play the "Battle Hymn" again and count out loud!

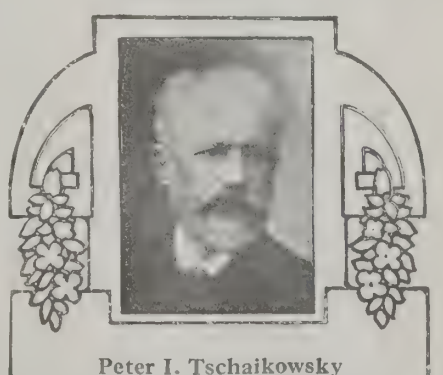
"And mother," sobbed Ethel, "my counting was terrible. All those dotted eighths and sixteenths were too much for me. I got all mixed up and had to stop before I was half through."

The other girl had not played with Ethel's brilliancy but she could count steadily and accurately and the supervisor had chosen her. She explained to Ethel the importance of accurate time when playing with an orchestra.

"And mother," promised Ethel, "I'm going to count every time I practice and next year when that girl goes to high school, I'm going to be the best pianist in the grades. Then I'm going to be pianist for the orchestra."

Anniversaries

Anniversaries of the following musicians are celebrated this month (November). Perhaps some of you can honor their days by playing something from their compositions at your November club meetings. You might also look up interesting details from their biographies.



November 4—Felix Mendelssohn, died in Leipzig, Germany, 1847.
November 6—Peter Tschaikowsky, died in St. Petersburg (now Petrograd), Russia, 1893.
November 9—Cesar Franck, died in Paris, 1890.
November 13—Gioachino Rossini, died in Paris, 1868.
November 15—Christoph Willibald Gluck, died in Vienna 1787.
November 18—Ignace Jan Paderewski, was born in Poland, 1860.
November 19—Franz Schubert, died in Vienna, 1828.
November 20—Anton Rubinstein, died in Russia, 1894.
November 28—Anton Rubinstein, was born in Russia, 1829.
November 29—Gaetano Donizetti, was born in Bergamo, Italy, 1797.

Dear Junior Etude:

I am nineteen years old and play piano, but cannot sing. I am working in an office in Johannesburg, "The Golden City." I am getting the Etude and will watch to see if you publish my letter. I should love to hear from some of your readers who live in interesting countries.

From your friend,
Agnes N. Rodgers (Age 19),
Box 6779, Johannesburg, Transvaal,
South Africa.

My piano is a lovely thing,
I keep it clean and dusted.
At night I close the lid down tight
So the strings will not get rusted.

Peter I. Tschaikowsky

Born, May 7, 1840 Died, November 6, 1893

The most popular of the great Russian composers. Used classic models, but filled them with modern feeling. His "Pathetic" symphony is probably most played of the great modern works for orchestra.

Etude Portrait Series

JUNIOR ETUDE—Continued

Junior Etude Contest

THE JUNIOR ETUDE will award three pretty prizes each month for the best and neatest original stories or essays and answers to puzzles.

Subject for story or essay this month—"My Favorite Piece, and Why I Like It." Must contain not over one hundred and fifty words. Any boy or girl under fifteen years of age may compete whether a subscriber or not.

All contributions must bear name, age, and address of sender written plainly, and must be received at the JUNIOR ETUDE Office, 1712 Chestnut St., Philadelphia, Pa., before the twentieth of November. Names of prize winners and their contributions will be published in the issue for December.

Put your name and age on upper left hand corner of paper, and address on upper right hand corner of paper. If your contribution takes more than one piece of paper do this on each piece.

Do not use typewriters.

Competitors who do not comply with ALL of the above conditions will not be considered.

MUSIC IN MY HOME
(Prize Winner)

Music in my home is one of the outstanding things. We could not be without it any more than we could be without eating. We all play the piano and love it. My father teaches piano. In a week or two he will have a pupils' recital, in which we will all take part. There are three children in our family besides myself, and we all have different teachers. We play solos, duets, trios and quartettes (four at one piano), and also numbers for two pianos. I play at one piano with my father accompanying me on the second. We also sing. To become good at hymns we take turns playing them while the others sing. We love chorales, too, and do quite a number of them.

HAROLD E. NEWHARD (Age 12),
Pennsylvania.

MUSIC IN MY HOME
(Prize Winner)

I think music in my home is one of the best things we have. People often tell us that, too. There are four of us girls, from eight to sixteen years of age, and we all play violin and piano. Father plays cornet. We play orchestra music, duets and solos. Often people come in just to hear us play. We live on the prairies and there is not much to which to go. We children do not need to go away from home, however, to have a good time. We expect to get more instruments soon. I have also one little sister and brother who will soon start music. We call our orchestra the Home-Trained Orchestra. We have had no lessons except from our mother. We think music in the home is something to be proud of.

GERTRUDE KELTS (Age 11),
Canada.

MUSIC IN MY HOME
(Prize Winner)

Music is greatly esteemed in my home. My mother is an accomplished pianist and violinist. My father plays the violin, mandolin and guitar. I am studying the piano and devote as much time as possible to it. Every evening we have what my grandfather calls the "Home Recital." This recital is a great pleasure to us all, especially to my father, because it rests his mind after a trying day at the office. I wish every home could have its own recitals, because I think everybody would be much happier.

ELIZABETH MORRIS (Age 13),
New York.

A Puzzle Corner

Answer to puzzle in June

K-angaroo
f-R-agment
Be-E-thoven
I11-I-nois
phea-S-ant
Schil-L-er
lavend-E-r
Novembe-R

The diagonal is Kreisler. A number of other words may be used to bring the same results, for instance, fraction for fragment, thrush for pheasant, kitten for kangaroo, Indiana or Califoria for Illinois.

Operatic Letter Chops

By E. Mendes

1. USE the last three letters of a famous opera for the first of the name of one of the United States.

2. Use the last three letters of a famous opera for the first of a six-letter word meaning threat.

3. Use the last three letters of a famous opera for the first of a four-letter word meaning minerals.

4. Use the last three letters of a famous opera for the first of a six-letter word meaning rare.

Prize Winners for June Puzzle

Virginia Goodrich (Age 14), Missouri.
Marie Krenzke (Age 13), Wisconsin.
William Willis (Age 10), Mississippi.

Honorable Mention for June Puzzle

Helen Estabrooks, Gretchen Kohler, John Karvonan, Edward T. Mize, Mary Morton, Mary Ellen Saxe, Margaret Marston, Helen Holmes, Agnes Mary Morrison, Jack Colter, Ruth Colter, Dorothy Smithman and Truette Wilson.

Honorable Mention for June Essays

Stuart Stevenson, Adelaide Biggane, Alice Drees, Angeline B. Drees, Erwind Edwards, Frances Cain, Bettina Hunter, Melba K. Ott, Fern I. Goss, Morris Gold, Margaret Knight, Anita Smith, Winnie Bush, Hazel Fashbaugh, Jean Worth, Clarice Hamilton, Muriel Stoepker, Kathryn Finch, Helen Lewiske, Sam L. Castronovo, Helen Wiens, Florida Graves, Theodore Smith, Rosenary Myers, Evelyn Jackson, Grace Hobbs, Helen Horton, Virginia Keller, Ruth Maynem, Eileen Bower, Frances R. Allen, Helen Sharp, Evelyn Stern, Lillian Hankin, William Willis, Esther Carlson, Patrice Taylor, Lucile M. Southworth, Errol Barran, Margaret Humphrey and Raymond F. Otis.

Letter Box List

Letters have been received from the following: Margery M. Smith, Mary Alice Dunham, Alice Rosenberg, Inez Johns, Gertrude L. Kelts, Dorothy Scherfen, Marie Long, Dorothy Eaton, Wylie Hausenwright, Genevieve Huckstep, Wendell Smith, Louise Mairs, Gertrude M. Chadney, Regina Pudney, Adelia Budge, Marjorie M. Sams, Fern Goss, Elizabeth Morris, Margaret Humphrey, Esther Le Geyt, Virginia Durand, Alberta Bresee, Virginia L. Gassman, Louise Jones and Sophie Weinstein.

The JUNIOR ETUDE regrets that there is not space to print these letters.

Letter Box

DEAR JUNIOR ETUDE:

We have greatly enjoyed the JUNIOR ETUDE. If we had not taken it I would not be so far advanced now, for the Etude articles are always in my mind. I give music lessons to a little girl who lives nearby. She has had three lessons and can read her notes very well.

From your friend,
KATHRYN FAST (Age 9),
Minnesota.

DEAR JUNIOR ETUDE:

Our schools offer many electives in music, harmony, voice, musical appreciation, boys' and girls' glee clubs and mixed chorus, and outside of school, orchestra. Then, we also have a course in band playing. Last year there were two hundred and twenty-five taking this course. Our concert band has forty-six pieces and took seventh place in the Nation Band Contest this year. Mr. Maddy was one of the judges and I was very much interested to see his article in the June ETUDE. Every school may have a good band, if they have a good director and interested students. Two-thirds of the members of our bands had never had private lessons on their instruments when they started in the bands; but next year it will be impossible to get in without having had private lessons. I have taken piano eight years and am taking clarinet in the concert band now. I think that any one who has an opportunity to be in a school band should do so.

From your friend,
GRACE JEAN WILLEN (Age 15),
Marion, Indiana.

DEAR JUNIOR ETUDE:

I am twelve years old and live in Northern Maine. We enjoy an orchestra at home. My mother plays the cornet, my sister the violin, my father the saxophone and myself the piano. I have played orchestra music for two years and find that it helps me with my time. I have enjoyed taking piano lessons for three years and like to practice. I have played in three recitals.

From your friend,
KATHRYN HERRICK (Age 12),
Maine.

"It Has Accomplished Wonders With My Pupils"

Hundreds of letters like the following have come from enthusiastic users of

Mastering the Scales and Arpeggios

By JAMES FRANCIS COOKE
Price $1.50

"I insist that scales are the foundation of a musical education and have never used a book which gives the student the knowledge and ability that is given by *Mastering the Scales and Arpeggios.* This book has been a life-saver for me and I am proud to say that I have, with its help, accomplished wonders with my pupils."

MRS. A. S. ROSE

Gabrilowitch, Rosenthal, Lhevinné, Jonás, Goodson, Bachaus and many others in the highest ranks of the great virtuoso teachers have pronounced this work invaluable to piano study.

THE BOOK THAT ACTUALLY PRODUCES STARTLING RESULTS IS THE TEACHER'S GREATEST ASSET

The privilege of free examination of any of our publications in the convenience of one's studio is cheerfully extended.

TOWERING FAVORITES

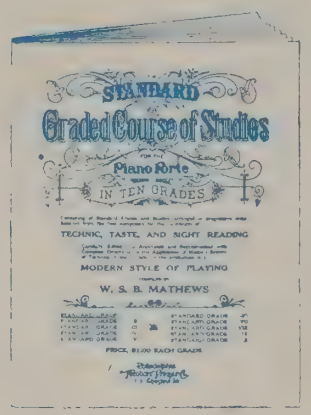
In the Field of Piano Teaching

Beginner's Book

School for the Pianoforte, Vol. 1

By Theodore Presser

THE immense popularity of this first instruction book is due to the fact that it enables the teacher to obtain readily excellent results with young beginners. The first work is presented in the "first reader" style with large notes and the rudiments are clearly explained. The pupil is soon playing little pieces, as well as attractive little duets with the teacher. Despite the many thousands of this beginner's book that have been sold the sale ever is on the increase, a sure indication of unusual merit.



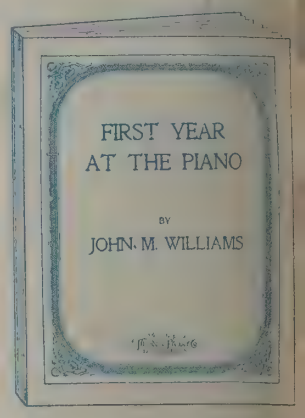
Price, $1.00

STANDARD GRADED COURSE

of

Studies for the Pianoforte

in Ten Grades



THIS course of studies originally compiled by W. S. B. Mathews and Theodore Presser was the original in its field and it consists of Standard Etudes and Studies, selected from the best composers and arranged in progressive order for the purpose of giving teachers the best material with which to introduce students to the piano keyboard, and develop them into creditable pianists. By diligent adherence to the entire course the pupil can be taken from the very beginning to the highest degrees of virtuosity. The *Standard Graded Course* is never out-of-date, because its great sale necessitates frequent new editions and with each new edition renowned teaching experts carefully revise and re-edit each volume before printing, to make certain that it is always the last word in the most sensible and progressive teaching material. A very acceptable feature of the Standard Graded Course is that it is so flexible as to permit the teacher to expand and supplement the work of the various grades with material that individually develops the students, as needed. The best of technic and musicianship is developed with a minimum of trouble by this course, which has been termed "America's most outstanding piano work."

Price, $1.00 Each Grade

First Year at the Piano

By John M. Williams

JOHN M. WILLIAMS, with his practical and progressive ideas upon elementary piano teaching, has contributed much to aid teachers of piano beginners to proceed more surely and to gain better results. This is a progressive and modern beginner's book, embodying excellent ideas, among which are avoiding teaching of anything that has to be unlearned and the introduction from the beginning of the base clef and phrasing. The book proceeds into elementary scale and pedal work and favorite melodies are cleverly utilized to hold the interest of the young pianist in the making. **Price, $1.00**

SELECTED CZERNY STUDIES

Selected, Edited and Arranged in Progressive Order by Emil Liebling. In Three Books.

Price, $1.00 Each

THE piano study material written by Czerny seems to be absolutely indispensable and teachers who can inspire their pupils to follow Liszt's advice, "practice Czerny diligently," are certain to produce players of marked ability. The eminent piano pedagog, Emil Liebling, selected for these three volumes the best of all Czerny's studies and carefully arranged them in progressive order. The first volume can be introduced with the pupil advanced in the second grade.

MASTERING THE SCALES AND ARPEGGIOS

By James Francis Cooke

Price, $1.50

THE teacher who would develop students of which they might be proud and students who want to gain real keyboard ability cannot give too much attention to the study of scales and arpeggios. This outstanding volume is a complete and practical system for this important branch of piano study, from the most elementary steps to the highest attainable degree of velocity and artistic perfection. It can be used with any method or system of teaching and because it contains original features found in no other work, many teachers have acclaimed it one of the greatest helps they have found in teaching the piano. It gives full description for the formation of all scales, major and minor and all chords are explained in the complete arpeggio work. There are many notes and bits of historical information that give the pupil a complete understanding of the development of the scales.

COMPLETE SCHOOL of TECHNIC

By I. Philipp **Price, $2.00**

THIS volume stands so high in piano literature that we might well term it "celebrated." It is a compendium of modern technic, exhaustive in all details, including all forms of finger exercises, scales, chords and arpeggios, double notes, octaves, trills, tremolo, glissando and bravura. Not only through one's student days but through his entire career, this work will be found excellent for daily practice. It makes possible real achievement in pianistic art.

FIRST STUDIES IN OCTAVE PLAYING

By Theodore Presser

Price, 80 Cents

WITH little tots the matter of octaves is something to be saved until their hands are larger, but with pupils a trifle older, octaves should be presented, as soon as possible and this selection of octave studies makes this possible in the third grade. The proper practice of octave playing not only gives a flexible wrist and forearm, but also strengthens the fingers to a remarkable extent, so that good octave players always are good *executants*.

TWELVE MELODIOUS STUDIES FOR ACQUIRING CERTAINTY

By Arnold Sartorio **Price, $1.10**

THERE are many who need drilling in accuracy and certainty in making various skips and movements over the keyboard and these intermediate grade studies are intended to help along these lines. They consist largely of arpeggio studies, octaves and various intervals. The pupil in the third grade given these studies is certain to move about the keyboard more securely.

BOOK FOR OLDER BEGINNERS

By John M. Williams **Price, $1.00**

THIS is a very practical and concise instruction book and teachers will find it particularly suitable for older boys and girls, as well as for adults. It begins with both clefs and while advancement is rapidly made into the playing of favorite songs and attractive piano pieces, this is done without any undue jumps in technical difficulty.

TUNES FOR TINY TOTS

By John M. Williams

Price, 75 Cents

THIS is virtually a kindergarten piano course, since it is a preparatory grade to the usual instruction method or beginner's book. It begins with both clefs and introduces one by one the keys on the piano above and below middle C.

NEW RHYMES AND TUNES

By H. L. Cramm **Price, 75 Cents**

THE thousands and thousands of copies of this book, purchased by piano teachers throughout the country, gives it a sales record that is nothing short of astounding. It starts right out with very simple pieces and little duets in both clefs, to teach the children the notes of the staff and at the same time to develop rhythmic feeling. This is an excellent accessory to any system of elementary instructions.

BILBRO'S KINDERGARTEN BOOK

By Mathilde Bilbro

Price, 75 Cents

A SUPERB work for the very first musical instruction of small pupils. It is printed with large notes and because the bass clef is not introduced immediately, the little pupils are early pleased with little pieces that they can play with both hands in the treble clef.

FIRST GRADE STUDIES

By L. A. Bugbee **Price, 80 Cents**

PERHAPS the reason this set of studies has been so successful is because from the very beginning almost, they are so nearly like pieces that pupils take to them instinctively and practice them with great zest. These are true first grade studies and they may be used after the first few rudimentary explanations that the teacher should give the beginner.

SUTOR'S NOTE SPELLING BOOK

By Adele Sutor **Price, 50 Cents**

THIS book teaches beginners musical notation through the medium of writing and spelling exercises. Children learn musical notation through it, while finding great delight in forming words, sentences and little stories from the seven letters of the alphabet used in music.

TWENTY-FIVE MELODIES FOR EYE, EAR AND HAND TRAINING

By Mathilde Bilbro

Price, 75 Cents

THIS work runs in grades two and three and furnishes very satisfactory material for establishing the position of the hand upon the keyboard, attaining freedom, training the eye and cultivating a musical ear.

THE MUSIC SCRAP BOOK

By N. Louise Wright

Price, 60 Cents

THIS is an out and out Kindergarten method, starting by both clefs and very engagingly acquainting the pupil with the rudiments of music and the relation of the notes upon the staff with the keyboard position.

Actual Size 3 x 5¼ 132 Pages

This Little Musical Authority is the Work of H. A. Clarke Mus. Doc.

HERE IS THE BOOK TO GIVE TO THE YOUNGSTER IN THE MUSICAL HOME

TUNES FOR TINY TOTS

BY JOHN M. WILLIAMS

HOLIDAY CASH PRICE, 50 Cents, Postpaid

THIS is a preparatory book that is designed for teachers or parents to use in introducing little ones to the ways of getting music out of the piano. It is not intended to supplant the usual instruction book since it really precedes it, giving the easiest material and the most gradual grading. It is a delightful book and begins with both clefs.

VERY FIRST DUET BOOK

Let a young student have this book to enjoy with a little musical friend or with a parent and then watch interest in piano playing grow.

THE parts in these piano duets are equal so that two students in first and second grades may have plenty of recreation together with these 27 easy piano duets.

HOLIDAY CASH PRICE, 50 Cents Postpaid
Regular Price, 75 Cents

STANDARD FIRST PIECES

HERE is a great treasure chest for the pianist of little experience. 72 gems in the first and second grades.

HOLIDAY CASH PRICE, 50 Cents Postpaid

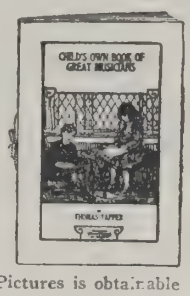
BRIGHT, pleasing genuine first grade pieces that please every young "artist in the making." Clever words to each add much for the interest of very young pupils.

HOLIDAY CASH PRICE, 50 Cents Postpaid
Regular Price, 75 Cents

YOUNG PLAYERS' ALBUM

THIS is for young players who have stepped out of the first grade and it is extremely popular with such players because of the 70 melodious second and third grade numbers it presents.



HOLIDAY CASH PRICE, 50 Cents Postpaid
Regular Price, 75 Cents

THEODORE PRESSER CO., Phila., Pa.

Everything in Musical Publications — Est. 1883 — 1712-1714 Chestnut Street

CHILD'S OWN BOOK OF GREAT MUSICIANS

BY THOMAS TAPPER

This unique series of Biographies of Great Composers is ideal for giving child music students an intimate appreciation of any of the following Master Composers:

BACH, BEETHOVEN, CHOPIN, GRIEG, HANDEL, HAYDN, LISZT, MENDELSSOHN, MOZART, SCHUBERT, SCHUMANN, VERDI, WAGNER

An Individual Booklet with a sheet of "Cut-Out" Pictures is obtainable on any of the above named composers.

PUT any one of these booklets in the hands of a child just as we deliver it with cover, page sheets, picture sheets, needle, silk cord and directions for binding and watch how quickly he will get interested in binding his own book and pasting in the pictures, incidentally being carried into the reading of the simply written biography of the master covered. You will then be convinced that it is an excellent way of feeding knowledge about the old masters into the child mind.

CHILD'S OWN BOOK OF GREAT MUSICIANS } **Holiday Cash Price, 12 Cts. Each** Regular Price, 20 Cts. each

BETTY AND THE SYMPHONY ORCHESTRA

BY ELIZABETH A. GEST

HOLIDAY CASH PRICE, 7 Cents Postpaid

LITTLE BETTY dreamed the night after she had been to her first orchestra performance and her dreams brought her all the instruments of the Symphony Orchestra and they told her much about themselves. Children or anyone reading this story quickly learn the names of all the instruments, to which family they belong and other interesting things about them.

MUSICAL PLAYLETS FOR YOUNG PEOPLE

BY JAMES FRANCIS COOKE

HOLIDAY CASH PRICE, 45 Cents Postpaid
Regular Price, 60 Cents

A LITTLE book of plays utilizing scenes and incidents in the lives of great composers. Fine material to add interest to pupils' recitals and excellent for "rainy day" playing in the musical home.

FIRST STUDIES IN MUSIC BIOGRAPHY

By Thomas Tapper **Cloth Bound**

A BOOK that is an outstanding favorite for first glimpses into the biographies music students should know.

HOLIDAY CASH PRICE, $1.20 Postpaid
Regular Price, $1.75

WINTER BEAUTY

Avoiding a weather-beaten skin with these protective treatments

BITING blasts and cutting cold impair the soft, diaphanous delicacy of the skin organisms. Left to the mercy of the elements, the complexion thus loses its youthful fineness, coarsens, chaps and ages.

HELENA RUBINSTEIN, the internationally famous beauty specialist, comes to the rescue of your winter beauty with precious creams and lotions, long treasured by the most winsome and distinguished women in the social limelight, as their intimate secrets of charm.

Cleansing—youthifying

VALAZE WATER LILY CREAM—most delightful and luxurious of all face creams—cleanses wonderfully, enlivens and rejuvenates the skin. Contains youthifying essence of water lily buds. Keeps complexion exquisite, soft-toned, entrancing. 2.50 4.00.

Dry skins, crowsfeet, wrinkles

VALAZE GRECIAN ANTI-WRINKLE CREAM (Anthosoros)—richest of nourishing creams—feeds underlying tissues, smooths away wrinkles and crowsfeet. 1.75, 3.50.

Finish with VALAZE EXTRAIT—exquisite rejuvenating lotion—absorbs "tired look" about eyes—keeps delicate skins smooth and youthful. 2.50, 5.00.

To clear and lighten the skin

VALAZE BEAUTIFYING SKINFOOD—*the skin-clearing masterpiece!* An animator and regulator of the skin's activity. Refines, lightens and purifies—removes tan, freckles and sallowness—marvelous for daily use. 1.00, 2.50, 4.00

Drooping chin—puffy eyes

VALAZE GEORGINE LACTEE—a marvelous muscle tightener. Corrects bagginess, relaxed muscles, drooping chin, puffy eyes. Restores firm, clear-cut contour. 3.00, 6.00.

Finish with VALAZE EMAILLINE—the nourishing astringent cream—braces and rejuvenates. 1.75, 3.50, 6.00.

To prevent or heal chapped, rough skins

VALAZE BALM ROSE—prevents chapping, coarsening, tones and softens the skin and safeguards your beauty. 1.00, 1.75, 3.50.

VALAZE BAUME BLANC—an exquisitely soothing, healing balsam for super-sensitive skins that become painfully tender and chapped. 1.75, 3.50, 6.00.

The perfect make-up

VALAZE CREAM OF LILIES—an alluring, whitening foundation, keeps make-up delightfully adherent, protects the skin. 1.50.

VALAZE POWDERS, ROUGES, LIPSTICKS, MASCARA, etc.—scientifically compounded by Helena Rubinstein to safeguard even the most delicate skins. Famous for their purity, flattering tones and exquisite quality. 1.00 to 5.50.

CUPIDSBOW—the new self-shaping lipstick—the *pièce de resistance* of all beauty originations! 1.50.

Dispensed at the better stores by trained and competent advisers—or order direct from Dept. E-12.

NEW WAY TRADE MARK

NEW WAY MUSIC DEVICES

Make Music Study Easy

Any Teacher or Student Can Use Them With Any System or Method

EACH device is created to serve a definite purpose—to solve a definite problem. Their chief aim—based on years of experience in teaching music and analyzing the problems of teacher and pupil—is to make music study and teaching more simple—more interesting.

By picturization fundamentals are more easily and permanently mastered.

Adapted to the beginner, as well as advanced student—to class as well as private instruction.

Order today those devices best suited to your needs, and begin at once to profit from their use.

1 New Way Keyboard and Staff Reader
The most valuable device created in years. Teaches student not only to read accurately and rapidly, but to play what is read. The correlation of staff and keyboard is made perfectly clear by means of sliding lettered buttons. The teaching of Sharps and Flats, Scale Construction, Chord and Interval Building is greatly simplified by its use. So simple the smallest child can operate and learn from it—so complete the advanced student can profit from it. As essential and accurate as the multiplication table. Every pupil should have one. **$2.00 ea.**

2 New Way Time Value Indicator
Two-color hanger—22x22—for teaching note and rest values. A great aid in visualizing values with minimum effort and time. **$1.50 ea.**

3 New Way Wall Board
Invaluable for school room or studio use. Enables teacher to illustrate any point to any number of pupils at same time. Size 28x36 in. Made of material that permits erasing. **$5.00 ea.**

4 New Way Practice Pad
Something entirely new for class dictation work and home practice. Special patented pad permits instant erasing and indefinite use. **50c ea.**

5 New Way Degree Cards
A deck of cards showing every note in music from the fifth added space below the bass staff to the fifth added space above the treble staff. Gives thorough drill in note reading. Also interesting games for home, class and club use. **$1.50 per set**

Complete instructions with each device. Quantity Discounts to Schools and Teachers on Request.

HOW TO GET MORE PUPILS

A Brand New, Thoroughly Practical, Exceedingly Inexpensive Plan Created as a Real Service to ALL TEACHERS

—BY—

THE ETUDE MUSIC MAGAZINE

This, we believe, is the most valuable help The Etude Music Magazine has ever given teachers.

$100,000.00 would be a small estimate of the aggregate worth of this plan to the profession, if enough teachers have the enterprise, the alertness and initiative to follow it up properly.

Right at the start, any teacher adopting it would save about $14.00 in publicity costs. That is, it would actually cost a teacher at least $16.00 to get set up and printed at the local printers what may now be procured through The Etude Music Magazine for $2.00.

THE plan is simply this: We have had prepared a very strong, interesting, convincing letter to parents which we reproduce on the next page. This letter is designed to reveal to parents the fact that only through the actual study of an instrument are the marvelous higher advantages of musical education to be brought to the child.

We stress enthusiastically the need for more and more phonographs, radios and player-pianos; but these, invaluable as they are in modern musical education, can not take the place of actual study with a real music teacher with a real instrument.

We strongly urge teachers to employ the mechanical music reproducers. They contribute immensely to music study. The teacher who does not take advantage of them is woefully behind the times. On the other hand, it may safely be said that every day the manufacturers of mechanical musical reproducing apparatus spend one million dollars to every single cent the teacher spends for advertising, and it is of vast importance for the future of musical education in America that our parents shall realize that there is a mind-training of priceless value which comes through the practical study of an instrument (including the voice) as contrasted with hearing music, but not executing it.

We need not tell our teacher friends how vital is the correct understanding of this matter upon the part of parents.

This letter we have had printed handsomely in facsimile of Elite typewriting on high class stationery with envelopes to match (olive green ink on a rich buff). The teacher adopting this plan will send in her name and full address. We will print these at the head of each sheet. We furnish the letter, the paper, the teacher's imprint and the requisite envelopes, all at the following rates:

100 for $2.00
250 for $3.75
500 for $6.00
These prices include letters with envelopes to match and the teacher's name imprinted on letter.

It would cost any teacher at least $16.00 to reproduce one hundred of these at the local printers. The price we make is possible only through our buying facilities and immense printings. All that is left for the teacher to do is to sign the letters, address the envelopes and mail them.

Thus, the teacher has a fine advertising campaign, prepared by experts, put at her disposal at a nominal cost, literally no more than the cost of good stationery.

Mail the letters to all parents of children in your vicinity. If thought advisable, hire a messenger to put them under doors of the homes. Leave some envelopes with merchant friends, to be distributed. Of course, it will pay you to "follow up" the initial letter with personal correspondence when possible.

We know of no other way in which the teacher could secure a strong advertising campaign at anything like this cost. We can imagine no better plan to wake up interest in music study and to get new pupils. Even if the letter is sent to the parents of your old pupils, it will fortify your position.

SEE FOLLOWING PAGE

We confidently expect that vast numbers of teachers will JUMP at this opportunity—that they will instantly recognize it as something they have wanted for years, but have been unable to prepare or to afford at the present high price of printing.

You buy it complete for about what you would pay for the stationery itself.

SEE FOLLOWING PAGE

WHEN ORDERING ASK FOR "TEACHER TO PARENT" LETTER—IN GIVING YOUR NAME AND ADDRESS AS YOU WANT IT AT THE TOP OF THE FIRST PAGE OF THE LETTER PLEASE PRINT IT IN PEN AND INK SO THERE WILL BE NO DOUBT AS TO CORRECTNESS

As the demand will be very great we earnestly ask you to order as promptly as possible.

Remember, the whole letter—printing, envelopes, stationery—is high class in every respect.

How to Get More Pupils

(Continued from preceding Page)

THIS IS THE FIRST PAGE OF THE LETTER AS YOU WILL RECEIVE IT

Your Name and Address Imprinted Here

EVELYN MAY DAVIS
2834 ACKER AVENUE
MILESVILLE, OHIO

The Balance of the Letter Reads

all." We could cite hundreds of instances of very famous men and women who have been equally enthusiastic over the value of musical training.

Many of our foremost men of today are practical musicians, some highly accomplished. Both of the heads of Congress during the Coolidge Administration, Vice-President, Gen. Charles G. Dawes, and the Speaker of the House, Hon. Nicholas Longworth, could, if necessary, earn their living through their musical ability. Among the noted musical public men of today are Benito Mussolini, Earl Balfour, Premier Painleve, Alfred Einstein, Dr. Frank Crane, Ralph Modjeski, Charles M. Schwab, Owen Wister, Cyrus H. K. Curtis, Rupert Hughes, Premier Ignace Jan Paderewski. The list could be extended by scores.

These men recognize in the study of music enormous educational value as applied to the practical workings of the human mind in ordinary problems of life. Music, when properly studied under a trained teacher:

1 Intensifies the Powers of Concentration
2 Promotes Accuracy
3 Coordinates Mind, Muscles and Nerves
4 Develops the Memory
5 Quickens Mental Activity
6 Encourages Self-Expression
7 Develops Poise
8 Enriches the Taste
9 Brings Greater Joy to Life

In addition to these all-important life factors, music is of enormous social value, of real importance in providing a wholesome mental and spiritual means of keeping one's leisure time profitably employed.

An investment in music lessons, under a competent teacher is one which bears magnificent dividends for a life time.

The phonograph, the player piano, the radio, have been of incalculable value in spreading musical knowledge and musical appreciation. They have properly become a part of innumerable homes of culture and progress. Great as are the benefits which these astonishing instruments bring, they never can take the place of the marvelous results which can come only through the actual study of an instrument. Psychologists and practical educators have demonstrated this truth over and over again. To get the highest value of music training, one must study an instrument.

Thousands of enlightened American parents have come to look upon music study for their children not merely as an entertaining accomplishment, not merely as a matter of family pride giving the children the distinction of culture and refinement; but as an unsurpassed opportunity to afford them a training, - mental, artistic and spiritual, which will develop qualities enabling them to compete with the real leaders of the future.

The undersigned will be pleased to confer with you upon this important matter.

Very cordially,

Room for Your Signature

An Open Letter to Parents:

The nation-wide discussion of the "new day of liberty for youth", which, during the last few years has produced types that our grandparents would not have thought credible, is a subject in which all parents are mightily interested. It involves in fact our greatest home problem.

On the whole, there have developed with the new type many wholesome benefits which, if not offset with dangerous temptations, may result in a new and better race of Americans.

The temptations, nevertheless, which have come with radical changes in our laws, our customs, our dress, our amusements, and our means of transit, have in many cases been the cause of ruining the chief assets of American homes, - our children.

This letter is frankly designed to bring to your attention the unusual advantages of the study of music in stabilizing and expanding the minds and characters of children, of young men and women, and at the same time, its value in holding their interest to the home.

The late Dr. Charles E. Eliot, former president of Harvard University, was a most enthusiastic protagonist for music, claiming that "Music is the best mind trainer of them

The Judicious Distribution of These Letters Should Prove a Real Asset to the Teacher

The World of Music

ARTUR RODZINSKI

Dr. Artur Rodzinski, distinguished Polish conductor, who first came to local notice as conductor of the Philadelphia Orchestra at one of the "Philharmonic Series" of 1925-1926, and later as guest conductor of the same organization at the Sesqui-Centennial, has now been appointed assistant conductor of this famed group of musicians. His first concerts were received with immense enthusiasm.

An American Opera, "Namiko-San," by Aldo Franchetti, with Tamaki Miura in the title rôle, is to be in the regular repertoire of the Manhattan Opera Company which is to make a tour of the states.

Paris Will Hear this month the 1780th performance of "Faust," the 616th performance of "Samson and Delila," the 260th of "Tannhauser," and the 100th of "Herodiade." Along with these the Opéra Comique announces the 900th performance of "Lakmé," the 783d performance of "Werther," the 680th of "Louise," and the 500th of "La Boheme."

The Chicago Woman's Symphony Orchestra, with Elena Moneak as conductor, opened its season with a concert on September 28, before the Woman's Club of La-Grange, Illinois.

Pauline Apel, for thirty years the servant and secretary of Franz Liszt, died on September 20th at Weimar, Thuringia. Eighty-eight years of age, she was known to multitudes of visitors as the caretaker of his home which is kept just as he left it at his death in 1886. In it are many gifts which the great pianist considered too costly for use, among them being one hundred pipes which never have been lighted.

Beethoven's "Missa Solemnis" has been already a feature of the New York recognition of the centenary of the great master's death. The great symphonic mass, which Beethoven himself is said to have declared to be the finest of his works, was given on October 31, at the Metropolitan Opera by the choral forces of the Society of the Friends of Music, and the Philharmonic Orchestra, with Arthur Bodansky conducting.

M. P. Moller, veteran organ builder of Hagerstown, Maryland, has received the honorary degree of Doctor of Music, from Susquehanna University of Selinsgrove, Pennsylvania. This is probably the first instance in America of a similar degree conferred on one whose first interest has been in the making of instruments. But why not? Is there not as much art in the construction of a great organ as in the playing of it?

Dusolina Giannini, the most sensational dramatic soprano that "The States" have produced in many years, has won a triumph in Berlin, as *Aida,* receiving no less than twenty-five recalls at her appearance on September 28.

For the First Time in the history of the Paris Conservatoire, the first prize for piano playing has been recently won by an American, Beveridge Webster, of Pittsburgh, where he was born in 1908.

FORTUNE GALLO

An Opera Museum is to be a feature of the new theatre now under construction in New York for the headquarters of the San Carlo Opera Company. In it Fortune Gallo, the impresario, is hoping to make a historical collection of stage settings, photographs, playbills and other accessories which will depict the history of opera production in America from the inception of this artistic enterprise to the present.

Bechstein Concert Hall, hallowed in Berlin musical annals, was recently reopened with a concert for which Julia Culp was drawn from her voluntary retirement. When originally dedicated in 1892, the soloists of the four initial concerts were those musical giants, Johannes Brahms, Anton Rubinstein, Joseph Joachim and Hans von Bülow.

The Philadelphia Grand Opera Company gave for its inaugural performance, on October 28, at the historic Academy of Music, Verdi's "Aida," a work whose music and pageantry have made it an almost indispensable of such festive occasions. And be it said that at this time the Quaker City's new organization, which has the potent bulwark of both social and business backing, gave promise of a brilliant future. Fulgenzio Guerrieri led the vocal and orchestral forces through an energetic and inspired interpretation; while Vera Cortis as *Aida,* Marta Wittkowska as *Amneris,* John Dwight Sample (an American tenor from the La Scala, making his American début) as *Rhadames* and Chief Caupolican (the South American Indian baritone) as *Amonasro,* each won plaudits. Also, Ayenara Alexeyewa and Holger Alexeyev-Mehner created enthusiasm in their American début as première danseuse and premier danseur of the ballet.

Karl Krueger, formerly conductor at the Vienna Opera and lately of the Conservatoire Orchestra of Paris, has been called to the post of conductor of the newly organized Seattle Symphony Orchestra.

The European Visit of the Philadelphia Orchestra which had been rather widely announced some months ago, has lately been abandoned. As a reason it is said that those who visited across the seas, to make preparations for the tour of the orchestra which many consider to be the greatest now in existence, found conditions unfavorable to a successful consummation of the enterprise.

MRS. F. S. COOLIDGE

The Second Chamber Music Festival of the Library of Congress, endowed by Mrs. Frederic Shurtleff Coolidge, was held at Washington on October 7-10. Though due regard was given to the classics, fully half the compositions were products of the very recent years. Two prize works written in 1925 by the young Belgian, Albert Huybrechts, were presented; while a composition by N. Berezowsky, a young Russian also not yet out of his twenties, had its world première.

Music Students are Twenty-Five Per Cent More Efficient than children who never have taken any music lessons, has been determined by exhaustive analysis of grades of the Springfield, Missouri High Schools. After making a study of the three thousand four hundred and seventy-eight students of the High and Junior High Schools, "Music study was discovered not only to improve the grades, but also to act as a mental stimulant."

The Westminster Choir of Dayton, Ohio, began on October 28 an extended tour of the eastern states. This organization ranks among the leading ones of the world in its *a capella* singing, and it is a brilliant example of what a group of enthusiastic amateurs, devoted to a high ideal, can accomplish in the way of high art.

A Statue of Massenet has been placed in the Luxembourg Gardens of Paris, so justly famous for their beauty. The monument stands near those of Chopin, Verlaine and Hederia; and on its base are sculptures of "Cendrillon," "The Juggler of Notre Dame," "Marie-Madeleine" and "Werther."

The Music Teachers' National Associaton will meet in their semi-centennial convention at Rochester, New York, December 28-30. Arrangements have been made for the discussion of many questions of vital interest to teachers in all branches of the profession, these meetings to be conducted by leaders in their respective lines of thought. Elaborate preparations have been made for the entertainment of those in attendance, and everything points to one of the greatest meetings in the history of the organization. Further particulars may be had by addressing the secretary of the Association, Donald M. Swarthout, University of Kansas, Lawrence, Kansas.

La Scala of Milan opened its season on November 15, with a gala production of Verdi's "Don Carlos." Difficult is the problem of catering to operatic tastes, when such a work remains a favorite in many European operatic centers but was practically discarded many years ago in both England and America.

GASPARO

"La Vestale," one of the most spectacular of operas surviving from the classic period, was wisely chosen by impresario Gatti-Casazza, for the opening performance of the Metropolitan Opera Company of New York, on November 1st. Rosa Ponselle, brilliant American dramatic soprano, was given the honor of interpreting the leading rôle. This has been one of the most notable "revivals" by the Metropolitan in recent years, first because of the age of the score, and, second, because of its spectacular qualities.

A Tomb for Erik Satie is to be erected on the spot where the remains of the composer repose. A fund for this purpose has been raised by memorial performances in Paris and London, of his works (some of them unpublished.).

A New Prodigy, Eileen Joyce, has been discovered in Westralia (West Australia). Percy Grainger, who has been touring the Southwestern Continent, writes most enthusiastically of the youthful wonder: "She is in every way the most transcendentally gifted young piano student I have heard in twenty-five years." She was expecting to have advanced study in Europe, but Mr. Grainger has strongly advised that she take up this work in America instead.

$7500 in Musical Prizes have recently been awarded in the Sesqui-Centennial Competition. Karl Siebeck of Brunn near Vienna received $3000 for his opera, "Toni;" the symphony prize of $2000 was divided between Herman Erdlen of Hamburg, for his "Passacaglia," and Gustav Strube of Baltimore, for his "Symphonic Fantasie;" the choral prize of $2000 was divided between Henry Hadley of New York, for his "Mirtil in Arcadia," and Jacob Weinberg of Jerusalem, for "An Evening in Palestine;" the prize of $500 for an a cappella suite went to T. Frederick H. Candlyn of Albany, New York, for his "Historical Suite;" and the judges found no work submitted that was considered worthy of the prize of $2000 for a ballet. Thirty-four operas, fifty-eight symphonies, eleven choral compositions, thirteen ballets, four pageants, one masque and eighteen a cappella suites were submitted in the competition.

It is the constant ambition of the editors and publishers of the "Etude" to make each issue of the journal worth many times more, in practical instruction, stimulating inspiration and real entertainment, than the price of the entire year's subscription. The music lover can not possibly find a better two-dollar investment.

"The Singing Biennial" Convention of the National Federation of Music Clubs is to be held in Chicago, April 16-23, 1927. Dr. Charles N. Boyd has been chosen as National Chairman and will conduct the Great Massed Chorus, for which "Singing Delegates from Every Club" has been made a slogan. A "Biennial Souvenir Choral Collection," in a beautifully bound souvenir volume, is being published especially for the occasion. The main objective of the Federation is to "stir up the whole country to a great revival of choral singing."

Three Eminent French Musicians, Louis Vierne, organist of Notre Dame, of Paris, Marcel Lanquetuit, organist of the St. Gothard Cathedral of Rouen, and Marcel Herbert, cellist, will visit United States during the present season. They come primarily to appear in conjunction with the Chamber Orchestra recently organized by Rodman Wanamaker and to play the wonderful organs of the great Wanamaker stores of New York and Philadelphia.

LOUIS VIERNE

Opera on the Pacific Coast is flourishing. Both San Francisco and Los Angeles already have had two-week seasons by an inter-city plan which enables them to command the services of leading artists and conductors. The movement has sufficient interest to have attracted Mr. Otto Kahn of the Metropolitan Opera Company to be present and to speak on the opening night at San Francisco.

A Carillon of Forty-Seven Bells has been presented to the First Methodist Episcopal Church, of Germantown, Pennsylvania, by William H. S. Shelmerdine in memory of his son. The set of bells will have a compass of four chromatic octaves and will require a carillonneur.

Two Parterre Boxes of the Metropolitan Opera House recently changed ownership, Robert S. Brewster acquiring the one owned by the late August Belmont, and Frazier Jelke becoming owner of the William K. and Harold S. Vanderbilt box. Ownership of a parterre box carries with it possession of a thirty-fifth interest in the Metropolitan Opera and Real Estate Company; and but eleven of them have been sold in the forty-three years of Metropolitan history.

Dr. Augustus Stephen Vogt, who raised the Mendelssohn Choir of Toronto to a world famous choral organization, passed away there on September 17, at sixty-four years of age. He had resigned in 1917 from the leadership of this organization in order that he might devote his entire time to his duties as Director of the Toronto Conservatory of Music. He was the son of a Baden organ builder who had made his home in the Ontario capital.

The "Old Vic" of London, where the experiment of grand opera well given at eighteen cents admission has proven a conspicuous success, opened its season on September 16, with a performance of "Lohengrin."

L. V. SAAR

The One Hundred Dollars, W. W. Kimball Prize, offered by the Chicago Madrigal Club, D. A. Clippinger, conductor, for the setting in madrigal form of a given poem, has been awarded again to Louis Victor Saar, which is the third time he has taken this prize; with honorable mention in two others of their competitions. For this year Miss Frances McCollin, of Philadelphia, received the honorable mention.

Howard Hanson's "Pan and the Priest," a symphonic poem, had its world's première at a recent Promenade Concert in Queen's Hall, London, under the baton of Sir Henry Wood. This was the third American work to be heard there this season, where but a few years ago they were all but unrecognized.

EARN A Teacher's Diploma or A Bachelor's Degree IN MUSIC

In Your Spare Time at Home

The teacher holding a Certificate today is the one at the top of his profession. Are you getting ahead in the music field? If not, what is the trouble? There are demands for teachers in schools and colleges, and you have a chance to qualify for the best position.

Get An Accredited Course

Diplomas, Degrees and Teachers' Certificates granted by the authority of the State of Illinois.

Many teachers possess talent and ambition sufficient to place them at the top where they could command higher tuition rates and larger classes, but they lack the necessary expert knowledge. Thus, the difference between their present standing and leadership—between large and small classes—between high and low tuition rates—is only a difference of a little broader knowledge. Every person who has risen to the top in the profession either as singer, player or teacher had the instruction of some great teacher. Recall who taught any of the noted musicians and artists and you will find that every great musical career is based on the instruction of some MASTER TEACHER.

Thousands of Letters Like These in Our Files

Becomes Certified Teacher

I have successfully passed the State Board Examinations and am now an accredited teacher in the State of Oregon. I owe this to your Normal Piano Course, for I tried to pass the examination before, but was not proficient in the answers, and failed. Then I saw your ad in THE ETUDE and determined to try this Course. It has been successful, and I am very grateful.
MRS. LULU E. DIEBEL, Seaside, Oregon.

Junior Chorus Won First Prize in Interscholastic League

Your Conservatory has received considerable advertising through me, as my Junior Chorus recently won first prize in the Interscholastic League. They competed with seven schools—three of which are large independent schools. I feel that much of my success is due to Mrs. Clark's course in Public School Music. MRS. ELSIE V. POST, Glen Flora, Texas.

Public School Music Graduate has Just Secured Life Certificate

I am now a full-fledged director of the Melvin Community High School Orchestra, having received my certificate from our superintendent on the recommendation of the State Board after presenting my credits received through my studies with your institution.
PROF. F. W. REUTER, Violinist, Dewey, Ill.

The Sherwood Normal Course Systematic And Complete

The Sherwood Course has taught me many things I have never heard any of my private teachers mention. The course has enabled me to increase the size of my class and I can't praise your methods too highly. I recommend them to all.
MARY ELLEN FOLEY, Owosso, Michigan.

Clear Tone—Result of Weldon Course

The Weldon lessons have benefited me much. My tone is clearer and better, and the attack has greatly improved. My breathing has also improved to a great extent, and I notice that the high tones are much easier for me than ever before.
PAUL BLOEDE, 615 R 124th St., Cleveland, Ohio.

Teacher in Convent Praises Courses

As a graduate of your Harmony, History and Advanced Composition Courses I want to say that I think your courses cannot be improved upon. While they are not in any way a *short* road to success, they surely are a most *safe* one. I trust that this year will bring you a large class of eager new students, and that they will enjoy the work as much as I did. SISTER M. AGNITA, 60 Broad Street, Providence, R. I.

Violin Teacher Increased Size of Class

This will acknowledge my Harmony Diploma. At the commencement of my studies with you, I was a violin teacher with plenty of time on my hands. My class has grown to three times that size. I command an increased fee and have a waiting list.
SAMUEL GRIFFITHS, New Bedford, Mass.

Study in Your Own Home with the Best Teachers in the Country

No longer is it necessary for the ambitious musical student to incur the expense of leaving home to study at an expensive resident conservatory. By the University Extension System the masters' methods are taught in the home by easily understood lessons sent by mail.

The Piano student has the lessons of the marvelous teacher Sherwood. The Cornetist studies with the master Weldon; Crampton trains the voice of the singer; Heft shows how to interpret the soul of music on the Violin; Rosenbecker and Protheroe take the pupil through every phase of the study of Harmony; Protheroe gives his authoritative instruction in Choral Conducting; Frances E. Clark gives the most practical methods in Public School Music; Frederick J. Bacon, the great banjoist; Samuel Siegel, world-renowned mandolinist, and William Foden, famous guitarist, give their methods for mastering these instruments. The History Course, including Analysis and Appreciation of Music by Glen Dillard Gunn, and Advanced Composition by Herbert J. Wrightson, are advanced courses leading to the degree. Ear Training and Sight Singing by F. B. Stiven.

More than 200,000 ambitious men and women have gained proficiency in these various branches of music by the University Extension Method. And to you we offer the same advantages which were given to them.

This Is *Your* Opportunity—Mail Coupon TODAY!

Fill in the coupon below—send it now for four lessons and our late catalog. We will give you full details of our offer to teachers and students, and the offer calls for samples from one of the courses. Get the catalog and lessons—then decide.

THE ETUDE

DECEMBER, 1926 | Single Copies 25 Cents | VOL. XLIV, No. 12

The Bells of Christmas

When the final curtain boomed down upon the Great War there were those blind enough to say that never again would the Bells of Christmas have the same meaning to the world.

The war-makers had proven their power. Brotherly love was a joke, when dollars, francs, marks and pounds were at stake. What was the lesson of Gallipoli, of Verdun, of Ypres, of Chateau-Thierry? Christianity was a failure, a farce, a laugh. Thereafter Christmas Bells and Christmas Carols would fall upon deaf ears.

Right thinking folks found such pessimism sickening. They knew that the world had been boiling in the great crucible of Fate and that from this would surely come far finer metal than we had ever known. Certainly, in the meantime there would be the scum of crime, vice and hate, but all those enemies of life would pass with the years.

Gradually, as the fires are smouldering and the great mass of molten humanity is simmering, we behold that more and more the finer virtues, the glad and noble ideals, the music of joy and of love are being reclaimed and the baser elements eliminated.

Out of the Master Refiner's moulds come new Bells of Christmas, ringing more joyously than ever.

New Bells of Christmas everywhere! Can't you hear them pealing the same old glorious song of Bethlehem, with greater sweetness, greater richness, greater power, greater ecstasy than any music the world has ever heard!

"Peace on Earth Good Will to Men!"

Merry Christmas to Everyone!

A Moulder of Thought

A PHILOSOPHER is one who by virtue of the virility, the originality and the humanity of his thought molds the thoughts of others. Henry T. Finck, whose passing is noted on another page of this issue with a forecast of his last work, was something far more than a mere chronicler, a reviewer of musical events. He was a philosopher who for the better part of his life made music his principal field.

His earliest works, in fact, dealt with the very romantic subject of the philosophy of love and had nothing to do with music. Even after he entered the musical field and started to contribute so enormously to the cultivation of musical taste and knowledge in this country, he could not fail to write upon numerous other subjects embracing a large range of human experience.

During the entire life of THE ETUDE Mr. Finck was an active and valued contributor. For the past few years he was in very poor health and therefore his contributions were not so frequent. He had the quality of investing any musical subject with remarkable human interest. You could not help reading Mr. Finck's articles; and when you had read them you were in the possession of knowledge of permanent value. Most of these articles are fortunately preserved in his remarkable book, "Musical Progress," than which there is no better panorama of musical taste and appreciation in America during the last fifty years.

To have been an intimate personal friend of this great philosopher, the editor counts as one of the richest human and educational assets of his career. Living in his home, and having him and his extremely able wife as guests, were rare privileges. During many long tramps in the mountains of Maine we came to know Henry T. Finck, the man. We learned of his charming, equable disposition. We learned of his sincerity, his unselfishness, his wit, his encyclopedic knowledge, his astonishing versatility. We found out why during his entire lifetime he won the strong admiration of many of his foremost contemporaries in numerous widely separated fields.

We cannot regard his passing at the age of seventy-two as a loss to American musical culture, but rather as the culmination of a rich and beautiful contribution to art and philosophy, not only in our own country but in the world at large.

Mars' Scars

THAT Germany suffered terrifically from the slaughter of its man power is a fact too recent in history to be commented upon. France, Italy, England, Austria, Belgium and America, alike made their human sacrifices in numbers so vast that even after ten years we cannot contemplate them without horror.

We cannot, however, help feeling especially deep pity for the thousands of European musicians of advanced years who had no part whatever in the War but who have been brought to penury and are still in terrible straits. Our office is flooded with letters from men and women of distinction who have made notable contributions to our art but who are now actually without the necessities of life.

One letter from a great opera singer, the wife of a world famous conductor, runs, "I am actually without shoes, my feet are upon the ground. My best coat is twelve years old. I am too weak to do anything to help myself even if it were possible for me to get pupils to teach."

Another from the wife of a famous composer whose compositions have been played by thousands of American pupils, runs, "We have been obliged to sell our Bechstein and the furniture has been going out piece by piece in order to keep us alive. Can't you please help?"

THE ETUDE has been helping through all the agencies it has been able to solicit. But of course we cannot assume the care of many in cases of such vast need.

We know that this is a poor time to ask Americans to help Europeans. Europe has not shown a particularly noble spirit since the war, in face of the millions and millions that have been sent by big-hearted Americans. Those who have been jealous of our prosperity have impugned our ideals and, with very bad grace, have laughed at Uncle Sam despite the fact of his willingness to help those in distress. Yet, it seems to us that this is the time to show our bigness of spirit and realize that people in dire trouble are not accountable for what they do or say. This is no time for us to forget the humanity of the situation. There are our fellow musicians in Europe literally at starvation's door. If there are readers of THE ETUDE who can include these unfortunates in their Christmas love with a small gift we shall be glad to forward any funds received to assist a great number of genuinely worthy cases that have been reported to us by reliable authorities.

We are pleased to say in this connection that the Trustees of the Presser Foundation have in the past sent many thousands of dollars over seas to help needy cases in France, Germany and Austria, and are continuing to send funds.

Address your contribution to

"The Etude" Christmas Cheer Humanity Fund.

A great number of small contributions is better than a few large ones. ETUDE readers have always been large-hearted. They contributed to the care of the dying Moszkowski nearly one thousand dollars. We are proud of the fine generous spirit of THE ETUDE family.

Musical Pyrotechnics

WHEN the editor was a very little boy indeed, he stood upon the roof of his home on Columbia Heights in Brooklyn, New York, and saw the great fireworks display that marked the opening of the Brooklyn Bridge. Whether he has seen more wonderful fireworks since then he does not know; but certainly none made a more brilliant impression.

One of the set pieces was Niagara Falls in fireworks. From tower to tower the faucets of fire were turned on until the whole East River was agleam with the gorgeous spectacle. Many years later he saw Niagara Falls in reality, under the illumination of powerful search lights. The pyrotechnical Niagara that sparkled so brightly in memory then became a toy, a penny Roman candle in comparison.

Really the difference between real music, that is, music that is built organically—developed as are all great artistic creations—bears about the same comparison to purely pyrotechnical music as the Brooklyn Bridge gun-powder waterfall bore to the great cataract.

Of course there are compositions that have built into them a pyrotechnic ornamentation which is magnificent. Such a work is the "Ride of the Valkyries" of Wagner or the "Fire Bird" of Stravinsky. There is a vast difference between these compositions and those which are merely incrusted with musical pinwheels and rockets.

In this issue of THE ETUDE MUSIC MAGAZINE our readers will find a lesson by the great pianist Richard Burmeister upon the Liszt *Polonaise in E Major*. We know of no finer specimen of what we have termed organic musical fireworks than this composition. That is, it is no mere artificial contraption built to amaze, but a real work of art organically and logically developed from an incandescent central theme. There is no part that is dispensable and there is nothing about it that seems to be added merely for transient effect. It fairly leaps in sparkling beauty from the keyboard under the hands of the accomplished pianist. These lessons, which have appeared in THE ETUDE from time to time, are the serious product of master pianists and are written with an attention to details and to artistic effect which makes them invaluable to the student. The Liszt Polonaise is the most difficult lesson we have yet presented. If you are not ready to play it as yet, by all means save this special issue until your technic is developed to that point.

The Art of Clarity in Pianoforte Playing

An Interview with the Distinguished English Virtuoso,

HAROLD SAMUEL

Editor's Note

Mr. Harold Samuel was born in London in 1879. His mother was half American. His father was a prominent art dealer. In his childhood, he taught himself to play the piano. In fact, he says it seems as though he always played. His lessons, however, actually started at the age of nine.

He was a pupil of Michael Hambourg, father of Mark Hambourg, of Isaac Albeniz, the great Spanish composer, and of the pianist, Benno Schoenberger.

He then went to study with Leschetizky in Vienna, but owing to illness had to return to England without having had a single lesson. He next went to study at the Royal College in London, where he became a pupil of Edward Dannreuther in piano and of Charles Wood and Sir Charles Villiers Stanford in composition.

He made his début in 1900 in Steinway Hall in London. At that time he played the Thirty Variations of Bach and the Fantasy of Schumann. He then devoted a large part of his time to accompanying famous artists; and it is said that he has accompanied most of the great singers and violinists of the period, at different times.

Finally, his friends persuaded him to concentrate his attention entirely on concert playing, and nineteen years after his first recital he gave another in London. He then attracted a great deal of attention by giving entire week's programs of Bach, playing the unusual things, many of which had been condemned to be used as studies. At that time, the popular numbers of Bach were the Chromatic Fantasie, the Italian Concertos and the Organ Transcriptions.

Mr. Samuel revived the Suites, the Partitas and other less frequently heard numbers. For years, he has been an enthusiastic and tireless student of Bach. His edition, with Donald Francis Tovey, of the Preludes and Fugues of the Well-Tempered Clavichord, issued by the Associated Board, won him the highest encomiums and at once placed him among the most valued authorities on the Leipsig Cantor's works.

"THE ART of clarity in pianoforte playing is something which should immediately interest the student who desires to rise above the mediocre as a performer. This depends not so much upon the material used in every instance as upon the manner in which this material is played. After I had had the good fortune to have a great deal of excellent instruction from experienced masters, it came to me at one time as a revelation that I had not availed myself of certain phases of preparation without which no one could really essay the playing public with any hope of competing with the many very highly trained virtuosi. I realized that I did not even know how to play scales with that facility and distinctness and equality and authority so essential in all good pianoforte technic.

"Scales are the very vertebræ of fine pianistic equipment. The student who has a fear that practice of the scales will make his playing mechanical or stiff, either does not know how to play the scales as they should be played or is using this as an excuse to avoid the hours and hours of careful hand training which are so essential in providing that velvety smoothness and crystal clarity which every fine player should have instantly at his command.

"Therefore, when this revelation came to me, I decided to devote myself almost religiously to the development of this phase of my technic, and I spent eighteen months in the study of scales and scale-like etudes, such as those to be found in "The School of the Virtuoso," by Carl Czerny, Opus 365. Anyone who will devote a similar amount of enthusiastic study to scales and arpeggios, and similar technic, and to Czerny and Clementi, cannot fail to be benefitted immensely.

"In using the Czerny School of the Virtuoso, I always made it a practice to play them at least twenty times, until every possible flaw was washed clean; that is, the composition had to be perfect, and then before passing to another study, I invariably played the study six times in succession without a single error. You may or may not believe it, but it took me eighteen months to get the first exercise in Opus 365 so it was satisfactory to me.

"There is a tendency on the part of a great many people to belittle a work like the Czerny Studies. This is to my mind sheer ignorance. They are invaluable. Take for instance, such a study as number six, in which the following example appears:

Ex. 1 Czerny, Op. 365, No. 6

"There is in this a very great technical difficulty and it exists between the last note played by the thumb in the left hand and the first note played by the thumb in the right hand, in each group at the point marked with the asterisk. With most players, there is an inclination to let it play a little louder than the other fingers; to accent with it. In a passage such as this, there should be a perfect smoothness and evenness of tone. More than this, the distance in time between these two thumbs as they appear should be identical with the distance in time with every other group of eight notes.

"In order to get my ear accustomed to this, I would play the whole group of eight notes with one hand and then try to imitate it, four notes played with one hand and four notes with the other hand. This I found a splendid drill (but it was a long, long time before I could get it to satisfy myself in every part).

Never Satisfied

"THIS IS another point. In practice one should find it very difficult to become satisfied. Maintain your standards up to the highest level and do not be content with anything below this level. Your ear should be your hardest critic.

"Dannreuther was in many ways a very remarkable teacher. He had a psychological insight into the development of the pupil that was uncanny at times. For instance, if a pupil were playing a piece and some part went wrong, Dannreuther would not pay any particular attention to that part, but would call the pupil's attention to a totally different thing and get the pupil's mind concentrated on another section of the piece. When the pupil played the piece again, in all probability, the part that had previously gone wrong would be all right. You see, he was employing a psychological trick. Very probably there was lodged in the pupil's mind that a certain part was going to go wrong. When his mind was drawn from that part and concentrated on another, the original trouble disappeared as though by magic.

"Difficult passages are largely passages that you have been telling yourself are difficult. As long as you think a passage is difficult, it will always be difficult. Fear plays an enormous role in piano study. I found this out when I commenced to play records for sound reproducing machines. Pieces that I knew perfectly well and could play correctly were at first very difficult to play because I feared the reproducing machine. After a time, this was entirely eliminated. Really, you make your own difficulties.

HAROLD SAMUEL

Czerny and Bach

"IN STUDYING the Czerny studies and in playing Bach, I have been obliged to realize that the modern love for relaxation, so called (and often misapplied), is not the beginning and the end of the art, as so many smaller teachers who do not comprehend the real meaning of relaxation believe it to be. In the playing of the Czerny studies and in the playing of Bach, I am a strong advocate of letting the fingers do the work obviously intended for them; and in this I am sure the most experienced performers and teachers will agree that the subtlety and finish and character developed through the individualization of the fingers is reflected at its best, even in the most delicate passages of Chopin, Schumann or modern composers such as Ravel and Debussy.

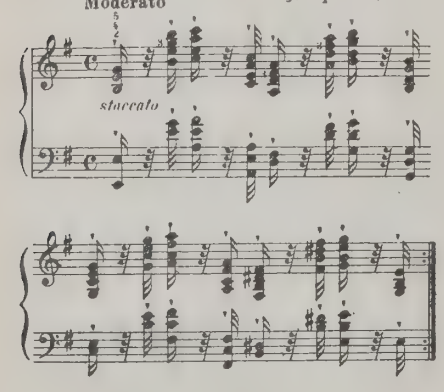
"The foundation may be in scales and arpeggios. What do I mean by the finger "working?" I mean that the finger itself should be trained to operate by its own muscular action. The finger drops on the key and plays the key. I mean by this the arm weight should not in this kind of a drill rest on the hand. The hand should not bear the weight of the arm. The arm

should support itself. In this way, the hand is left absolutely light and ready for any stress that may be necessary, such as bringing out a subject. I am fully acquainted with the necessity, on given occasions, of arm relaxation, but this to my mind should be employed in its right place for special purposes and is not always advantageous in every conceivable phase of pianoforte playing.

"In bringing out a subject, a certain amount of arm weight is desirable, but it should not be abused. The lighter the hand upon the keys, the less arm weight will be necessary to insure finer results.

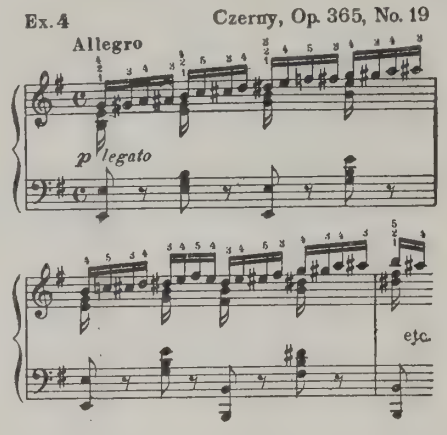
The Light Hand

"THE WHOLE thing may be summed up by saying that it should be the desideratum of the student to secure as light a hand as possible in rapid finger or passage playing. The main trouble is that some great teacher brings out a splendid theory in connection with such a thing as arm weight and relaxation and then a great many underlings, who do not understand the principles, principles that are often very involved, attempt to pass on this theory in ex cathedra fashion, assuming that unless the work is done in this way everything is wrong.



"Let us make, for instance, another return to our venerable Czerny. Take exercise number seven. Here we have an exercise in chords. It is to be played moderato and note that it is also *legato e ben marcato*. This is largely a study for the finger as well as forearm and should be played with distinctive finger action. It is a most valuable study at the very start.

Ex. 2 Moderato Czerny, Op. 365, No. 7



"You will realize that the fingers must be watched for poor finger action, in order to secure that exchange of tone at the right note, to enlist a beautiful legato. On the other hand, at the bottom of the passage, there is a distinctive hand touch with very staccato notes in which the hands should be held with extreme lightness, but even here, the quickness in changing the fingers denotes the desirability of rapid finger action.

Ex. 3 Moderato Czerny, Op. 365, No. 7

"Now turn to exercise number fourteen. This is one of the most valuable studies for finger work and deft treatment of the two parts. It is so excellent that I frequently play it now as a kind of tonic. Exercise number nineteen is similarly good for the value of its finger treatment. It resembles very closely the study in A minor of the Chopin studies, called, in America, the Wind Etude.

Ex. 4 Czerny, Op. 365, No. 19

"Any one who can play the Czerny School of the Virtuoso, and play it with freedom and ease and authority, has made a splendid stride toward the acquisition of the art of fine pianism. Czerny knew these things should be played over and over. In fact, he said in his own introductory, that, in order to accomplish the very best results in the shortest possible time with these studies, a certain number of uninterrupted repetitions is required for each exercise. Experience has taught that by such means the student will arrive at a degree of proficiency in a few months, greater than he could otherwise hardly reach in many years; and the achievement of such rapid advancement readily warrants the exertion and devotion demanded. Thus spoke the teacher of Franz Liszt and of Theodor Leschetizky.

"As I have said, the art of clarity in playing the piano is based very largely upon the sense of clarity in hearing. We must train our ears to listen to 'microtonic' differences in tone, time and rhythm. Somehow daily study in scales and arpeggios seems to have a very wonderful effect in straightening out our mental capacity to listen as well as play. The scales are just as important to the student as the 'daily dozen' to the man who desires to keep fit through exercise. As I said before, one should never fear that scale playing will produce mechanical playing. The pupil who has this fear is hardly worth considering as a pianist. It must be a very delicate, not to say poor, kind of art that will be injured by scale and arpeggio playing rather than being benefitted by it.

Self-Test Questions on Mr. Samuel's Article

1. *What are the vertebræ of the pianist's equipment?*
2. *What is the valuation of Czerny studies?*
3. *How did Dannreuther correct a weakness?*
4. *What is meant by a finger "working?"*
5. *What is the base of clarity in playing?*

Teaching the Adult Beginner

By Arthur Schwarz

SO FAR as has been ascertained, there never has been a really sensible consideration of the adult beginner. On the one hand there have appeared rhapsodies about the spiritual need of music, the everlasting pleasure to be derived from its study—an obvious platitude, since everybody, excepting a relatively few, loves or can be taught to love good music; and, on the other hand, a great deal of nonsense relative to psychology in its relation to teaching.

Some day a Mencken will brush aside the claptrap of the teaching. But the problem of the adult beginner is the present concern.

First of all it must be realized that the average adult will not study more than two years. In that time the pupil must have been made familiar with the kind of music that most likely will be heard in future years. For one who has studied Clementi, some Haydn, and pieces by Gurlitt, excellent though they are, only to hear "The Rosary," "O' Sole Mio," or "Last Rose of Summer," does not give him half the thrill derived by the one who has studied them. In truth, six months after starting, the pupil should be familiar with numbers like "The Rosary," in simplified form, "Kathleen Mavourneen," "Sweet Genevieve," and numbers that are heard sung by John McCormack and played by Kriesler.

Music That Is Liked

An adult who will enjoy playing a Kuhlau Sonatine for friends is a rare bird; but one who will *not* enjoy playing, say, "The Rosary." or "Home Sweet Home," is still more rare. The opportunities for giving music to fit the needs of any adult are endless; the Jew may play "Eili, Eili," a melody that aroused the admiration of James Huneker; the Russian may play "The Red Saraffan," used by Wieniawski, in "Souvenir de Moscow."

There are arrangements of the popular operas that one hears at concerts and over the radio. The pleasure that one extracts from hearing music that has been studied, is immense. Hymn tunes like "Old Hundred," and "It Came Upon a Christmas Eve," the one with its melody from Schumann's Nocturne F major—such music may be utilized in the case of the student who likes hymn tunes.

An elderly lady preferred hymn tunes above all music. She learned, and played for her friends, tunes that were familiar to them all. The entire company would start singing when she began playing, and, as the saying goes, "A happy time was had by all." Suppose that lady had studied only some Czerny, a Kuhlau Sonatine, and all the scales? How long and how often could she impose upon her friends?

Another lady, after having studied one year, listlessly played a LeCouppey Etude and a *Tarantelle* by Heller. She was given "Underneath the Stars." What? A popular song? Well, did not Kriesler make a record of it? Did not Pavlowa dance to the "Glowworm?" Something by Jerome Kern, Victor Herbert? Is "Gypsy Love" poor music? Tell it to McCormack. Is "Kiss Me Again" inferior to Clementi? Perhaps it is. But ask any adult to play some Clementi for friends and learn how they were bored. Ask the same adult to play "Kiss Me Again," and find out how soon the audience was singing and enjoying the fun.

Having suggested possible music for the student, some short cut to this Utopia may be suggested. And short cut does not mean superficiality, but the elimination of superfluous material. Scales, except where they appear in pieces, are superfluous. Finger exercises are a waste of time. So are etudes.

The First Lesson

The first lesson should familiarize the pupil with the clefs, time and note values, fingering and the formula for the major scales, if one is too attached to the scales to part from them—*presto*. The third lesson should introduce the student to "Home, Sweet Home," or some other easy folk tune. By circumspectly choosing music, the student may be brought to the easier Chopin Preludes.

A list of music given an adult beginner, thirty-seven years of age, is added: "Last Rose of Summer," "Home, Sweet Home," "Sweet Genevieve," "Voice of the Heart," "Martha," "Il Trovatore," "Rigoletto" (with the stories of these operas), "The Rosary," arranged by Loepke, "Barcarolle," "Glowworm," "Minuet in G," Beethoven, "Southern Revels," Morrison, "Gypsy Love," "Babes in the Woods," Schubert's "Serenade," "Humoreske," "Simple Confession."

Here was music that the student enjoyed, more so as she was continually hearing it over the radio, at concerts and at the theatre. It was music she could readily play for friends—a powerful stimulant to study. In short, the student played what she liked, what her friends liked to listen to, what she frequently heard, and what made her study a joy.

Counting for Balky Pupils

By Wilfred E. Despard

"I CAN'T count out loud because I get all mixed up," is the excuse given by 'balky' pupils—usually numbered among those who are weak in time.

The following will in most cases overcome the counting difficulty:

When giving a pupil a new piece or exercise, change places with him. Tell him that he is to be the teacher. Let him explain the time signature in his own way. Now play the exercise for him very slowly while he points out the notes with a pencil, counting out loud as he goes along.

If he should stop counting, stop playing and start all over again.

Then let him take his place at the piano. Point out the notes for him and he will have no difficulty playing and counting at the same time. This plan appeals to children because they like games of "make-believe" and can adopt suggestions best in this way.

THE ETUDE *looks forward with joy to the New Year which will be signalized with more and better* ETUDE *features than ever before. We have been literally ransacking the world for new features. Mr. Preston Ware Orem and Mr. George Pechstein,* ETUDE *representatives, have just returned from Europe with their cases filled with delightful and inspiring manuscripts. Not to have* THE ETUDE *for 1927 would be to close the doors to a whole world of the most interesting material ever secured for a musical magazine.*—EDITOR OF THE ETUDE

How to Teach the Notes on the Grand Staff Beginning with Middle C

By

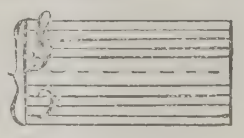
JOHN M. WILLIAMS

MANY TEACHERS of pianoforte who have been in the habit of teaching the treble and bass clefs separately to beginners, thus: The notes in the spaces of the treble clef are named F A C E, and those on the lines are E G B D F; the notes in the spaces of the bass clef are named A C E G, and those on the lines are G B D F A." This is done without showing the connection between the two, and frequently the teacher is at a loss as to how to teach some of the newer and more modern beginners' books that take Middle C for a starting point and work in either direction.

As practically all the newer beginners' books introduce the notes from this position, the following explanation will be helpful.

One teacher in speaking to the writer was absolutely at a loss how to begin; in fact, she thought it necessary to teach the notes on the bass and the treble clefs as before, and then to teach Middle C. Naturally such an amount of information was confusing to the beginner and the teacher went back to her old way of teaching—until she was shown how to overcome the difficulty in a new way. Her enthusiasm until she was shown how to overcome the passing of it on to others.

To Begin With



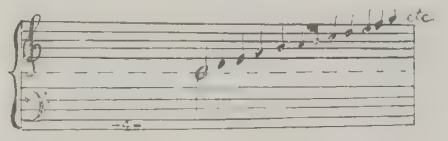
WHEN FIRST teaching the names of the *keys*, stress the importance of Middle C, and be careful to have its location firmly fixed in the pupil's mind before he leaves. Next, pay particular attention to teaching the *directions—high* and *low*. The latter is very important, because the child reads his notes through *relative* position more than by the actual pitch names. Hence, when teaching the letter names of the keys it is just as well to say to the pupil, "Play Middle C—play a higher C—play a low C." Or, "Play a D in the middle of the piano—now play a higher D—now a low D," and so on, so that from the very beginning he will associate the words "high" and "low" with the proper directions on the keyboard.

Correlating the Keyboard and the Notes

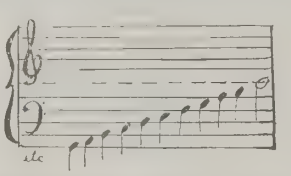
THE NEXT STEP—and rather difficult for some teachers—is the *correlating of the keyboard* with the *notes or symbols that represent these sounds.*

Remember to teach always *first the thing—then its sign*— in other words, *first the keys and then the notes.*

Place the clef sign thus:

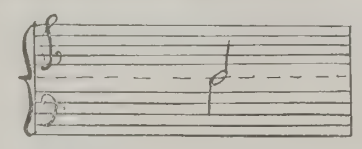


Next draw a large note to represent *middle* C exactly half way from either end, thus:

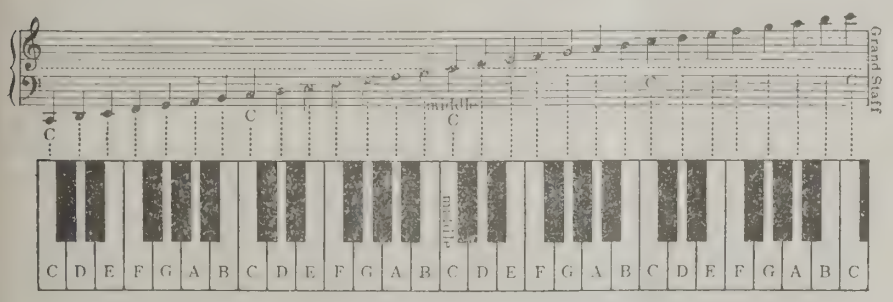


This note is middle C, the most important note for the beginner to learn, whether child or adult.

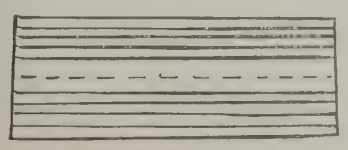
An excellent story to fix this point in the child's mind (and a point planted with a story is much more apt to "take" than one without) is this:



"The notes on the top five lines and the spaces in between belong to a *lady* named Mrs. G. or Mrs. Treble Clef. The notes on the five bottom lines and the spaces in between belong to a *gentleman* named Mr. F. or Mr. Bass Clef. But, Mr. Bass Clef and Mrs. Treble Clef are married and have a child named Middle C! Summed up: Mrs. Treble Clef and *her* family—



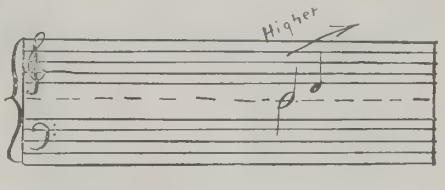
Mr. Bass Clef and *HIS* family



and THEIR family—MIDDLE C!

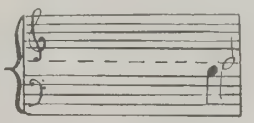
A chart like the illustration above is invaluable at this stage of the game. Any teacher can make one for himself or herself, and most publishers and music stores have them for sale. Take a piece of cardboard 28 inches long and about 5 inches high and draw the grand staff on it lengthwise, beginning with the middle line and adding five lines above and five below. Sometimes it is better to draw a dotted line for the middle one and for very small children a red line has been found helpful.

Note: Draw the pupil's attention to the fact that the FIRST LINE *BELOW* THE TREBLE CLEF AND THE FIRST LINE *ABOVE* THE BASS CLEF—IS THE SAME NOTE—*MIDDLE C.*



The chart may now be placed directly back of the keys against the name board of the piano—WITH MIDDLE C ON THE CHART DIRECTLY ABOVE MIDDLE C ON THE PIANO. The pupil should be allowed to take the chart home with him for the first two or three weeks.

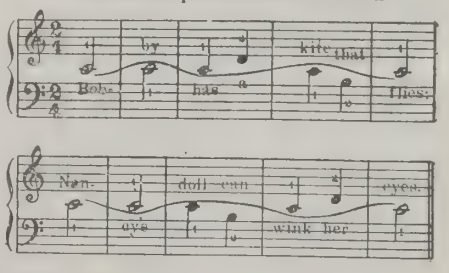
Mr. John M. Williams, whose Classes for Teachers, given from coast to coast, have attracted the widest attention, will contribute many articles to future issues of THE ETUDE. *Mr. Williams' "What to Teach at the Very First Lesson," "The First Year at the Piano," "Tunes for Tiny Tots," and "Book for Older Beginners" are materials of the greatest value to teachers.*



The next problem is one that frequently confronts the teacher of any subject—how to *correlate* THE KNOWN WITH THE UNKNOWN. In this case the pupil has learned the letter names of the keys of the pianoforte—so the KEYBOARD IS THE KNOWN. The notes on the Grand Staff—the symbol representing these sounds or keys—is the UNKNOWN. The problem is to correlate the two.

If you are making the chart with the pupil (and it is advisable in some cases—especially with wee tots; as the old educational maxim still holds good—"We learn by doing—not by telling"—and children like to "make things"), it might be well to explain that you are going to try and make a "picture" that will represent the keys or sounds.

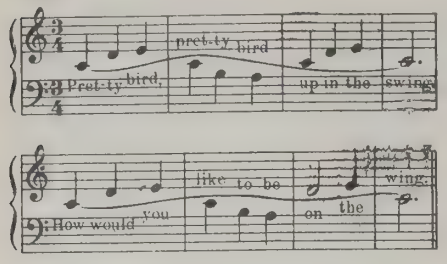
Have the pupil to touch Middle C on the piano and then to touch the note on the grand staff that represents it (naturally the chart should be directly back of the keys while this is going on). Now let the pupil play D on the keyboard—with the second finger of the right hand. Inquire if this is "higher" or "lower" than Middle C. If he answers "higher," then say—"Where shall we place the note that represents it on the chart—higher or lower?" Naturally the higher the keys or sounds, the higher the notes on the grand staff that represent these sounds. Thus:



Then play B *below* Middle C with the second finger of the left hand. The same question is asked, except the word 'lower" is used instead of "higher." Next, draw the note to represent this sound, thus:

The teacher may now sketch in the other notes, always being careful to draw the *note* on the grand staff immediately above the *key* it represents. (See illustration at the beginning of the article.) If the teacher prefers—especially with very small children—several little tunes using only Middle C and the note on either side may be here introduced and the child may be taught these before going any further.

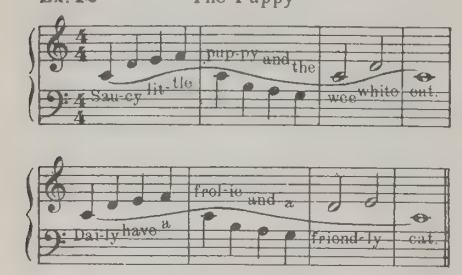
Ex.10
One Note Up and One Note Down



*The musical illustrations are from "First Year at the Piano," and "Tunes For Tiny Tots," by John M. Williams.

Be sure to allow the pupil to take the chart home with him, so that he may place it back of the keyboard on his own piano. In some cases it is just as well to have the note representing Middle C drawn in red—so as to draw special attention to it. Perhaps this will be sufficient for the first lesson, if the child is but four or five years of age, or if the pupil is fortunate enough to have a lesson every day or every other day.

At the second lesson another note on either side of the three already taught is



introduced; and the musical vocabulary now consists of five notes, thus:

Ex. 11 The Bird

We may now teach one or several little melodies, using these four or five tones; for instance:

Ex. 12 The Puppy

The child is thus learning his notes and simultaneously correlating them with the sounds or keys they represent on the keyboard, and doing it the best way possible. Remember to repeat the old educational maxim and you will know what I mean: *"A child learns by doing—not by telling."* The teacher will have to use his or her judgment as to how many new notes to introduce at each lesson. Some children of from 8 to 10 years of age will learn little pieces using five notes in either hand at the very first lesson; while children of three, four or five years of age should take a short lesson every day, and will thus probably learn the same amount by the end of the week.

Twins—two dear little children of three years of age—were thus taught their notes, and before they were four had learned an entire little book of pieces *by note*. Moreover, their music lessons had been kept a "happy time" experience with them. Each day they went "exploring," beginning at Middle C and gradually working away in either direction until they could play straight through their little book—*by note*—and it was such a gradual process that they did not realize they were being "taught" anything! In fact, they were not "taught" them, they simply "absorbed" them, much as a child absorbs vocabulary at home.

It is important that at the beginning every little exercise should be played three ways:

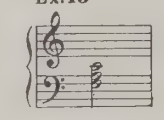
First: *Play and count aloud.*

Second: *Play and name notes aloud.*

Third: *Play and say the words aloud (or sing).*

Caution: The pupil should keep his eyes focused on the *notes*—not on the keyboard.

Sight Reading Important



A CHILD who reads easily and rapidly will be much more willing to practice than one who laboriously stops and counts up or down for each note that he plays. One of the greatest troubles the teacher of children has is that the child reads his little books *very, very* slowly and then *memorizes* them. At public school the better teacher recognizes this, and a pupil not only reads his "First Reader," but is given a *great deal of supplementary reading to do*—sometimes as high as sixteen extra books being used for this purpose during the first year alone. I believe we music teachers can learn something from this and will profit much if, instead of going direct from a preparatory grade into the first, we have the child read through, say, a half dozen or so supplementary books.

The writer hopes that every teacher of very small children will try the following, as it has been a tremendous help in sight reading where wee tots are concerned. The music rack on most pianos causes the music to be much too far from the child's eyes, and causes both eye strain and a constant looking *up* at the notes and *down* at the keyboard or fingers. This will be done away with entirely if the teacher or parent will try the following: Take a couple of common ordinary clothes pins and snap them onto the music book; then hang it from the music rack until it is, say, about two inches above the keys. The top line of the music book should be about *level* with the pupil's eye, so that he can see his hands and the notes without making two separate movements of the head. The child beginner in music has not the advantage of a half-size or quarter-size instrument as does his brother musician, the violinist. But he should make the best of what he has to work with. Try this and see how wonderfully the reading will improve.

Very young children beginning piano lessons should not take *one* of these Preparatory Grades, but *several*—sometimes as many as *nine*—before proceeding to the real instruction book.

Why? Because there is the physical side of the piano playing to be thought of, and babies should not be holding down several notes at one time, thus:

Ex. 13

as it presupposes more strength than the little muscles can produce without strain.

Another important item—one that should be carefully explained to the mother: No very young child should be *made* to practice. Keep the piano closed during the first few months of his piano lessons; and, when he has been "good," let the mother explain that, "As a reward," he or she may "make music" for five minutes—or ten minutes if the child is older, say, five or six years of age. When the practice period is up—*don't let him practice longer, even though he begs to do so.* Close the piano and say, "If you are good you may practice again after a while." The child should leave the piano stool *wanting to make music.* That is the secret! Remember it is not the number of repetitions of a thing that fixes it in the mind; it is the *vividness* of the *impression* that counts. Goodness knows, there are enough children who sit on the piano stool an hour every day for several years without learning anything—at least so far as the teacher can discover.

To Keep Students Interested in Classical Music

By W. L. Clark

1. PRESENT the material vividly and stimulate the pupil to know the great masterpieces.

2. Teach the student to comprehend the noble aspects of the lives of great composers, for thus will he begin to realize the magnanimity of their works.

3. Stress thoroughness of execution, for interest is aroused only in those compositions which are well done.

4. Give assignments to develop musical appreciation as well as to improve technic or assist memory.

5. Stress classical music in recitals and concerts, thus requiring from the start the best in musical rendition.

Don't Hurry! The Tortoise Won

By Joseph Kruger

REAL progress lies in pushing as far forward as possible in the mastery of the piece at hand rather than in skipping wildly from one to another and perhaps not really getting ahead at all. Interpretation of a new piece must wait until the technical aspects of it are mastered. An effective crescendo in a run cannot be attended to while the mind is taken up with playing clearly or using correct fingers. The phrasing cannot receive due attention while there is a possibility of playing a "sour" note.

Composers do not write merely to show off finger gymnastics. They make expression such a point that interpretation is the important thing and technic but a means toward exercising it. So, see if the phrasing is correct, watch the dynamics, work over the tone, get the correct pedallings. All these things take a great deal of time and concentration which it is impossible to give if, as soon as the technic is mastered, there is a wild hurdle for a new piece.

Do not see, therefore, how quickly the old piece can be laid away but rather how far it is possible to go with the last composition before starting something new. Remember, the plodding tortoise won the race!

A Music-Sharing Plan

By Robert Price

THERE are dozens of music books and "pieces" in every musician's library, which lie unused year after year because the owner's immediate need for them has passed and because no one else knows of their presence in the community. A group of music lovers in a little Indiana town has conceived and put into effect the following music-sharing plan.

Each co-operator prepares a list of the standard selections in his possession. These lists are given to a stenographer who combines them in carefully catalogued form and then makes mimeographed copies for each participant. These lists are arranged alphabetically according to composers. After each selection the person of whom the number might be obtained is indicated. The following excerpt suggests the system:

COMPOSER	TITLE	OWNER
MacDowell, E. A.	*Witches' Dance*	Smith
	Woodland Sketches	Jones
		Brown
Mendelssohn, F.	*Rondo Capriccio*	Adams
		Bishop
	Songs without Words	Carter

To facilitate the plan, a few simple borrowing rules are agreed upon: (1) Each lender must keep his own account of music loaned; (2) records are to be cleaned up regularly at the end of every six months and each selection accounted for at that time. The little courtesies of careful handling and mutual accommodation are taken for granted. The scheme has proved a great convenience.

The lists have been revised occasionally and new participants included. At no time has the cost of having the catalogues prepared been great when divided equally among all the sharers. In fact, the added convenience resulting from the arrangement has made the expense trivial.

"Interpretation can come only when the technical side has been polished and perfected; but every stage of the preparation should be based on rhythm, since, with an understanding of this principle, the most complicated composition becomes clear."

—SIR DAN GODFREY.

Leschetizky Memorial Dedicated

WE ARE indebted to Mrs. Fannie Bloomfield-Zeisler, the distinguished pianist, for the picture of the new memorial to Leschetizky, which she has been good enough to send to ETUDE readers, from abroad. The dedication services took place in the Central Cemetery in Vienna, on the 26th of September. The ceremonies were opened by the performance of Beethoven's "In questa tomba," played by a quartet of French horns. Mrs. Zeisler, the secretary of the memorial fund, then presented the beautiful monument to the municipality of Vienna. Among those present were Marie Prentner (author of "The Modern Pianist," the authoritative study book upon the Leschetizky method), Ignaz Friedman, Mme. Gabrielle Leschetizky, Professor Godfrey Smith from Sydney, Australia, Emil von Sauer and Georg Reimers. The dedicatory address was made by Dr. Heinrich Steger, who called attention to the fact that although Leschetizky was not born in Vienna he enthusiastically adopted the City of Haydn, Mozart, Beethoven, Schubert and Brahms as his home and was therefore always looked upon as a Viennese.

Interesting Ways of Giving the Harmony Examination

By Helen Oliphant Bates

HARMONY teachers will find the following informal methods of giving examinations interesting to the pupils:

(1) Two captains may be appointed or elected for a harmony match. Each captain will then choose her team, the first captain choosing first, one helper, and then the second captain choosing one, until all pupils belong to one of the teams. The teams will then form two lines and the teacher will proceed to ask questions, alternating between the two teams. Whenever a question is answered incorrectly, the person missing it must sit down. The game continues until all the members of one team are out.

(2) The teachers will make a deck of cards, each card to contain a key signature and a chord in the key given. The pupils gather around a table where the cards are turned up one at a time. Each card as it is turned up becomes the property of the girl first giving the correct name of the chord on it. When the chords of the entire deck have been named, the person holding the largest number of cards is winner of the game.

How Kullak Taught Octaves

By the Distinguished Pianist-Composer Commendatore

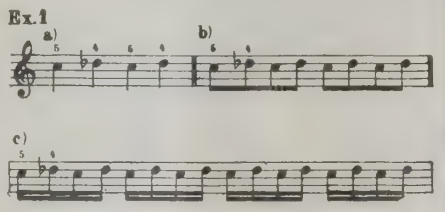
EUGENIO PIRANI

OCTAVE PLAYING is one of the most important departments of pianistic art and Theodore Kullak was one of its most famous exponents. This is strikingly demonstrated in his treatise on octaves.

When I was in Berlin, Kullak honored me with his friendship. As he liked my way of playing octaves he instituted in the "Neue Akademie der Tonkunst" (Academy of Music) of which he was the director, an "Octave Class" of which he gave me full charge. As the opportunity was often mine to discuss with the master all the possibilities and phases of this special department of piano playing I shall try to give herein a concise summary of those inspiring conversations.

Octaves must be divided into two sections—those played *staccato* and those played *legato*.

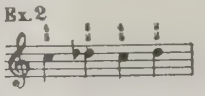
Staccato octaves are executed from the wrist with an elastic, light stroke, except in cases where great force is required. Then they should be played with the whole arm. The hand should spring up immediately after the stroke like a rubber ball. Staccato octaves are generally fingered 5/1 on the white keys and 4/1 on the black.



These fingers must be stiffly outstretched with forefinger and middle finger held up as high as possible in order not to touch the intervening keys. It facilitates the execution to raise the wrist slightly on the black keys and depress it on the white ones.

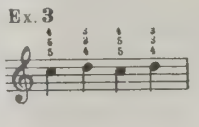
Repeated octaves, first taken slowly and then with increased rapidity, and chromatic and diatonic scales in all keys, should be practiced, care being exercised as before to lift the wrist on the black keys and lower it on the white. Also octave passages in broken chords (in major and minor triads, and in chords of the dominant seventh, for instance), should be diligently practiced in all keys. It is astonishing how great elasticity of the wrist can be acquired through constant exercising in staccato octaves.

A far more arduous task confronts the pianist in the mastering of *legato octaves*. In spite of the wide spreading of the fingers in this interval, it is possible to attain an almost perfect legato in the performance of octaves. I say "almost" perfect because only the upper notes of the octave can be thoroughly tied, while the lower notes can be bound only approximately.



Let us divide this work into two tasks, the legato of the upper notes and that of the lower ones. The foundation of the legato of the upper notes is the passing of the fourth finger over the fifth ascending (and of the fifth under the fourth descending) and occasionally of the third over the fourth (ascending). This is done in the following way: Strike C with the fifth finger, bend it as far back as possible and strike *D flat* with the fourth finger stretching it out as far as possible. In this way you will be able to bind the two notes with this unusual fingering. Practice first slowly in quarter notes, as in 1a, then more quickly in bend the fourth and stretch the third.

Ex. 1

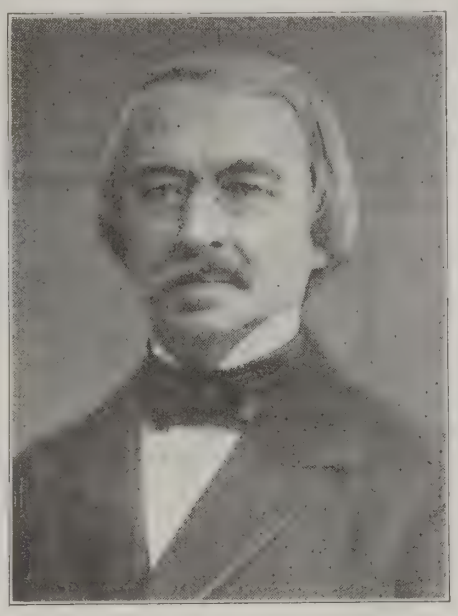


After that substitute the fingerings the fifth to the third, and the fourth to the third. In the first case bend the fifth and stretch out the third; in the second case, bend the fourth and stretch the third.

Ex. 2

A further step is taken by tying two *white notes,* first with the fifth and fourth, then with the fifth and third and last with the fourth and third.

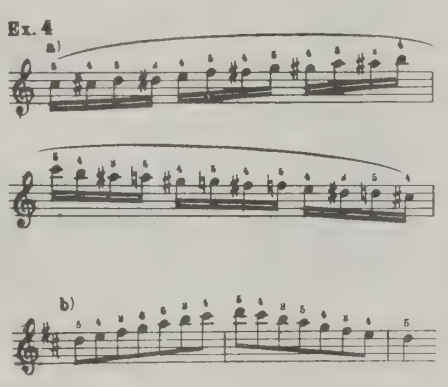
Ex. 3



The bending of the fifth or fourth and the stretching of the fourth or third must be here much more intensified as the two keys are a whole instead of a half tone apart.

Attending difficulties will disappear with repeated efforts of bending and stretching if exercises along this line are practiced with *the free hand before proceeding to the keyboard.*

Try, for instance, with the free hand, to bend the fifth finger alone and then the fourth alone while the other fingers remain outstretched.



The first group of exercises will enable the pianist to perform *chromatic scales*

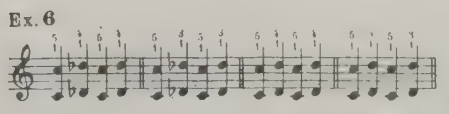
THEODORE KULLAK
from a portrait owned by Commendatore Pirani

with perfect legato, as in 4a, while the second group will enable him to play the *legato diatonic scales,* as in 4b.

Ex. 4

These exercises prepare the student for the legato execution of the *upper notes* of the octaves.

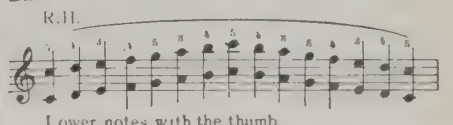
The lower notes must all, without exception, be performed with the thumb. I said before that here only an approximate legato is obtainable, as, for instance,



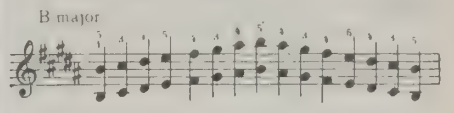
Ex. 5

Still, it is marvelous how near one can approach the legato through a kind of crawling, creeping-like sneak from one note to the other. After a diligent practice, the keenest ear can hardly detect the separation between the two notes. It is, of course, only an imitation but one which is decidedly deceiving. The "empty space" between the two notes can be reduced to a small fraction of a second.

Consequently passages like the following

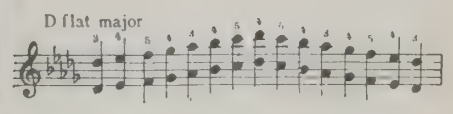


Ex. 6

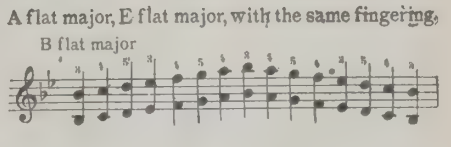


are not so very difficult to perform.

A complete fingering of legato octave scales in all keys follows:

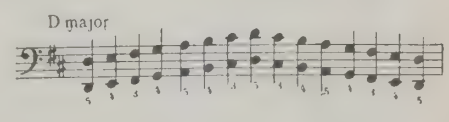


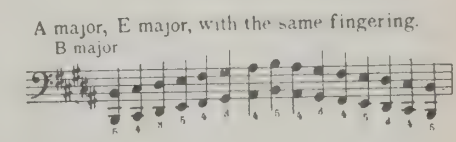
Ex. 7



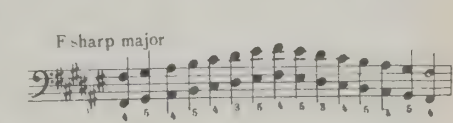
G major, D major, A major, E major, with the same fingering as C major.

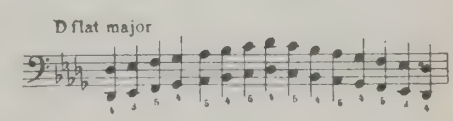
A flat major, E flat major, with the same fingering.

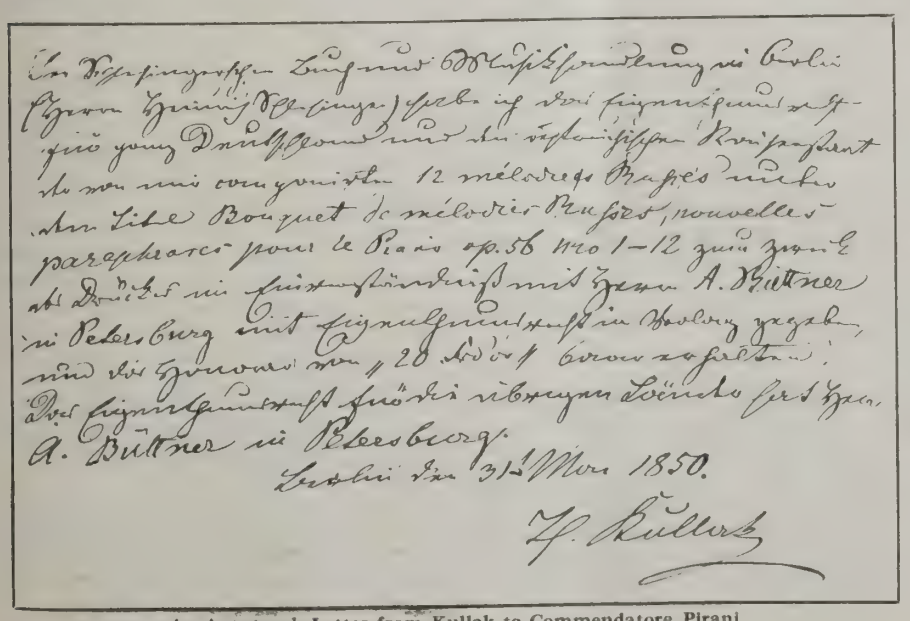




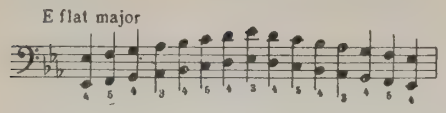
Left Hand

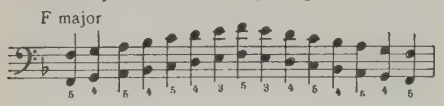






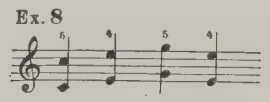
A major, E major, with the same fingering.





An Autograph Letter from Kullak to Commendatore Pirani

E flat major



B flat major, the same fingering.

F major

A step further in legato octaves will be taken by increasing the width of the intervals, that is, by performing broken chords in legato octaves:

Ex. 8

Here the bending of the fifth and the stretching of the fourth (or third) require great flexibility and skill.

(*For the left hand the same exercises and the same remarks are to be understood in the reverse sense.*)

The student should not be discouraged, if, in the beginning, this fingering of legato octaves appears to him a hard nut to crack. Let him be assured that it is within the bounds of possibility.

IT CAN BE DONE!

. . .

Though I have spoken at length about the importance of Kullak as an authority in this special branch of piano technic, I should not like to give the impression that he was circumscribed in the narrow boundaries of an octave specialist. He was far more than that: a great artist in the broadest meaning of the word. Technic was to him only a means to the end. In his interpretation he was a true poet.

Often I heard him contradict furiously those who belittled the piano as an instrument which could not sing and consequently was unable to compete with other instruments with a sustained tone, like violin, cello, flute or the human voice. "Give me a good trio (piano, violin and violoncello) composed of first-class players," he used to say, "and you will see if the piano appears at a disadvantage when it comes to perform the same melody as intrusted to the violin and to the violoncello. It is a real feast for me to let them feel like two cents the moment the piano takes possession of the theme."

He was perfectly right. A full fledged pianist with a good piano under his fingers can take the prize from any other instrumentalist, no matter whom.

Theodor Kullak commanded the admiration of his greatest colleagues, such as Rubinstein or Bülow, and when they were in Berlin they never failed to call on Kullak. They used to perform for one another's benefit. What a pity that this great artist was vexed by an uncontrollable stage fright. He began to play like a Jupiter Tonans, but soon lost control of himself; a kind of vertigo seized his brain; and he became almost paralyzed.

Although this nervous condition did not allow him to appear in public he was one of the greatest pianists of our time. With his fleshy, supple, thoroughly trained fingers he was able to lure from the piano a singing tone of rare beauty, as well as powerful orchestral effects. Besides his octaves, his double notes, scales and arpeggios were of faultless purity. His interpretation was full of dramatic contrasts and poesy. Indeed, he was master of the whole classical repertoire.

"To have crept into the hearts of millions, added to their joys, and solaced their sorrows, is surely a nobler record than to have been the idol of a clique, or the pet of pedagogues."—FRANCESCO BERGER (writing of Weber).

When to Practice Each Hand Alone

By May Hamilton Helm

THERE are two good reasons for practicing each hand alone: First, to master fingering unusually hard in either part; second, to bring out a melody that is not clear to the student.

But in sight-reading it is almost a waste of time to play each hand separately. Since the two must play together eventually, why not employ them so from the start? Of course, only the simplest pieces should be chosen to begin, then those gradually increasing in difficulty. Skill in reading at sight is thus acquired by degrees and both hands trained to function simultaneously in the process of sight reading.

Practice Audiences

By June A. MacLennan

USING the imagination to make the audience become a minus quantity is the usual solace of amateur performers. But the elimination of nervousness should begin when the pupil practices in private. If he pretends he has an audience of great musicians he will strive for exactness, effective touch, correct pedaling and, finally, a colorful interpretation of the composer's ideas.

Peopling a private studio with great masters and striving to interpret correctly is a real public trial to accustom the player to an audience. He will not then be confused by the reality. This is of far more value than pretending he is alone during a public performance.

Good Equipment Necessary for Good Instruction

By John Duddy

ONE OF the foremost things conducive to the training of students is the equipment of the instructor. Let us touch briefly upon the following five subjects:

1. Location: The requirement for a good studio is that it be in a good residential location, in the heart of the business district or other place easily accessible from any point. Students are not slow to criticize nor the public to find fault if the studio surroundings are unlovely. Regardless of his ability to teach, ten chances to one the instructor's list of clients will be small.

2. Light: Plenty of good daylight and air is in itself a wonderful "pep" producing agency. The room, if not well lighted and ventilated, produces a stupor or laziness which takes all interest from the lesson.

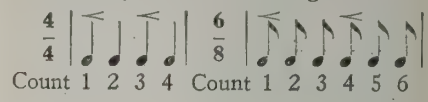
3. Heating: The temperature should average about sixty-eight degrees. This removes all traces of mustiness and chases cobwebs from the brain. In the winter months a small gas heater, if no other is available, would suffice to take off the chill. If the room be too warm, the instruction is lost sight of through inattention.

4. Isolation: The studio should be in some place shut off from distracting noises. Privacy alone helps gain the confidence of the student and self-consciousness is lost, much to the teacher's and his pupil's advantage.

5. Furnishings: Several easy chairs, a desk, a bookcase for your reference books and library, an alphabetical music filing case and numerous small lamps of various delicate pastel shades—these, plus your instrument, lend a distinctive atmosphere to the studio. Useful things, such as the telephone, the typewriter, musicians' pictures and musical magazines, all aid in forming a well-equipped studio. Go to a dingy studio—one which never sees a dust-cloth from one year to another—and you will find work that fails to carry the message which teachers of music are privileged to impart.

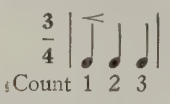
It is far more difficult to keep pupils in the proper spirit for music than it is merely to gain their patronage. These points, carefully considered and acted upon, will go far toward maintaining the required standard of excellency.

Schubert the Modernist



Schubert's works were considered so modernistic that when, in 1844, sixteen years after the death of the composer, his admirer Felix Mendelssohn, tried to produce Schubert's "Symphony in C" in London, he met with so much opposition from the orchestra that he was obliged to substitute his own work "Ruy Blas."

The Young Student's Measure



By Eutoka Hellier Nickelsen

THE young child should know that:

1. Every measure contains at least one strong accent.
2. Accent is special emphasis given to a tone.
3. There are two kinds of accent, measure and melodic.
4. Measure accent comes at regular intervals.
5. Melodic accent may be used whenever the composer wishes a certain tone emphasized to bring out the melody.
6. Measure accent is divided into two groups, primary and secondary.
7. Primary is the stronger accent and always appears on count "one."
8. Secondary is the less strong accent.

9. Secondary accent does not appear in 3/4 measure.

10. *Sforzando,* or *Sfz,* as it generally appears on the printed page, calls for an extremely strong accent to be immediately followed by *piano,* the latter word meaning to play (or sing) softly.

Relative Minors

By Dorothy Bushell

IT IS important that the student should be able to distinguish readily minor from major chords. Before attempting to play a minor scale, or to describe it to the student, the writer's method is to sit at the piano (taking C major, for example), strike the tonic chord, C E G, several times, and follow it by the playing of the complete scale.

After describing these as the "happy" scale and chord, and while the pupil's ear is still expecting the major chord, a sudden transition is made to the relative tonic minor chord. This is described as the "sad" chord. This process is repeated with all the tones of the C major scale so that the pupil cannot fail to distinguish between the "sad" and the "happy" chords. This in itself is valuable ear training.

Another difficulty in teaching young pupils is the definition of the term "relative minor."

A short time ago the writer used the following method with a small, intelligent boy about to begin his "minors."

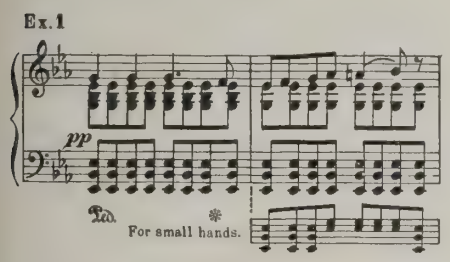
"All the major scales have relative minors living two doors below them. For instance, C major has a cousin living two doors below him called A minor. Their respective key signatures are the same because of the 'relationship' which exists between them. C major's house is necessarily above that of his cousin, A minor, because the term 'minor' actually means lower or subordinate. Thus the minor cousins always live *below* their majors: D major's relative is named B minor, and so on."

The child grasped the idea immediately, and was able to trace the relative minor from the tonic of every major scale indicated on the key-board.

When teaching the minor scales it is very important to point out clearly the position of the tetrachords and where the semitones occur in both melodic and harmonic forms of the minor scales.

Beethoven's Piano Sonatas and How to Play Them

By PROFESSOR FREDERIC CORDER
of the Royal Academy of Music of London, England

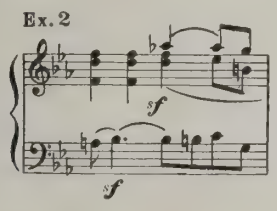


Each Article in This Series is Independent of the Foregoing Articles. This is Part VI.

Sonata No. 13 (Sonata quasi una Fantasia) Op. 27, No. 1, in E Flat

THIS SONATA, by its rather vague sub-title, "In the style of a Fantasy," would seem to imply that it is somewhat rambling and incoherent in plan. Such was doubtless the composer's intention, but at the period when he wrote it he had not discovered how to write rhapsodically. His composition persists in presenting itself in watertight compartments, and it is in vain that he writes *"attacca"* at the end of each movement (meaning "follow on") when he contradicts himself perpetually by making an emphatic cadence with a pause after it. The first movement, at any rate, is an ingenious attempt to get away from the discontinuity of a theme and variations by the agreeable expedient of breaking out into an *Andante* and a *Scherzo,* yet relapsing into his variations again and again. This would make an excellent piece to play by itself, and the reason why it is not done can only be a disinclination to expose Beethoven's failure of plan.

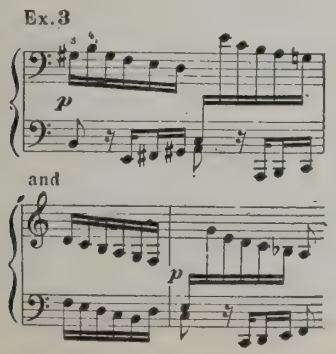
The variation movement (not so entitled) has an exceedingly simple subject, the rendering of which hardly needs explanation. The melody must stand out well, the lower parts, especially in the right hand, being kept very subdued. It is imperative to observe all the repeats, which are only made to save printing expenses. After the the first three sections they are written out at length. Observe how naturally the little episodic *Andante* thrusts itself in. Here the under parts must be even more restrained. How tiresome it is that the tenth measure is beyond the stretch of most right hands! It does so spoil the music to spread the chord. The only alternative is to let the left hand come to your assistance, thus:



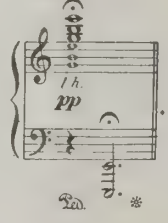
Ex. 1

which helps to keep the melody smooth also. You could not be so unmusical—so heartless—as to omit *this* repeat. Why, it would be cutting a tune in half!

I must remind you that every time the chord at measure 7 recurs the right hand must realize that the *sf* applies only to the top note



Ex. 2



and everything below must only be a light support. (See my remarks on Sonata No. 8.)

With startling suddenness a *Scherzo in C major* bursts in upon our tranquility. Now is the time to show what your fingers can do. It is some relief, I find, to let the left hand help the right hand in two places, measures 43 and 51.

Ex. 3

Ex. 4

Also the chord at 62 needs a "breath-pause," or momentary break for the sake of the *sf* and for the assistance it lends.

Now the *Andante,* undisturbed by this boisterous interlude, resumes its placid course. Take extra care to keep the melody *dolce* when it comes in the left hand and avoid hurrying the *coda* (79-86) which, on the contrary, wants to be *calando.*

On the modern piano the last measure sounds somewhat thin, though some people may believe this to be the composer's intention. I think it sounds better filled out thus:

at least add the low E flat, which Beethoven would no doubt have done if he could.

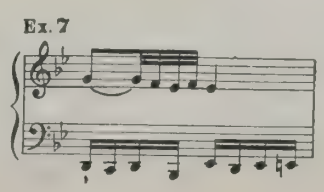
Now comes the real *Scherzo,* and it will tax your powers of skipping to the utmost; so do not be beguiled into playing it too fast. Also you will find it worth while to take a blue pencil and tick off the measures in twos, beginning with the *second* bar-line; otherwise you run a great risk of losing your way in the rhythm, especially at 78. On no account omit any of the repeats. From 70 to 76 there comes a very important *crescendo,* culminating in a sudden *p,* the first time, and a momentary *f* the second. This is rather a trap for the hasty player.

When the *Scherzo* resumes, with a syncopation between the hands, you will realize the value of my warning against going too fast. The skips are now more trying than ever, especially in the short *coda* (138). Lean as far over to the right as you can for these four measures, and, of course, take the left hand right to the bottom C of the piano. It was very sad for Beethoven to have to turn back for the last three notes. This repeat of the *Scherzo* is made much harder by the right hand being *legato* against the left hand staccato, causing the latter double the amount of exertion to that of the former. The beautiful *Adagio* which follows is all too short and not so easy as it appears.

In the 6th measure there is a trill that is apt to cause trouble. The melody being in octaves, it is hard enough to play the trill as a five, or even four-note turn, but if the left hand reaches up and plays the second sixteenth-note the right hand can easily play a six-note trill. But in that case there is really no reason why the left hand should not play a trill also, thus:

Ex. 5

Of course, one does not usually double a trill, but this one presents so slight a difficulty that it seems a pity to mutilate the passage for nothing. Only play the trills very lightly. At 17 keep all the under parts very subdued and try your best to make the trill in 18 not seem a struggle. Whatever way you elect to play the trill in 6, the two trills in 22 and 23 must be played similarly. In this way they will go:



Ex. 6

In the next measure make a *rallentando* on the first four eighth-notes so as to be in keeping with two which follow. The fifth cannot be played *legato,* as it would get in the way of the right hand; but a momentary touch of the pedal will conceal the break. In 25 is a *downward* trill on Ab, which had to be written in full, as there is no recognized sign for this ornament. This is followed by a normal trill on the same note, beginning on Bb and ending with a cadenza, which starts at the same speed, but slackens till the last three notes are at the pace of quarters. The inexperienced always try to play such passages as they appear on paper, changing suddenly from quite quick to quite slow. There is no way of making clear to the eye the gradual slackening which is a common feature of ornamental passages, so composers usually write as Beethoven has here done.

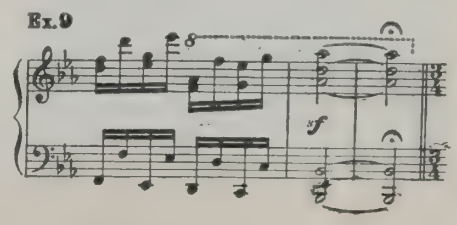
For once two movements are really linked together. Now, for goodness sake, do not be misled into starting this *Allegro* too fast. There are some troublesome bits of fingering in it. The trill in the second measure will probably have to be reduced to

Ex. 7

for if you get more notes into it, being so low down in the piano, it will sound an indistinct muddle. After the first eight measures I advise you to play the next sixteen with the thumb of the left hand, always on Bb, turning the forefinger over on middle C when required. At 25 don't get flustered by the skips for the two hands. Keep them parallel and make up for lack of speed by the changes from *f* to *p.* If you try to hide the break by the use of the pedal, use it very neatly and momentarily. These done, comes a curious passage of broken sixths for the right hand and for the left hand.

Raise the left *above* the right, holding the wrist high, while the right hand keeps close to the keys. At 48 it is more comfortable to avoid the entanglement of hands by letting the right hand assist the left by playing both notes on the first of the measure for five measures, thus:

Ex. 8



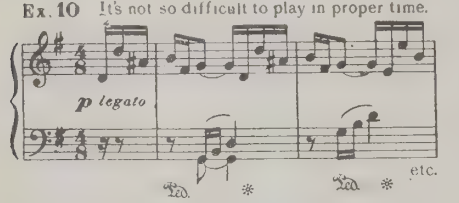
This is the best way to avoid confusion in what is otherwise a dangerous passage. The right hand octaves which follow are kept steady by the left hand sixteenth-notes; but from 71 onwards mind that you mark the first of each measure, the rhythm being awkward to hold in mind. At 74, if you can possibly reach it, keep to the left-hand fingering which I hope you will have been using in the left hand for some five measures—2, 1, 2, 1,—if you play all the middle notes with the thumb it tends to confusion. At least be sure to use this fingering in measures 76 to 78.

The next portion is pure repetition; only mark the turning point at 104, where you are shunted into the key of G-flat. Bear that change of key in mind and the numerous accidentals will give you no trouble at all, the visits to Eb minor and Bb minor being quite obvious. Next we have a comparatively simple modification of the broken-sixth passage which was so troublesome a while ago, and this leads us back, with the favorite effect of a *crescendo* cut off at its climax, to the third appearance of the principal theme. Recognizing that the movement is in *Rondo* form, we expect, and get, all the first portion of the music repeated. All we have to look out for is the alteration which shall enable the former "pedal passage" (36-54) to reappear in Eb instead of Bb. This takes place on the last eighth-note of 195, and it is the few measures here that you have to watch out for. The "pedal-passage" now comes on Bb, slightly modified. The change of key renders it necessary to change the position of the hands at 216, as before we did at 44, and to take two notes with the right hand on the first of measures 216 to 220.

Do not fail to notice how Beethoven was compelled to weaken his climax by stopping the upward scale in the middle of 253. Of course, it should have gone

Ex. 9

The *Adagio* is then repeated in a neatly abbreviated form. Look out for the two trills, the first accenting A♮ and the second C. Also the *cadenza* slackening down from sixteenth-notes to quarters. Lastly, beware of starting the final *Presto* too fast, or you will render the sixteenth-notes impossible. To find the pace play measures 278 to 283 as fast as you can with safety, following them immediately by measures 266 to 269, counting the time. Nothing gives you away more than to start *Presto* and then have to pull back ignominiously.



To be able to play this Sonata well marks a very definite stage in the progress of a player. You need to remember all the devices for circumventing the many unkind difficulties the composer has placed in your way, for they all recur in the more advanced works yet to come. As your powers of sight-reading increase you will, I hope, perceive that injudicious notation is a very formidable stumbling-block, and one that can be finally surmounted by a little thought. I consider that the music of Beethoven is so valuable a factor in the education of a pianist just because of that fact—you have to translate the method of speech so frequently without altering the speech itself; you have to translate music written in two staves—treble and bass—into the idiom of *one hand possessed of ten fingers and unlimited stretch.*

Sonata No. 10 in G-Major Op. 14, No. 2

THIS IS A Sonata one cannot afford to pass over. Though less robust in the musical contents than some, it affords excellent practice in unusual rhythms, especially for the less advanced student.

The very opening measures force you to feel your time, so unusually distributed are the accents. It could certainly have been given more appeal to the *eye* had the notation been thus:

Ex. 10 It's not so difficult to play in proper time.

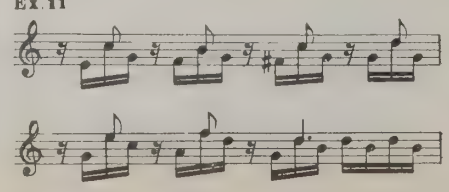
for the inexperienced or thoughtless player seeing a group of notes always instinctively accents the first of the group. The dotted eighth-note, too, breaks the rule that bids us not express by a dot the extension of a sound over the strong beat of a measure. In any case, a note is easier to read than a dot. Until you have become familiar with the music it will be better to count "one, two, three, four" eighth-notes to every measure. The trill at the end of 9 begins as usual with its upper note, and consists of six little notes. By the time you reach 20 the left hand will have become so accustomed to the groups of four that it should find little or no trouble in fitting them against the triplets of the right hand. The fingering for the right hand at 6 to 12 is best taken $\frac{5\ 4}{3\ 2}$ throughout—that is, using no thumb at all. On no account let either finger play two consecutive notes; if you do, away goes your slur. In 33 is a good test of your ability: the upper notes form the melody, but, as they are played with weaker fingers than the lower notes, they are apt to get overpowered. If they do, stop and gravely box your own ears, not hard, but just enough to punish yourself for not listening, but trusting to your fingers that have no sense.

At 47 the music is marked *dolce.* That really describes more the character of it than the method of playing. Of course, the melody in thirds must stand out (Beethoven forgot to write eighth-note tails in the first measure) and the middle A's can be played (very delicately) with whichever thumb finds it most convenient. At 58 the middle part must die down to a mere murmur, the top melody becoming more and more insistent.

Interesting Development

THE DEVELOPMENT is very interesting. At 70 the two hands echo one another—what is called Canon—and then revert to the melody in thirds of the second subject (fingered as before) and then the left hand takes over the main interest for no less than seventeen measures, working away at the first subject, varied by scale passages, while the right hand maintains an unobtrusive accompaniment of easy triplets. They are purposely kept easy and unobtrusive so as not to interfere with the left hand. This affords a capital practice in two against three and independence of the hands. Presently (107) the right hand has it made up to him by some brilliant runs, well supported by a smooth quiet part below. Then more two against three, the hands changing over their duty and a "climbing down the ladder" passage for the right hand (finger this 2, 4—2, 4 throughout) leads us back home. There is nothing fresh in the recapitulation, but you need to make a very nice *diminuendo* in the final measures, which otherwise will sound poor.

The slow movement is an air with variations, though not so entitled. It is one of the easiest movements, technically, in all the Sonata, so you can devote all your powers to accent and phrasing.



As to the time, now. It is customary in our day to consider the final strong accent of a *cadence* as falling on the first of a measure. It is a convention not without its exceptions, and in Beethoven's time it had not been made into a definite rule, or he would have begun on a half measure. But what makes him mark so obviously four-in-a-measure movement 𝄵 ? Of course, four is always 2 x 2, but when the pace is *Andante,* what is gained by desiring one to count impossibly slow half-notes? Fancy the 17th and 18th measures regarded from that point of view! But it doesn't matter; one would count four in a measure, anyhow.

A Two-Fold Task

WHEN IN THE first variation (21) the melody is taken in the middle octave by the left hand you must remember what I told you about the second subject of the slow movement of the Eb Sonata (Op. 7). The left hand has a two-fold task, to play a middle voice *Cantabile* and to play a smooth bass, both being *Legato.* To effect this he has to slide and creep and make his thumb perform acrobatic feats. Practice the left hand alone; you will see. In the second variation (43) the upper notes of the left hand must seem as though played by the right hand, forming part of his chords, so try to make them sound as though they had no connection with the bass notes. The same in the second half of the variation where they grow into big chords. There are four measures of joining, leading into the last variation. Note that they are all *diminuendo,* but they begin *p* and diminish to *pp.*

This last variation is not easy to pick out the kernel of. The theme is hidden away in the midst of an accompaniment figure in the right hand; so don't jump at the idea that the left-hand part is the most important. It would have been much clearer written thus:

Ex. 11

Once you catch the idea it is simple enough.

By this time I hope you know better than to play C♮ for the last note of 71. That is all I have to say about this pretty movement, except that I rather yearn for an E to resolve the F upon in the middle of 86. Get the final measures as delicate as you can and startle everybody with a "bang" at the end.

The last movement is headed "*Scherzo,*" which means a joke. This implies that its character is wayward and humorous. You will find the time very "catchy," and the best way is to begin by playing measures 24 to 26 three or four times over, counting "one, two, three" in a measure. Then see if you can follow it by the opening, the difficulty of which lies in the "cross-accent." You *must* feel where the *one* the *two* and the *three* come in each of the first two measures.

When you have conquered this difficulty I should advise you to evade Beethoven's unkind joke in 10 by marking the chord on the first of the measure with an R, and the high C with an L. The same two measures later. The exaggerated skips were his idea of fun, but I cannot see the humor of doing a thing with difficulty when it can be done quite easily. The needless trouble to which he puts you is even more obvious at 66-68, where you need to mark the skips L, R. Put a slight accent on the first of 65-7-9 and 71 to see that you don't lose the time.

A Subdued Left Hand

THE MIDDLE SUBJECT, which starts at 73, requires you to subdue the left hand accompaniment very much. The sixteenth-notes figure has no particular interest and the bass 77-9 can then stand out slightly, without overpowering the melody. This flows easily along, the pace having insensibly slackened, till at 124 you feel quite staggered by the return of the first subject. Begin counting your time at 123 to avoid being put out by the cross rhythm.

I may tell you that this cross rhythm, which cunningly makes two measures of three time into three little bits of two, is a standing feature in the Bohemian dance called a *Furiant,* which you meet with frequently in the music of Dvořák and Smetana. If you will step to the music of Beethoven's subject you will feel how provoking it is to have the accent driven from one foot to the other. From this descended the delightful *Valse à trois temps,* now forgotten, but certain to be revived some day.

Well, on we go with our recapitulation until at 185 you find a cadence which is very difficult to play up to time. I will concede a slight—but very slight—pulling back, for the relief of the *Coda* which follows, and in which the triplets will fairly have to gallop. It is fortunate that they are so easy during the last page, for the right hand has got some terrible skips here. Don't let the left hand hustle him, and don't dash at the skips, whatever you do. When we reach 237 you find out that you have all along been misreading the first subject, in spite of my kind advice to prepare yourself by playing 24 to 26 first. Now that you have reached the end, try the beginning again immediately, and it will feel far too slow. That shows that you played it far too fast, because there was no left-hand part to check you. Moral: Count your time.

Self-Test Questions on Mr. Corder's Article

1. *What ingenious effort does Beethoven make in the first slow movement of his Op. 27, No. 1?*
2. *What particular limitation of the piano of his day did Beethoven have to take into account in his compositions?*
3. *What characteristic of Beethoven's music makes it of particular educational value?*
4. *For what special technical problems does Op. 14, No. 2 afford study?*
5. *What rule as to final strong accents has been established since Beethoven's time?*

Musical Postcards

By G. Henry

THE development and control of the imagination in any form of art is a factor irretrievably wedded to all that is creative, interpretative, and expressive in that art. This is a fact that none will dispute. Yet, in the world of music, however blandly we accept the principles that govern the use of the imagination; as musicians, and more especially as teachers of music, we are inclined to neglect the practical urgency of this indispensable feature. As a consequence we find that the individual imagination is allowed to languish.

It will also be recognized that a practice of the art of improvisation is highly conducive to a development of the imaginative faculties; and it seems a pity that this form of musical self-expression is so much neglected. It is an index of good musicianship; and, besides, it is really fine fun! I seek, then, to employ improvisation for developing the pupil's fancy.

I have for some years made use of a plan of improvisation, which has proven a real stimulant. One of my earlier pupils called it "Musical Postcards;" and, apt or not, the name has stood. In brief, here is the idea.

I ask the student to play, in a phrase or two, his impression of a particular event, place, character, or quality. So wide is the choice of subject matter that there need be no difficulty in drawing out the most of which the pupil is capable. "A Sleigh Ride," "A Fair at Stamboul," "The Oasis," may be selected. By treating different places of the earth and different races of mankind, a desire for broader knowledge is instilled. A pupil, playing a few measures to express "San Francisco Chinatown," at first gives nothing but an incoherent jumble of sound; but a hint dropped concerning the peculiarities of the Chinese scale brings him, after serious study, to an interpretation marked by a portrayal of Oriental idiom and instrument.

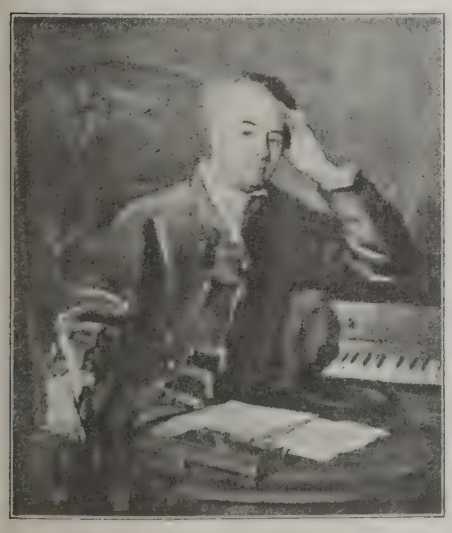
A great variety of interesting experiments may be performed by this method, and with a little cleverness the teacher should be able to discover the latent powers of each particular student.

Schubertiana

SCHUBERT was so prolific that sometimes he did not recognize his own works. It is said that once, when he heard a singer present one of his songs, he exclaimed, "That is a very good song. Who wrote it?"

Schubert worshipped at the shrines of Haydn, Mozart and Beethoven. He is said to have known comparatively little of Bach and did not really discover the extent of Handel's work until shortly before death.

Character Study of George Frederic Handel



Third in a Remarkable Series of Biographical Articles

By the Eminent Composer-Critic

FELIX BOROWSKI

TO NONE OF the musical immortals was it given to travel through life with the pomp and circumstance which attended the career of Handel. There have been great composers whose personal idiosyncrasies have been more remarkable than his. There have been some who suffered more romantically, and others who died more pathetically; but it is difficult to call to mind any master who made so powerful an appeal to the imagination as did he who trod upon princes, fought life as well as death, and came out victorious at the end. John F. Runciman, who wrote pungently about music for the London *Saturday Review*, once referred to Handel as "by far the most superb personage one meets in the history of music." No description could be more apt than that.

If, as Quintus Cicero wrote, the countenance is the index of the mind, a study of Handel's portraits would be of considerable assistance in making some estimate of his character. It is remarkable, however, how great is the variation in the master's physiognomy, as it was painted by his contemporaries. Sir John Hawkins, who knew Handel, made mention of the fact that "few pictures of him are to any extent tolerable likenesses." There are innumerable busts and portraits, but many of them might be—so far as their dissimilarity is concerned—of entirely different people. Thomas Hudson who painted Handel frequently would seem to have been more successful than many of his portrait-painting colleagues in putting on canvas some of the characteristics which we know the composer of "Messiah" possessed. One delineation in particular—an engraving made from one of Hudson's portraits—seem to reflect the real Handel. It is a picture showing the master seated, his figure very plump, the right arm posed in a rather aggressive fashion on the thigh, the left hand holding a piece of music and the expression of countenance discovering that combination of dominance, cocksureness, sly humor and irascibility which made Handel who he was.

GEORGE FREDERIC HANDEL,
by Mercier

Fat and Bow-legged

THERE CAN BE no doubt that to the outer eye Handel was no elegant spectacle. He was extremely fat and, having bowed legs, waddled as he walked. Both his face and his hands were heavy with fat; and, when he played the organ or the harpsichord, it was difficult, Charles Burney said, to make out the fingers or to distinguish the movement of them. It must have been an impressive as well as a diverting spectacle when Handel walked down the street. His gait suggested the rolling of a vessel in a heavy sea; and as he walked he also talked.

This habit of conversing with himself grew upon Handel with advancing years; and, as he used his voice with the energy with which he used every other faculty, his opinions of men and things were offered to the world with distinct and rather embarrassing freedom. Moreover, his conversation, either with himself or with his friends, was strange and peculiar; for, although he lived in England for so many years, Handel was never able to master the intricacies of its language. His speech, therefore, was made up of very broken English mixed with frequent recourse to French, German and Italian. The age in which he lived, not having been one distinguished for its refinements, Handel colored his verbal intercourse with friends and acquaintances with the copious imprecations which passed in society for strength and picturesqueness of utterance.

Handel was what most abnormally fat people are not—he was extraordinarily energetic. If he had achieved nothing else but the composition of his music—there are one hundred thick volumes of it that have been published by the German Handel Society—he would have done as much as two average composers. But he managed opera houses and opera companies, travelling all over Europe to obtain artists for them; and for many years he fought innumerable enemies in the British aristocracy, never admitting defeat, becoming bankrupt twice, twice paying his debts in full and finally leaving a fortune of $250,000 when he died.

Driving Energy

TO THOSE who would emulate his fame, Handel left an example of driving energy that has rarely been approached. Yet this example is a warning, too. To achieve what he achieved meant unceasing toil; it meant the deprivation of exercise, diversion, even sleep. His notes were driven on to the pages of his score all day, late at night and often when the dawn made the candle at Handel's side look wan and pale. Nature may have taken her time in calling Handel to account for the infraction of her laws, but she made reprisals.

The history of Handel's health has its bearing upon his character. Diagnosis as a science was in its swaddling clothes in the eighteenth century. The medical practitioner knew as little about drugs as he did about diseases, so that generally his ministrations were even more dangerous than the malady which he undertook to cure. When some time about 1735 Handel called in his physician to explain various aches and pains that were tormenting him, the man of science, having drawn off some blood from the corpulent person of the great composer, with the lancet which he kept in his pocket with his snuff and handkerchief, gravely pronounced the case to be rheumatism. It was an awkward time in which to be sick, for Handel had an opera house on his hands and a company in it for which he had to write operas as well as to attend to its managing. Moreover, he had been putting up a terrific fight against his rivals who were doing their best to ruin him. Perhaps the composer knew better than his doctor that what he needed most was rest. His right side was so racked with pain that to play on the organ or the harpsichord was agony for him. He was beginning to suffer from sleeplessness and worry. It was high time to do something for the "rheumatism," and the composer betook himself to one of the watering-places which were fashionable in England at that time.

A Killing Pace

A SHORT PERIOD of rest and relaxation set up the great man and he went back to London more filled than ever with the fever and fury of fight. But soon nature began again with her reminders that the wages of intemperance—the intemperance of overwork and lack of sleep—were about to fall due again. The pain came back, but paralysis came with it. There were disquieting mental symptoms, too. In 1737 Handel's friends were convinced that he had permanently lost his reason. A visit to Tunbridge Wells could scarcely be expected to accomplish much for so desperate a case. The doctors advised Aix-la-Chapelle and their patient accepted their counsel. Astonishing to relate, either the waters or the rest or both, cured him.

For a period all was well, but Handel still continued drawing drafts upon his constitution which eventually he would have to meet. In 1751 he was forced to return to Aix; the brain symptoms were manifesting themselves again; his general health was undermined and, after his return to England, a greater calamity than any he had known disclosed itself. For toward the end of the year Handel found that his eyesight was failing. This time he hastened to Cheltenham to drink the waters; but what could Cheltenham waters do for a man in Handel's state? He betook himself to Mr. Samuel Sharp, the principal oculist at Guy's Hospital, and the verdict of that authority must have struck the master's heart with a chill like that of death. It was *gutta serena*—blindness. Even this affliction did not kill Handel's indomitable spirit. He was working on his oratorio "Jephtha" when his sight began to fail and he still continued working on it, noting on his manuscript from day to day the inexorable descent into the utter darkness which finally overwhelmed him.

Handel's Irritability

IT IS SCARCELY surprising that a man who so consistently overtaxed his nervous vitality as Handel did, should have possessed a temper which was the reverse of equable. His fits of rage were terrible to observe. Not the presence of royalty itself would restrain the violence of Handel's language or actions when anger boiled within his soul. Many of the rehearsals for his oratorios were held at Carlton House, the residence of the Prince of Wales, and woe to any aristocratic listener who interrupted the proceedings with audible conversation. And the master was even more formidable in his own theater. The singers went in terror of him and the members of the orchestra shivered in their seats when Handel's face bespoke displeasure. Even in his normal condition Handel inspired awe. Burney once remarked upon the extraordinary effect produced upon the choir when, at the end of an aria, the composer would shout *Chorus!* in a terrible voice.

Even in his moments of irritation Handel was not deserted by that sense of humor which so often saved him from utter dejection when things were going badly with him. Most of his retorts to people who annoyed him are fairly well known; but some of them are worth quoting if only to demonstrate that his bark was often worse than his bite.

When, during a rehearsal of "Ottone," Francesca Cuzzoni peremptorily refused to sing the air, *Falsa immagine*, Handel, who already at the beginning of the proceedings had said to her in French, "Madame, I well know that you are a very devil, but I will show you that I am Beelzebub, the prince of devils," caught hold of her by the waist and proceeded in the direction of the window with the apparent intention of dropping her out of it. Cuzzoni decided, however, before they reached it, that she had met her match, and she consented to sing.

Nor was the master's answer to the Rev. Thomas Morell less incisive when, having provided Handel with none too good a text for the oratorio "Judas Maccabeus," the former took it upon himself to criticize adversely some of the composer's music. "You teach me musick, sir!" screamed

GEORGE FREDERIC HANDEL
by Hogarth

The two illustrations on this page by great contemporary artists are far more accurate than the customary pictures of Handel

Handel, his huge frame quivering with rage. "Mine musick ist good musick. It ist your words dat are bad. Hear the passage again. . . . Now go you and make words to dat musick!"

Sometimes the master's retort was less indignant than contemptuous. When one of his minor artists—an Englishman named Gordon—objected to Handel's method of accompanying him, and declared that if it was not changed he would jump on the harpischord and smash it, Handel coolly replied, "Let me know ven you do dat; for I am sure more beople vill come to see you jump dan hear you sing!" So, too, his reply to Dr. Maurice Greene, a composer whose fund of melody was very small, when the latter sent the master an anthem of his creation requesting Handel's opinion of it. With a view to obtaining Handel's commendation at first hand, Greene invited the great man to breakfast. Many topics were discussed, but Handel said nothing about the composition. Greene's patience at length was exhausted, and, unable any longer to conceal his eagerness, he blurted out, "Well, sir, but my anthem—what do you think of it?" "Oh, your antum; I did tink dat it wanted air!" "Air?" said Greene. "Yes, sir; and so I did hang it out of de window," replied Handel.

The Feminine Influence

AMONG THE galaxy of great composers, Handel was unique in having produced his masterpieces without the inspiration provided by the fairer sex. Like him, both Beethoven and Schubert remained in single blessedness; but the music of the former was evoked by innumerable romances, and much of Schubert's we know was inspired by Caroline Esterhazy. The one romantic episode in Handel's life was connected with the great Italian, Vittoria Tesi, who is said to have met that genius when he sojourned as a young man in Florence and to have followed him all over Italy until he listened to her suit. Handel's first biographer, Rev. John Mainwaring, hinted at this episode in his "Memoirs of the Life of the Late G. F. Handel," published in 1760; and it was eagerly seized and enlarged upon by the biographers who came after. The simple matter of dates did not appear to have occurred to them. At the time of Handel's residence in Italy, Vittoria Tesi was only seven years of age.

There has been in existence another legend to the effect that Handel was once engaged to be married to one of his pupils, and that, stung by the declaration of her mother that she would never consent to the marriage of her daughter to a fiddler, he gave her up. It was not for lack of opportunity that Handel escaped the nets which the fashionable femininity of his day spread for him. Many women, filled with admiration for his genius and for his masterful character, would have fallen at his feet and have given him adoration; but, unromantic as this explanation of Handel's frigidity may seem, the composer of the "Messiah" was too hard pressed for time in which to accomplish all the work he had to do and his thoughts were too much engrossed with his own affairs to permit him to dally with fair women in scented boudoirs.

The tenderness which was in his heart Handel poured out upon his mother, Dorothea Handel, who lived so far away from him in Halle. "Only one woman ever influenced his life," wrote Newman Flower, "ever put the meaning of womanhood into a soul that sang most sweetly of the feminine sex. Quaintly enough, his great understanding of his mother came, not from her presence, her ready influence, but from her distance. She always seemed to reach out to him and touch him, in Hamburg, in Italy, in Hanover, in London. When he was soaring or when in the grip of adversity, she was ever there."

Handel's Religion

BECAUSE he wrote a large number of oratorios, Handel has always been considered—at least by his earlier biographers—to have been devoted to religion. Without casting any reflection upon the master's faith in God or upon his moral probity, it is necessary, in the interests of accuracy, to state that his oratorios came into existence because he needed money. Opera had failed and Handel's sagacity told him that a different form of entertainment might intrigue the town. Thus the oratorio "Esther" came into existence and was produced in 1732 at the King's Theater. The work was a modification of an earlier piece, but London went wild over it, in spite of the storms that swirled in the pulpits of the churches because Handel had put a Bible story on the stage. "Esther" was the beginning of Handel's triumphs in that form; it was also the beginning of that success which enabled him to leave a fortune when he died.

The matter of oratorio has, therefore, only a modified bearing upon the matter of Handel's piety. Sir John Hawkins said that the composer often spoke to him of his good fortune in having taken up his abode in a country where no one suffered any molestation or inconvenience on account of his religious opinions. "This does not sound like the utterance of a very ardent Christian," wrote R. A. Streatfeild in his valuable study of Handel, "and there is something suspicious, too, about the sacred rapture with which the venerable Hawkins recorded the fact that during the last two or three years of his life Handel attended divine service at St. George's, Hanover Square."

But while it would seem to be true that Handel rarely went to church during the greater part of his life, he was really religious at heart, and while, indeed, he wrote oratorios for business reasons, he hoped to bring to the people who listened to them something of the faith in the power and goodness of God which he himself had felt. It was after the first performance of "Messiah" in London that Handel said to Lord Kinnoul, who had complimented him upon the noble entertainment he had given to the town, "I should be sorry, my lord, if I only entertained it; I wished to make it better."

His Benevolences

PERHAPS the most practical proof of Handel's moral feeling consisted in his devotion to the cause of the poor and the unfortunate. This was shown in the countless benefactions which he made to individuals—like the widow of his old teacher, Lachow, many of the artists who had sung his works, and his secretary, Christopher Smith—but particularly in those which he made to charitable organizations. The Royal Society of Musicians, which came into existence as "A Society for the Support of Decayed Musicians and Their Families," was liberally assisted by Handel throughout his career, even when he was most in need of financial help himself. He was the mainstay of the Foundling Hospital, in London, which had been founded in 1739 by an old sailor, Thomas Coram, "for the relief and education of deserted children." One year before Handel died there was entered upon the register of the hospital the name of a little Maria Augusta Handel. She was a foundling to whom Handel had given his name. Nor should there be forgotten the charity which, at the first performance of his "Messiah" at Dublin, in 1742, caused the master to divide the profits between the Society for the Relief of Debtor Prisoners and the Mercers' Hospital.

Simplicity of Life

HANDEL'S daily life, as he spent it at home, was a simple one. He lived for nearly forty years at 25 Brook Street, London, in a four-story house for which he paid £35 ($175) a year. The house is still standing, but in 1905 the lower portion was rented to an interior decorator and turned into business premises. It was in that house that the "Messiah" was composed and in which Handel died in 1759.

That the great man did not surround himself with any magnificence is apparent from the inventory of his belongings taken after his death. In the room which Handel used as his study the furniture consisted of an easy chair and cushion, an old stove, a writing desk, a swing dressing glass, a wicker fire-screen, two deal boxes, a linen press, a deal bookcase and two wig-blocks. The parlor, on the first floor at the front of the house, contained an oval and a square table, six old matted chairs, a leather stool, two gilt sconces and a broken chimney glass. The other rooms were as plainly furnished.

Powerful Inspiration

ALTHOUGH when Handel sat in his study his outer vision rested upon the commonplace surroundings which were peculiar to thousands of other middle-class homes in London, his inner eye beheld great things. To no other composer did inspiration come with such moving power. In the writing of his operas and oratorios the master truly lived in the scenes which he portrayed in sounds with so much majesty and skill. He said that when composing the "Hallelujah" chorus in his "Messiah," "I did think I did see heaven opened and the great God himself." And his servants testified that when their duties took them into Handel's study when he was working he was frequently bathed in tears, so moved was he by the pathos of his own music and of the imaginary situation to which it was allied.

Moreover, when inspiration visited him, Handel's pen could not keep pace with his ideas. Perhaps the composition of "Messiah" was the most remarkable instance of the rapt and frenzied nature of its creator's inspiration. The whole work was completed in twenty-four days. "It was the achievement," wrote Mr. Flower, "of a giant inspired—the work of one who, by some extraordinary mental feat, had drawn himself completely out of the world, so that he dwelt—or believed he dwelt—in the pastures of God."

Speedy Composition

BUT "MESSIAH" was not the sole instance of Handel's rapidity of composition. His opera "Rinaldo" was written in fourteen days, and Vincent Novello, studying the master's manuscripts in the Fitzwilliam Museum, at Cambridge, England, drew attention to the fact that the sand which was sprinkled in the eighteenth century over ink-written manuscripts in order to dry them covered the whole page of many of Handel's, and that therefore he must have reached the end of the page before the ink at the beginning of it was dry. Nor was all this merely hurried work in the sense that the composer was content with the first idea which presented itself. The aria *How Beautiful* in "Messiah" was rewritten four times, and innumerable are the corrections and revisions which Handel made in other works.

Only a man of herculean strength could have accomplished the labor which Handel offered to the world. Even his intemperance in work—and, it may be added, in food, for Handel was a prodigious eater—did not take him out of existence until he had been seventy-four years in it. There must have been a great void in London when the gravediggers in Westminster Abbey patted down the last handful of earth and placed the stone in position above Handel's tomb. Never had quite his like been seen or heard before. It is possible that his like will never be seen again.

Self-Test Questions on Mr. Borowski's Article

(1) *What was peculiar in Handel's life experiences?*

(2) *Describe Handel's personal appearance.*

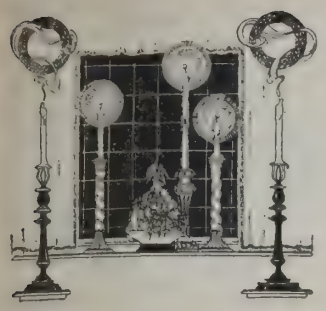
(3) *Tell something of Handel's vicissitudes and of the fortune he left.*

(4) *Tell something of Handel's application to work.*

(5) *What woman most influenced Handel's life?*

(6) *What were his religious inclinations and how expressed in his life?*

(7) *What charities were favored by Handel; in this was he unusual among composers?*

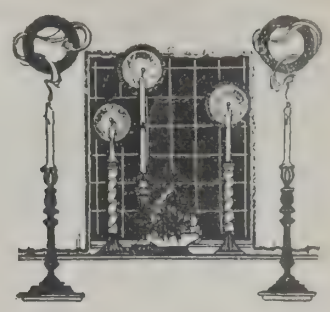


The Last Lesson First

By Charles Knetzger

BOOKER T. WASHINGTON who has won world-wide fame for his grand achievements in the uplifting of his race relates the following story in his autobiography, "Up from Slavery."

"During the days of slavery there was an old colored man who wanted to learn how to play on the guitar. In his desire to take guitar lessons he applied to one of his young masters to teach him: but the young man, not having much faith in the ability of the slave to master the guitar at his advanced age, sought to discourage him by saying: 'Uncle Jake, I will give you guitar lessons; but Jake, I will have to charge you three dollars for the first lesson, two dollars for the second lesson, and one dollar for the third lesson. But I will charge only twenty-five cents for the last lesson.'



"Uncle Jake answered: 'All right, Boss, I hires you on dem terms. But, Boss, I wants yer to be sure an' gimme dat las' lesson first.'"

The Golden Age of Music

HENRY T. FINCK'S AUTOBIOGRAPHY

A review of the most interesting musical book of the hour, the last work of America's most famous critic, the late Henry T. Finck, for thirty years a leading contributor and warm supporter of "The Etude."

SHOULD a musical or dramatic critic be on terms of intimacy with the artists he is called upon to criticize? There is one veteran critic in New York who has throughout his career avoided meeting these artists. On the other hand, Henry T. Finck, who served for forty-three years as musical critic of the New York *Evening Post*, habitually cultivated the friendship of all the great singers and players who appeared in the metropolis. By studiously avoiding mediocrities and associating only with celebrities, he escaped the embarrassment of having to say disagreeable things about men or women whom he knew personally. Moreover, his chief, Mr. Godkin, had advised him early in his career never to write anything about an artist, particularly a woman, that he would hesitate to say to her personally. The greatest artists welcome criticism if it is written in courteous language.

Friends with the Great

HAD IT not been for his habit of cultivating the friendship of great musicians, Mr. Finck would not have been able to write a book like his autobiography, which has recently been published under the title of *My Adventures in the Golden Age of Music*. In the course of nearly half a century he was successively on terms of intimacy with an extraordinary number of celebrities, and concerning all of these he has new anecdotes to relate, besides dwelling on their principal achievements and the attitude of the public toward them. He explains why he never had any difficulty in adding a celebrity he admired to the list of his friends.

"How did I do it?" he asks, and answers: "By winning his or her affection. If you wish to win a woman's love or friendship, you do not compliment her on those of her attributes or charms which are so conspicuous that any fool can see them. You discover some subtle traits that others have overlooked and dwell on those. That's what I have done with the celebrities I have been called upon to discuss as a newspaper critic, and why they have taken me to their hearts. That's why the greatest of the great were always glad to come and lunch with us, or to invite us to lunch or dine with them, and why I have plenty of personal gossip and new anecdotes to offer.

"Many critics love to dwell on flaws in the work of the great and greatest. I heard those flaws but ignored them, dwelling instead on the things that raised these artists above the level of dull mediocrity on which most musicians and other mortals dwell."

The Golden Age of Music

WHAT IMPRESSED Mr. Finck most in reviewing the story of his life is that it covers practically the whole of the Golden Age of Music in New York. "There will never be another age like it," he declares. "The radio is making terrible havoc in the activities and earnings of professional musicians (ask them!), while the cacophonists, sarcastically dubbed 'futurists,' are doing their level best, with their insane cult of dissonances, to assassinate whatever interest is left in the divine art. They are greater enemies of music than the jazz bands. 'Paradise Lost' might be an appropriate sub-title for my reminiscences of the Golden Age of Music."

Perhaps Mr. Finck is unduly pessimistic as to the future; the thousands of talented musicians now busy will undoubtedly give a good account of themselves, and just as Caruso appeared when everybody thought that Jean de Reszke had been the last of the great tenors, so there will doubtless be other pleasant surprises in the future. As regards the past, this author is usually enthusiastic, often rapturously so, even after he had become, inevitably, somewhat blasé. Read what Otto H. Kahn wrote about him in a letter (1921) in which he says: "Though, as you mention, your views and mine have not always been in full accord, may I say that I have always admired particularly three of your qualifications: Your broad and profound musical (and general) culture, your courageous independence of judgment and expression, and your rare and fine capacity, after many years on the 'listening post' in concert halls and opera houses, to be thrilled by art and artists and to command a freshness, warmth and sincerity of emotion which to most mortals is only vouchsafed, if at all, in the short years of the springtime of their lives."

Varied Biographies

THERE ARE two kinds of autobiography, according to Mr. Finck. One of them tells the story of the author's ideas, ideals, aims and achievements. "This kind," he says, "I provided in a volume entitled *Musical Progress*, which includes the sum and substance of my mental activity in music." The other kind tells an author's adventures among his fellow men and women. This new volume not only tells about the most important and interesting things musical that happened in New York between 1881 and 1924, but takes the reader to the first Bayreuth Festival and subsequently the Vienna, where everybody was operetta-mad; and these things belonged to the Golden Age of Music.

The author was able to appreciate all this at its full value because he had been brought up in a musical atmosphere, in spite of his having lived from his eighth to his eighteenth year in "wild and woolly Oregon." He gives some startling illustrations of the lack of musical culture in this region at that time; but all the same he lived in a musical atmosphere because his father, who played nearly every instrument, amused himself by organizing village bands and choirs, so that there was always music in the house—home-made, too, for the whole Finck family played or sang.

President Eliot and Music

AS A BOY, Henry Finck had no intention of living in the musical world. He was eager to go to Harvard for a general education and perhaps to become a professor or a doctor or a writer. When he reached his goal he was so fortunate as to become a Harvard student at a time when the late President Eliot was, as Oliver Wendell Holmes said, turning the whole educational system over "like a pancake," which had the result that the students came out of the pan "well done"—at least, they thought they did.

Music was one of the branches most favored by President Eliot. He went so far as to say that *"music, rightly taught, is the best mind-trainer on the list."*

Concerning this point, Mr. Finck remarks: "Positive proof that music is 'the best mind-trainer' has come from Magdalen College, where all the musical instruction at Oxford is given. There are many prizes and scholarships. Only ten per cent. of the students at Magdalen take music, yet this ten per cent. take seventy-five per cent. of all those prizes and scholarships, leaving only twenty-five per cent. for the other ninety per cent. of students. And this is not the record of one year, but *the average of thirty successive years.*"

HENRY T. FINCK — 1926

Does Music Study Pay?

THE WISEST of the thousands of teachers who read THE ETUDE will show this page in Finck's book to parents who are not quite sure whether it pays to let their children take music lessons. Mr. Finck took lessons of Professor Paine, and he won, in scholarships and a fellowship that enabled him to go abroad for three years, no less than $3000. No wonder he exclaims, "Three cheers for music! And three more cheers for President Eliot, whose example has made it fashionable in American universities. Three more cheers, if you please, for John Knowles Paine, a man from Maine (he was born in Portland), who exhibited the holy zeal and perseverance of a true missionary for the divine art." Some of the most interesting pages in Mr. Finck's book are concerned with Professor Paine's activities and influence. He frowned on his pupils' enthusiasm for Wagner, but later on changed his mind radically and confessed his conversion in letters to Finck.

At Longfellow's Home

HALF A century ago there were so many famous men at Harvard that, in the words of the author, "you could hardly have fired a shotgun in any direction without hitting a celebrity." Mr. Finck met most of them, not only in the classroom, but also in their homes. He brings the reader face to face with such men as Longfellow, Howells, James Russell Lowell, Emerson, John Fiske, Agassiz, Holmes, Norton, Palmer, Bowen and Peabody.

The author's father had wisely taught him to play the violincello, at an age when the instrument was bigger than the boy. To his skill in playing the 'cello, Finck owed his acquaintance with Longfellow. The poet's nephew, Wadsworth, who subsequently became a famous architect, "told Longfellow," to cite Mr. Finck's own words, "about my playing, and the poet promptly expressed a desire to meet me. I was taken to his house for an introductory meeting, and shortly afterward the kind-hearted poet invited the homesick boy from Oregon to dinner. Christmas dinner, at that! I sat at his side and he shared with me all the delicacies (he was an epicure) that friends from near and far had sent for the occasion. Such a dinner I had never dreamt of. But I enjoyed his conversation still more. He asked me many questions about my life in Oregon, and you may be sure I was ever so glad to answer them. . . .

"His three daughters were of course present, and it was arranged that I should bring up my 'cello and play duos with the oldest of them. She was a good pianist and I enjoyed these evenings, which became more and more frequent. The poet could hear us from his private room; now and then he came into the parlor for a chat. He was usually serious in his conversation, but once he perpetrated a joke. He wanted to know all about my 'cello, which was of the miniature Amati type. When I told him it was over a hundred years old, he said with a smile:

"'Rather small for its age, isn't it?'"

Wagner, Bayreuth and Vienna

WHEN MR. FINCK graduated at Harvard in 1876, the Philadelphia Centennial Exposition was in full bloom. To him, however, there was something still more important: the first Wagner Festival in Bayreuth. He borrowed $500 from an uncle in St. Louis and steered straight for Bayreuth, where he spent $225 of his small capital for tickets for three cycles of the Nibelung operas! In the opera house he put his ear against keyholes to get "glimpses" of the orchestral colors, but was put out. He then boldly decided to accost Wagner and ask for permission to attend the rehearsals, on the ground that he had come all the way from America to write up the festival for the New York *World* and the *Atlantic Monthly*.

Wagner frowned—said he had no use for critics. "But I am not a critic," Mr. Finck protested, "only a young man who has come to write up the festival." That placated Wagner. "I had made up my mind," he said, "to admit no one. But Liszt has gone in and a few others, so you may as well come, too." And thus the young enthusiast had a chance to see the great master directing the greatest musical event in musical history—operatically the climax of the Golden Age.

At Vienna

VIENNA he had the great good luck to visit just at the time when Johann Strauss was producing such masterworks as *Fledermaus, Merry War* and *The Queen's Lace Handkerchief;* while two other favorites, Suppé and Millöcker, were also busy launching *Fatinitza, Beggar Student* and that sort of thing. "It was," says the writer, "the golden age of the operetta; and I, with my usual good luck, was on the spot when these musical gold coins came fresh from the mint by wholesale."

When Mr. Finck got to the home of pretty girls and dancing, known as Vienna, he had, at the age of twenty-five, never learned the art of dancing. He simply had to take lessons, but was very slow in learning. "I was surprised," he writes, "at my stupidity, for was I not exceptionally musical?" When he told Schwott about that, the teacher laughed and said: "That has nothing to do with it. It is a fact known all over Vienna that Beethoven never succeeded in learning to dance." "That made me feel better," Mr. Finck adds. "I made a supreme effort, caught on suddenly, and soon left Beethoven far behind."

Patti and Emma Eames

MR. FINCK became musical editor of the New York *Evening Post* in the same year (1881) that Carl Schurz, Edwin Godkin and Horace White assumed control of it. Theodore Thomas ruled at that time in the concert halls and Adelina Patti in the operatic Academy of Music. New York was able to appreciate Thomas and his orchestra, but when they went on the road they encountered rather primitive conditions. It was the day of corked minstrels. The author tells a story he had from Thomas himself: Scene: a barber shop to which he had gone in the morning following his concert in a new town. While waiting for his turn he heard the barber say to the man in the chair: "How did you like the show last night?" "Not much," was the reply. "There were no end-men, no jokes, and them sixty-four fellers were too lazy to blacken their faces."

To Patti, Finck was not fair, and he frankly confesses it. While admitting that she had the loveliest voice ever heard and was perfect in light, ornamental rôles, he wanted to hear her in dramatic music, for which alone he cared at that time. Oddly enough, the great prima donna was with him. She was trying to score in masterworks like *Carmen* and *Aïda,* but they were not in her line. She would have given anything to sing *Isolde* or *Brünnhilde;* she repeatedly attended the Bayreuth festivals, but that was as far as she got in this direction.

American Prima Donnas

THE PAGES on the American prima donnas who sang at the Metropolitan are particularly rich in anecdotes. Here is one about Emma Eames: One time when she was enjoying operatic triumphs in London, several ladies of the highest aristocratic circles called on her to ask if she would kindly sing for their pet charity. After a moment's thought she answered sweetly: "I will, on one condition. You are all wealthy ladies, far wealthier than I. Now, my usual cachet is £300. I will contribute that by singing on condition that each of you will sign for the same amount." The visitors said they would consider the offer and left. She never heard from them again, it is needless to say. "The charity of society women," Mr. Finck adds, "too often resembles Mark Twain's climbing of the Swiss snow mountains—by proxy."

Sembrich and Paderewski

AS A BOY, Mr. Finck had learned five languages, in all of which he taught his dog, Bruno, to obey orders. He was sorry in later years that he had not learned the Polish language, too, so he might converse with his great Polish friends: Sembrich, Jean and Edouard de Reszke, Josef Hofmann and Paderewski. But he loved to hear them speak their lingo, which sounds much more musical than it looks on the printed page. One time Paderewski's sister taught Mr. Finck a few Polish phrases, with which he surprised Sembrich when she came for dinner.

After one of Sembrich's New York recitals Mr. Finck went to the artist's room. As soon as she saw him she left her other friends and hastened across the room to meet him. With an anxious expression on her face she asked: "Tell me frankly, my dear Henry, did I sing very badly this evening? You see, I am just back from a long concert tour and I fear I have not done myself justice."

Assuming a grave air, the critic replied, "Why, no, Marcella, you sang as well as usual, with one very serious exception." "What was it?" she asked anxiously, and the critic replied, "Your Polish accent was simply abominable."

Tapping him on the shoulder with her fan, she exclaimed, "You naughty man, to tease me so;" and smiles returned to her face.

A Paderewski Trick

ON ANOTHER occasion Paderewski was the naughty man. Sembrich's husband had a kind but bad habit of sending this critic a box of cigars every Christmas. Mr. Finck sold the box and gave the money to a charity. He did not want to spoil Guillaume's fun by telling him. Consequently he was greatly embarrassed when, at a lunch which Sembrich gave at the Savoy Hotel to Mr. and Mrs. Finck, Guillaume ordered the waiter to bring the critic two cigars. He could not say, "I don't smoke;" he had smoked two cigars in all his life and both had made him "seasick." He tried to put the two the waiter brought into his pocket, but Guillaume said, "No, no, smoke them right here —Marcella doesn't object." So he smoked —a very little.

Finck told this incident to Paderewski, and a year or two later, when he had the Fincks as his guests for a fortnight in his Swiss chateau at Morges, on Lake Geneva, he one day invited Sembrich and Guillaume to dinner. While all were enjoying the famous Chateau Gardens, the great pianist let the cat out of the bag by telling the cigar story, to everyone's amusement.

Once before Paderewski had been naughty to this critic at a dinner, this time in London. An organ-grinder had been playing for some time in the street. Presently Finck exclaimed: "Hello! He has changed his key!" Whereat Paderewski, with a mischievous twinkle in his eye, looked at Mrs. Finck and said, "He is very musical—for a critic!"

Getting Even with the Pole

THE CRITIC made up his mind then and there that he would get even some time with the pianist. The chance came during the visit at Morges. Thursday afternoons visitors were allowed to enter the grounds to see the gardens, hothouses and fancy poultry. "On the first Thursday," writes Mr. Finck, "our hosts had gone away, leaving us alone. Noticing some ladies in the garden, I said to my wife: 'I'll sit down and improvise. They will think it's Paderewski and tell all their friends about their good luck.'

"When our host came back I told him about these ladies, adding that they would now go back home and say to their friends: 'You think you know how Paderewski plays because you have heard him in a concert hall; but you have no idea how much more inspired he is when he improvises in his studio, as we heard him.'"

The long chapter on Paderewski is perhaps the most engrossing thing in Mr. Finck's new book. He knew the great pianist composer for thirty-four years—knew what a wonderful mind he had outside of music, too. He was the first journalist to suggest that Paderewski should be King or President of Poland. This induced an old subscriber to write to the editor on January 11, 1919: "Probably a year ago Mr. Finck wrote the same silly, inane nonsense, and how a serious paper like the *Evening Post* can permit such stuff to be printed is beyond the comprehension of your average reader. I should think Mr. Finck's closest friends would without delay call in a first-class alienist."

For six years of distinguished political activity Paderewski did not touch his piano. When he came back to the stage many wondered if he had lost any of his skill. On this point another superpianist said to Mr. Finck after again hearing Paderewski: "We had better all become Premiers and then come back to music!"

A Matter of Language

By E. A. B.

RICHARD WAGNER, as famous a composer as he was, betrayed the most absurd inconsistencies in the matter of the language of his expression marks. "Let us write everything in German," he said to himself. Commendable enough! only then he forgot or was careless, and so we frequently find in his music a curious, incomprehensible, and ugly mixture of German and Italian such as *ein wenig rallentando;* or *ausdrucksvoll* and *espressivo* are used a few measures apart in the course of the same tune.

Trying to be "national" in the language you use for your music is sometimes considered laudable. Percy Grainger is one of the few who are really consistent in employing a language other than Italian. But as long as everyone from Kalamazoo to Cairo understands Italian musical terms, and they have for so many years been the generally accepted medium by which the composer has given the performer the interpretation he desires, isn't it the height of foolishness to cast aside this musical Esperanto? MacDowell's "ruggedly" "lingeringly" and so on, and Grainger's droll and verbose directions cannot mean a great deal to the musician in Leningrad, Lisbon, or Hong-Kong, we imagine.

All Scales by the Same Route

By Ruth L. F. Barnett

SOME pupils find difficulty in keeping in mind two separate processes for forming the series of scales, one for the sharp keys and another for the flats. One process will suffice if the teacher can bring himself to go contrary to precedent in handling the flat scales.

First, have the pupil write the sharp scales in the usual way; that is, by beginning with the scale of G and sharping the seventh note. Then begin each new scale on the fifth of the preceding scale and sharp the new seventh. Continue through the scale of F-sharp.

Below the scale of F-sharp have the pupil write the scale of G-flat. Bracket these two scales to be sure that the pupil understands that they are the same scale spelled differently. Now continue the process used in the sharp scales, beginning each new scale on the fifth of the preceding scale as before. Sharping the seventh note of the scale will cancel one flat at a time until the series ends with the key of C.

The Swimming Coach's Instructions As Applied to Piano Practice

By Florence Lipkin

AS A member of one of the largest American swimming associations the writer was given the benefit of the instruction of a coach whose pupils have won laurels all over the world. The rules he gave were:

1. When training for a one-hundred-yard swimming race, practice until you can swim with ease three or four hundred yards.

2. When training for speed in the water, practice very slowly, paying strict attention to the movements of the arms and legs and to the breathing. Swim gradually faster, but never at the highest possible speed. Go slowly!

Applying these rules to piano practice:

1. When the exercise or piece contains a run or passage of one octave, practice it up and down two, three or more octaves till every note is clear and the fingers do not fumble.

2. When a piece is to be played at a quick tempo, practice it very slowly, paying special attention to the action of the fingers, the position of the hand and arm, and all rhythms and interpretation marks. Gradually increase the speed, but do not practice too often at the designated tempo. Go *slowly!*

Music's Frailty

By Elizabeth Stoddard

THE peculiar charm of music exists in its very frailty, its constant reliance on human effort. The other arts may survive for centuries without the aid of a single loving thought or the guidance of a single creative impulse; but music becomes shadowy and lifeless the instant it loses man's devoted allegiance.

Paganini's violin in a glass case in Genoa is only a valuable "specimen;" stacks of Beethoven's symphonies would be mere relics for the curio seeker did not a living touch transform them.

Music's realm is not in musty volumes, nor in crumbling forums. It is in the hearts, the fingers, the throats, of its million lovers.

Bach is truly a treasure trove for the pianists.. What a wealth of ideas! What invention! What true feeling!"

—NICHOLAS MEDTNER.

The Pianist's Daily Dozen

By CHARLES B. MACKLIN

Part I

This set of finger gymnastics, to be done away from the piano, is from a book which will shortly be ready for the market. The author is a well-known teacher who has made a careful study of the development of the pianist's hand, and who has been most successful in putting his discoveries into practice with his pupils. His language is so transparent that even the beginner-student will be able to grasp the meaning and to put it into practice. Our readers will welcome these most practical helps.

THE VALUE OF certain finger gymnastics, done away from the piano to supplement work on the keyboard, and, in some cases, substitute for it, has come to be so generally recognized by piano teachers of experience that it is now possible to systematize a course of hand building and development which not only will save much effort at the piano, but also will render much more profitable the time spent in actual keyboard practice.

For many years machines and contrivances of various kinds have been more or less in vogue. In fact, ever since the ill-fated Schumann injured the fourth finger of his left hand with a device which he had hoped would enable him to raise it to a height equalled by the other fingers—and perhaps before that time—teachers have been experimenting with the idea. Some years ago a teacher in London made a considerable reputation with a most ingenious machine which he claimed would obviate the necessity of tedious hours of work at the keyboard by putting the hand in better condition to do the work at the keyboard. From many reliable accounts the machine would do all that he claimed for it.

However, I know of no machine which will do anything in the way of developing strength and flexibility of muscles, position of hand and arm, and general nerve control, which cannot be done quite as well and quite as soon by the use of a few simple exercises faithfully and systematically performed. The great value of the machine is psychological: it lies in the fact that the student, *having paid* for the machine, *uses it.* If he will use the exercises here given with the same fidelity he would expect to adopt if he bought an expensive machine, he will accomplish at least as beneficial results.

The Machine Outdone

AS A MATTER of fact, such exercises as those in this little book have one distinct advantage over almost any type of machine: they are safer. They are done by the student himself, who is best able to tell whether the strain is becoming too great. Schumann was by no means the only enthusiast to have strained a finger with a device for improving it. I have known two students who had this experience, and have heard of many. But I have known none, nor heard of any, who ever received anything but the most highly beneficial results from these exercises.

No originality is claimed for them. Most of them are known in some form or other to many teachers; but, as I have never seen them systematized and presented in this form, and as they can be of untold benefit to virtually every type of student, it occurred to me that such an article as this might serve a useful purpose; indeed they may serve a double purpose. First, they will be found to aid greatly in the building of those hands which are defective from the standpoint of piano-playing, putting them into a condition in which they can more easily perform the mechanical work demanded in playing. Second, they will be found very beneficial for the advanced player who is called upon for constant playing, but whose time does not allow of many hours of technical work at the keyboard.

It is not claimed that they will take the place of piano technic. Nothing can do that. But they will both aid in its development and enable the player who has acquired a certain technic to hold a good deal of it without so many hours at the piano.

The exercises here presented deal only with the development and maintainance of position, strength and flexibility of hand and arm, and with nerve control. But it should be emphasized that good playing rests in large part upon general physical well-being. By far too little attention is paid to this quite obvious fact. We compel our footballers and other athletes to follow the most rigid regimen as to diet, sleep and exercise, as a means to a maximum of muscular strength and nervous control. Yet, the musician, who is called upon for a thousand times higher degree of accuracy of movement, a delicacy of adjustment and control not surpassed by the juggler, usually gives no heed to the quite patent and elementary need of general physical health. Indeed, there is a type which prides itself upon a fragile and aesthetic appearance; which loves to dwell upon the fact that Chopin had poor health, and that he is said to have had a spiritual look. Common sense seems not to have revealed that Chopin's contribution to music and to the playing of his day was made in spite of poor health, and not because of it.

The Exercises

WE MAY divide the exercises into three groups, with one exercise left to itself. They are classified, according to the needs of development, as follows:

1. For strengthening weak hands and arms and for maintaining the general health of arm and hand tissues.
2. For developing arm and hand position.
3. For developing flexibility. This group is especially valuable for small and stiff hands.
4. The last exercise is for the relief of fatigue.

While it is obvious that certain types of hand will need one group more than another, there is almost no hand which will not be benefited by the use of all of them in proportion to needs; *except that weak hands should not use the exercises for stiff hands.* The first two groups can all be done in such a way as greatly to improve nerve control.

We will list the entire set and then proceed to the explanatory detail.

I. For Strengthening

1. Setting-up exercises for arms.
2. Gripping, to strengthen flexor muscles.
3. Massage and skin-drill for the whole arm and hand.

II. For Position

4. Raising the bridge of the hand.
5. Turning the hand.
6. Straightening the fingers.
7. Bending the nail-joint of the finger.

III. For Flexibility

8. Raising fingers back from bridge.
9. Stretch between fingers.
10. Massage of the back of the hand.
11. Thumb-turn.
12. For the relief of fatigue.

Shoulder Muscles

WE BEGIN by considering the shoulder muscles, in connection with those of the upper arm—triceps and biceps. No real technical progress is possible unless the whole arm is in condition to contribute mightily. Weaknesses of hand and arm often have their inception in weakness of arm and shoulder. Not enough attention is given to the arm, as a rule, although it is the base from which the fingers must work. Unless arm and hand will stand *steady* behind the fingers, there can be no dependable evenness of stroke, either as to time or tone, in pure finger work.

All experienced pianists, in actual playing, use arm movements, to a greater or less degree, in connection with finger work. But the student must differentiate clearly between the arm movement which is deliberately designed to supplement the work of the finger and one which is a purely accidental and involuntary reaction to the finger movement. Irregularity of stroke in the finger itself must necessarily affect adversely any combination movement which includes finger action.

As this irregularity is often caused by an unsteady arm, we commence with the arm. In addition to considering the arm in direct connection with pure finger work, we know that a most sensitive and flexible arm is essential to all good tone work and, while this fact is well known, the relationship between a healthy arm and one that is obedient does not seem to have been sufficiently emphasized. A strong arm, flexible as to muscles, steady as to nerves, and healthy as to the tissue itself, is the first essential.

For the initial exercise, any of the usual "setting-up" exercises which deal with the shoulders and upper arm will serve well. The simplest and one of the best is well known and is done as follows:

Exercise I

STAND ERECT, balanced easily, with no tension in any part of the body, heels touching the floor, but most of the weight of the body carried on the balls of the feet. Breathe smoothly during the exercise. Do not hold the breath. Thrust out both arms at right angles to the body, extending the fingers rapidly with the same motion. Then bring the forearm sharply toward the head, bending the elbow only, but clenching the hand with this motion. Keep the upper arm at right angles to the body during the entire exercise. Repeat from ten to twenty times.

This exercise may be varied—and should be—by thrusting the arms straight in front of the body instead of to the sides, and also by thrusting them above the head. These variants have the advantage of bringing the upper arm into greater play, as it cannot in these be held at right angles to the body, as in the first form.

If desired, the exercise may be done with light dumbbells, preferably of the spring-grip type—the spring-grip offering resistance to the grip on the return movement, thus developing the striking muscles of the fingers. In this way, shoulder, arm, and hand muscles are developed simultaneously. Some work, however, should be done without dumbbells of any kind, because of the value of extending the fingers, with the quickest possible movement from the clenched position as the arm is thrust forward or outward. This develops the quick action of the lifting muscles, which determine the speed of finger work.

Best results will be obtained if this exercise be done at first vigorously, making all movements as rapidly as possible, and repeating a few times, *and then slowly,* allowing the muscles to unfold very gradually, without any opposing tension, and to float, as it were, with a minimum of effort. Slow movements of all types are the finest possible means of developing nerve control; and these movements, slow as they are, *must be continuous.* They must never be allowed to jerk. At first, it is extremely probable that they will jerk, in spite of all effort to prevent it; but constant practice will make even the slowest movement continuous.

Exercise II

THE TYPE of hand which especially needs this exercise is weak at the "bridge," or third knuckle joints. This hand is usually, though not always, thin and flabby. Whatever its size and shape, the infallible indication of the need of building is *the bridge which sinks in, all the way across the hand,* as shown in Figure 5. Compare this bridge with that shown in Figures 1, 2 and 3. In Figure 3, note carefully the high position of the bridge at the fifth finger, and also the high wrist knuckle, and consider these points again, when reading the description of the principles which determine hand positions.

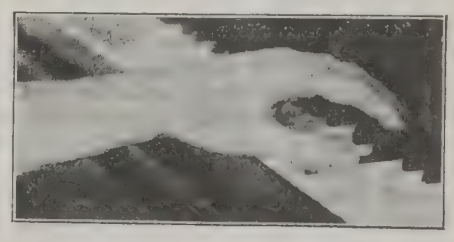


Figure 1
Apex of curve at bridge.

Figure 2
Apex of curve at wrist.

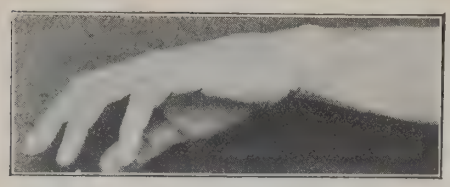

Figure 3
Note position of fifth knuckle at bridge and of wrist knuckle.

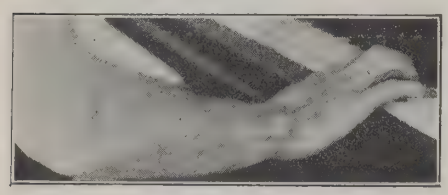

Figure 4
Elbow crammed outwards, wrist in concave curve.

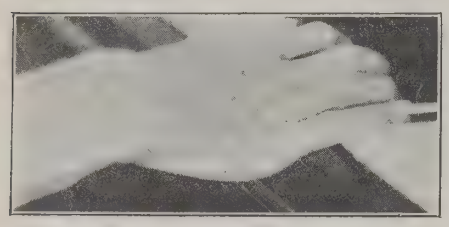

Figure 5
Bridge concave, and tipped to the side.

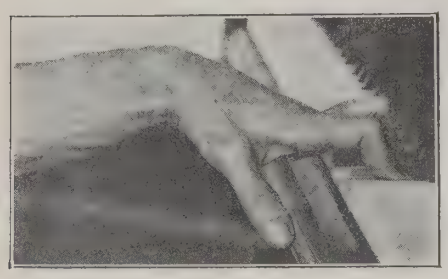

Figure 6
Thumb off keyboard, and nail-joint concave.

Note the potential strength of the position in Figure 3, as compared with that of Figures 5 and 6.

Kaleidoscopic Tempi

By E. A. Barrell

One of the characteristic features of most of our modern music is the frequent, surprising, and sometimes shocking changing of the time-signature within a single movement; and indeed a composition which employs but the one signature for its entirety is beginning to cause us to knit our twentieth-century brows in absolute and unfeigned wonderment. Of course *Beethoven* could write a work like his *Sonata quasi una Fantasia (Op. 27, No. 2),* for example—or *Wagner* the Introduction to "Tristan"—and not change the time once. But with Messrs. Stravinsky, Scott, Schoenberg, and other and more muddled "moderns," things are different.

It is undeniably true that the modern musical idiom is quite unlike anything in the past; and so, perhaps, a swiftly changing sequence of time-signatures is a real necessity. We are not prepared to decide as to that; but since the basic rhythm of life and of the entire universe is absolutely unvarying and steady, we wonder greatly whether a music of temporal instability—proceeding in its course about like a too enthusiastic imbiber of questionable moonshine—can ever be sufficient and satisfying to the ear.

There are perceptible two widely different tendencies in this matter. There is, first, the practice of *very occasionally* interposing *a single measure* of a different time: and this often lends variety, and seems naturally to follow. And then, secondly, there is the continual and never-ending use of a new time *in nearly every other measure,* which is such a common occurence in the work of our so-called "expressionists."

As an example of the first tendency, I have before me a copy of a little three-page song, "Nevicata" (The Snow-flurry), by one of the greatest of the modern Italians, Ottorino Respighi. This song is in two-four rhythm; but, on pages one and three, single measures of three-four have been introduced, and with fine effect. Of course Robert Schumann's music exhibits this same sort of thing. Then, on the other hand, Stravinsky, for instance—in nearly everything he has written—has dished his music up as a perfect *pot-pourri* of 2/4, 9/7, 3/8, 5/4, 11/9, and other curious metres.

In "Syncopating Saxophones" by Alfred Frankenstein (buy it and read it, by all means, if you are out for wit, speed and knowledge) the author writes as follows of Stravinsky:

"And just as the conventional cadences of verse were not for Whitman, so the conventional rhythms of the older music were not for Stravinsky. So he changes his time-signatures constantly, sometimes in every bar [measure]. The first movement of one of his pieces for unaccompanied clarinet is thirty measures long and has twenty-two time-signatures. The second movement is written without time; it is in the nature of a cadenza. The third movement, sixty-one bars long, has forty-six time-signatures."

To the author of this article (who is possibly just a trifle old-fashioned in his ideas) such a practice as this seems stark madness. And yet, who knows but what there is a sufficient and worthy method in it after all?

Cyril Scott

By G. R. Bett

From a recent book on Cyril Scott by A. Eaglefield Hull, we learn that this most interesting member of the younger group of British composers "is of medium height and of a spareness bordering on the fragile. His head is small—some think this is a never-failing sign of a spiritual man; his face contains at times the benign sadness of enlightened middle-age; at others, it is radiant with youth, and sometimes is even lit with what can only be called 'impishness.' The features are finely cut and (helped by his habit of always wearing a stock tie) suggest a Georgian type, though he is clean-shaven and does not allow himself that affected revival of the side-whiskers. His hands are small and beautifully shaped, apparently quite inadequate in size and strength to the prodigious effect which they can produce on the keyboard. . . . His kindness and generosity are unending and always accompanied by the tact that comes from understanding and sympathy. He has been called a *poseur* by a few acquaintances whose imagination cannot include the possibility of an order of mind so different from their own. And yet never was man more utterly natural. His directness is sometimes disconcerting to those accustomed to a cotton-wool wrapping of conventionality in their views of men, music and things. Perhaps this inclination to regard him as a *poseur* also arises from his surroundings, for he chooses to live in what cannot be called other than a distinctly ecclesiastical atmosphere. Nor does he stop short at Gothic and ascetic furniture—enhanced by beautiful stained-glass windows designed by Burne-Jones and presented to him by a valued friend, but candidly avows his fondness for the smell of incense, which he is constantly burning. 'I like the ecclesiastical atmosphere,' he remarks, 'because in it I feel as if I might be anywhere.'"

Habits That Refresh

By Harold Mynning

It was jokingly said that the pianist Moritz Rosenthal sometimes strikes a wrong note purposely to test the control of his fingers. It is, indeed, beneficial at times, to do the opposite of what is correct or what we are accustomed to do. The momentary breaking of fixed habits is like letting a breath of the outdoors into a room that has had hardly any fresh air for months. Habits are our servants but we should cast them off now and again lest we become theirs.

In keeping with this line of thought I accidentally discovered one day—most things are discovered by accident— a very useful exercise that not only serves to develop control to a marked degree but also breaks a habit that, while useful in itself, is apt to become overworked.

The exercise is to play over a series of three chords, the first very softly, the next very loudly and the last with a tone in between the two extremes; that is, *pp, ff, f.* This is a fine excercise for rendering the hand flexible and makes for surety of attack. It is particularly difficult to play a medium-toned chord between a very soft chord and a very loud one because it is something that seldom actually occurs in music. But for this reason, if for no other, it is excellent for learning to acquire control of all degrees and shades of tone color. It is the old, old story of purposely making a task difficult that the final performance may be the more easily mastered.

The Musician Holds His Court

By C. Stafford

"The lute player who plays for himself hath no anxiety," said one of the wisest of the old philosophers. Let us do some thinking about this statement. Do we ever play for ourselves? Do we not, even when practicing, have some future audience in mind—at any rate, our teacher?

Now, just for the novelty of it, let each one of us give a whole practice hour just to himself. Let us say, "There is nobody else in this world for sixty minutes but *me* at my piano. I shall begin with scales because I really want to hear how I play them. I have never really listened before, for I have been too busy wondering how the teacher liked them.

"This scale is like rubber-boots sloshing along a muddy road! If I do not do another thing this hour I am going to get it to sound like dancing feet on a marble floor. That was better—and that still better! Now it has its rubbers off, anyway. But slowly, there! I cannot expect it to dance before it learns to walk daintily. Again, and yet again. There! It was not hard after all. I shall name that scale 'Pavlowa.'

"Now I shall play over my last Czerny exercise. The teacher said I played it well, but I want to be sure myself. Those chords at the beginning are like trumpeters announcing the arrival of the Queen. Play them big! No, that does not make me feel like a Queen. Bigger and finer! So. Now I can sweep in majestically and hold my court.

"Graciously I distribute harmonies and rhythms to my subjects. I grant a rest here with poise: a melody there with power. Never does a single rebellious note escape punishment nor a single well-turned progression lose its reward. At the end the three trumpeters usher me out with another flourish.

"Next I shall play for myself the first two lines of my new piece. It has not been touched before, but even so I do not intend to listen to a muddle of sound. I shall play it very slowly and get every note correctly. Once I can understand the piece—get acquainted with its peculiarities. so to speak—I shall be able to play it without getting confused. But some compositions are hard to be friendly with, at least for several days. They stand back and let the player make all the advances.

"Here is the *Introduction* to my friend-to-be, properly coming first of all. This gives me an idea of what attitude I am to take toward the piece as whole and what manners or technic I am expected to use.

"Why, this piece *is* friendly! See how smoothly it falls into my way of thinking! I nod and beckon and it laughs back with a little triplet. I say 'Come and play!' and it goes tripping up and down the piano gayly. How lovely it all is!

"However, I must treat my new friend gently. There she has stumbled and fallen down! That was because I went too fast. Slowly there! More slowly! Come, let us just walk together at first.

"It really seems too bad to say 'goodbye' to this merry friend, but someone in the distance keeps saying, 'Mary, *Mary,* I have called you five times. Come to supper!'

"Supper time! Why, I started practicing at four o'clock and now it is six!"

A Concentration Drill

By Benjamin E. Galpin

Eyes to see, ears to hear, one hand to point, a series of figures or notes, a metronome and a brain capable of strictly minding its own business; these are the materials needed in this drill for concentration.

The student points with his finger to the *first* of a series of notes or numbers, as ①—2—3—4, ①—2—3—4, as the metronome ticks. While two, three, and four are being ticked he merely listens and gets ready to point to the *one* again. Thus he *obeys* on the first count and holds himself in readiness on the second, third and fourth counts.

Here are other exercises:

①—2—3—4: obey on *1* (listen on *2, 3,* and 4).

①—2—③—4: obey on *1* and *3* (listen on *2* and 4).

①—2—③—④: obey on *1, 3,* and *4* (listen on 2).

Counting aloud is best for some as it keeps the mind from falling asleep.

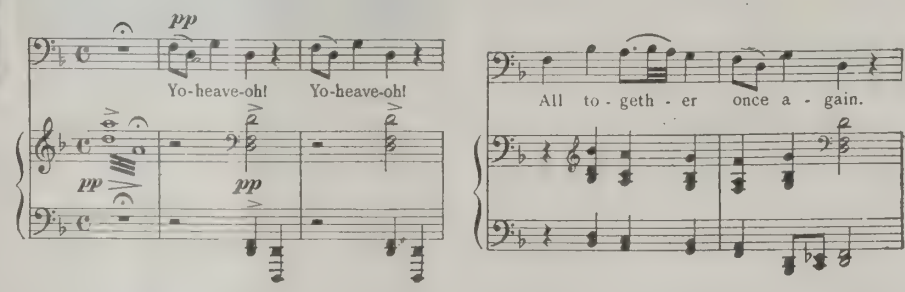
A Musical Voyage Down the Volga

By ELLEN VON TIDEBOHL

[Ellen von Tidebohl is well known to ETUDE *readers through her many excellent contributions sent to us from Russia. She tells of a memorable voyage down the Volga River. The Volga (through the famous "Volga Boatman's Song") has become almost as famous as the Blue Danube of Strauss. Serge Koussevitsky, the present conductor of the Boston Symphony Orchestra, and the originator of this notable musical excursion, is one of the most brilliant conductors of the world. The Story of Boris Godounoff, as presented by the writer, is most interesting. The article is presented as received from the author, retaining the delightful flavor of an alien gifted in writing English.]*

SERGE KOUSSEVITZKY'S

EARLY in the spring of 1910, S. Koussevitzky, the well-known conductor and famous soloist on the contrabass, hired a steamer for a voyage down the Volga. His aim was to bring musical culture to the far provinces of Russia by giving symphonic concerts at the largest towns along this river. The passengers of the steamer were the members of the orchestra and several solo artists. One of them was Alexander Scriabin. Friends, too, had been invited to participate at this trip which had to last a whole month. I, too, had the chance of being a guest of Koussevitzky's.



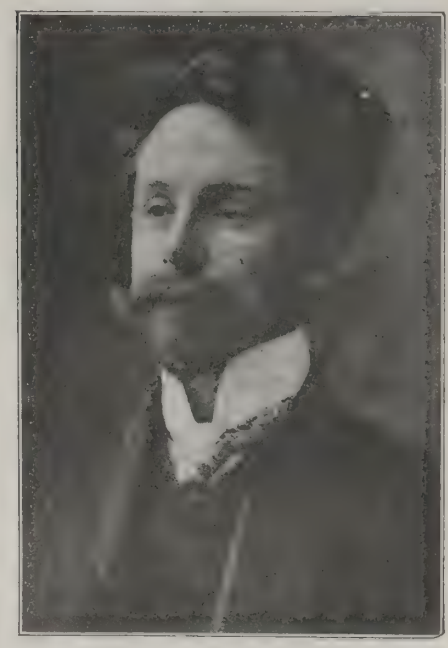
A. Scriabin, a composer of the very modern contemporary music, was the most fascinating interlocutor of our company. I had daily opportunity of seeing him and deliberating with him on subjects of mutual interest. He listened with delight to the lovely songs of the birds and admired the beautiful shores where blossoms and green bushes gave the luxurious picture of a bright spring. What an impressive mind was that of Scriabin! While speaking, a divine light illuminated his face.

At Ouglitch

IT WAS in the evening that we reached the ancient town, Ouglitch, situated on the upper Volga. On approaching Ouglitch we saw from afar a row of white churches with their golden cupolas and crosses of ancient Byzantine style, all over enveloped by the rosy beams of a sinking sun.

At the end of the sixteenth century here lived the Tsarina, widow of Tsar John the Terrible, and her son Dmitri, heir of the throne of Russia. Since he was only seven years old, the Boyar Boris Godounoff, of Mongolian origin, was named ruler of the land till the heir's majority. Boris Godounoff, a man of immense ambition, wanting the Tsar's power for himself and his line, delivered a secret order to kill the child Dmitri. This crime was fulfilled in Ouglitch and afterward gave poignant sufferings to Boris Godounoff by morbid reproaches of his conscience. Modeste Moussorgsky took this event as subject for his opera *Boris Godounoff,* remaining true to history.

But let us return to the passengers who hastened to step out on the shore in order to overlook the historical relics. The picture before us was splendid and the churches, cupolas and crosses were overflown by a veil of a mystical tinge. A. Scriabin was walking by side with me. All at once a great emotion was reflected on his face. "O Religion! O Holy Faith!" exclaimed he, showing with a gesture of his hand the radiant picture before him,



which was like a celestial vision. "What a world of beauty and delight lies in the confidence and trust in God!" (His own words.)

Royal Chambers

THE HEAVY iron gates were opened and we entered the chambers where more than three hundred years ago had lived the Tsarina-widow and her son Dmitri. It was dark; the guard gave us thin wax candles, as they are used at Orthodox church services. Strange was the aspect given to the gloomy rooms by the small lights in the hands of moving figures in a spot where was revived a long past time. All kinds of relics were spread on desks, toys of the child Dmitri and

CHALIAPIN AS BORIS GODOUNOFF

ALEXANDER SCRIABIN

pictures on religious matters on the walls. In the middle of the room was erected a kind of scaffold supporting an enormous bell. The legend tells that this bell began to ring alarm all by itself the very moment of the murder. By order of Boris Godounoff this bell had been thrown from the tower and chastised by rods in presence of the revolted, indignant inhabitants, who were immediately expelled to Siberia. The bell was put on a car drawn by many horses and went the same way. Some years after, Tsar Michael, the first of the Romanoff Dynasty, ordered to return the banished people from Siberia, and the bell, too, which was established on the place we saw it.

The "Bell Legend"

RUSSIAN people are superstitious, and from their point of view the bell became a holy thing. They believe that he who touches it acquires bliss for soul and body. One of our company gave a thump to the bell—a long, soft sound was heard going far away in the space. "Oh, how wonderful," whispered Scriabin; "a divine voice of the past speaks to us of an eternal union of mankind. There is no space, no time in the gigantic work of the Universe! Everything rolls its own way to the infinite!" (His own words.) We were scarcely breathing, fascinated by the wonderful sound and the words of A. Scriabin. The thin wax candles were extinguished; we left the palace and returned to reality. Before us again was the beautiful sight and the waves of the Volga glittering in silver colors inframed by dark shores. A. Scriabin began to speak with allurement about the symbols in art; it was felt that his soul was shivering under a new mental emotion.

The deep impression of our stay in Ouglitch cannot be forgotten; but let us go further on the Volga to new shores and new aspirations. Each great town offered some interest. A. Scriabin performed his beautiful concerto piece and numerous encores with the greatest success. Since I had opportunity of hearing his performances in close succession, I observed that each time he gave another tint to his rendering according to his emotion. Before stepping on the concert stage Scriabin was exceedingly nervous, but as soon as he began to play his excitement seemed to be over and his performance became wonderful.

The last town we reached was Astrakhan, at the mouth of the Volga, where Europe and Asia, meeting together, dispute their superiority one to another. Then began our return home, and again before us the beauties of nature which already had delighted our sight. "It is really a magnificent

voyage," said A. Scriabin, "but I confess that I am tired of doing nothing! I am longing for my home, where I can entirely give myself up to my work." He did not say "to compose," because of his great modesty. We returned to Moscow with unforgetable reminiscences, the dearest of which are those connected with A. Scriabin, the more precious since he has passed on.

Self-Test Questions of Miss Von Tidebohl's Article

1. *What was the physical aspect of Ouglitch?*
2. *With what royal tragedy was it connected?*
3. *What incident would indicate Scriabin's deep religious feeling?*
4. *What superstition was associated with the great bell of Ouglitch, and what gave rise to its origin?*
5. *What incident would suggest the modesty of Scriabin?*

Scales by Tetrachords

By H. C. Higgins

In teaching scales with an increasing number of flats and sharps, it has proved very satisfactory to have pupils work the scales out by the use of tetrachords. Instead of saying, for instance, "In the scale of A flat you must flat B, E, A and D," without giving any reason but that that is the right way to do it, we give the pupils to understand thoroughly just what a tetrachord is, that every major scale has two perfect tetrachords and that a perfect tetrachord is one in which the half-step comes between the third and fourth degrees.

Then, in building the scale, starting on A flat, for example, we tell them: "From A flat to B flat is the first step of our first tetrachord; from B flat to C is the second step. Next we must have a half-step, so it must be D flat." So we explain all the way through that we have to raise and lower because we must have whole steps or half-steps. The pupils, once they know *why*, become fascinated with the idea.

Is Liszt Found Mistaken?

By Mary M. Pleasants

In rereading through the complete works of my favorite composer, Frederic Chopin —an annual feast to me—I naturally remember some *movements* as well as harmonies and melodies of his wonderful genius. While rereading excerpts from Liszt's memoirs of Chopin I was struck with the following quotation:

"Through the feeling that flows forth in all his works they have spread and become much loved in large circles; and this feeling is in the highest degree romantic, individual, peculiar and yet related not only to that people, which has to thank him for one more celebrity, but also to all hearts that were ever touched by the misery of exile and by the sentiment of love. Meanwhile, Chopin was not always contented with those frames within which he sketched his happily-chosen figures; he would also bring his thoughts into the limits of the classical form. He has written two fine concertos and three fine sonatas, but it is not difficult to discern in these productions rather the will, the purpose, than the inspiration. This last with him was capricious, arbitrary, fantastical, bound to no reflection. He had to give it free play and he did violence to his genius, as one thinks, as often as he thought to chain it to traditional rule.

"Chopin could not imprison the wavering, never sharply defined outlines, which lend his thoughts their highest charm, within the stiff, angular framework of a precise pattern. Nevertheless, these efforts are decidedly distinguished by a rare nobility of style and contain passages of high interest and motives of surprising grandeur of thought. We may mention for example, the *adagio* of the second Concerto to which he was particularly partial, and which he was very fond of playing. The embellishments in this movement belong to the finest manner of the composer, and the leading thought is kept up with wonderful breadth. The entire movement is ideally perfect, and the expression of the feeling now bright and gleaming, now touching and penetrating."

All of this quotation from Liszt expresses far better than I can my enthusiastic estimate of Chopin's genius. But on consulting the Second Concerto, I find that the slow movement referred to is not an *adagio*, but a *larghetto* in the key of Ab major. Also I find, by consulting the First Concerto, that the corresponding movement of it is also a *larghetto* in E major. Hence, I ask the question, "Is Liszt found mistaken?"

Things to Do

By George W. Weaver

We get too much of the negative "don't." Let us have some "do" for a change. Most pupils progress better if they are told what they can or should do and get tired of continual prohibitive "don'ts." To draw attention to things to be done is better psychology than the eternal dwelling on faults to be avoided. Here, then, are a few points to observe on the positive side:

DO—

1. See from the very first that each finger strikes the correct note.
2. Require your eyes to note the time and key signatures.
3. Train your mind to remember what the eyes have seen.
4. Work consciously for accuracy (speed increases of itself).
5. Demand prompt obedience on the part of the fingers to what the eyes see.
6. Observe phrasing and touch while still going slowly.
7. Listen for the voices or harmonies while you are playing. If you cannot hear what the composer has to say, you cannot expect an audience to hear it.
8. Try to recognize the chords as you play them. Your technic teaches you the chords and inversion: apply this knowledge.
9. Bear in mind that rhythm is the life-pulse of music and try to find the rhythm (not merely the accents).
10. Listen with both ears to what your teacher has to tell you. If you listen with only one ear the comments are likely to pass right through it and out the other.

First Things First

By May Hamilton Helm

"First things first," answered a woman when asked how she managed to "keep up her music" while also doing her housework. It was with her largely a question of values.

It seemed folly to develop a talent and then, through disuse, let it slip away. Therefore she practiced every morning, letting less important duties wait. There is generally time to do what one really wants to do.

"The time will come when singers will be relegated to the orchestra and their voices used as orchestral instruments. Something more than opera will come out of the movement; the possibilities are endless."

—Eugene Goossens.

Our Heritage—The Indian

By Frederick Cardin

THE INDIAN will always be remembered as the child of "the Great Out-Doors." Consequently, we must consider the Indian Music as of the same source. Research work reveals that Indian music is the greatest, perhaps, of our various idiomatic forms of American folk music.

For many years little was done to collect and preserve the native American Indian music, but now the Smithsonian Institute has attended to the recording and filing of a large portion of all Indian music, and this is being saved for future study. The first scientific study of Indian music is a collection made by Alice Fletcher, of "Music of the Omahas," a Nebraska tribe, and preserved in the Peabody Museum. Collections are now available in every first class library, and it is our privilege to study the Indian melodies and rhythms, as well as the works of other recognized authorities, that they may evolve into something that will fit into the scheme of our modern musical endeavor. One of the surest ways of preserving the native American music is to re-create it and embody it into those things that will make a universal appeal.

Many American composers have chosen Indian themes for their compositions. Mr. Thurlow Lieurance has recorded hundreds of Indian songs which are now preserved in the Smithsonian Institute at Washington, D. C. On one occasion, by accident, he nearly lost his life in the Rocky Mountains, while making his way to an Indian ceremonial, to study and record the music. To him the Indian race as well as the Paleface American is indebted for that beautiful song, "By the Waters of Minnetonka," and for many others based on Indian motives.

Rhythm and melodic beauty characterize Indian music. To the music lover, especially the composer, the music of the Indian is interesting from an expressive as well as a theoretical standpoint. In many instances the songs were accompanied and supported by drums, or, as is often said, the "tom-tom," with a combination of as many as three different rhythms, a combination considered very difficult by modern musicians.

A fact yet beyond our grasp is that the Indians, consciously or otherwise, did hear and sing quarter tones. Many times it is hard to reproduce effects which the Indians obtained with this ability to employ smaller intervals than is possible with our modern musical system. It is unknown whether or not they had a standard scale.

The Indian flute is the closest connection between the primitive and the modern music, the only musical instrument developed by the Indian.

The Indian flute was used for serenading and courting; especially when a brave from one tribe loved a maiden from another tribe. The young brave always composed his own love song by which, from the distance, he might be recognized by his sweetheart. Even today, out in Oklahoma, it is not an unusual thing on balmy spring nights to hear the Arapahoe flutes in the vicinity of the Girls' School on the Comanche Reservation. The flutes are usually made of cedar and have a beautiful tone, quite enticing.

The romantic and traditional quality of Indian music is most attractive. There was special music for all his ceremonies, such as the prayer song of chants for bountiful crops, for spiritual guidance in battle and for physical and moral strength, besides thanksgiving songs for victory, for the corn crops and the plentiful grass, for the many buffalo, and the safety of their people. Then there were the songs of longing, of love, of joy and sorrow. In our Indian music of the plains, one finds the song of the laughing waters, the song of the weeping waters and of owl's bleak cry; the tale of the strawberry moon, of the hot south winds and the years of drought, and famine; of the mischievous whirlwinds and the fierce north winds, from the land of the sky blue waters—things vital and more than fascinating to the Indian, yet fathomless to that great child of nature.

Showing the Pupil the Benefit of Stretching Exercises

By Arthur A. Schwartz

Every pupil wants to see the practical result of work. Nothing so stimulates a boy learning, say carpentry, as the sight of a table he has finished. The same applies to a girl who has learned to embroider. She likes to see her work progress. A child always would rather make a thing which he can see not only when it is done, but while it is growing.

Watch a little girl when she starts to plant flowers, and watch the same child when the flower begins to sprout. With what loving care she tends the plant, and how careful she is to help it grow! How practical was Miss Pontifex when she gave her little nephew a carpenter's workshop. The clever old spinster knew children were delighted when they saw the results of their work. Modern educators, too, see the sense of working along these lines.

To tell a child that certain stretching exercises will increase the span of the hand, means nothing. Children, as every teacher knows, try to stretch the hand, and even ask the teacher: "How much can you stretch?"

Here is a scheme that I have never known to fail, even with grown-ups: I draw the outline of the pupil's hand in a stretched position, in a book I keep for that purpose, and date the picture.

Two or three months later, after giving some stretching exercises, I place the pupil's hand over the old outline and again draw it. The hand has stretched; the fingers extend farther apart than they did at first, and the pupil sees the practical results. Stretching exercises, thereafter, are eagerly practiced; they mean something.

"To be truly musical you yourself need not either play or sing. If you love music and learn to appreciate it, you may become more musical than many an accomplished player or singer. You need not follow music as a profession in order to love it as an art, for appreciation grows with knowledge; and real musicianship does not lie merely in dextrous fingers or facile composition."—Sir Dan Godfrey.

A NEW DEPARTMENT OF PUBLIC SCHOOL MUSIC

Conducted Monthly

By GEORGE L. LINDSAY, Director of Music, Philadelphia Public Schools

Combined Course in Music History, Appreciation and Harmony

THERE ARE many reasons why a variety of music electives cannot be given in the smaller high-schools. A small number of pupils may, indeed, elect various courses, such as Theory and Practice, Harmony, Music Appreciation, Vocal Ensemble, Instrumental Ensemble, History of Music, and Applied Music Study of the piano, organ, voice and instruments of the orchestra and band. But, while the sum total of the number of pupils electing all of these courses would compare very favorably with other popular electives, still the cost of providing enough teachers to carry on a full program of music electives would be prohibitive.

The problem must be solved by combining certain allied courses, such as elementary theory and practice, harmony, music appreciation and history, into one elective or constant course in music. The course should be given on a basis of four or five periods a week and extend over a period of two terms, or one school year. It must, of course, carry full credit toward high school graduation. Enough pupils should elect this special course in music each term to enable the teacher to carry two classes at the same time, namely, music one, which would contain pupils taking the course for the first time, and music two, which would contain pupils who have finished the first term of the course.

Regular Courses

THE GIVING of cultural courses in music on an elective basis should not interfere with the regular work in music. In the high school all of the pupils should be required to take chorus at least once a week, for credit on a laboratory basis; that is, one-half point of credit for each semester's work. The general practice is to require at least one year of chorus work and to offer, in addition, an elective in chorus work for those especially interested. This is important in order to secure graduation credit for pupils who are attracted by glee club and operetta projects.

The school orchestra is the other regular music course which cannot be overlooked. An elective course in orchestra or instrumental ensemble must be given for credit. The high school chorus and orchestra classes should meet four periods a week and receive laboratory credit. The carrying on of credit for applied music study may be handled by the school music teacher in co-operation with local private teachers. A summing-up of the minimum number of courses in the order of importance which a single music teacher in the high school should give, may appear as follows:

(1) Regular chorus work for all pupils;

(2) Elective chorus, open to all pupils qualified;

(3) Elective orchestra (or band), open to all pupils qualified;

(4) Special cultural course, open to all pupils;

(5) Credit for applied music study, open to all pupils taking regular elective courses in music.

Planning the Cultural Course

THE CULTURAL elective course may be considered from two points of view. Music appreciation, history and biography fall under one heading, and elementary theory and practice and harmony fall under another. If the course is to be given on a four-period-a-week basis, then two periods should be devoted to history and appreciation, say, the first and third periods, and the other two periods, the second and fourth, to theoretical work. If five periods are permitted, three of them should be devoted to history and appreciation and two to theory. This really splits the special music course into two courses. However, by doing so, this provides for the admittance of many pupils who cannot find a place in their individual rosters for the full course and, in addition, enables those who are neither interested nor prepared to take work in theory, to take the history and appreciation course.

Material for the Course in History and Appreciation

IN PLANNING the special course we must realize that little can be done without placing texts in the hands of the pupils, in order that assignments may be given regularly for home study. A reference library of works on music, such as Grove's "Dictionary of Music," Baltzell's "History of Music," and many other works on music history and biography should be available for the use of the pupils. There is nothing finer for use in a course of this kind than a work which covers the field of history of music and appreciation in a novel and interesting way. This may be said of the "Standard History of Music," by Dr. James Francis Cooke. This could be used as a basic text and placed in the hands of the pupils. The book is well outlined in short chapter form, with ten test questions given at the end of each chapter. The interesting supplement of records will furnish ample material for illustration of the historical background developed through study of the text. The use of these records for listening lessons will furnish material for a correlated course in music appreciation.

There is no course more fascinating for the average boy or girl than a course of this kind in music history, and in the appreciation of the literature of music, chronologically presented. This course could be continued or supplemented by another work by the same author, namely, "Music Masters Old and New." A music club could be organized to present programs and a study of the lives and works of the great musicians mentioned in this text.

Material for Theoretical Work

THE FACT that a text is needed for history and appreciation holds true also of work offered in elementary theory and harmony. A good text covering the elementary field in theory is the "Harmony Book for Beginners," by Preston Ware Orem. "This work aims to present in a plain and practical manner the groundwork of harmony, giving sufficient material for the work of the first year and affording a thorough preparation for more advanced study, according to any of the standard methods."

Music note books or music paper should be provided for working out the material assigned. Written work should not be copied down in final form in the pages of the text until passed on by the teacher. A staff-lined blackboard should be used and a piano or, better still, a reed organ should be available. The use of an organ will enable the pupils to hear the sustained tones of a chord and, furthermore, to hear chord connection and the leading of voices. The use of cardboard keyboards will enable the pupils to visualize the chord sets or positions and to build up a background for the study of keyboard harmony.

Methods for History and Appreciation

I HAVE BEEN requested to outline a combined course in musical history, appreciation and harmony from month to month, covering ten months in all. This will include the use of the texts named. Let us consider, first, the method of teaching history and appreciation as correlated subjects, and later take up the method of presenting elementary theory and harmony. The "Standard History of Music" reads like a story book and could be read aloud, topic by topic, by individual pupils. After a topic has been covered, the teacher should question the class and get a reaction of the understanding of the pupils. After this has been done the teacher should present a record which illustrates the point or points under discussion, and once again the reaction should be expressed by the pupils. Occasionally the process should be reversed.

A home assignment of a chapter or certain pages should be made. Also, the teacher, without preliminary discussion, should present illustrative material by means of a record or by playing himself. Individual pupils should be asked to identify the kind of music presented or to explain the connection of the musical illustration with the home assignment. Still another interesting but more difficult way is the presentation of the record or illustration first without even preliminary home study. The pupils are asked to give their frank reaction and the teacher, by clever questioning, proceeds to unfold the characteristics of the music which apply to the topic suggested for study.

Whatever method or methods may be used, it is important to use the "ten test questions" given at the end of each chapter for review. Not only should the content of the text be considered in the review, but also the musical illustrations should be used for a test of musical discrimination and memory. Good use should be made of the supplementary booklet, issued to accompany the history. The list of records prepared for use with each chapter is explained by program notes, and these notes are of great interest to the pupils. The names of the compositions may be learned and thus a knowledge of the literature of music gained.

Methods for Elementary Theory

THE INTRODUCTION of elementary theory to pupils of high school age is not a difficult task. A certain vocabulary of the material of music must be learned before actual work in scale building can be presented. All of the scales, sharp and flat, must be given and the near relation of scales or keys explained in the order of the circle of fifths. Out of this building and writing comes the construction of the signatures. All of this work must first be heard, then sung, analyzed, spelled and written. The piano keyboard should be constantly in use and the pupils should be called on to play the various scales studied. All of this work leads to the study of intervals.

If a strong foundation in scale building has been laid, the study of intervals will not be difficult, nor a matter of mathematical calculation, as each degree of the major scale of any given tone lies in fixed relation to the tonic, and as these intervallic relations are either major or perfect. By lowering or raising these fixed intervals one-half step, following the rule that major becomes minor, and perfect, diminished, when lowered, or major becames augmented and perfect, augmented, when raised, and, in addition, that minor intervals become diminished when lowered one-half step, we have the whole story about intervals. The building of triads is a simple matter and is generally considered a part of elementary theory.

Methods for Harmony

THE ACTUAL study of harmony begins with the building of chords in four parts. A study of the various sets or positions of the chords, with regard to the position of the soprano, leads to a background for a study of the chord succession. Right at this point we can begin the harmonization of melody fragments, such as bugle calls. Original melodies should be called for as soon as the harmonization of given melodies is introduced. Common chords in succession should be presented by adding dominant harmonies to tonic and, later, by adding sub-dominant harmonies to tonic. Combinations can be made of all three, and gradually all of the chord material built on the various degrees of the major scale, with the exception of the seventh or leading tone, may be introduced. Progress should not be made too rapidly in using new and different chord combinations or confusion will result. The study of harmony can be made intensely interesting by presenting the subject from several angles. Discrimination in taste must be aroused if the art value of the subject is to be considered.

Some Aspects of Presenting Harmony

LET US consider several ways of approaching the study of harmony in order to build an all-round musical development of the class. One of the popular slogans of education is "the thing before the sign." In theory study this means hearing and doing first and analyzing and writing later. A simple bit of chord suc-

DEPARTMENT OF ORCHESTRAS AND BANDS

Learning to Read an Orchestral Score

By M. MONTAGU-NATHAN

The Following Excerpt is from Mr. Montagu-Nathan's Interesting Book, "The Orchestra and How to Listen to It"

(Kegan Paul, Trench, Trubner & Co., Ltd.)

The Score

THE SCORE serves several purposes. In the old days, before the era of the conductor, when the first violinist was really the leader of the orchestra, and, when occasion demanded, would conduct his colleagues through any passage in which a modification in *tempo* occurred, by beating time with his bow, the score, compiled by the composer, was simply a record of the music in its orchestral version, and, once the separate parts had been copied from it, was only required in an emergency. With the advent of the conductor, however, it became customary to print and publish the score, and, in more recent times, the listener has been indulged with the provision of a means of studying and following the music from a miniature or pocket reproduction. Modern scores of works in which the instrumental body is very large are reproduced by photography—a comparatively inexpensive process.

The score, at a first glance, seems a simple affair enough, but at a second the student will see that as some of the instruments play, or rather sound, notes different from those written, score-reading, following, and especially playing, cannot be successfully undertaken without special knowledge, and, after that has been acquired, some practice.

This difficulty is caused by the principle of transposition, on which certain instruments are played and written for.

An examination of a score-page will disclose that, while in the strings the key-signature is that of the key in which we know the piece to be, some of the wind-instruments have other key-signatures. If we were to reproduce on the piano the notes we find in the score, the chord chosen would not have the sound we had heard when the piece was performed on the orchestra. There is a story told of Dvořák, that when a youth, he arranged some music for a band, and being in ignorance of the necessity of transposing, wrote a trumpet part in the key of the piece; as this occasion was intended to be something in the nature of a demonstration of his musical prowess before the parents to whom he had recently returned from school, one can well imagine his dismay at this revelation of the dangers arising out of insufficient knowledge!

Why Transposing Instruments

THE REASON for the variations of key-signature in a score is easily comprehended once the principles of sound-production are understood.

The reader will remember that the principles in accordance with which the wind instrument produces its sound are founded upon the natural harmonic system, which is, that when the air in a tube is set in motion, the vibration of the air column takes place in segments and that the division of these segments results in the production of partial tones. The incident of this system is perhaps best explained by a kind of comparative instrumental anatomy.

If we turn to the clarinet, which is a transposing instrument, we find that it is built in a certain key, and that a change of note is affected by an alteration of the length of the air-column—an effect produced by opening up holes in the side of the instrument—the higher octaves being secured by graded over-blowing, which brings into play a different fundamental, and, consequently, a different set of partials. It will be remembered that owing to the "break" in the clarinet compass—the section in which the instrument is tonally unsatisfactory—it has been found expedient to employ instruments of different calibre, so that the notes which in a clarinet of one pitch would be unsatisfactory are played on another on which these particular notes do not occur in the "break," but in another section of its compass, being therefore satisfactory.

Transferring our attention to the horns, we discover that these instruments are likewise built in a certain key, and that if played in this normal key they produce their series of partials by variation of liptension; further, that the whole series is altered by the use of a valve which lengthens the tube, so that when a note not to be found in the natural series is required, it is secured by changing the calibre of the instrument, and, in consequence, its partials.

A Comparison

NOW IF WE CONSIDER the violin, and imagine that the player is only allowed the harmonic or partial notes of one string, we shall at once perceive that his left hand will often be obliged to make wide leaps from one spot to another in order to produce a scale selected from his partial notes; or, if we use the piano for our comparison, we are under the necessity of imagining that all notes save the harmonic series have been eliminated from the keyboard and that the player, if he wish to play a scale, must pick out the partials, not in their order of occurrence on the keyboard, but in another. Moreover, unless he contrive, he will obtain only a limited number of notes, either on the violin or the piano of our hypothesis. What the wind-instrumentalist contrives is in reality the equivalent of what the violinist would be obliged to do in such a situation; he would alter his string, whenever he required a note not in the natural series, by screwing it either up or down, thus changing the pitch and throwing open a new set of partials; the pianist would probably depend on an equivalent device by which he would lower or raise by means of a mechanical process easily manipulated.

In instruments such as the clarinet, which has a cylindrical bore, the fingering is more difficult, owing partly to the absence of even-numbered partials. It is necessary, therefore, to keep the fingering as nearly as possible uniform, and, when the orchestra has to play in a key which is difficult for the clarinet, to arrange that the latter shall *finger* in the easiest possible key.

If, then, the clarinettist is using, say, his B flat instrument, he will in any case be sounding notes a whole tone below the notes written in his part and in the score, and, in addition, the composer writes for the instrument in the key which will make the clarinet part as easy as is possible in the circumstances.

Making It Easy

THUS THE CLARINETTIST is placed in the position of our hypothetical violinist or pianist, in that whereas he will on occasions alter the pitch of his instrument, just as does the horn player, the fingering system is kept as nearly as possible constant.

If his part were written as it sounds, the instrumentalist would have to do the transposing, which would be, so to speak, a physical as well as mental transposition; the conductor's or reader's process is only mental. To explain the matter in the briefest possible fashion, the notes written for transposing instruments are construed by the player as fingering indications.

It should be here pointed out that there is really no need for the score to be identical with the part played by the instrumentalist, and a few attempts have been made, without any considerable success, to abolish this old-fashioned and unnecessary method of score compilation and to introduce the practice of giving the parts of transposing instruments as they sound.

Until this reform obtains full sanction the score reader will be obliged, when perusing a masterpiece in his arm-chair, to perform a feat which appears to be comparable to that of reading a play in which the chorus or crowd speaks in the vernacular and some of the protagonists in certain other languages. To the accomplished linguist the sense of the play will be revealed, but the commencing polyglot will secure but a spasmodic appreciation of the drama.

How It is Done

THE TRANSPOSING instruments in ordinary use are as follows:

The ENGLISH HORN, which has the same fingering-system as the Oboe, but which, owing to its greater length, sounds a fifth lower; its part is written, therefore, a fifth higher, and its key signature has one more sharp than the key of the piece.

The CLARINETS in B flat and A. In the first, the note B flat is the equivalent of C. In consequence of this the B flat Clarinet part will be found to have discarded two of the flats belonging to the key of the piece, thereby effecting the necessary transposition from B flat (two flats) to C (none). As an instance of this, music for the B flat Clarinet which, for a non-transposing instrument, would be in the key of A flat (four flats) is written for the B flat Clarinet in B flat (two flats). The same subtraction obtains, naturally, when there are sharps instead of flats. Two sharps *more* being the equivalent of two flats *less*, the key of C would become, for the B flat instrument, that of D (two sharps).

The same condition of affairs prevails with the A Clarinet. To alter the key of A so that it would operate as that of C means the discarding of three sharps; hence, whilst music in A would be written for this instrument in C (or three sharps less), music in B (five sharps) would, in process of dropping three sharps, become music in D (two sharps) and music in D (two sharps) would drop its two accustomed sharps and introduce one flat besides—appearing, therefore, as in F (one flat).

The BASS CLARINET, usually in B flat, in addition to the transposition, is written an octave above, in order to avoid leger lines.

The HORN is written for according to the fingering system best suited to the key of the piece. Obviously the F Horn will have its notes written a fifth higher than the notes sound.

The TRUMPET undergoes transposition similar to that of the Clarinet, its fingering system being usually either B flat or A.

The PICCOLO and the DOUBLE BASS are not, strictly speaking, transposing instruments; the transposition undergone by the music does not affect the tonic, or keynote; it is, in a sense, a platonic transposition. The Piccolo part is written an octave lower and the Double-Bass part an octave higher than the real sounds in order to avoid leger lines—as already noted in reference to the bass clarinet.

Experience the Only Teacher

THERE IS no royal road to adeptness in score-reading, but the attainment of facility by means of experience and experiment in the orchestral concert-room will surely be reckoned a pleasure rather than a toil. From our illustrations it will be seen how a standard score is arranged, and the student will observe with some trepidation that the tendency towards increase in size of the orchestra has caused the score to grow until there are often many lines in it which are not to be found in the classical examples. The scores of such works, for instance, as Skryabin's POEM OF ECSTASY, which at moments require more than thirty-six staves to the page, could hardly be reproduced in pocket size, since that would render the reproduction too small to read. An attempt in this direction has, however, been made with the Strauss work, but, as the page has to be sufficiently high to accommodate the numerous lines in a readable type, the length of lines on each page is of necessity curtailed in order to retain some semblance of pocket dimensions, and hence it becomes necessary to turn over with a frequency that speedily grows irksome. One feels like a Lilliputian trying to read the score of a work intended for the edification of Brobdingnag.

Fortunately there is no reason why the comparison instituted by the inclusion of these examples of scoring should deter the intending student from entering upon a study of the symphonic literature. The history of the orchestra is at the beginning of a new chapter. Bigness as an end, and even as a means, has now, for obvious reasons, very little to recommend it, and the future of the orchestra must lie with those who know full well that simplicity is not incompatible with beauty.

The Teachers' Round Table

Conducted by PROF. CLARENCE G. HAMILTON, M.A.

Professor of Pianoforte Playing at Wellesley College

This department is designed to help the teacher upon questions pertaining to "How to Teach," "What to Teach," etc., and not technical problems pertaining to Musical Theory, History, etc., all of which properly belong to the Musical Questions Answered Department. Full name and address must accompany all inquiries

PROF. CLARENCE G. HAMILTON

Metronome Speed

I am at the age of twenty-eight, working hard to become a pianist. Technic bothers me, and I am nervous when I play a quick piece in public. My teacher insists on my getting my pieces up to metronome markings, but I feel so stiff when the metronome is ticking fast! Is it necessary to get music up to these markings? I use the metronome a good deal, but am afraid it is keeping me back in my work.

I love to express myself in my music, and always have in mind a picture of the music that I am playing. Should I be discouraged because I cannot play fast enough? I have the spirit for work and never blame anyone else but myself if I do not get along. Memory work is easy for me. G. C.

A metronome should be used only when it is a real help; otherwise it should be kept on the shelf. In his book *The Principles of Expression in Pianoforte Playing,* Christiani says:

"Technic should not seek to shine by itself, and least of all give the impression of being the performer's strongest point. It is not so much a question of playing a great many notes with great velocity in a given degree of strength, as of playing every note clearly and in the spirit of the composition."

So if you have acquired the proper rhythmic proportion in a given piece, forget about the metronome markings which are generally arbitrary and altogether too fast for the student; and concentrate on the interpretation of the musical thought—which mere rapidity is apt to obscure rather than illuminate. Certainly we would not judge the ability of a public speaker by the rapidity with which he talks!

However, you should constantly endeavor to eliminate all stiffness from your playing, since such stiffness results in an inelastic touch and a rigid style. Pay special attention to relaxation of the wrist muscles which are the most frequent delinquents, and preface each day's practice by systematic exercises for loosening the wrists.

Materials for Elementary Pupils

1. What studies and pieces shall I give a bright boy of six after the completion of Bilbro's *First Melody Lessons?*

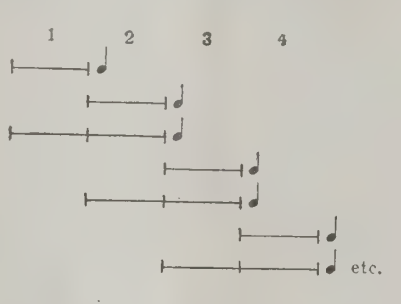
2. Do you think that Hanon's *Exercises* and Gurlitt's *Studies* could be abridged in teaching an adult beginner who can read music?

3. Is a person of twenty-three too old to begin the study of the harp? Where can a harp be obtainable, also instruction? What are a harpist's earning powers and mediums? A Young Teacher

1. Try Beren's *Easy Studies without Octaves,* Op. 70, Book 1. For pieces, I suggest Bachmann's *Cendrillon Waltz,* and Gurlitt's *March of the Tin Soldiers,* Op. 130.

2. These exercises and studies are excellent. Gurlitt's *School of Velocity for Beginners,* Op. 141, would probably suit the case. A teacher of discretion will always adapt studies to a pupil's needs and not slavishly follow the order in which they appear. Fit the studies to the pupil and not the pupil to the studies.

3. As I am not a harpist I cannot answer these questions in detail. The age of twenty-three, however, should not be too old to start on any instrument, especially if one has some previous musical knowledge. Also, the harp is increasingly in demand for both solo and orchestral work.



Memorizing

1. What is the best method of memorizing in the higher grades? Is it better to study the piece thoroughly and play it well before beginning to memorize or to begin memorizing with the study of the piece?

2. Is Liszt's bravura waltz called the "Mephisto Waltz" from Lenau's *Faust?* Is it not considered extremely difficult? M. M. M.

1. Yes, it is much better to study a piece well from the note and to submit it to the teacher's criticism before attempting to play it from memory, since corrections and suggestions are more effective if the pupil is still dependent upon the printed page.

In the Round Table for August, 1923, I suggested a scheme for memorizing which I have found of advantage to both myself and my pupils, and which works equally well whatever the stage of advancement. In this system, one proceeds according to the following diagram:

Each division: |——| represents one measure; and the note which follows it represents the first note of the next measure.

Begin with measure 1. Play it *twice* carefully with the notes. Then, looking at the fingers, play twice on top of the keys. Finally, play aloud twice from memory. Proceed likewise with measure 2, then with measures 1 and 2 in succession, then with measure 3, then with measures 2 and 3 consecutively, and so on.

The next day you may repeat the process, taking groups of two and four measures instead of one and two measures; and the following day you may practice whole sections in a similar manner. In this process, each individual detail of notes and finger motions should be stamped indelibly on the mind. Having secured this mental mastery one may proceed to the "finishing touches" of interpretation.

2. The *Mephisto Waltz,* was, as you suggest, inspired by the *Faust* of Nicolaus Lenau (pen name Nicolaus von Strelenau), a Hungarian poet who lived from 1802 to 1850 and who was noted both for his short lyrics and for his longer poems, such as *Savonarola* and *Faust.* Yes, the waltz is a technical "stunt."

Applied concentration makes a musician, an artist, a poet, a philosopher. The degree of success a man achieves and the rank he attains in any calling depend more on this "applied concentration" than on the gift of genius or on accident.—*Bartholomew.*

Supplementary Exercises

Is Hanon No. 1 to be used in connection with Presser's *Beginner's Book* or *The Standard Course, Book 1?* Do you recommend the use of Mason's *Touch and Technic* with the Presser book?

Just what is meant by an "accredited teacher?" M. McE.

The courses which you mention are intended to be self-sufficient although there could be no possible objection to supplementing them by other longer exercises, such as those of Hanon. Mason's *Touch and Technic* furnishes a valuable background for any course of music study.

An accredited teacher is presumably one who has fulfilled the conditions imposed by a given institution or community. Since such conditions are only occasionally formulated and since they vary with each locality, the term is an extremely vague one. Many attempts have of late been made to require government certification of teachers, but, so far as I know, these have hitherto been unsuccessful. Will not members of the Round Table who have had experience in the matter give us some information?

Short Fingers

My problem is that of the small, rigid hand and its limitation—how to manipulate or help the hand to develop and eventually be of a size adequate to meet the demands. The particular child to whom I refer is one of my pupils, a gifted child of ten. She is of average size in every respect except in the smallness of her hands.

A former instructor of mine used to begin a lesson by strenuous manipulation of the hands while going through an oral drill regarding scales, triads, and so forth. Personally, the reaction was not agreeable. It took me about five minutes to become conscious of my own hands. But she evidently considered it a short cut to "limbering up." If I'm assured that it is for her good I shall manipulate this child's hands. Needless to say I give her suitable stretching exercises at the keyboard, and she can now play a seventh with ease. She is studying the *Harmonious Blacksmith,* Beethoven's *Moonlight Sonata,* and so forth. As far as interpretation is concerned, she is quite able to take the latter piece. J. P.

Your problem is one about which I should not worry as it will probably solve itself with the child's natural growth. Manipulation of the hand is all right providing it be not overdone; but I should be wary of too many stretching exercises which are apt to strain or stiffen the muscles. A pupil of mine persisted in practicing octaves without my knowledge or consent until the consequent strain necessitated the care of a physician who forbade her touching the piano for several weeks.

See that the hand develops normally in finger expertness, and that, above all, the wrist is kept relaxed. Then trust to time to do the rest. Meanwhile there is a plentiful amount of piano music that does not involve long stretches or that may easily be adapted to short fingers. Most of Cramer's studies come under this head, also pieces such as the sonatas of Haydn and Mozart, Bach's preludes and fugues, Weber's *Rondo Brillante,* Op. 62, Cyril Scott's *Danse Nègre* and some of Chopin's nocturnes and waltzes.

Some of the greatest pianists have possessed small hands. I recall the marvellous agility with which the late William Sherwood used to scamper over the keys with his short fingers. I'm not sure but that undersized fingers are preferable to large, clumsy ones or those that are so long as to get in each other's way!

Psychology and Music Teaching

I QUOTE from a letter received from Mrs. C. C. Carson, of Peru, Indiana, in which she makes a strong plea for the study of psychology and the science of pedagogy by every piano teacher. Enumerating the benefits of such study, she says:

If piano teachers knew about Thorndike's laws of learning, about the laws of habit, how the mind of the student reacts to different stimuli, how many would change their method of procedure? About nine-tenths of them, if they were open-minded enough to admit their errors!

A little story told by my psychology professor a number of years ago to illustrate the law of use and habit, has helped me to put many a heedless pupil on his feet. "A farmer drove carelessly and crookedly over a muddy road. His wagon left deep ruts. Every time he went over that road his wagon followed the same ruts, cutting deeper and deeper continually." Just so in our mental process the oftener the nerve current passes over certain paths in the brain, the less becomes the resistance. Certain connections between situation and response are made, and the paths are established.

If we practice slowly and carefully, think straight, see that our fingers respond to our thoughts—in short, make the track clear-cut the first time—each time it will be easier and easier to play the selection *correctly.* Of course, it would be useless to try to explain to young pupils about neural paths in the brain, about the nerve currents, and such, in technical terms, but high school pupils *want to be shown,* want to know why. The teacher who knows these things herself certainly knows better how to guide and train young minds in music study just as she would be aided by such knowledge in the study of mathematics or language.

I, for one, am in favor of setting certain standards of requirements for music teachers to raise the standards of our profession and to make us more useful in our work.

For those who are interested to follow out Mrs. Carson's suggestions, the following books may be especially recommended as worthy of close study:

Fisher: *Psychology for Music Teachers.*

Thorndike: *Principles of Teaching.*

Strayer and Norsworthy: *How to Teach.*

"You don't have to know nothing about music to be a orchestra conductor," said Jake Jones; "I oncet conducted the Philharmonic Orchestry. Sure I did! Conducted the whole gol-darned bunch of players from the hotel to the high school auditorium where they gave a concert."

The Musical Scrap Book

Anything and Everything, as Long as it is Instructive and Interesting

Conducted by A. S. GARBETT

WAGNER AND BERLIOZ AS PRESS-AGENTS

THE part commerce plays in modern music comes in for review in Adolf Weissmann's "Problems of Modern Music," provoking an interesting comparison of Berlioz and Wagner in bringing their work to popular attention. They "ranged themselves the one for, the other against, the press," says Weissmann.

"They both knew the value of stage-managership to the artist in the nineteenth century. They both knew the far-reaching influence of the printed word in the modern world, and they were both born self-advertisers. Here, however, the resemblance ended. Berlioz, whose love of sensation amounted to hysteria, wrote musical articles sparkling with Gallic wit. It is true that as a creative artist he disliked the critic's task which circumstances imposed upon him, but he made the most of the possibilities it offered, and was not above using deliberate untruth for his own advantage. The truth of his inspiration as a composer, however, mocked at the utilitarian devices and intrigues of his lesser self; his work was always in advance of the comprehension of his fellow-countrymen, and he himself solitary among them.

"Wagner, on the contrary, advertised himself, not through but in spite of the press. He could not adjust himself to the journalistic *tempo,* and his writings took the characteristic form of long-winded treatises. His keenness and personal ambition were very great and he, like Berlioz, was not fastidious as to the means he employed; his propaganda was very persuasive.

"Berlioz and Wagner may be said to have been their own agents, but neither liked the task. It was forced upon them by the real necessity of getting performance, without which a musical composition remains unfulfilled. They had to speak through many mouths of the orchestra and sought to inspire all its members, from the conductor downwards, with the spirit and meaning of their work."

A LEATHER DAGGER FOR MADAME!

"I ALWAYS throw myself heart and soul into anything I may be doing," confesses Marie Jeritza, the great dramatic soprano, in her book, "Sunlight and Song." "Yet sometimes my enthusiasm is held responsible for accidents of which I am blameless. More or less was printed anent an incident which occurred at my second performance of 'Tosca.' It was said that I flung myself so enthusiastically on the villain, *Scarpia,* who surely deserves to be stabbed to death—and was impersonated by my friend Scotti—that my dagger passed through his Empire coat, waistcoat and silk shirt, grazing the skin. Since then I am supposed to use a leather dagger for the stabbing scene. After all, so it was said, there was no reason why an artist, especially so fine an artist as Scotti, should be sacrificed because I sank my individuality so thoroughly in that of the heroine. . . . .

"The truth of the matter is that it was all the fault of the dagger, or to be correct, the species of hunting-knife used. A good stage knife should always have a blunt handle, so that when the artist, unseen by the audience, makes the rapid turn of the wrist which reverses the knife, there is no chance of the victim being struck by the sharp point. The hunting-knife had—quite inappropriately—a horn handle, made of the antler of a deer, but unfortunately running to a point. It was the first time I had used it. I picked it up hurriedly, taking a blunt end for granted, and so the accident happened."

BEETHOVEN AND HIS MOTHER

BEETHOVEN'S childhood was far from being happy, on account of his inebriate father, but some happiness came to him at least through his mother. Paul Bekker, whose "Beethoven" has been recently translated from the German, tells us that "Throughout his life, Beethoven held his mother in hallowed memory and spoke of her always with the tenderest reverence, with a painfully acute sense, perhaps, of her unenviable life with his brutal father. She remained for him the chief of the very few happy associations of his childhood's home. Each year the feast of St. Mary Magdalene (her birthday and name-day) was kept with due solemnity. The music-stands were brought from the *Tucksaal* and placed in the two sitting rooms overlooking the street, and a canopy, embellished with flowers, leaves, and laurel, was put up in the room containing Grandfather Louis' portrait.

"On the eve of the day, Madame van Beethoven was induced to retire betimes. By ten o'clock all was readiness; the silence was broken by the tuning-up of instruments, Madame van Beethoven was awakened, requested to dress, and was then led to a beautifully draped chair beneath the canopy. An outburst of music roused the neighbors, the most drowsy soon catching the infection of gaiety. When the music was over the table was spread and, after food and drink, the merry company fell to dancing (but in stockinged feet to mitigate the noise) and so the festivities came to an end."

We have this pretty birthday idyll from a young inmate of the house occupied by the Beethovens.

PURITANISM IN MUSIC

IN "The Well Tempered Musician," Francis Toye, an English critic with a modern outlook, discourses interestingly on a form of Puritanism in music common to both sides of the Atlantic:

"In endeavoring to demonstrate to an Anglo-Saxon audience," he says, "that light music is not, *sui generis,* inferior to serious music, the writer is handicapped by a remarkable obstacle in the fact that, temperamentally, the Anglo-Saxons show a marked preference for light music, and that, for this very reason, they are loath to believe that it can possess merit equal to that of music which they find more difficult to appreciate. One cannot have Puritan ancestry with impunity. Puritanism is always cropping up in all of us in the most unexpected guises, and one of the most marked characteristics of our artistic Puritanism is our distrust, if not our scorn, of what seems instinctively incongenial. . . . . .

"Doubtless the acknowledged masterpieces at the very apex of our music literature are serious, without taint of levity. But it is not until you start the wholly unprofitable task of trying to classify musical compositions in order of merit, like schoolboys in an examination, that you realize how few, how exceedingly few, these are. For after, say, half a dozen selections—and it is doubtful if all these would command universal assent—we have to cry halt before Mozart's 'Don Giovanni,' 'Le Nozze di Figaro,' and 'Così Fan Tutte,' not to mention Wagner's 'Meistersinger' and Bizet's 'Carmen.' If the term 'light music' has any meaning at all, these masterpieces must be admitted, in greater or less degree, to contain examples of it. Thereafter any distinction between the merits of serious and light music, as such, becomes frankly impossible. Indeed, it is often very difficult to say where the frontier between the two should be drawn."

JEAN-BAPTISTE LULLY—REALTOR

LULLY, the founder of French opera, also operated in real estate, according to Romaine Rolland, who thus describes him in "Some Musicians of Former Days:"

"Like Gluck, Lully understood the all-powerfulness of money in modern society, and his head for business was the means of getting him a large fortune. His posts of Superintendent of Chamber Music and music matter to the Royal family are estimated to have brought him thirty thousand francs. His marriage, in 1662, with the daughter of the celebrated Lambert, music master of the court, brought him a dowry of twenty thousand francs. Besides this he had the receipts from the opera and exceptional honorariums from the king.

"He conceived the idea of investing the greater part of his money in projects to make a new suburb on the Butte des Moulins. He did not consult a business man in the matter, but did all his own work, and, as Mr. Edmond Radet has shown, worked out calculations, negotiated purchases of land, superintended building operations, and settled terms with the workmen. He never let any one do things for him. In 1684 he was the proprietor of six buildings which he had had put up, in which he let apartments and shops. At Puteaux he had a country house with a garden, and a second one at Sèvres. And finally he set about purchasing a lordly estate, the country of Grignon, for which he bid sixty thousand pounds above the First President. . . .

"At his death he left fifty-eight sacks of louis d'or and Spanish doubloons, as well as silver plate, precious stones, diamonds, real and personal property, charges, pensions, and so forth, in all worth about eight hundred thousand francs, and equal to two million francs to-day."

To this the author adds a footnote detailing other properties Lully possessed, lifting his fortune to seven millions of francs.

GRÉTRY'S INVENTIVE MIND

"IF I had to dance to music in prison I should choose a clarinet to play the tune," said Grétry, the French composer, who believed the clarinet and bassoon were sad instruments, and the oboe rustic. Most wind-instruments were "sad" in his day, which, of course, was the day of Haydn and Mozart.

"Like Rameau," says Mary Hargrave in "The Earlier French Musicians," in which she has an essay on Grétry, "he speculated about music as a means of expression. Not only sorrow and joy, but such emotions as anger, jealousy, shame, may be expressed in music. Even friendship, sarcasm or flattery may be rendered."

And again, she says: "He had an inventive mind and imagined a kind of metronome for rhythm, also a musical barometer with a merry air for fine weather and a sad one for gloomy days. . . . .

"He dreams of a theatre of the future which is astonishingly like Bayreuth. 'I should like the theatre to be small, holding one thousand persons at most; with only one class of seats everywhere; no boxes. I would have the orchestra concealed, so that neither musicians, lights nor music stands should be visible to the audience. The effect would be magical. . . . A circular hall rising in tiers forming a simple amphitheatre decorated only by frescoes.'

"He foresees that all accessories foreign to the 'poem' must be got rid of. The ornamental singer will be banished from theatres to concert halls; *roulades* will seem so ridiculous that no one will sing them save those who wish to imitate the nightingale. There are also orchestral abuses which must be abolished.'"

SCRIABIN AS A STUDENT

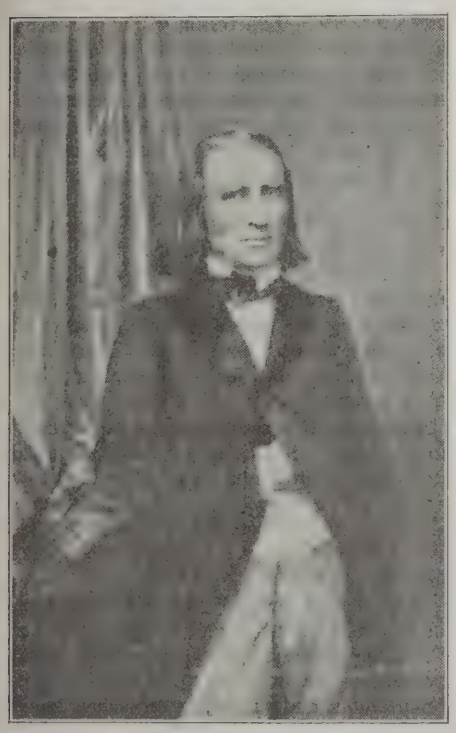
HERE are some gleanings from an essay on Scriabin appearing in "Crotchets," by Percy A. Scholes, giving us a glimpse of the Russian composer in his student days:

"Scriabin's definite academic training was, of course, received at the Moscow Conservatory. Here his teachers were Taneyef for counterpoint, Arensky for composition, and Safonoff for piano. The teaching and personality of Taneyef were probably quite acceptable to him, and so, certainly, were those of Safonoff. To Arensky he seems quickly to have taken an aversion, and his work for him was done under compulsion. On one occasion Arensky set him as a summer holiday task the writing of ten fugues. Of these he wrote but two—a fugue-nocturne and a five-part fugue. . . . When, leaving the stricter style of fugue, Scriabin went on to free composition, he gave still more annoyance to his master. If Arensky asked for one thing, Scriabin would invariably bring another. As one instance, Arensky told his pupil to write an orchestral scherzo—result, the composition of an introduction to an opera on a Lithuanian subject. Speaking to another of his students, Arensky described Scriabin as a 'madman.'

"Taneyef, it is satisfactory to find, understood Scriabin and gave him a far better name. He spoke of him as a quick learner who always did the exercises that were set, but admits that he was not particularly fond of work, and was ingenious in finding short cuts; 'such as selecting the shortest themes for treatment as exercises in "imitation!"'

"Safonoff's recollections of Scriabin seem to have been invariably pleasant. He described as one of the finest experiences of his life an occasion when, whilst giving Scriabin a lesson, being over-tired, he dropped off to sleep and woke to hear a D flat major prelude until then unknown to him. He remained spellbound and afraid to move or speak lest he should break the spell."

Franz Liszt and His E Major Polonaise



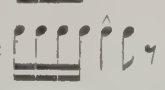
By the Eminent Pianist

RICHARD BURMEISTER

Famous Pupil of Franz Liszt

IT WAS in the fall of 1881 that I followed Franz Liszt from Weimar to Rome to continue my studies with him. His seventieth birthday had just been celebrated at the German Embassy in the Palaces Caffarelli and later a concert was given in his honor at Sala Dante where Sgambati played his *A Major Piano Concerto* and Pinelli conducted his *"Dante" Symphony.* A few days later, Liszt, who lived at Hotel Aliberti that winter, gave to the few pupils gathered in Rome a lesson at which I happened to play his *E Major Polonaise.* Though forty-five years have elapsed since, it seems to me as if the lesson had taken place yesterday; and it gives me pleasure to write down for the ETUDE the master's conception and changes of his work.

The biography of Liszt is too well known to be reiterated here. His career was a most marvelous one: A pupil of Czerny (the man with the uncountable ETUDES); kissed by Beethoven after a concert the lad gave in Vienna; refused by the Paris Conservatoire to enter as pupil; a few years later having all Europe at his feet; then settling down in Weimar to startle the musical world by publishing most revolutionary compositions; after that drawn to Rome by the Princess of Wittgenstein, he became there a priest after his love affairs had furnished the salons of Europe with most sensational talking-stuff. Again he returned to Weimar



A RARE PORTRAIT OF LISZT

to give the rest of his busy and most generous life to his pupils and died solitary, like a gentle King Lear, but without a Cordelia, in Bayreuth amidst the Wagner Festivals, the 31st of July 1886.

A Popular Composition

AMONG Liszt's piano compositions the *E Major Polonaise* has become one of the most popular piano pieces. Before commenting on it a few words may be said about the Polonaise in general.

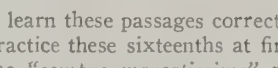
The Polonaise (in Italian Polacca), a Polish national dance, is rather a promenade than a dance. It did not originate from the numerous Polish folk dances or songs, but was first played and danced in 1574, at the court of Henry III of Anjou in Krakau, when the nobility defiled before him at his ascension to the throne.

The Polonaise is always written in ¾ time of moderate tempo and consists of two repetitions of 6, 8 or 10 measures. Characteristic is the very strong accent on the first beat of the measure, the rhythm of the accompaniment:  and the ending on the third beat: 

Later, when the polonaise was introduced into other countries and spread over all Europe, it underwent some enlargements and changes. A Trio, even two Trios, were added and a Coda attached to it. The Kosciusko-Polonaise (Auf zur Rache, ihr Brűder) is a famous example of the kind.

The rhythm of the Polonaise (called "alla Polacca") is used also in instrumental and even in vocal pieces and operas ("Faust" by Spohr, "Eugen Onegin by Tschaikowski and the well-known "Dance of the Torches" by Meyerbeer, danced at many ceremonies of the former Prussian court). The most popular polonaises have been written for the piano, not as dance music, but as piano pieces. Beethoven began the set with his *Polonaise op.* 89. Weber followed with his *Polacca brillante* (arranged by Liszt for piano and orchestra) and Chopin, the Pole, crowned it with his magnificent array of polonaises of which the one in A flat major has ever been the war horse on which pianists have attempted rides to glory.

Liszt's Two

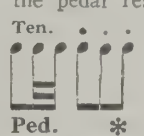


THE TWO polonaises in E major and C minor written by Fr. Liszt are a set apart. Revolutionist as he was in breaking the traditional forms and inventing startlingly new harmonies, he interpolated into the strain of the *E Major Polonaise* also brilliant cadences and into the one in C minor even Hungarian rhythms and free improvisations. Our unforgotten James Huneker, in his book, "Franz Liszt," wrote the following about them: "The two Polonaises recapture the heroic and sorrowing spirit of Sarmatia. The first in E is a perennial favorite; I always hear its martial theme as a pattern reversed of the first theme in the A flat Polonaise of Chopin. But the second Liszt Polonaise in C Minor is the more poetic of the pair; possibly that is the reason why it is so seldom played."

The Broad-Minded Interpreter

AS TO the performance of his own original compositions Liszt was the most broad-minded man. As he himself had tussled all his life with the works of other composers, transcribing them for other instruments, changing, arranging and rearranging them in most various ways, he was also most liberal towards the changes the performers made with his works. During his life time I arranged his *Galop Chromatique* and his *Sonata in B minor* for two pianos, and both works were performed at the lessons with his approbation. Later I arranged his *Concerto Pathétique* (originally written for two pianos), his *Mephisto-Waltz* and his *Fifth Hungarian Rhapsody,* all for piano and orchestra.

In the *E major Polonaise* which is published in this number of the "Etude," I publish for the first time the changes which partly originated from Liszt himself, and partly were proposed by his pupils and approved of by the master.

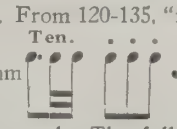


Interpretation

THE CHARACTER of the Polonaise is best defined by Liszt's own inscription: *"Allegro pomposo con brio."* It begins with a short introduction the staccato notes of which are not to be played lightly but rather heavily, almost *portamento.* In the first three measures of the principal theme, 5-7, Liszt insisted on bringing out very distinctly the single sixteenth notes (those *not* written in octaves), being an essential part of the theme. He called it a "Schlamperei" when in the third measure (7) the single sixteenths were drowned by the following octaves in this manner:  instead of 

In order to learn these passages correctly I advise to practice these sixteenths at first staccato. The *"sempre marcatissimo"* refers also to the accompaniment. In 11 the phrasing of the sixteenths of the first and third beat must have rather this effect:  the same in 19 of the sixteenths of the first and second beat. In 25 Liszt's remark *"quasi trombi"* speaks for itself. While Hans von Buelow, in his monumental Beethoven edition proposes to imitate orchestral effects at the end of the *Sonata Appassionata,* it is doubtful whether Beethoven had them in his mind when writing those passages. Liszt, however, fully intended to produce orchestral imitations, in quite a number of his piano compositions. In order to bring out the *"Trombi"* effect in this second theme of the Polonaise one has to play it forte with rigid, stiff fingers and wrist, but the accompaniment *mezzo forte* with flexible touch. Measures 36-39 are to be played like fanfares.

The *Cadenza,* 43-48, was played by Liszt at the lessons with the additions in the left hand and the following slight changes.



The Trio

THE "TRIO" from 66 on begins *fortissimo* with a most pathetic theme. In playing it one may think of four French horns *unisono* (like the beginning of Tschaikowsky's piano concerto in B flat minor). Use the middle finger only and stiffen it by placing the thumb under the first joint. In the accompaniment the prevailing rhythm of the polonaise is carried throughout. The correct use of the pedal results almost in this rhythm:  Begin the repetition of the theme in octaves, 78, more subdued in order to bring out the following big *crescendo.* In the "Recitativo," from 90 on, play the horn motive in the right hand *marcatissimo,* the accompanying melodic chords *molto espressivo* and the motive in 91-92 like an oboe-solo.

In 108-111 be most careful, taking the pedal on the first bass notes which must not be struck *staccato* but must be held a moment before the jump to the next chord. In 113-16 glide over the keys in playing

The Famous Villa d'Este in Italy where Liszt resided when Mr. Burmeister studied with him

the octaves. From 120-135, "full orchestra." The rhythm  is here still more pronounced. The following changes of the Cadenza originated from Liszt himself. It is to be played like a free improvisation, the double trills to be lengthened *"ad libitum."*

The Variations

THE *TEMPO* of the first variation of the principal theme, 150, is a little slower than the first tempo, about an *Andante.* The passages of the right hand are to be played not only *elegantemente,* but also *equalemente* while the left hand must keep up the rhythm *piano,* but most distinctly. The run in 154-55 must flow down like a thin, swift waterfall. The second variation, 166, is to be played still very lightly, but already more *marcato.* The different notation of the passage in 169 and 177 is easier to play than the original. In 173 note that the last three notes of the left hand are to be played an octave higher. In all older editions this *8va. . . .* is left out. From 180 to 185 the *staccatissimo* of the right hand is modified to a light *portamento.* In 186 reappears the second theme of the Polonaise (imitating here two flutes) and it is to be played piano, but with a very sharp rhythm.

In order to bring out distinctly the harmonic changes of 186-96, note the phrasing and pedal marks, also the *"tenuto"* of the left hand-chord on the third beat. Keep 220-21 in strict time. In 222-24 do the *accompanimento martellato* with stiff fingers and wrist, while the theme takes up the *tempo* of the Trio, therefore go at once slower than the foregoing measures. In 227-32 the theme is like trombones, but the accompaniment lighter. That the *Coda* from 236 on is not a satisfactory ending of the Polonaise is proven by the fact that most of the pianists make of it another

arrangement. See the editions by Carenno and Busoni. The arrangement of the ending in this edition follows pretty closely the original.

Self-Test Questions on Mr. Burmeister's Article

1. *What characteristics stand out prominently in Liszt's nature.*
2. *What was the origin of the Polonaise?*
3. *What peculiar rhythms give piquancy to the Polonaise?*
4. *What developments has the Polonaise undergone, and by what masters?*
5. *In what well-known works has the* "Alla polacca" *rhythm been effectively employed?*
6. *What was Liszt's attitude toward interpreters of his works?*
7. *What unusual effects did Liszt introduce into his compositions for the piano?*

Technical Development

By Henry Durkee Price

Incomplete knowledge of their physical equipment, and consequently a haphazard method of improving it, has been a contributing factor in holding many ambitious students of the piano from realizing their full development.

The pupil should be brought to a realization of the facts regarding his own individual physical makeup. Then may he reap the greatest possible benefit from his practice.

The presence of unequally developed fingers produces an uneven, inaccurate technic, and these inequalities must be leveled out by increasing the muscular scope of action of the weak fingers while giving less attention to the stronger and more efficient ones.

Few pupils actually know which finger has the greater scope of action and which the lesser. And how are these facts to be sufficiently realized and brought home to the pupil, except by an actual measurement of his finger action?

The vertical scope of action of each individual finger may be measured in the following simple manner. Procure a foot rule and drill a hole about the size of a match on each quarter inch mark. Now place the hand in position on a table or other flat surface and stand the rule on end alongside the finger to be measured. While holding all the other fingers down, raise the finger to be measured until the tip of the nail just touches a match conveniently inserted in one of the holes an inch or more above the table. Gradually increase this distance by moving the match up one hole at a time until the maximum vertical movement for that particular finger is reached and recorded. In a majority of cases, the second finger will be found to be the most flexible, followed in order by the fifth, first, third and fourth. This would indicate the relative amount of practice each finger requires, to bring them all to a standard of action.

Now lay the rule flat down on the table and hold the tip of the second finger against a match inserted near the left end of the rule while stretching the third finger until it touches another match placed an inch or more to the right. This stretch may be gradually increased by moving the match over one hole at a time until the horizontal maximum of stretch between any two fingers is reached and recorded.

By practicing these exercises daily with all the fingers and making weekly records of the results, the pupil may be gratified to find his scope of muscular action increasing and the ligaments binding the finger joints becoming more pliant and flexible.

Influence of Music at Home

By Clyde Norwood

Longfellow once said: "Show me the home where music dwells and I will show you a home that is happy, peaceful and contented." He was not a musician himself, but he was fully convinced that music would bring peace and contentment to any household. And, of course, he meant by this good music.

In these days of unrest and lack of discipline at home, can the influence of good music ever be measured? No, it is beyond all things precious! It can "chase dull care away," help build character and bring cheer and joy.

When the poet penned his wise sentence there were no "Broadway successes," no records of the "latest hits," and, above all, no jazz to disturb the serenity of the home. In those days the music that brought contentment was personal—coming from the heart, sung with the voice and played with the hand. Then it was that mother played the hymns on Sunday evenings, all the family gathered about the piano or melodeon. Then it was that the eldest daughter of the family was given music lessons, and practiced every day, happy to have the privilege of studying. Her work in music was a joy and education for the whole family.

So to-day, one member studying piano and practicing music daily will bring peace and contentment to the home, uplift the atmosphere, and cultivate a taste for what is good. Then the cheap, ugly and degenerate music (so-called) will not be tolerated. Deep in the human heart is the love of good music. Why not have, then, what is really desired?

If, out of a family of six, one has the privilege of music study, it should be looked upon as an honor, a high calling, not as a piece of drudgery to be shunned and neglected. The boy or girl who loses the chance, does not appreciate the gift, will deeply regret it a little later. Many have honestly mourned the loss of the great opportunity that slipped out of their fingers and could never be grasped again.

Should the opportunity come in the guise of music lessons, may it be welcomed with all the heart! What are a few little inconveniences, such as the practice hour, when playtime is calling, compared to the joy in the home when studying is done carefully; the pleasure to parents and friends when proofs of industry can be shown; the happiness of attending a good concert and knowing what it is all about?

Boys, the music-study hour will keep you out of mischief, and you will thank your stars, one day, that you had it. Girls, the lovely melodies of Bach, Mozart and Beethoven are worth a thousand times more to you than the trashy stories and books you find time to read. For both of you music is a wonderful character builder. Everybody is born with a love for it. It is within you, waiting to be cultivated and brought out.

Then do your share to make home happy and life contented.

Musical Memory Gems

By Lucille Collins

We all know the excellent effect of memory gems on the child's mind in his school work. Why not, then, in the study of music?

In the past few years many interesting little poems containing musical thoughts have been published in the Junior Etude Department. The writer has made these into a collection to use in connection with the younger pupils' piano lessons. Every week all pupils are given verses to learn. They love them and if the writer happens to forget they always look disappointed and say, "Can't I have a verse this week?"

At a recent beginners' recital one of these little poems was recited before each piano number and made quite an impression on the audience.

First Steps in Musical Form

By Eutoka Hellier Nickelsen

It is quite possible for the very young child to know:

1. The poetic idea of the composition, though he may not understand the harmonic structure.
2. That a major key is used in telling a happy story.
3. That a minor key is used in telling a sad story.
4. That a complete musical period consists of sixteen (sometimes eight) measures.
5. That each musical period expresses a completed thought pertaining to the story.
6. The difference (told by ear) between a complete sentence and an incomplete sentence.
7. That a triad is a three-toned chord.
8. That a triad may be built on each scale tone.
9. That march time is in 4/4 measure.
10. That waltz time is in 3/4 measure.

Blanketing Mistakes With A "Loud" Pedal

By A. Lane Allan

An imaginative young pupil whose technic was sadly marred by the constant use of the "loud" pedal was induced to read the biographies of various composers, as part of her regular lesson. The romance of their lives appealed to her and she caught, too, a glimpse of the application and industry needed to bring about any worthwhile result.

Soon it was plain to her that she was cheating herself by "blanketing mistakes with a loud pedal." Before very many weeks of regular reading she developed a clear cut touch and forgot the existence of a "loud" pedal. The example of the "great ones" had indeed proved helpful.

"It is the 'cello with its great range of tonal beauty, drawing from the best of each of its contemporaries, that fulfills the most complete demand for contrast and gives us the greatest of all string instruments."—The Musical Leader.

Veiled Music

By Eugenio Pirani

"Distance lends enchantment." The fascination of half-heard music is like the charm of a lovely girl wrapped in delicate, floating robes or enveloped, as a vision, in clouds.

Recently I was walking late in the night in a solitary spot up in the country, when, from far away, faint sounds fell upon my ear. Through the air floated a sweet, ethereal melody which seemed not to come from a human voice nor from any instrument, piano, harp, or violoncello, but from some invisible spirit. I hardly dared proceed, fearing that the magic spell would be broken.

But the curiosity of the scientist prevailed, and I continued to walk in the direction of the sound, to discover, on nearing a cottage, that it was simply a piano played in a passable, if not indifferent, manner. The distance had been responsible for that mysterious appeal. On nearer approach the witchery was destroyed.

Would it not be possible, then, to find some way to endow piano playing with that mysterious charm independent of distance or other circumstances? Would it not be possible to obtain that faintness, that vagueness, that mystic quality which made the sound seem almost supernatural? "Veiled piano playing" can accomplish this wonder.

Let the player's fingers glide, float, over the keyboard with a velvety touch. Let him combine skilfully the two pedals, the soft to bring about a very delicate shade, the *forte* pedal to create a kind of diaphanous mist. Let him think of Aeolian harps, angels, heavenly voices and he will succeed in eliciting rapturous harmonies.

Let him not think, however, that he can dispense with a perfect technic, with a faultless performance of passages, chords and so forth! The result would be of no artistic value: it would become mere mockery. Only a consummate artist can attempt such excursions in the field of poetry, of dreamland. There must not for an instant be the feeling that his "veiled playing" is only a camouflage for hiding a poor performance, only a vulgar trick to cover defects and imperfections. His severest criticism should point behind this "magic veil" to real beauty and mastery. The innovation would be otherwise too gladly accepted by the crowd of incompetents as a screen for their limitations. The mystic veil is not supposed to help inefficiency, but, on the contrary, to elevate true artistry.

Of course this art should not be indulged in to excess. Softness and delicacy should not degenerate into inaudibility. How much pleasanter, however, this extreme than the other of boisterous sonority, pugilistic essays of many a pianistic "Dempsey" against the helpless keyboard!

Nor should "veiled execution" be used indiscriminately. It should be dispensed with in those passages requiring great tonal power, as in military marches, storms, tempestuous and passionate effusions. Here, loudness is imperative. The true artist should have all the colors ready on his palette. Where mighty climaxes are required the "great play," *das grosse spiel,* must be called into action. "Veiled music" should be reserved for compositions which require a delicate treatment, like spinning songs, lullabies, and other music which suggests murmuring sounds.

"When anybody asks me what I think of jazz music, I reply that there is jazz and that there is music, but that there is no jazz music."

—Mrs. John F. Lyons

GIESEKING PLAYS ONLY THE

Baldwin

CHOOSE YOUR PIANO AS THE ARTISTS DO

"It is truly marvelous with what suppleness the Baldwin responds to *every* intention of the artist and permits him to realize *every* effect, dynamic or technical, *every nuance* of expression, even the most delicate. I am truly happy that I have chosen the Baldwin."

In this high esteem, the enduring purity and resonance of Baldwin tone is held alike by Gieseking, Bachaus, dePachmann, Carreras and dozens of other great pianists of past and present generations.

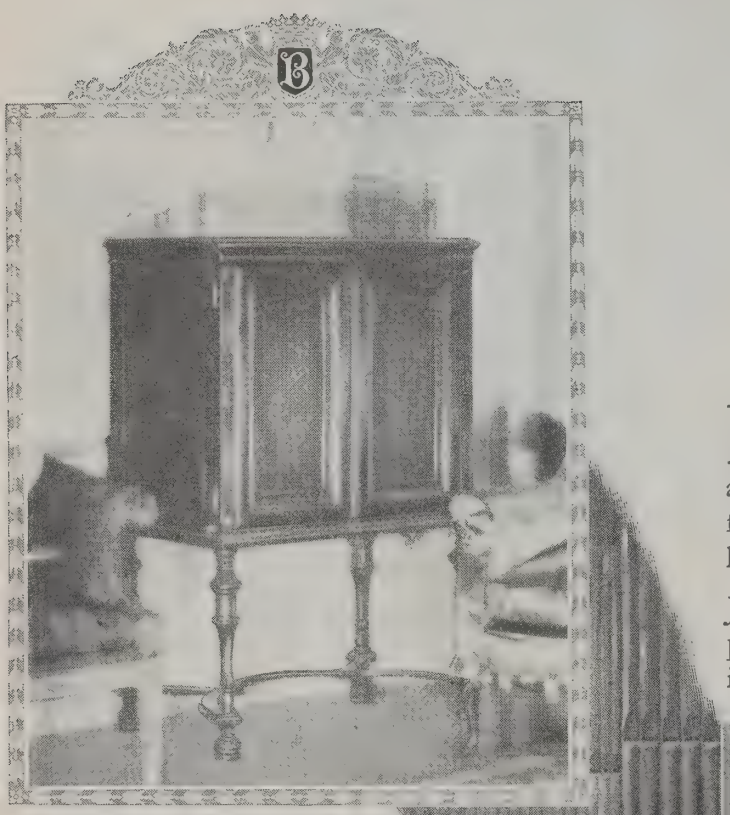
A SUGGESTION

Choose YOUR Piano as the artists do. The book, "How Artists Choose Their Pianos," will help you in selecting the instrument for your home. We will gladly send you a copy free.

You will share the enthusiasm of discriminating musicians the world over when you visit any Baldwin dealer and play the Baldwin yourself.

BALDWIN Uprights, $850 and up; Grands, $1400 and up; Reproducing Models, $1850 and up.

Convenient payments if desired.



THE BALDWIN PIANO COMPANY, CINCINNATI, OHIO

In Music, in Radio—This year

The BRUNSWICK PANATROPE

—world's first purely electrical reproducing musical instrument. Joint achievement of the four world leaders in musical and electrical acoustics—

Radio Corporation of America
General Electric Company
Westinghouse Electric & Manufacturing Company
The Brunswick-Balke-Collender Company

The Brunswick Panatrope & Radiola. Panatrope with 6- or 8-tube Radiola Super-heterodyne. Finished in walnut or Adam Brown mahogany

LAST Christmas you could not buy the Brunswick Panatrope . . . so new is this astounding invention. This year, for the first time, its incredibly beautiful music is here for all to enjoy.

Just about twelve months ago, the first public demonstration of this remarkable instrument was given in Aeolian Hall, New York City. The next morning's papers reported the event in front-page space. They acclaimed the Panatrope the most remarkable musical achievement of all time. Its electrical principle, they agreed, was the one to which all future reproducing musical instruments must come to survive.

The Brunswick Panatrope, Model 10, finished in figured walnut. Prices of the Panatrope and Panatrope & Radiola range from $350 to $1250

Critics and those of the general public present affirmed this verdict of the press. In every standard of musical perfection, they said, the Panatrope excelled any music-reproducing instrument they had ever heard.

Since this first demonstration, the Brunswick Panatrope has been exhibited in schools, colleges and before public gatherings the country over. More than four million persons have now listened to it. No music-reproducing instrument ever received the favorable comment that has been given the Brunswick Panatrope. No music-reproducing instrument has so quickly and so completely swept into public favor.

The Brunswick Panatrope brings you not only the music of the new electrical records but of radio, too. It is obtainable either alone or in combination with the Radiola Super-heterodyne. Thus it puts at your fingertips all recorded music and the rhythmic, newsy programs of radio as well. The Panatrope may also be used as the loud-speaker unit for your present radio, with

THE BRUNSWICK-BALKE-COLLENDER CO., GENERAL OFFICES; 623 SOUTH WABASH AVENUE, CHICAGO

One gift above all others

Elisabeth Rethberg, soprano, Metropolitan Opera Company, whose voice recorded on Brunswick Records and reproduced on the Panatrope is brought to you with the faithfulness of a photograph

musical results equally superior to those to which you are accustomed.

The Brunswick Panatrope and the Brunswick Panatrope & Radiola are shown here in but two of many magnificent cabinets in which these musical instruments may be obtained.

The Panatrope or Panatrope & Radiola in one of these cabinets is the supreme Christmas gift. Weigh any musical entertainment for the home that you can find against the Panatrope... and in fairness you will say that this instrument excels in every particular.

Another triumph

The Brunswick-Balke-Collender Company has also developed another musical instrument, as yet unnamed,* for bringing out the music of the new records. In tone quality and its ability to reproduce the entire musical scale, we believe this instrument represents a very great advance over anything in existence, except the Panatrope.

Brunswick's new musical instrument does not utilize the electrical equipment of the Panatrope, and its prices are lower, ranging from $300 and less.

**$5000 for a name*

To find a suitable name for Brunswick's new musical instrument we offer 3 prizes totaling $5,000 (first prize, $3,000; second prize, $1,500; third prize, $500) for the best name submitted together with an advertising slogan or phrase not exceeding 10 words describing its music. Contest closes December 15th at midnight. In event of a tie for any prize offered, a prize identical in all respects with that tied for will be awarded to each tying contestant.

Write for free booklet describing this contest. Address Dept. P-198. Or, ask your Brunswick dealer for a copy. It is not necessary to have the booklet in order to compete, but it may help you immensely.

Any Brunswick dealer will demonstrate the Brunswick Panatrope, the Brunswick Panatrope & Radiola, and the new Brunswick instrument as yet unnamed.* If there is no Brunswick store near you, write us.

Enthusiastically Praised by the Press and the Musical Public.

These books embody **117** conferences with the world's greatest musicians, composers, pianists, singers, conductors, authors, poets, public men on all phases of the art of music.

These three fascinating books, written in non-technical language, contain instruction, information, inspiration and advice from the foremost men and women of the age related to music.

These important conferences embrace the teaching value of scores of lessons with the greatest living artists and teachers of music.

There is no collection nearly so comprehensive in the practical field of helping the music lover and the student who really desires to advance in the knowledge and appreciation of music.

The author and compiler, after years of training and practical experience as a teacher in New York City, started this collection of conferences which have required twenty years to collate and present in the present form.

The conferences demanded great diplomacy, an understanding of four languages and an estimate of the musical educational needs of the American student and the American music lover which could be acquired only by the experience gained from years in the editor's chair of the world's largest musical magazine, reading thousands and thousands of questions from music lovers.

Educational Study Notes on Music in this Etude

By EDGAR ALDEN BARRELL

Yuletide, by Frederick A. Williams.

The form of this piece may be indicated in letters as follows: A-B-C-A'. This is exclusive of the eight measure introduction which is purely preludial and stresses the dominant tonality.

How many times we hear the word "yule" and do not stop to consider whence it was derived! This is very unfortunate, for there is no more interesting study in the world than the ancestry of words; it is much more exciting than discovering who your great-great-grandfather's aunt's sister happened to be. Now "yule"—if our memory serves us right—has close kinship with the Swedish word "jul" (the *j* being pronounced like *y*, as in German) meaning "Christmas."

Here is a formal analysis of "Yuletide." We often wonder whether the readers of this column derive benefit from the analyses which we occasionally offer, and we would be pleased to hear from them in regard to the matter.

Introduction: (8 measures.)

Section A: In B-Flat (16 measures to Tonic)

Section B: In F (4 measures to sub-Mediant; 4 to Tonic; 8 to Tonic)

Section C: In B-Flat (16 measures)

Section A': Like first section except the last two measures.

Note in this piece that the groups of sixteenths are always played legato and are always followed by staccato effects.

Second Polonaise, by Franz Liszt.

Master lesson by Richard Burmeister elsewhere in this issue.

Scène de la Csárdá, by August Nolck.

AUGUST NOLCK

The Csárdá is an Hungarian national dance, usually in 2/4 time and always very impassioned. Strong accentuation is needed in its performance, and some knowledge of the Hungarian temperament. In the *Primo* part there is excellent practice in playing thirds; and thirds, if correctly fingered, present little difficulty even to those hardly out of the novice class.

Just before the *ff*, please observe the effect of holding off the climax achieved by the introduction of the diminished seventh chord. This is a highly interesting chord, intensely powerful if rightly employed, very weak when just "dragged in." Some of the greatest composers have impoverished the beauty of their work considerably by over-use of this chord, and many of them have been extremely careless in spelling it correctly according to the context.

In the section in G (sub-Dominant of D) the syncopation is telling, but do not make it too pronounced.

Dutch Dolls' Dance, by Helen L. Cramm.

The composer of this number was born in Pembroke, N. H., and has lived in Haverhill, Massachusetts, since her childhood. A pupil of Emery, Faelton, and other noted teachers, she was for ten years the principal of a music school. At present all her time and attention are devoted to composition and to teaching privately.

The *Dutch Dolls' Dance* must be phrased very accurately, notice being taken of the slurs which run over the bar lines; and do not hurry the tempo—the marking, you see, is *Allegro moderato*, not simply *Allegro*.

The peasant background is evident from the sequence of Tonic-Dominant-Tonic-Dominant, and so on. Also the repeated notes in the second section of the *Primo* aid in sketching the scene.

The Sleigh Ride, by M. L. Preston.

Typographical errors have occurred, and occasionally inspiredly, in every magazine or newspaper that ever existed. However, we herewith offer our apologies to Mrs. Preston for her name appearing as "Mr." Preston in these columns recently. It is said that the only folks who make no mistakes are those occupying the graveyards—which is probably true, but that does not lessen our feeling of regret at the error in question.

Many ETUDE readers having residence outside the snow belt will have to *imagine* the wintry scenes and activities mentioned in Mrs. Preston's piece and in others in this issue. However, the imagination is a fine thing to cultivate, particularly now-a-days when the motion pictures —with their absurdly full explanations—are driving it almost into desuetude. A nation in which this faculty is absent or stunted cannot, we think, be a very joyful place—and for our part, if we ever found ourselves in such surroundings, we most certainly would take the first aeroplane departing therefrom.

The movement suggested for this piece is "tempo di minuetto." However, it probably would do no harm to increase this slightly.

Notice the accents over certain notes. Although there exists some difference of opinion on the matter, this series of accents is accepted by many as the standard:

— : least accentuation

> : middling accentuation

Λ : greatest accentuation

Clumsy fingers will spoil the grace-note effects in this piece. High finger action may be used to overcome the difficulty, however.

Compositions using the "bell" effect are legion, and range in mood from the popular song which made 3 A. M. a noted hour to the lovely "Au Convent" by Borodin and the *C-Sharp Minor Prelude* of Rachmaninoff. Organists whose instruments possess a set of chimes always greet such pieces with enthusiasm.

The Darkie's Dream, by Harl McDonald.

Mr. McDonald is one of our younger, but wonderfully talented, Western composers. Added to his gift in composition, he is an exceptional pianist, of whom the famous Olga Steeb says: "He displays a fine technic, plays with virility and strength, and contrasts this with a fine poetical sense. He is a careful student and works out his interpretation in a musicianly manner." Mr. McDonald is also a concert organist of ability.

The main characteristic of the first section is the contrary motion obtaining between the hands. As any student of that most delightful subject, Counterpoint, knows, contrary motion is nearly always excellent, and in fact is more to be desired than great riches of harmony.

"Allegro," you know; "scherzando" is derived from the Italian word "scherzo," meaning "a joke."

Measure 17 after the double bar, and following measures, seem to us to be especially negroesque and pleasing.

Observe the alternation of "con ped." and "senza ped." The original theme in octaves makes a fine climax. *Subito* means suddenly.

Frolic of the Goblins, by J. Frank Frysinger.

Practice measures five and seven and similar measures faithfully so that the location of the upper notes becomes "second natûre." Mr. Frysinger manipulates his six-note motive very successfully, and the "frolic" is a very pleasant and joyful affair. Do not hunt too long for the last note in the right hand part of this piece: it is the last note on your piano, unless your instrument is of unusual proportions as to keyboard.

J. Frank Frysinger was born in Hanover, Pennsylvania, in 1878. He studied with Edgar Stillman Kelly, Richard Burmeister, Ralph Kinder, Wolstenholme, the Englishman, and others, and was for several years director of the Hood College Conservatory at Frederick, Maryland. Since 1911 Mr. Frysinger has headed the organ department at the University School of Music in Lincoln, Nebraska. His organ and piano compositions are noteworthy.

Abraham Lincoln, by Dorothy Gaynor Blake.

DOROTHY GAYNOR BLAKE

A sketch of Dorothy Gaynor Blake was given in these columns in a recent issue.

There is a lot of "go" to this little march which should be played with a firm but relaxed mechanism. The section in F switches the melody to the left hand; let the right hand, therefore, be very subdued

This composer can always be counted upon for something intensely melodic and very attractive to the average pupil. There is no "padding" nor any lost motion in her work.

Scherzetto, by Harrison Potter.

A fine first theme, vigorous and well-handled, worthy of Scarlatti. Like Philipp Emanuel Bach's famous little "Solfeggietto," Mr. Potter's composition is not really difficult, and is a whole lot of fun to play. Contrast the staccato and legato carefully.

The second section contains a theme nicely in contrast to the first, as regards both motion and atmosphere. Observe the fine pedal point, measures 16-32 after the double bar. A pedal point is a sustained or repeated note (generally in the bass part) which is continued through varying harmonies either consonant or dissonant with it. The "Pedal" is usually the Tonic or Dominant—or both—though modern composers occasionally employ other notes as pedals. A pedal in an upper part is called an "Inverted Pedal."

Harrison Potter, a pupil of Felix Fox in this country and of Philipp and others abroad, is one of our noteworthy concert pianists and piano pedagogues. Highly gifted in the line of composition, he yet has been somewhat reticent in consenting to the publication of his writings; and it is therefore with an especial feeling of delight and a very point-with-pride air that THE ETUDE presents this *Scherzetto*.

Valse des Fleurs, by Frank H. Grey.

What sort of flowers Mr. Grey has reference to we do not know. Not "wall-flowers," at any rate.

Mr. Grey's themes are always clear-cut and pleasing, his harmony unhackneyed, and his rhythm definite and interesting. The first theme is a splendid one—not difficult with correct fingering. Have your fingers well curved. In the *con spirito* section observe the good syncopation.

A sketch of this composer was given recently in these "Notes."

In the Trio, the repeated notes are effective.

(Continued on page 967)

The Home Beautiful Contains a Grand

The finest gift of all

IF you would make your gift one that will bring joy and happiness for years and years, choose a Brambach Baby Grand.

This remarkable instrument is known the world over for its wonderful responsiveness and for its glorious tone.

It is a compact, beautifully-proportioned instrument that requires no more space than an upright —and costs but little more.

Embodying qualities unknown until Brambach created them, this remarkable Baby Grand is unexcelled in beauty of tone and finish. It is a distinct achievement in piano making . . . a result which only 103 years of manufacturing experience could bring about.

Easy to own one

Because of the enormous Brambach production, this remarkable grand piano is priced surprisingly low, $650.00 and up, f. o. b. New York City. On convenient terms, if desired. Distributed by leading music houses everywhere.

Mail coupon below for further information and for a paper pattern showing the exact space requirements of this beautiful Baby Grand. The pattern will be mailed with our compliments.

BRAMBACH

BABY GRAND

$650 *and up f.o.b. N.Y.*

BRAMBACH PIANO COMPANY
Mark P. Campbell, Pres.
615 W. 51st St., New York City

YES, you may send me the descriptive paper pattern and full information regarding the Brambach Baby Grand.

The Singer's Etude

Edited for December by Eminent Vocal Specialists

It is the Ambition of THE ETUDE to Make This Voice Department "A Vocalist's Magazine Complete in Itself"

That Bugbear of Singers—The English Diphthong

By Grace Grove

WEBSTER TELLS us that "The Diphthong is the sound produced by combining two vowels in a single syllable" Af course Mr. Webster refers only to the *spoken* diphthong; for we are all aware that the *sung* diphthong is an altogether different and much more complicated consideration.

In singing, because of the fact that the tone must be sustained upon a single vowel sound, it becomes vitally necessary that the student understand how to sustain the *important* and how to cleverly dispose of the *unimportant* part of his diphthong. In other words, he must learn to analyze the component elements of his diphthong vowel and then give to each its relative value. If he fails to do this, then we hear the so-called "mouthing" of vowels—one of the most unpardonable of vocal offenses.

The matter of singing diphthongs properly is one which requires much serious study, but, strangely enough, one which is often left to take care of itself. For there is a surprisingly large proportion of vocal students who are unable even to name the diphthong vowels. Is it not to be expected, then, that they should use them correctly in their songs? No singer can hope to acquire perfect and elegant enunciation of his song texts until he has conquered the English diphthong vowels.

Let us first consider the diphthong "A" as it appears, for instance, in the word "fade." The "A" vowel, of course, consists of a predominating "EH," and a vanishing sound of "e." The "EH" is sustained practically throughout the full value of the note to be sung; while the "e" is pronounced immediately before the final consonant, "d," but so quickly that it need not be calculated upon as to time value. The singing of the word, then, analyzed into its component parts, is simply "fEH—(ee)d."

The Vanishing "E"

NOW LET US take the word "day," one whose diphthong is *not* followed by a final consonant. Here the difficulty lies in the seemingly irresistible tendency of the pupil to close his jaws as he finishes the word and thereby to "bite" into the vanishing "e." In ending this word and all other words of like vowel arrangement, the mouth position need not be noticeably changed. If, through lack of attention, it becomes so, then the vanishing vowel will certainly be accentuated—and wrongly. For the correction of this last fault, I would advise careful practice before the mirror of all diphthongs ending in the "e" vowel.

Then the "I" diphthong, composed of the primary sound of "AH," plus a vanishing sound of "e," should claim the serious attention of all who would attain correct singing enunciation, for this is surely a diphthong which we hear often mutilated by careless singers. For example, let us take the word "light." "AH," being the principal vowel, is, of course, the one to be sustained, while the vanishing sound of "e" is pronounced quickly, just before the consonant "t" is spoken. How often do we hear "LAH—EEET"—the second part of the diphthong receiving even more attention than the first and predominating vowel?

The word "my" offers a serviceable example of a word containing the "I" vowel *not* followed by a consonant. Here again the student must assure himself that he is not closing his jaws upon the final "e." To avoid doing so is much more difficult than it seems on first consideration. It is quite necessary in the singing of this, as of all diphthongs, that all pressure be removed toward the point of attack on the vanishing vowel.

Then the diphthong "oi" or "oy" in such words as "joy," "hoist," "anoint," and "appoint," requires considerable thought and skill. The sustained vowel, of course is "AW," and here again we encounter our old enemy—the vanishing "e." The syllable is then sung as "AW—(e)," with pressure consistently removed toward the final vowel.

Probably one of the most obvious and frequent mutilations of the "AW—(e)" diphthong appears in a careless performance of "Rejoice, Rejoice," from "The Messiah." Many young sopranos fail to maintain a pure vowel sound throughout the intricate florid passages where is found the diphthong "oi," the second syllable of the word "rejoice." In this case the vanishing "e" must appear only *after* the attack upon the final note of these coloratura passages—and then simultaneously with the sibilant "ce."

Distortion of the "O" Sound

WHEN THERE are the diphthongs whose vanishing sound is the vowel "ŌŌ." According to Mr. Webster, the English "O" is more or less diphthongal in character, for there is a slight sound of "ōō" following the main part of the vowel. This vanishing sound of the diphthong "O—ōō" is even less prominent than those previously discussed. Great care must be exercised that it is not exaggerated in the slightest degree. Students should carefully guard against such a distortion as might easily occur, for instance, in the pronunciation of the exclamation "Lo," which in careless hands—or rather lips—degenerates into "LŌ—ōō." Here again the student's mirror may furnish serviceable assistance.

Another "ŌŌ" ending occurs in the diphthong "ou" or "ow" ("AH-ōō"), as in the words "house" and "how;" and this combination furnishes another potential stumbling-block in the upward climb of the ambitious voice student. A clean, sustained "AH," with no premature preparation for the vanishing "ōō" will insure its proper articulation. Other examples of this diphthong "AH—ŌŌ" are found in the words "vow," "now," "howl," "hour," "out," and others.

Giving "Dew" Its Due

NOW LET us consider the diphthongs whose short or unimportant sounds occur before, instead of after, the sustained part of the diphthong vowel. The English "U" is an example of this difficult vowel combination. Here we find that an initial sound of "e" must appear quickly and immediately before the more important "OO." The result then will be "(e) ŌŌ."

Why do so many vocal students ignore the diphthongal demands of this English "U," and pronounce—or rather mispronounce—the word "dew" as though it were spelled "doo?" The word "new" suffers likewise; and still these same students would scarcely think of singing the word "few" as "foo," or "pew" as "poo." In all of these words, as in also such as "youth," "pure," and "mute," the first sound of "e" is passed over quickly, and should in no way interfere with the sustained "ŌŌ" which is made to predominate strongly.

We find this short sound of "e" preceding the main vowel "AH," in the word "yonder," as it does also the "AW" vowel in the word "yawn." Likewise, the word "yore," whose vowel "O" has a slight vanishing sound of "ōō," contains an initial sound of "e;" and in the word "yea" we again encounter the short "e" preceding the diphthong "A." Then also in the words "yet" and "yes," the main vowel of "EH" is preceded by a short sound of "e."

In considering the difficulties of these diphthongs whose vanishing sounds precede the main vowel, we discover another danger—and a serious one. For many students unconsciously (and we all admit that it *is* difficult to hear one's self) use the initial sound of "e" as a sort of ladder by which to climb into the main vowel. They thereby accomplish a "scoop"—at all times undesirable. In singing these diphthongs the student must exercise great care in order that both parts of his diphthongs are attacked exactly on pitch.

One of the most difficult diphthongs, and one most often neglected, is that which has the "ōō" vowel as the initial and short sound. This vowel combination is very apt to be slovenly treated unless the student's attention be especially called to its dangers. The word "was" is really "(ōō) AH (z);" and "why," "(hōō) AH (e)."

If either of these words falls upon a sustained tone, the "AH" must be the only vowel given prominence.

Then there is the word "when," which we often hear sung as "wen," a perfectly legitimate word in its proper environment but scarcely eligible to appear in a song-text of any poetic value. If the student is sufficiently painstaking, he will aspirate his "H" before a short sound of "ōō," and then pass instantly into the heart of the diphthong vowel which, in this particular case, is the pure vowel "EH." Then, of course, "(hōō) EH (n)" is the result. We have also "what," "where" and "whine," all governed by the same general rules. Here again, as in the case of the short initial "E," the student must be vigilant in order that his short sound of "ōō" is attacked exactly on pitch.

The Crescendo and Diminuendo

BECAUSE OF an imperfect understanding of the shading of the diphthong vowel, many students allow a premature "vanishing sound" to intervene in the progress of what might otherwise have been an altogether satisfactory crescendo or diminuendo. The crescendo or diminuendo must, of course, be consummated upon the pure and predominating vowel of the diphthong, the vanishing sound being produced only at the finish of that particular bit of shading—and that quickly, in order to interfere in no way with its accomplishment. This rather involves a question of "changing horses in midstream"—an unwise and dangerous proceeding.

For some inexplicable reason, known only to themselves, most students seem to feel a distinct urge toward closing their jaws as they progress toward the end of a diminuendo. If the vowel sustained in the decrescendo happens to be the pure vowel "AH" or "EH," and the student is an addict to this pernicious habit, then we are very apt to hear "AH-uh" or "EH-uh," combinations which could scarcely be classified as beautiful vowel sounds.

Then, on the other hand, some pupils carelessly allow the jaw to *drop* on a pure "ŌŌ" or "E;" and this is likely to happen on a diminuendo, indeed on any sustained tone requiring these vowels. Under such circumstances "E" and "ŌŌ" develop diphthongal characteristics undreamed of by Mr. Webster or any other authority on our English vernacular. Then, instead of pure vowels, we hear a mongrel "ŌŌ-uh" or "E-uh," neither of which vowel combination appears legitimately in any known singable language.

Of course we all are ready to admit that, from a vocal standpoint, English, on account of its inevitable diphthong, is much more difficult than is Italian, with its pure vowel formations. Many American voice students complain bitterly of the difficulties of singing their native language, and make loud and convincing comparisons in favor of the pure Italian vowel. So far we must agree with them.

But, strange to say, these same students present thoroughly Anglicized and therefore diphthongal renditions of "Caro Mio Ben" and "Ritorno Vincitor." After all, it seems that they must have their diphthongs, regardless of how thoroughly they may

Spinning the Breath

By Lynne Roche

"BREATH" holds the whole secret of tone—speaking of its technical aspect.

"Breath control," that has been made an ogre to the student of singing, needs to be considered as nothing so forbidding.

Inhaling becomes a very simple process, if the singer will but relax thoroughly the muscles of the chest and abdomen and allow them to expand as the breath just "pours" (no drawing about it) down into the lungs with the ease which may be seen in the sleeping child.

The reversed operation is not quite so simple, but far from impossible, and can be accomplished with almost the same ease.

Some old master invented for the proper mode of this the phrase, "spinning the breath." Which is not at all inappropriate; for the stream of outgoing breath must become as tenuous as the fibre the worm derives from the mulberry leaf.

With the breath taken as specified, hold it for but a short second—just long enough to secure the feeling that the respiratory muscles have come to rest and are ready to reverse their motion. Now, with the lips parted the least possible—just enough that there is the feeling that the tip of a well-sharpened pencil might be inserted—allow the breath to "spin out" through this tiny opening, not trying to find how long it will take to exhaust the lungs but how long an ordinary breath can be extended.

Allow a few moments of rest and then repeat the process. Make but a few repetitions of this at one time; but do this two or three times a day; and a noticeable improvement in control of the breath will be soon felt.

despise them in their native tongue. One might think the maintenance of the perfect purity of the vowel stream a problem of sufficient difficulty in itself without unnecessary additions to the already disheartening list of diphthongs.

"Manufactured" Diphthongs

AMONG THESE "manufactured diphthongs," perhaps the most common is that of "(e) AH" which we often hear instead of the pure "AH" vowel in such words as "shall" and "shadow." In order to form the consonant combination "sh," it is necessary that the tongue be near the roof of the mouth, as is also the case in the formation of the "E" vowel. Unless, then, the jaw be dropped quickly for the singing of "AH" an officious "E" may easily be sounded between the "SH" and the following "AH." Thus we often hear "shee-AH-L" for "sh-AHL," and "shee-AH-dow" for "SHAH-DOW."

The same distortion may be easily occur in the pronunciation of "SHEH" as it occurs in the first syllable of the word "shepherd." "EH" is rightly a pure vowel sound; but it ceases to function as such when an officious "E" is allowed to precede it and distort the word into "shee-EHpherd."

This obtrusive "E" may also appear before the main vowel in the words "shout" and "shore;" and then we have "shee-OUt" and "shee-Ore;" also instead of "shawl," we hear "shee-AWL." This alien "E" is most elusive, and can be routed only by the utmost care and perseverance.

Plainly, the task of each and every voice student is to cease wasting his years and energy in bewailing the many difficulties of the English diphthong, and instead set himself to the task of learning to sing it intelligently—even elegantly. He will then come to realize that, after all, English *is* a singable language: he will even enjoy demonstrating the truth of his discovery to his own and his listeners' satisfaction. He may claim the honor—no mean distinction, in truth—of having conquered the English diphthong.

The Schubertian Song

SIR C. HUBERT H. PARRY, Bart., Mus. Doc., who has contributed a higher degree of illuminating musical criticism than any Briton of his time, says regarding the Schubert songs: "Schubert's ways of suggesting the actual have been followed by the composers of songs to the present day."

That is precisely what Schubert did, "suggest the actual." He had a remarkable gift for portraying in tone certain moods which developed human emotions seemingly akin to the thought of the song texts. Others have tried this but very few have succeeded. Löwe, in his marvelous ballade, "Edvard," makes an astonishing picture; and Edward MacDowell, in his "The Sea," also touches the zenith of musical expression. In the present day we have a kind of reflex of the efforts of the modern French masters in creating atmosphere—all too frequently fog. None, however, has ever excelled Schubert in suggesting the *actual.*

Know Your Own Larynx

By A. Telrab

SINGERS may be interested to know that Dame Melba, perhaps the most perfectly trained soprano of our time, believes a certain knowledge of the physiology of the throat essential to successful singing. She contributes a chapter to her biography by Agnes G. Murphy, in which she says:

"One of the first fields for the employment of the beginner's energy is physiology. No student should be content to proceed without gaining a reasonable knowledge of the anatomy of the throat and the sensitive and complicated physical mechanism that produces the singing voice. For myself, I at one time became so completely absorbed in this study that I could practically neither think nor speak of anything else. An understanding of the delicate functions of voice mechanism is a rational and logical plea for perfection in singing, and was always embodied in the methods of the old masters, whose general accuracy has been reduced to a much surer science by some of their present-day followers. Those who know the structure of the larynx and the muscular mechanism of the parts called into action by the production of the voice will find themselves in possession of knowledge essential to correct attack. The application of the air-blast to the vocal cords should be a detail of exact science, not haphazard circumstance."

Perennial "Farewells"

By H. E. Erwin

WITH Melba's recent farewell still fresh in the ears of London, and a rumor already in the air that her "most perfect trill of all musical history" may be heard on an early tour of a company with this fair Australian at its head, the beginning of the "farewell" habit becomes of interest.

Though opera appeared in Florence in the year 1600, when Peri's "Euridice" had its first performance in honor of the marriage of Henry IV of France and Maria di Medici, it was not till 1691 that Margarita L'Epine appeared in London as the first of a train of Italian songsters that were soon almost to monopolize the stages of the operatic world.

In spite of more than plainness of speech and features, of uncouth manners and appearance, her voice was of such beauty that she soon had a loyal public. Then, in 1692 she announced probably the first of "farewell" appearances, which, like the same of many of her more modern emulators, was so successful that she instituted a series of them that continued for several years.

"There will be English opera some day, for there are splendid composers and they are slowly but surely developing an American form. What it will eventually become remains to be seen."—FLORENCE MAGNUS.

A MERRY, MUSICAL CHRISTMAS to THE ETUDE mothers and fathers! Let us resolve to make this a truly, musical season in the selection of both our gifts and our recreations for the family.

Ever since the angels sang their heavenly strain on that far-away night in Bethlehem we have associated music with the Christmas season. Many of the finest examples of the choral art have been inspired by the birth of the Babe of Bethlehem; and we should do our part towards making known or keeping alive these splendid compositions. If we cannot participate in their rendition, we can go ourselves, and take our children to church or concert hall, and thus help increase the audiences, and encourage those who spend their time and efforts in preparing these masterpieces for public presentation. As heads of families we must not allow ourselves to become so completely engrossed with the purely material features of the Christmastide that we neglect the artistic and the spiritual phases of this holy week.

The Message of Handel's "Messiah"

THE LIFE of every man, woman and child in America would be richer for the hearing of "The Messiah" at every Christmas season. It is amazing how many children grow to maturity missing this wonderful experience. Therefore let me urge every ETUDE mother to make the effort to get her family to a hearing of this oratorio this season if it is at all possible. If your own town is too small to support an oratorio chorus and soloists sufficiently schooled to produce this glorious masterpiece, then look up the nearest large community where it is to be sung and take your entire family, as a family-present, each to the other, on a little Christmas journey that might be made both as reverential and as sacredly significant as that one of Biblical record. You can give your family nothing that will mean so much to them throughout the entire year.

Spend an afternoon in the music section of your public library and look up the life of Handel and the history of *The Messiah*. Acquaint your family with it; and, if any of the children have reached the technical skill of its leading themes and melodies, let them demonstrate them in the home until they can be recognized. By all means have a copy of this oratorio in the family and know something about it before you hear it; for everybody enjoys music they can anticipate better than that which is absolutely unfamiliar.

THEODORÉ THOMAS long ago said: "Popular music is only another name for familiar music;" and Ben Ames Williams has recently said the same thing, in speaking of the short story: "Immortality is only another word for continued popularity."

Therefore, endeavor to train yourself, and the rest of the family—even father—to listen attentively for the appearance of the leading themes in the concerted parts of both the vocal and the instrumental scores. It is an interesting and educational practice, and like every other occupation develops and grows with us.

You can awaken interest in music in the home by giving musical gifts. The material here is almost unlimited and something might be found for every member of the family, even the one who is the least interested in music. From the choice of a new instrument, where the price is available, on down to less significant gifts it is possible to find something suitable and acceptable for all.

MOST ANY CHILD finds pride in a good-looking music roll and it is an economy because it protects the music from the careless handling of the average boy or girl to and from the lesson period. An older son or daughter would be happy in the possession of a leather bound copy of the Sonatas of one of the Masters, with the name of the receiver-to-be done in lovely gold lettering on the outside. With time this would come to be a real treasure.

For other members of the family, even mother and father, books on musical appreciation, and biographies of the masters would be acceptable and enjoyed. Many of the latter are as fascinating and thrilling as modern romance or fiction. The entire family would get untold information and delight from a standard musical dictionary, and it would be invaluable to the children, if they are taught to use it intelligently and frequently.

The Musical Equipment

IF THE MUSICAL equipment of the home does not include a player-piano or sound-reproducing machine, getting any of these is worth a real sacrifice for stimulation in the subject, and comparison with the work the children are doing. You will never know how much real joy and satisfaction father will get from one of these features until it is in the home.

Arrange a program of seasonal music to accompany or follow the family dinner. Give the little ones horns, bells, whistles, harmonicas, xylophones, toy pianos, anything that in any way carries across the musical idea. You can have a jolly time with a little jazzy orchestra made up from the Christmas toys before you take up your prepared program of more serious and reverential music that carries the Christmas spirit and significance.

By all means, mothers, put on your thinking caps and select an appropriate musical gift for every member of the family. Let us determine to do our part towards making America musical by making this Holiday season the most musical one in our lives.

When the Christmas goodnight is said, let us lie down with the consciousness that this has been, indeed, a Musical, as well as a Merry Christmas!

Know the elation of owning, of playing upon the Wurlitzer Studio Grand. Wurlitzer craftsmen have so artistically blended wondrous tone with decorative beauty in this perfect and suitably small instrument, that only among the larger and much higher priced Wurlitzer pianos can you find its equal.

School for the Training of

THEATRE ORGANISTS

Direction: CHARLES H. DEMOREST and HENRY FRANCIS PARKS, Famous Theatre Organists

WINTER TERM NOW

Students have lessons and practice before the Screen provided by the College in its studios. New two, three and four manual Wurlitzer and Moeller theatre organs for lessons and practice, owned and operated by the College.

COURSE OF STUDY

A two-year course. Varied to suit the individual student.

FIRST YEAR

First Term: First working registration, arranging of popular ballads, semi-classic ballads. Themes for feature films.

Second Term: Preparation for news reel playing, arrangement of piano numbers for the organ, waltzes and marches. Characteristic numbers arranged.

Third Term: First studies in adapting orchestrations to the organ, first studies in jazz playing, second or double-touch, playing of song-slides. Comedy film.

Fourth Term: First actual screen work, the news reels, comedy film, classification and construction for feature films, cuing short and long feature film, thorough preparation in adapting music.

SECOND YEAR

First Term: Repertoire, transcriptions of violin and orchestral music, orchestral overtures adapted, first actual screen work in playing the feature film scenics, cartoons, travelogues, etc.

Second Term: Modulation and improvisation for all types of films, memorizing for important situations, dramatic music, such as misteriosos, furiosos, etc. Actual dramatization of all kinds of films, meeting actual conditions of the theatre, improvisation, including waltzes, marches, intermezzos, jazz, melody work.

Third Term: All scenic effects such as storms, falls, thunder, trains, etc. Constant practice before screen.

Fourth Term: Devoted entirely to screen work by those who have followed the complete course, and opportunity will be given to play before invited audience, so that practical experience may be gained fitting the organist for public work.

LENGTH OF COURSE

The time which will be consumed in covering the course will be determined to a large extent upon the ability as organists of those who take it. Students who never have studied organ previously will require two full years to finish the course. Experienced organists may cover it in one year.

NOTE—*Church and concert organists of experience are eligible to enter the Advanced Course.*

(Continued from page 907)

cession should furnish a melody to be harmonized. A bass should be given and harmonized. Both the soprano and the bass should be presented for practice in ear-training. Four-part harmonies should be thrown on the ears of the pupils for ear-training or chord analysis. All of this should be written out by the individual pupils and a figured analysis marked under each bass note.

The pupils should go to the piano and play the material developed and, finally, melodies and basses should be harmonized directly at the keyboard. All of this develops a resourcefulness on the part of the pupils and enables them to hear silently what they have written and to see mentally the chord notation of simple harmonic combinations which they hear or think out in a creative way.

Recapitulation

WE HAVE been considering the possibility of building a single course in music which will fit the needs of the high school pupil who wishes to delve into the cultural side of the art. We find that the plan is feasible if we will use texts which cover the field in a way calculated to interest the beginner. We must also use modern methods which will enliven the study of music history by correlating it with music appreciation.

Harmony must be presented in so far as possible from the art point of view, rather than as "The grammar of music." The course suggested could be presented in two terms or semesters by holding the class four periods a week; but it would be well to devote five periods if possible. In the first term three periods should be given to history and appreciation, and two to harmony. In the second term two periods should be given to history and appreciation and three to harmony.

The following is the first of a series of ten outlines (each covering the work of four weeks) of a combined course in music history, appreciation and harmony to be used with "The Standard History of Music," a supplementary list of records, and "Harmony Book for Beginners." These will be published monthly.

Week	Subject	Chapter	Topic	Page
1	History	1	How Music Began	7—15
"	Appreciation	1	Records of Aboriginal and Primitive People	3
"	Harmony	1 and 2	Material of Music	7—8
2	History	2	Music of the Early Church	16—21
"	Appreciation	2	Records of Gregorian Period	3
"	Harmony	2	Building the Major Scales	9—11
3	History	3	Development of Notation	22—26
"	Appreciation	—	Study and Copying of Old Manuscripts	—
"	Harmony	4	Major Scales—Flat Keys—Signatures	12—15
4	History	4	Troubadours, Minnesingers, Meistersingers	27—32
"	Appreciation	3 and 4	Records of Troubadours, "Prize Song"	4
"	Harmony	5	Intervals	16—18

Letters from Etude Lovers

Mozart as a Remedy

To The Etude.

Mozart's compositions will serve as a remedy for those muscle-bound students whose devotion to modern music has caused them to play in a strained and exaggerated style. Thus will they regain lightness and the ability to play without use of the pedal.

Mozart's music demands exceptionally clean playing and phrasing, the latter often being as subtle as that required for stringed instruments. As it likewise calls for calmness and poise, this music acts as a massage for overworked nerves and muscles. Its very intimacy causes it to be difficult in interpretation. The study of it provokes the student to greater effort and concentration than does modern music which is often interpreted in a frantic, haphazard manner.—W. G. S.

A Lesson in Taste

To The Etude:

"I wish I might play popular music. All my friends do, and it doesn't seem to hurt their playing. Besides, no one likes to hear the classics any more."

Such a statement indicates a crisis in the musical life of the pupil. A lecture by the teacher, no matter how convincing, cannot develop the pupil's appreciation of good music. He must be made to feel for himself the difference between good music and "trash."

When such a problem arises, I use this method: I give him a popular selection as part of the lesson, at the same time assigning a piece of good music for contrast. For this purpose I use a moderately easy piece with strong rhythm and appealing melody, such as the Paderewski "Minuet" or a Brahm's waltz. I find interesting stories connected in some way with it and allow the pupil considerable freedom in interpretation. I try to get him to see it not as so many notes to be played with the correct amount of crescendo and diminuendo, but as a mood that must be expressed.

In the popular piece I insist upon technical accuracy, memorizing and some attempt at expression. I keep the pupil working on it until he discovers for himself that there is nothing in the piece to be expressed. In nearly every case at the end of two or three lessons he sees just how meaningless the popular music is and is more than willing to return to the usual lesson material—Margaret Neal.

The Organist's Etude

Edited for December by Well-Known Specialists

It is the Ambition of THE ETUDE to make this Organ Department "An Organist's Etude Complete in Itself"

The Anthem, Its History and Place in the Service

By Frank L. Sealy, F. A. G. O.

Part II

Paper Read at the Convention of the American Guild of Organists, at Buffalo, New York

"A REVOLUTION in musical taste occurred early in the seventeenth century, which metamorphosed the whole conception of the nature and purpose of music, and the complex ancient art of the medieval church was forgotten under the fascination of the new Italian melody and the vivid rhythm and tone color of the orchestra." During the civil war and under the Commonwealth organs were closed and cathedral churches shut; singers were silent except for Psalm singing. Composers for the church dropped the pen and took up the sword, and it was not until the Restoration that the motet or anthem was sung again.

Through this seething period of religious and political controversy England travailed for 120 years. One king, three queens and many of the bravest, purest and brainiest of her subjects lost their heads on the scaffold, or were burned at the stake. Civil war desolated the land, and the whole country became at times an armed camp. From 1549 to 1661 the Puritans were in power and elaborate church music was forbidden. Cromwell and his followers by no means disliked the music, but they were opposed to any elaborate form of worship, as well for political as religious reasons.

Music by Law

When Charles II. came to the throne in 1660 the practice of church music had been abandoned for at least eleven years. In addition to that, Archbishop Cranmer had in his instructions in 1544 enjoined a more simple mode of counterpoint. Note against note unbroken, notes and no imitations, were the directions. Neither Tallis, Tye nor Byrd, the great men of that time, continued long to use the new method, but they gradually ceased composing for the church, writing many secular glees and madrigals. All these restraints, the hostility of the Puritans to the old style of cathedral music and the turning more and more of the tastes of the people toward secular music had opened the door wide for the change which was to come.

The restored Stuart monarch, Charles II., having lived during his exile at the French court, had acquired French tastes. He soon tired of the grave and solemn ways established by Byrd and others and ordered the composers to add symphonies with instruments to their anthems. He also sent Pelham Humphrey, one of the chapel royal choir, to France to learn the new style. Humphrey, then only 16, went to Paris and studied with Lulli, the great opera composer of the day. He also visited Italy, where he probably met Sarissimi, who was a great master in the new declamatory style. After three years of study and travel he returned and was sworn in as a gentleman of the chapel royal. Humphrey was the first to infuse into the English church music the new light style which was destined to supplant the grand school of the motet. Humphrey was the pioneer in the new declamatory and expressive style.

An English Master

In 1658 was born a greater than Humphrey, Henry Purcell. It is possible that one who has formed his impressions only by reading about him may be disappointed when for the first time his compositions are studied. It should be remembered, however, that Humphrey and Purcell were at the beginning of a new era in church music. The old motet school of writers, which had passed away, represented the quintessence of vocal polyphony—the culmination of centuries of development. Instrumental music was now to have its day and the style of church music was to be greatly influenced and temporarily injured. One essential difference between the old and new style was the accompaniment. In the old music the original method had been to do without instruments. When the accompaniment was added, it generally doubled the voice parts. If there was a distinctly separate part, it was in style like the voice part, a veritable song without words. Instrumental figuration was unknown or in a very crude state of development; but now the experiments of Gabrieli at Florence, Frescobaldi in Rome, Sweelinck at Amsterdam, John Bull in England and many others were bearing fruit.

The old music had been essentially choral, but the anthems by Purcell which are representative of him in the maturity of his powers contain a greater amount of instrumental music than in any period of English church music. Violins were introduced in 1674 and Purcell had the advantage of writing services and anthems with all the variety afforded by choir, soloists and orchestra. In style he foreshadowed Handel, having the same practical sense which led him not to make his church work too elaborately contrapuntal. Some of his anthems seem like solos or duets, with a little chorus work thrown in as an afterthought. One anthem has two pages of solo, six of duet and one page chorus. In another there are seven pages of duet and one chorus. In his writing for solo passages for church he seems to have put aside any intent to make them beautiful.

In his music for the theater and opera Purcell showed an unrivaled power to create fresh and charming melodies; but this is missing in his church work. One of his most characteristic anthems is "O Give Thanks."

Music Declines

After Purcell English music declined. In the anthem the solo or verse period had been developed and composers were gradually beginning to combine full and verse anthems.

After Purcell's death in 1695 no one appeared worthy to carry on the art where he had left off. Two of his contemporaries, John Blow and William Croft, who survived him a few years, produced some noble anthems, and Blow some very creditable instrumental work; but after their death came a long interruption in the constantly upward development, which had been going on since the time of Dunstable in the fifteenth century. Myles B. Foster in his "Anthems and Anthem Composers" somewhat justly calls the eighteenth century period the period of decadence. The standards established by the great masters of the motet age and the brilliant writers of the new school, founded in England by Humphrey and Purcell, were not followed, and toward the end an orgy of arrangements was in fashion. The only anthem composers of note at this time were Boyce, Batishill and Crotch. The last two really should be classed as belonging to a later intermediate period, as well as Thomas Attwood, pupil of Mozart and friend of Mendelssohn.

The work of anthem composers of the nineteenth century is familiar to all. I would like to express the opinion that at the present time justice is scarcely given for the work of Barnby, Goss, Smart, Stainer, Sullivan and a few others. The judgment of the critic does not always agree with that of the public. Frequently time proves that the public is right. May I venture to express the opinion that Barnby's "Beloved, if God So Loved Us," "Drop Down, Ye Heavens," "O Praise the Lord, all Ye His Angels," "Sweet Is Thy Mercy, Lord"; Goss' "O Saviour of the World," "The Wilderness;" Smart's "The Lord is my Strength"; Stainer's "And All the People Saw," "What Are These?" and "I Saw the Lord," and Sullivan's "I Will Mention Thy Loving Kindness" and "O Taste and See" will be alive and affording delight and comfort to thousands of listeners long after the mistaken, short-sighted criticisms of them are buried so deep that the strongest angel on Resurrection morn will not be able to lift them out to bring them to judgment.

Of the House of Wesley

In closing this historical sketch I would like to make special mention of one who bears a name honored by many. Samuel Sebastian Wesley was the son of Samuel Wesley, who by general consent is considered one of the greatest English church composers. He was the grandson of the Rev. Charles Wesley, author of the well-known hymn "Jesus, Lover of My Soul," and grandnephew of John Wesley founder of the Methodist Church. Wesley of all the church composers of the nineteenth cencentury seems to have had the most of genius. Many are disposed to give preference to his larger anthems, "Blessed Be the God and Father" and "The Wilderness," but they are early works written when he was not over twenty-five years old, and do not compare with some of his smaller works written later in life, such as "Wash Me Thoroughly" and "Cast Me Not Away." He had a power of noble, sustained melody very Handelian in style. Walker says: "The grand style of the past, clear echoes of which were sounding in the work of his father, was missing in the work of Sebastian Wesley." Nevertheless, he was a very talented original composer.

Wesley is the last name I shall mention with the exception of Sir George Martin and Charles Villiers Stanford. Martin's anthem "Hail, Gladdening Light," has been sung all around the world, and Stanford has been a favorite composer for many years. —*The Diapason.*

Handel and the Foundlings

By Alfredo Trinchieri

CHRISTMAS of 1926 will break a tender musical tie for many a Londoner, for this is to be the last Yuletide at which ten tiers of fatherless girls in mob caps, bibs and aprons, and boys looking brave in their brass buttons and red waistcoats will perch themselves high on either side of the historic Handel Organ of the high eighteenth century chapel of the Foundling Hospital in Guilford Street, and sing their carols, some of which go back six centuries. The property is sold and the foundlings are to be transferred to a fine new home in broad green fields and under the blue skies of the country. A boon in health and happiness for the youngsters; but, ah, how much of tradition and sentiment is to disappear!

It was to this chapel that Handel gave its organ. "A very fine organ," the Governors of the Hospital boasted in 1750, when they announced that "Mr. Handel will open the said organ, and the sacred oratorio called *Messiah* will be performed under his direction."

Tickets were half a guinea ($2.50), and there was no collection. So successful was the performance that it was repeated again and again "under the direction of the inimitable composer," and "met with universal applause."

Such were the ways of George II's Londoners. Anyway, they seem to have known good music when they heard it. These were the first hearings of Handel's "Messiah;" and from them and his own organ-playing the crotchety "Old Saxon" raised more than ten thousand pounds (fifty thousand dollars) for this hospital.

Furthermore, he gave to the institution a copy of the score of the great oratorio, "reserving to himself only the liberty of performing the same for his own benefit during his life."

The Governors of the Hospital undertook to go to Parliament to obtain the force of law for this benefaction; but they mistook their man.

"De devil!" Handel erupted. "For vat sal de Foundling put mein oratorio in de Parliament?"

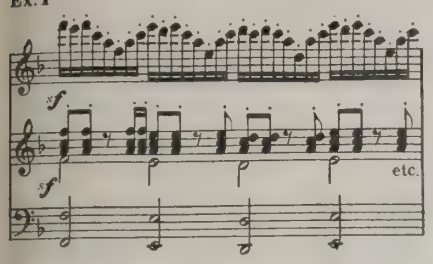
However, he stood by his word, and in his will the "Messiah" score went to his pet hospital.

A Firm Foundation

By E. A. Barrell, Jr.

IF ASKED what single department of organ playing is the most important and the most interesting we would say "Pedalling." It is this one feature, indeed, that distinguishes organ playing from piano playing; and the many cinema organists who, having received only pianoforte training, dispense wholly or almost wholly with the pedals, are not organists at all. To them the organ is only a sort of glorified piano. (In complete fairness, however, be it said that presiding over the countless and ever-increasing number of theater organs are many very excellent performers, thoroughly grounded in true organ technic, and often brilliantly original in registrational effects.) Not to employ the pedals, thus, is quite absurd. And besides—one is missing half the *fun!*

When, after weeks and perhaps months of practice on, say, the *St. Anne's Fugue,* something like mastery is attained over the difficulties of the pedalling, and the feet glide noiselessly, rapidly and (nearly) correctly about the pedal-board, there is a real enjoyment and pleasure in the accomplishment. And the hours of practice,

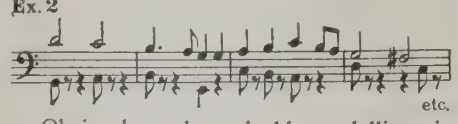


you now recall, were never tedious but rather were actually fun: glorious, exhilarating, entertaining. Pedalling is all rather like a game, you see; a game more amusing a thousandfold than *mah jong*, and a game quite as subtle as bridge, without the added annoyance of a grouchy partner.

An interesting feature of pedal technic—and one which has received too scanty attention from the pedagogues—is double pedalling. Double pedalling, as its name implies, is the employment of both feet simultaneously, and there are two main types thereof.

First, there is the playing of pedal octaves, to build up the sonority and grandeur of the tonal mass. This is the more common, and much the easier, type. It is wonderfully effective, too.

At the return of his theme in the *Toccata* from the *Fifth Symphony*, Widor achieves this sonority:



Ex. 1

The other type is the playing of intervals greater or less than an octave. This is truly fascinating; and if sometimes one's temper is badly frayed after a long practice at the double pedalling of the *Allegretto* movement from Guilmant's *7th Sonata*, for instance, the approach of success brings a warm thrill of pleasure, and you are a better man or woman for having mastered these intricacies. For persons with the proverbial "one-track" mind, by the way, double pedalling of this latter type will do wonders and will give a highly awakened and more comprehensive cerebration.

A splendid example of the use of the feet for playing other intervals than the octave is to be found in Guilmant's well-known *Chant Séraphique* from his *Marche Funèbre et Chant Séraphique*. We cite herewith a few pedal measures from this composition:

Ex. 2

Obviously, when double pedalling is going on, the Swell pedal cannot be used. But since the large majority of Swell pedals are cruelly over-used, this is all for the best.

Guilmant often carries the right foot as far as F or G. This demands a good deal of stretching, particularly if one's legs happen not to be very lengthy.

Another interesting feature of pedalling is the trill. In the opening measures of the arrangement of Sibelius's *Finlandia* the pedal trills are beautifully effective and strong. Very few organists possess, however, a good and *steady* pedal trill.

The organ is admittedly "the king of instruments." It seems sometimes, as it roars out in a flood of sonority and eloquence and richness, to be almost linked up with the Divinity. Thus the study of the organ should be fraught with all sincerity, and with keen, persistent effort. And the pedals, especially, must never be neglected. Clever fingers, rushing over the manuals, may build castles and cathedrals and dreams, but without the firm foundation of a sure and unhesitant and flowing pedal support, they will be very silly-looking castles, very unsanctified cathedrals, and very, very empty dreams.

Seventy Strong Organ Blowers

By R. A. di Dio

In a book on "Music and the Anglo-Saxons," Mr. Wackerbath gives this description of a tenth century organ erected at Winchester Cathedral by Bishop Elphege, who died in 951. The account is from the Latin of Wulstan, an English monk who died in 963.

"Such organs as you have built are seen nowhere, fabricated on a double ground. Twice six bellows above are ranged in a row, and fourteen lie below. These, by alternate blasts, supply an immense quantity of wind, and are worked by seventy strong men, laboring with their arms, covered with perspiration, each inciting his companions to drive the wind up with all his strength, that the full-bosomed box may speak with its four hundred pipes, which the hand of the organist governs. Some, when closed he opens, others, when open he closes, as the individual nature of the varied sound requires. Two brethren—religious—of concordant spirit sit at the instrument and each manages his own alphabet. There are, moreover, hidden holes in the forty tongues, and each has ten—pipes—in their due order. Some are conducted hither, others thither, each preserving the proper point (or situtation) for its own note. They strike the seven differences of joyous sounds adding the music of the lyric semitone. Like thunder, the iron tones batter the ear, so that it may receive no sound but that alone. To such an amount does it reverberate, echoing in every direction, that everyone stops his ears; being in no wise able to draw near and hear the sound, which so many combinations produce. The music is heard throughout the town, and the flying fame thereof is gone out over the whole country."

The "seven differences of joyous sounds" produced on this ecclesiastical calliope, are, of course, the seven tones of the diatonic scale in the appropriate ecclesiastical modes; and the "lyric semitone" is doubtless B flat, that being the only accidental permitted in the Greek and Gregorian tones for hundreds of years.

"I Don't Dance"

The Philadelphia *Public Ledger* of June 11, 1845, carried the following bit of ingenuous humor which we give with its quaint diction and punctuation intact:

An exchange tells a good story of an innocent countryman who chanced to be in one of our cities on Sunday, and concluded to go to church. Arrived there, he waited outside for a moment, when, to his profound surprise, the organ struck up, from which he concluded that some sort of "shake down," was about to commence. Just at that moment a gentleman invited him to walk in and take a seat. "Not 'zactly, Mister—I ain't used to no such doin's on Sunday: and besides, *I don't dance;*" and he retired, shocked exceedingly.

"There was never a time when our country possessed so many fine organists as the present, but how many of them have given any thought or study to the matter of selling that which it has been so costly to buy?"—Ralph Kindler.

Jesse French & Sons
REPRODUCING GRAND
"A Name Well Known Since 1875"

An Achievement in Wonderful Music

THE exclamation of all who hear the work of the World's best musicians reproduced in the parlor exactly recorded.

With such an instrument in your home you have nearly all the fine artists of all the World at your beck and call—they will play for you a program of your own choosing and do it as well as tho you had paid $5.00 for your seat for that performance.

The JESSE FRENCH & SONS (Welte Licensee) Reproducing Grand is truly a musical marvel—it is an artistic instrument for the artist—an artistic thing of beauty for the home—an artistic triumph of musical reproduction—electrically operated.

Expression and Reproducing uprights and Grands are available at from $750.00 to $2,750.00.

Organ and Choir Questions Answered

By HENRY S. FRY

Former President of the National Association of Organists, Dean of the Pennsylvania Chapter of the A. G. O.

Q. Will you kindly suggest some organ solos suitable for our Church, (Lutheran) Dedication? I will need several numbers.

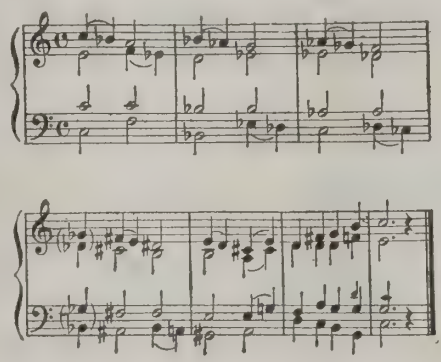
A. Any organ numbers of a festival and churchly character may be used for Dedication services. One of the great heritages of the Lutheran Church is the Chorale, and compositions based on these Chorales would be very appropriate. We will include some in the list, but many more are available—notably a large number by Bach, and those by Brahms, Karg-Elert and others. The first four mentioned in the list are based on Chorales—

Festival Prelude on "Ein Feste Berg" William Faulkes
Three Chorales (quite lengthy) . César Franck
Sonata No. 6 . . . . Felix Mendelssohn-Bartholdy
Two Chorale Preludes . . . . . Henry S. Fry
March for a Church Festival . . William T. Best
Festival Postlude . . . . . Oscar Schminke
Festivity . . . . . Cyril Jenkins
Jubilate Deo . . . . . Alfred J. Silver
Prelude Heroic . . . . . William Faulkes
Air for "G" String . . . . . Bach-Nevin
Exaltation . . . . . Frank Howard Warner
Thanksgiving . . . . . Clifford Demarest
Hosannah (Chorus Magnus) . Theodore Dubois
In the Twilight (Prayer) . . . . . F. F. Harker
Meditation . . . . . H. C. Banks, Jr.
Pastorale (First Sonata) . Alexander Guilmant

Q. Would you offer some remarks on the pronunciation of the word "wind" in choral singing? I am asking the above question for the following reasons: the conventional way has been to pronounce it to rhyme with hind. At the B. C. Musical Festival three years ago Granville Bantock, the composer, who was an adjudicator scored competitors for this pronunciation and told them to use it in its every day dress to rhyme with sinned. I am sorry not to be able to quote the particular instances—it is just possible that the rhyme of the poetry called for it, but as a member of a choral society, on several occasions since, this ruling of Mr. Bantock's has been quoted as authoritative, and we have been told to use Mr. Bantock's pronunciation; though obviously the poet called for the other. My view of it is that it is not arbitrarily "wind" or "wynde," but must have the pronunciation to fit the poet's idea of meter and rhyme. At our last concert, in the "Song of the Vikings," I think, there was one verse where wind was obviously intended to rhyme with behind, but Mr. Bantock's ruling overawed us.

A. The editor thoroughly agrees with you that the pronunciation should be governed by the poetic content. We, of course, do not know under what conditions Mr. Bantock's ruling was made, and it may have been correct in that instance, but we would not feel obliged nor inclined to be governed by the ruling if the word appeared as a rhyme with kind, mind and so forth.

Q. Could you advise me as to which of the following methods is correct in selection of stops on a two manual organ? One teacher (A) whose method I follow, uses during the course of a service, the Aeoline, Melodia, Stopped Diapason, Dulciana, Flute, Oboe, Pedal Bourdon, Tremolo, Super-octave and the Swell Pedal. Another teacher (B) uses the full organ entirely, all stops, the sub-octaves, super-octaves and the Crescendo Pedal employed at one time. B's method to me is mere noise, and still B has the reputation of getting more volume and being a better organist. Would you advise me to follow A's or B's method?



A. If we are to understand that the teachers you mention use the same combinations throughout the entire service, we would not advise your following either "method" exclusively. We would not advise the use of A's combination with the tremolo throughout the service, nor B's Full Organ. Undoubtedly B would get more volume, but that is no indication of good musicianship, and the full organ should be utilized only when necessary to support the voices being used, and when brilliancy and volume are required for organ numbers. A's combination does not require the Great Organ Open Diapason, and we can scarcely imagine hearty congregational singing that would not call for its use frequently for support. Our advice would be—use the tremulant very sparingly in service playing; use full organ only when effective, and vary your combinations to suit the passages being played, and to support the amount of vocal tone being used. We do not know the size of your choir and therefore cannot advise you as to how much organ may be used for accompanying their work, but care should always be taken that the organ does not overpower the singers.

Q. Can you give me any information on theatre organ work? What is the most difficult work in this connection? Is much jazz used or is there an equal amount of classical music used? Do you think that any one who plays pieces such as "Two Larks," by Leschetizky; "Rustle of Spring," by Sinding; "Second Mazurka," by Godard; "Butterfly," by Grieg, and some Chopin, would be able to take up a course and be successful? Would you advise a private teacher or a school of music? As I understand, it takes three years to complete the course at the school. Would it take that length of time with a private teacher? Do you think that a person at the age of twenty-seven, who has been instructed as a church organist, would be too old to undertake that kind of work?

A. It would be difficult to pass on the probability of your success as a theater organist. If you have sufficient technical resources you might be very successful after a course of study in picture-playing. This course may be taken either from a private teacher who is familiar with the requirements or at some school equipped for such work. The age you mention should not bar your being successful. A retentive memory, ability to improvise and modulate, and a keen sense of situations, in addition to technical ability, will be great helps to success. The editor does not feel that it should require three years for the course if you already have had good organ training. Probably both jazz and classical compositions would be found useful.

Q. Can you give me some rules on how to modulate from one key to another. I am a church organist and find this difficult.

A. The proper way, of course, to learn to modulate is to take up the study of Modulation in a systematic way; but, as you probably require information for more immediate use, we will illustrate a rather simple but roundabout way—through the use of the flattened seventh, or leading note. By this method a complete circle of the keys may be made, as in the following diagram:

It will be noticed that when the key of G flat is reached an enharmonic change is made to the key of F sharp. This method is suggested only as a make-shift. Until you have made a study of modulation, we would suggest that you procure a copy of Palmer's "Book of Interludes" which includes many printed modulations. The price of the book is seventy-five cents.

Q. Being a subscriber to THE ETUDE, *and wanting to study in my spare time, I am asking you a few questions. I would like to know the make-up of an organ: the names of stops, the pedals for the feet, what their use is, and so forth. If there is some book to be had on the subject will you kindly name it?*

A. An organ usually contains one, two, three, four or sometimes five keyboards or manuals for the use of the hands, and a pedal board for the use of the feet. In regular organ music a separate staff is printed to be played by the feet. In hymn-tune playing the Bass part may be played by the feet. Organs contain from four or five stops to two hundred and forty-seven (in the largest organ in the world). A two-manual and pedal organ of very small size may include:

GREAT ORGAN

Open Diapason 8 ft. Melodia 8 ft.
Dulciana 8 ft.

SWELL ORGAN

Salicional 8 ft. Flute 4 ft.
Stopped Diapason 8 ft. Oboe 8 ft.

PEDAL ORGAN

Bourdon 16 ft.

COUPLERS

Swell to Great 4 ft. Swell to Swell 16 ft.
Great to Pedal Swell to Swell 4 ft.
Swell to Pedal Great to Great 16 ft.
Swell to Pedal 4 ft. Great to Great 4 ft.
Swell to Great Great Unison off
Swell to Great 16 ft. Swell Unison off
Expression Pedal for Swell Organ
Crescendo Pedal.

We would suggest that you secure a modern edition of "The Organ," by Stainer, which will give you information of the kind you wish.

VOCAL FUNDAMENTALS FOR SPEECH AND SONG

An Epoch-Making Work, the Author of Which Has Restored Many Lost Voices—That of Geraldine Farrar Being a Recent Triumph.....*net* $2.50

By ALBERT E. RUFF

We have acquired this valuable epoch-making work. It is not a new "vocal method"—does not compete in any sense with such books as Witherspoon's "Singing," or Graveure's "Super-Diction," or any methods of voice culture. It is a treatise on the vocal muscular system. The author is a specialist in voice preservation and restoration. After forty years of experience with all kinds of voices, both for speech and song, in which his principal researches were always to find the reason for voice breakdown, either through loss or partial loss of voice, after it had, to all appearances, been cultivated by reputable voice teachers, and had been received and acknowledged by public and press as perfect—the author, in this work, gives the exercises with which he has brought back to professional careers, many who had despaired of ever being able to repeat any of their former successes.

The Schirmer Catalogs

In addition to our voluminous Main Catalogs and many Special Catalogs, we publish information about all of our important publications. Anybody seeking the details about any Schirmer publication may have prompt and thorough informative service upon request.

SCHIRMER'S LIBRARY *of* MUSICAL CLASSICS

CONSISTING of more than 1500 volumes, embracing all classifications of music, Piano, Organ, Voice, Violin, 'Cello, Ensemble Music, etc.

Editorially referred to as

"A MONUMENT TO AMERICAN PROGRESS IN MUSICAL ART."

We prize greatly such comment, but to us as publisher it means that and more. Fifty years ago the founder of this business began the building of SCHIRMER'S LIBRARY OF MUSICAL CLASSICS, which to-day continues to grow as originally named. As it still provides the basis on which this business endures, so also does it provide

The Basis for the Musical Education of the Nation

To practically every music school and teacher in the country, it is the foundation of their teaching ideals.

We appreciate the compliment that other prominent publishers pay us, when they bring out in their Editions only those volumes which they find sell in large quantities in SCHIRMER'S LIBRARY OF MUSICAL CLASSICS. As in the past, however, we shall continue to build this Edition not according to its probable saleability but in a manner that will justify the opinion of a prominent music educator who names it

"The Most Comprehensive Edition Known to the Musical World—An American Institution—Trustee of the Classics and Champion of Musical Progress."

In this monumental collection of classical music, there are more than thirty-five thousand compositions, by three hundred and twenty-five composers. In the 1500 volumes so far published there are one hundred and thirty-five thousand pages of music.

BEETHOVEN : IMPRESSIONS OF CONTEMPORARIES

From Childhood to Death—35 Intimate Views, Filling a Gap in Beethoven Literature—16 Portraits, from 1786 to 1827. Cloth, 8vo, 250 pages. $3.00 net.

A fascinating volume of intimate informal contemporary impressions of the musical Titan, from childhood to death, chronologically arranged.

So planned that the reader feels as though accompanying such famous personages as Mozart, Czerny, Countesses Guicciardi and Brunswick, Goethe, Moscheles, Spohr, Rossini, Weber, Liszt, in their visits to the masters, and sharing their vivid impressions of his personality, his household affairs, the humor, failures, glories, and tragedies of his life.

This book fills a long-felt gap in Beethoven literature, and is very timely in view of the centenary of Beethoven's death, March 26, 1827.

Illustrated with sixteen half-tone portraits—from 1786, when Beethoven was sixteen years old, to 1827, the year of his death. Reproduced from oil-paintings, engravings, crayon drawings, a marble bust, and the life-mask. Revealing the astonishing differences in the artists' conceptions.

To Music Teachers

To teachers located where the services of a music dealer with adequate stock are not available, we offer to send direct, "On Selection," such classifications of materials as they may specify, most carefully selected by clerks specially trained in those particular branches.

Examination privileges cheerfully extended.

Christmas Services and Entertainment Suggestions

A Fine Variety of Services and Entertainment Material for the Christmas Festivities of Young Folk

We have other publications in which you may be interested. Tell us what you want.

Services for Sunday School

Christmas Night! Holy Night! A well-planned service. Singable Christmas Hymns, Responsive Readings and impressive little recitations.

The Christmas Story. The Sweetest Story Ever Told.

A very interesting and melodious service that will please Sunday School members.

Glad Tidings. Words and music by R. M. Stults and others.

A successful service, delightful in every particular and in great demand.

Joy of Christmas. Words and music by R. M. Stults and others.

Joyous music set to bright and appropriate texts, tuneful and catchy, echoing the true Christmas spirit and sure to please.

Christmastide Reverie. A Christmas service for Sunday Schools. Contains all recitations, etc., necessary for an entire service.

With Joyful Song. Complete Christmas service for Sunday Schools. Words and music by R. E. DeReef and others.

A brilliant Song Service, easily learned. Consists of twelve tuneful carols, interspersed with novel and appropriate exercises, recitations and readings.

His Star of Love. Words and music by F. A. Clark. An original Christmas service for Sunday Schools. Bright, tuneful choruses with a number of excellent solos, which may also be sung in unison. Accompaniment for piano or organ.

Star of Promise.—By F. A. Clark. This service will carry the Sunday School through an interesting hour or two at Christmas time, giving melodious and joyful numbers for Sunday Schools to sing, as well as other program material and readings to round out the service.

Price of any of the above services: Single copy, 7 cents; dozen, 80 cents; 50 copies, $3. 25; 100 copies, $6.00, all postpaid

Alleluia. Christmas Service of Praise. Words by Gertrude Knox Willis. Music by Mrs. R. R. Forman.

Will appeal to all those who are looking for a short service to be used in connection with other addresses and carols for a Christmas program for the young. Price, **20 cents** a copy.

Operettas or Musical Plays

The Crosspatch Fairies

By Norwood Dale **Price, 60c**

A Christmas play with music for little folks, giving a brand-new treatment of the holiday spirit.

In Santa Claus Land

By G. M. Rohrer **Price, 50c**

A little Christmas play in one act, admirably adapted for use with Sunday School or day classes.

Santa Claus' Party

By Louis F. Gottschalk **Price, 10c**

Can be produced without scenery and with very simple costumes, although full directions are given for a very eleborate setting. Time of performance, 15 to 20 minutes.

Musical Recitation

(With Piano Accompaniment)

The Night After Christmas

By Frieda Peycke **Price, 35c**

Catalog No. 18366

This is a very clever number for an accomplished reader, or a bright youngster with the assistance of someone at the piano.

Songs for Child Singers

Happy Children

By Wallace Johnson **Price, 30c**

Catalog No. 19571

A joyful little number that may be played or sung by a young performer.

Babies' Night

By M. Greenwald **Price, 30c**

Catalog No. 11796

This is an easy little piano number with three verses of text set to the melody.

Little Skeptic

By G. Spaulding **Price, 30c**

Catalog No. 11949

This is one of Spaulding's melodious little piano solos with cunning text that may be sung by a little boy.

Santa Claus is Here

By F. J. Bayerl **Price, 30c**

Catalog No. 17960

This is a real Christmas song for a young soloist, but it can be made additionally effective by the use of a triangle or bell ad libitum in accordance with the marking.

Toy Symphonies

Toy symphonies are real novelties for the program. They utilize such toy instruments as the cuckoo, rattle, tambourine, castanets, bells, anvil, pop-gun, cricket, slapstick, sand blocks, etc.

Christmas Toy Symphony

By H. D. Hewitt

Price, Piano, Four Hands and All Parts, $1.50

Piano, Four Hands alone, 80c

Can be given with almost any number of instruments.

Christmas Bells

By Arthur Seidel **Price, 50c**

Does not require many performers.

Kitchen Symphony

By H. Kling **Price, $1.00**

Piano With Six Kitchen Utensils

Minuet from Symphony in E flat

By W. A. Mozart (Arr. by J. Schulhoff)

Price, 50c

Piano Solo, Castanets, Tambourine, Triangle, Drum, Cymbals and Bell Chime.

Violin and Piano

Christmas Bells

By M. Greenwald

Catalog No. 17112—First Position

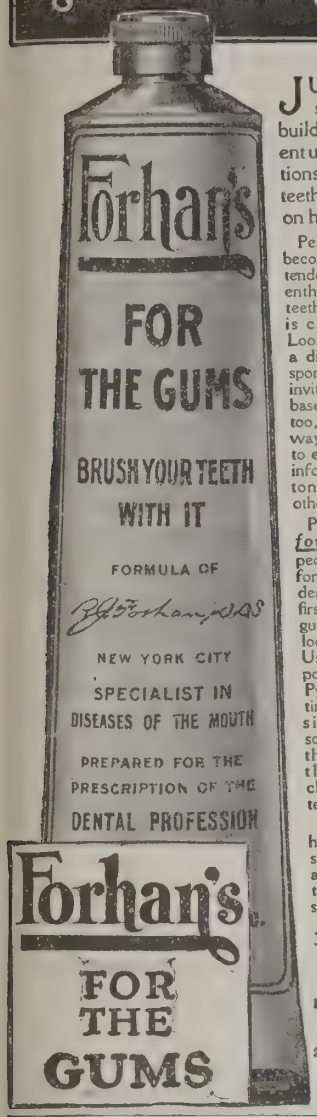
Price, 40c

Christmas Night

By J. Pietrapertosa

Catalog No. 840—Third Position

Price, 60c



Piano Solo Numbers

These are excellent numbers, mostly for young pianists, and they will fit well in Christmas entertainments and also in piano pupils' recitals conducted by teachers at Christmastide.

THEODORE PRESSER CO., *Music Publishers and Dealers* **1712-1714 Chestnut Street** **PHILADELPHIA, PA.**

The dread Pyorrhea begins with bleeding gums

JUST as the strength of a building is dependent upon its foundations, so are healthy teeth dependent upon healthy gums.

Permit the gums to become inflamed or tender and you weaken the foundation of the teeth. This condition is called Pyorrhea. Loosening of teeth is a direct result. And spongy, receding gums invite painful tooth-base decay. They act, too, as so many doorways for disease germs to enter the system—infecting the joints or tonsils—or causing other ailments.

Pyorrhea attacks *four out of five* people who are over forty. And many under that age, also. Its first symptom is tender gums. So you should look to your gums! Use Forhan's, which positively prevents Pyorrhea if used in time and used consistently. It also scientifically cleans the teeth—keeps them white and clean. Brush your teeth with it.

If gum-shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment.

Question and Answer Department

Conducted by

ARTHUR DE GUICHARD

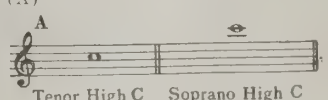
Always Send your full name and address. No Questions will be answered when this has been neglected.

Only your initials or a chosen nom de plume will be printed.

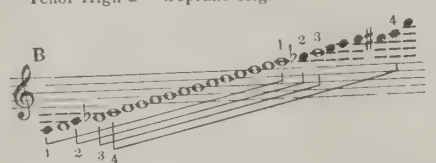
Make your questions short and to the point.

Questions regarding particular pieces, metronomic markings, etc., not likely to be of interest to the greater number of ETUDE readers will not be considered.

Rachmaninoff, Op. 3, No. 2.



Q. In the Prelude by Rachmaninoff, Op. 3, No. 2, do the half-notes in measures 51, 52 and 53 come on the first beat or a little ahead of it?—MABEL F. D., Selma, Alabama.



A.—The slightest shade of a fraction before it—so slight, indeed, that the half-note and its chord are played almost simultaneously on the beat.

A Barnum & Bailey Voice!

Q. What is the name of a woman's voice which is sung an octave higher than the alto voice? Many call it a woman's tenor. However, we are taught that a woman cannot carry a tenor voice, this being solely a man's voice.—E. M. M., Plum Branch, South Carolina.

A. Except as an extraordinary freak (one in a million), there is no such thing as a "woman's tenor," or a woman's man-voice. The woman's voice is, by nature, an octave higher than a man's voice; for example, in (A)

while they may look the same on paper when written in the treble, or G clef, the soprano high C sounds an octave higher than the tenor high C (see "A"). For the range of women's voices see "B." 1, Alto or Contralto; 2, Mezzo-Soprano; 3, Dramatic-Soprano; 4, Light, or Coloratura-Soprano. Note well that the black notes are exceptional notes in the voices indicated, save those in No. 4, which most coloratura sopranos possess. The very last black note, C in *altissimo*, is a note which Mozart said he heard, in 1770, sung by Lucrezia Agujari (called "La Bastardella"). Note well, also, that it is the *quality* or *timbre* which determines the kind of voice, *not* the compass.

Question Without Name and Address.

"*X. Y. Z.*"—a teacher—writes a series of three questions, but does not give his name and address, as this department requires. Initials only, or a *nom de plume*, would be used for the answer, but the details are obligatory. Until they are presented the questions are in suspense.

American Music—Dance Music and the Suite—Influence of Certain Composers.

Q. (i) Please state briefly, yet in a complete way, the qualities and defects of present-day American music. (ii) Did the dance form assist to any extent in the development of the Suite? (iii) To what extent was the development of the Suite important, historically? (iv) What did the following composers do to develop the various forms of musical expression: Bach, Beethoven, Chopin, Wagner, Liszt?—LYNNE, Pineapple, Ala.

A. (i) The outstanding quality of American music of today is to be found in the super-excellence of American symphony orchestras, the best of which are second to none in the world. The defects reside in the fact that there is no American music which may be unerringly recognized as distinctively American, in the same way that German, Russian, French and Hungarian schools of composition are recognized. There are several excellent American composers, but their compositions are, for the most part, written in the style of the foreign schools of thought, now one and now another. (ii) The Suite was composed of a series of old folk-dances, principally the *Allemande, Gavotte, Bourrée, Pavan, Sarabande, Minuet, Courante, Chaconne, Gigue* and others. (iii) By degrees the Suite developed into the Sonata form, from which are derived all the most important instrumental compositions, culminating in the Symphony. (iv) Bach raised the art of polyphonic composition to the highest degree of excellence, never since approached by any other composer. Beethoven, in the forty-nine sonatas which he wrote (thirty-two for piano, one for piano, four hands, ten for violin, five for 'cello, one for horn) carried the sonata form to its greatest height of expression, by reason of the variety of sentiment which he gave to his melodies and the remarkable treatment of their harmonic structure, not alone in his sonatas but also in his quartets and symphonies. Chopin, the greatest genius of pianoforte music (both as a composer and as a performer) the world has ever had, was a musician-poet in the most intimate meaning of the term. Wagner revolutionized opera and made it a Music-Drama, inventing the *leit motif* for chief characters and events, making the orchestra illustrate the libretto by imparting greater depth and significance to the poet's words, and requiring that all the operatic facilities and resources (actors, singers, instrumentalists and scenic artists) should be equally employed to interpret the story of the Music-Drama. Liszt created the Symphonic Poem, altered the harmonic minor scale (see his *Rhapsody*, No. 15), introduced the piano recital, excelled as a pianoforte virtuoso, treating the instrument as an orchestra, and opened up a new era in Hungarian music.

Grace-Notes or Ornaments—Couperin, Chopin.

Q. (i) Please tell me how to play "La Bandoline" by François Couperin. Are the sixteenth-notes meant to be the inverted mordent?

Ex. 1

(ii) Is it correct to play the second measure of Prelude, Op. 28, No. 23, Chopin, like this ("B"); and Prelude, No. 8 ("C")

Ex. 2

(iii) In the last, does the F♯ in the bass come together with the A in the treble?—R. N., San Francisco, Cal.

A. (i) The sixteenth-notes are not inverted mordents, the sign for which is ∿ without an upright line through it. Your interpretation would give eight eighth-notes in the measure. Play the mordent with the beat and its note, as follows:

Ex. 3

(ii) Your interpretations of "B" and "C" are correct.

Rheumatic Finger Joints.

Q. I am troubled with rheumatism in my fingers and the joints become very stiff at times, especially noticeable when trying to play a trill or any quick passage. Will appreciate anything you might suggest.—E. M., Denver, Colo.

A. Consult your physician.

Diminished Intervals on a Given Bass.

Q. How can I express correctly on the staff certain diminished intervals on a foundation note which is not to be changed? In the case of the diminished 7th, it seems to me that the ♯ of the signature should first be made ♮ and then the ♭ added to it; also with the diminished 3rds in the ♯ major scales. In the case of the diminished 4ths in the flat scales, I do not know whether one accidental ♭ is sufficient or whether I should use two flats to make my meaning plain. Which is correct?—CAROL A., Oakland, Cal.

A. Use a double-flat (♭♭).

For Christmas Give Fragrance

FRAGRANCE was the first Christmas gift.

Wise men, following the star, brought only their choicest possessions — myrrh and frankincense.

Perhaps that is why fragrance seems so appropriate a gift for Christmas—even so long afterwards and under such different conditions.

But whatever the reason, fragrance and Christmas are inseparable. Myrrh and frankincense are expressed today in many exquisite creations—perfumes just as precious, just as full of meaning.

Among the many fragrant products of Roger & Gallet, Paris, you will always find just the right gift for Christmas—a single bottle of some particular flower extract, a delicately perfumed powder, an artistic compact, or a beautiful box of several fragrant toilette articles.

And always, of course, most acceptable, *Fleurs d'Amour* (Flowers of Love), *Le Jade* (the Precious Perfume), and, new this Christmas, the fragrance of old Italy—*Ausonia*.

Shop early. Your favorite Drug, Department or Specialty store will be glad to show you Roger & Gallet's fragrant gifts.

The Violinist's Etude

Edited by ROBERT BRAINE

It is the Ambition of THE ETUDE to make this Department "A Violinist's Magazine Complete in Itself"

Playing for the Movies

PLAYING for the "movies" has become a definite profession which furnishes steady employment all over the United States for thousands of violinists, as well as those playing other orchestral instruments. Many a young violinist who has had hopes of becoming a famous concert violinist often finds himself in the ranks of those playing in large orchestras in the motion picture theaters of our larger cities.

THE ETUDE receives many letters similar to the following from young musicians who wish to know how to get into such work: "I am writing you in reference to obtaining a position as violinist in some movie orchestra. After one is prepared to fill such a place, is it hard to get a position? What steps are necessary in order to be placed? What compensation should one expect for this work? Is it true that one is usually placed in such a position by some agency?

"I am preparing myself for this work, having studied for several years with good violin teachers."

The Theater Player

THE REQUIREMENTS for this type of work, amount of compensation received, and so forth, vary according to the size of the city, the grade of music played, length of time the musician is expected to play daily and the rank of the theater. In other larger motion picture houses in New York, Chicago, Philadelphia, and other American cities where there are often accommodations for audiences as large as 5,000, music is made a leading feature. Such theaters employ fine orchestras of fifty or more men and the programs often include orchestral selections of the highest character. To get into such orchestras the player must have studied the violin thoroughly and acquired the technic of a finished artist.

In the smaller moving picture houses the requirements are usually not so great but that ordinary theater musicians can meet them. In the smaller cities and towns where orchestras are used at all they consist of but a few pieces; and easy music, as a rule, is played. Some such houses have orchestral music only in the evening, and some only when a special film is being used, or on Sundays and holidays when the prices of admission are higher. Almost all motion picture houses have organs or pianos, or both, for use when there is no orchestra, or between the hours when the orchestra is not playing. Using orchestral music exclusively would mean too lengthy hours for one orchestra and the expense of having two or three orchestras would be too great.

The Unions

IN CITIES and towns where there are unions affiliated with the American Federation of Musicians the rules of the union govern the number of hours the musicians play and the compensation they receive. In theaters where union orchestras are used applicants for positions must join the union before they can be employed.

No average price as to the compensation for this class of work can be given as it varies greatly according to the size of the city, the rank of the theater, grade of music played, hours on duty, and according to whether or not vaudeville is featured in addition to pictures. There are some small towns where as little as $15 to $20 a week is paid for organists, pianists, or violinists. In cities of around 75,000 population, theaters sometimes pay from $35 to $50 per week for pictures and vaudeville (two shows each day). In the best picture houses of the large cities the orchestral players get $50 or more a week for concert work and pictures. The local unions fix their own scales, which vary in different towns and cities.

Get Information First

IF OUR correspondent has any city in mind where he expects to locate, it would be a good idea to write to the secretary of the local union for a union book which gives the scale of prices for all classes of work for that city. All unions publish these books containing rules, by-laws, scale of prices, and such items.

Very few positions in these orchestras are filled by agencies. The theater places the contract for orchestral music with some leader or manager of an orchestra, and it is his duty to engage his players. In the larger cities, at least, if the orchestra leader is in need of musicians, all he has to do is to go to union headquarters where, as a rule, he can get as many as he needs.

In our correspondent's case he had better try to get experience in orchestral work in his home town. If there is a union which controls the theater work, he will be obliged to join it. He should then see the leaders of the motion picture orchestras and ask for work. If there is nothing to do for a violinist in that town, he might visit neighboring towns and see the orchestra leaders about work. An advertisement in one of the orchestral journals might lead to a position, but in this kind of work only positions in very small towns are, as a rule, secured through advertising. In cities and towns of any size there are always sufficient musicians at liberty to fill up the ranks without resorting to agencies or advertising.

Consider The City

OUR CORRESPONDENT will hardly find steady employment in moving picture work in cities much below 100,000 population, that is, in pictures alone. Where vaudeville and pictures are combined, steady position in such theaters are sometimes available in towns between 50,000 and 100,000. In order to get a foothold in theatrical playing, it is often necessary to do substitute playing at first, that is, take the place of the regular man when he cannot play. In this way the newcomer gets valuable experience. The novice should make the acquaintance of as many orchestral players as possible, letting it be known that he is open for engagements as a substitute. In course of time, if the new man is a good violinist, he will find a regular position in some orchestra.

The principal thing is to study faithfully until he becomes a good violinist and sight reader, and to get all the orchestral experience possible. A very large number will not take the pains to learn to do the work thoroughly. Then, when their big chance comes, they fail from lack of ability and experience.

As our correspondent lives near New York, it would be a good idea, if he can afford it, and fails to get work in his home town, to go to that city and study for six months or a year. By mingling with musicians there he would get an idea of what the profession demands and of how to get work.

There is but one way out for the aspirant. He must, by hook or crook, get hold of an experienced professional and from him learn the thousand and one things that are necessary.

Having somehow made the acquaintance of an orchestral man, you should look out for an opening, a job. Perhaps your acquaintance may become the means of getting you started.

The most common way for the beginner to get into the circles he yearns for is by substituting.

A professional violinist occasionally wants a day off, or is unwell. If he wants to keep his job he usually tries on these occasions to send a substitute in his place. And, obviously, it cannot often be an ordinary professional, for such a man will be already engaged. So the deputy is usually someone who is not yet properly in the profession. This is the aspirant's chance, for it will not matter if you are not so fine a player as the man you relieve—it is, in fact, better that you should not be, or he will be chary of employing you. And, as the job will probably last only one night, you have nothing to lose and all to gain—for one night's real show will give you a tremendous amount of experience.

To get a relief job of this kind you must let a professional player know that you are willing to substitute for him; and you must fit yourself for the chance as thoroughly as you can. Notice just the sort of music he plays, how he plays it, whether he sits still or goes for a walk between items, and such other things as occur to you.

Then one day will come your opportunity. Go to your place as if you are quite at ease. Do not, as a second-violin, stride across to the left of the conductor, where the *firsts* sit; and do not ask unnecessary questions or in any way flaunt your ignorance and inexperience.

"Hard Knocks"

You may get some hard knocks, as a "hopeless amateur;" but stick grimly to it and you will emerge at the end of the show, maybe scarred, but certainly happy; for you will have actually started as a professional; and there will be a lot of blunders that you will never make again.

Movie orchestras offer a good field for the beginner; for if a small one be chosen with just one or two other musicians, the novice can take music of his own, which he can be sure of playing well. The members will probably welcome some new stuff.

Many violinists get their first post on board a liner. This is a good plan; for, with the fewer distractions afloat, the young player can put in plenty of practice. He can, too, easily borrow the orchestral parts to try over.

A post on a liner is usually obtained after an *audition*—that is, a test of the applicant's abilities, which consists largely of sight-reading and customarily includes overtures and selections. A thorough acquaintance with dance music is also essential for this sort of work.

Dance music offers a very good opening for the would-be professional, especially in small towns. It is fairly easy to run a little dance orchestra with a few other players of *semi-professional* standard. And this work will give experience and confidence to aim at higher things later on.

There are many branches of the profession which it has not been possible to mention; but the aspiring fiddler may rest assured that, if he pursues his vocation with proper zest, a thrilling, worth-while way of life will lie before him.

"The fun of being an artist is preserving the amateur spirit. Once I am off the stage I cease to be the professional. And, as an amateur, I spent a great part of my spare time, attending concerts, enjoying them with a relish unworthy of one whose business is music!"—SZIGETI.

The Orchestral Profession

2. The Violinist's Début

By Sid G. Hedges

IT IS of no use trying to start in the profession until you are up to the required standard; but it is not easy to decide just when that standard is achieved. The number of years spent in preparation do not afford much guidance, for rates of progress vary so much, and there is no fixed examination such as other professions require to mark out the insufficiently equipped from those properly qualified.

The most satisfactory way of testing one's ability is by sight-reading.

I will be quite definite:—No violinist is fit for the orchestral profession unless he can read Mozart's overture to "Figaro," at sight, taking two beats in a measure, with a metronome set at 152.

Of course, if you happen to be familiar with "Figaro" you cannot measure your sight-reading ability by it, so in that case choose another straightforward overture like "Zampa," "Cosi Fan Tutti," "Don Giovanni," or "Preziosa."

Being sure of one's technical qualification is the first step; but there is a great deal of the *business* of the profession without a knowledge of which one cannot well start.

A conductor may say:

"In at *segno;* cut C to D, and trio; all second times!"

"In at *segno,*" means that you are to begin playing not at the first measure, but at 𝄋

"Cut C to D" implies that the music is divided into lettered portions, and that the part between C and D is to be omitted. The movement marked *trio* is also to be left out.

"All second times," signifies that no repeats are to be taken, so that all first time measures will be omitted.

There is other *business* besides details of this sort.

"When does the orchestral violinist tune up; by what does he tune—who turns over when two players sit at one desk; should music be taken home for practice?"

These and a multitude of similar questions would need a whole ETUDE for their answers; yet the violinist who blunders badly over them is likely to pay for his ignorance by finishing his first engagement on the same night that he begins it. Such lack of knowledge is rarely excused. A conductor, in fact, cannot afford to excuse it; for a defaulting of one player may mean a breakdown or disaster to the whole orchestra.

Organizing a String Quartette

By Edward Roesken

When one thinks of the wealth of melody lying hidden between the covers of the volumes of string quartette music, and of the existence of comparatively few organizations devoting their time to its study, he feels that violinists should be reminded occasionally that they are neglecting one of the greatest possibilities of their instrument. There is a satisfaction to be derived from playing in such a combination, which orchestra playing cannot give; for there is an opportunity for the development of an artistry which will make the ensemble seem like the voice of one instrument and yet permit the individuality of each player to express itself.

Such an organization is, of course, made up of a first and second violin, a viola and violoncello; and the literature available has been enriched by the pens of such composers as Beethoven, Haydn, Mozart, Mendelssohn, Schubert and Dvořák—to name but a few. It ranges from simple airs to works of great difficulty.

Ordinarily, one would think of the violist and violoncellist as the players most difficult to discover and hold; and yet, once found, it will usually be learned that these have already tasted the delights of chamber music and will be the most enthusiastic and faithful. An amateur orchestra which boasts of a violist and a 'cellist needs only the interest of two violinists to form a string quartette. Violinists, however, who love and are competent to play this type of music are few; for the seriousness and leadership required of the first violinist are seldom found in the same person; and second violinists too often fail to discover the beauties of their part and tire of "playing second fiddle."

One who is considering the formation of a string quartette may find the following suggestions of assistance. Violinists of adequate skill may be brought to light by writing a half dozen of the nearest violin instructors, asking if they have pupils who might be interested. It is possible that among these instructors one will be found who will ask to be considered as a candidate. Violists are merely violinists who have learned to play the viola. An experienced violinist can usually master most of the difficulties of the larger instrument and its peculiar clef in a week or two, either by the reading of viola scores or by means of one of the many viola instruction books written expressly for that purpose.

When four are found who appreciate the music written for the string quartette, an enthusiasm usually results which more than repays for the effort made in bringing them together.

The Old Violin Nuisance

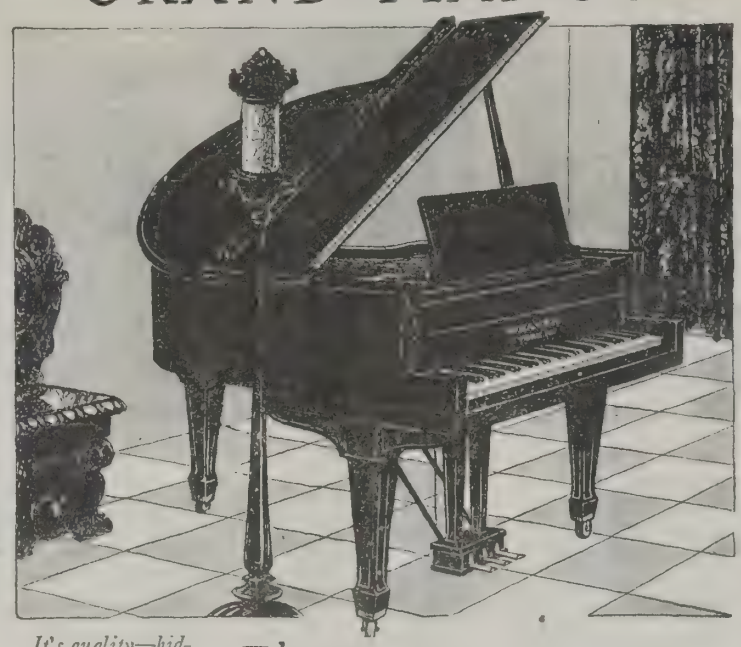
A correspondent writes that in order to stem the flood of questions as to whether violins containing the names of famous violin makers are genuine or not, The Etude might publish an extended article giving the characteristics of old violins made by famous makers, together with facsimilies of their labels, and so forth, so that violin owners could themselves judge whether their violins are genuine.

The Etude has exposed the old violin nuisance in almost every number for years, showing the fallacy of anyone who owns an apparently old violin containing a Strad or other label jumping to the conclusion that it is genuine. Regular readers and subscribers of The Etude know the facts on this subject quite well by this time, but there are always hosts of new subscribers, and chance readers who buy a copy or two, and it is these people who write letters to the magazine about their supposed Strads and Guarnerius violins.

Such an article as our correspondent describes would have to be of extended length and would have to be published in every number of the magazine to do much good, and even then there would be thousands of people who would not see it. It is also true that ordinary violin owners could not tell whether their violins were genuine or not no matter how many articles, pictures and facsimilies of labels they had to guide them, for the simple reason that imitators of old violins copy violins and labels *so* closely that the descriptions and pictures of the genuine would seem to fit the appearance of the imitation. It takes years of experience in the actual handling and study of violins to be able to distinguish an artistically made imitation old violin by a master violin maker from a genuine. One must know the goods. It takes an experienced bank teller to judge a well-made counterfeit bank note, and an experienced violin expert to judge violins, except, of course, in the case of crude imitations which anyone can detect.

For this reason people will no doubt write to magazines and music dealers seeking to learn if their apparently old violins are genuine or not as long as the custom prevails of putting counterfeit labels in violins.

Sins of Commission



By Elizabeth Lee

The sins of omission may have kept souls out of heaven, but it is usually the sins of commission that keep violinists out of the virtuosi class. Performers who have a series of spectacular feats for exhibition in the way of double-stops, trills, harmonics, and passages of intense feeling should not forget that the playing must be smooth, clear and strong as a whole. One poor note will spoil pages of exquisite rendition. One misdirected chord will distract people's attention for a whole evening.

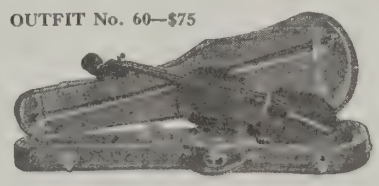
Mozart, The Violinist

While there is in every mind the picture of Mozart as a pianist, touring Europe as an infant prodigy, performing miraculous feats, he was a finished violinist as well. "You have no idea yourself how well you play the violin," writes his father (Oct. 18, 1777); "if you only do yourself justice, and play with fire, heartiness and spirit, you may become the first violinist in Europe." After the year 1774 Mozart's compositions for the violin became more and more in the "bravura" style, and illustrate clearly his own progress in mastering the technical difficulties of the instrument.

WEAVER
GRAND PIANOS

It's quality—hidden and showing that accounts for its supremacy.

TO the exquisite tone; the marvelously responsive touch and the long life of a Weaver Grand, add perfection as near as it is humanly possible to give—and you've an idea why connoisseurs the world over speak so proudly of their Weavers.



Weaver Piano Co., Inc., York, Pa.

An Ideal Christmas Gift

The Vega Violin Outfit is an ideal Christmas gift. It creates a pride of possession and encourages the beginner to greater attainments. Send him to his teacher fully equipped to make his study one brimming full of happiness.

The beginners' outfit Number Sixty has been selected for its exceptional value. It consists of a Stradivarius model, Style A Vega in imitation of old, finished in rich golden-red, producing a beautiful sweet tone with great carrying power. Case of genuine grain leather, lined with silk plush. E. Nurnberger bow. Equipped with rosin, E string tuner, mute and chin rest.

OUTFIT No. 60—$75

Write for the beautiful free catalog describing the many violins, outfits and accessories.

RARE VIOLINS by famous masters
within the reach of those of modest means

GITTELSON & HOWARD have adopted the policy of specializing in violins by famous but lesser Italian masters, at moderate prices.

Mr. Howard has just returned from abroad with a widely representative collection including Guadagnini, Grancino, Rocca, Ceruti, Testore, Marchi, Costa, Floriani, Pedrinelli, and many other fine examples of the Nineteenth Century.

A complete descriptive catalogue will be mailed on request

Violin Questions Answered

By MR. BRAINE

Kloz Violin.

S. J. S.—Without seeing your violin, I could only give a guess as to its value, as so much depends on its state of preservation, and whether it is a good specimen of the supposed maker's workmanship. A recent catalog, by a leading firm, lists a Mathias Kloz of 1793, at $350. Possibly your violin is only an imitation, as the Kloz violins have been largely imitated.

Inspiration Plus Perspiration.

E. W. P.—It would be pure guesswork to try to figure out an answer to your hypothetical question as to which of the violin pupils you mention would show the greatest progress after a term of years. The question of talent would probably decide the matter. It often happens, as every violin teacher knows, that a pupil of high mentality and very great talent will make more progress in one year than a pupil of only average talent in two or three years, even though he practices half as much. Of the two boys you mention, the one with the greatest talent would probably come out ahead. If both had equal talent, either might be the winner. However, we should remember Edison's famous saying that "success is five per cent inspiration, and ninety-five per cent perspiration."

Exceptional Progress.

G. C.—Impossible to judge your progress without hearing you play. If you play the compositions you name really well, you have made exceptional progress. At sixteen you had a late start, and, although I hardly think you can achieve a virtuoso technic, you may easily become, with faithful practice, a fair, average violinist. As you live in a small town where you can hear very little music, you had better buy a radio which will put you in touch with music in the large cities near your home.

Washing the Bow.

J. L.—You can wash your violin bow by rubbing the hair in a lather of soap with an old tooth-brush. Then rinse off all the soap with clean water and dry thoroughly. The now hair should then be treated with powdered rosin, and, after being rubbed on the rosin cake, will be ready for use.

Factory Violin?

L. J. B.—While it is difficult for me to pass judgment on a violin I have never seen, I should say that your violin, trade-marked *Paganinni*, with a picture of castle inlayed in mother of pearl on the back, is a factory fiddle of no great value. There are, no doubt, good violin makers and repairers in a city as large as yours. Take it to one of them, and he can give you a definite idea of the value of the violin.

Kloz Imitation?

T. G. B.—The name is Kloz, and his labels read, "Georg Kloz in Mittenvald an der Iser 17—." The Kloz family of violin makers had several branches, and their violins stand high among eighteenth century German violin makers. They cannot be compared to the Cremona makers, of course. If genuine, your violin is valuable. There are many imitations of the Kloz violins.

Label Not a Guide.

W. H. M.—Read the articles on old violins in the March and April numbers of THE ETUDE, and you will see that there is not one chance in a million that yours is genuine. You cannot judge from the label because counterfeit labels closely resemble the original.

Trade-Mark Stamps Imitation.

M. E. K.—Read my articles, in the March and April numbers of THE ETUDE, containing hints on how to detect spurious Cremona violins. You will note that supposed Stradivarius violins stamped "Conservatory" on the back, as yours is, are factory violins of no great value. The Cremona makers did not stamp trade-marks on the back of their violins.

"Hopf" Brand.

A. H.—There is an immense number of violins branded "Hopf," which are usually of the factory type, made in Germany. You will find an extended article on Hopf violins in the August, 1922, number of THE ETUDE, which you can get by sending twenty-five cents to the publisher.

Vuillaume Violin?

A. C.—Vuillaume was one of the most famous violin makers of France, and his violins are valuable. Judging by the label and description of the violin which you send, I should say that it is an imitation Vuillaume. I cannot tell the value of the violin without seeing it.

Pedigreed Cello.

C. F. R.—Your cello is evidently a very interesting old instrument. If you care to go to the expense, you might send it to one of the dealers in old violins who advertise in THE ETUDE. He can possibly tell you who the maker was, and what the instrument is worth.

Violin Study with Piano.

P. L. H.—Instead of harming your piano playing, the study of the violin will be a great benefit to it, if you do not let it take too much time from your piano practice. As your plan is to make the piano your principal instrument and study the violin simply for your own pleasure, not for the profession, your late start at eighteen will not matter. Commencing at that age you can hardly hope to become a professional, but you can learn a good deal, especially since you have had seven years of piano study. 2—Take lessons if you can, but, if you are planning to do without a teacher, you might get "Self Instruction for the Violin," by Albert G. Mitchell.

Late Start on Cello.

F. K.—The age of twenty-four is entirely too late to take up the cello with the idea of making a profession of cello playing. If you wish only to learn a limited amount, that is different. 2—You would require a teacher if you wish to learn correctly. 3—I know of no large magazine devoted exclusively to cello playing. Most of the violin magazines occasionally devote a certain amount of space to the cello. While interest in the cello is increasing, the number of violin students is many times greater than the number of cello students.

Violin Making.

G. H. M.—Practical and inexpensive books on violin making are "Violin Making," by Mayson (Chas. Scribner's Sons, New York), and "The Violin and How to Make It," by a Master of the Instrument (Carl Fischer, New York). On repairing you might get, "Repairing, Adjustment and Restoring of the Violin," by G. Foucher. 2—You can get a German system flute with eight or ten keys for from $15 to $20. Boehm-system flutes are higher in price. 3—Hermann's Violin School, Book 2nd, has a clear explanation of the positions, and good exercises in each position. 4—Music journals of a general character devote more space to piano playing, because the number of piano students greatly outranks those of all other instruments put together.

Market for "Strads."

R. F. H.—THE ETUDE is not in the market for supposed Strads and other Cremona violins. Write to some of the dealers in old violins who advertise in THE ETUDE. If your violin is really genuine and in good condition they can no doubt find you a purchaser.

Effective Solo.

H. J. K.—The *Sohn der Haide*, by Kelar Bela, would prove a very effective solo for the concert where you are to play. If you have enough technic to play half through Kreutzer, you would be able to play it.

Church Solos.

J. K. G.—There are several arrangements of *The Rosary* for violin and piano. The one by Kreisler is very effective. It requires a fairly advanced violinist to do justice to it. 2—For the church services in which you are invited to play a solo, the "Adoration," by Borowski, would prove a good number, or the "Meditation," from Thais, by Massenet, if you are advanced enough to do it justice.

"Rattle" in Violin.

E. H. S.—The finger producing the harmonic lies lightly on the string for the full duration of the note to be produced. 2—Writers of violin books and studies give only the briefest explanations accompanying the exercises because they do not suppose anyone will try to learn the studies without a teacher. You might get Hermann's *Violin School*, Vol. 11, which has a few explanations of how to play harmonics. Your best course would be to take lessons if at all possible. 3—It would be pure guesswork for me to try to locate the "rattle" in your violin without seeing it. It might come from any one of several different causes. Maybe your violin is unglued at some point. Possibly the fingerboard is uneven, or the nut too low. The trouble might come from one of the screws of the E tuner being loose. Then again the chin rest might be touching the tail-piece or rest tightly against the top of the violin. Maybe the wire wrapping of your G string is loose, causing a buzzing sound. You had better send your violin to a good professional violin repairer to be put in good shape. He would at once locate the cause of the "rattle" and remedy it.

Holding the Violin.

R. Q. C.—Authorities differ as to the manner of holding the violin with regard to the jaw, chin, shoulder, and collar bone. Some advocate using a cushion under the coat at the shoulder, and others not. I would advise you to get the little work, *Violin Teaching and Violin Study* by Eugene Gruenberg in which all these different theories are discussed. 2—Practically all American conservatories and colleges of music admit pupils at every stage of advancement from the beginner to the most advanced pupil. The young man of twenty about whom you write should enter at once if he hopes to accomplish much in violin playing. 3—Unless a player has rosin on his fingers, or on the strings (where the fingering is done) the trouble of the fingers sticking to the strings in shifting no doubt comes from the fingers perspiring. The main cause of excessive perspiration is nervousness and one of the best preventatives is to rub the fingers and hand with alcohol just before playing in public. As it is difficult to get pure alcohol since prohibition, ordinary toilet water, which always contains alcohol, may be used.

2054 W. LAKE ST. CHICAGO, ILL.

As a means of contributing to the development of interest in opera, for many years Mr. James Francis Cooke, editor of "The Etude," has prepared, gratuitously, program notes for the production given in Philadelphia by The Metropolitan Opera Company of New York. These have been reprinted extensively in programs and periodicals at home and abroad. Believing that our readers may have a desire to be refreshed or informed upon certain aspects of the popular grand operas, these historical and interpretative notes on several of them will be reproduced in "The Etude." The opera stories have been written by Edward Ellsworth Hipsher, assistant editor.

Wagner's "Siegfried"

When Philadelphia was celebrating its Centennial in 1876, Germany was undergoing its greatest musical awakening at the little town of Bayreuth, where, on August 13, 14, 16 and 17, the entire cycle of *Der Ring des Nibelungen* was given for the first time. Part of the cycle had been given previously at Munich, "Das Rheingold" in 1869 and "Die Walküre" in 1870.

This huge undertaking, epic in all its aspects, was commenced by Wagner in 1848. His early enthusiasm, however, only got him as far as the "Death of Siegfried," which he completed in 1849-1850. This in altered form became the "Götterdämmerung." It soon became obvious to the master that a series of music dramas of heroic dimensions was necessary to encompass the prodigious canvas of a great work. Wagner called the work a trilogy, although it really is a tetralogy. He looked upon "Das Rheingold" merely as a kind of prelude or *Vorabend* to the cycle as a whole.

When Wagner announced that he proposed to make operatic material of *The Ring of the Nibelung*, he was greeted with ridicule. Here was stuff which was too lofty and too gigantic for either music or the stage. Wagner answered this by writing dramatic music of a richer and more powerful character than had hitherto been produced. To the Germans it came very near the sacrilege of presenting heaven upon the stage. When the works were presented, however, the reaction was instantaneous. Wagner was hailed as the greatest of modern masters and literally worshipped by his countless admirers.

The first American performance of "Siegfried" was given November 9, 1887, at the Metropolitan Opera House in New York. Anton Seidl conducted and the *Siegfried* was Max Alvary. Emil Fischer, Marianne Brandt and Lilli Lehmann were also in the cast. The success of the work must have been considerable, since eleven performances brought to the box office $37,124.50. The writer recollects attending this first performance, as a child. Fafner made an unforgettable impression. Never had there been a dragon more terrible in all the literature of fairy lore. Here indisputably was one in real life and accompanied by gorgeous music. Alas! the impression was more zoological than musical.

Some critics seem to regard "Siegfried" as the most inspired example of Wagner's employment of the Leit-Motif. The Motive of *Siegfried the Fearless* is so distinctive and inspiriting that it seems singular that the musical pirates have not already stolen it for some bit of Broadway Jazz. Operagoers who are familiar with the "Ring" as a whole, will take delight in divining other motives from other parts of it.

For the most part, a smattering of music adds little to the enjoyment of any performance. In the case of Wagner, however, a familiarity with the motives and enough musical experience to appreciate the consummate skill with which the master has employed them, adds immensely to the pleasure of listening to the performance. There have been many "guides" through the Wagnerian operas, in many different tongues. The writer has never seen any volume quite so good, as an introduction to the "motive" characterization of the "Ring," as the second volume of W. S. B. Mathews, "How to Understand Music." This Yankee musician went to Bayreuth at a time when it was necessary to write very definitely and explicitly on musical subjects if he wished to be understood by the somewhat illiterate general public of his day. As a result, he put into print a most valuable picture of the entire "Ring," painted in words that all can understand and enjoy.

"The Music Dramas of Richard Wagner," by Albert Lavignac, a much more elaborate work, contains a chart indicating the first appearance of each motive in the "Ring."

The Story of "Siegfried"

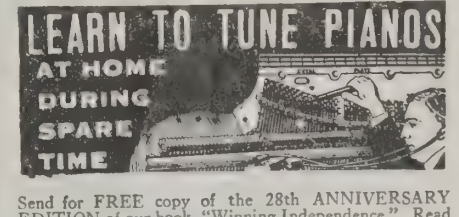
Act I. A Forest: at one side a cave. *Mime* at his anvil, forges a sword for *Siegfried*. *Siegfried*, in forest dress, enters impetuously, driving a bear which frightens *Mime*. Noticing the dwarf's fear, *Siegfried* drives the bear back into the wood. *Siegfried* demands that *Mime* shall mend the sword which his father broke in his last battle and then returns to the forest. *Wotan* enters, tells *Mime* he is known as the *Wanderer*, inquires about the sword and tells *Mime* that only one who knows no fear will be able to mend it. *Wotan* leaves and *Siegfried* returns. *Mime* tells *Siegfried* how his mother had wished him to learn fear. When *Siegfried* asks what is meant by fear, *Mime* describes the great *Dragon* living near. *Siegfried* asks to be guided thither, but says his sword must first be mended. *Mime* refuses the attempt; *Siegfried* mends the sword and, to try it, strikes the anvil a mighty blow which severs it in twain.

Act II. The Dragon's Cave in the Forest. *Fafner*, better to guard his gold, has changed himself into a dragon and lives in a cave. *Alberich* spies near by, hoping to regain the treasure by killing the hero who slays the dragon. The *Wanderer* warns *Alberich* of *Siegfried's* approach. *Alberich* offers to save the *Dragon's* life in return for the ring but is contemptuously refused. *Alberich* hides as *Siegfried* and *Mime* approach. *Mime* is trying to frighten *Siegfried* by tales of the *Dragon;* but *Siegfried* sits under a tree and, hearing the songs of the birds, wishes he might understand their language. A blast of his horn disturbs *Fafner* and the *Dragon* emits an awful roar. It rushes upon *Siegfried* who jumps aside and buries his sword in its heart. Accidentally tasting the *Dragon's* blood, *Siegfried* is surprised to find that he understands the song of the bird. *Siegfried* enters the cave and, while *Fafner* and *Alberich* argue about possession of the ring, returns with it himself. The bird reveals the intended treachery of *Mime*. *Siegfried*, with the aid of the ring, reads *Mime's* intent to kill him, so he strikes down the dwarf, throws him in the cave and rolls the body of the *Dragon* before the entry. The bird acquaints him with *Brünnhilde's* sleeping place and flies ahead to lead *Siegfried* thither.

Act III. A Wild Region at the Foot of a Rocky Mountain. *Wotan* summons his earth goddess wife, *Erda*, and consults her as to the deliverance of the world through *Siegfried* and *Brünnhilde*, but without satisfaction. Wearied of struggling against fate, *Wotan* renounces his reign, realizing that the era of love must replace the rule of the gods. He attempts to bar *Siegfried's* approach and has his spear shattered by one blow of the sword. As *Siegfried* nears *Brünnhilde* the flames abate. There is a long scene in which love conquers the maiden-goddess and she throws herself in his arms as the curtain falls.

"In England they have a little better musical taste in many ways than they have here. I notice that their radio programs have a much better musical content, and they have actually hired Paderewski for radio recitals. Furthermore, I could give them Bach, Mendelssohn, Haydn; Bach, Mendelssohn, Haydn; Bach, Bach, Bach; and it would be eagerly attended and listened to. Here, you know, we have to play melodies in G's and lullabys in D's and C's, if we want to get the major part of our audiences."—CHARLES COURBOIN.

Encourage Him



If a Boy shows signs of interest in music, promote that interest. Encourage him. For music will keep him in good company and aid his mental development. We urge starting with a Buescher Saxophone because it is so easy to learn. Lessons given free with each new instrument. Six days' trial. Easy terms. Write for catalog. Leading musicians play the

"I am a singer.. and until I discovered Luden's, a sore throat always made me worry."

A well-known concert singer wrote us recently, saying:

"My throat became irritated the day before I was booked for a Nebraska concert. Upon arrival I could hardly speak, much less sing. Desperate, I sought a druggist who suggested Luden's. They gave quick relief, soothed my throat and I sang with a clear voice." (*Original letter on file.*)

Hundreds of similar letters are on file from those who must depend on a clear voice and trouble-free throat. It's the *exclusive* menthol blend in Luden's Cough Drops that gives quick, safe relief for nose, throat and chest. In the yellow package—5c—everywhere.

Twenty-Five Prizes Open to All Etude Readers

"WHY EVERY CHILD SHOULD HAVE A MUSICAL TRAINING"

What Can You Say on This Subject?

For years THE ETUDE MUSIC MAGAZINE has devoted a great amount of space to indicating how a musical training is of great value to the child in developing rapid thinking, accuracy, self-discipline, memory, good taste, muscular, mental and nerve co-ordination.

We have brought to our readers' attention the opinions of many of the greatest thinkers of the time, pointing to the fact that the training received in the study of the art, particularly in the study of an instrument (including the voice), has a very great significance in the fields of Religion, Education, Sociology, preparation of the mind for higher accomplishments in Art, Science and Business, in Musical Therapeutics, and other inspirational themes. Now we should like to have an opportunity to print the boiled-down opinions of some of our readers upon the subject at the head of this column.

A One-Hundred Dollar Musical Library

CONDITIONS

The contest closes December 31st, 1926. All manuscripts must be in our office at 5 P. M. on that date.

Anyone may contribute. It is not limited to subscribers to THE ETUDE.

The Essays must be between three and four hundred words in length.

The Essays must be written on one side of the sheets of paper. Kindly write as legibly as possible. When feasible have the Essay typewritten.

Address "THE ETUDE Prize Essay Contest," THE ETUDE MUSIC MAGAZINE, Philadelphia, Pennsylvania.

Be sure to put your name and address at the top of each page of manuscript.

Essays accompanied by return postage will be returned. All others will be destroyed within one month after the closing of the contest.

When the opinion of the Judges is divided between the merits of two approximately excellent manuscripts, neatness of appearance, clearness of expression and punctuation will be taken into consideration.

FIRST PRIZE

A Musical Library, Valued at One Hundred Dollars ($100.00)

Just think what a boon this wonderful library would be in any School or Home!

The following works selected from the publications of the Theodore Presser Company, at the regular retail prices, constitute this prize.

PIANO

Descriptive Analyses of Piano Works, *Edward B. Perry* $2.00
Stories of Standard Teaching Pieces, *Edward B. Perry* 2.00

When Dad is Interested

By Charles Knetzger

"We have a new piano-bench," said little six-year old Gladys," and there is just room enough for us to sit when we play."

"Room for us? Who's us?" inquired her teacher.

"Why, don't you know! It's me and Dad. Every night when I practice he sits next to me and helps me. He says I play fine, and he tells me all the names of the pieces in the book. Sometimes he tries to catch me on the notes, but I know them better than he does."

This child was not aware that she had a wonderful father and that his interest in her music was a constant incentive to improvement. At the tender age of six the child's brain is most impressionable and when conditions are favorable it absorbs music almost as unconsciously as it learns to perform the most ordinary actions of the day. Yet what a hopeless task it is to teach such a young child, if it gets no help and encouragement at home!

"Dad was watching me play last night," said another tiny tot, "and I asked him where C was. He said he didn't know, but I made him learn, all right!"

Many fathers think they have done their duty when they have provided a good instrument for the home. Sometimes they also try to select the best teacher available, one who has a pleasing personality, understands child psychology, and seems to be well qualified to teach young children. It rarely occurs to them, however, to take an active interest in their children's progress. They little think how much the making or marring of the future career of the child rests with them!

To refuse to listen to the children's little pieces when asked, to express dislike for a composition, or to ridicule their childish attempts, is unpardonable. Yet, does it not sometimes happen that parents are guilty of such action, thus causing their children to dread the practice hour or to omit it altogether?

To expect rapid advancement in a young child, except in the case of a prodigy, is folly: for the foundation must be slowly and carefully laid in order that successful progress may be insured.

Even a busy man with no knowledge of music may by appreciation of his children's efforts be to them a source of help and inspiration which will bear a rich fruitage of consolation and enjoyment in future years.

"The Etude" Interest

To The Etude:

Of all magazines with which I am acquainted, I like The Etude best, for it contains subjects which appeal to me.

A few years ago I became interested in the Junior Etude and have since learned to love the entire magazine. As my elder sister plays the violin and the piano, and I, the latter, we have enjoyed many hours in playing and singing from The Etude. The many articles, the various departments, the photographs and the cover designs have been helpful and inspiring to us, and interesting to other members of the family as well.

I especially enjoyed Liszt's interpretations of Chopin's *Preludes*, Op. 28, as compiled by Sidney Silbur, in the March edition of this magazine. The descriptions are very realistic and make the pieces much more interesting.

For instance, in Prelude No. 4 of Op. 28, "A Fit of Suffocation," the heavy breathing in the left hand and complainings in the right hand are very distinct, and in measure twelve one can almost see Chopin turning restlessly in bed. The increasing anguish, the sigh aloud at the *stretto*, the apparent ceasing of the heart-beat at measure twenty-three—a pause—and the chords of sleep; all are brought out clearly.

I shall like these pieces better than formerly because I now know the story back of each one.

Ernestine Buck.

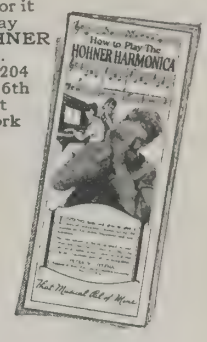
When you attend a concert, do you hear more than a pleasant noise?—Mrs. Harriet Seymour.

Harmonicas Make a Happy Christmas

Everyone delights in receiving a musical instrument that he can *play;* and *anyone* can play a Hohner Harmonica.

By giving harmonicas this Christmas you will not only give happiness to the recipient, but will stimulate his interest in music by giving him an instrument he can play.

Hohner Harmonicas teach accuracy, rhythm and expression—the basis of musical education. As holiday gifts they combine the twofold advantage of all year 'round happiness and a guide to serious musicianship.



Leading dealers everywhere sell Hohner Harmonicas—50c up.

SUMMY'S CORNER

The two songs listed below we deem to be more than ordinarily attractive

I LOVE TO TELL THE STORY

Words by Katherine Hankey — **Music by J. DeForest Cline**
High Voice in D — **Low Voice in B Flat**
Price 60 cents

Words of the familiar hymn in spontaneous song setting. It compels attention by reason of the genuine appeal contained in the simple melody, which, unencumbered by modernity, speaks in a truly inspiring way that all may understand. The accompaniment is delicately varied and sympathetic throughout, giving the well balanced support necessary to an expressive rendition.

CRADLE SONG

Words and Music by Lotte Kruse
High Voice in G Flat — **Low Voice in E Flat**
(German and English Text)
Price 30 cents

Simple in rhythm and phrase as a lullaby should be, it does not, however, conceal the musical skill of the writing evidenced in the graceful flowing melody line and carefully thought out and refined accompaniment. The moderate range and simplicity of line and structure determine its utmost desirability for teaching and makes it, for those same reasons, an excellent program number.

A Very Popular Book Giving Portraits and Biographies of Famed Musicians

GALLERY OF MUSICAL CELEBRITIES

By Arthur Selwyn Garbett

PRESENTS a collection of seventy portrait-biographies of the world's foremost composers, singers, pianists, violinists, organists and teachers who have lived during the last 200 years. One page gives an excellent condensed biography, and on the facing page is a fine portrait. Covers such musical celebrities as Beethoven, Rachmaninoff, Rossini, Schütt, Schytte, Sibelius, Verdi, Dudley Buck, Gounod, Handel, Haydn, MacDowell, Mascagni and others. The book is well produced and is art bound with silk cord.

Holiday Cash Price, 55c., Postpaid
Regular Price, 75c.

A Musical Dictionary that is an Exceedingly Popular Leader

PRONOUNCING DICTIONARY OF MUSICAL TERMS

By H. A. Clarke, Mus. Doc.

DEFINES all the Italian, French, German and English musical terms in a clear, understandable manner, giving pronunciation guidance where necessary upon not only the musical terms, but also on the names of prominent musicians of the last two centuries, whose birth and death dates also are given. A list of the most celebrated operas with the composers' names is another feature of this widely used dictionary. Musical examples are given to illustrate the meaning of various musical expressions and forms. This is a dictionary every teacher and student should possess. Cloth bound.

Holiday Cash Price, 95c., Postpaid
Regular Price, $1.25

GALLERY OF DISTINGUISHED MUSICIANS

By Arthur Selwyn Garbett

CONTAINS a short biography with a portrait of sixty-two distinguished musicians. Auber, Boccherini, Bruckner, Carpentier, Cherubini, Faure, Gabrilowitsch, Mahler, Massenet, Tausig, Suppe, Tosti and numerous others about whom very few know any essential facts are to be found in this collection of biographies. *Distinguished Musicians* and the two preceding volumes *Musical Celebrities* and *Eminent Musicians*, comprise upwards of 200 representative musicians of today and yesterday.

A Superb Gift for Any Music Lover—Price, $20.00 (Not Prepaid)

DESCRIPTIVE ANALYSES OF PIANO WORKS

By Edw. Baxter Perry

EDWARD BAXTER PERRY has worked out a remarkably helpful poetic, dramatic and historical analysis or description of some of the greatest and best-known piano compositions. An invaluable work for directors of music club programs. Ideal for teachers and students. Cloth bound.

Holiday Cash Price, $1.45, Postpaid
Regular Price, $2.00

MUSICAL PROGRESS

By Henry T. Finck

MORE favorable comment has been given this book in the press than any musical literature work for years. It is an interesting and inspiring book for every music lover, teacher and student to read. Cloth bound.

Holiday Cash Price, $1.45, Postpaid
Regular Price, $2.00

CHOIR AND CHORUS CONDUCTING

By F. W. Wodell

MUSICIANS with little or no experience in these fields will find the guidance of this book indispensable.

Holiday Cash Price, $1.45, Postpaid
Regular Price, $2.00

AN ALBUM OF MUSIC MAKES AN EXCELLENT GIFT FOR THE PIANIST, VIOLINIST, ORGANIST OR SINGER

A FEW SUGGESTIONS SELECTED FROM OUR THIRTY-EIGHTH ANNUAL HOLIDAY OFFER

Copy of Complete Offer Giving Special Christmas Prices on Many Things Sent on Request

Suggestions for Pianists of Average Ability

SCHUBERT ALBUM

24 Franz Schubert Melodies for Piano Solo

ONE'S joy in music has not been as full as it might be if he has not an acquaintance with the glorious flow of melody in Franz Schubert's writings. This album gives a fine selection of them for piano.

Holiday Cash Price, 60 cents, Postpaid
Regular Price, $1.00

REVERIE ALBUM

23 Piano Solos of the Contemplative Type

THE Reveries, Nocturnes and pieces of a similar type are in this album. They are melodious and expressive, and ideal for Sunday use.

Holiday Cash Price, 60 cents, Postpaid
Regular Price, $1.00

ALBUM OF SONG TRANSCRIPTIONS

Famous Melodies, Sacred and Secular, 25 Piano Solos

FINE transcriptions and variations for the piano arranged from Hawaiian, Spanish, Scottish, Irish, Russian and Italian melodies and sacred favorites.

Holiday Cash Price, 60 cents, Postpaid
Regular Price, $1.00

STANDARD BRILLIANT ALBUM

27 Showy, but not Difficult, Piano Solos

THIS album is a great favorite because it gives the average pianist solos that are effective and impressive without too much technical demand.

Holiday Cash Price, 50 cents, Postpaid
Regular Price, 75c.

SCHOOL AND HOME MARCHES

20 Excellent Marches in Various Styles for piano

THE popularity of this collection never seems to wane, perhaps because players of moderate ability get calls for march playing in schools, gymnasiums and lodges.

Holiday Cash Price, 50 cents, Postpaid
Regular Price, 75c.

CONTEMPORARY MARCH ALBUM

30 Piano Solo Marches for Drills, Processions, Etc.

A SUPERB compilation of military, parade and grand march types to meet march and drill demands of all kinds.

Holiday Cash Price, 60 cents, Postpaid
Regular Price, $1.00

STANDARD OPERA ALBUM

GOOD arrangements in piano solo form of immortal melodies from the great operas.

Holiday Cash Price, 50 cents, Postpaid
Regular Price, 75c.

Exceptionally Fine Offerings for Good Pianists

FRENCH ALBUM

Selected Piano Solos by French Composers

ONE of the new offerings this year. 17 immensely satisfying piano solos from the works of Chaminade, Debussy, Dubois, Faure, Godard, d'Indy, Saint-Saëns, Vidor and other French composers.

Holiday Cash Price, 60 cents, Postpaid
Regular Price, $1.00

CELEBRATED LIGHT OVERTURES

100 Pages of Outstandng Favorite Overtures

BE sure to ask for the Piano Solo edition on this as there is also a Piano Four-Hand edition of this same album. These overtures should be in the library of every music enthusiast.

Holiday Cash Price, 60 cents, Postpaid
Regular Price, $1.00

MODERN DRAWING ROOM PIECES

27 Brilliant and Melodious Solos for the Piano

AN album that has long held a place among the best sellers because of the excellence of its contents. It contains 27 brilliant and melodious pieces that are showy in the hands of the average player.

Holiday Cash Price, 75 cents, Postpaid
Regular Price, $1.25

TRANQUIL HOURS

Excellent Material for Sunday Piano Playing

CALM, dignified numbers for church use and for other sacred and stately calls upon the pianist are given in this noteworthy collection.

Holiday Cash Price, 75 cents, Postpaid
Regular Price, $1.25

PROGRAM PIECES

33 Pianoforte Solos of the Recital Level

ALL of these compositions are in grades four and five and every one is attractive.

Holiday Cash Price, 50 cents, Postpaid
Regular Price, 75c.

RACHMANINOFF ALBUM

WE publish a number of albums individually devoted to a certain composer that are in great demand. This one giving nine of Rachmaninoff's best compositions is celebrated.

Holiday Cash Price, 45 cents, Postpaid
Regular Price, 75c.

MANY OTHER FINE PIANO SOLO ALBUMS AND ALSO SOME EXCELLENT PIANO DUET ALBUMS ARE OBTAINABLE AT SPECIAL LOW PRICES WHILE OUR "38TH ANNUAL HOLIDAY OFFER" IS IN EFFECT.

Send Postal for Offer

Gifts for Violinists of all Ages

ALBUM OF FAVORITE FIRST POSITION PIECES

For Violin and Piano

A WONDERFUL volume because it gives so much encouragement to the violin beginner through the 22 melodious and interesting, yet easy to play, violin numbers it contains.

Etude Radio Hours

On the second Thursday of every month, over radio stations W.I.P. (Gimbel Brothers, Philadelphia), and W.G.B.S. (Gimbel Brothers, New York), at 8.15 P. M. Eastern Standard Time, there comes to radio listeners everywhere, THE ETUDE Radio Hour.

Likewise, on the third Tuesday of every month, another Radio Hour is presented over Station W.L.S. (Sears-Roebuck Foundation, Chicago).

The purpose of these Radio Hours is not to furnish popular entertainment, but to create a popular interest in music study. In bringing the value of music study to attention, THE ETUDE is pointing out to individuals everywhere the value of seeking personal development in music.

We are mentioning THE ETUDE Radio Hours here in order to direct the attention of them to teachers who as yet have not given them any consideration.

The radio can do much toward creating a wider appreciation for better music, and the publishers of THE ETUDE are highly gratified that such a far-reaching medium is available for the educational programs it can offer. Remember, a greater appreciation for better music enables the teacher to create more interest in music study.

Comments that both teachers and students of music should hear are made upon the text and music contents of the current issue, and invariably some artist or teacher of great reputation assists THE ETUDE Editorial Staff in making the program additionally interesting.

The Chicago program is given under the direction of D. A. Clippinger.

We believe all teachers should equip themselves to hear these ETUDE Radio Hours each month, and, of course, being so equipped, they also have the opportunity to feast upon many of the high-class musical gems offered by the leading broadcasting stations. The radio most certainly is offering the most convenient means by which a teacher or music student can broaden his musical horizon.

Christmas Giving to Teachers, Students and Lovers of Music

The Theodore Presser Co. has been in the field to give service to those in the Musical World for over 43 years, and for the last 37 holiday seasons has offered those desiring to give gifts to music lovers not only a wealth of suggestions, but an opportunity to save money in purchasing any of the suggested gifts.

It is impossible in one issue of THE ETUDE to bring attention to all of these suggestions; therefore, in various advertisements in this issue a comparative few of the excellent things offered at special holiday prices in our 38th Annual Holiday Offer are brought to attention. These, of course, are the outstanding favorites, but those who wish to see the complete offer may have a copy for the asking. Just drop us a postal today asking for a copy of the 38th Annual Holiday Offer and clearly sign your name and address.

In this day, when psychology is so universally appreciated, it is easy for one to appreciate the psychological effect upon the recipient of a gift, when the gift shows that the giver has given thought to it and endeavored to make it personally "fit" the one receiving the remembrance.

Surely, nothing will convey this personal touch and thought to the music lover's mind more than having a gift come along that is of a musical character. The albums of music of all kinds and the interesting literature works on musical subjects in the 38th Annual Holiday Offer of the Theodore Presser Co. offer suggestions for almost every desired expenditure.

How to Get More Pupils

Frequently teachers ask, "How can I get more pupils?" There is no magic method, but judicious publicity work and proper contributions made toward creating an interest in music generally are things that mean much to the teacher. In this issue there is brought to attention THE BEST PLAN WE HAVE EVER SEEN FOR AIDING THE TEACHER TO SECURE PUPILS. See the two pages devoted to it in this issue. They are 885 and 886.

The Pianist's Daily Dozen By Charles B. Macklin

If there is anything that the serious student of piano playing wants to accomplish, it is the perfect muscular control of each finger on both hands. In most of the ordinary muscular use of the hands there tends to be a cramping and binding of the muscles, and this the pianist must overcome. Flexibility, independence of action and immediate response to mental direction can be obtained with the rational exercises for the hands outlined by Mr. Macklin in this book.

Mr. Macklin is too wise a piano pedagog to suggest that these exercises will supplant all of the work that must be done at the keyboard to gain control of the fingers, but it is possible with these exercises to achieve results at the keyboard more readily, making unnecessary some of the technical work otherwise required.

Teachers should know about this work, because there are many times when they will help the pupil to overcome physical obstacles by recommending its use. The advance of publication cash price is 30 cents a copy, postpaid.

Our Beautiful 1927 Calendar

For the first time our readers have virtually selected the picture on the Calendar for this year. It is the lovely "Fairyland of Music," which first appeared on the September ETUDE and brought such an immediate and widespread demand for "copies to frame" that we instantly realized that nothing we could put on the Calendar could possibly please our readers more or make a brighter musical spot on the walls of thousands of homes.

The picture was immediately used and adapted by other firms, who were glad to pay the artist large fees for its use. We have made arrangements with him by which he generously permits us to use this painting at a rate enabling us to sell the Calendar at the same very low "Christmas and New Year's gift" price which we have been giving our patrons for years, 10 cents a copy, $1.00 a dozen.

The picture is in every way the original conception and design of the artist, Mr. Francis Sherman Cooke, who is a son of Mr. James Francis Cooke, for many years Editor of THE ETUDE.

The Beginner's Voice Book By Frantz Proschowsky

It is possible in almost every instance where one wants to study a musical instrument to find a real beginner's book, that is, one that presupposes no previous knowledge of music and carefully outlines a course of instruction beginning with the rudiments of music and then stepping into the most elementary phases of study upon the particular instrument in question, progresses gradually until a performing ability is built upon a good foundation of elementary work, but when one turns to the study of the art of singing the available vocal works are not as satisfying in their introductory work and logical progress.

This, however, will not be so when *The Beginner's Voice Book,* by Frantz Proschowsky, is on the market. Voice teachers and beginning voice students will find this book of great assistance, since it gives not only the necessary introduction, but very practical and helpful exercises in logical order.

Mr. Proschowsky, who is the vocal advisor of Galli-Curci and Tito Schipa, himself has made a series of anatomical drawings for this book which are of great value to the student stepping up to the threshold of voice study.

As one can well imagine, this will be an outstanding contribution to the vocal world, coming from so great a master of voice teaching, and truly it does show his greatness in that he presents so many of the fundamentals of singing in such a clear, concise manner that the student or teacher is sure to obtain good results when using this vocal instruction book.

Although Mr. Proschowsky has clearly defined the path for the student, the pupil will find that a teacher means much in studying by means of this or any other instruction book, but where one is so unfortunate as not to find a voice teacher convenient, nothing could be better used for self-instruction than this new book, for which we are recording advance of publication orders at the special price of 60 cents, postpaid.

Beginner's Method for Saxophone

It has been our privilege to stand among professionals and hear them acclaim the art and superb tone found in the saxophone playing of H. Benne Henton. It is this man, with his complete knowledge of the saxophone, who is personally supervising the preparation of the *Beginner's Saxaphone Method,* that we are to put upon the market.

This will be a practical instruction work that should not be confounded with any of the "freak" short cuts to supposed saxophone playing. This type of work that will appeal to the music teacher, and supervisors desiring to develop saxophone players for school orchestras will find in it just the type of material to carry the beginner along into playing ability. The advance of publication cash price is 40 cents, postpaid.

Mass No. 14 In Honor of St. Joseph Two Parts, Treble Voices By Eduardo Marzo, Op. 203

Mr. Marzo is well known to the musical world, and particularly to those who are interested in the music of the Catholic Church. This new Mass by Chevalier Marzo is most effective, yet is not at all difficult and can be rendered readily after very little rehearsing. It is for two-part, treble voices, and neither part presents any vocal difficulties. As we have explained in previous descriptions of this Mass, it may be sung by a mixed choir of men and boys, the boys singing the soprano part and the men the alto part, although the original intention of this two-part writing was to furnish a Mass that would be suitable for use in Convent Schools or in choirs where male voices either were entirely missing or somewhat lacking. The advance of publication cash price of this Mass is 35 cents, postpaid.

It will not be long before it will be ready to go to those registering advance of publication orders; and, therefore, we suggest prompt action upon the part of those who want a copy of this work when it appears; otherwise, they will find it necessary to pay more than the present low advance of publication price.

Very First Pieces Played on the Keyboard By N. Louise Wright

This is not a first instruction book, but rather, as the title indicates, a group of very first pieces that may be utilized after the young student has been acquainted with the notation and is getting into the reading of study material in the five-finger position. While these little pieces are very easy, nevertheless they are of such a character as to prove practical and helpful. Teachers of little tots will find them easy to fit in with the very early instruction work with children, whether in kindergarten class or in individual instruction. Each of the little pieces of this group have text which, as teachers know, always is an advantage. The advance of publication cash price is 25 cents a copy, postpaid.

Forty Negro Spirituals Compiled and Arranged By Clarence Cameron White

These *Forty Negro Spirituals* will be found to be the best and most correctly presented group of Negro Spirituals. Mr. White knows the Spirituals of his race and has gained his acquaintance with them through sources not open to many. His activities in the National Association of Negro Musicians, of which he is president, are one indication of the soundness of this statement. The name of Clarence Cameron White is known to everyone who knows anything of American musical composition, and this attests the excellence of handling that will be found in the accompaniments of the Spirituals he has selected for this collection. It is a gem for those who want their library to have all the worth-while things in the literature of American music and, of course, all singers should possess it. Advance of publication offer is made at the low price of 75 cents, postpaid.

Twelve Piano Etudes By Mathilde Bilbro

Miss Bilbro has established a well-deserved reputation for ability to write attractive, yet thoroughly practical educational matter for piano study, particularly in the earlier grades. We are soon to have on the market this new teaching work by Miss Bilbro, which furnishes what are virtually twelve first grade study pieces. They are attractive musically, and there is a special technical phase to each. Any teacher not familiar with the teaching works of Miss Bilbro should send in a request for the privilege of having some of them for examination. By all means they should register an advance of publication order for the new *Twelve Piano Etudes* at the special advance offer price of 30 cents, postpaid. Of course, on the new Bilbro book there are no examination or return privileges at this advance offer price.

Advertisement

New Easy Four-Hand Album

Here we are offering at a low advance of publication cash price of 35 cents, the opportunity for teachers to secure a copy of a new and easy four-hand album that we are to issue. This will be the type of work that will hold the young student to an interest in attaining something at the keyboard, and the contents will be generous enough in number to furnish quite a little material that will spread over a good season. Teachers can use a work of this character in seeking out a piano duet very now and then as a relief from close adherence to other prescribed study material. In the main, it is excellent to have something of this character in the pupils' hands for the sight reading and ensemble playing development that comes through recreation duet playing. The young student will feel that he has something worth while ahead of him in this collection, because in its latter pages it points to future accomplishments in the pieces that it presents in a grade of difficulty approaching the third grade. This is reached, of course, in the progressive arrangement of duets through the book, which in the beginning starts with four-hand numbers in the first grade. The special advance of publication price is 35 cents.

Beginning with the Pedals of the Piano By Helen L. Cramm

So many things have been done to make the first piano study work for children as attractive as possible, and this has been because individuals who knew and understood children set about to make first study material pleasing as well as practical. The delightful works of Helen L. Cramm have been outstanding in this connection, and now a new work is to be added to the group of immensely successful books by Miss Cramm.

This work is a decidedly valuable one in that it introduces to the pianist in the making some of the main principles of pedalling. Since the proper use of the pedals adds much to the beauty of pianoforte playing, the wisdom of utilizing a book such as this, which lays a foundation for future pedal work, can be appreciated readily. Advance of publication cash price is 30 cents a copy, postpaid.

Album of Study Pieces in Thirds and Sixths

A paragraph is hardly necessary on this work, since the title is descriptive in itself and the reception given albums previously issued in our series of *Albums of Study Pieces for Special Purposes* indicates that piano teachers are on the lookout for material of this character. The volumes that have been so well received dealt individually with *Trills, Scales, Arpeggios* and *Octaves*. This new collection is similar to the others in that it makes possible the conquering of certain technical devices or combinations through the study of attractive pieces, featuring the phase of technic the album covers. This, of course, proves a safer and more attractive way in which to approach such things than is found in many dry technical works that bore the student. Third grade pupils would be ready for an album of such study pieces as this new one we are to issue covering thirds and sixths. Advance of publication cash price is 30 cents a copy postpaid.

Violin Method for Beginners By Ann Hathaway

Violin teachers should place an advance of publication order for this Violin Method for Beginners, by Ann Hathaway, since they will find in it such a thoroughly practical procedure of study with the use of exceedingly attractive material. It accomplishes what it sets out to do, and that is to get the pupil achieving something in violin playing within a short time, but it does not attempt to progress rapidly into technical demands that should not be expected of a beginner, nor does it cover any more than first position work. Advance of publication orders for this method will be registered at the special price of 40 cents a copy, postpaid.

New Organ Collection

The Theodore Presser Co. has a number of outstanding successful musical collections in a series of reasonably priced albums, utilizing special large plates that make possible the inclusion of a generous number of compositions upon the number of pages that a publisher can afford to place in an album priced at 75 cents. While this series is a fine variety of albums for pianists of various abilities, and there are several choices for singers and violinists, up to the present date it includes only one pipe organ album, *The Standard Organist*. This album is a very popular seller with church and theatre organists, as well as with ambitious organ students, not only because of its reasonable price but because of the excellent and meritorious variety of the material in it. We have been importuned for a number of years to produce another album of this character, but we have bided our time through a desire to make up such an album only when we felt that there was sufficient good material available. The new album is now in preparation, and in order that all those interested in new offerings of pipe organ collections may have an opportunity of becoming acquainted with this collection, we are adhering to our usual practice of offering book publications at a low advance of publication price. The advance of publication price in this instance is 35 cents a copy, postpaid.

Secular Two-Part Song Collection

This might almost be called utility two-part song collection, since it provides material that school supervisors can use for two-part singing and any chorus of treble voices, whether juvenile or amateur, will find in it program numbers and encore novelties. Then again, with so much sight singing ability developed in our schools of today, it is perfectly possible for a song leader to use this with any general group, making possible effects that will not ordinarily be found in general group or community singing. While all numbers are in two-part, none are difficult and all are readily singable, because of the melody that is ever present. Some of the numbers are unusual in the effects readily obtainable and, of course, in the well-balanced variety are some excellent humorous numbers. The special advance of publication cash price is 20 cents a copy, postpaid.

Master Vocal Exercises By Horatio Connell

The Curtis Institute of Music in Philadelphia and the Chautauqua Summer School of Music are two avenues through which the name of Horatio Connell comes to the American musical public today, and, of course, all those who are in more intimate contact with the outstanding individuals in American musical circles know of Mr. Connell's reputation, not only as a voice teacher, but also as an American baritone who has been acclaimed here and abroad for his concert and oratorio work. Out of his wealth of experience and practical study of problems in voice study Mr. Connell has prepared this work which presents a master series of vocal exercises, and the voice teacher who wants to strengthen and modernize the study material that he utilizes should add to his curriculum this very practical book by Horatio Connell. The advance of publication cash price is 40 cents a copy, postpaid.

Fundamental Studies in Violoncello Technic By G. F. Schwartz

The interest in the 'cello is greater than many realize. It is a solo instrument of great possibilities, and in orchestral work it is of outstanding importance. Many are the musicians who are accomplished in other branches of musical endeavor who find the study of the 'cello enjoyable diversion.

It is not an instrument which is within the reach of younger beginners such as the piano, the violin and some of the other instruments; and, therefore, this set of exercises starts in and proceeds in a manner suited to those who already understand all of the general rudiments of music.

These studies are arranged in such step-by-step order and furnish such work for the 'cello student that those faithfully perfecting a performance of them will have acquired a very substantial foundation of technical proficiency upon the 'cello. Teachers of the 'cello will find it a grateful work to utilize, as it is a set of studies that can be used to good effect along with a curriculum of standard 'cello studies of great masters of the instrument.

From the manner in which this paragraph introduces this set of *Fundamental Studies in Violoncello Technic*, the reader can gather that they also are ideal for self-study work. The nominal price of 40 cents a copy is all that is being asked on advance of publication orders.

New First and Third Position Album For Violin and Piano

This is to be one of the types of music collections that have made the Theodore Presser Co. book catalog so successful. By this we mean it is the type of collection that furnishes the player with material for diversion or for use in such public performances as are demanded from many, and at the same time it is also a collection that will prove of value to the teacher who wishes to utilize an album in instruction work. Incidentally, there are many teachers who prefer to give pupils the numbers separately in sheet form, and such teachers will find it very helpful to have an album such as this in their libraries, since they can make reference to it and order the particular numbers as they need them in sheet music form, because each number in this album, as is the case with practically all of the Theodore Presser Co. albums of music, is published in separate sheet music form. This album will cover a generous variety of first and third position pieces for the violin with piano accompaniment. During the period that our editors are deciding on the particular numbers that will be included in this collection out of the possibilities in hand, it is offered in advance of publication at the price of 50 cents, postpaid.

Seven Last Words of Christ Lenten Cantata By Theodore Dubois

This is just a last-minute warning to those who will soon be giving consideration to the music they desire for the Lenten season, since we will withdraw from the advance of publication offer our new edition of Dubois' *Seven Last Words of Christ* on January 1st. Our new edition bears English text that gives the true import of the utterances of Christ in the hours when all prophecies were being fulfilled by his Crucifixion. These English words also have the necessary poetic and dramatic qualities to fit in with the musical setting as effectively as the original Latin. Remember, we will be able to deliver any desired quantities early in January and that the opportunity to secure a single copy at the special advance of publication price of 50 cents will be withdrawn at the end of this month.

Brehm's First Steps for Young Piano Beginners

This instructor was on the market as one of the leading teaching works in the Brehm Brothers' catalog, which catalog was taken over by the Theodore Presser Company. We withheld making a new edition of this instructor until our Editors had time to give it careful attention and make certain that there was a place for it, particularly in view of the fact that it covers a field for which some excellent works already are available. There is such merit to the "Brehm's First Steps" that our Publication Department decided to issue it—adding some material that was felt would be an improvement, and before it is placed on the market orders in advance of publication will be accepted at 25 cents a copy. This is a beginner's book that utilizes the method of giving the first lessons with both hands in treble clef.

(*Continued on page 966*)

The World of Music

(*Continued from page 887*)

The "Amen" has been banished from the close of hymns in the services of St. Augustine's Church, Wembley, England, on the ground that its use is inartistic and often detracts from the climactic close of the hymn. This action was taken by the initiative of the clergy. And yet there are those still alive who will remember when there was bitter resentment of this "innovation" of singing the "Amen." One good rector went even so far as to denounce it as "one of the smartest bits of work of the Devil."

Dr. Ralph Horner, composer and teacher, of Winnipeg, Manitoba, passed away on April 7, 1926. Born at Newport, Monmouthshire, England, April 28, 1848, his education was finished in the Leipsig Conservatory under Plaidy, Moscheles, Reinecke, Papperitz and Richter. Returning to England, he became prominent as teacher and conductor of both orchestra and opera. He came to New York in 1906, and in 1909 removed to Winnipeg to become director of the Imperial Academy of Music and Arts. His compositions for orchestra have been often played.

The American Violin Trade Association held its first convention in New York on June 14-16, the chief interest in this first meeting being the discussions of the promotion of the American-made violin.

The sixth Annual Ashville Festival (North Carolina) was held August 9-16, when the San Carlo Opera Company produced "Carmen," "Madame Butterfly," "Barber of Seville," "Aida," "Lucia di Lammermoor," "La Boheme," "Tales of Hoffman" and "La Forza del Destino."

Miss L. Eugenie Eldridge has completed sixty years of service as organist of the village church of South Chatham, Massachusetts, having begun on the last Sunday of April, 1866.

Honegger's "Judith," with Mary Garden in the title rôle, is announced for its American première during the present season of the Chicago Civic Opera Company.

The Centenary of Beethoven's Death is to be commemorated at Milan by a revival of "Fidelio" at La Scala, and the performance of all the nine Symphonies under the leadership of Toscanini. All the String Quartets also are to be heard.

CONTESTS

A Prize of $1500, for a suitable official song for the Infantry of the American Army, is offered by the *Infantry Journal*. Full particulars may be had by addressing the *Infantry Journal*, Washington, D. C.

A Prize of $1000 is offered by C. C. Birchard of Boston, for the best original cantata suitable for choral presentation; and a similar sum is offered by the National Federation of Music Clubs, for a Symphonic Poem. Both these competitions are under the auspices of the Chautauqua Assembly of New York, and particulars may be had from H. Augustine Smith, Boston University, Boston, Massachusetts.

A Prize of One Thousand Dollars is offered by the National Opera Club, for the female singer with a voice of the most outstanding quality, to be determined in the contest of 1927, conducted by the National Federation of Music Clubs. Particulars from Mr. E. H. Wilcox, National Contest Chairman, Iowa City, Iowa.

Ten Thousand Dollars in Prizes of five thousand, three thousand and two thousand dollars each, are offered by the Musical Fund Society of Philadelphia, for the best chamber music compositions for three to six instruments. The contest closes December 31st, 1927; and particulars may be obtained by addressing the Musical Fund Society, 407 Sansom Street, Philadelphia, Pennsylvania.

A Prize of Three Thousand Dollars is offered by *Musical America* for the best symphonic work by an American composer. The contest closes December 31st, 1926; and particulars may be had by addressing Musical America, 501 Fifth Avenue, New York City.

Prizes Amounting to Three Hundred and Ten Dollars, for the best unpublished anthems are offered by the Lorenz Publishing Company, of Dayton, Ohio, from whom all details may be had on application.

A "National Capitol Official Song" Contest is to be held under the auspices of the National Federation of Music Clubs. It is open to all American writers and composers, and full particulars may be had from Miss Beatrice S. Goodwin, Contest Chairman, 5 West Lenox Street, Chevy Chase, Maryland.

The Etude as a Christmas Gift

No better way to remember a musical friend than with a year's subscription to THE ETUDE. The price is only $2.00, and with each subscription intended as a gift we will send a fine Christmas Gift Card announcing you as the donor. Let your subscription orders come early, which will prevent disappointment on Christmas morning. THE ETUDE coming each month prolongs Christmas cheer over the entire year and is a reminder of your friendliness and thoughtfulness.

THE PRESSER PERSONNEL

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Nicholas Mora, Jr.

Back in 1905 a young man by the name of Nicholas Mora, Jr., was given a position in the department caring for the Reserve Stock of Theodore Presser Company's Sheet Music and Octavo Publications, and now we introduce him as manager (since 1911) of that department. In 1905 Mr. Mora was one of the two workers in the Reserve Stock where the large quantities of each publication were kept wrapped in bundles and kept on open shelves. Now Mr. Mora supervises a dozen or more assistants in this department and cares for a stock of music many times the size of the 1905 stock and all the sheet music is in dust proof bins and all the Octavo Music in dust proof cartons. Ceilings, areas and the stock holding fixtures in this Reserve Department gleam like white china and in these well-ordered surroundings there are kept tons and tons of music to meet the demands of teachers and music buyers utilizing the many desirable publications in the Presser catalog.

Mr. Mora also manages a group of employees that feed the new printings of our music to the Reserve Department. This group with the aid of two speedy power folding machines and a power cutter, folded and trimmed around five million sheets of music in the last twelve months. Think of the detail to the correct handling of all this, in supplying the demands of the On Sale Department and Order Department. The zeal with which Mr. Mora has kept his department with all its great amount of detail functioning smoothly and promptly means much to us in the service we render to our great host of friends and patrons located wherever the mails reach.

Twenty-four Caprices For Violin Solo By P. Rode

This announcement is not so much to acquaint our readers with the type of work being offered as to make known to the violin world that we are preparing an excellent new edition of these widely-used caprices for *The Presser Collection*. This is in keeping with our plan of having all the worth-while standard studies and classical collections included in *The Presser Collection* in the most desirable editings. To many violin teachers it would seem incredible that a violin student had attained any degree of proficiency if he had not first gone through the *Kruetzer Studies* and then the *Rode Caprices*. Otto Meyer, whose fine editings of violin teaching works are known to many, is carefully scanning this work and preparing it for our engravers. The advance of publication cash price of the *Twenty-four Caprices for Violin Solo by Rode* is 45 cents a copy, postpaid.

Fifty Easy Melodious Studies for the Pianoforte By A. Biehl, Op. 7

Some teachers regularly use a certain work or combination of works in exactly the same prescribed order for all pupils; others try to fit individually to each pupil the work that they feel will produce the best results; again, others like to change for their own mental relief. All of these conditions explain why there is a sale for so many teaching publications as are on the market, and particularly keep in use many standard works, such as this interesting group of second-grade studies by Biehl. Our new edition will be dressed up in fine fashion in every way and will be put out in *The Presser Collection* form. The advance of publication price is 30 cents per copy, postpaid.

New Collection of Favorite Songs and Choruses For All Occasions

Anyone wanting a general collection of good things for everybody to sing, whether he is a community song leader, a school music supervisor or an assembly music director, should know this book, and the surest way to make its acquaintance is to send in an order in advance of publication with ten cents. This will insure receipt of a copy as soon as it is printed. Weeks of work already have been put in upon it and there are quite a few more weeks of work necessary to the mechanical side of its production. Naturally a book of this character could not be satisfying unless it included many old favorites along with a few good old hymn tunes, but this collection in addition to doing this, has its own individual new special settings of classical melodies and the use of copyright melodies available only to us. In all there will be around 150 numbers, and all printing will be of a size that is easily read; so it can be appreciated what a bargain is being offered in advance of publication at 10 cents. Naturally, when it appears on the market we shall offer it in quantities at a very nominal price.

First Garland of Flowers Favorite Melodies in the First Position For Violin By Julius Weiss, Op. 38

It is hard to tell just how early "impetuous youth" begins, but teachers of children find it existing from the very first points of instruction. The youngster who is just learning to hold a pencil immediately wants to write a long letter to somebody, and so it is in music study. The little student has an inward desire to play a piece before he posseses the necessary technical equipment. The First Garland of Flowers long has been the standby of many violin teachers in giving the young pupils melodious pieces to play in the early stages of violin study. There is a piano part so that the little student is further delighted with an accompaniment to these little pieces, which are all in the first position. This standard work is undergoing a careful scrutiny at the hands of our Editors and all necessary editing and revisions will be made before we place it on the market as a new addition to the *Presser Collection of Standard Studies and Classical Collections;* 35 cents is the price at which advance of publication orders are being accepted.

H. M. S. Pinafore Comic Opera By Gilbert and Sullivan

Despite the many excellent comic operas for amateur production that have come from such writers as May Hewes Dodge and John Wilson Dodge, R. M. Stults, Paul Bliss and others in recent years, amateur organizations never seem to tire of the Gilbert and Sullivan Comic Operas. Perhaps it may be that there are more amateur organizations that causes a continued sale for the Gilbert and Sullivan works in addition to the great sale of later works by some of the writers we have mentioned above, but in all events there is an ever-present demand, and to meet this with a modern, well-printed edition we are adding *H. M. S. Pinafore* to our catalog. This comic opera, with its delightful humor and its sparkling and melodious music, is well deserving of being offered to the musical world in a good new edition such as we are preparing. For those who want to become acquainted with this work or the fine new edition that we are making, there is presented the opportunity of ordering a copy in advance of publication at the special price of 50 cents a copy, postpaid.

Seven Octave Studies—School of Octave Playing—Part 2 By Theo. Kullak

This is to be a fine new edition of Kullak's well-known Seven Octave Studies which forms the second part of this composer's *School of Octave Playing*. As we have said in advertising *The Presser Collection* in its newest and finest form, "Nothing is better than the best." Piano teachers may rest assured that this new edition of these "Seven Octave Studies" will be superb in every way. The editors not only compare works of this character with the originals, but also with all existing revisions and editings on the market, in order to make certain that everything practical and worth-while will appear in *The Presser Collection* edition, but they also carefully consider every section to ascertain if any possible new editings or revisions will be helpful. These Octave Studies are not easy, by any means, being designed more for the advanced student who has attained quite a degree of proficiency, yet should have daily drill in accuracy and speed in octave playing. The advance of publication price of this new edition is 40 cents a copy, postpaid.

Advance of Publication Offers Withdrawn

We have two works that cease to be subject to the advance of publication offer, beginning with December 1st. One of these is the *Dozen Songs for Saxophones*, by Clay Smith. This is a fine collection of saxophone numbers and will satisfy those who want to render saxophone solos with any member of the saxophone family or who want to do duet work with any two members of the saxophone family, in either case with or without piano accompaniment. There are three saxophone volumes, one containing a solo and second saxophone part for C melody saxophone. Another volume covers the E-flat alto saxophone in the same way, and another covers the B-flat tenor saxophone similarly.

If it is desired to play duets with two C melody saxophones, then it is necessary to buy only one volume. If it is desired to play a duet with the C melody saxophone and B-flat tenor saxophone, then two volumes are bought. This illustrates how parts are interchangeable. The saxophone volumes are 50 cents each and the piano accompaniment 75 cents.

The other work being withdrawn this month is that presenting the *Three Dances for Piano—Four Hands, by Cyril Scott.* These are extremely interesting piano numbers, and they will interest concert pianists as well as teachers of advancing students. Then, of course, the many proficient pianists who indulge in piano duet playing for the pure love of it should have these distinctive numbers. Price, $1.25.

Have You A Good Binder For Your 1926 Etudes?

There is nothing like having your copies for the year conveniently arranged so that you can place your hand on any one you desire. THE ETUDE is worth many times the small subscription price of $2.00. You can bind all twelve copies for convenient reference in a fine silk buckram binder stamped in gold. It opens flat, making ready access to any number and keeps your copies fresh, neat and clean for all time. The retail price of the binder is $2.25, and an excellent value for the money.

Send us your renewal now for the coming year—add to your remittance of $2.00, $1.25, the actual cost of the binder, and for this sum total, $3.25, we will take pleasure in mailing one to you. You can start a permanent musical library which will be a source of constant pleasure to you in the future.

Remember, $2.00 covers your renewal, $1.25 the manufacturing cost of the binder, $3.25 in all, and you will have made a mighty good and profitable investment.

Beware of Fraud Subscription Agents

The annual crop of complaints is now coming in from almost every section of the country where good money has been paid to a swindler. We cannot be responsible for dishonest canvassers claiming to represent us. Pay no money to anyone not personally known to you. Beware of the so-called ex-service man, the "bright-faced boy" getting votes so that he can work his way through college or similar fake stories. Any honest canvasser will be glad to have you send the money direct if you are not convinced as to his responsibility. We in turn will give him credit for the subscription. It is imperative that this warning be heeded.

THE PRESSER PERSONNEL

Introducing our patrons to the highly trained and experienced Members of our Staff who serve them daily.

Mr. Charles S. Sangston

Mr. Charles S. Sangston is in charge of the Stock Rooms housing the Reserve Stock of all the Theodore Presser Co. Book Publications. Mr. Sangston came with us in 1912, joining our Shipping Department force. Eight months away to war formed the only interruption in his years as a Presser Co. employee. He went from our Shipping Department into our Order Department in 1920. He now ably oversees the workings of the Presser Book Reserve Stock. It is this department that stocks the editions of Presser Book Publications as they come in from the binderies and then feeds them to the Order Department in quantities sufficient to cover the requirements of that department for a short period. In Mr. Sangston's department will be found many of the best selling collections and teaching publications on the market, the stock of some individual publications, because of their great sale, being so large as to occupy individually more cubic feet of space than found in the largest room of the average house.

Mr. Sangston and his assistants must pass on to the Publishing Department correct "in and out" records which permit the printing and binding of new editions before stocks are depleted.

Dealers throughout the country make the main stock replenishing season the summer months and during this season our Book Reserve Dept. is filled with extra workers and case after case of our book publications are packed in this department for shipping to dealers everywhere.

Let The Etude Do Your Christmas Shopping

The following is a partial list of fine rewards given entirely free for new subscriptions to ETUDE MUSIC MAGAZINE. Select the one you desire and you will be mightily pleased with your choice. All gifts or rewards are standard merchandise and will be appreciated as holiday gifts:

1926-1927 Magazine Catalog Just Out

The best magazines clubbed with ETUDE at very substantial savings. A post card will bring you a copy.

Educational Study Notes

(Continued from page 941)

[arch for a Church Festival, by Ernest A. Dicks.

Mr. Dicks, a member, we believe, either of the nerican Guild of Organists in this country or the Royal College of Organists in England, s written much notable organ music. This *rch* has a fine dignified theme, carefully developed. Note the strong dominant cadence st before the restatement of this theme. Play .s number majestically (*maestoso*) or else it ll lose much of its character. The pedal figure, to be distinct, should be

tyed ♩ ♪ not ♩. ♪.

stance of the curious distortion of a word om its original significance.

Andantino really means "slightly slower than *idante;*" but the received meaning is "slightly ster than *andante;*" and hence you must gov- n your playing accordingly. This word is an In this section note the excellence of the de- ending Pedal scales. Make them staccato! w few organists have a good pedal staccato, is ll known. Where the direction "In Oboe" given, the left hand commences a fine coun- point—which, unfortunately, is quickly andoned.

reamland, by Henry Tolhurst.

Dreamland must be performed *molto legato.* Mr. Tolhurst's series of keys is very felici- is: A Major, A Minor, C Major, E Major, and A Major. As you can see, these are all closely related to each other.

The first six notes are the motive.

A very lovely melody, suited either to teaching or recital.

Rose of Love, by Lily Strickland.

A sketch of Miss Strickland appeared in these columns recently.

This song is typical of her style and its excellences, and will stand or fall according to the singer's capacity for *espressivo* singing.

The sections marked sustained (sostenuto) must be so sung.

And the Angel Said, by Frances Pitts Grant.

And the Angel Said strikes us as being one of the very best Christmas songs we have seen for a long time. Its themes are sturdy and well-contrasted, and there is plenty of rhythmic variety. This song builds to a fine climax in the broad-flowing 12/8 section. Make a ritard on the words "Christ the Lord."

This wonderfully poetic Biblical text has seldom had such a worthy musical counterpart. The composer seems to have caught up the whole spirit of the words into her excellent music.

Snowflakes, by Thurlow Lieurance.

One of Mr. Lieurance's finest inspirations, beautifully descriptive.

Take it at a leisurely tempo, with a slight drag on the first notes of the theme.

Musical Books Reviewed

Musical Theory: Short Lessons By Arthur af Andersen. Books I and II. Bound in th and published by H. T. FitzSimons. ok I, 48 pages; Book II, 47 pages. Price, enty-five cents a copy.

In these diminutive volumes Mr. Andersen, American composer and pedagogue of re- te, sets forth lucidly and without elabora- n the elements of musical theory from the eliest matters of staff, cleffs, and notation the formal treatment of the dominant enth chord and its inversions, and the sic principles of song composition. The dience of school students for whom these oks are primarily intended should, we nk, gain a very clear idea of musical fun- mentals from the writer's handling of his oject.

Mr. Andersen, during his student days in ance, was apparently lucky enough to ch some of the admirable habits of French ought and reasoning: clarity, directness, ic unassailable; and the present volumes ibit these qualities pretty much through- t. The lessons are short and to the point; y seem ideally adapted to the amount of de the school student can allot to musical ory each week.

The matter of Intervals is especially well plained.

We see no reason, by the way, why the thor should make substitutions (and such msy ones) for the commonly-accepted ns indicating Sixth Chords and Six-four ords. Naturally, one must be original— t symbols which have served for so many tures have survived because they were fittest, and we are old-fashioned enough hate to see them displaced.

Singing. By Herbert Witherspoon. Cloth nd; one hundred and twenty-six pages. blished by G. Schirmer, Inc. Price, $2.00.

The science of Astronomy, whose phenom- occur in the detachment of a million miles' tance, is as clear-cut as an iceberg. The ence of Anatomy, the materials of which we hear and feel every minute of our lives, erflows with superstitions. These threaten engulf, among others, the ghost-ridden ger.

This book does one thing and does it well. frees the voice from its enthralment to re physique, making it, not a means of de- oping nasal, throat and lung passages, nor device for directing the breath into forty- l channels, but a free, untrammeled ex- ssion as natural as the child's first cry and it as fully in command of every organ it oses to employ.

Yet it is no new thing for a book of singing say, "Let the voice alone." This book is gled out because, having said it, it goes on tell how such a command may be carried through technic, diet, care of the and ht-thinking. Particularly elucidating and ertaining is the chapter on exploded fads l fancies in the teaching of singing.

Outspoken Essays on Music. By Camille int-Saëns. Authorized translation by Fred thwell. Cloth bound; with musical illus- tions. One hundred and eighty-six pages. blished by Kegan Paul, Trench, Trubner & Ltd., and E. P. Dutton & Co. Price, $2.00.

That a true musician is first a truly great son cannot be doubted. That he can talk the architecture of New York or of the in- ligence of animals with keen insight and npathy is a matter of some wonder. But en he is Camille Saint-Saëns and actually ites a book containing comments on these as ll as other topics pertinent to music lovers, simply get the book and read it.

But when we run through the pages first it dizzying to observe the captions and read ay sentences here and there. American lroads, the metronome, appogiatura, Helen of Troy, the Operetta, Roosevelt, lions in captivity, false masterpieces, Chopin annotating the *F Major Ballade*, ants, Sarasate, Liszt—it is impossible to name all the nooks and crevices into which this genius thrusts the fingers of his wit.

Through every page drifts the warm breath of kindliness and the tang of a human interest. These are not discourses of a brain-weary composer sickened by a too-deep draught at the Pierian Spring, but an Apollo daily sipping of ambrosia and imbuing himself forthwith with the spirit of a playwright, archeologist, diplomat, mathematician, architect, litterateur, and poet.

On the Trail of Negro Folk-Songs. By Dorothy Scarborough. Two hundred and eighty-nine pages: cloth bound. Illustrated with musical notations. Published by Harvard University Press. Price, $3.5

While trim, systematic whitefolk have been dovetailing their new theories of composition into old ideas of sense and rhythm, the negro has been singing the joys of his religion, the pleasures of dancing and eating "shortenin' bread" and the sorrows of the boll-weevil, of "Old King Buzzard" and "Ca'n."

Here they are all given—tunes that we thought were our own peculiar possession, "The Monkey's Wedding" and "The Frog That Would A'Wooing Go," for instance, with many another that we instantly make ours. A great work, indeed, it is to save for the world, grown suddenly too solemn and too old, scraps of melody from nurserydays and from the open paths and broad blueskies of childhood.

American Composers (Revised Edition). By Hughes and Elson. Cloth bound; 582 pages; illustrated. Published by The Page Company (Boston), at $3.00 per copy.

"American Composers," by Rupert Hughes, first appeared in 1900. To this have been added by Arthur Elson due mention of composers who have come into notice since that time and the recent accomplishments of the older writers. The authors, both of whom stand among our most valuable critics of matters musical, have brought within one volume a complete, concise and pleasantly readable narrative of the men and women who have made American music respected, and along with this have given a clear vision of the qualities of their creations.

The pages are enlivened by both portraits of the composers and liberal quotations (sometimes *fac simile* reproduction of the manuscript) from their works.

Missa Festiva, by Nicola A. Montani. Paper bound; 62 pages. Published by J. Fischer & Brother. Vocal score. Price $1.00.

This "Festival Mass," by N. Montani, the Director of the Palestrina Choir, is lofty in conception, highly musicianly and, withal, very excellent liturgical music. The Gregorian background, which lends the air of impersonality that is supremely necessary to this type of composition, is skillfully employed; and where a hand less sure would have achieved only false effects, Mr. Montani adapts and molds his material with felicity and understanding.

The contrapuntal texture of this mass is finely woven throughout. Canonical imitation and other fugal devices are introduced with great ease and naturalness.

The theme of the *Kyrie* (appearing in augmented form at the end of the chant) is not so interesting as most of the other themes in this work; but it is adequate and its syncopations are effective. And the pedal point at the end of the *Kyrie* is remarkably fine and well-handled.

The "Et ex Patre natum" theme (in the *Credo*) seems to us the most striking one in the mass; the *Gloria* and the *Sanctus*, the most successful sections.

JUNIOR ETUDE

CONDUCTED BY ELIZABETH A. GEST

Christmas Gifts

By Marion Benson Matthews

"What shall I give to Miss Marie?"
Cried Anne. "It must be fine—
No music teacher in the world
Is quite so nice as mine!"

"Dear Anne, if I were Miss Marie,"
Said Grandma, with a smile,
"Your promise to work faithfully
Would seem the gift worth while.

'To practice hard, and not neglect
The scales and finger work,
To make believe you do not hear
When pleasures tempt to shirk."

"Ah, yes, if I were Miss Marie,
I'd ask no better gift," said she.

Anniversaries

Anniversaries of the following musicians are celebrated this month (December). Perhaps some of you can honor their days by playing some of their compositions at your December Club meetings. You might also look up interesting details in their biographies.

December fifth, WOLFGANG AMADEUS MOZART died in Vienna, 1791.

December eighth, JEAN SIBELIUS was born in Finland, 1865.

December tenth, CÉSAR FRANCK was born in Liege, Belgium, 1822.

December eleventh, HECTOR BERLIOZ was born in France, 1803.

December sixteenth, LUDWIG VAN BEETHOVEN was born in Bonn, Germany, 1770.

December sixteenth, CAMILLE SAINT-SAËNS died in Algiers, 1921.

December eighteenth, CARL MARIA VON WEBER was born in Germany, 1786.

December eighteenth, EDWARD MACDOWELL was born in New York, 1861.

Letter Box

DEAR JUNIOR ETUDE:

I have been taking THE ETUDE regularly since September, 1924 and it has helped me a great deal with a general knowledge of music.

Do you often hear from readers in South Africa?

In Cape Town music plays quite an important part in our lives, and our greatest musical asset is a symphony orchestra which, though small as compared with other orchestras of its kind, is a very fine one, and I believe I am correct in saying that it is the best in South Africa.

An annual occurrence of much interest to the little musical world of Cape Town is the Eisteddfod, when hundreds of people of all ages come together at the City Hall for about three weeks to compete in various branches of music, dancing, elocution and singing. These competitions always attract many people, which goes to prove how fond of music the Cape Town people are.

With all best wishes for THE ETUDE's success, I am,

Your friend,
KATHLEEN STOLLER (Age 16),
"Wembley," Upper Orange St.,
Cape Town,
South Africa.

Elsa's Christmas Gift

By Gertrude Greenhalgh Walker

IT WAS during the social hour of the Etuder's Club that the girls began to make plans for the Christmas recital and to talk about their promised rewards.

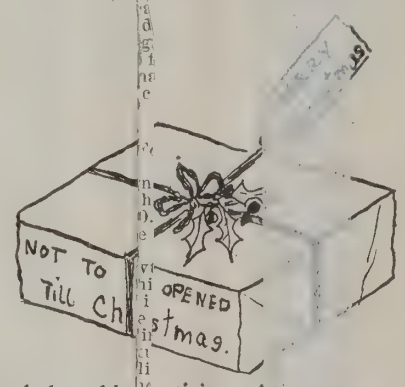
"My Daddy," said Rose, "has promised me a wrist watch for Christmas if I memorize my piece and play it without a mistake at the recital."

"And my Auntie has promised me a week at the shore, if I play better than ever before," broke in Beth.

"Well, I'm not saying much at home," said Bob; "but, believe me, I'm working for that bicycle in Perkin's window. I'll get it, too, Mother says, if I practice an hour and a half every day without being reminded and get a good report at each lesson."

And so it went on through the group, each one relating what bait was luring them on to practice. All but Elsa, who sat listening and listening, with wide-open eyes as the promised gifts were mentioned.

"What is your gift to be, Elsa?" asked Rose.



A tear came into Elsa's eye; but Miss Brown, the teacher, spoke up and said, "Oh, Rose, that is a secret between Elsa and me." Miss Brown knew that it was a financial effort for Elsa to take lessons and did not see just why one should have a present for practicing, anyway.

When the meeting was over Miss Brown asked Elsa if she had ever read Lowell's "Vision of Sir Launfal." Elsa had not, so Miss Brown lent it to her, and underlined a certain passage about giving and receiving.

Next lesson Elsa came with radiant face. "I'm doing it! I'm doing it!" she exclaimed.

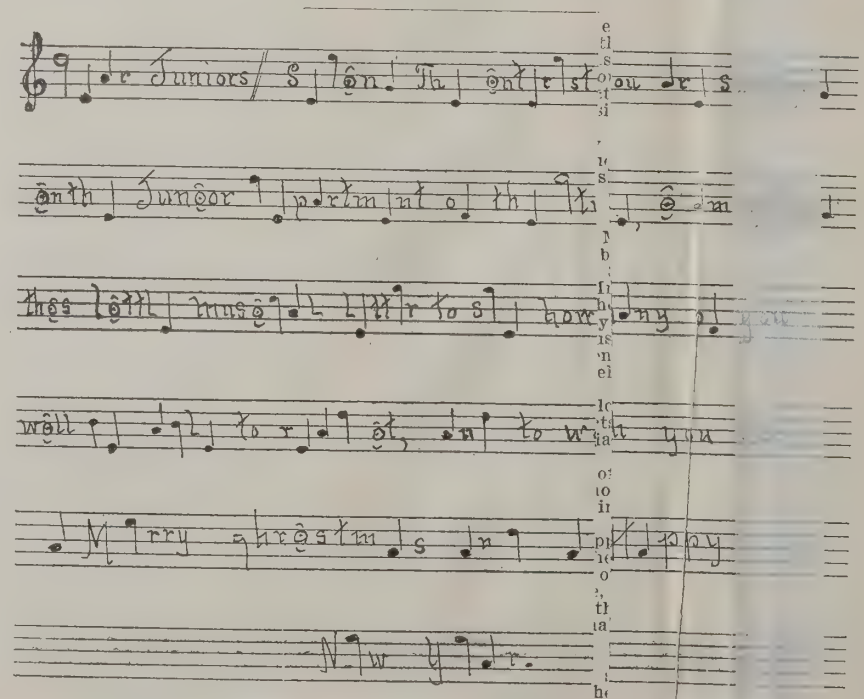
"Well, we will keep our secret until the Christmas recital," said Miss Brown.

At last the day came. Rose played beautifully; and her father gave her the dearest little wrist watch. Bob played well and

had done his practicing without being reminded; so he got his bicycle. All the others won their own rewards for Christmas.

But Elsa played beautifully—better than any of the others—but said nothing about getting any present for it.

"Where is your gift, Elsa? You and Miss Brown were so secretive about it at the meeting," asked Rose.



Elsa smiled and holding her head up proudly, said, "I did not receive, I *gave* instead." chorused the girls.

"You *gave* my music. You see Mother is very ill and every day I helped her by practicing my very best to get better and joy into my music. Music putting ice very best tonic she could said it was, because I appreciated have had taking lessons, she shared my privilege."

music with nodded approval, and quoted

Miss Brown ssed to give than to receive." "It is more Elsa to quote the verse Then she sion" that was her inspiration from the, happily,

and Elsa e give but what we share,
"Not what without the giver is bare."
For the

CHRISTMAS GREETINGS TO THE JUNIORS FROM P. S. MORRISON

"The Junior Etude" from the Federation of Music Clubs

A Letter to Junior Etude Readers

NATIONAL OFFICERS OF THE ETUDE:

MY DEAR time I have wanted to greet you and tell how much I enjoy reading your page every month. There is one part of it that interests me most, the Junior Etude, of course. As I read it I ask myself, "Do these Club clubs belong to the National Federation of Music Clubs? Then I look in my files and always the answer is—"Yes." I think is one reason why this Junior page is literally interesting. It breathes the spirit of the Federation whose work is to encourage the building of the Temple of Music in America.

Now you are sure that many of you know that the work to be accomplished by the Junior Clubs during the world year; but I am going to review the Clubs so that you may be reminded of this work and be inspired all over again to do your part.

THE CHILDRENS' CRUSADE, to preserve the Log Cabin Studio and last resting place of Edward MacDowell, is to be one of our great achievements this year. On the opening day of the Junior Luncheon at which time we shall be a glorious accomplishment will be made. In order to have this accurate, our Crusade must begin *at once* and we will reach our goal and will stand fulfill our mission on *February* 's birthday. Our Crusade will collect the money *first*, in the following way:

1. Its member of a Federated Club will give 5 cents.
2. Each member of a Federated Club will ask 2 children to give 5 cents.
3. Each member of a Federated Club will ask 5 children to give 1 cent each.

If you have not received your directions send to me for them. Address 1 and Later Ave., Merchantville, N. J. Westra also conducting a National Crusade.

We Music Memory Puzzle contest. word have received the Bulletin and trust hope are preparing for the final contest that will be held on Junior Day at the Biennial which April, 1927, at Chicago.

Plans, of course, planning to send delegates.

You the Biennial where we hope to have the largest Junior rally in our history. It is a thrilling experience to attend a convention of many clubs from many States, all different together telling each other of their gatherings and ideals. It is good to compare works and to see that others are working as we are encouraging as we are.

There is much to tell you which cannot be told in this letter, concerning program, study work, and other activities. Our Junior extensions form a mighty army whose work is refined and whose vision is the making of a musical America.

JULIA E. WILLIAMS,
Director Junior Dept., N. F. M. C.,
121 Westminster Avenue,
Merchantville, N. J.

P.S.—While the above letter is written especially to members of the National Federation of Music Clubs, there are lots of other Music Club members who do not belong to the Federation but who will be interested in the work this anyway, and learning about the activities.

JUNIOR ETUDE—Continued

Junior Etude Contest

THE JUNIOR ETUDE will award three tty prizes each month for the best and test original stories or essays and an- ers to puzzles.

Subject for story or essay this month— Pleasant Musical Experience." Must tain not over one hundred and fifty rds. Any boy or girl under fifteen rs of age may compete whether a sub- iber or not.

All contributions must bear name, age, d address of sender written plainly, and st be received at the JUNIOR ETUDE fice, 1712 Chestnut St., Philadelphia, Pa., fore the tenth of December. Names of ze winners and their contributions will published in the issue for March.

Put your name and age on upper left nd corner of paper, and address on per right hand corner of paper. If your ntribution takes more than one piece of per do this on each piece.

Do not use typewriters.

Competitors who do not comply with L of the above conditions will not be nsidered.

(Unfortunately, there was a slight mis- e in last month's announcement. The sult of the November contest will appear usual in February and not this month.)

PATRIOTIC MUSIC
(Prize Winner)

A year ago I went to a sham battle given the National Guardsmen of our State. I ll never forget my emotions as I stood, ex- d, on a side row.

Amid the deafening reports of the guns and illery, the band played loudly but with pression, "The Star Spangled Banner." I lly felt brave enough to carry "Old Glory" ough the hottest fire in No Man's Land.

'oming home, I solved the problem that had n troubling both my parents and me; my ation in life would be that of the saint of battlefield: a nurse.

Now, doesn't that just show what can be e by patriotic music?

JEANNE F. MURPHY (Age 14),
New Jersey.

PATRIOTIC MUSIC
(Prize Winner)

Woodrow Wilson once said, "There is no tter way to express patriotism than through sic." Statesmen and governments have g recognized the value of music in strength- ing the love of the people for their country. arly every nation has a National anthem. thing stirs our patriotism so much as to ar or sing "The Star Spangled Banner." hat exultation we feel in knowing that our g yet waves over this land, valiant in war d virtuous in peace! The French and Eng- h also have their beautiful patriotic songs. a Marseillaise," the fiery battle-song of the ench; the stately hymns, Britain's "God ve the King" and our "America;" the tri- phant "Star Spangled Banner"—all tighten e bonds of love and devotion that bind us our country.

RALPH FORTNA (Age 14),
Nebraska.

PATRIOTIC MUSIC
(Prize Winner)

Patriotic music is music that is adopted some country to be its national anthem. is kind of music may be written in singing ne or march time, and whenever it is sung or yed it is highly respected by the citizens which it is dedicated. Each country has own patriotic music, such as, for the ited States, "America," and for Ireland, Wearing of the Green," for England, "God ve the King."

Patriotic music may be used to express character of a country, as in the song merica," "Sweet land of liberty," and in he Star Spangled Banner," "The land of e free and the home of the brave."

HERMON PAXTON (Age 13),
Oklahoma.

EAR JUNIOR ETUDE:

We do not have any music clubs in our town; fact, my mind is rather vague as to what ey are. I would like very much to have me of the JUNIOR readers write me and ex- ain music clubs to me, and how to start one.

From your friend,
ANNIE B. GARDNER (Age 16),
Box 218, Hobart, Oklahoma.

N. B.—In this case the JUNIOR ETUDE gives ie personal address of the writer of the ove letter so that some of the older JUN- OR readers who have had club experience can nswer privately and give advice. And any tter sent directly to the column would be ood, too, as then others could profit by the lvice.

Puzzle Corner

DIAGONAL PUZZLE

THE first letter of number one, the second of number two, the third of number three, and so on, will spell the name of a famous composer. Your answers must include the words as well as the diagonal.

No. 1. Where Beethoven was born.

No. 3. An opera by Verdi.
No. 4. The greatest composer of contrapuntal music.
No. 5. A famous Moorish castle in Spain.
No. 6. A band of instrumental players.

Answer to July Puzzle

1. Caruso.
2. McCormack.
3. Heifetz.
4. Paderewski.
5. Gluck.
6. Homer.
7. Kreisler.
8. Melba.
9. Galli-Curci.
10. Elman.

Prize Winners for July Puzzle

Anna Marie Staple (Age 14), Ohio.
Robert Rimes (Age 13), Massachusetts.
Mildred Jackson (Age 13), California.

Honorable Mention for July Puzzle

Ionia Martin, Helene V. Winter, Murdock McDuffie, Freda Rosner, Nancy Helen Webster, Grace Lowenhaupt, Ralph Fortna, Doris Francis Ledbetter, Violet Chauklin, Helen Erickson, Margaret Montgomery, Helen Moss, Alberta Roberts, Frances McMurtrie, Marie Louise Maxon, Annabell Crane, Bettina Hunter, Helen Kizler.

Honorable Mention for July Essay

Lucyle M. Southworth, Evelyn Anthol, Ruth E. Matthis, Eleanor Frantz, Louise Okim, Anise Doup, Florence Oddy, Helen Lewike, Margaret E. Zur-Linden, Arlette Blum, Martha Reber, Miriam Gold, Ruth Sawyer, Evelyn Barker, Grace C. Kelley, Evelyn Becker, Elizabeth Albee Adams, Violette Mestlin, Theodore Smith, Freda Rosner, Mae Deibler, Mildred Gauss, Marguerite Boles, Mary Merrill, Martha Bell Leitheart, Genevieve Reising, Marsaline Smith, Virginia Gassman, Cornelia Jean Lewis, Miriam Glazier, Dorothy Dole, Virginia Hess, Sophie Weinstein, John Karvonen, Sam Castronovo, Ruth Snyder, Evelyn Whelden, Mary Louise Branch, Esther V. Reburn, Ruth Woodward, Jessie Park, Catherine Reber, Gladys Noeppel, Mary Charmian Stuart, Miriam Wilson, Winifred Keene, Beatrice Maxine Irwin, Albert Leatheman.

Question Box

DEAR JUNIOR ETUDE:

I have taken lessons a half year and my teacher says I have talent, but I have no piano and must practice where I can. I could practice for hours if I had a piano. I can play *Minuet in G, Trauimerei* and *Menuet á l'Antique*, by Paderewski. Do you think I have made good progress for a half year? Does it do any harm to play jazz for amusement?

D. G. (Age 15).

Ans.—Although a stamp was enclosed and a private reply requested to the above letter, no address was given.

It is impossible to say, without hearing a person play, whether or not they have made good progress; for after all, it is *how* one plays and not *what* one plays that really counts.

Playing jazz may be harmful, but there is no reason why it should be if one keeps good rhythm, is relaxed and does not "bang."

And D. G. deserves credit for doing hard work under such handicaps. Many Juniors have fine pianos in their homes and yet do not work!

Club Corner

DEAR JUNIOR ETUDE:

As president of our little Music Club I thought I would write to you. We meet once a week and study the lives and music of the great composers. Some of the members give musical selections while others read stories and letters from the JUNIOR ETUDE.

Sometimes our teacher entertains our mothers; then she gives a short talk on music, while we give a short program. Sometimes we have a little party. We have a pupils' recital twice a year.

From your friend,
MARIE BOLES (Age 12),
Montana.

N. B.—Notice the change of the closing date of your contest this month. From now on you will receive your ETUDES earlier and consequently the contests will close earlier.

SPECIAL NOTICES AND ANNOUNCEMENTS

PERSONAL FOR SALE or WANTED
Rate 10c per word

FOR SALE—Violin business of good reputation in Western educational centre. Box C. I. K., care of ETUDE.

GIFT TIME IS HERE!

LET ETUDE MUSIC MAGAZINE DO YOUR CHRISTMAS SHOPPING

Just sit at your desk at home. List your friends whom you wish to remember with THE ETUDE.—Mail your order to us and Presto! Your Christmas shopping for 1926 is done

Splendid combinations which include ETUDE MUSIC MAGAZINE at decidedly money-saving prices are shown on this page. No gift will be more warmly received than a good music magazine combined with good fiction.

Gift Card Sent with Magazine

No gift more acceptable to a musical friend than a year's subscription for "Etude Music Magazine." It comes once a month regularly, renewing your thoughtfulness and good wishes for the holiday season and throughout the year. A bright, crisp, cheery gift card bearing your name is sent to the recipient—no fuss, no worry, no time lost in shopping. Simply enclose a two dollar bill and we will see that your card arrives on Christmas morning.

DO NOT DELAY! The Holiday season is here.

Music Supplement

In addition to the many enticingly interesting and exceedingly practical articles, such as instructive paragraphs, anecdotes, history, biography, music news and special departments which have made the ETUDE MUSIC MAGAZINE world famous, each issue contains from 18 to 20 pieces of new and selected music—over 200 selections in a year's subscription which, if purchased separately, would cost not less than $60.00. You cannot make a better musical investment with a two dollar bill.

SUBSCRIPTIONS MAY BEGIN ON ANY FUTURE DATE DESIGNATED

Miss Etelka Evans teaching her class in the history and appreciation of music in the

Cincinnati Conservatory of Music
INCORPORATED

Cincinnati Conservatory of Music

May 5, 1926

The Auto Pneumatic Action Company,
12th Avenue & 51st Street,
New York City

Gentlemen:

The Baldwin Welte-Mignon (Licensee) Grand Piano in use at the Conservatory of Music is of invaluable assistance in teaching the History and Appreciation of Music.

The opportunity of hearing the faithful interpretation of the classics by the world's great pianists is not only educational but a source of constant inspiration to the student.

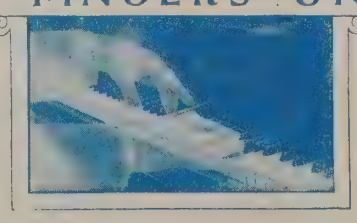
It has become such an important factor in the teaching that it would be a serious deprivation not to have the instrument in the lecture room.

Sincerely yours,

(SIGNED) BERTHA BAUR
President and Director.

Bringing world-famed pianists to your faculty

Suppose that you could engage Paderewski, De Pachman, or Gieseking to play before your class in musical appreciation. Imagine the benefit to your musical history students from hearing the greatest works played by masters of the piano.



The Welte-Mignon Licensee Reproducing Piano is invaluable in such instruction. For its faithful portrayal of tone, technique, and feeling sets the highest standards before the students. And the range of available selections permits a careful study of the outstanding classics.

Let us send you complete information regarding this modern method of musical instruction.
